**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. GENERAL

   A. Non-Mandatory Pre-bid Conference - February 20, 2020 at 1:00 p.m.

   B. Sub-Bid Opening - March 11, 2020 at 10:00 am.

   C. General Bid Opening - March 25, 2020 at 2:00 pm.

2. TABLE OF CONTENTS

   A. Page TOC-1, DIVISION 0 - BIDDING AND CONTRACT REQUIREMENTS, add "Section 00420, Form for Sub-Bid".

   B. Page TOC-6, DIVISION 16, ELECTRICAL, delete "Section 16140, Wiring Devices".

   C. Page TOC-6, DIVISION 16, ELECTRICAL, delete "Section 16220, Motors".

3. SECTION 00100, ADVERTISEMENT FOR BIDS

   A. Page 00100-3, Paragraph 6., delete the fourth subparagraph in its entirety and replace with the following new paragraph:

      All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all subbid categories including the categories in which less than three subcontractors were prequalified. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

   B. Page 00100-3, delete Paragraph 11. in its entirety and replace with the following new paragraph:

      11. Bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the category of Sewage Treatment Plant Contractor. An Update Statement form covering the period from the date of the Bidder's most recently filed Contractor Qualification Statement (CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT. The project does not require the Contractor to have MassDOT Highway Division Certification.

4. SECTION 00200, INSTRUCTION TO BIDDERS

   A. Page 00200-2, Article 1.01 – RECEIPT AND OPENING OF BIDS, Paragraph B., delete the last sentence in the third sub-paragraph in its entirety.

   B. Page 00200-2, Article 1.01 – RECEIPT AND OPENING OF BIDS, Paragraph C., delete the fourth subparagraph in in its entirety and replace with the following new paragraph:

      Only Sub-Bids from prequalified Filed Sub-Bid Subcontractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

      - Masonry
      - Miscellaneous Metal Work
      - Roofing and Flashing
      - Metal Windows
      - Glass and Glazing
      - Painting
      - Plumbing
      - Heating, Ventilating and Air Conditioning
      - Electrical Work

Sub-Bids from Prequalified Filed Subcontractors and Other DCAM Certified Sub-Contractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

- Waterproofing and Dampproofing
- Fire Protection
- Tile

C. Page 00200-2, Article 1.01 – RECEIPT AND OPENING OF BIDS, delete Paragraph F. in its entirety and replace with the following new paragraph:

F. A non-mandatory Pre-Bid Conference will be held on February 20, 2020 at 1:00 pm at the Town of Orleans, 19 School Road, Orleans, MA 02653.

D. Page 00200-3, Article 1.03 – PREPARATION OF BID, delete Paragraph C. in its entirety and replace with the following new paragraph:

C. In accordance with M.G.L. Chapter 149 Section 44D-1/2 and 44 D-3/4, the following General Contractors and Filed Subcontractors have been prequalified to submit Bids on this Project:

**General Contractors**

| | |
|---|---|
| C.H. Nickerson & Co., Inc. | MWH Constructors, Inc. |
| Daniel O'Connell's Sons, Inc. | RH White Construction |
| Methuen Construction Company, Inc. | Waterline Industries Corporation |

**Filed Subcontractors**

| Category | Subcontractors |

E. Page 01030-5, Article 1.08 - PROGRESS OF WORK, add the following new paragraph:

C. Furnish to the Engineer a “two-week look ahead” that summarizes the anticipated construction activities. The “two-week look ahead” shall be provide to the Engineer on Thursday of every week throughout the duration of the Project.

5. SECTION 00410, FORM OF GENERAL BID

A. Delete “Orleans_MA-2019-01-Bid Form_v1” in its entirety and replace with the attached new “Orleans_MA-2019-01-Bid Form_v2” in both hard copy and Microsoft Excel format.

6. SECTION 00420, FORM OF SUBBID

   B. Delete "Orleans_MA-2019-01-SubBid Form_v1" in its entirety and replace with the attached new "Orleans_MA-2019-01-SubBid Form_v2" in both hard copy and Microsoft Excel format.

7. SECTION 00520, AGREEMENT

   a. Page 00520-2, Paragraph 6., delete the words "…the sum of $9,700 for each consecutive…" and replace with the words "…the sum of $6,700 for each consecutive…".

8. SECTION 01025, MEASUREMENT AND PAYMENT

   A. Delete SECTION 01025, MEASUREMENT AND PAYMENT in its entirety and replace with the attached new section.

9. SECTION 04120, STONE VENEER

   A. Delete SECTION 04120, STONE VENEER in its entirety and replace with the attached new section.

10. SECTION 04200, UNIT MASONRY AND ACCESSORIES

    A. Delete SECTION 04200, UNIT MASONRY AND ACCESSORIES in its entirety and replace with the attached new section.

11. SECTION 00550, MISCELLANEOUS METALS

    A. Delete SECTION 00550, MISCELLANEOUS METALS in its entirety and replace with the attached new section.

12. SECTION 07160, BITUMINOUS DAMPPROOFING

    A. Add new SECTION 07160, BITUMINOUS DAMPPROOFING as attached.

13. SECTION 07610, METAL ROOFING

    A. Delete SECTION 07610, METAL ROOFING in its entirety and replace with the attached new section.

14. SECTION 08500, FIXED WINDOWS

    A. Delete SECTION 08500, FIXED WINDOWS in its entirety and replace with the attached new section.

15. SECTION 08550, WINDOWS

    A. Delete SECTION 08550, WINDOWS in its entirety and replace with the attached new section.

16. SECTION 08810, GLASS AND GLAZING

    A. Delete SECTION 08810, GLASS AND GLAZING in its entirety and replace with the attached new section.

17. SECTION 09300, TILE WORK

    A. Add new SECTION 09300, TILE WORK as attached.

18. SECTION 11350, ULTRAVIOLET DISINFECTION EQUIPMENT

    A. Page 11350-5, Article 2.01 – SYSTEM DESCRIPTION

       1) Paragraph A., delete the words "400 gpm" and replace with the words "240 gpm".

       2) Paragraph A., delete the words "15 mg/L (average), 25 mg/L (maximum) twice a month" and replace with the words "10 mg/L (average), 15 mg/L (maximum) twice a month".

       3) Paragraph A., delete the words "UV Max Influent Fecal Coliform" and replace with the words "UV Max Effluent Fecal Coliform".

       4) Paragraph F.2., delete the paragraph in its entirety and replace with the following new paragraph:

          2. Number of lamps per reactor: As required to meet the design conditions specified herein and with a system dimension that fits within the foot print shown on the drawings.

5) Paragraph G.1., delete the words "…maximum of 14 CFU/100 ml, or equivalent MPN…" and replace with the words "…maximum of 200 CFU/100 ml, or equivalent MPN…".

6) Paragraph G.2., delete the words "…UV dose of 87 mJ/cm2 at peak flow, in effluent with a UV Transmittance of 57% at end of lamp life (EOLL) …" and replace with the words "…UV dose of 45 mJ/cm2 at peak flow, in effluent with a UV Transmittance of 55% at end of lamp life (EOLL) …".

B. Page 11350-6, Article 2.02 – MANUFACTURERS

1) Delete the Article in its entirety and replace with the following new Article:

2.02 - MANUFACTURERS

A. Trojan

B. Wedeco

C. Approved Equal.

C. Page 11350-6, Article 2.03 – UV DISINFECTION EQUIPMENT CONSTRUCTION

1) Delete Paragraph B.6. in its entirety and replace with the following new paragraph:

6. Each UV reactor shall contain high-intensity low-pressure amalgam UV lamps arranged horizontally and parallel to the direction of flow.

2) Delete Paragraph B.9. in its entirety and replace with the following new paragraph:

9. Not Used

3) Delete Paragraph J.2. in its entirety and replace with the following new paragraph:

6. Not Used.

D. Add new SECTION 09300, TILE WORK as attached.

19. SECTION 16050, ELECTRICAL WORK - GENERAL

A. Page 16050-02, Article 1.00, SUBBID REQUIREMENTS, delete Paragraph D. in its entirety and replace with the following new paragraph:

B. Reference Drawings

1. The Work of DIVISION 16, ELECTRICAL for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 E-001 | 00 E-601 | 00 E-602 | 10 ED-001 | 10 ED-002 | 10 ED-003 | 10 E-001 |
| 10 E-002 | 10 E-003 | 10 E-004 | 10 E-005 | 10 E-006 | 10 E-007 | 10 E-101 |
| 10 E-102 | 10 E-103 | 10 E-104 | 10 E-201 | 10 E-202 | 10 E-203 | 10 E-204 |
| 10 E-205 | 10 E-206 | 10 E-301 | 10 E-302 | 10 E-303 | 10 E-601 | 10 E-602 |
| 10 E-603 | 10 E-604 | 10 E-605 | 10 E-606 | 10 E-607 | 10 E-608 | 10 E-609 |
| 10 E-610 | 10 E-611 | 10 E-612 | 10 E-613 | 10 E-614 | 10 E-615 | 10 E-616 |
| 10 E-617 | 15 E-101 | 15 E-102 | 15 E-601 | 15 E-602 | 25 E-101 | 30 E-001 |
| 30 E-101 | 30 E-002 | 99 E-501 | 99 E-502 | 99 E-503 | 00 FA-001 | 10 FA-101 |
| 10 FA-102 | 10 FA-201 | 10 FA-202 | | | | |

2. The Work of DIVISION 16, ELECTRICAL for Alternative A-1is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 E-001 | 00 E-601 | 00 E-602 | 20 E-101 | 20 E-102 | 20 E-601 | 20 E-602 |
| 99 E-501 | 99 E-502 | 99 E-503 | 00 FA-001 | 20 FA-101 | | |

20. SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS

A. Add new SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS as attached

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 00 G-002, INDEX OF DRAWINGS

A. MECHANICAL PROCESS, delete “10 D-107”.

B. MECHANICAL PROCESS, add “10 D-309”.

C. ELECTRICAL, add “10 E-617 WWTF – ELECTRICAL, WIRING SCHEMATICS V”.

2. DRAWING 00 C-104, SITE LAYOUT PLAN - WWTF

A. Add the following spot grades between the Wastewater Treatment Facility / Sequencing Batch Reactor No. 2 and the Equipment Storage Facility:

1) 56.25

2) 56.35

B. Add the following new Note 6.:

6. If Alterative No. A-1 – Equipment Storage Facility is not accepted, all grading, pavement, curbing, site utilities, emergency generator, fencing and the like shall be constructed as shown. All underground utilities shall be terminated 10-feet from the face of the Equipment Storage Facility.

3. DRAWING 00 C-108, PAVEMENT PLAN AND ZONING COMPLIANCE

A. Add new DRAWING 00 C-108 as attached.

B. Delete the words “Mill and Overlay Pavement on Overland Way” with the words “Mill and Overlay 2-inches of Pavement on Overland Way”.

C. Delete the words “Full Depth Pavement at new WWTF. For Additional Information, See Sheet 00 C-104” and replace with the words “Full Depth Pavement at WWTF. For Additional Information See Sheet 00 C-104 and Detail on Sheet 99 C-508”.

4. DRAWING 00 C-109, DRAIN PROFILES

A. Drain Profile 3, Delete the words “32 LF 12” PVC DI” and replace with the words 32 LF 12” DI.

5. DRAWING 00 C-108, PAVEMENT PLAN AND ZONING COMPLIANCE

A. Add new DRAWING 99 DI-602 as attached.

6. DRAWING 00 C-202, SITE PLAN – EFFLUENT DISPOSAL

A. Delete the words “12’ Wide Gravel Access Drive to Wick Distribution Vault and Wicks” and replace with the words “12’ Wide and 18-inch Deep Gravel Access Drive (Mass Highway Spec. M1.03.0 Type A ) to Wick Distribution Vault and Wicks. Gravel Shall Be Compacted to 95% Max. Dry Density.”

7. DRAWING 00 C-203, YARD PIPING PLAN – EFFLUENT DISPOSAL

A. Delete the words “Construct Drop MH On Exist. 12” PVC Drain. Approx. Inv. El. 122.9” and replace with the words “Construct Drop MH On Exist. 12” PVC Drain. Rim 126.0, Inv. In. 122.9, and Inv Out 118.0”

B. Delete the words “Concrete Headwall and Rip-Rap Slope Protection” and replace with the words “Concrete Headwall and Rip-Rap Slope Protection, Inv. 116.0”

8. DRAWING 99 C-502, DETAILS II

   A. Typical Drain Trench Detail, delete the words "Compacted Crushed Stone Bedding Against Ledge, 1-1/2" Max. Stone Size" and replace with the words "Compacted 3/4" Crushed Stone or Processed Glass Aggregate Bedding".

   B. Typical Water Trench Detail, add the following new note:

      3. In lieu Crushed Stone, the Contractor may utilize PGA for bedding.

   C. Gravity Sewer/Force Main Trench Detail, delete the words "Compacted Crushed Stone Bedding Against Existing Materials, 1-1/2" Max. Stone Size" and replace with the words "Compacted 3/4" Crushed Stone or Processed Glass Aggregate Bedding".

9. DRAWING 99 C-503, DETAILS III

   A. Delete the detail "Concrete Thrust Block Bearing Areas for Water Main".

   B. Delete the title "Force Main Thrust Block" and replace with "Sewer Force Main Thrust Block".

10. DRAWING 99 C-505, DETAILS V

   A. Add the following table.

WICK ELEVATIONS (ft., NGVD)

| Wick ID | Approximate Ground | Approximate Water Table | Bottom of 3' Diameter Temporary Casing for Wick Borehole | Bottom of 2' Diameter Temporary Casing | Top of Wick Access Wells | Bottom of Wick Access Wells |
|---|---|---|---|---|---|---|
| 1 | 124.0 | 14.0 | 24.0 | 24.0 | 120.3 | 24.0 |
| 2 | 122.2 | 14.0 | 22.2 | 22.2 | 118.5 | 22.2 |
| 3 | 127.8 | 14.0 | 27.8 | 27.8 | 124.1 | 27.8 |
| 4 | 130.2 | 14.0 | 30.2 | 30.2 | 126.5 | 30.2 |
| 5 | 132.2 | 14.0 | 32.2 | 32.2 | 128.5 | 32.2 |

| Wick ID | Top of Fine and Course Gravel Packs | Bottom of Fine and Course Gravel | Top of 3' Diameter Permanent Steel Casing | Bottom of 3' Diameter Permanent Steel Casing | Top of Removable Grate | Top of Concrete Grading Ring |
|---|---|---|---|---|---|---|
| 1 | 120.0 | 24.0 | 121.0 | 113.0 | 121.0 | 118.0 |
| 2 | 118.2 | 22.2 | 119.2 | 111.2 | 119.2 | 116.2 |
| 3 | 123.8 | 27.8 | 124.8 | 116.8 | 124.8 | 121.8 |
| 4 | 126.2 | 30.2 | 127.2 | 119.2 | 127.2 | 124.2 |
| 5 | 128.2 | 32.2 | 129.2 | 121.2 | 129.2 | 126.2 |

| Wick ID | Bottom of Coarse Gravel Outside Permanent Casing | Bottom of 0.33" Thick Steel Plates | Top of Access Hatch | Invert of Force Main Access to Vault (max. elev) | Invert of Force Main Inside Vault | Invert of Force Main Discharge |
|---|---|---|---|---|---|---|
| 1 | 116.0 | 118.0 | 124.2 | 119.5 | 122.0 | 121.5 |
| 2 | 114.2 | 116.2 | 122.4 | 117.7 | 120.2 | 119.7 |
| 3 | 119.8 | 121.8 | 128.0 | 123.3 | 125.8 | 125.3 |
| 4 | 122.2 | 124.2 | 130.4 | 125.7 | 128.2 | 127.7 |
| 5 | 124.2 | 126.2 | 132.4 | 127.7 | 130.2 | 129.7 |

11. DRAWING 99 C-506, DETAILS VI

    A. Delete the detail “Typical Outside Drop Manhole Connection” in its entity.

    B. Delete the detail “Typical Precast Concrete Manhole with Hood (Catch Basin)” in its entity.

    C. Typical Precast Concrete Drain Manhole

        1. Delete the words “26” Heavy Duty Frame & Cover, C.I. Lebaron LK 110 or Approved Equal. (Cover to be Stamped Drain)” and replace with the words “Orleans Standard Drain Manhole Cover. See Drawing 99 C-507

        2. Delete the words “6” Min 3/4” Crushed Stone” and replace with words “6” Min 3/4” Crushed Stone or Processed Glass Aggregate”.

    D. Typical Precast Concrete Sewer Manhole

        1. Delete the words “Use Orleans Standard Manhole Frame & Cover. Min. Wt. 475 lb. (Cover to be stamped Sewer). Lebaron LK 110 or Approved Equal. Locking Frame and Cover to be Set 6” Above Finished Grade (Off Road Locations). Cover to be Stamped Sewer) Lebaron LCB268-1 or Approved Equal. Min Weight = 475 lbs.” and replace with the words “Orleans Standard Sewer Manhole Cover. See Drawing 99 C-507”.

        2. Delete the words “3/4” Crushed Stone” and replace with words “3/4” Crushed Stone or Processed Glass Aggregate”.

12. DRAWING 99 C-508, DETAILS VIII

    A. Bit. Conc. Pavement Section, delete the words “10” Compacted Gravel Sub-Base on Compacted Subgrade” with the words “12” Compacted Gravel Sub-Base (Mass Highway Spec. M2.01.7) on Compacted Subgrade.

    B. Delete the detail “Gravel Road Section – Effluent Disposal Access Drive” in its entity.

13. DRAWING 10 A-601, ROOM FINISH SCHEDULE

    A. Add the following new note:

        Note: TBD (To Be Determined) in the Room Finish Schedule indicates that the selection of colors will be determined during the Shop Drawing review process.

14. DRAWING 10 A-602, DOOR SCHEDULE AND LEGEND

    B. Door Schedule, revised the following Door Types

        1. Door 108A – Type F

        2. Door 109B – Type F

        3. Door V-1B – Type P

15. DRAWING 99 P-502, DETAILS II
    A. Gasoline/Oil/Sand Separator
        1. Delete the words “3’-6” Min.” and replace with the words “5-foot Diameter”.
        2. In Note 6, delete the words “…through the roof.” and replace with the words “…through the chimney.”
        3. Delete the Construction Material Paragraph in its entirety and replace with “Precast Concrete Manhole (H-20 Loading)”.
    B. Duplex Sump Pump Piping Detail
        1. Add the following new note:
            2. Similar Piping for Simplex Sump Pump.
        2. Delete the words “Check Valve (TYP.)” and replace with the words “Double Check Valve (TYP.)”.
16. DRAWING 10 E-002, WWTF – ELECTRICAL SITE PLAN - SYSTEMS
    A. Revise CCTV 10-002 from Pole Mounted to Building Mounted at Column Line A and Colum Line 1.
    B. Revise CCTV 10-003 from Pole Mounted to Building Mounted at Column Line A and Colum Line 4.
    C. Delete CCTV 10-004 and all of its associated components.
    D. Delete CCTV 10-006 and all of its associated components.
    E. Delete CCTV 15-001 and all of its associated components.
    F. Delete CCTV 15-002 and all of its associated components.
    G. Revise CCTV 15-003 from Pole Mounted to SBR N0. 2 Wall Mounted.
    H. Delete CCTV 20-001 and all of its associated components.
17. DRAWING 10 E-302, WWTF - GRADE LEVEL - SECURITY PLAN I
    A. Delete CCTV 10-101 and all of its associated components.
    B. Delete CCTV 10-120A and all of its associated components.
    C. Delete CCTV 10-120B and all of its associated components.
    D. Add CCTV 10-101 and all of its associated components in Truck Bay located at Column Line A and Colum Line 4.

**CHANGES TO BE MADE TO THE CONTRACT ATTACHMENTS**

None

Company's Name

Date

Company's Address

**Refer to the Instructions in SECTION 00410, Page 2 - Bid Proposal in filling out this Proposal Form.**

| Item | Description | Unit of Measure | Quantity | Extended Total |
|---|---|---|---|---|
| **PART I - MOBILIZATION/DEMOBILIZATION** | | | | |
| 1 | For Mobilization/Demobilization, the lump sum of (not to exceed five (5) percent of the sum of all Bid Items - Part II and Part III and excluding Part I). | | | |
| | $ - | l.s. | 1 | $ - |
| | **TOTAL OF PART I - MOBILIZATION/DEMOBILIZATION** | | | **$ -** |
| **PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK** | | | | |
| 2A. | The Work of the General Contractor including all Work for the WWTF other than that covered by other items, as specified, the lump sum of | | | |
| | $ - | l.s. | 1 | $ - |
| 2B. | The Work of the General Contractor including all Work for Effluent Disposal Facility other than that covered by other items, as specified, the lump sum of | | | |
| | $ - | l.s. | 1 | $ - |
| 2C. | For rock and/or boulder excavation including replacement with suitable fill material, as specified, the sum of | | | |
| | $ - | per c.y. | 20 | $ - |
| 2D. | For excavation of unsuitable material below trench grade and/or subgrade of structures and pipes including replacement with suitable fill material, as specified, the sum of | | | |
| | $ - | per c.y. | 500 | $ - |

| | | **TOTAL OF PART III - FILED SUBBIDS** | | **$ -** |

**PART IV - ALTERNATIVES**

| | | |
|---|---|---|
| A-1 | For Addition of the Equipment Storage Facility, as specified, the sum of | $ - |
| A-2 | For Addition of Fiber Optic Conduits and Handholes, as specified, the sum of | $ - |
| A-3 | For Addition of Tracer Wire, as specified, the sum of | $ - |
| A-4 | For Addition of SBR Transfer Pump No. 4, as specified, the sum of | $ - |
| A-5 | For Addition of the SBR Blower No. 4, as specified, the sum of | $ - |
| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | $ - |

**BASIS OF AWARD** - The OWNER's present funding constraint limits award of this contract to $22,350,000. The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraint will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding the total of $22,350,000. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additonal Funding may be obtained at the Annual Town Meeting proposed to be held in May 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

Company's Name

Company's Address

Date:

**Refer to the Instructions in SECTION 00410, Page 2 - Bid Proposal in filling out this Proposal Form.**

TO: ALL GENERAL BIDDERS EXCEPT THOSE EXCLUDED:

A. The undersigned proposes to furnish all labor and materials required for completing, in accordance with the hereinafter described Drawings, Specifications and Addenda, all the Work specified in Section No.

of the Specifications and in any Drawings as specified in such section contained in the Contract Documents titled Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486 prepared by AECOM, 9 Jonathan Bourne Drive, Pocasset, MA 02559.

| Item No. | Description |
|---|---|

**Base Bid**

The work of the Subbidder for all Work of the Project, excluding the Work contained within each Alternative, the Contract sum of:

$ - l.s.

**Alternatives**

A-1 For Addition of the Equipment Storage Facility, as specified, the lump sum of

$ - l.s.

A-2 For Addition of the Fiber Optic Conduits and Handholes, as specified, the lump sum of

$ - l.s.

A-3 For Addition of the Tracer Wire, as specified, the lump sum of

$ - l.s.

A-4 For Addition of SBR Transfer Pump No. 4, as specified, the sum of

$ - l.s.

A-5 For Addition of SBR Blower No. 4, as specified, the sum of

$ - l.s.

A-6 For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of

$ - l.s.

B. This Subbid includes Addenda numbered _____ through _____ inclusive.

C. This Sub-bid:

___ may be used by any General Bidder except:

___ may only be used by the following General Bidders:

(To exclude Gneral Bidders, instert "X" in one box only and fill in blank following that box. Do not answer "C" if no General Bidders are excluded.)

D. The undersigned agrees that, if it is selected as Subbidder, it will, within five (5) days, Saturdays, Sundays and legal holidays excluded, after presentation of a Subcontract by the General Bidder selected as General Contractor, execute with such General Bidder a Subcontract in accordance with the terms of this Subbid, and contingent upon the execution of the General Contract and, if requested so to do in the general bid by such General Bidder, who shall pay the premiums therefor, furnish a Performance and Payment Bond of a surety company qualified to do business under the laws of the Commonwealth and satisfactory to the Awarding Authority, in the full sum of the Subcontract Price.

E. The names of all persons, firms and corporations furnishing to the undersigned labor or labor and materials for the class or classes or part thereof of Work for which the provisions of the section of the Specifications for this subtrade require a listing in this paragraph, including the undersigned if customarily furnished by persons on its own payroll and in the absence of a contrary provision in the Specifications, the name of each such class of Work or part thereto and the Bid Price for each such class of Work or part thereof are:

1. Name:

Class of Work:

Bid Price:
$ -

2 Name:

| Class of Work: |
| |
| Bid Price: |
| $ - |

Note: Do not give Bid Price for any class or part thereof furnished by the undersigned.

F. The undersigned agrees that the above list of Bids to the undersigned represents bona fide Bids based on the hereinbefore described Drawings, Specifications and Addenda and that, if the undersigned is awarded the Contract, they will be used for the work indicated at the amounts stated, if satisfactory to the Awarding Authority.

G. The undersigned further agrees to be bound to the General Contractor by the terms of the hereinbefore described Drawings, Specifications, including all general conditions stated therein, and Addenda, and to assume toward it all the obligations and responsibilities that it, by those documents, assumes toward the Owner.

H. The undersigned offers the following information as evidence of its qualifications to perform the Work as Bid upon according to all requirements of the Drawings and Specifications:

1. Number of Years have been in business under present business name

2. Ever failed to complete any work awarded?

3. List one or more recent buildings with names of general contractor and engineer or architect on which you served as subcontractor for work of similar character as required for the above-named building.

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The purpose of this section is to define the basis of measurement and payment for each of the unit price or lump sum items listed in DOCUMENT 00410, FORM OF GENERAL BID. If no quantity or bid item appears in DOCUMENT 00410, FORM OF GENERAL BID for any of the following described items, no Work of that description is anticipated on the project.

B. The Contractor shall become acquainted with all Work associated with each Payment Item and shall have no claim for additional compensation due to unfamiliarity with the Work required to complete each Item in accordance with the Contract Documents.

C. No payment will be made for any item of Work until all documentation required by the Contract Documents has been reviewed and approved by the Engineer. No payment will be made for additional materials that are not installed on the Project. The Owner reserves the right to withhold the fair market value for work not completed in addition to the retainage on work completed. Unbalanced bid items will specifically be subject to review and to this potential withholding from periodic payment applications.

**1.02 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.03 - PAYMENT ITEMS**

| Item | Description |
|---|---|
| PART I - MOBILIZATION / DEMOBILIZATION | |
| 1 | Mobilization/Demobilization |
| PART II – WWTF RELATED WORK | |
| 2A | Wastewater Treatment Facility |
| 2B | Effluent Disposal |
| 2C | Rock and/or Boulder Excavation |
| 2D | Replacement of Unsuitable Material Below Trench Grade |
| 2E | Replacement of Unsuitable Material Above Trench Grade |
| 2F | Experimental Excavation |
| 2G | Sheeting and/or Shoring Ordered Left in Place |
| 2H | Existing Perimeter Fence Repairs |
| 2I | Perimeter Fence and Gates |

| Item | Description |
|---|---|
| PART III – FILED SUBBIDS | |
| 3A | Section 04120, Stone Veneer and Section 04200, Unit Masonry and Accessories |
| 3B | Section 05500, Miscellaneous Metal Work |
| 3C | Section 07160, Bituminous Dampproofing, Section 07900, Joint Sealants and Section 07840, Firestopping |
| 3D | Section 07610, Metal Roofing and Section 07710, Roof Specialties |
| 3E | Section 08500, Fixed Windows and Section 08550, Windows |
| 3F | Section 08810, Glass and Glazing |
| 3G | Section 09300, Tile Work |
| 3H | Section 09900, Painting |
| 3I | Section 15300, Automatic Wet-Pipe Sprinkler Systems |
| 3J | Section 15400, Plumbing and Section 15195, Natural Gas Piping |
| 3K | Section 15500, Heating, Ventilating and Air Conditioning and Section 15520, HVAC Insultation |
| 3L | Division 16 – Electrical (All Sections) |
| PART IV - ALTERNATIVES | |
| A-1 | Addition of the Equipment Storage Facility |
| A-2 | Addition of Fiber Optic Conduits and Handholes |
| A-3 | Addition of Tracer Wire |
| A-4 | Addition of SBR Transfer Pump No. 4 |
| A-5 | Addition of SBR Blower No. 4 |
| A-6 | Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank) |

**1.04 - BASIS OF MEASUREMENT AND PAYMENT**

**PART I – MOBILIZATION / DEMOBILIZATION**

**ITEM 1 - MOBILIZATION/DEMOBILIZATION**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, which shall include transporting, mobilization, demobilization, utility connection fees, permits, licenses, bonds, insurance and all other incidental Work relative thereto.

B. Measurement. Measurement for mobilization/demobilization shall be made based on the lump sum amount bid as approved by the Engineer.

C. Payment. Payment for mobilization/demobilization listed in DOCUMENT 00410, FORM OF GENERAL BID shall be made at the lump sum price bid under this Bid Item. The amount of this lump sum shall not exceed five (5) percent of the Contract amount, excluding Item 1, and no payment shall be made in excess of this amount. An amount of seventy-five (75) percent of the amount bid under Item 1 (exclusive of normal Contract retainage) will be made when the Contractor has mobilized to the Project site(s) and is ready to start construction. The remaining twenty-five (25) percent (exclusive of normal Contract retainage) will be made following demobilization from the Project site(s) following final completion and acceptance of the work by the Owner.

**PART II – WWTF RELATED WORK**

**ITEM 2A - WASTEWATER TREATMENT FACILITY**

A. General. The lump sum price bid for construction of the Wastewater Treatment Facility shall include all Work described in these Specifications, notices, Division 0 through Division 16 inclusive, and Contract Drawings, except for those items priced separately (Part I, Part II and Part III). All Allowances specified in SECTION 01020, ALLOWANCES shall be included under this Bid Item.

B. Measurement. The methods of measurement shall be based on the completed installation of the Wastewater Treatment Facility, as specified, based on the schedule of values approved by the Owner.

C. Payment.

1. Payment for Wastewater Treatment Facility listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum price bid under Item 2A based on a schedule of values approved by the Owner.

2. All Allowances specified in SECTION 01020, ALLOWANCES shall be included under this Bid Item. Payment for the allowances under Item 2A which are listed in SECTION 01020, ALLOWANCES shall be based upon the actual time and materials or Lump Sum as approved by the OWNER. If the actual costs exceed the allowance, the difference will be paid by the Owner. Should the actual cost be less than the allowance, the Owner will retain the difference. Refer to SECTION 01020, ALLOWANCES.

**ITEM 2B – EFFLUENT DISPOSAL**

A. General. The lump sum price bid for construction of the Effluent Disposal shall include all Work described in these Specifications, notices, Division 0 through Division 16 inclusive, and Contract Drawings, except for those items priced separately (Part I, Part II and Part III).

B. Measurement. The methods of measurement shall be based on the completed installation of the Effluent Disposal, as specified, based on the schedule of values approved by the Owner. The Contractor shall include the cost for 20-vertical feet of permanent steel casing in each Wick.

C. Payment.

1. Payment for Effluent Disposal listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum price bid under Item 2B based on a schedule of values approved by the Owner.

2. Payment for permanent steel casing in each Wick shall be based on the actual number of vertical feet provided.

**ITEM 2C - ROCK AND/OR BOULDER EXCAVATION**

A. General. The price bid under Item 2C shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified which shall include excavation, drilling and blasting, furnishing and placing replacement material, removal and legal disposal of rock, backfilling and compaction, monitoring blasts, and any other incidental Work relative thereto.

B. Measurement. Measurement of rock and/or boulder excavation shall be made based on the volume removed and replaced as approved by the Engineer computed, as follows:

1. Only boulders greater than one (1) cubic yard in volume, defined by the Engineer as removable only by blasting, shall be measured and paid for under this Bid Item. Measurement shall be based on the length, width and depth of boulders excavated within the trench limits.

2. Rock in pipe trenches shall be measured from its surface to a point six (6) inches below the invert of the pipe and, as follows:

a. For pipe twenty-four (24) inches or less in diameter a width of five (5) feet for depths twelve (12) feet or less and a width of seven (7) feet for depths greater than twelve (12) feet.

b. For pipe greater than twenty-four (24) inches in diameter a width of three (3) feet plus the inside diameter of the pipe for depths of twelve (12) feet or less and a width of five (5) feet plus the inside diameter of the pipe for depths greater than twelve (12) feet.

3. Rock or boulders encountered in other excavations, which are to be paid for separately, shall be measured from its surface to a point one (1) foot below the base of structure and to a width of one (1) foot outside the face of the structure.

4. Where more than one (1) pipe is installed in the same trench, payment shall be made on the basis of a common trench with the maximum trench width of seven (7) feet.

C. Payment. Payment for rock and/or boulder excavation listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the unit price bid per cubic yard under Item 2C.

1. No additional payment will be made for frost removal or for any other materials encountered in the excavations, no matter how stiff or compact of consistency, even if blasting is required for removal. Soft or disintegrated rock that can be removed without the use of explosives shall not be paid for under this Bid Item.

2. No additional payment will be made for rock and/or boulder excavation where existing utilities are removed and relaid to facilitate the Work within the trench limits defined hereinbefore.

3. Masonry or concrete structures encountered during the course of constructing the Work, which require blasting for removal, shall be paid for subject to the limits and conditions described herein.

4. No payment will be made for excavation of rock and/or boulders beyond the specified limits.

**ITEM 2D and ITEM 2E - REPLACEMENT OF UNSUITABLE MATERIAL**

A. General. The prices bid under Item 2D and Item 2E shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified which shall include excavation, sheeting or shoring not ordered left in place, dewatering, removal and legal disposal of unsuitable materials, filter cloth, furnishing and placing replacement materials, transportation, backfilling, compaction and any other incidental Work relative thereto.

B. Measurement. Measurement for replacement of unsuitable material above and below trench grade and/or subgrade shall be made based on the volume removed and replaced as approved by the Engineer and, as follows:

1. Unsuitable material below trench grade shall be measured from a point six (6) inches below the invert of pipe to the bottom of the excavation and a total width of three (3) feet plus the inside diameter of pipe for pipe twenty four (24) inches or less in diameter (minimum four (4) feet) for trench depths twelve (12) feet or less and five (5) feet plus the inside diameter of the pipe for trench depths greater than twelve (12) feet.

2. Unsuitable material above trench grade shall be measured from a point one (1) foot plus the thickness of permanent pavement thickness below the existing pavement surface or from a point six (6) inches below the existing unpaved surface to a point one (1) foot above the pipe and a total width of three (3) feet plus the inside diameter of pipe for pipe twenty four (24) inches or less in diameter (minimum four (4) feet) for trench depths twelve (12) feet or less and five (5) feet plus the inside diameter of the pipe for trench depths greater than twelve (12) feet.

3. Unsuitable material below precast concrete manholes shall be measured from a point six (6) inches below the base of the manhole to the bottom of the excavation and to a width of two (2) feet plus the outside diameter of the manhole.

4. Unsuitable material below foundations for structures shall be measured from the bottom of foundation varying in width on a forty-five (45) degree angle down and out two (2) feet from the bottom edges of foundation to a depth approved by the Engineer.

C. Payment. Payment for replacement of unsuitable material above and below trench grade and/or subgrade listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the unit price bid per cubic yard under the applicable division of Item 2D and Item 2E.

1. No payment will be made for replacement of suitable material above trench grade when suitable excess excavated material is available from other excavations made under this Project.

2. Bedding material placed from a point six (6) inches below the invert of pipe, to a point one (1) foot above the top of the pipe shall be included for payment under the applicable pipe laying Bid Item.

3. When more than one (1) pipe is installed in the same trench, payment will be based on a common trench with a minimum width of seven (7) feet.

4. No payment will be made for unsuitable material replaced beyond the limits approved by the Engineer.

**ITEM 2F - EXPERIMENTAL EXCAVATION**

A. General. The price bid under Item 2F shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, which shall include notification of utility owners, machine and/or hand excavation to locate utilities, backfill, compaction, maintaining utility marking locations, repair to utilities damaged while performing experimental excavations, temporary bituminous concrete patch, furnishing assistance to the Engineer and all other incidental Work relative thereto.

B. Measurement. Measurement of experimental excavation shall be made based on the volume excavated and backfilled as approved by the Engineer.

C. Payment. Payment for experimental excavation listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the unit price bid per cubic yard under Item 2F. No payment will be made for any cost associated with damages caused to existing utilities made during the performance of experimental excavation operations.

**ITEM 2G - SHEETING AND/OR SHORING ORDERED LEFT IN PLACE**

A. General. The price bid under Item 2G shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for complete and permanent earth support system(s), located at locations approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement of sheeting and/or shoring ordered left in place shall be made based on the square feet of sheeting and/or shoring left in place as approved by the Engineer, computed as follows.

1. Measurement of the length of sheeting and/or shoring left in place shall be the actual measured horizontal length of sheeting and/or shoring installed.

2. Measurement of the depth of sheeting and/or shoring left in place shall be made vertically from one (1) foot below the bottom of the structure slab to five (5) feet below finish grade.

C. Payment. Payment for sheeting and/or shoring ordered left in place listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the unit price bid per square foot under Item 2G.

1. No payment will be made for sheeting and/or shoring left in place outside of the measurement for payment limits specified.

**ITEM 2H - EXISTING PERIMETER FENCE REPAIRS**

A. General. The price bid under Item 2H shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for Existing Perimeter Fence Repairs, as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on a percentage complete, as approved by the Engineer.

C. Payment. Payment for Existing Perimeter Fence Repairs listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under Item 2H.

**ITEM 2I - PERIMETER FENCE AND GATES**

A. General. The price bid under Item 2I shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified for the new Perimeter Fence and Gates and removal and legal disposal of the existing wood stockade fence as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on a percentage complete, as approved by the Engineer.

C. Payment. Payment for Perimeter Fence and Gates listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under Item 2I.

**PART III – FILED SUBBIDS**

A. General. The lump sum price bid for subbids for all work described in the Contract Documents.

B. Measurement. Measurement shall be based on the work required in the following sections of the Specifications:

| Item | Description |
|---|---|
| 3A | Section 04120, Stone Veneer and Section 04200, Unit Masonry and Accessories |
| 3B | Section 05500, Miscellaneous Metal Work |
| 3C | Section 07160, Bituminous Dampproofing, Section 07840, Firestopping, and Section 07900, Joint Sealants |
| 3D | Section 07610, Metal Roofing and Section 07710, Roof Specialties |
| 3E | Section 08500, Fixed Windows and Section 08550, Windows |
| 3F | Section 08810, Glass and Glazing |
| 3G | Section 09300, Tile Work |
| 3H | Section 09900, Painting |
| 3I | Section 15300, Automatic Wet-Pipe Sprinkler Systems |
| 3J | Section 15400, Plumbing and Section 15195, Natural Gas Piping |
| 3K | Section 15500, Heating, Ventilating and Air Conditioning and Section 15520, HVAC Insultation |
| 3L | Division 16 – Electrical (All Sections) |

C. Payment. Payment for subbids shall be at the lump sum price bid for all work described in the Contract Documents.

**PART IV – ALTERNATIVES**

**ITEM A-1 – EQUIPMENT STORAGE FACILITY**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for Equipment Storage Facility, as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing the Equipment Storage Facility, as approved by the Engineer.

C. Payment. Payment for Equipment Storage Facility listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under the Bid Item.

**ITEM A-2 - FIBER OPTIC CONDUITS AND HANDHOLES**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, which shall include placement of conduits, handholes and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing the Fiber Optic Conduits and Handholes, as approved by the Engineer.

C. Payment. Payment for Fiber Optic Conduits and Handholes listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under the Bid Item.

**ITEM A-3 – TRACER WIRE**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, which shall include placement of tracer wire, connectors, termination points, grounding, testing and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing the Tracer Wire, as approved by the Engineer.

C. Payment. Payment for Tracer Wire listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under this Bid Item.

**ITEM A-4 – SBR TRANSFER PUMP NO. 4**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for SBR Transfer Pump No. 4, as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing SBR Transfer Pump No. 4, as approved by the Engineer.

C. Payment. Payment for SBR Transfer Pump No. 4listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under this Bid Item.

**ITEM A-5 – SBR BLOWER NO. 4**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for SBR Blower No. 4, as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing SBR Blower No. 4, as approved by the Engineer.

C. Payment. Payment for SBR Blower No. 4listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under the Bid Item.

**ITEM A-6 – SBR AERATION DIFFUSER GRIDS**

A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, for two SBR Aeration Diffuser Grids (1 per SBR Tank), as approved by the Engineer, and all other incidental Work relative thereto.

B. Measurement. Measurement shall be made based on providing two SBR Aeration Diffuser Grids (1 per SBR Tank), as approved by the Engineer.

C. Payment. Payment for two SBR Aeration Diffuser Grids (1 per SBR Tank) listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under the Bid Item.

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 4, MASONRY shall include the complete Work specified in all of the following Sections:

1. SECTION 04120, STONE VENEER
2. SECTION 04200, UNIT MASONRY AND ACCESSORIES

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of SECTION 04120, STONE VENEER for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-101 | 10 A-102 | 10 A-103 | 10 A-201 | 10 A-202 | 10 A-301 |
| 10 A-302 | 10 A-303 | 10 A-304 | 10 A-305 | 10 A-401 | 10 A-402 | 10 A-403 |
| 10 A-404 | 10 A-406 | 10 A-407 | 10 A-408 | 10 A-501 | 10 A-503 | 10 A-504 |
| 10 A-505 | 10 A-604 | 10 A-605 | 10 A- 606 | 10 A-607 | 99 A-607 | 00 S-001 |
| 00 S-001 | 10 S-101 | 10 S-102 | 10 S-103 | 10 S-104 | 10 S-105 | 10 S-303 |
| 99 S-501 | 99 S-502 | 99 S-502 | 99 S-504 | 99 S-505 | 99 S-506 | 00 D-001 |
| 00 D-002 | 10 D-100 | 10 D-104 | 10 D-105 | 10 D-301 | 10 D-302 | 10 D-303 |
| 10 D-304 | 10 D-305 | 10 D-306 | 10 D-307 | 10 D-308 | | |

2. The Work of SECTION 04120, STONE VENEER for Alternative No. A-1 is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 20 A-101 | 20 A-102 | 20 A-201 | 20 A-202 | 20 A-301 | 20 A-302 |
| 20 A-401 | 20 A-501 | 20 A-601 | 20 A-602 | 20 A-603 | 99 A-607 | 00 S-001 |
| 00 S-002 | 20 S-101 | 20 S-102 | 99 S-501 | 99 S-502 | 99 S-505 | 99 S-506 |
| 00 D-001 | 00 D-002 | | | | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 04120, STONE VENEER and
SECTION 04200, UNIT MASONRY AND ACCESSORIES

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SCOPE**

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Stone Veneer as specified herein and/or as shown on the Contract Drawings.

1. Stone cladding, siding and veneer of exterior walls as indicated.

2. Thin stone veneer on thin set.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Product Data:

a. Preparation instructions and recommendations.

b. Storage and handling requirements and recommendations.

c. Installation methods.

2. Selection Samples: Submit mortar color samples.

3. Verification Samples: Submit 2 manufacturer’s full-size samples of natural veneer stone for each pattern specified.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Store stone on pallets or wooden crates. Pallet shall be shrink-wrapped.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Stone Producer Qualifications: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

C. Stone Installer Qualifications: Company specializing in performing Work of this section with minimum five years documented experience.

D. Mock-Up: Provide a mock-up for evaluation of stone, mortar color and application workmanship.

1. Finish areas designated by Architect.
2. Do not proceed with remaining work until Architect approves workmanship, color, and sheen.
3. Refinish mock-up area as required to produce acceptable work.

**1.08 - REFERENCES**

A. ASTM International (ASTM):

1. ASTM C91: Standard Specification for Masonry Cement.
2. ASTM C144: Standard Specification for Aggregate Masonry Mortar.
3. ASTM C150: Standard Specification for Portland Cement.
4. ASTM C207: Standard Specification for Hydrated Lime for Masonry Purposes.
5. ASTM C270: 08a Standard Specification for Mortar for Unit Masonry.
6. ANSI A118.4: Latex Portland Cement Mortar

B. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - PROJECT CONDITIONS**

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install natural stone veneer under environmental conditions outside manufacturer's limits.

B. Hot and Cold Weather Requirements: ACI 530.1/ASCE 6/TMS 602.

C. Air Temperature: 40 degrees F or above during installation.

D. Mortar Mixing Water: Heat mortar mixing water when air temperature falls below 50 degrees F.

**PART 2 - PRODUCTS**

**2.01 - MANUFACTURERS**

A. Acceptable Manufacturers for stone veneer:

1. STONEYARD® - 265 Foster Street; Littleton, MA 01460; Tel: 978-742-9800; Fax: 978-742-9898; Email: sales@stoneyard.com. Web: www.stoneyard.com
2. Quality Stone Veneer - 50 Howe Ave, Millbury, MA 01527; Tel: 508-581-4115; Fax: 508-762-1504. Web: www.qualitystoneveneer.com
3. Fieldstone Veneer - 49-1/2 Summer St. Milford, MA 01757; Tel: 844-983-6337. Web: www.fieldstoneveneer.com

**2.02 - NATURAL VENEER STONE**

A. Physical Characteristics:

1. Fieldstone: Collected stone from farms and fields in Massachusetts, Connecticut, Rhode Island, New Hampshire, Vermont, and Maine.
2. Color and Veining Range: Earth tones of brown, tan, gray, buff, pink, yellow, white, and black.
3. Density: 153.0 pcf.
4. Bulk Specific Gravity: 2.46.
5. Water Absorption: 0.54 percent.
6. Modulus of Rupture Perpendicular: 1,854 psi.
7. Modulus of Rupture Parallel: 2,692 psi.
8. Compressive Strength Perpendicular: 19,958 psi.
9. Compressive Strength Parallel: 17,307 psi.

B. Sizes and Shapes:

1. Natural Stone Veneer. Broad range of colors including brown, tan, gray, buff, pink, yellow, white and black.
2. Natural aged and split faces. Commonly used as an architectural stone siding for interior and exterior veneer applications.
3. Adhered Thin Veneer - 1.0-inch thick (plus or minus 0.25-inches). Lightweight (less than 14 lbs per square foot), natural stone, does not require a supporting masonry shelf. Used for exterior applications:
   a. Flats.
   b. Pre-Cut Corners for the appearance of full depth stone
   c. Mosaic Thin Veneer: style Boston Blend Ashlar from Stoneyard or equal.
      (1) Primarily natural weathered faces with some split faces
      Thickness: 1.0 inch (plus or minus 0.25 inch)
      (2) Facing area: 0.25 to 1.25 sf
      (3) Pre-cut corners present full size stone shape in a thin veneer

**2.03 - ACCESSORIES**

A. Building Paper: ASTM D226, No. 30 asphalt saturated felt.

B. House Wrap: Air/vapor barrier polymeric membrane as specified in SECTION 07270, AIR/VAPOR BARRIER MEMBRANE.

C. Concrete Bonding Agent: Water-based polyvinyl acetate type or concrete adhesive emulsion formulated for use as an admixture.

D. Joint Sealants and Joint Fillers: As specified in SECTION 07900, JOINT SEALANTS.

**2.04 - ADHERED MASONRY VENEER INSTALLATION MATERIALS AND ACCESSORIES**

A. Air and Water Barrier Membrane: Air & Water Barrier to be thin, cold applied, single component liquid and load bearing. Waterproofing Membrane to be non-toxic, non-flammable, and non-hazardous during storage, mixing, application and when cured:

1. Air Barrier Test (AC 212): Pass
2. Air Permeance (ASTM E2178): Pass
3. Elongation @ break (ASTM D751): 20-30 percent
4. 7 day Tensile Strength (ANSI A118.10): >265 psi (1.8 MPa)
5. 7 day Shear Bond Strength (ANSI A118.10): >200 psi (1.4 MPa)
6. 28 Day Shear Bond Strength (ANSI A118.4): >214 psi (1.48 – 2.4 MPa)
7. Service Rating (TCA/ASTM C627): Extra Heavy
8. Total VOC Content: < 0.05 mg/m3

B. Epoxy Waterproofing Flashing Mortar: Waterproof Flashing Mortar to be 3 component epoxy, trowel applied specifically designed for use under adhered masonry veneer:

1. Breaking Strength (ANSI A118.10): 450-530 psi (3.1-3.6 MPa)
2. Waterproofness (ANSI A118.10): No Water penetration
3. 7 day Shear Bond Strength (ANSI A118.10): 110-150 psi (0.8-1 MPa)
4. 28 Day Shear Bond Strength (ANSI A118.10): 90-120 psi (0.6–0.83 MPa)
5. 12 Week Shear Bond Strength (ANSI A118.10): 110-130 psi (0.8-0.9 MPa)
6. Total VOC Content: <3.4 g/L

C. Cementitious backer board units: size, thickness and installation as specified by cement backer board manufacturer, complying with ANSI A118.9.

D. Latex-Portland Cement Mortar for leveling beds and scratch/plaster coats: Mortar Bed to meet the following physical requirements:

1. Compressive Strength (ANSI A118.4 Modified): >4,000 psi (27.6 MPa)
2. Water Absorption (ANSI A118.6): ≤ 5 percent
3. Service Rating (TCA/ASTM C627): Extra Heavy
4. Smoke & Flame Contribution (ASTM E84 Modified): 0
5. Total VOC Content: < 0.05 mg/m3

E. Latex Portland Cement Mortar: Bond Veneer Mortar to be weather, frost, shock resistant, non-flammable and meet the following physical requirements:

1. Compressive strength (ANSI A118.4): >2,500 psi (17.2 MPa)
2. Bond strength (ANSI A118.4): >450 psi (3.1 MPa)
3. Smoke & Flame Contribution (ASTM E84 Modified): 0
4. Total VOC Content: < 0.05 mg/m3

F. Latex Portland Cement Pointing Mortar / Grout: Pointing Mortar to be weather, frost and shock resistant, as well as meet the following physical requirements:

1. Compressive Strength (ASTM C91): 3,500 psi (24.1 MPa)
2. Smoke & Flame Contribution (ASTM E84 Modified): 0
3. Total VOC Content: < 0.00 mg/m3

G. Expansion and Control Joint Sealant: Silicone Sealant to be a one component, neutral cure, exterior grade silicone sealant and meet the following requirements:

1. Tensile Strength (ASTM C794): 280 psi (1.9 MPa)
2. Hardness (ASTM D751; Shore A): 25 (colored sealant) /15 (clear sealant)
3. Weather Resistance (QUV Weather-ometer): 10,000 hours (no change)

H. Spot Bonding Epoxy Adhesive: Stone Adhesive (Standard Grade) for installing adhered masonry veneer, brick and stone over vertical and overhead surfaces shall be high strength, high temperature resistant, non-sag and shall meet the following physical requirements:

1. Thermal Shock Resistance (ANSI A118.3): >1,000 psi (6.9 MPa)
2. Water Absorption (ANSI A118.3): 0.1 percent
3. Compressive Strength (ANSI A118.3): >8,300 psi (57.2 MPa)
4. Shear Bond Strength (ANSI A118.3 Modified): >730 psi (5 MPa)

## PART 3 - EXECUTION

### 3.01 - EXAMINATION

A. Do not begin installation until backing structure is plumb, bearing surfaces are level and substrates are clean and properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

### 3.02 - PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

### 3.03 - INSTALLATION OF ADHERED MASONRY THIN VENEER – MORTARED OR DRY STACK JOINTS

A. General: Install in accordance with current versions of American National Standards Institute, Inc. (ANSI) “A108 American National Standard Specifications for Installation of Ceramic Tile” and TCNA “Handbook for Ceramic Tile Installation.” Cut and fit adhered masonry veneer neatly around corners, fittings, and obstructions. Perimeter pieces to be minimum half unit of stone. Maintain masonry courses to uniform dimensions. Form vertical and horizontal joints of uniform thickness. Install divider strips at junction of flooring and dissimilar materials.

B. Direct Adhere Method to Install Masonry Veneer: Install latex Portland cement mortar in compliance with current revisions of ANSI A108.02 (3.11), A108.1B and ANSI A108.5. Use the appropriate trowel notch size to ensure proper bedding of the adhered masonry veneer, selected so that 100 percent coverage of the back surface of the Thin Adhered Veneer is achieved. Work the latex Portland cement mortar into good contact with the substrate and comb with notched side of trowel. Spread only as much latex Portland cement mortar as can be covered while the mortar surface is still wet and tacky. When installing large format (>8-inch x 8-inch (200 mm x 200 mm) units, spread latex Portland cement mortar onto the back of (i.e. 'back-butter') each piece/unit in addition to troweling latex Portland cement mortar over the substrate. Beat each piece/unit into the latex Portland cement mortar with a beating block or rubber mallet to insure 100 percent full bedding and flatness. Allow installation to set until firm. Clean excess latex Portland cement mortar from adhered masonry veneer face and joints between pieces.

1. Pattern Bond:

   a. Layout work in advance and distribute color range of stone uniformly over total work area.

   b. Lay stone with face exposed.

   c. Take care to avoid concentration of any one color to any one wall surface.

   d. Maintain uniform joints, as stone allows.

   e. Do not use stacked vertical joints.

C. Pointing/Grouting Joints (NOTE: Stacked Stone Installations to omit pointing of mortar joints)

D. Polymer Fortified Pointing Mortar - for joint widths ≥1/16-inch (1.5 mm) and ≤1-inch (25mm]). Allow Thin Adhered veneer to cure a minimum of 24 hours at 70° F (21°C). Verify joints are free of dirt, debris, wedges or spacers. Sponge or wipe dust/dirt off veneer face and remove any water standing in joints. Surface temperature must be between 40-90° F (4-32°C). Pour approximately 4 quarts (3.8 L) of clean, potable water into a clean mixing container. Add a 50 lb. (22.7 kg) bag of LATICRETE Pointing Mortar to the container while mixing. Mix by hand or with a slow speed mixer to a smooth, stiff consistency. Install latex fortified cement grout/pointing mortar in compliance with current revisions of ANSI A108.1A (7.0), ANSI A108.02 (4.5) and ANSI A108.10. Dampen dry surfaces with clean water.

E. Place Pointing Mortar into a high-quality masonry mortar pointing bag. Carefully bag the pointing mortar into the joints. Once the mortar has become stiff in the joint, ("thumb-print dry") typically 15 to 20 minutes after pointing at 70° F (21°C), using a striking or joint tool, strike the mortar joints to the desired finish/contour. Remove excess mortar using a masonry brush or sponge. Do not over wash the mortar joint.

F. Higher temperatures may require faster time to initial cleaning; wider joints or lower temperatures may require a longer time to initial cleaning. Allow joints to become firm. Inspect joint for pinholes/voids and repair them with freshly mixed grout/pointing mortar. Within 24 hours, check for remaining haze and remove it with warm soapy water and a nylon scrubbing pad, using a circular motion, to lightly scrub surfaces and dissolve haze/film. Do not use acid cleaners on latex Portland cement grout/pointing mortar less than 10 days old.

G. Expansion and Control Joints: Provide control or expansion joints as located in contract drawings and in full conformity, especially in width and depth, with architectural details.

1. Substrate joints must carry through, full width, to surface of adhered masonry veneer.

2. Install expansion joints in adhered masonry veneer work over construction/cold joints or control joints in substrates.

3. Install expansion joints where adhered masonry veneer abut restraining surfaces (such as perimeter walls, curbs, columns), changes in plane and corners.

4. Joint width and spacing depends on application and should be determined by the project design team.

5. Joint width: ≥ ⅛-inch (3mm) and ≤ 1-inch (25mm).

6. Joint width: depth ~2:1 but joint depth must be ≥ ⅛-inch (3mm) and ≤ ½-inch (12mm).

7. Layout (field defined by joints): 1:1 length: width is optimum but must be ≤ 2:1. Remove all contaminants and foreign material from joint spaces/surfaces, such as dirt, dust, oil, water, frost, setting/pointing materials, sealers and old sealant/backer. Use Primer for underwater and permanent wet area applications, or for porous stone (e.g. limestone, sandstone etc.) installations. Install appropriate backing material (e.g. closed cell backer rod) based on expansion joint design and as specified in SECTION 07900, JOINT SEALANTS. Apply masking tape to face of adhered masonry veneer, brick or stone veneer. Use caulking gun, or other applicator, to completely fill joints with sealant. Within 5 to 10 minutes of filling joint, 'tool' sealant surface to a smooth finish. Remove masking tape immediately after tooling joint. Wipe smears or excess sealant off the face of adhered masonry veneer or other absorptive surfaces immediately.

H. Adjusting: Correction of defective work for a period of two (2) years following substantial completion, return to job and correct all defective work. Defective work includes, without limitation, adhered masonry veneer units stones broken in normal abuse due to deficiencies in setting bed, loose grout/pointing mortar, and all other defects which may develop as a result of poor workmanship.

1. Control and Expansion Joints:

   a. Keep joints open and free of debris.

   b. Coordinate control joints as specified in SECTION 07900, JOINT SEALANTS for sealant performance.

2. Sealant Recesses:

   a. Provide open joints 3/4-inch deep and 1/4-inch wide, where masonry meets doors, windows, and other exterior openings.

   b. Coordinate sealant joints as specified in SECTION 07900, JOINT SEALANTS for sealant performance.

3. Cutting and Fitting:

   a. Cut and fit thin veneer stone for chases, pipes, conduit, sleeves, grounds, and other penetrations and adjacent materials.

   b. Coordinate with other work to provide correct size, shape, and location.

4. During progress of the work, cover top of unfinished stone masonry work for protection from weather.

**3.04 - INSTALLATION BUILDING VENEER**

A. Install building veneer stone and mortar in accordance with manufacturer's instructions and ACI 530.1/ASCE 6/TMS 602.

B. Maintain masonry courses to uniform dimensions. Form vertical and horizontal joints of uniform thickness.

**3.05 - CLEANING**

A. Keep face of stone free of mortar as work progresses.

B. If residual mortar is on face of stone, allow to dry partially and brush mortar off surface and sponge off residue.

C. When work is completed and mortar has set for 2 to 3 days, clean surface from top to bottom using mild masonry detergent acceptable to natural stone manufacturer.

D. Do not use harsh cleaning materials or methods that could damage stone.

E. Do not use metal brushes or acids for cleaning.

**3.06 - PROTECTION**

A. Protect installed natural stone veneer to ensure that, except for normal weathering, stone will be without damage or deterioration at time of Substantial Completion.

B. Touch-up, repair, or replace damaged stone before Substantial Completion.

**3.07 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700 – CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 04200**

**UNIT MASONRY AND ACCESSORIES**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 04200, UNIT MASONRY AND ACCESSORIES is a part of DIVISION 04, MASONRY which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 04120, STONE VENEER.

B. The Work of SECTION 04200, UNIT MASONRY AND ACCESSORIES, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Unit Masonry and Accessories as specified herein and/or as shown on the Contract Drawings.

B. The work under this Section includes the following:

1. Concrete masonry units (CMU), solid and hollow core units.
2. Fire-rated concrete masonry units.
3. Reinforced concrete masonry lintels.
4. CMU bond beams.
5. Cavity wall insulation.
6. Grouting as indicated and as specified herein.
7. Installing miscellaneous metal items built into masonry.
8. Premolded masonry joint fillers.
9. Installation of loose steel lintels, steel plates, and masonry anchors.
10. Door and window frames built into masonry are furnished by the Contractor in Division 8 and installed under the work of this Section.

11. Masonry joint reinforcing, ties, anchors, miscellaneous reinforcing provided and installed under the work of this Section.
12. Deformed steel bars for wall reinforcing and CMU lintel reinforcing are furnished by the Contractor under Division 3, installed under the work of this Section.
13. Sample wall.
14. Installation of beams, sills and structural items to be embedded in masonry.
15. Installation of anchors, for precast concrete, to be embedded in masonry.
16. Membrane flashing (thru-wall), termination bar and sealant.
17. Installation of anchor bolts embedded in masonry.
18. Installation of metal flashing is included in this section and furnished in SECTION 07531, EPDM SINGLE-PLY MEMBRANE ROOFING.
19. Air/Vapor Barrier Membrane.
20. Mortar Net.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Manufacturer's product data for:

a. Concrete masonry units of all types

b. Mortar and grout

c. Joint reinforcement

d. Anchors and ties

e. Membrane flashing, termination bar and sealant

f. Control joint key

g. Weephole inserts

h. Cavity wall insulation

i. Air/vapor barrier membrane and accessories.

2. Testing:

a. Provide efflorescence test results on actual masonry and mortar to be supplied for this project, including test results of potable water for mortar conforming to the specified requirements.

b. Provide from testing laboratory, the chemical analysis of water-soluble alkali content (%) of cement for mortar.

3. Samples for Approval:

4. Drawings including plans, elevations, and details of wall reinforcement; details of reinforcing bars at corners and wall intersections, control, expansion joints and wall openings.

5. Submit information and requirements for addressing special inspection required by SECTION 01065, STRUCTRURAL TESTS AND INSPECTIONS including all anticipated dates and time that will allow special inspection to be accomplished.

a. Engineer must be notified by Masonry Subcontractor within thirty (30) days of proposed inspection periods.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver masonry units in an air-dry condition.

E. Store masonry units above ground on level platforms that will permit circulation of air and prevent moisture absorption.

F. Concrete masonry units shall be covered or protected from inclement weather and shall conform to the moisture content as specified in ASTM C90, when delivered to job site.

G. Handle masonry units, either individually or in groups, to keep units whole. Handle masonry units in a manner to maintain sharp edges and undamaged faces with minimum protection as follows:

| • Type of Unit | • Minimum Protection |
|---|---|
| • Concrete masonry units | • Handling |

H. Do not stack masonry units more than two (2) pallets high when stacking on frozen ground. Store masonry units on wooden planks.

I. Steel reinforcing bars, coated anchors, ties, and joint reinforcement shall be stored above ground. Steel reinforcing bars and uncoated ties shall be free of loose mill scale and rust.

J. Cementitious and other package material shall be delivered in unopened containers, plainly marked and labeled with manufacturer's names and brands. Cementitious material shall be stored in dry, weather tight enclosures or be completely covered. Cement shall be handled in a manner that will prevent the inclusion of foreign materials and damage by water or dampness. Sand and aggregates shall be stored in a manner to prevent contamination or segregation.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Sample Masonry Panel(s):

1. Panels shall be L-shaped or otherwise configured to represent all the wall elements. Construct sample masonry panel(s) for concrete masonry exposed in finished work. Build panel(s) 4 ft. long x 2 ft. long x 6 ft. high by the required thickness as indicated on the drawings, with facing stone veneer on one side, and concrete masonry units on other side and incorporating joint reinforcement, vertical control joint, specialty shapes, insulation, air vapor/barrier membrane, accessories, weepholes and flashings, face units and backup units as indicated.

2. Construct sample panel(s) at project site location designated by the Engineer to allow acceptance by the Engineer prior to start of masonry work. Sample panel(s) shall not be built in, or as part of the structure, but shall be located where directed.

3. Construct sample panel(s) using specified materials and methods of construction, conforming to indicated shape, surface finish, color and texture range, mortar color, bond pattern, and joint finish.

4. Upon acceptance by the Engineer, sample panel(s) shall become the standard of workmanship and acceptance for represented masonry work. Do not start masonry work for which sample panel(s) are required until sample panel(s) have been accepted.

5. Protect and maintain sample panel(s) in original location and in original condition until the masonry work has been completed and approved.

6. After completion of the work, the sample panel(s), including all foundation concrete shall become the property of the Contractor and shall be removed from job site upon acceptance of represented masonry work, or when permitted by the Engineer.

C. Visual Appearance:

1. Provide stone veneer and concrete masonry units conforming to ASTM tolerances for visual appearance at time of delivery and maintain original appearance to conform to tolerances immediately prior to construction.

D. Remove masonry work damaged as a result of failure to comply with specifications, in the opinion of the Engineer, and reconstruct as directed by the Engineer at no additional cost to the Owner.

1. IMIAWC: Recommended Practices and Guide Specifications for Cold Weather Masonry.

D. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - SITE CONDITIONS**

A. Protection of Masonry:

1. During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

2. Extend cover a minimum of 24-in. down both sides and hold cover securely in place.

3. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24-in. down face next to unconstructed wythe and hold in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least 3 days after building masonry walls or columns.

C. Stain Prevention:

1. Prevent grout, mortar, and soil from staining the face of masonry and precast concrete to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

a. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.

b. Protect sills, ledges, and projections from mortar droppings.

c. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

d. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements:

1. Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

a. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperatures is 40 deg. F and above and will remain so until masonry has dried, but not less than 7 days after completing cleaning.

E. Hot-Weather Requirements:

1. Protect unit masonry work when temperature and humidity conditions produce excessive evaporation of water from mortar and grout. Provide artificial shade and wind breaks and use cooled materials as required.

a. When ambient temperature exceeds 100 deg. F, or 90 deg. F with a wind velocity greater than 8 mph, do not spread mortar beds more than 48 inches ahead of masonry. Set masonry units within one minute of spreading mortar.

F. Prevent damage due to wind and wind-blown particles.

**1.10 - SPECIAL INSPECTION**

A. Provide in accordance with SECTION 01065, STRUCTURAL TESTS AND INSPECTIONS.

**PART 2 - PRODUCTS**

**2.01 - GENERAL**

A. Provide masonry units with dimensions listed in ANSI A62.3 except where otherwise specified or indicated. Provide additional masonry units to complete masonry work as indicated.

B. For exposed alteration and restoration work, provide masonry units of same type, grade, size, and appearance as existing masonry work.

C. Furnish special coves, corners, bullnoses, and other special shapes as indicated.

D. Provide open cell neoprene or expanded polyethylene filler for top of nonload bearing masonry unit walls.

E. Obtain masonry units from one manufacturer.

F. Furnish stock and special shapes as shown in Facing Tile Institute Handbook to complete work as indicated.

**2.02 - MORTAR AND GROUT**

A. General:

1. Provide mortar conforming to ASTM C270, Type S, composed of portland cement, hydrated lime, and sand.
2. The damp, loose volume of sand is not to exceed three times the sum of the volumes of cement and lime.
3. Proportion of lime to portland cement, by volume: 1/4 to 1/2.
4. Portland cement: ASTM C150, Type I or Type II.
5. Lime: ASTM C207, Type S
6. Sand for Mortar: ASTM C144, from single acceptable source.
7. Sand for Grout: ASTM C404.
8. Water: Clean potable from single source and free from acids, alkalies, organic material, minerals and salts.
9. Do not use accelerators or other admixtures in mortar or grout without written approval of Engineer.
10. Retemper mortar only to replace water lost through evaporation and use mortar within 2 hours after mixing.

B. Colored Mortar:

1. Manufacturers:
   a. Glen-Gery Color Mortar Blend.
   b. Riverton Corp.
   c. Colorbond, Centurion R.D.
   d. Or acceptable equivalent product.
2. Provide colored mortar composed of factory mixed colored pigments, Type S, Portland cement and three parts, by volume, well-graded sand.
3. Pigments shall meet the requirements of ASTM C979. Do not use carbon black.
4. Color of mortar shall be selected by Architect.

C. Grout Mix: ASTM C476, 2,500 psi minimum compressive strength. Do not use air entraining admixtures. Provide fine or coarse grout to suit work being grouted.

**2.03 - CONCRETE MASONRY UNITS**

A. Unit Designations:

1. Hollow load-bearing units: ASTM C90
2. Solid load-bearing units: ASTM C90
3. Concrete building brick: ASTM C55

B. General:

1. Damaged units not permitted.
2. Provide concrete masonry unit Type I, moisture-controlled units.
3. Provide units free from iron and other substances that will stain plaster, paint, corrode metal or cause popouts. Aggregates not to contain more than 1.5 mg. of ferric oxide per 200 grams when tested in accordance with ASTM C331.
4. Units shall be modular in size and shall include closer, jamb, header, lintel, and bond beam units and special shapes and sizes to complete the work indicated.

C. Hollow Load Bearing Units:

1. ASTM C90 light weight, Grade N, Type I.
2. Sand and aggregates: ASTM C33.
3. Moisture content when laid not to exceed 35 percent of total adsorption.
4. Wet-steam cured for a minimum of 12 hours followed by covered yard storage for not less than four weeks.
5. Nominal size: 8-in. by 16 in. by heights and bed thicknesses indicated or permitted.
6. Texture: Smooth for application of paint.
7. Provide external corner units: bullnosed.
8. Prism Strength: The average strength of 3 constructed masonry prisms shall be a minimum of 1,900 psi with no individual prism less than 1,700 psi when tested in accordance with ASTM E447.

D. Solid Concrete Masonry Units:

1. Provide solid concrete masonry units conforming to fire-rated wall requirements of Hollow Load Bearing Units.
    a. Net cross-sectional area of unit in every plane parallel to bearing surface at least 75 percent of gross cross-section area measured in sample plane.
2. Fire Rated Concrete Masonry Units: Provide concrete masonry units in fire rated assemblies and partitions which are listed by UL for the application indicated and provide construction which matches UL tested fire rated assemblies.
    a. Prism Strength: The average strength of 3 constructed masonry prisms shall be a minimum of 1,900 psi with no individual prism less than 1,700 psi when tested in accordance with ASTM E447.

**2.04 - LINTELS**

A. General:

1. Provide lintels to extend at least eight inches beyond each jamb of the masonry opening.
2. Provide lintels with all surfaces free of cracks, chips, and broken edges.
3. Provide lintels sized for wall thickness and masonry opening and with 3/8-in. allowance in height, width, and length for mortar joints.

B. Block Lintels:

1. Provide block lintels fabricated from standard lintel-type concrete masonry units of same material and texture as units in adjoining work, reinforced as indicated, and filled with grout having a minimum 28 day compressive strength of 2,500 psi as specified.

C. Steel Lintels:

1. Install galvanized steel lintels as specified under SECTION 05500, MISCELLANEOUS METAL.

**2.05 - JOINT REINFORCEMENT**

A. Manufacturers:

1. Reinforcing Corporation of America.
2. Dur-O-Wal, Inc.
3. Hohmann & Barnard, Inc.
4. Or acceptable equivalent product.

B. General:

1. Prefabricated, formed of ASTM A82 cold-drawn steel.
2. Hot-dip galvanized, ASTM A153, Class B-2.
3. Provide ladder type reinforcement with smooth cross wires flush welded together on 16-in. centers.
4. Provide prefabricated special pieces for corners and intersections of walls and partitions.
5. Provide joint reinforcing width according to width and type of wall indicated on drawings.

C. Exterior Cavity Walls:

1. Provide 3/16-in. side rods and 9-gage cross rods reinforcement.
2. Adjustable (two-piece) type with one side rod at each face shell of backing wythe and with separate ties that extend into facing wythe. Ties shall have two hooks that engage eyes or slots in reinforcement and resist movement perpendicular to wall. Ties shall extend at least halfway through facing wythe but with at least 5/8-inch cover on outside face. Ties shall have hooks or clips to engage a continuous horizontal wire in the facing wythe.

**2.06 - VERTICAL REINFORCEMENT**

A. Contractor shall furnish vertical reinforcement and dowels as specified under SECTION 03200, CONCRETE REINFORCEMENT.

**2.07 - CAVITY WALL INSULATION**

A. Extruded, closed cell, polystyrene.

B. ASTM C578, Type IV. Factory Mutual approved for a Class I, fire rating.

C. R-Value: 5.0 deg. $F/ft^2/h/Btu$ per inch min. at 75 deg. Mean temperature in accordance with ASTM C518.

D. Compressive Strength: 25 $lb./in.^2$ minimum in accordance with ASTM D1621.

E. Provide in thickness as indicated.

**2.08 - MEMBRANE FLASHING AND TERMINATION BARS**

A. Provide 40 mil thick thru-wall flashing consisting of a 36 mil self-adhering rubberized asphalt membrane laminated to a 4 mil high density polyethylene film with silicone treated release sheet.

B. Products:

1. CCW-705-TWF Thru-Wall Flashing by Carlisle Coatings & Waterproofing Inc.
2. Perm-A-Barrier Wall Flashing by Grace Construction Products.
3. Blueskin SA Air/Vapor Barrier Membrane by Monsey Bakor.
4. Or acceptable equivalent product.

C. Termination Bar and Sealant:

1. Material: Type 304 stainless steel 26 gauge.
2. Size: 1/8-in. x 1-in. x 8 ft. long with ¼-in. holes spaced 6-in. o.c. Provide stainless steel screws suitable for masonry installation.
3. Type: Single-winged style to accept sealant.
4. Sealant shall be as recommended by membrane flashing manufacturer.

**2.09 - METAL DRIP EDGES**

A. Fabricate metal drip edges from 0.0156-in. thick stainless steel.

B. Extend drip edge at least 3-in. into wall and ½-in. out from wall, with a hemmed outer edge bend down 30 degrees.

**2.10 - CONTROL JOINT GASKETS**

A. Control joint gaskets shall be factory fabricated solid section of extruded rubber material conforming to ASTM D-2000 with a durometer hardness of 80 (+ or -5) when tested in conformance with ASTM D-2240.

B. The control joint gasket shall be provided with a solid shear section not less than 5/8-in. thick and 3/8-in. thick flanges.

**2.11 - COMPRESSIBLE JOINT FILLER**

A. Closed cell neoprene conforming to ASTM D1056, Class RE41.

B. Manufacturers:

1. D/A 2010 Rapid Soft Joint by Duro-O-Wal, Inc.
2. #NS-Closed Cell Neoprene Sponge by Hohmann & Barnard, Inc.
3. 3330 Horizontal Expansion Joint by Masonry Reinforcing Corp. of America.
4. 030 Soft Joint by National Wire Products Industries.
5. Or acceptable equivalent product.

**2.12 - VERTICAL EXPANSION JOINTS**

A. Provide 60 mil EPDM bellows with integral punched holes in 4-in. wide x .018-in. thick stainless-steel flanges.

**2.13 - SHOP TESTING**

A. Do not deliver, accept or install masonry units and mortar until the actual production run of masonry units has been tested and passes with "no effloresecence" results as specified.

B. Provide commercial testing laboratory approved by the Engineer to perform efflorescence testing.

1. Provide testing laboratory with a record of at least five (5) years of efflorescence testing.

C. Provide sample masonry units and mortar mix to testing laboratory.

D. Provide efflorescence testing of brick units by testing laboratory in accordance with ASTM C67.

1. Acceptable Test Result: ASTM C67 rating of "No Efflorescence."

E. Provide chemical analysis of water-soluble alkali content (%) of cement for mortar and adjust content in accordance with the recommendations of the Brick Institute of America to avoid efflorescence in the cured mortar joints.

**2.14 - MASONRY CLEANING AGENTS**

A. As recommended by masonry manufacturer. Muriatic acid not allowed.

## PART 3 - EXECUTION

### 3.01 - PREPARATION

A. Clean laitance, dust, dirt, debris, oil, grease, and other foreign substances which would affect bond of mortar, from surfaces to receive mortar.

B. Lay out walls to establish accurate spacing of bond pattern, for uniform joint widths, and to locate openings, movement-type joints, returns and offsets. Arrange units in manner which will result in less than two units being cut between each joint or wall opening.

C. Wet masonry having absorption rates in excess of 0.025 ounces per square inch per minute, when tested in accordance with ASTM C67, so that rate of absorption does not exceed that rate when masonry in installed.

### 3.02 - PROTECTION OF WORK

A. Protect the walls, including window sills, with non-staining waterproof coverings when work not in process.

B. Provide minimum 24-in. overhang of protective covering on each side of wall and anchor securely.

C. Protect facing materials from staining.

### 3.03 - INSTALLATION

A. Provide temporary bracing of all walls until walls have been completely erected.

B. Lay masonry plumb and square, true to dimensions, and with full, tightly bonded joints.

C. Horizontal joints of cavity and composite walls, which are to contain wall ties and joint reinforcement shall be level with each other.

D. Install products, indicated to be built into wall, as masonry work progresses. Fill spaces around built-in products with mortar, rake mortar joint, and allow space for sealant.

E. Fill backs of pressed-metal door frames solid with mortar.

F. Make joint width equal to difference between actual and nominal dimensions of unit being installed.

G. Tool exterior joints concave with hard glassy surface free from drying cracks. Tool interior joints flush in similar manner.

H. Provide level and solid mortar bearing in masonry walls directly under precast concrete slabs, beams, and sills, and under structural steel beams to sizes and thickness indicated.

I. Provide 1/2 in. minimum clearance between top of nonload bearing masonry walls and bottom of overhead construction.

J. Lay masonry units in a running bond with vertical joints breaking not less than 4 in. over units in course below, or in vertical stack bond as indicated.

K. Lay soldier course brick bond where indicated, three vertical bricks to one horizontal.

L. Lay vertical cored units with full beds on shells only. Fully butter vertical edges.

M. Cut masonry units with either dry or wet masonry saws.

N. Keep chases, wall cavities, air spaces, expansion joints and spaces to be grouted free from debris and mortar.

O. Lay concrete masonry and structural facing tile units dry.

P. Lay masonry units in full mortar bed.

Q. When resuming masonry work, clean exposed surface of set or partially set masonry and remove loose mortar prior to laying fresh masonry.

R. Install continuous wall reinforcement in accordance with manufacturer's printed installation instructions, and place in alternate horizontal masonry joints. Lap reinforcement not less than six inches and, at corners and intersections, connect to prefabricated reinforcement. Make splices in manner, and at those points, which will not reduce structural strength of wall. Make welded and mechanical connections to develop strength of reinforcement.

S. Install vertical reinforcement where indicated and in poured grout studs formed by vertically aligned cells of unit masonry. Secure reinforcement at top and bottom, and at intervals not more than 192 diameters of reinforcement. Use two-cell masonry units for vertical reinforcement.

T. Install control joint gaskets in concrete masonry unit walls where indicated and in accordance with manufacturer's printed installation instructions.

U. Set metalwork into masonry and build around metalwork. Metalwork furnished in accordance with requirements specified in the section herein.

V. Follow recommended practices and guide specifications for cold weather masonry work as set forth in IMIAWC-75.

W. Using a bristle brush, brush loose mortar from the faces of the walls whenever the scaffolding is moved or raised and at the end of each shift.

X. Install mortar net at the bottom of each air space. Mortar net thickness to match depth of air space.

Y. Construct faces of walls, and inside and outside corners, plumb, and courses level, within following tolerances:

1. Variation from plumb of lines and surfaces of columns, walls, and arises: 1/4 inch in 10 feet; 3/8 inch in 20 feet; 1/2 inch in 40 feet, and 1/2 inch total.

2. Variation from plumb of external corners, expansion joints, and other conspicuous vertical lines: 1/4 inch in 20 feet; 1/2 inch in 40 feet, and 1/2 inch total.

3. Variation from level of exposed lintels, sills, parapets, horizontal grooves, and other conspicuous horizontal lines: 1/4 inch in 20 feet; 1/2 inch in 40 feet, and 1/2 inch total.

4. Variation of linear building lines from established position in plan and related portion of columns, walls, and partitions: 1/4 inch in 20 feet; 1/2 inch in 40 feet, and 2 inch total.

5. Variations of cross sectional dimensions of columns and in the thicknesses of walls: Minus 1/4 inch, plus 1/2 inch.

6. Variations from plumb in masonry control joints: 0-in.

**3.04 - MORTAR**

A. General:

1. Machine mix mortar, except small batches by hand mixing, mixed for at least five minutes after materials are in mixer. Where hand mixing is permitted, mix mortar in tight mortar box until required plasticity is obtained. Mix mortar with maximum amount of water.

2. Use mortar within 2 hours after mixing.

B. Beds:

1. Place full mortar beds on masonry unit bearing surfaces bonded to bearing surface of unit below, and to surface of previously installed unit in same course as unit being installed; furrowing of mortar not permitted. Pack mortar under and around joint reinforcement before masonry unit is installed.

2. Make mortar bed of such thickness that cured mortar joint is equal to difference between actual and nominal dimensions of unit being installed.

3. Do not allow mortar fins to protrude into cores for masonry units which are to be vertically reinforced.

C. Colored: Proportion for each batch and mix in drum-type mechanical mixer shall be mixed between 3 and 5 minutes after materials have been deposited in mixer.

D. Provide cured mortar joints free from efflorescence.

**3.05 - GROUTING**

A. Provide clean out units in bottom course at every dowel where height of grout placement exceeds four feet. Remove overhanging mortar, mortar droppings, and obstructions from grout spaces. Seal clean out holes only after masonry work, reinforcement, and final cleaning of grout spaces have been approved by Resident Engineer, and before grouting. Sealing to match surrounding masonry.

B. Place grout within two hours after mixing.

C. For vertically reinforced concrete unit masonry, place grout in all cells containing reinforcement, and in lifts of not more than four feet. Consolidate grout at time of placing by either puddling or vibrating; reconsolidate grout by puddling before plasticity is lost. When grouting is stopped for one hour and longer, form horizontal construction joints by stopping grout placement 1-1/2 inches below top of uppermost grouted unit. Use coarse grout in grout spaces which are four inches and larger in all horizontal directions; place fine grout in grout spaces which are smaller than four inches in any horizontal direction.

D. Hollow masonry units in walls or partitions supporting plumbing, heating, or other mechanical fixtures, voids at door and window jambs, shall be filled solid with grout. For purposes other than vertically reinforced concrete unit masonry, place grout where indicated, and only after mortar joints and other Cementitious materials have cured. Place coarse grout in grout spaces which are two inches and larger in all horizontal directions; place fine grout in grout spaces which are smaller than two inches in any horizontal direction. Place grout at rate which allows consolidation of successive layers while preceding layer is plastic. Placement height not to exceed four feet. Consolidate grout and puddle when grouting stopped for two hours and longer; form horizontal construction joints by stopping grout placement 1/2 course height below top of uppermost grouted unit. Grouting accomplished from back-up face of masonry units.

E. Prevent grout from coming into contact with finish surfaces which are exposed to view, and with those surfaces which are to receive other finishes.

F. Place grout where indicated at all stair connection locations as indicated on drawings.

**3.06 - LAYING CONCRETE MASONRY UNITS**

A. Lay approved units with moisture absorption ratio of less than 35 percent.

B. Lay units in running bond with vertical joints breaking not less than 4 in. over units in next course below or as indicated. Lay units, cored vertically, with full beds on shells only. Vertical edges fully buttered.

C. Do not wet units before laying except in hot weather. Lightly moisten contact surfaces with water using soft brush just prior to laying units.

D. Install reinforced concrete masonry unit lintels in concrete masonry unit walls and partitions as indicated. Extend lintels at least 8 in. beyond each jamb of masonry opening. Install only completely cured lintels.

E. Jamb units shall be of the shape and sizes to conform with wall units.

**3.07 - BONDING AND JOINT REINFORCEMENT**

A. Bond concrete masonry unit against concrete walls with corrugated dovetail anchors placed in dovetail slots. Place anchors 16-in. on centers. Contractor shall furnish and install dovetail slots as specified under SECTION 03300, CAST-IN-PLACE CONCRETE.

B. Place joint reinforcement, for interior concrete masonry unit walls and partitions, continuously in horizontal joint on 16-in. centers. Interrupt at control joints. Place special pieces, for reinforcing corners, around columns and intersections, in every joint where reinforcement occurs.

C. Bond intersecting masonry walls and partitions with box wall ties spaced vertically at 16-in. on centers.

**3.08 - VERTICAL REINFORCEMENT**

A. Place steel reinforcement bars vertically in all masonry walls as indicated.

B. Locate vertical reinforcement and dowels in first cells of CMU at jambs of all masonry openings and then space horizontally as indicated.

C. Embed dowels 1-ft.-6-in. into reinforced concrete at top and bottom of CMU walls and partitions. Overlap reinforcing 2-ft.-0-in. using 6-ft.-0-in. maximum length bars.

D. Grout cells as specified.

**3.09 - CUTTING AND JOBBING**

A. Leave slots and opening for inserts, wires, conduits, and similar items of construction, open or cut.

B. Provide recesses or openings at junction boxes, or other locations as indicated.

C. Provide openings in exterior walls and interior partitions at duct, conduit, exhaust and other wall penetrations. Bridge above openings using concrete masonry units. Reinforced masonry lintels shall be provided at openings greater than 1-ft.-4-in. Install membrane wall flashing at exterior wall openings.

D. Masonry units to be dried to 35 percent moisture content from prior cutting or grinding before installation of mechanical and electrical services.

**3.10 - PARTITIONS**

A. Partitions shall be continuous from floor to underside of floor or roof deck as indicated. Openings in fire walls around joists or other structural members shall be filled in accordance with SECTION 07840, FIRESTOPPING. An isolation joint shall be placed in the intersection between partitions and structural members. Continuous sealants shall be provided at all isolation joints as specified in SECTION 07900, JOINT SEALANTS.

**3.12 - BOND BEAMS**

A. Bond beams shall be filled with grout and reinforced as indicated.

**3.13 - CONTROL JOINTS**

A. Control joints keys shall be provided as indicated and shall be constructed by using special control joint units and in accordance with the drawings. The vertical mortar joint at control joint locations shall be continuous. The control joint key shall be interrupted in courses containing continuous bond beam steel. Provide backer rod and sealant at all exterior control joints as specified in SECTION 07900, JOINT SEALANTS.

**3.14 - COMPRESSIBLE JOINT FILLERS**

A. Compressible joint fillers shall be provided as indicated and where directed by the Engineer.

**3.15 - SHELF ANGLES**

A. Shelf angles shall be adjusted as required to keep masonry level and at the proper elevation. Shelf angles shall be galvanized steel and provided in sections not longer than 10 feet and installed with a 1/4-in. gap between sections. Shelf angles shall be mitered and welded at building corners with each angle not shorter than 4-ft., unless limited by building configuration.

**3.16 - CAVITY WALL INSULATION**

A. Install insulation to cavity wall air/vapor barrier membrane with mastic as recommended by the manufacturer of the insulation at 1 ft. both horizontally and vertically on the inside face. Mastic to be compatible with air/vapor barrier membrane. Fit the courses of insulation between wall ties or horizontal joint reinforcement and other confining obstructions in the cavity. Tightly butt edges of insulation in both directions. Press insulation units firmly into place against the inside wythe of masonry or against other construction including structural members to form a continuous thermal barrier.

B. Seal joints between insulation units by applying adhesive, mastic or sealant, recommended by the insulation manufacturer, to edges of each unit to form a tight seal as units are shoved into place. Fill the voids in the completed installation with adhesive, mastic or sealant recommended by the insulation manufacturer.

C. Complete installation and concealment of insulation to avoid prolonged exposure of insulation to direct sunlight by covering exposed insulation.

**3.17 - MEMBRANE FLASHING INSTALLATION AND COORDINATION**

A. Self-Adhered, Composite Flexible Membrane Flashing: Prepare masonry surfaces to receive flashings smooth and free of projections. Install flashing to dry surfaces at air and surface temperatures of 25 deg. F. and above in accordance with manufacturer's recommendations at locations indicated.

1. Precut pieces of flashing to easily handled lengths for each location.
2. Remove release paper and position flashing carefully before placing it against the surface.
3. When properly positioned, place against surface by pressing firmly into place by hand roller or a blunt object. Fully adhere flashing to substrate to prevent water from migrating under flashing.
4. Overlap adjacent pieces 2 inches and roll all reams with a steel hand roller or a blunt object.
5. Install metal drip edges beneath flashing at exterior face of wall. Stop flashing ½-in. back from outside face of wall and adhere flashing to top of metal drip edge.
6. At heads, sills and all flashing terminations, turn up ends a minimum of 2 inches and make careful folds to form an end dam, with the seams sealed.
7. Do not allow the rubberized asphalt surface of the flashing membrane to come in contact with polysulfide sealants, creosote, uncured coal tar products or EPDM.
8. Do not expose flashing membrane to sunlight for more than thirty days prior to enclosure.
9. Install termination bar fastened at 6-in. o.c. along top edge of all flashings. Apply bead of sealant along top edge of termination bar and flashing.

B. Accessories:

1. Apply surface conditioner at rate recommended by the manufacturer, prior to flashing installation. Allow surface conditioner to dry completely before flashing application.
2. Apply a bead or trowel coat of mastic along flashing top edge, seams, cuts and penetrations.

**3.18 - VERTICAL EXPANSION JOINTS**

A. Set stainless steel flanges in continuous bed of sealant. Sealant to be compatible with air/vapor barrier.

B. Attach expansion joints per manufacturers recommendations.

**3.19 - FIELD QUALITY CONTROL**

A. Repair joints that are unsound, not full of mortar, or which have hairline cracks due to shrinkage or poor adhesion, as follows:

1. Cut or rake affected mortar to a depth of 3/4 in.
2. Brush out debris.
3. Thoroughly moisten remaining mortar and adjoining masonry and paint with neat cement.
4. Point joint full of mortar.
5. Tool joint to a hard, glassy surface.
6. After first day, wet down walls having repaired joints, at least five times daily, for a minimum of three days.

B. Remove and reconstruct work injured by climatic conditions, or because of insufficient protection as directed by the Engineer and at no additional cost to the Owner.

C. Pointing consists of raking out defective joints, and stack bond pattern joints; repairing defective joints; and working joint after mortar has initially set.

1. Joints except control joints, joints in stack bond pattern and joints to be sealed: Tool concave in a manner which will compact and press the mortar against the units. Strike flush joints covered with plaster, drywall, or waterproofing membrane.

2. Control joints, expansion joints and joints to be sealed shall not contain mortar.

3. Defective joints: Rake out the full depth of the joint, patch with mortar, and tool to match adjacent joints.

D. Apply cleaning agent to sample wall area of 20 sq. ft. in location acceptable to Engineer if cleaning by water does not produce satisfactory results to the Engineer.

1. Do not proceed with cleaning until sample area is acceptable to Engineer.

2. Follow manufacturer's printed instructions.

3. Scrub with approved cleaning agent.

4. Immediately rinse with clear water.

5. Work small sections at a time.

6. Work from top to bottom.

7. Protect sash, metal lintels, and other materials which may corrode when masonry is cleaned with acid solution.

8. Protect precast architectural concrete from masonry mortar stain and overflow.

E. When left overnight, cover tops of wythes of masonry walls with a by waterproof membrane extending at least 24 inches down both sides. Protect masonry left for greater length of time in accordance with requirements specified in SECTION 01500, TEMPORARY FACILITIES. When work is resumed, clean all top surfaces of loose mortar. Wet units thoroughly, except concrete masonry units when required as specified.

**3.20 - FIELD TESTING**

A. Provide in accordance with SECTION 01680, PHYSICAL CHECKOUT, SHOP, FIELD AND FUNCTIONAL TESTING and as specified.

B. Test concrete masonry units in accordance with ASTM C140.

C. A minimum of two specimens of mortar from separate batches shall be taken each day. A layer of mortar 1/2 to 5/8 in. thick shall be spread on the masonry units and allowed to stand one minute. The specimens shall then be prepared and tested for compressive strength in accordance with ASTM C 109.

D. Test grout compressive strength in accordance with ASTM C1019. A minimum of two specimens of grout per day shall be sampled and tested. Each specimen shall have a minimum ultimate compressive strength of 2,500 psi at 28 days.

E. Efflorescence Test: Masonry which will be exposed to weathering shall be tested for efflorescence. Tests shall be scheduled far enough in advance of starting masonry work to permit retesting if necessary. Sampling and testing shall conform to the applicable provisions of ASTM C 67. Units meeting the definition of “effloresced” will be subjected to rejection.

**3.21 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

This Page Intentionally Left Blank.

**SECTION 05500**

**MISCELLANEOUS METAL**

## PART 1 – GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 5, METALWORK shall include the complete Work specified in all of the following Sections:

1. SECTION 05500, MISCELLANEOUS METAL

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of SECTION 05500, MISCELLANEOUS METALS for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 C-001 | 00 C-104 | 99 C-503 | 99 C-504 | 00 A-001 | 10 A-101 | 10 A-102 |
| 10 A-103 | 10 A-104 | 10 A-201 | 10 A-202 | 10 A-301 | 10 A-302 | 10 A-303 |
| 10 A-304 | 10 A-305 | 10 A-406 | 10 A-407 | 10 A-501 | 10 A-502 | 10 A-503 |
| 10 A-504 | 10 A-603 | 10 A-604 | 10 A-605 | 10 A-607 | 00 S-001 | 00 S-002 |
| 10 S-101 | 10 S-102 | 10 S-103 | 10 S-104 | 10 S-105 | 10 S-106 | 10 S-107 |
| 10 S-301 | 10 S-302 | 10 S-303 | 15 S-101 | 30 S-101 | 99 S-501 | 99 S-502 |
| 99 S-503 | 99 S-504 | 99 S-505 | 99 S-506 | | | |

2. The Work of SECTION 05500, MISCELLANEOUS METALS for Alternative A-1 is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 C-001 | 20 A-101 | 20 A-201 | 20 A-202 | 20 A-301 | 20 A-302 | 20 A-501 |
| 20 A-603 | 20 A-607 | 00 S-001 | 00 S-002 | 20 S-101 | 20 S-102 | 99 S-501 |
| 99 S-502 | 99 S-503 | 99 S-504 | 99 S-505 | 99 S-506 | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 05500, MISCELLANEOUS METAL

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SCOPE**

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide metal fabrications not specifically included in other Sections and required for completion of work as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Erection and detailed Shop Drawings, which show the plan location, elevation and details for the fabrication and erection of all miscellaneous metals work. Show anchorage and accessory items. Include details of all connections between all materials.

2. Provide signed and sealed Shop Drawings and calculations, which are prepared by a Registered Professional Engineer licensed in the State in which the pre-engineered metal component will be installed.

3. Manufacturer's literature describing standard items.

4. Shop drawings showing materials, sizes, finishes, locations, attached hardware and fittings, and details for manufactured items and fabricated metalwork, including field erection details showing cuts, copes, miter connections, holes, thread fasteners and welds. Indicate welds, both shop and field, by symbols conforming to AWS standards. Indicate coatings or other protection against corrosion.

5. Setting diagrams, erection plans, templates and directions for installation of backing plates, anchors, and other similar items.

6. Manufacturer’s specifications, load tables, anchor details, installation details for grating.

7. Material, product data and specifications with standards designated.

8. One sample of finished railing proposed for use. Submit with shop drawing submittal.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Identify and match-mark, materials, items and fabrications, for installation and field assembly.

E. Deliver items to jobsite as complete units, wherever practicable, ready for installation or erection, with anchors, hangers, fasteners and miscellaneous metal items required for installation.

F. Carefully handle and store materials, protected from weather, rusting and other damage.

G. Store structural shapes, pipes, tubes and sheets off the ground on suitable supports, with webs of flanged shapes vertical.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. Railings and Guardrails:

a. Railings and guardrails shall be designed for a live load of 100 plf vertical plus 50 plf horizontal applied concurrently or a concentrated load of 200 pounds applied in any direction at any point along the rail, whichever produces the most extreme condition.

b. Intermediate rails, balusters and panels or fillers shall be designed for a uniform load of 25 psf over the gross area of the guard of which they are a part. This loading need not be added to the loading of the main members prescribed above.

c. Handrails shall be designed for a live load of 50 plf applied in any direction or a concentrated load of 200 pounds applied in any direction at any point along the handrail, whichever produces the most extreme condition.

D. Aluminum grating and aluminum plate covers design shall be based upon the following criteria:

a. Design Live Loads:

i. Uniform Live Load: 300 psf

ii. Concentrated @ Center Span: 500 plf

b. Maximum bending stress = 12,000 psi

c. Maximum shear stress = 8,000 psi

d. Modulus of Elasticity = 10,000 ksi

e. Maximum deflection under 100 psf uniform live load = Span / 300

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Obtain field measurements prior to preparation of shop drawings and fabrication.

C. Welding Qualification and Certification:

1. Furnish written welding procedure for all welds in conformance with AWS Structural Welding Code.

2. Each welder, tacker and welding operator shall be certified by test within the past six months to perform type of work required in conformance with AWS Structural Welding Code. Testing shall be conducted and witnessed by an independent testing laboratory.

3. Maintain duplicate qualification and certification records at the job site readily available for examination.

18. B247: Specification for Aluminum and Aluminum-Alloy Die Forgings, Hand Forgings and Rolled Ring Forgings.
19. B249: Specification for General Requirements for Wrought Copper and Copper-Alloy Rod, Bar, and Shapes.
20. B308: Specification for Aluminum-Alloy 6061-T6 Standard Structural Shapes, Rolled or Extruded.
21. B429: Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

F. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

## PART 2 - PRODUCTS

### 2.01 - MATERIALS

A. Steel:

1. Conform to latest issue for the following:
   a. Steel Shapes and Plates: ASTM A36
   b. Steel Pipe: ASTM A53.
   c. Nuts, Bolts, Rivets, Washers, and Anchorage Devices: ASTM A325 and AISC Specification.
   d. Steel Sheets: Cold-rolled or hot-rolled carbon steel, ASTM A366, or ASTM A569.

B. Stainless Steel

1. Type 316 unless otherwise indicated or specified.
2. General: Type (or Grade) 304L for welding, otherwise Type (or Grade) 304.
3. Shapes and Bars: ASTM A276
4. Plate, Sheet, and Strip: ASTM A167
5. Tubing: ASTM A269
6. Pipe: ASTM A312, Schedule 40S

C. Aluminum:

1. Plates, rolled or extruded shapes, sheets or castings conforming (unless otherwise permitted or indicated) to the following Aluminum Association alloy and temper designations:
   a. Rolled structural sheets and plates: ASTM B209-6061-T6
   b. Rolled Structural Shapes: ASTM B308-6061
   c. Extruded structural shapes, bars and tubes: ASTM B221 Alloy 6061-T6
   d. Extruded structural tube or pipe: ASTM B429 Alloy 6061 T-6
   e. Gratings (bearing bars): ASTM B211-6061-T6
      (crimp bars): ASTM B211-6061-T5
   f. Castings: ASTM B26-214
   g. Sheets: ASTM B209-Alclad 3003-H14 and 3003
   h. Bolts and nuts: Type 316 stainless steel
   i. Pipe railings: ASTM B241-6061-T6
   j. Handrail posts: ASTM B241-6061-T6
   k. Die and hand forgings: ASTM B247 Alloy 6061-T6
   l. Welding filter rods: ASTM B241-6061-T6

D. Bolts, washers and nuts: Type 316 stainless steel

E. Welding:

1. Provide filler materials appropriate and compatible for the alloys and tempers in accordance with the AWS Structural Welding Code.
2. Provide Class 5356 electrodes.

**2.02 - FABRICATION**

A. General:

1. Fabricate true to shape, size and tolerances as indicated and specified with straight lines, square corners or smooth bends; free from twists, kinks, warps, dents, and other imperfections. Straighten work bent by shearing or punching.
2. Dress exposed edges and ends of metal smooth, with no sharp edges and with corners slightly rounded. Construct connections and joints exposed to weather to exclude water.
3. Provide sufficient quantity and size of anchors for the proper fastening of work.
4. Fabricate details and connection assemblies in accordance with drawings and with projecting corners clipped and filler pieces welded flush.
5. Weld shop connections, bolt or weld field connections, unless otherwise noted or specified.

6. Provide clips, lugs, brackets, straps, plates, bolts, nuts, washers, and similar items, as required for fabrication and erection.

7. Use connections of type and design required by forces to be resisted, and to provide secure fastening.

8. Welding:

   a. Grind exposed edges of welds to a 1/8-inch minimum radius. Grind burrs, jagged edges and surface defects smooth.

   b. Prepare welds and adjacent areas such that there is (1) no undercutting or reverse ridges on weld bead, (2) no weld spatter on or adjacent to weld or any other area to be painted, and (3) no sharp peaks or ridges along weld bead. Grind embedded pieces of electrode or wire flush with adjacent surface of weld bead.

9. Bolting:

   a. Provide Type 316 stainless steel stud bolts and nuts with heavy aluminum washer for fastening of aluminum material.

   b. Draw up bolts or nuts tight, and deform threads where possible. Use bolts of lengths required so that bolts do not project more than 1/4-inch beyond face of nut. Do not use washers unless specified. Provide hexagonal head bolts with hexagonal nuts.

   c. Provide holes required for the connection of adjacent or adjoining work wherever noted on drawings. Locate holes for bolting equipment to supports to a tolerance of + 1/16-inch of exact dimensions indicated.

   d. Provide plastic protection caps.

B. Fit work together in fabrication shop and deliver complete, or in parts, ready to be set in place.

C. Fabricated Products:

1. Pipe Sleeves in Concrete Construction: Weld standard weight, black steel pipe, with anchors to exterior to accommodate passage of conduits, pipes ducts and similar items.

**2.03 - ALUMINUM PLATE COVERS AND FRAMES**

A. Provide aluminum tread plate covers of type, size indicated and as specified.

1. Provide with nonskid surface, reinforced with aluminum bars and angles welded to underside of cover. Fit covers neatly and accurately in frames.

2. Maximum size of plate covers shall not exceed 3 feet square unless otherwise indicated.

3. Frames:

   a. Provide aluminum angle frames with leveling bars.

   b. Provide mitered corners and welded joints. Grind smooth where exposed.

   c. Provide welded strap anchors at 24-inch maximum [610 mm] spacing, minimum two per side, for securing in concrete floor or 1/2-inch [13 mm] diameter, Type 316 stainless steel expansion bolts for securing to concrete, as applicable.

4. Provide aluminum cover plates and frames with a natural mill finish.

B. Removable Type Plate Covers:

1. Fit cover neatly and accurately in frames. Provide a minimum of four airtight plate cover lift handles for each plate cover section.

C. Hinged Type Plate Covers:

1. Covers hinged to frame with Type 316 stainless steel, heavy duty plain bearing hinges and stainless steel pins.

2. Attach hinges to covers and frames with Type 316 stainless steel machine screws.

3. Provide covers with slam lock and spoon handle and fixed wrench type handle, or as indicated.

4. Provide a minimum of two airtight plate cover lift handles for each plate cover section.

D. Gasketed and Bolted Type Covers:

1. Provide plate covers with continuous, compressible neoprene seals between cover and frame at perimeter.

2. Provide covers secured to frames with countersunk, flathead, Type 316 stainless steel machine screws spaced 6-inches [150 mm] on centers.

3. Fit cover neatly and accurately in frames. Provide a minimum of four airtight plate cover lift handles for each plate cover section.

E. Bolted Type Covers:

1. Provide covers secured to frames with countersunk, flathead, Type 316 stainless steel machine screws spaced 6-inches [150 mm] on centers.

2. Fit cover neatly and accurately in frames. Provide a minimum of four airtight plate cover lift handles for each plate cover section.

**2.04 - LOOSE LINTELS AND CMU PARTITION SUPPORTS**

A. Furnish loose lintels and CMU partition supports as indicated on drawings. Fabricate from structural steel shapes and plates. Hot-dip galvanize after fabrication.

**2.05 - ENGINE EXHAUST SLEEVE**

A. Fabricated of aluminum pipe or tubing with a minimum wall thickness of 1/8-inch. Inside diameter of sleeve 2 inches greater than outside diameter of exhaust pipe. Provide aluminum wall cover plate, aluminum plate with slip joint, and retaining ring. Weld plate to sleeve to form cover plate. Cut outer end to 45 degree.

**2.06 - GRAB BARS**

A. Provide grab bars at floor hatch openings adjacent to walls. Fabricated of 3/4-inch diameter solid aluminum rods and bent to shape indicated, with ends to be embedded in wall and bent downward for anchorage. Bars 2-feet wide with projected distance of 7 inches from wall to center of the bars.

**2.07 - ALUMINUM PIPE RAILS**

A. Provisions: All-welded assembly fabricated from 1-1/2-in. IPS, schedule 80 aluminum pipe, alloy 6061-T6 for posts, top rails and intermediate rails. Provide mitered connections at the intersections of posts and railings. Provide radius connections as indicated. Alloy of welding filler rods shall be compatible with alloy of posts and railings. Grind exposed welds smooth. Reinforce pipe rail posts with 14-inch long solid aluminum rod inserts at bottom of stanchions.

1. Complete railing, including anchorage and framing, and post spacing at a maximum of 4 feet on centers to withstand specified loading. Provide 1/4-inch thick aluminum kick plates as indicated.

2. Provide cast aluminum brackets for wall-mounted handrails.

3. Weld posts, to be mounted on top of stair stringers, to aluminum angle brackets. Fasten brackets to stringers with 1/2-inch diameter stainless steel bolts.

4. Side mount guard rail posts, to concrete. Weld to extruded aluminum brackets. Secure brackets to concrete with four 1/2-inch diameter stainless steel expansion bolts.

5. Set posts into concrete curbs, and into preformed holes. Secure in place with nonshrinking non-metallic grout. Provide holes at least 1 inch greater in diameter than outside diameter of posts and minimum of 6 inches deep.

6. Fabricate removable pipe railings in same manner as fixed railings.

7. Provide panels as large as practicable with joints between panels made neat and inconspicuous with exposed welds ground smooth.

**2.08 - ALUMINUM LADDERS**

A. Fabricate from 1-1/2-inch IPS, Schedule 80 aluminum pipe side rails and 1-inch solid round aluminum rod rungs, mortised and welded to uprights. Ladders for roof access, provide with uprights flared at top and turned back to form guard rails.

1. Provide rungs knurled or dimpled to minimize slipping.

B. Provide aluminum safety cages around ladders where the vertical distance between floors or landings is 20 feet or more. Fabricate cages from structural aluminum components as detailed.

C. Conform to OSHA Regulation 1910.27 for safety cages.

D. Ladder safety post extensions shall be provided on all fixed ladders 20 feet or less in height located below hatches and roof scuttles and as indicated. The aluminum telescoping tubular safety post extension shall lock in its vertical position and extend a minimum of 36 inches above the opening and shall be secured to the ladder rungs with stainless steel fasteners and brackets. The ladder post extension shall be Ladder UP Safety Post, Model LU-4 by Bilco Co.; Series L1E Safety Extension by Halliday Products; Pull-up Bar by Access Manufacturing or equal.

**2.09 - ALUMINUM FINISHES**

A. After fabrication, provide interior and exterior aluminum pipe railing assemblies, kick plates, posts, and ladders with Aluminum Association Standard clear anodized finish, Designation C22A41.

**2.10 - ALUMINUM PROTECTION**

A. Protect aluminum against electrolysis from all sources as specified in SECTION 01063, MISCELLANEOUS REQUIREMENTS. Under no circumstances shall aluminum contact a dissimilar metal.

1. Members Encased in Concrete: Zinc chromate primer.

2. Members in Contact with Concrete Masonry or Mortar: Coal tar epoxy.

B. Manufacturers:

1. 46H-413 Hi-Build Tnemec Tar by Tnemec Co., Inc.

2. Bitumastic 300M by Carboline Co.

3. Targuard by Sherwin Williams.

4. Or acceptable equivalent product.

**2.11 - RUNGS AND GRAB BARS**

A. Fabricate rungs from 1-inch diameter, Type 316 stainless steel rod and shaped to meet the requirements of OSHA 1910.27, Fig. D-1. Provide a clear width of 16 inches, drop front design approximately 3 inches deep and turned upward at least 2 inches at the embedded ends, and embed to a depth of 6 inches into the wall. Space rungs a maximum 12 inches apart vertically, and projecting 7 inches from face of wall to centerline of rungs. Provide stainless steel grab bars built into wall above the hinged floor plate covers.

1. Provide rung knurled or dimpled to minimize slipping.

**2.12 - FALL PREVENTION SYSTEM FOR LADDERS**

A. Provide ladders with a rigid, fall prevention system complete, of Type 316 stainless steel construction. Provide Saf-T-Climb system manufactured by Siebe Norton, Inc., Cerritos, CA, or an acceptable equivalent product.

1. System Components: Rigid notched carrier rail (1-5/16-inch stainless steel tubing) with guide channel, alignment guide and connecting strap; saf-t-lok sleeve and safety locking mechanism; mounting brackets; safety belt with two side "D" rings for attaching, body strap (nylon w/elk leather wrap), and buckle of stainless steel.

B. Conform to OSHA Regulation 1910.27 for fall prevention system.

**2.13 - STEEL BOLLARDS**

A. Pipe for the bollards shall be 6-inch O.D. in all locations standard strength galvanized steel conforming to ASTM A120 or A53, except for bollards located around electrical transformers which shall be 4 inch O.D.s standard strength galvanized steel conforming to ASTM A120 or A53. Lengths shall be such as to allow bollards to extend 4-feet above and below grade.

B. Concrete for bollard encasement and for filling the inside of the pipe shall conform to DIVISION 3, CONCRETE.

C. Bollards shall be covered with a dome top low-density polyethylene thermoplastic tube having ultra-violet resistance and anti-static properties with a nominal thickness of 0.250 inches. Color shall be OSHA yellow and surface of sleeve shall be smooth with round top. No ribbed or multiple piece systems accepted.

**2.14 - HATCHES**

A. Hatches shall be of the styles, types and sizes shown on the Contract Drawings. All hatches shall be of the same manufacturer. Manufacturer shall guarantee proper operation and against defects in material or workmanship for a period of five (5) years. All hatches shall be of aluminum as manufactured by the Bilco Company, Halliday Products Inc., or Babcock Davis.

B. Type J and JD hatches shall be single leaf and double leaf, respectively, watertight, self-draining type. Door leaf shall be of 1/4-inch thick aluminum diamond pattern plates reinforced with aluminum stiffeners as required and capable of withstanding a live load of 300 pounds per square foot. Channel frame shall be 1/4-inch thick aluminum with anchor flange around the perimeter. Each door leaf shall be equipped with a minimum of two (2) hinges, with stainless steel pins, compression spring operators enclosed in telescopic tubes to afford easy operation, and an automatic hold-open arm with release handle. Snap locks with removable handle and safety chains shall be provided. A 1-1/2-inch drainage coupling shall be located in the front right corner of the channel frame. Hardware shall be stainless steel with factory mill finish and bituminous coating applied to exterior of frame.

C. Type K and KD hatches shall be single leaf and double leaf, respectively. Door leaf shall be 1/4-inch thick aluminum diamond pattern plate reinforced with aluminum stiffeners as required and capable of withstanding a live load of 150 pounds per square foot. Channel frame shall be of 1/4-inch thick extruded aluminum with built-in neoprene cushion and with strap anchors bolted on the exterior. Door leaf shall be equipped with a minimum of two (2) hinges bolted to underside and pivoted on torsion bars that counterbalance the door for easy operation. The door shall open 90 degrees and lock automatically in that position. A vinyl grip handle shall be provided to release the cover for closing. Doors shall be equipped with a snap lock and removable handle. Hardware shall be stainless steel with factory mill finish and bituminous coating applied to exterior of frame.

D. Type J and JD hatches that are not shown connected to a drainage system shall be provided with extensions to the drainage coupling to allow drainage to the area below.

E. Hatches shall be installed in accordance with the recommendations of the manufacturer and as approved by the Engineer.

F. Hatches shall be provided with integral protective safety grating panels which operate independently from the hatch cover. Panel shall be constructed with aluminum “I” bar construction, all T-316 stainless steel hardware, tamper proof stainless steel hinge bolts, lockable with owner-supplied padlock, hinged with positive latch to maintain upright position, load rated consistent with access cover, view area for observation and limited maintenance, safety orange powder-coated finish, nut rail and stainless steel spring nuts with 300 psf loaded doors.

**2.15 - MISCELLANEOUS ITEMS**

A. Provide items of miscellaneous metalwork not particularly specified, of the shape, size, material and detail indicated and suitable for the purpose intended.

**PART 3 - EXECUTION**

**3.01 - GENERAL**

A. Accurately set and properly secure in place as indicated and specified. Where bolted connections are used, draw closely together and draw nuts tightly. Use bolts of lengths so that they do not project more than 1/4-inch [6 mm] beyond face of nut. Do not use washers unless specified. Provide hexagonal head bolts with hexagonal nuts.

B. Locate anchors and anchor bolts and build into connecting work. Insert expansion bolts into drilled holes.

C. After erection, clean aluminum with mild soap and water, followed by clear water rinse, after erection.

D. Miscellaneous metal items specified shall be installed as indicated, specified and in accordance with accepted shop drawings.

**3.02 - ALUMINUM PROTECTIVE COATING**

A. Protect aluminum from contact with dissimilar metals, concrete, masonry, motar or grout.

B. Coat surfaces of aluminum with heavy coat of bitumastic paint.

C. Before coating application, clean contact surfaces, remove dirt, grease, oil, foreign substances, followed by immersing in, or wipe thoroughly with, an acceptable solvent. Rinse with clean hot wate and dry thoroughly.

**3.03 - ALUMINUM PIPE RAILINGS**

A. Set posts plumb and align railings horizontal or parallel to rake of stairs to within 1/4 inch in 10 feet [6 mm in 3 meters] unless otherwise indicated.

B. Side mount posts to concrete with aluminum brackets as indicated.

C. Set top mounted posts in concrete curbs into preformed holes.

1. Provide holes at least 1 inch greater in diameter than outside diameter of posts and a minimum of 6 inches [150 mm] deep.
2. Moisten interior of holes and surrounding surfaces.
3. Set railing in position and brace until grout sets.
4. Secure in place with non-metallic, non-shrink grout. Provide 1/8-inch [3 mm] build up of grout around base of posts, sloped away from posts.

D. Provide butt splice joints with internal sleeves bonded with adhesive.

E. Provide expansion joints at intervals of not more than 32 feet [10 meters].

1. Locate joints within 6 inches [150 mm] of posts.
2. Provide slip joint with internal sleeve extending 2 inches [50 mm] beyond joint on each side.
3. Fasten internal sleeve securely to one side only.
4. Provide gap of 0.002 inch per foot per degree Fahrenheit [.10 mm per meter per degree Celsius].

**3.04 - ALUMINUM HANDRAILS**

A. Install aluminum handrail brackets spaced at a maximum of 4 feet [1.2 meters] on center.

**3.05 - LADDERS**

A. Anchor uprights to wall with angles or bent plates, weld to uprights and bolt expansion to wall. Ground smooth all welds.

B. Secure interior ladders to floor slabs with floor flanges.

C. Install safety cages or fall prevention system as indicated and in accordance with accepted shop drawings.

**3.06 - ALUMINUM GRATINGS AND FRAMES**

A. Accurately set and properly secure frames and gratings in place. Where bolted connections are used, draw closely together and draw nuts tightly.

B. Provide standard panel widths.

C. Perform cutting and fitting as required for installation.

D. Place grating panels such that cross bars align.

E. Cutouts for pipes or circular obstructions shall be 2-inch [50 mm] larger in diameter than the diameter of the obstruction.

F. Provide saddle clips, z-clips or other approved fasteners to secure grating at every 4-square feet. Provide a minimum of four fasteners per grating section.

G. Attachments shall permit removal of the grating panels.

**3.07 - ALUMINUM PLATE COVERS**

A. Accurately set and properly secure frames and covers in place. Where bolted connections are used, draw closely together and raw nuts tightly.

B. Set frames with welded anchors in forms prior to concrete placement.

C. Provide standard panel widths.

D. Perform cutting and fitting as required for installation.

E. Cutouts for pipes or circular obstructions shall be 2 inches [50 mm] larger in diameter than the diameter of the obstruction.

**3.08 - LIFTING HOOKS**

A. Fasten lifting hook to 1/2-inch by 4-inch by 11-inch steel anchor plate and assembly placed in formwork before concrete is placed.

B. Place lifting hooks in punched holes in bottom flange of steel beams and secure in place by nuts.

**3.09 - ENGINE EXHAUST SLEEVE**

A. Secure sleeve to masonry wall with two anchor lugs welded to sleeve. Fasten aluminum plate with slip joint around sleeve to masonry on inside. Fit retaining ring between sleeve and engine exhaust pipe to retain insulated packing.

**3.10 - GRAB BARS**

A. Space grab bars at 12-in. on center or as indicted. Apply protective coat of bituminous material to embedded parts of bars.

**3.11 - STRUCTURAL DOOR FRAMES**

A. Provide structural steel angles, plates and strap anchors as indicated.

**3.12 - ANGLE PROTECTION**

A. Provide structural steel angles and strap anchors as indicated and specified.

**3.13 - FALL PREVENTION SYSTEM**

A. Install in accordance with manufacturer's printed instructions and as specified.

**3.14 - ALUMINUM PLANK**

A. Acurately set and properly secure frames and planks in place. Where bolted connections are used. Draw closely together and draw nuts tightly.

B. Provide standard panel widths.

C. Perform cutting and fitting as required for installation.

D. Cutouts for pipes or circular obstructions shall be 2 inch larger in diameter than the diameter of obstruction.

E. Attachments shall permit removal of plank.

**3.15 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 07160**

**BITUMINOUS DAMPPROOFING**

**PART 1 - GENERAL**

**1.00 - SUBBID REQUIREMENTS**

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION shall include the complete Work specified in all of the following Sections:

1. SECTION 07610, BITUMINOUS DAMPPROOFING
2. SECTION 07840, FIRESTOPPING
3. SECTION JOINT SEALANTS

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-101 | 10 A-102 | 10 A-201 | 10 A-202 | 10 A-301 | 10 A-302 |
| 10 A-303 | 10 A-304 | 10 A-305 | 10 A-406 | 10 A-407 | 10 A-505 | 10 A-602 |
| 10 A-603 | 10 A-604 | 10 A-605 | 10 A-606 | 10 A-607 | 00 S-001 | 00 S-002 |

| 00 E-601 | 20 E-101 | 20 E-102 | 99 E-501 | 00 FA-001 | 20 FA-101 | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 07610, BITUMINOUS DAMPPROOFING,
SECTION 07840, FIRESTOPPING and SECTION07900, JOINT SEALANTS

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SCOPE**

A. Provide and apply materials for below grade dampproofing as indicated and specified.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Product data for each type of product specified, including data substantiating that materials comply with requirements for each dampproofing material specified. Include recommended method of application, recommended primer, number of coats, coverage or thickness, and recommended protection course. Product data from dampproofing manufacturer stating the specified VOC content and compliance.

2. Recycled Content Submittal

a. For products having recycled content, documentation indicating specified percentages by weight of postconsumer and pre-consumer recycled content.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.

E. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with Section 01400 and as specified herein.

B. Installer Qualifications: Engage an experienced Installer who has completed bituminous dampproofing similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

C. Single-Source Responsibility: Obtain primary dampproofing materials and primers from one source and by a single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

**1.08 - REFERENCES**

A. American Society for Testing and Materials (ASTM) Publications:

1. D 1227: Specification for Emulsified Asphalt used as a Protective Coating for Roofing.

2. D 1621: Standard Test Method for Compressive Properties of Rigid Cellular Plastics.

B. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - SYSTEM PERFORMANCE REQUIREMENTS**

A. Provide joint sealants that have been produced and installed to establish and to maintain watertight and airtight continuous seals without causing staining or deterioration of joint substrates.

B. Provide joint sealants for interior applications that have been produced and installed to establish and maintain airtight continuous seals that are water resistant and cause no staining or deterioration of joint substrates.

**1.10 - PROJECT CONDITIONS**

A. Substrate: Proceed with dampproofing only after substrate construction and penetrating work have been completed.

B. Weather Limitations: Proceed with dampproofing only when existing and forecasted weather conditions will permit work to be performed according to manufacturer's recommendations and warranty requirements.

**1.11 - SEQUENCING AND SCHEDULING**

A. Sequence installation of joint sealants to occur not less than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

**PART 2 - PRODUCTS**

**2.01 - MANUFACTURERS**

A. Hydrocide 700B Semi-mastic by ChemRex, Inc.; Sonneborn Building Products Div.

B. Liquid Asphalt 472 Emulsion by Koppers Industries, Inc.

C. 220AF Fibered Dampproofing by Karnak Chemical Corporation.

D. Or acceptable equivalent product

**2.02 - BITUMINOUS DAMPPROOFING**

A. Cold-Applied, Asphalt Emulsion Dampproofing: Asphalt-based emulsions recommended by the manufacturer for dampproofing use when applied according to the manufacturer's printed instructions.

1. Semi-mastic Grade: Emulsified asphalt semi-mastic, prepared with mineral-colloid emulsifying agents and containing fibers other than asbestos, complying with ASTM D 1227, Type II, Class I.

2. VOC Content: 0.25 lb/gal. (30 g/L) or less

**2.03 – PROTECTION COURSE**

A. Protection Course: Unfaced, fan-folded, extruded-polystyrene board insulation, nominal thickness ¼ inch with compressive strength of not less than 8 psi per ASTM D1621.

1. Recycled Content: Provide extruded polystyrene board insulation with recycled content so postconsumer recycled content plus one-half of pre-consumer recycled content is not less than thirty (30) percent

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint sealant performance. Do not proceed with installation of joint sealants until unsatisfactory conditions have been corrected.

**3.02 - PREPARATION**

A. Clean substrate of projections and substances detrimental to work; comply with recommendations of manufacturer.

B. Install cant strips and similar accessories as shown and as recommended by manufacturer.

C. Fill voids, seal joints, and apply bond breakers as recommended by manufacturer.

D. Install separate flashings and corner protection stripping, as recommended by manufacturer, where indicated to precede application of dampproofing. Comply with details shown and with manufacturer's recommendations.

E. Prime substrate as recommended by manufacturer.

F. Protection of Other Work: Do not allow liquid and mastic compounds to enter and clog drains and conductors. Prevent spillage and migration onto other surfaces of work by masking or otherwise protecting adjoining work.

**3.03 – INSTALLATION, GENERAL**

A. Comply with manufacturer's printed instructions except where more stringent requirements are indicated and where Project conditions require extra precautions to ensure satisfactory performance of work.

B. Application: Apply dampproofing to the following surfaces.

1. Exterior, below-grade surfaces of exterior concrete walls in contact with earth or other backfill.

2. Back side of concrete or masonry retaining walls and stone facing to prevent percolating of water through the wall or facing.

3. Where indicated on the Drawings.

C. Apply vertical dampproofing down walls from finished-grade line to top of footing, extend over top of footing, and down a minimum of 6 inches over outside face of footing. Extend 12 inches onto intersecting walls and footings, but do not extend onto surfaces exposed to view when the Project is completed.

D. Semimastic Grade: Brush or spray apply a coat of asphalt emulsion dampproofing at a rate of 5 gal./100 sq. ft., to produce a uniform, dry-film thickness of not less than 30 mils.

**3.04 – PROTECTION AND CLEANING**

A. General: Where indicated, install protection course of type indicated over completed and cured dampproofing treatment. Comply with dampproofing materials manufacturer's recommendations for method of support or attaching of protection materials. Support with spot application of trowel-grade mastic where not otherwise indicated.

**3.05 - INSTALLATION OF PROTECTION COURSE**

A. General: Where indicated, install protection course of type indicated over completed and cured dampproofing treatment. Comply with dampproofing materials manufacturer's recommendations for method of support or attaching of protection materials. Support with spot application of trowel-grade mastic where not otherwise indicated.

**3.06 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 07610**

**METAL ROOFING**

## PART 1 – GENERAL

### 1.00 - SUB-BID REQUIREMENTS

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION shall include the complete Work specified in all of the following Sections:

1. SECTION 07610, METAL ROOFING
2. SECTION 07710, ROOF SPECIALTIES

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

E. Reference Drawings

1. The Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-102 | 10 A-103 | 10 A-201 | 10 A-202 | 10 A-301 | 10 A-302 |
| 10 A-303 | 10 A-305 | 10 A-505 | 10 A-603 | 00 S-001 | 00 S-002 | 10 S-105 |
| 10 S-303 | 99 S-505 | 99 S-506 | | | | |

2. The Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION for Alternative No. A-1 is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 20 A-101 | 20 A-102 | 20 A-201 | 20 A-202 | 20 A-301 | 20 A-302 |
| 20 A-501 | 00 S-001 | 00 S-002 | 20 S-102 | 99 S-505 | 99 S-506 | |

F. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 07610, METAL ROOFING and
SECTION 07710, ROOF SPECIALTIES

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

G. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SUMMARY**

A. Scope of Work: Contract Drawings indicate extent and general configuration of roof. Provide materials for and install complete roof system including, but not limited to:

1. Metal Roof.
2. Underlayment Board.
3. Exterior Sheathing.
4. Fasteners and attachment devices.
5. Flashings and other accessories.
6. Attic ventilation accessories.

B. Material Included But Not Installed Under This Section:

1. Extra Stock: Matching sheet metal for fabrication and installation under Section. Furnish extra stock in timely sequence.

**1.02 - REFERENCES**

A. Aluminum Association: “Publication 35: Specifications for aluminum sheet metal work in building construction.”

B. American Society for Testing and Materials, current edition to apply:

C. B209 – Aluminum and Aluminum-Alloy Sheet and Plate.

D. Underwriters Laboratory: Building Materials Directory.

E. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.03 – PERFORMANCE REQUIREMENTS**

A. Structural Design: Comply with design criteria.

B. Watertightness: No uncontrolled water leakage shall occur through roof system.

C. Wind Uplift: Shall be installed to meet applicable building codes.

D. Fire Safety: Shall be installed to meet applicable building codes.

E. Material Compatibility: Prevent contact between dissimilar metals and between metals and potentially corrosive or staining substances.

F. Special Environmental Conditions: Roof shall be compatible with following environmental conditions when applicable:

1. Marine environment.

2. High industrial pollution levels.

G. Expansion and Contraction: Shall be installed to accommodate thermal expansion and contraction.

**1.04 - SUBMITTALS**

A. Product Data: Submit manufacturer's specifications, standard detail drawings and installation instructions.

B. Shop Drawings:

1. Submit shop drawings indicating thickness and dimensions of parts, fastenings and anchoring methods.

2. Indicate roof terminations, clearly showing flashings and change of direction.

3. Clearly indicate locations of field-applied sealant.

4. Show locations of nailing clips and fasteners.

5. Provide a plan showing layout of entire roof.

C. Samples:

1. Submit two sample panels showing metal thickness, profile and required finish.

2. Submit standard color samples on metal for Architect's selection.

D. Applicators: Submit list of completed Projects and name of Architects.

**1.05 – QUALITY ASSURANCE**

A. Manufacturer's Qualifications:

1. Twenty years minimum experience in factory fabrication of metal roofing systems.

2. Products listed in this specification section are as manufactured by Classic Products, Inc.

3. No other bidder will be accepted without prior written approval of architect based upon other manufacturer's products meeting all specified requirements.

4. Substitution requests must be submitted at least ten working days prior to bid date and approved substitutions will be set forth in an addendum.

5. No substitutions will be permitted after bid date.

6. No fax requests will be accepted.

B. Installer's Qualifications: Installer shall provide necessary manpower and equipment to assure progress of work in accordance with Project schedule. Installer shall employ a foreman on Project site who shall have a minimum of five years experience installing similar products on comparable projects.

C. Regulatory Requirements: Comply with requirements of applicable building codes and other agencies having jurisdiction for wind uplift ratings.

D. Pre-Installation Conference:

1. Conduct meeting.

2. Convene and conduct pre-installation conference. Notify others whose work requires coordination with roof installation.

3. Review and coordinate scheduling, sequencing of trades that influence roof installation, tool and utility requirements, and other Project requirements.

**1.06 – DELIVERY, STORAGE AND HANDLING**

A. Comply with manufacturer's delivery, storage and handling instructions.

B. Schedule deliveries to assure continuous progress of work.

C. Protect products against damage.

D. Store under waterproof covering, with proper ventilation to prevent condensation.

E. Inspect materials upon arrival at site and note damaged materials. Do not install damaged materials.

F. Verify access limitations to site and roof. Verify that materials proposed to be stored or staged on roof do not exceed structural limitations of building.

**1.07 – SEQUENCE AND SCHEDULING**

A. Schedule work of this Section to avoid impeding work of other sections.

**1.08 – WARRANTY**

A. Furnish manufacturer's standard limited transferable warranty stating architectural fluorocarbon finish will be:

1. Free of fading or color change in excess of 5 NBS units as measured per ASTM D2244 for a period of 20 years.

2. Will not chalk in excess of numerical rating of 8 when measured in accordance with standard procedures specified in ASTM D659 for a period of 20 years.

3. Will not peel, crack or delaminate for a period of 50 years.

B. Furnish written warranty signed by applicator for five-year period from date of substantial completion of building covering repairs required to maintain roof and flashings in watertight conditions.

## PART 2 - PRODUCTS

### 2.01 - MANUFACTURER

A. Acceptable Manufacturers

1. Classic Metal Roof Systems
2. Modern, Standing Seam Metal Roofing
3. East Coast Metal Roofing, Inc.

B. Basis of Design Product: Oxford Shingle aluminum roofing panels as manufactured by Classic Metal Roof Systems, Inc., Piqua, OH, Tel. 1-800-543-8938.

C. Substitutions

1. Substitutions must fully comply with specified requirements.
2. Refer to Quality Assurance Section 1.05 for substitution request procedures.

### 2.02 - MATERIALS

A. Panels

1. Metal roofing shall be roll formed tension-leveled panels. Panel material shall be with a minimum thickness of 0.032, 3105-H14 aluminum with a smooth texture and coated with a two coat Kynar 500 or Hylar 5000 finish applied over a polyester prime coat.
2. Provide factory-formed interlocking panels with a 12-inch x 60-inch exposure.
3. Panels shall be warranted for 20 years against peeling, cracking, blistering, chipping, and rust-through. Color will be selected from the manufacturer's premium color range.

### 2.03 - ACCESSORIES

A. General: Accessories shall be as recommended by roof system manufacturer to meet performance criteria.

B. Base and counter flashings, copings, fascias, and trim shall be of the same material and thickness and have the same finish as the roof panels. All hold down clips and fasteners shall be concealed and made of galvanized steel or stainless steel. All components shall be manufactured by the roofing system manufacturer

C. Soffit panels shall be roll-formed with a minimum thickness of 0.032 aluminum and coated with a two coat Kynar 500 or Hylar 5000 finish as used for the roof panels. Matching "J" channel trim shall be provided. Panels shall be Full Vent PAC-750 soffit as manufactured by PAC-CLAD. Color to be selected from the manufacturer's standards

D. Gutters shall be 4-inch x 6-inch, 0.032 aluminum with concealed hangers. Color to match adjacent trim or siding color. Provide end caps, corners and all accessories.

H. Downspouts shall be 3-inch x 4-inch, 316 Stainless Steel with boots and concealed fasteners. Color to be stainless steel with brushed finish.

I. Snow Cleat System shall be Cleat System or equal approved for use with the metal shingle roof panels by the metal roof system manufacturer. Rail system shall be clamped to the metal shingles and held in place with set screws. Rails shall match roof panel color.

J. Roof jacks shall be made of EPDM rubber compound resistant to ozone and UV light. Life expectancy within a temperature range of -65 to 250 degrees F shall be 20 years.

E. Install eaves membrane around entire chimney(s) extending at least 6 inches (152mm) up the wall and 12 inches (305mm) on to the roof surface. Lap the membrane over the roof deck underlayment

F. Underlayment

1. Self-Adhered Underlayment installed on roof eaves, rakes, ridges, and valley of entire roof. See roof plans for exact locations and dimensions. Self-adhering waterproof membrane to be made of rubberized asphalt with a cross laminated polyethylene film or Polymer Modified Bituminous Sheet Materials used as Steep Roofing Underlayment with a minimum thickness of 60 mils as manufactured by W.R. Grace Construction Products, or equal

    a. Basis of Design: Grace Ultra – Roofing Underlayment.

2. One layer 30 lb. asphalt felt; ASTM D226; or one layer Roof Aqua Guard or other synthetic underlayment in field area of roof as shown on roof plan.

G. Exterior Sheathing Board: See spec SECTION 06200, CARPENTRY.

H. Flashing

1. Flashings shall provide for positive drainage, prevent ponding of water, and allow moisture to drain off roof without affecting underlying construction. Flashing to prevent capillary action.

2. Flashings utilizing pop rivets must be self-sealing or sealed with sealant and always be above line of water flow.

I. Penetration Seals

1. Round Penetrations: Flash with aluminum and neoprene pipe boots.

2. Rectangular Openings: Flash with flashings compatible with roof system.

J. Snow Retention Devices: If necessary, provide and install snow retention devices approved by roof manufacturer for use with roof system.

K. Fasteners

1. Panels shall be fastened to the deck with nail clips provided by the roof system manufacturer. Use 5 clips per panel and one fastener per clip.

2. Provide fasteners of sizes and types required by Project conditions to meet performance specifications and roof manufacturer's recommendations. Fasteners shall be corrosion resistant and compatible with roofing and other materials.

3. Pop Rivets: Provide non-corroding, not-staining type. They shall be sealed and located above flow of water. Rivets shall have a minimum shank diameter of 0.125 inches and shall be of sufficient length to form a proper head.

L. Sealants

1. Sealants shall be color-matched butyl rubber sealant provided by roof system manufacturer, non-corrosive and compatible to adjacent material.

2. Seal with cartridge-type sealant.

    a. Sealants shall remain fluid.

    b. Sealants shall adhere to panel surfaces. Clean panels that may be lightly coated with lubricants or airborne contaminants. Sealants must be compatible with contiguous materials.

    c. Sealants should be applied only to dry surfaces.

**2.04 - FINISHES**

A. Painted

1. Pretreatment: Metal shall undergo continuous cleaning, rinsing, and chemical conversion process immediately prior to painting.

2. Exterior Coat:

a. Primer coat shall be 0.2 mil minimum average thick, fully cured, and corrosion resistant and flexible base for topcoat.

b. Topcoat shall yield a 0.7 mil minimum average thick coating. Topcoat shall be fully cured and of consistent color throughout Project.

c. Adhesion:

(1) Bend Test: 1/8" mandrel, no tape pull-off per ASTM D522.

(2) Reverse Impact: 3 x metal thickness per ASTM D2794.

d. Corrosion Resistance:

(1) Salt Spray: 1000 hours per ASTM B117.

e. Accelerated Weathering: 2,000 hours per ASTM G23 or ASTM G26.

f. Weatherability: 5-year South Florida or equivalent exterior exposure:

(1) Color Retention: 5 AEE units maximum degradation per ASTM D2244.

(2) Chalk resistance: 8 minimum rating per ASTM D4214.

3. Gloss Retention: 75% minimum retention per ASTM D523.

4. Back Coat: Corrosion resistant primer plus wash coat, 0.7 mil minimum average total dry thickness.

B. Color: As selected by architect from manufacturer’s standard colors. (Custom colors available, consult manufacturer.)

**2.05 – FABRICATION TOLERANCES**

A. Panel Construction: Uniformly dimensioned. Fasteners and nailing clips shall be concealed.

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine substrate to ensure it is solid and smooth.

B. Do not commence installation until field conditions have been verified.

C. Ensure cuttings from field fabrication are removed prior to installation.

**3.02 - PREPARATION**

A. Field measure prior to fabrication of custom fabricated items.

B. Lay out work to provide random appearance and to avoid short courses. Where field cutting is required, make cuts in a workmanlike manner.

C. Protection:

1. Adjacent surfaces: When possible, install flashings prior to siding and stucco installation.

2. Dissimilar metals: Isolate any dissimilar metals to prevent corrosion.

**3.03 - INSTALLATION**

A. General: Comply with approved shop drawings, manufacturer's installation instructions, and applicable construction and safety regulations.

B. Underlayment: Install underlayment according to procedures recommended by roof system manufacturer.

C. Panels shall be interlocked with each other and securely attached to the roof deck.

D. Flashings:

1. Follow approved details.
2. Flashings shall be lapped four inches and fastened 12 inches on center.
3. Lap valley minimum of six inches.
4. Allow for expansion and contraction of lineal accessories.

E. Protective Materials: Provide temporary protective materials if needed to protect previously installed roof surfaces.

F. Sealants:

1. Apply only to dry surfaces in accordance with sealant and roof manufacturer's instructions.
2. Apply only in bend thickness of minimum 3/8".
3. Apply in workmanlike manner.
4. Install sealants only when ambient temperature and conditions are in accordance with sealant manufacturer's recommendations.

G. Accessories: Securely install in accordance with manufacturer’s instructions.

**3.04 – ADJUSTING, CLEANING, AND PROTECTION**

A. Protect roof from damage by work of other sections on, above, or adjacent to roof.

B. Installed panels and accessories shall be secured before leaving roof area at end of day.

C. Keep installed roof clean and protected from damage.

D. Clean gutters of roof installation debris at completion.

E. Repair minor damage to finishes. Use matching coatings recommended by roof manufacturer. Remove and replace items which can not be satisfactorily repaired.

F. Protect roofing from metal filings or shavings. Metal filings or shavings shall be cleaned from panels or flashing surfaces by end of each day.

**3.05 - CONTRACT CLOSEOUT**

G. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 07840**

## PART 1 – GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 07840, FIRESTOPPING is a part of DIVISION 07 THERMAL AND MOISTURE PROTECTION which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 07160 – BITUMINOUS DAMPROOFING.

B. The Work of SECTION 07840, FIRESTOPPING, requires the Subcontractor to perform all Work specified under this section.

**1.01 - SCOPE**

A. Provide firestopping as indicated and specified including the following:

1. Penetrations through fire resistance rated floor and roof construction including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

2. Penetrations through fire resistance rated walls and partitions including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

3. Penetrations through smoke barriers and construction enclosing compartmentalized areas involving both empty openings and openings containing penetrating items.

4. Sealant joints in fire resistance rated construction, including gypsum drywall partitions, masonry walls and adjacent construction.

B. General Contractor shall be responsible for providing firestopping for the project.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Product Data: Submit manufacturer's literature for each type of Firestop material to be installed. Indicate product characteristics, typical uses, performance and limitation criteria, and test data.

2. Shop Drawings: Show typical installation details for the methods of installation. Indicate which firestop materials will be used where and thickness for different hourly ratings. Include firestop design designation of qualified testing and inspecting agency evidencing compliance with requirements for each condition indicated.

a. For those firestop applications that exist for which no UL tested system is available through a manufacturer, a manufacturer's engineering judgement derived from a similar UL system design or other tests shall be submitted to local authorities having jurisdiction for their review and approval prior to installation. Manufacturer's engineering judgement shall follow the requirements set forth by the International Firestop Council.

3. Certificates: Submit certificates signed by manufacturers of firestopping products certifying that their products comply with specified requirements.

4. Installation Instructions: Submit manufacturer's installation procedures for each type of product.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver firestopping products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; lot number and shelf life.

E. Store and handle firestopping materials to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Fire-Test-Response Characteristics: Provide firestopping that complies with the following requirements and those specified under the “System Performance Requirements” article:

1. Firestopping tests are performed by UL, Warnock Hersey, or another agency performing testing and follow-up inspection services for firestop systems that is acceptable to authorities having jurisdiction.

2. Through-penetration firestop systems are identical to those tested per ASTM E 814.

3. Fire-resistive joint sealant systems are identical to those tested for fire-response characteristics per ASTM E 119.

C. Installer Qualifications: Engage an experienced Installer who has completed firestopping that is similar in material, design, and extent to that indicated for Project and that has performed successfully.

D. Single Source Responsibility: Obtain through penetration firestop systems for each kind of penetration and construction condition indicated from a single manufacturer.

E. Provide firestopping products containing no detectable asbestos as determined by the method specified in 40 CFR Part 763, Subpart F, Appendix A, Section 1, "Polarized Light Microscopy."

F. Coordinating Work: Coordinate construction of openings and penetrating items to ensure that designated through penetration firestop systems are installed per specified requirements.

G. Preinstallation Conference: Conduct conference at Project site.

H. Field Testing of firestop systems will be performed for each type of firestop systems.

**1.08 - REFERENCES**

A. American Society for Testing and Materials (ASTM) Publications:

1. E84: Test Methods for Surface Burning Characteristics of Building Materials.

2. E119: Test Methods for Fire Tests of Building Construction and Materials.

3. E814: Test Method for Fire Tests of Through-Penetration Five Stops.

B. Underwriters Laboratories Inc.

1. UL Fire Resistance Directory.

C. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - SYSTEM PERFORMANCE REQUIREMENTS**

A. General: Provide firestopping systems that are produced and installed to resist the spread of fire, according to requirements indicated, and the passage of smoke and other gases.

B. F-Rated Through Penetration Firestop Systems: Provide through penetration firestop systems with F ratings indicated, as determined per ASTM E 814, but not less than that equaling or exceeding the fire resistance rating of the constructions penetrated.

C. T-Rated Through Penetration Firestop Systems: Provide through penetration firestop systems with T ratings, in addition to F ratings, as determined per ASTM E 814, where indicated and where systems protect penetrating items exposed to contact with adjacent materials in occupiable floor areas. T-ratings shall be per code but not less than 1 hour. T-rated assemblies are required where the following conditions exist:

1. Where firestop systems protect penetrations located outside of wall cavities.
2. Where firestop systems protect penetrations located outside fire resistive shaft enclosures.
3. Where firestop systems protect penetrations located in construction containing doors required to have a temperature rise rating.
4. Where firestop systems protect penetrating items larger than a 4 inch diameter nominal pipe or 16 square inches in overall cross sectional area.

D. Fire Resistive Joint Sealants: Provide joint sealants with fire resistance ratings indicated, as determined per UL 2079, but not less than that equaling or exceeding the fire resistance rating of the construction in which the joint occurs.

E. For Firestopping Exposed to View, Traffic, Moisture, and Physical Damage, Provide Products That Do Not Deteriorate When Exposed to These Conditions:

1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
2. For floor penetration with annular spaces exceeding 4 inches or more in width and exposed to possible loading and traffic, provide firestop systems capable of supporting the floor loads involved either by installing floor plates or by other means.
3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

F. For firestopping exposed to view, provide products with flame spread values of less than 25 and smoke developed values of less than 450, as determined per ASTM E 84.

**1.10 - PROJECT CONDITIONS**

A. Environmental Conditions: Do not install firestopping when ambient or substrate temperatures are outside limits permitted by firestopping manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Ventilation: Ventilate firestopping per firestopping manufacturers' instructions by natural means or, where this is inadequate, forced air circulation.

**1.11 - SEQUENCING AND SCHEDULING**

A. Coordinate the work of this Section as required with the work of other trades.

B. Coordinate construction of openings and penetrating items to ensure that firestopping systems are installed according to specified requirements.

C. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.

D. Do not cover up those firestopping installations that will become concealed behind other construction until Owner’s inspection agency and authorities having jurisdiction, if required, have examined each installation.

1. Notify the Owner’s inspecting agency at least seven days in advance of through-penetration firestop system installations. Confirm dates and times on days preceding each series of installations.

## PART 2 - PRODUCTS

### 2.01 - GENERAL

A. All firestop products and systems shall be designed and installed so that the basic sealing system will allow the full restoration of the thermal and fire-resistance properties of the barrier being penetrated with minimal repair if penetrants are subsequently removed.

1. Provide paintable firestop products at locations exposed to the public. Mechanical and electrical rooms are not considered public spaces.

2. Provide VOC compliant materials.

B. Compatibility: Provide through-penetrations firestop systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.

C. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by the qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:

1. Permanent forming/damming/backing materials, including, but not limited to, the following:

a. Slag-/rock-wool-fiber insulation.

b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.

c. Fire-rated form board.

d. Fillers for sealants.

2. Temporary forming materials.

3. Substrate primers.

4. Collars.

5. Steel sleeves.

### 2.02 - MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

1. Specified Technologies Inc. (STI), Somerville, NJ.

2. Hilti, Inc., Tulsa, OK.

3. 3M Fire Protection Products, St. Paul, MN.

4. Bio Fireshield, Carlisle, MA.

5. W.R Grace, Flamesafe.

6. Or acceptable equivalent product.

### 2.03 - MATERIALS

A. Firestop Mortar:

1. Specified Technologies Inc. SpecSeal Mortar.

2. Bio Fireshield Novasit K-10.

3. Hilti FS 635 Trowelable Firestop Compound.

B. Firestop Sealants and Caulks:

1. STI SpecSeal Sealant.
2. Dow Corning Firestop Sealant No. 2000.
3. 3M CP25WB + Caulk.
4. Bio Fireshield Biotherm and Biostop.
5. Hilti FS-ONE High Performance Intumesent Firestop Sealant.

C. Firestop Putty:

1. STI Spec-Seal Firestop Putty Bars and Pads.
2. 3M MPS-2 Moldable Putty Stix and Putty Pads.
3. Hilti CP 617 and CP 618 Putty Pads and Putty Sticks.

D. Firestop Collars:

1. STI SpecSeal Firestop Collars.
2. 3M PPD Collars.
3. B10 Fireshield Bio Firestop Sleeve.
4. Hilti CP 643 and CP 642 Firestop Collars.

E. Wrap Strips:

1. SpecSeal Wrap Strip.
2. 3M FS-195 Wrap Strip.
3. Hilti CP 645 Firestop Wrap Strips.

F. Cast-In-Place Firestop Device:

1. Hilti CP 680 Cast-In-Place Firestop Device.

G. Fire Safing Insulation:

1. Fibrex Insulations, Inc.
2. Owens Corning HT, Inc.
3. Thermafiber LLC.
4. Or approved equal.

H. Accessories: Forming/damming materials - mineral fiberboard or other type recommended by manufacturer.

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of firestopping. Do not proceed with installation until unsatisfactory conditions have been corrected.

**3.02 - PREPARATION**

A. Surface Cleaning: Clean out openings and joints immediately prior to installing firestopping to comply with recommendations of firestopping manufacturer and the following requirements:

1. Remove all foreign materials from surfaces of opening and joint substrates and from penetrating items that could interfere with adhesion of firestopping.

2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.

3. Remove laitance and form release agents from concrete.

4. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

B. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing firestopping's seal with substrates.

**3.03 - INSTALLING THROUGH PENETRATION FIRESTOPS**

A. General: Comply with the "System Performance Requirements" article in Part 1 and the through penetration firestop manufacturer's installation instructions and drawings pertaining to products and applications indicated.

B. Install forming/damming materials and other accessories of types required to support fill materials during their application and in the position needed to produce the cross sectional shapes and depths required to achieve fire ratings of designated through penetration firestop systems. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

C. Install Fill Materials for Through Penetration Firestop Systems by Proven Techniques to Produce the Following Results:

1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.

2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.

3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

D. Install fire safing insulation at all interior full-height fire rated walls at roof intersections.

**3.04 - FIELD QUALITY CONTROL**

A. Allow for 3 random samples of each type of firestopping system to be inspected. Reinstall disturbed samples to comply with requirements.

B. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.

C. Where deficiencies are found, repair or replace firestopping so that it complies with requirements.

**3.05 - CLEANING**

A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturers of firestopping products and of products in which opening and joints occur.

B. Protect firestopping during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated firestopping immediately and install new materials to produce firestopping complying with specified requirements.

**3.06 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 07900, JOINT SEALANTS is a part of DIVISION 07, THERMAL AND MOISTURE PROTECTION which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 07160, BITUMINOUS DAMPPROOFING.

B. The work of SECTION 07900, JOINT SEALANTS, requires the subcontractor to perform all work specified under this section

### 1.01 - SCOPE

C. Provide joint sealants as indicated and specified including the following:

1. Exterior Joints in Vertical Surfaces and Non-traffic Horizontal Surfaces as Indicated Below:
    a. Joints between architectural precast concrete units.
    b. Control and expansion joints in unit masonry.
    c. Perimeter joints between materials listed above and frames of doors, louvers, and windows.
    d. Other joints as indicated.
    e. Joints at precast concrete coping.
2. Interior Joints in Vertical Surfaces and Horizontal Non-traffic Surfaces as Indicated Below:
    a. Control and expansion joints on exposed interior surfaces of exterior walls.
    b. Perimeter joints of exterior openings where indicated.
    c. Tile control and expansion joints.
    d. Vertical control joints on exposed surfaces of interior unit masonry walls and partitions.
    e. Perimeter joints between interior wall surfaces and frames of interior doors, louvers, and windows.
    f. Perimeter joints of toilet fixtures.
    g. Other joints as indicated.
3. Interior Joints in Horizontal Traffic Surfaces as Indicated Below:
    a. Joints as indicated.

D. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Product Data: For each joint sealant product specified.
2. Samples: For selection purposes submit three (3) of manufacturer's standard color chart including bead samples, consisting of strips of actual products showing full range of colors available, for each product exposed to view.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.

E. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Installer Qualifications: Engage an experienced Installer who has completed joint sealant applications similar in material, design, and extent to that indicated for Project that have resulted in construction with a record of successful in service performance.

C. Single Source Responsibility for Joint Sealant Materials: Obtain joint sealant materials from a single manufacturer for each different product required.

**1.08 - REFERENCES**

A. American Society for Testing and Materials (ASTM) Publications:

1. ASTM C 834: Standard Specification for Latex Sealing Compounds.
2. ASTM C 919: Standard Practice for Use of Sealants in Acoustical Applications.
3. ASTM C 920: Standard Specification for Elastomeric Joint Sealants.
4. ASTM C 1193: Standard Guide for Use of Joint Sealants.

B. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - SYSTEM PERFORMANCE REQUIREMENTS**

A. Provide joint sealants that have been produced and installed to establish and to maintain watertight and airtight continuous seals without causing staining or deterioration of joint substrates.

B. Provide joint sealants for interior applications that have been produced and installed to establish and maintain airtight continuous seals that are water resistant and cause no staining or deterioration of joint substrates.

**1.10 - PROJECT CONDITIONS**

A. Environmental Conditions: Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside the limits permitted by joint sealant manufacturer.
2. When ambient and substrate temperature conditions are outside the limits permitted by joint sealant manufacturer or below 40 degrees F (4.4 degrees C).
3. When joint substrates are wet.

B. Joint Width Conditions: Do not proceed with installation of joint sealants where joint widths are less than allowed by joint sealant manufacturer for application indicated.

C. Joint Substrate Conditions: Do not proceed with installation of joint sealants until contaminants capable of interfering with their adhesion are removed from joint substrates.

**1.11 - SEQUENCING AND SCHEDULING**

A. Sequence installation of joint sealants to occur not less than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

**PART 2 - PRODUCTS**

**2.01 - MATERIALS**

A. Compatibility: Provide joint sealants, joint fillers, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

1. Provide paintable sealants at locations that are exposed to view.

**2.02 - MANUFACTURERS**

A. Type 1 - General Purpose Exterior Sealant: Polyurethane; ASTM C920, Type M, Grade NS, Class 25; two components.

1. Sonolastic NP-2; Sonneborne
2. Dymeric; Tremco
3. Sikaflex-2c, NS; Sika
4. Dynatrol 2; Pecora
5. Vulkem 922; Vulkem
6. Chem-Calk 500; Bostik
7. Or acceptable equivalent product.

B. Type 2 - General Purpose Interior Sealant: Acrylic emulsion latex; ASTM C834, single component, paintable.

1. Tremco Acrylic Latex; Tremco
2. AC-20; Pecora
3. Chem-Calk 600; Bostik
4. Or acceptable equivalent product.

C. Type 3 - Bathtub/Tile Sealant: White silicone; ASTM C920, Uses M and A; single component, mildew resistant.

1. Sanitary 1700; GE Silicones
2. 898 Silicone; Pecora
3. 786 MR Silicone; Dow Corning
4. Or acceptable equivalent product.

D. Type 4 - Acoustical Sealant: Butyl or acrylic sealant; ASTM C920, Grade NS, Class 12-1/2, Uses M and A; single component, solvent release curing, non-skinning.

1. Tremco Acoustical Sealant; Tremco
2. AC-20 FTR Acoustical Sealant; Pecora Corp.
3. Sheetrock Acoustical Sealant; United States Gypsum Co.
4. Or acceptable equivalent product.

**2.03 - JOINT SEALANT BACKING**

A. General: Provide sealant backings of material and type that are nonstaining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Plastic Foam Joint Fillers: Preformed, compressible, resilient, nonstaining, nonwaxing, nonextruding strips of flexible plastic foam of material indicated below and of size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance:

1. Closed cell polyethylene foam, nonabsorbent to liquid water and gas, nonoutgassing in unruptured state.

C. Bond Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self adhesive tape where applicable.

**2.04 - MISCELLANEOUS MATERIALS**

A. Primer: Material recommended by joint sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealant substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming in any way joint substrates and adjacent nonporous surfaces, and formulated to promote optimum adhesion of sealants with joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint sealant performance. Do not proceed with installation of joint sealants until unsatisfactory conditions have been corrected.

**3.02 - PREPARATION**

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with recommendations of joint sealant manufacturer and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean concrete, masonry, unglazed surfaces of ceramic tile, and similar porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil free compressed air.

3. Remove laitance and form release agents from concrete.

4. Clean metal, glass, porcelain enamel, glazed surfaces of ceramic tile, and other nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.

B. Joint Priming: Prime joint substrates where indicated or where recommended by joint sealant manufacturer based on preconstruction joint sealant substrate tests or prior experience. Apply primer to comply with joint sealant manufacturer's recommendations. Confine primers to areas of joint sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

**3.03 - INSTALLATION OF JOINT SEALANTS**

A. General: Comply with joint sealant manufacturer's printed installation instructions applicable to products and applications indicated, except where more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations of ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Acoustical Sealant Application Standard: Comply with recommendations of ASTM C 919 for use of joint sealants in acoustical applications as applicable to materials, applications, and conditions indicated.

D. Installation of Sealant Backings: Install sealant backings to comply with the following requirements:

1. Install joint fillers of type indicated to provide support of sealants during application and at position required to produce the cross sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

a. Do not leave gaps between ends of joint fillers.

b. Do not stretch, twist, puncture, or tear joint fillers.

2. Install bond breaker tape between sealants where backer rods are not used between sealants and joint fillers or back of joints.

E. Installation of Sealants: Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross sectional shapes and depths relative to joint widths that allow optimum sealant movement capability. Install sealants at the same time sealant backings are installed.

F. Tooling of Nonsag Sealants: Immediately after sealant application and prior to time skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated, to eliminate air pockets, and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

1. Provide concave joint configuration unless otherwise indicated.

G. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, and to comply with sealant manufacturer's directions for installation methods, materials, and tools that produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant in conformance with sealant manufacturer's recommendations.

**3.04 - CLEANING**

A. Clean off excess sealants or sealant smears adjacent to joints as work progresses by methods and with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.

**3.05 - PROTECTION**

A. Protect joint sealants during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so that and installations with repaired areas are indistinguishable from original work.

**3.06 - SCHEDULE**

A. Exterior Joints for Which No Other Sealant Type is Indicated: Type 1; colors as selected.

B. Joints Between Exterior Metal Frames and Adjacent Work (except masonry): Type 2.

C. Interior Joints for Which No Other Sealant is Indicated: Type 2; colors as selected.

D. Joints Between Plumbing Fixtures and Walls and Floors, and Between Countertops and Walls: Type 3.

E. Exposed and Concealed Joints where Acoustical Sealant is indicated and required: Type 4, colors as selected.

**3.07 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**1.00 - SUBBID REQUIREMENTS**

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 8, WINDOWS AND DOORS shall include the complete Work specified in all of the following Sections:

1. SECTION 08500, FIXED WINDOWS

2. SECTION 08550, WINDOWS

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of SECTION 08500, FIXED WINDOWS for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-102 | 10 A-201 | 10 A-202 | 10 A-301 | 10 A-302 | 10 A-303 |
| 10 A-304 | 10 A-305 | 10 A-401 | 10 A-402 | 10 A-403 | 10 A-404 | 10 A-405 |
| 10 A-406 | 10 A-407 | 10 A-602 | 10 A-603 | 10 A-604 | 10 A-607 | 00 S-001 |
| 00 S-002 | 10 S-101 | 10 S-102 | 10 S-103 | 10 S-104 | 99 S-505 | 99 S-506 |

2. The Work of SECTION 08500, FIXED WINDOWS for Alternative No. A-1 is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 20 A-101 | 20 A-201 | 20 A-202 | 20 A-301 | 20 A-302 | 20 A-401 |
| 20 A-601 | 20 A-602 | 20 A-603 | 00 S-001 | 00 S-002 | 20 S-101 | 99 S-505 |
| 99 S-506 | | | | | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 08500, FIXED WINDOWS

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified

**1.01 - SCOPE**

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide High-Performance, Thermal-Barrier, Custom Architectural Grade, Preglazed Aluminum Windows and Frames, and Auxiliary System Components as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit manufacturer’s product data and specifications, including installation instructions.
2. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components, provisions for expansion and contraction, masonry openings, operable units, and attachments to other work.
3. Submit details showing construction parts, metal thicknesses, installation and erection details, thermal-break and glazing details including connections, anchorage, fastening and sealing methods.
4. Submit sections of typical members, dimensioned elevations, frame sizes, type and spacing of anchors and fasteners, and details of accessories.
5. Submit three (3) color charts for aluminum finish.

6. Submit two samples each of sash corner, glass, finishes, hardware, anchorage and fastener. Engineer reserves the right to reject material finishes with objectionable variations from the established samples.

7. Submit certified test reports with results and written compliances conforming to the Design Requirements specified in this section.

8. Design calculations verifying compliance with performance criteria specified, acceptable to governing authorities having jurisdiction, prepared, signed and stamped with the seal of a registered professional engineer, as specified.

9. Certificates: Submit for approval the following:

   a. Proof of testing laboratory AAMA certification and copies of testing agencies background and experience in performing similar tests to those specified.

   b. Registered professional engineer who prepares signs and stamps its seal shall provide a written statement confirming responsibility for the design and attest that the work prepared meets the Specifications and the requirements of governing authorities having jurisdiction and conforms to the prevailing standards of practice for the type of work specified.

10. Test Reports: Submit for approval the following:

    a. Valid AAMA "Authorization for Product Certification" indicating that the aluminum windows and frames to be provided for this Project conform to AAMA/NWWDA 101 I.S.2.

11. Warranties: Submit for review copies of written warranties agreeing to replace aluminum window and frame system components that fail to perform as specified.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Delivery of Materials:

   a. Deliver aluminum window and frame system materials, components and accessories dry and undamaged, with manufacturer's protective wrapping intact.

   b. Deliver aluminum window and frame system components in clearly and legibly labeled with AAMA designations and in undamaged cartons to provide protection during transit and storage.

   c. Inspect aluminum window and frame system components upon delivery for damage. Remove and replace all damaged items at no additional cost.

E. Storage of Materials:

   a. Do not store aluminum window and frame system components in contact with concrete or other materials that might cause corrosion or staining.

   b. Store aluminum window and frame component under cover and in an area protected from the weather and with good air circulation around each piece. Avoid the use of non-vented plastic or canvas shelters which could create a humidity chamber. Immediately remove wrapping if it becomes wet.

   c. Provide a ¼-inch space between aluminum window and frame system components in order to promote air circulation.

F. Handling of Materials:

a. Do not subject aluminum window and frame components to bending or stress.

b. Do not damage edges or handle material in a manner that will cause scratches, warps or dents.

c. Handle material using appropriate handwear and tools that do not damage finish of items to remain exposed.

**1.06 - DESIGN CRITERIA**

A. Standards:

1. Comply with applicable standards and recommendations by AA, AAMA, and ASCE, except to the extent more stringent requirements are specified or required by governing authorities having jurisdiction at the Site.

2. Comply with AAMA/NWWDA 101/I.S.2 including “non-mandatory” Appendix B, C, and D except where more stringent Wind Velocity Maps are included in ASCE 7 or other governing authorities having jurisdiction.

B. Modifications: Aluminum window and frame requirements shown are intended to establish basic dimensions of units, modules, profiles, mullion depths, sight lines, support locations of members and the visual design intention. Within these limitations Contractor shall be responsible for the structural adequacy, weather resistance, thermal and condensation resistance, and the detailing and fabrication of all aluminum window and frame system, including anchorage, and to make whatever modifications of, and additions to, the details as may be required to fulfill the minimum performance requirements of AAMA Optional Performance Grade and the requirements of non-mandatory Appendixes specified, at no additional expense to the Owner. Maintain the visual design concept as shown, including member sizes, profiles, support locations and alignment of components.

C. Performance Criteria:

1. Loading Analysis Criteria:

a. Wind Loads: Provide structural analysis, calculations and details indicating compliance with the ASCE 7-93 and ASCE 7-88, based on project location, heights and wind speed of 115 miles per hour (MRI 100 years), Ground Roughness (Exposure) Category D; Importance Factor based on ASCE 7 - Category IV - Essential Facility, and corresponding formula coefficients, to determine velocity pressures.

b. Seismic Loads: Provide aluminum window and frame system, including anchorage, capable of withstanding the effects of earthquake motions calculated according to requirements of the ASCE 7, Section 9, whichever are more stringent.

c. Dead Loads: Provide aluminum window and frame system components that do not deflect an amount that will reduce glazing bite below 75 percent of required glazing bite dimension when carrying full dead load. Provide minimum of 1/8 inch clearance between members and top of fixed panels, glazing, or other fixed part immediately below. Provide a minimum of 1/16 inch clearance between members and operable windows and doors.

d. Live Loads: Provide aluminum window and frame system, including anchorage that accommodates supporting structure’s deflection from uniformly distributed and concentrated live loads indicated without failure of materials or permanent deformation.

e. Deflection of Framing Members, ASTM E330: Maximum deflection of L/175 at center of single span when subjected to both positive and negative applicable design pressures, with no permanent deformation or damage of any main frame, sash, panel or sash member in excess of 0.2 percent of the span when the load is removed.

2. Water and Air Infiltration Tests: A 5 foot-0 inch by 3 foot-0 inch window shall comply with the following:

    a. Static Test Pressure Water Penetration Testing, ASTM E331 and AAMA 910: After the AAMA 910 life cycle test, no evidence of uncontrolled water penetration to the interior of the building through the aluminum windows and frames when subjected to a static air pressure difference of 12 pounds per square foot.

    b. Air Infiltration Testing, ASTM E283: After the AAMA 910 life cycle test, maximum air infiltration of 0.08 cubic feet per minute per square foot, when subjected to a static air pressure difference of 6.24 pounds per square foot.

3. Aluminum Window Classification (Grade): Based on AAMA/NWWDA 101/I.S.2, provide the following:

    a. Performance Class: In addition to General Requirements of Section 1, Gateway Performance Requirements established in Table 2.1, the Specific Performance Requirements of Section 2.2 and the Material and Component Requirements of Section 3, provide Optional Performance Class – Architectural AW, for all aluminum windows and frames.

    b. Performance Grade: As a minimum, provide Optional Performance Grade 65 aluminum windows and frames tested for structural test pressure of 1.5 times design pressure, unless structural calculations based on performance criteria specified identifies the need for more stringent optional performance grade for any area of the Project.

    c. Product Type: Provide AW - Fixed Window, as shown on the Drawings.

4. Provide design, detailing and fabrication based on the most stringent combination of standards, testing and engineering analysis specified.

5. Thermal Movements: Aluminum window and frame system, including anchorage, shall withstand thermal expansion and contraction movements of system and supporting elements resulting from not less than an ambient temperature change of 120 degrees F, which may cause a surface material temperature change of 180 degrees F. Limit the deflection as for wind pressure loading. Thermal movements shall not cause permanent deformation, cracking, opening of joints, undue stress on fasteners, or other effects detrimental to weathering performance.

6. The design of the aluminum window and frame system, including anchorage, as shown and specified is intended to prevent excessive condensation on the indoor faces of the work, with the heating and ventilating system in operation, and under the following conditions. Provide aluminum window and frame system design, detailing and fabrication in compliance with AAMA 1503.1 that achieves and maintains this design intention:

    a. Outdoor: Ambient temperature 0 degrees F; 15 mph wind.

    b. Indoor: Ambient temperature of 75 degrees F; relative humidity of 25 percent.

    c. Excessive condensation is defined as visible water.

    d. Condensation Resistance Factor: 58 minimum for frame.

7. Provide internal drainage to lead all infiltrated water to the exterior through weep slots.

8. Provide Fire-Rated glazing materials installed as borrowed lites in fire-rated frames and wall applications

9. Testing: Manufacturer's standard window units shall comply with the requirements and testing in accordance with the specified tests. Provide certification by the manufacturer of compliance with such tests; otherwise, perform the required tests through a AAMA accredited and recognized testing laboratory or agency and provide certified test results.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Installer Qualifications:

1. Engage a single installer skilled, trained and with successful experience in the installation of aluminum window and frame systems and with specific skill and successful experience in the erection of the types of units and components required; and who agrees to employ only tradesmen with specific skill and successful experience in this type of work.

C. Erection Tolerances:

1. Limit variations from plumb, level or dimensioned angle to the following:

a. 1/8-inch maximum deviation in 10 foot vertical or angular run and in 20 foot horizontal runs.

b. 1/4-inch maximum deviation in 40 foot runs, all directions.

2. Limit variations from theoretical member locations shown, based on established floor lines and column lines, including variations from plumb and level, to the following:

a. 3/8-inch total maximum deviation for members at all locations.

b. 1/8-inch maximum change in deviation for members for 10 foot runs, all directions.

3. Limit offsets in end-to-end and edge-to-edge alignments of adjoining and consecutive members, which form planes, continuous runs and profiles, to the following:

a. 1/16-inch maximum offset in flush alignment, including members which are to be 1/2-inch or less out-of-flush, and including members which are separated 2-inches or less by a reveal or protrusion in the plane of the aluminum windows and frames.

b. 1/8-inch maximum offset in alignments which are to be out-of-flush by more than 1/2-inch or separated by a reveal or protrusion of more than 2- inch width.

D. Source Quality Control:

1. Obtain all aluminum window and frame system components, operating hardware, custom panning, flashing and accessories from the same manufacturer.

2. Provide aluminum windows and frames labeled with AAMA Hallmark labels.

E. Testing Agency Qualifications: To qualify for approval, an independent testing agency shall demonstrate to Engineer’s satisfaction, based on evaluation of criteria submitted by testing agency, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the work in accordance with ASTM E329 and AAMA qualifications.

**1.08 - WARRANTY**

A. General Warranty: The special warrantees specified in this Article shall not deprive the Owner of other rights or remedies the Owner may otherwise have under the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under the Contract Documents.

B. Special Warrantees: Provide the following:

1. Provide written warranty, signed by the manufacturer and running to benefit of the Owner, agreeing to replace aluminum window and frame finish that shows excessive wear, as specified, and stating that the coil and spray coated polyvinylidene fluoride based coating specified complies with the following:

a. Coating shall not spall, check, craze, peel or otherwise lose adhesion for a period of ten years from the date of installation, to the extent that such shall create unsightly conditions, impair the intended architectural qualities of the building or otherwise fail to meet performance criteria specified, when viewed from a distance of 5 feet - 0 inches from the item.

b. In the event that the coil coated polyvinylidene fluoride based coating fails to meet the specified standards the manufacturer shall, at its own expense, replace or field paint, at the discretion of the Owner, all areas affected by the failure. In the event that repainting is selected, it shall be done at mutually agreeable intervals throughout the term of the warranty.

c. The warranty shall not apply where any failure is caused by accidents, or any external conditions or forces beyond the control of the manufacturer.

2. Provide written warranty, signed by the manufacturer and running to benefit of the Owner, agreeing to replace aluminum window and frame system components including the failure of insulating glass. Failure of materials or workmanship shall include, but is not limited to, leakage or air infiltration, deflections, or deterioration of metal in excess of normal weathering, and in excess of performance criteria specified; and defects in, and improper arrangement of, the various parts, accessories, weatherstripping, and other components of the system.

C. Warranty Period:

1. Windows: Three years from date of substantial completion.

2. Glazing: Five years from date of substantial completion.

3. Metal Finish: Fifteen years from date of substantial completion.

**1.10 - PROJECT CONDITIONS**

A. Protection: Provide continuous protection of materials against damage primarily by storing materials under cover and above ground and away from other construction traffic.

1. Do not install aluminum windows and frames until all work that could damage aluminum window and frame systems has been completed.

2. Provide temporary closures until construction sequencing allows installation of aluminum window and frame systems at a time when the systems will not be subject to construction damages of any kind.

B. Scheduling and Coordination:

1. Review installation procedures under other Sections and coordinate them with the work specified herein.

C. Field Measurements:

1. Verify dimensions in areas of installation before fabrication and indicate dimensions on Working Drawings. Coordinate fabrication schedule with construction progress to avoid delay.

**1.11 - SYSTEM DESCRIPTION**

A. This Section describes exterior, high-performance, minimum 3-1/4-inch frame depth, factory-fabricated and factory-glazed, aluminum windows with integral structural polyurethane thermal-breaks and applied muntins complying with the requirements of AAMA/NWWDA 101/I.S. 2 - Architectural Performance Class and Section 4 - Optional Performance Grades, all with Architectural Class I anodized finish or with a complete selection of factory-applied, three coat, custom and premium exotic color, custom blended full strength polyvinylidene fluoride finishes and colors with extended life topcoat, as selected; all designed, detailed and fabricated as required to resist specified loadings, and resistance to air and water penetration specified and in accordance with the requirements of governing authorities having jurisdiction; associated high-performance operating hardware, auxiliary system items, accessories, fasteners and similar items for completely functioning systems.

B. Fire-rated, clear and wireless glazing and frame material for use in locations such as doors, sidelites, interior windows, transoms, borrowed lites, and wall applications with fire rating requirements ranging from 45 minutes to 2 hours with required hose stream test; for use in interior and exterior applications. Coordinate with spec section 08810 Glass and Glazing.

**PART 2 – PRODUCTS**

**2.01 - MANUFACTURERS**

A. EFCO Corporation.

B. Graham.

C. Kawneer.

D. Or acceptable equivalent product.

**2.02 - MATERIALS**

A. Extrusions:

1. Provide extruded, double tubular aluminum mullions, applied muntins, pressure plates, snap covers, two-piece snap trim, sills and glazing stops and trim, equal to ASTM B221, 6063-T5 alloy and temper as recommended by the aluminum window and frame manufacturer to comply with the requirements of performance, fabrication, application of finish and control of color for finishes.

    a. Minimum Thickness: 0.125-inches.

2. Provide extrusions within commercial tolerances, formed true to details shown and free of defects impairing strength, durability, color or finish.

B. Sheets:

1. Provide aluminum sheet closures, auxiliary components and accessories, equal to ASTM B209, 5005 alloy for exposed sheet and 3003 alloy for nonexposed sheet or as recommended by the aluminum window and frame manufacturer to comply with the requirements of performance, fabrication, application of finish and control of color for finishes.

    a. Provide thicknesses for Principal Formed Sheet Members: 0.125-inches minimum thickness.

2. Provide sheet free of defects impairing strength, durability, color or finish.

C. Fasteners: 300 Series non-magnetic stainless steel, guaranteed by the manufacturer to be non-corrosive and compatible with the aluminum window members, trim, hardware, anchors and other components of the window units.

1. Do not use exposed fasteners, except where unavoidable for the application of operating hardware. Match the finish of the metal surrounding fastener, unless otherwise specified.

2. Provide Philips flat-head machine screws for exposed fasteners, unless otherwise specified.

D. Thermal Separators: Integral, structural polyurethane.

E. Glass and Glazing:

1. Glass: 1-in. thick clear, insulating-glass units, with low-E coating pyrolytic on third surface for tinted windows.

a. Tint: Solar gray with visible light transmittance of 18%.

2. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal.

3. Factory-Glazed Fabrication: Glaze aluminum windows in the factory and comply with AAMA/WDMA 101/I.S.2/NAFS.

4. Glazing Stops: Provide snap-on glazing stops. Provide glazing stops to match sash and ventilator frames.

F. Wire Fabric Insect Screen and Frames: Provide insect screen and frames for each operable sash.

1. Provide 18 by 16 mesh of 0.009-inch diameter stainless steel wire, complying with FS RR-W-365, Type VI, mounted with polyvinylchloride splines into 5/16-inch by 1-1/2-inch by 0.050-inch extruded tubular aluminum frames with finish to match window in color and performance; corners mitered, gusset reinforced and crimped.

2. Provide insect screens that mount into exterior or interior extruded tracks using two stainless steel leaf springs.

3. Where windows swing outward, and insect screens are mounted on interior, provide sliding wickets framed as for fixed insect screens and trimmed for a tight fit and durability during operation.

G. Weatherstripping: Provide double rows of manufacturer's replaceable epdm stripping complying with ASTM D2000, secured in extruded aluminum ports at all vent perimeters.

H. Brackets, Gussets, Reinforcements and Splice Clips:

1. Provide aluminum brackets and reinforcements wherever possible. Where steel units are required for higher strength or other unavoidable necessity, hot-dip galvanize the pieces after fabrication, with 2.0 ounces zinc coating.

I. Auxiliary Components and Accessories:

1. Provide extruded aluminum, minimum 0.125-inch thick wall, with exposed surfaces finished to match aluminum windows and frames in color and performance; concealed fasteners; all weatherseals; designed for unrestricted expansion and contraction.

2. Provide complete selection of exterior wrap-around custom panning accessories; two-piece head and jamb receptors; sills and subsills with thermal-breaks, anchors and end dams; two-piece interior snap trim and clips; interior glazing adapters, expanders, receptors, stools and other trim necessary for a complete installation, as determined by Engineer.

3. Provide intermediate, thermally broken, expansion-type, vertical and horizontal integral mullions (stack; offset stack; and three-piece) and mullion covers in configurations and types as required for combinations of windows and sizes of window areas shown.

J. Bituminous Paint: Cold applied asphalt mastic complying with SSPC-Paint 12, compounded for 30-mil thickness per coat.

K. Expansion Anchor Devices: Where inserts have not been provided in supporting concrete structure, provide drilled-in expansion bolt anchors of either toothed-stainless steel or lead shield design.

**2.03 - WINDOW OPERATION**

A. General:

1. Projected Double Hung Windows: Swing-out as shown, side-hinged vent sash and fixed window combinations as shown, provide operable sash with two balance-support arms, pivots with friction shoes.

B. Operating Hardware:

1. Strike and Cam: White bronze, UNS C86200 cast white manganese bronze complying with ASTM B584.

2. Concealed Stainless Steel Hinges: Heavy-duty four-bar hinges with nonmagnetic stainless steel balance arms. Provide sliding pivots with nylon friction-adjustable shoe in a stainless steel track.

3. Limit Opening Device: Provide stainless steel adjustable hold-open limit arm with release key for all project-out operable windows.

4. Lock: Lift type throw. Cam-action lock with keeper, one per ventilator.

5. Provide on gear type rotary operator located on jamb at sill with standard crank handle. Provide on per window.

**2.04 - FABRICATION**

A. General: Provide specified manufacturer's standard fabrication and accessories, except to the extent more stringent requirements are specified. Include complete system for assembly of components and anchorage of window units.

B. Sizes and Profiles: The required sizes for window units and the profile requirements are shown on the Drawings. The details shown are based upon standard details by one manufacturer. It is intended that similar details by other manufacturers will be acceptable, provided they comply with the size requirements, performance requirements and with minimum/maximum profile requirements shown and specified.

C. Frame and Vent: All members shall be minimum 0.125-in. thick, double tubular; corners mitered, double gusset reinforced, factory-sealed with sealant complying with AAMA 800 and crimped.

D. Water Control: Provide pressure equalization gasket on vent interior; vent and frame weeps, foam baffles, and exterior hoods to allow water to drain by gravity and resist wind-blown rain.

E. Provide field-mounted drip caps on vent exteriors above frame sill.

F. Operating Hardware:

1. Cut, reinforce, drill and tap frames and windows as required to receive operating hardware. Comply with manufacturer's instructions and template requirements. Use concealed fasteners wherever possible.

2. Design, detail and fabricate reinforcement for maximum heavy-duty use, consisted with required guarantee period and performance criteria specified.

G. Provide extruded aluminum applied muntins, and custom panning shapes as shown and specified.

H. Fabricate aluminum windows that are reglazable without dismantling sash or ventilator framing.

I. Thermally Improved Construction: Fabricate aluminum windows with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.

**2.05 - FINISHES, GENERAL**

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

**2.06 - ALUMINUM FINISHES**

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Class I, Color Anodic Finish: AA-M12C22A42 (Integrally colored or electrolytically deposited color coating 0.7 mils) complying with AAMA 611.

1. Color: Dark bronze

**PART 3 – EXECUTION**

**3.01 - INSPECTION**

A. Contractor shall examine the alignment of substrates and the sequence of work before erection of the custom aluminum window and frame systems work begins and notify Engineer in writing of unsatisfactory conditions. Do not proceed with the custom aluminum window and frame systems work until unsatisfactory conditions have been corrected in a manner acceptable to Engineer.

B. Custom aluminum window and frame systems work shall not be installed when there is no assurance of adequate, long term protection by Contractor.

**3.02 - INSTALLATION**

A. All windows shall be installed by factory-trained erectors in strict accordance with installation data provided by approved shop drawing submittal, and the requirements of these Specifications.

B. Do not install component parts that are observed to be defective in any way, including warped, bowed, dented, abraded and broken members, and including damaged glass.

C. Do not cut, or trim, component parts during erection, in a manner that would damage the finish, decrease the strength, or result in a visual imperfection or a failure in performance of the custom aluminum window and frame systems. Return component parts which require alteration to the shop for refabrication, if possible, or for replacement with new parts.

D. Install component parts level, plumb, true to line and with uniform joints and reveals. Provide required support secured to structure with non-staining and noncorrosive shims, anchors, fasteners, spacers and fillers. Use erection equipment that will not mar or stain finished surfaces, and will not damage the component parts.

E. Apply a bituminous coating of approximately 30-mil dry film thickness, on concealed contact surfaces of dissimilar materials before installation, wherever there is the possibility of corrosive or electrolytic action.

F. Apply sealant in accordance with manufacturer’s written recommendations at joints, wipe off excess and leave exposed sealant surface clean and smooth.

G. Anchor components parts securely in place as shown, by bolting, or other permanent mechanical attachment system, which will comply with performance requirements and permit movements which are intended or necessary.

**3.03 - PROTECTION**

A. Contractor shall provide protective treatment and other precautions required through the remainder of the construction period, to ensure that window units will be without damage or deterioration, other than normal weathering at time of Final Acceptance.

B. Contractor shall advise Engineer, in writing, of protection and surveillance requirements that Contractor shall provide at no additional expense to the Owner, to ensure that aluminum windows and frame system will be without damage or deterioration at the time of Final Acceptance by the Owner.

C. Where protective coating has been supplied, remove coating completely immediately before installation and when construction activities no longer requires its retention.

**3.04 - ADJUSTMENT**

A. All windows shall be adjusted for smooth operation and weathertight closure providing a tight fit at contact points and at weatherstripping after installation is complete and readjusted when necessary prior to Substantial Completion.

B. At the completion of the work, restore adjacent work, marred by the work of this Section, to an undamaged and clean condition.

C. Adjacent work that has been physically damaged, or that does not respond adequately to cleaning, shall be replaced with new materials at no additional expense to the Owner.

**3.05 - CLEANING**

A. Clean aluminum surfaces immediately after installation, exercising care to avoid damage of finish. Lubricate hardware and other moving parts.

B. Maintain the aluminum window and frame systems and glazing in a clean condition throughout the construction period, so that they will be without any evidence of deterioration or damage, other than the effects of normal weathering, at the time of Final Acceptance.

C. Select methods of cleaning that will promote the achievement of uniform appearance and stabilized colors and textures for materials that weather or age with exposure.

**3.06 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 08550, WINDOWS is a part of DIVISION 08, OPENINGS: WINDOWS AND DOORS which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 08500 - FIXED WINDOWS.

B. The Work of SECTION 08550, WINDOWS, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Aluminum Window Types (1) Double-Hung Window Units and (2) Non-operative (Fixed) Window Units as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Product Data: For each type of product. Include construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes for aluminum windows.

2. Shop Drawings: Include plans, elevations, sections, hardware, accessories, insect screens, operational clearances, and details of installation, including anchor, flashing, and sealant installation.

3. Samples: For each exposed product and for each color specified, 2-inches x 4 inches in size.

4. Samples for Initial Selection: For units with factory-applied color finishes. Include similar Samples of hardware and accessories involving color selection.

5. Samples for Verification: For aluminum windows and components required, prepared on Samples of size indicated below:

a. Exposed Finishes: 2-inches x 4 inches.

b. Exposed Hardware: Full-size units.

6. Product Schedule: For aluminum windows. Use same designations indicated on Drawings.

7. Qualification Data: For manufacturer and Installer.

8. Product Test Reports: For each type of aluminum window, for tests performed by a qualified testing agency.

9. Field quality-control reports.

10. Sample Warranties: For manufacturer's warranties.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit. Comply with the requirements specified in SECTION 01610, DELIVERY, STORAGE and HANDLING and as specified.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Delivery of Materials:

1. Deliver aluminum window and frame system materials, components and accessories dry and undamaged, with manufacturer’s protective wrapping intact.

2. Deliver aluminum window and frame system components in clearly and legibly labeled with AAMA designations and in undamaged cartons to provide protection during transit and storage.

3. Inspect aluminum window and frame system components upon delivery for damage. Remove and replace all damaged items at no additional cost.

D. Storage of Materials:

1. Do not store aluminum window and frame system components in contact with concrete or other materials that might cause corrosion or staining.

2. Store aluminum window and frame component under cover and in an area protected from the weather and with good air circulation around each piece. Avoid the use of non-vented plastic or canvas shelters which could create a humidity chamber. Immediately remove wrapping if it becomes wet.

3. Provide a 1/4-inch space between aluminum window and frame system components in order to promote air circulation.

E. Handling of Materials:

1. Do not subject aluminum window and frame components to bending or stress.

2. Do not damage edges or handle material in a manner that will cause scratches, warps or dents.

3. Handle material using appropriate handwear and tools that do not damage finish of items to remain exposed.

**1.06 – DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

**1.07 - QUALITY ASSURANCE**

C. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

D. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting this performance by test reports, and calculations.

E. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

F. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project. Engage a single installer skilled, trained and with successful experience in the installation of aluminum window and frame systems and with specific skill and successful experience in the erection of the types of units and components required; and who agrees to employ only tradesmen with specific skill and successful experience in this type of work.

G. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of typical wall area as shown on Drawings.

2. Acceptance of mockups does not constitute acceptance of deviations from the Contract Documents contained in mockups unless Engineer specifically accepts such deviations in writing.

**1.08 - WARRANTY**

A. General Warranty: The special warrantees specified in this Article shall not deprive the Owner of other rights or remedies the Owner may otherwise have under the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under the Contract Documents.

B. Special Warrantees: Provide the following:

1. Provide written warranty, signed by the manufacturer and running to benefit of the Owner, agreeing to replace aluminum window and frame finish that shows excessive wear, as specified, and stating that the coil and spray coated polyvinylidene fluoride based coating specified complies with the following:

a. Coating shall not spall, check, craze, peel or otherwise lose adhesion for a period of ten years from the date of installation, to the extent that such shall create unsightly conditions, impair the intended architectural qualities of the building or otherwise fail to meet performance criteria specified, when viewed from a distance of 5 feet - 0 inches from the item.

b. In the event that the coil coated polyvinylidene fluoride based coating fails to meet the specified standards the manufacturer shall, at its own expense, replace or field paint, at the discretion of the Owner, all areas affected by the failure. In the event that repainting is selected, it shall be done at mutually agreeable intervals throughout the term of the warranty.

c. The warranty shall not apply where any failure is caused by accidents, or any external conditions or forces beyond the control of the manufacturer.

2. Provide written warranty, signed by the manufacturer and running to benefit of the Owner, agreeing to replace aluminum window and frame system components including the failure of insulating glass. Failure of materials or workmanship shall include, but is not limited to, leakage or air infiltration, deflections, or deterioration of metal in excess of normal weathering, and in excess of performance criteria specified; and defects in, and improper arrangement of, the various parts, accessories, weather stripping, and other components of the system.

C. Warranty Period

1. Windows: Three years from date of substantial completion.

2. Glazing: Five years from date of substantial completion.

3. Metal Finish: Fifteen years from date of substantial completion.

4. Manufacturer's Warranty: Manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.

a. Failures include, but are not limited to, the following:

(1) Failure to meet performance requirements.

(2) Structural failures including excessive deflection, water leakage, and air infiltration.

(3) Faulty operation of movable sash and hardware.

(4) Deterioration of materials and finishes beyond normal weathering.

(5) Failure of insulating glass.

b. Warranty Period:

(1) Window: 10 years from date of Substantial Completion.

(2) Glazing Units: Five years from date of Substantial Completion.

G. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.10 - PREINSTALLATION MEETINGS**

A. Preinstallation Conference: Conduct conference at Framingham, MA.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review, discuss, and coordinate the interrelationship of aluminum windows with other exterior wall components. Include provisions for anchoring, flashing, weeping, sealing perimeters, and protecting finishes.
3. Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.
4. Inspect and discuss the condition of substrate and other preparatory work performed by other trades.

**1.11 - PROJECT/SITE CONDITIONS**

A. Protection: Provide continuous protection of materials against damage primarily by storing materials under cover and above ground and away from other construction traffic.

1. Do not install aluminum windows and frames until all work that could damage aluminum window and frame systems has been completed.
2. Provide temporary closures until construction sequencing allows installation of aluminum window and frame systems at a time when the systems will not be subject to construction damages of any kind.

B. Scheduling and Coordination:

1. Review installation procedures under other Sections and coordinate them with the work specified herein.

C. Field Measurements:

1. Verify dimensions in areas of installation before fabrication and indicate dimensions on Working Drawings. Coordinate fabrication schedule with construction progress to avoid delay.

## PART 2 - PRODUCTS

### 2.01 - WINDOW PERFORMANCE REQUIREMENTS

A. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.

1. Window Certification: WDMA certified with label attached to each window.

B. Performance Class and Grade: AAMA/WDMA/CSA 101/I.S.2/A440 as follows:

1. Minimum Performance Class: LC.

2. Minimum Performance Grade: 25.

C. Thermal Transmittance: NFRC 100 maximum whole-window U-factor of 0.30 Btu/sq. ft. x h x degrees F.

D. Solar Heat-Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of 0.40.

E. Sound Transmission Class (STC): Rated for not less than 30 STC when tested for laboratory sound transmission loss according to ASTM E90 and determined by ASTM E413.

F. Outside-Inside Transmission Class (OITC): Rated for not less than 30 OITC when tested for laboratory sound transmission loss according to ASTM E90 and determined by ASTM E1332.

G. Windborne-Debris Resistance: Capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to ASTM E1886 and testing information in ASTM E1996 and requirements of authorities having jurisdiction.

### 2.02 - MANUFACTURERS

**A.** Aluminum Double Hung Windows:

1. Crystal Window and Door Systems, Ltd.

2. Superior Window Company.

3. Wojan Windows.

B. Source Limitations: Obtain aluminum windows from single source from single manufacturer.

### 2.03 - ALUMINUM WINDOWS

A. Operating Types: Provide the following operating types in locations indicated on Drawings:

1. Double hung.

2. Fixed.

B. Frames and Sashes: Aluminum.

1. Exterior Finish: Aluminum.

a. Color: As selected by Engineer from manufacturer's full range.

2. Interior Finish: Manufacturer's standard colors/finishes.

a. Color: As selected by Engineer from manufacturer's full range.

C. Insulating-Glass Units: ASTM E2190, certified through IGCC as complying with requirements of IGCC.

1. Glass: ASTM C1036, Type 1, Class 1, q3.

a. Tint: Clear.

b. Kind: Fully tempered.

2. Lites: Two.

3. Filling: Fill space between glass lites with argon.

4. Low-E Coating: Pyrolytic on second surface.

5. Integral Louver Blinds: Glass manufacturer's standard, horizontal louver blinds with aluminum slats and polyester fiber cords, located in space between glass lites, and operated by hardware located on inside face of sash

   a. Operation: Tilt, raising, and lowering.

   b. Color: As selected by Engineer from manufacturer's full range.

D. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal.

1. Dual Glazing:

   a. Interior Lite: Glass.

   b. Exterior Lite: Insulating-glass unit.

E. Hardware, General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907 or other corrosion-resistant material compatible with adjacent materials; designed to smoothly operate, tightly close, and securely lock windows, and sized to accommodate sash weight and dimensions.

1. Exposed Hardware Color and Finish: As selected by Engineer from manufacturer's full range.

F. Hung Window Hardware:

1. Counterbalancing Mechanism: Complying with AAMA 902, concealed, of size and capacity to hold sash stationary at any open position.

2. Locks and Latches: Allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only.

3. Tilt Hardware: Releasing tilt latch allows sash to pivot about horizontal axis to facilitate cleaning exterior surfaces from the interior.

G. Weather Stripping: Provide full-perimeter weather stripping for each operable sash unless otherwise indicated.

H. Fasteners: Noncorrosive and compatible with window members, trim, hardware, anchors, and other components.

1. Exposed Fasteners: Do not use exposed fasteners to the greatest extent possible. For application of hardware, use fasteners that match finish hardware being fastened.

**2.04 - ACCESSORIES**

A. Dividers (False Muntins): Provide divider grilles in designs indicated for each sash lite.

1. Quantity and Type: Two per sash, permanently located at exterior and interior lites

2. Material: Manufacturer's standard.

3. Pattern: As indicated on Drawings

4. Profile: As selected by Engineer from manufacturer's full range.

B. Color: As selected by Engineer from manufacturer's full range

C. Horizontal Louver Blinds: Provide manufacturer's standard, removable, horizontal louver blinds with aluminum slats and polyester fiber cords that are operated by hardware located on inside face of sash.

1. Operation: Tilt, raising, and lowering.

2. Color: As selected by Engineer from manufacturer's full range.

**2.05 - INSECT SCREENS**

A. General: Fabricate insect screens to integrate with window frame. Provide screen for each operable exterior sash. Screen wickets are not permitted.

1. Type and Location: Full, inside for project-out sashes.

B. Aluminum Frames: Manufacturer's standard aluminum alloy complying with SMA 1004 or SMA 1201. Fabricate frames with mitered or coped joints or corner extrusions, concealed fasteners, and removable PVC spline/anchor concealing edge of frame.

1. Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet.

2. Finish for Interior Screens: Baked-on organic coating in color selected by Engineer from manufacturer's full range.

3. Finish for Exterior Screens: Matching color and finish of cladding.

4. Mesh Color: Manufacturer's standard.

C. Aluminum Wire Fabric: 18- by 16-inches mesh of 0.011-inch- diameter, coated aluminum wire.

1. Wire-Fabric Finish: Charcoal gray.

**2.06 - FABRICATION**

A. Fabricate aluminum windows in sizes indicated. Include a complete system for installing and anchoring windows.

B. Glaze aluminum windows in the factory.

C. Weather strip each operable sash to provide weathertight installation.

D. Mullions: Provide mullions and cover plates, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections. Provide mullions and cover plates capable of withstanding design wind loads of window units.

E. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation. Allow for scribing, trimming, and fitting at Project site.

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify rough opening dimensions, levelness of sill plate, and operational clearances.

C. Examine wall flashings, vapor retarders, water and weather barriers, and other built-in components to ensure weathertight window installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.02 - INSTALLATION**

A. Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components. For installation procedures and requirements not addressed in manufacturer's written instructions, comply with installation requirements in ASTM E2112.

B. Install windows level, plumb, square, true to line, without distortion, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction to produce weathertight construction.

**3.03 - FIELD QUALITY CONTROL**

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

B. Testing Services: Testing and inspecting of installed windows shall take place as follows:

1. Testing Methodology: Testing of windows for air infiltration and water resistance shall be performed according to AAMA 502.

2. Air-Infiltration Testing:

a. Test Pressure: That required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance class indicated.

b. Allowable Air-Leakage Rate: 1.5 times the applicable AAMA/WDMA/CSA 101/I.S.2/A440 rate for product type and performance class rounded down to one decimal place.

3. Water-Resistance Testing:

a. Test Pressure: Two-thirds times test pressure required to determine compliance with AAMA/WDMA/CSA 101/I.S.2/A440 performance grade indicated.

b. Allowable Water Infiltration: No water penetration.

4. Testing Extent: Three windows of each type as selected by Engineer and a qualified independent testing and inspecting agency. Windows shall be tested after perimeter sealants have cured.

5. Test Reports: Prepared according to AAMA 502.

C. Remove and replace noncomplying windows and retest as specified above.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

**3.04 - ADJUSTING, CLEANING, AND PROTECTION**

A. Adjust operating sashes and hardware for a tight fit at contact points and weather stripping for smooth operation and weathertight closure.

B. Clean exposed surfaces immediately after installing windows. Remove excess sealants, glazing materials, dirt, and other substances.

1. Keep protective films and coverings in place until final cleaning.

C. Remove and replace sashes if glass has been broken, chipped, cracked, abraded, or damaged during construction period.

D. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written instructions.

**3.05 - CLOSEOUT ACTIVITIES**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 8, DOORS AND WINDOWS shall include the complete Work specified in all of the following Sections:

1. SECTION 08810, GLASS AND GLAZING

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of DIVISION 8, DOORS AND WINDOWS for the Base Bid is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-102 | 10 A-201 | 10 A-202 | 10 A-301 | 10 A-302 | 10 A-303 |
| 10 A-304 | 10 A-305 | 10 A-401 | 10 A-402 | 10 A-403 | 10 A-404 | 10 A-405 |
| 10 A-406 | 10 A-407 | 10 A-602 | 10 A-603 | 10 A-604 | 10 A-607 | |

2. The Work of DIVISION 8, DOORS AND WINDOWS for Alternative A-1 is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 20 A-101 | 20 A-201 | 20 A-202 | 20 A-301 | 20 A-302 | 20 A-401 |
| 20 A-601 | 20 A-602 | 20 A-603 | | | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

2. Subbid for: SECTION 08810, GLASS AND GLAZING

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-1

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SCOPE**

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide and set glass required to complete glazing at interior windows as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit manufacturer's specification for glass and glazing materials and working drawings showing methods of glazing installation.

2. Samples:

a. Glass samples not less than 6 in. square.

b. Three properly labeled samples of each type of glass and glazing material for review.

3. Manufacturer's certification that materials meet or exceed specifications requirements.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver each pane of glass affixed with manufacturer's labels; do not remove labels prior to installation, inspection or final acceptance.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. Fire-rated, clear and wireless glazing material for use in locations such as doors, sidelites, transoms, borrowed lites, and wall applications with fire rating requirements ranging from 45 minutes to 2 hours with required hose stream test; for use in interior and exterior applications

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Requirements of Regulatory Agencies: Provide glass installation meeting requirements of applicable state and local codes.

C. Design Criteria:

1. Exterior Glass and Glazing:

a. Provide exterior glass and glazing capable of withstanding wind loads as specified.

b. Provide watertight glass and glazing systems.

D. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 degrees F (250 degrees C), and the fire-resistance rating in minutes

**1.08 - REFERENCES**

**1.09 - JOB CONDITIONS**

A. Apply glazing compounds on dry surfaces, at temperatures above 40 degrees F.

## PART 2 - PRODUCTS

### 2.01 - GLASS MATERIALS

A. General:

1. Safety glass conforming to ASTM C1048 and ANSI Z97.1.
2. Glass Thickness:
    a. Provide glass thicknesses as specified unless accepted glass manufacturer recommends greater thickness to meet windload requirements.
    b. Provide glass in adjacent windows or glazed panels of same thickness unless shown otherwise.

### 2.02 - GLASS TYPES

A. Exterior Insulating Glass Units:

1. 1/4-in. float glass.
2. Solar control low-e type.
3. 1-in. overall thickness of unit.
4. Low-e coating to be applied to the number two (2) surface for clear windows.
5. Winter night time u-value equal to or less than .29.
6. Clear class with visible light transmission of 69%.

B. Interior Glass Units:

1. Laminated Safety Glass:
    a. 1/4-in clear laminated glass conforming ASTM C1036 and C1172, Type 1 – Flat.
    b. Construction shall consist of two sheets of 1/8-in. thick, clear floatglass bonded to interlayer of polyvinyl butyral plastic sheeting.
    c. Glazing: Conform to glass manufacturer’s printed instructions with regard to sealant, setting blocks, glazing tapes and heel beads.
2. Fire-resistive glazing products.
    a. Products:
        (1) Basis of Design: Oldcastle Glass, Inc.; Pyroguard
        (2) Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated
    b. Fire-Protection-Rated Glazing: Glass Type: 90-minute fire-rated glazing; film-faced ceramic glazing or laminated ceramic glazing. Provide safety glazing labeling OH-90
    c. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.

### 2.03 - GLAZING SYSTEM COMPONENTS FOR METAL WINDOWS

A. Provide glazing tape, heel bead sealant, removable snap-on metal glazing bead. Furnish components in color approximating window finish.

**2.04 - ELASTIC GLAZING COMPOUND**

A. Channel Glazing and Face Glazing Manufacturers:

1. 795 manufactured by Dow.
2. 895 manufactured by Pecora Corporation.
3. Spectrum 2c manufactured by Tremco Manufacturing Co.
4. Or acceptable equivalent product.

**PART 3 - EXECUTION**

**3.01 - INSPECTION**

A. Check openings and glazing channels scheduled to receive glass: Free of projections, burrs, irregularities, and debris and other defects that would affect glass or plastic and glazing materials.

B. Inspect glass for edge damage or face imperfections.

C. Correct defects before glazing.

**3.02 - PREPARATION**

A. Examine frames receiving glass or plastic sheet to ensure if clean and dry.

B. Verify sealants are compatible with glazing materials.

C. Remove oil and dust from glass and plastic materials by wiping clean immediately prior to installation.

D. Use solvents to remove protective coatings or film from aluminum surfaces, that neither etches nor mars surfaces.

**3.03 - GLAZING**

A. General:

1. Conform to Flat Glass Marketing Association's "Glazing Manual", manufacturer's recommendations and accepted working drawings.
2. Do not glaze when temperature is below 40 degrees F.
3. Glaze doors and operating windows in closed position.
4. Maintain edge clearance, in accordance with manufacturers recommendation, from perimeter of glass to inside of rabbet.
5. Maintain minimum 1/8-in. clearance between faces of glass and plastic and adjacent stop or bead.
6. If any glass dimension exceeds 50 inches, provide setting blocks at the sill and spacer shims on other edges.
7. Clean and dry glazing rabbets, glass edges, and applied stops before glazing.
8. Glaze windows neatly and evenly.
9. Do not extend glazing tapes and glazing compounds over edges of glazing stops.
10. Do not apply glazing tapes and glazing compounds more than 1/32 in. under edges of glazing stops.

B. Vision Panels:

1. Double glazed with applied glazing beads and elastic glazing compound.
2. Minimum edge clearance of glass: 1/4-in. all around.
3. Minimum face clearance of glass: 1/8-in. from sash rabbet, all around.

**3.04 - GLASS REPLACEMENT**

A. Replace broken, scratched or damaged glass due to faulty materials or installation with new glass, at no additional cost to the Owner.

**3.05 - PROTECTION**

A. Protect installed glass and plastic against breakage, damage from sandblasting, welding spatter or other sources.

**3.06 - CLEANING**

A. Clean glass and surrounding surfaces of spatter and blemishes resulting from glazing operations.

B. Prior to final acceptance clean and polish lights inside and outside.

**3.07 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

This Page Intentionally Left Blank.

**SECTION 09300**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 9, FINISHES shall include the complete Work specified in all of the following Sections:

1. SECTION 09300, TILE WORK

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

D. Reference Drawings

1. The Work of SECTION 09300, TILE WORK is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 A-001 | 10 A-102 | 10 A-104 | 10 A-301 | 10 A-408 | 10 A-409 | 10 A-601 |
| 10 A-602 | 10 A-605 | 10 A-606 | 99 A-607 | 00 M-001 | 10 M-104 | 10 M-107 |
| 99 M-501 | 99 M-502 | 00 P-001 | 00 P-002 | 10 P-103 | 10 P-104 | `10 P-105 |
| 10 P-106 | 10 P-107 | 10 P-108 | 10 P-109 | 99 P-501 | 99 P-502 | 00 E-001 |
| 10 E-202 | 10 E-205 | | | | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 09300, TILE WORK

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified

**1.01 - SCOPE**

G. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Modular Tile as specified herein and/or as shown on the Contract Drawings.

H. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS:

B. Product data for each item specified, including installation instructions.
Samples: Submit representative samples of tile specified or proposed for use to Engineer/Architect for review and tests before materials are purchased. Materials delivered shall conform to submitted samples, subject to normal variation for quality of product specified.

C. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation recommendations for each type of substrate.

D. Submittals required under this section include, but are not limited to the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in tiles.

2. tile type, color, and dye lot.

3. Type of subfloor.

4. Type of installation.

5. Pattern of installation.

6. Pattern type, location, and direction.

7. Type, color, and location of insets and borders.

8. Type, color, and location of edge, transition, and other accessory strips.

9. Transition details to other flooring materials.

E. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Tile: Full-size Sample.

2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch- long Samples.

F. Product Schedule: For tile. Use same designations indicated on Drawings.

G. Certificate of Compliance:

1. Submit certified test reports that modular tile meets all the performance requirements stated in paragraph 1.5 Performance Requirements. Submit certified test reports from a NVLAP Certified Lab that tile meets all performance criteria.

H. Qualification Data: For Installer.

I. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

J. Maintenance Data: For tiles to include in maintenance manuals. Include the following:

1. Methods for maintaining tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

2. Precautions for cleaning materials and methods that could be detrimental to tile.

K. Warranty: Special warranty specified in this Section.

**1.05 - PRODUCT HANDLING**

A. Provide in accordance with Section 01610 and as specified

B. Deliver materials in manufacturer's original sealed container bearing standard grade-seal in accordance with ANSI A137 and with seals unbroken.

C. Deliver dry-set mortar in sealed, moisture proof containers.

D. Handle tile in manner to prevent chipping and breakage.

E. Store materials away from moisture and under cover in manner to prevent damage or contamination.

F. Extra stock:

1. For replacement and maintenances purposes, furnish, and deliver to Owner's maintenance department, additional ceramic tile materials of each size, color, pattern and type from same runs as actually used on job and in quantities as follows.

2. Not less than 5 percent of total amount used.

G. Provide sufficient amount of mortar and grout materials for proper installation of extra stock

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified.

B. Installer Qualifications: An experienced installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

C. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648, Class 1, by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

D. Mockups: Before installing tile, build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

E. Approved mockups may become part of the completed Work if undamaged at time of Substantial Completion.

F. Preinstallation Conference: Conduct conference at Project site to review methods and procedures related to tile installation including, but not limited to, the following:

1. Review delivery, storage, and handling procedures.

2. Review ambient conditions and ventilation procedures.

**1.08 - WARRANTY**

A. Special Warranty for Tiles: Manufacturer's standard form in which manufacturer agrees to repair or replace components of tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of tile due to unusual traffic, failure of substrate, vandalism, or abuse.

2. Failures include, but are not limited to, more than 10 percent loss of bind strength, dimensional stability, excess static discharge, and delamination.

3. Warranty Period: From date of Substantial Completion - Lifetime limited stain warranty, lifetime limited modular warranty, lifetime limited colorfastness to light warranty, lifetime static warranty, 10 year limited colorfastness to atmospheric contaminants, and 10 year stain warranty.

**1.09 - REFERENCES**

A. ANSI A108.1: Glazed Wall Tile, Ceramic Mosaic Tile, Quarry Tile and Paver Tile Installed with Portland Cement Mortar.

B. ANSI A108.4: Installation of Ceramic Tile with Organic Adhesives or Water Cleanable.

C. ANSI A108.5: Ceramic Tile Installed with Dry-Set Portland Cement Mortar or Latex-Portland Cement Mortar.

D. ANSI A118.1: Dry-Set Portland Cement Mortar Standard.

E. ANSI A137.1: Specification for Ceramic Tile.

F. ASTM C144: Specification for Aggregate for Masonry Mortar.

G. ASTM C150: Specification for Portland Cement.

H. ASTM C206: Specification for Finishing Hydrated Lime.

I. ASTM C207: Specification for Hydrated Lime for Masonry Purposes.

J. TCA, Tile Council of America, Inc

**1.10 - PROJECT CONDITIONS**

K. Comply with CRI 104, Section 7.2, "Site Conditions; Temperature and Humidity" and Section 7.12, "Ventilation."

L. Environmental Limitations: Do not install tiles until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

M. Do not install tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by tile manufacturer.

N. Where demountable partitions or other items are indicated for installation on top of tiles, install tiles before installing these items.

**1.11 - EXTRA MATERIALS**

A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile: Full-size units equal to 5 percent of amount installed for each type indicated.

**PART 2 - PRODUCTS**

**2.01 - TILE (CPT)**

A. Glazed Ceramic Wall Tiles: Standard-grade, cushion-edged, 4-1/4-in. square, 5/16-in. thick, nonvitreous body, glaze tiles. Tile shall exhibit no cracking or crazing when subjected to standard autoclave (accelerated steam) test. Colors will be selected by Engineer. Provide surface bullnoses and other special shapes for thin-setting bed installation to produce a complete, neatly finished installation, as indicated on drawings.

B. Ceramic Mosaic Floor Tile: Standard grade, dust-pressed, unglazed porcelain type, cushion edged, and paper back-mounted or paper face-mounted. Tiles shall be approximately ____ by ____ by 1/4-in. thick. Colors will be selected by Engineer. Tile shall show no staining when subjected to attack by N/10 acids, alkalies, or organic.

C. Quarry Tile: 6-in. by 6-in. by 1/2-in. thick standard grade tile made from shale by the extrusion process, free from warpage, cupping or other distortions. Color selected by Engineer. Score backs of tiles and grind tile to size after firing. Acceptable manufacturers: American Olean Tile Co.; Summitville Tiles, Inc.; or an acceptable equivalent.

D. Portland Cement (including white portland cement): Conform to requirements of ASTM C150.

E. Hydrated Lime: Conform to requirements of ASTM C206 or ASTM C207.

F. Sand for Mortar Setting Beds: Conform to requirement of ASTM C144.

G. Clevage membrane: 15-lb. roofing felt or 4 mil polyethylene film.

H. Reinforcing: 2-in. by 2-in. by 16/16 gage welded wire mesh.

I. Dry-Set Portland Cement Mortar (for setting ceramic floor tile): Bear hallmark of TCA, (Tile Council of America, Inc.) and conform to ANSI A118.1.

J. Organic Adhesive (for setting ceramic wall tile); Bear hallmark of TCA (Tile Council of America) and conform to ANSI A136.1.

K. Grout (for glazed ceramic wall tiles): Manufacturer's prepared white, dry-set portland cement grout containing additives to produce proper curing and develop satisfactory hardness and bond in joints between dry tile.

**2.02 - INSTALLATION ACCESSORIES:**

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed tile and is recommended by tile manufacturer for releasable installation.

1. VOC Limits: Provide adhesives with VOC content not more than 50 g/L when calculated according to 40 CFR 59, Subpart D (EPA method 24).

C. Miscellaneous Materials: As recommended by manufacturer to complete installation.

**PART 3 - EXECUTION**

**3.01 - EXAMINATION**

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting tile performance. Examine tile for type, color, pattern, and potential defects.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by tile manufacturer.

2. Subfloor finishes comply with requirements specified in DIVISION 3, CONCRETE, SECTION CAST-IN-PLACE CONCRETE for slabs receiving tile.

3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.02 – INSTALLATION OF GLAZED CERAMIC WALL TILES**

A. Install on concrete floor slabs using dry-set mortar method. Install tiles in strict accordance with ANSI A108.5. Apply in strict accordance with manufacturer's instructions.

B. Clean surface to receive tile of all dust, dirt, and other particles, and leave in suitable condition to receive ceramic floor tile. Tile setter: Inspect and approve subfloor before beginning installation.

C. (NTS: Use the following paragraph for tile floors over structural concrete subfloors subject to bending and deflection.)

D. Apply cleavage membrane and reinforced cement mortar setting bed over structural concrete subfloors, supporting reinforcing mesh so that it will be approximately in middle of bed.

E. Mortar Setting Bed: One part portland cement to six parts of damp sand by weight; it may not contain more than one-tenth of hydrated lime. Do not make mortar setting bed under 3/4-in. or over 1-1/4-in. thick. Firmly tamp and screed level, maintaining proper slope to drains.

F. Set ceramic floor tile and grout in a first-class manner by mechanics experienced in such work using materials recommended by manufacturer and in strict accordance with recommendations of TCA, (Tile Council of America, Inc). Set tiles with edges true and square and parallel to walls of room. Lay borders and defined lines before field or body of floor. Form all intersections and returns accurately and fit tiles closely and neatly at all plumbing fixtures, pipes, and fittings so that coverplates or escutcheons will overlap tiles properly. Secure all tiles firmly in place, and remove loose tiles, or tiles sounding hollow when rapped, and replace.

G. Firmly beat sheets of mounted tiles into mortar and bring surface to a true plane at proper elevations. Complete beating and leveling within one hour after placing of sheets. Within one hour after installation of sheets, if paper face-mounted, remove paper and glue by wetting without using excess water. At this time, adjust all tiles out of line.

H. Mix a neat cement paste of white portland cement with water to a creamy mixture, and brush into joints. Completely fill joints flush with surface of tiles. Clean off all excess grout with clean burlap bags or other cloths. Before grout sets, fill in all skips and gaps.

**3.03 INSTALLATION OF QUARRY TILE:**

A. Set quarry tile in a first class manner and in accordance with ANSI A108.1, using materials recommended by manufacturer. Press tiles firmly into position and properly beat in or vibrate to obtain proper contact on back. Grout quarry tile in same manner as ceramic floor tile.

**3.04 CLEANING AND CURING:**

A. Thoroughly sponge and wash all completed tile work, working diagonally across joints, and finally polish with clean dry cloths. Acid clean unglazed tiles only when necessary and not until 10 days after setting tiles. Wet tiles with clean water before cleaning with a 10 percent muriatic-acid solution. After acid cleaning, flush tiles thoroughly with clean water.

B. Cure floor tiles by keeping them damp at least three days, and during this time do not permit any traffic on tiles.

**3.05 PROTECTION:**

A. Cover finished tile floors with clean building paper before foot traffic is permitted on them. Place board walkways on floors that are to be used as passageways by workmen

**3.06 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 16998**

## PART 1 – GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK - GENERAL.

B. The Work of SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS requires the Subcontractor to perform all Work specified under this section.

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Field Inspection and Acceptance Tests as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit inspection and testing forms for all electrical distribution equipment to be inspected and tested under this section.

2. Submit data sheets for the insulation resistance testing of conductors and motors prior to performing operating testing. List all cables and motors to be tested.

3. Provide space on data sheet forms to enter the results of testing, instruments used with serial numbers, and name of personnel performing testing. This data to be filled out during testing.

4. After completion of the testing, submit all test results with observed notes and recommendations.

**1.05 - PRODUCT HANDLING – Not Used**

**1.06 - DESIGN CRITERIA – Not Used**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated 1.08 - REFERENCES

B. All inspections and tests shall be in accordance with the following applicable codes and standards latest revisions except as provided otherwise herein.

1. National Electrical Manufacturer’s Association – NEMA

2. American Society for Testing and Materials – ASTM

3. Institute of Electrical and Electronics Engineers – IEEE

4. InterNational Electrical Testing Association – NETA – Acceptance Testing Specification for Electric Power Distribution Equipment and Systems (STD).

5. American National Standards Institute – ANSI:
    a. ANSI C2: National Electrical Safety Code
    b. ANSI Z244-1: American National Standard for Personnel Protection
6. State and Local Codes and Ordinances
7. Insulated Cable Engineers Association – ICEA
8. Association of Edison Illuminating Companies – AEIC
9. Occupational Safety and Health Administration:
    a. OSHA Part 1910; Subpart S, 1910.308
    b. OSHA Part 1926; Subpart V, 1926.950 through 1926.960
10. National Fire Protection Association – NFPA:
    a. ANSI/NFPA 70B: Electrical Equipment Maintenance
    b. NFPA 70E: Electrical Safety Requirements for Employer Workplaces
    c. ANSI/NFPA 70: National Electrical Code
    d. ANSI/NFPA 780: Lightning Protection Code
    e. ANSI/NFPA 101: Life Safety Code

C. All inspections and tests shall utilize the following references:
1. Project Design Specifications
2. Project Design Drawings
3. Manufacturer's instruction manuals applicable to each particular apparatus

**1.09 - DESCRIPTION**

A. Provide field inspections and acceptance testing as specified herein.

B. After electrical installation is complete, (a) adjust and set all protective devices (in accordance) with results of electrical studies, (b) perform tests to demonstrate that the entire system is in working order and in accordance with applicable codes, manufacturer's instructions, drawings and specifications. Test shall be performed per InterNational Electrical Testing Association (NETA): Acceptance Testing Specification for Electrical Power Distribution System and Equipment (STD). Tests are in addition to, and not a substitution for, tests of individual items at the manufacturer's facilities. Perform insulation and ground resistance tests before operating tests. Determine proper rotation of motors before permanent connections are made.

C. Tests are also intended to accomplish the following:
1. Provide initial acceptance tests and recorded data.
2. Ensure a successful start-up with a minimum of last minute interruptions and problems.
3. Determine the suitability of the equipment and systems for energizing and placing into operating service.
4. Ensure that each system component is installed satisfactorily, will perform and will continue to reliably perform its function.

D. Provide all necessary supervision, labor, materials, tools, test instruments or other equipment or services and expenses required to test, adjust, set, calibrate, functionally and operationally check all work and components of the various electrical systems and circuitry throughout the installation.

E. Engage the services of a nationally recognized Independent Electrical Tester to perform the required field inspections, test, and adjustments specified. The Independent Electrical Tester shall meet the following qualifications:

1. The testing firm is not to be a subsidiary, division, or department of the Contractor performing the work of Division 16.
2. The testing firm is not to be subsidiary, division, or department of the manufacturer of the equipment, materials or systems being inspected or tested.
3. The testing firm shall perform all testing in accordance with International Electrical Testing Association, Inc. (NETA), standards and procedures. All testing results shall be submitted on NETA forms and the testing data shall be certified by a Registered Professional Electrical Engineer. Test results shall indicate recommended action for sub-par test results. Results shall list recommended test values that should be obtained for a new installation.
4. Testing and checkout work shall be performed with personnel skilled and trained in the particular tests being conducted.
5. Evidence of the proposed testing firm's qualifications, accreditation, and experience shall be submitted for evaluation. Testing firm shall be member of NETAwith minimum of five years of testing industrial electrical systems to NETA requirements and procedures.

F. The Independent Electrical Testing Contractor shall provide supervision, labor, materials, tools, test instruments, or other equipment, and services, required to adjust, set, calibrate, and test operate the components of the various electrical systems and circuits throughout the installation, the construction package, and as specified herein.

G. Perform these tests after the electrical installation is complete. These tests shall demonstrate that the entire electrical system is in proper working order and in accordance with: applicable codes; and the supplier's instructions, drawings, and specifications.

H. Testing by the Independent Electrical Tester in no way changes the requirements to perform the specified tests, checkouts, and inspections required under the equipment specification sections.

I. The listings and descriptions of the tests, and checks described herein is not to be considered as complete and all inclusive.

J. Retests required by defects and failures of equipment to meet specifications shall be conducted at no additional cost.

1. Replace wiring and equipment found to be defective, or failing to meet specified requirements, at no additional cost.
2. Supply electric current necessary for tests.

K. Where specified in other Division 16 sections, perform work under the supervision of factory trained technicians, representing the equipment being tested or inspected.

**1.10 - SCHEDULING**

A. The Contractor is responsible for the preparation of proposed procedures, testing and inspection forms, and schedules for all inspections, tests, settings and calibrations specified or otherwise required prior to or during the check out for start-up and acceptance of all the electrical components, equipment and systems. This work to be coordinated and to be compatible with the work of other crafts and the project schedule. The above must be organized and submitted with all proposed testing and NETA approved check out forms for the review. The procedures must provide specific instructions for the checking and testing of each component in addition to the system functional checks.

B. Prior to check out and testing for start-up, verify that all equipment and wiring is permanently identified with nameplates and tags. Check and tighten all terminals and connection points, remove all shipping blocks and hardware, thoroughly clean all equipment, repair all damaged or scratched finishes, inspect for broken and missing parts and review and collect manufacturer's drawings and instructions. Make routine checks and tests as the job progresses to verify that all wiring and equipment are properly installed.

C. Safety practices shall include, but are not limited to, the following requirements:

1. Occupational Safety and Health Act
2. Accident Prevention Manual for Industrial Operations, National Safety Council

3. Applicable state and local safety operating procedures
4. Owner's safety practices
5. National Fire Protection Association
6. American National Standards for Personnel Protection

D. All tests shall be performed with apparatus de-energized. Exceptions must be thoroughly reviewed to identify safety hazards and devise adequate safeguards.

E. The testing firm shall have a designated safety representative on the project to supervise the testing operations with respect to safety.

F. Ensure that all testing and checkout work is conducted in a safe manner. Special safety precautions such as the following to be utilized where appropriate:

1. Locking and tagging procedures
2. Barricades
3. De-energization and/or isolation of equipment prior to testing
4. Review of procedures with site personnel
5. Erection of warning signs
6. Stationing of guards and watchmen
7. Maintenance of voice communications
8. Personnel orientation

G. Report all inspections, tests, and calibration in writing on NETA approved report forms. The recorded data from shall have the signatures of the persons conducting the tests and authorized witnesses. The forms shall serve as the test and inspection checklist for inspection requirements. Submit all test and check out data in accordance with SECTION 01300, SUBMITTALS prior to adjustments, repairs, drying out, or similar work prior to final testing and acceptance. "As-found" and "as-left" test data to be recorded and reported in writing.

H. Sequence tests and checks such that the equipment can be energized immediately after the completion of the applicable tests.

**PART 2 - PRODUCTS**

**2.01 - TESTING EQUIPMENT**

A. Calibration:

1. All calibration and setting checks by the Independent Electrical Test shall be performed with the laboratory's calibrated test instruments. This test equipment to have calibrations traceable to the National Bureau of Standards. The Independent Electrical Tester dated calibration labels shall be visible on all test equipment. Calibrations over 6 months old will not be acceptable on field test instruments. All testing instruments shall be checked to verify satisfactory operation prior to proceeding with the tests. Serial and model numbers of the instruments used shall be recorded on the test forms.
2. Make necessary openings in circuits for testing instruments and place and connect all instruments, equipment, and devices, necessary for the tests. Upon completion of tests, remove instruments and instrument connections and restore all circuits to permanent condition.

**2.02 - TESTING**

A. Coordination:

1. Coordinate activities, and cooperate with others on project, to ensure that systems are ensure that systems are energized when required, loads applied, and other requirements are carried out on timely, coordinated basis.

2. Conduct tests in presence of the Owner's representative. Provide ten calendar days or more advance notification of when any test is to be performed.

3. Conduct testing such that warranties or guarantees are not voided. Coordinate all testing with manufacturer's factory trained technicians, where applicable. Where specified tests are not compatible with the manufacturer's recommendations, obtain the manufacturer's review prior to testing. Permit witnessing by the manufacturer's representative if so requested.

B. Preparation:

1. Make up no low voltage connections at service entrance, transformers, motors, switchboard and motor control centers, permanently until correct phase rotation of all equipment is determined. Install and insulate these connections temporarily, if necessary, while determining proper rotation. Make permanent connections after proper rotation has been established and subsequent to completion of insulation resistance and dielectric tests.

**PART 3 – EXECUTION**

**3.01 - INSULATION TESTS OF EQUIPMENT, CABLE, AND CIRCUITS**

A. Independent Electrical Testing:

1. The Independent Electrical Tester shall perform all inspections and testing as specified herein.

B. List each circuit and measured resistance as test data.

C. Maintain records of all insulation resistance values. Identify conductor, or equipment, date that value was taken, and resistance value. Submit the information in neat tabular forms.

**3.02 - SPECIFIC TESTS AND INSPECTIONS**

A. General:

1. The following specific items or work shall be performed by the Independent Electrical Tester. The equipment and cable shall be de-energized and isolated as necessary to perform the tests.

2. Perform tests and inspections as specified throughout Division 16. Tests and inspections required by these sections are not necessarily repeated under this section.

3. Provide assistance as requested by the Independent Electrical Tester in performing its work.

B. Equipment Test and Inspection During Construction and Prior to Acceptance Testing:

1. Motors:

a. Visually inspect the motor for any physical damage.

b. Before energizing any machine, visually inspect for serviceability. Verify that proper alignment has been performed. Check nameplate for electrical power requirements.

c. Test run all motors before placing into regular service. A check on the motor for rotation, speed, current and temperature rise shall be made and results recorded. Maintain the proper color codes for phase identifications. A motor phase rotation meter should be used prior to connection at motor to prevent later swaps of phase wires.

2. Grounding Systems:

   a. All main plant building loops and major equipment grounds to be tested to remote earth or directly referenced to an extremely low resistance (3 ohm) reference ground bench mark. Visual inspection of all systems, raceway and equipment grounds to be made to determine the adequacy and integrity of the grounding. All ground testing results to be properly recorded, witnessed, and submitted.

   b. Ground tests shall be performed in accordance with NETA using a J. G. Biddle Company low resistance, Null balance type, ground testing ohmmeter, and test lead resistance compensated for. The test instrument to be the type, which compensates for potential and current rod resistances.

   c. Test entire grounding system for continuity of connections and for resistance. Ensure that ground resistance of conduits, equipment cases, and supporting frames does not vary appreciably from that of system as whole and does not exceed 3 Ohms.

3. Outdoor Pad Mounted Transformer:

   a. At the time of equipment receipt, visually check the exterior for any damage or defects.

4. Low voltage Switchboard:

   a. At the time of equipment receipt, visually inspect the equipment for any damage or defects. Coordinate inspections with factory-trained technicians.

   b. Energize heaters for prolonged storage, if required.

   c. Perform complete inspections and electrical tests in accordance with SECTION 16366, LOW VOLTAGE SWITCHBOARDS and NETA.

5. Circuit Breakers – Low Voltage:

   a. At the time of equipment receipt, visually check the exterior for any damage or defects.

   b. Perform complete inspection and electrical test in accordance with NETA.

6. Motor Control Centers:

   a. At the time of equipment receipt, visually check the exterior for any damage or defects.

   b. Perform complete inspection and electrical test in accordance with SECTION 16920, 600-VOLT MOTOR CONTROL CENTERS and NETA.

7. Dry-Type Transformers:

   a. All 480 volt primary, air-cooled, transformers shall be given an insulation test, by means of a megger, after connections with the primary cables are complete. The supply cable shall be meggered with the primary winding and to the open air circuit breaker. Secondary leads may be meggered with the secondary windings to the open load breakers.

   b. Check continuity and correctness of connections of all windings and ratings.

   c. Perform inspection checks, and electrical tests in accordance with NETA.

8. 600 VAC Wire and Cable:

   a. Before energizing, the continuity and insulation resistance of all wiring shall be measured with a megger from each wire to all others and to ground.

   b. All cables and wires to be checked for proper identification numbering and/or color coding.

   c. Perform inspection checks and electrical tests in accordance with NETA.

9. Overhead Conduit Systems:

   a. The overhead conduit system to be checked for proper installation by using the following check list: (This list not to be considered all inclusive but as a guide for inspection).

      (1) Conduits are supported on appropriate independent supports (i.e., not on process piping, pipe ways, or piping hangers).

      (2) Exposed conduits are run in a neat workmanlike manner, parallel or perpendicular to structural members.

      (3) Conduits are routed as far away from possible fire hazards and heat sources as practical.

      (4) Conduits are supported at the required intervals.

      (5) Pull boxes and fittings are installed so that covers are easily removable. Verify that all covers are installed and tightly bolted with gaskets provided where needed.

      (6) Number of bends in the conduit does not exceed NEC requirements without a pull box installed.

      (7) Circular cross sectional area is uniform at conduit bends. Single bends do not exceed 90 degrees.

      (8) Conduits are terminated in threaded hubs or bushings to prevent damage to wire.

      (9) Conduits joints have joint compound of the type specified and are tight and conduit ends are properly reamed and threaded not to engage less than 5 threads.

      (10) Pull fittings are of adequate size such that cable can be installed and replaced at a later date without bending the cable less than code or manufacturer's requirements.

      (11) Seal fittings and/or sealing compound is installed at moisture barriers to prevent entry of moisture into equipment and/or where shown on plans.

      (12) Drains and conduit seals are installed on vertical conduit runs entering devices, equipment, and enclosures to prevent entrance of moisture.

      (13) Flexible conduit is installed at motors and other equipment as specified or required. Verify that all cabling and conduit runs are properly identified at each end.

10. Panelboard electrical checks to be as included in the Wire and Cable section of this specification. Panelboards to be checked for proper circuit identification on the door schedule.

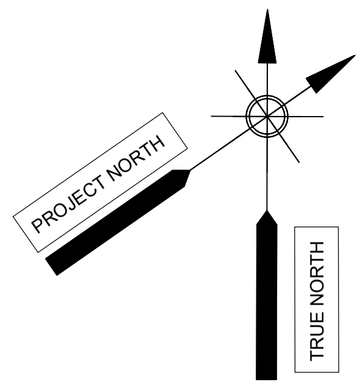
11. Sealing of Openings: Inspect the entire job to insure that all openings and holes provided or utilized are properly sealed as specified.

12. Where referenced NETA Standards indicate optional testing, perform these tests as described.

**3.03 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**



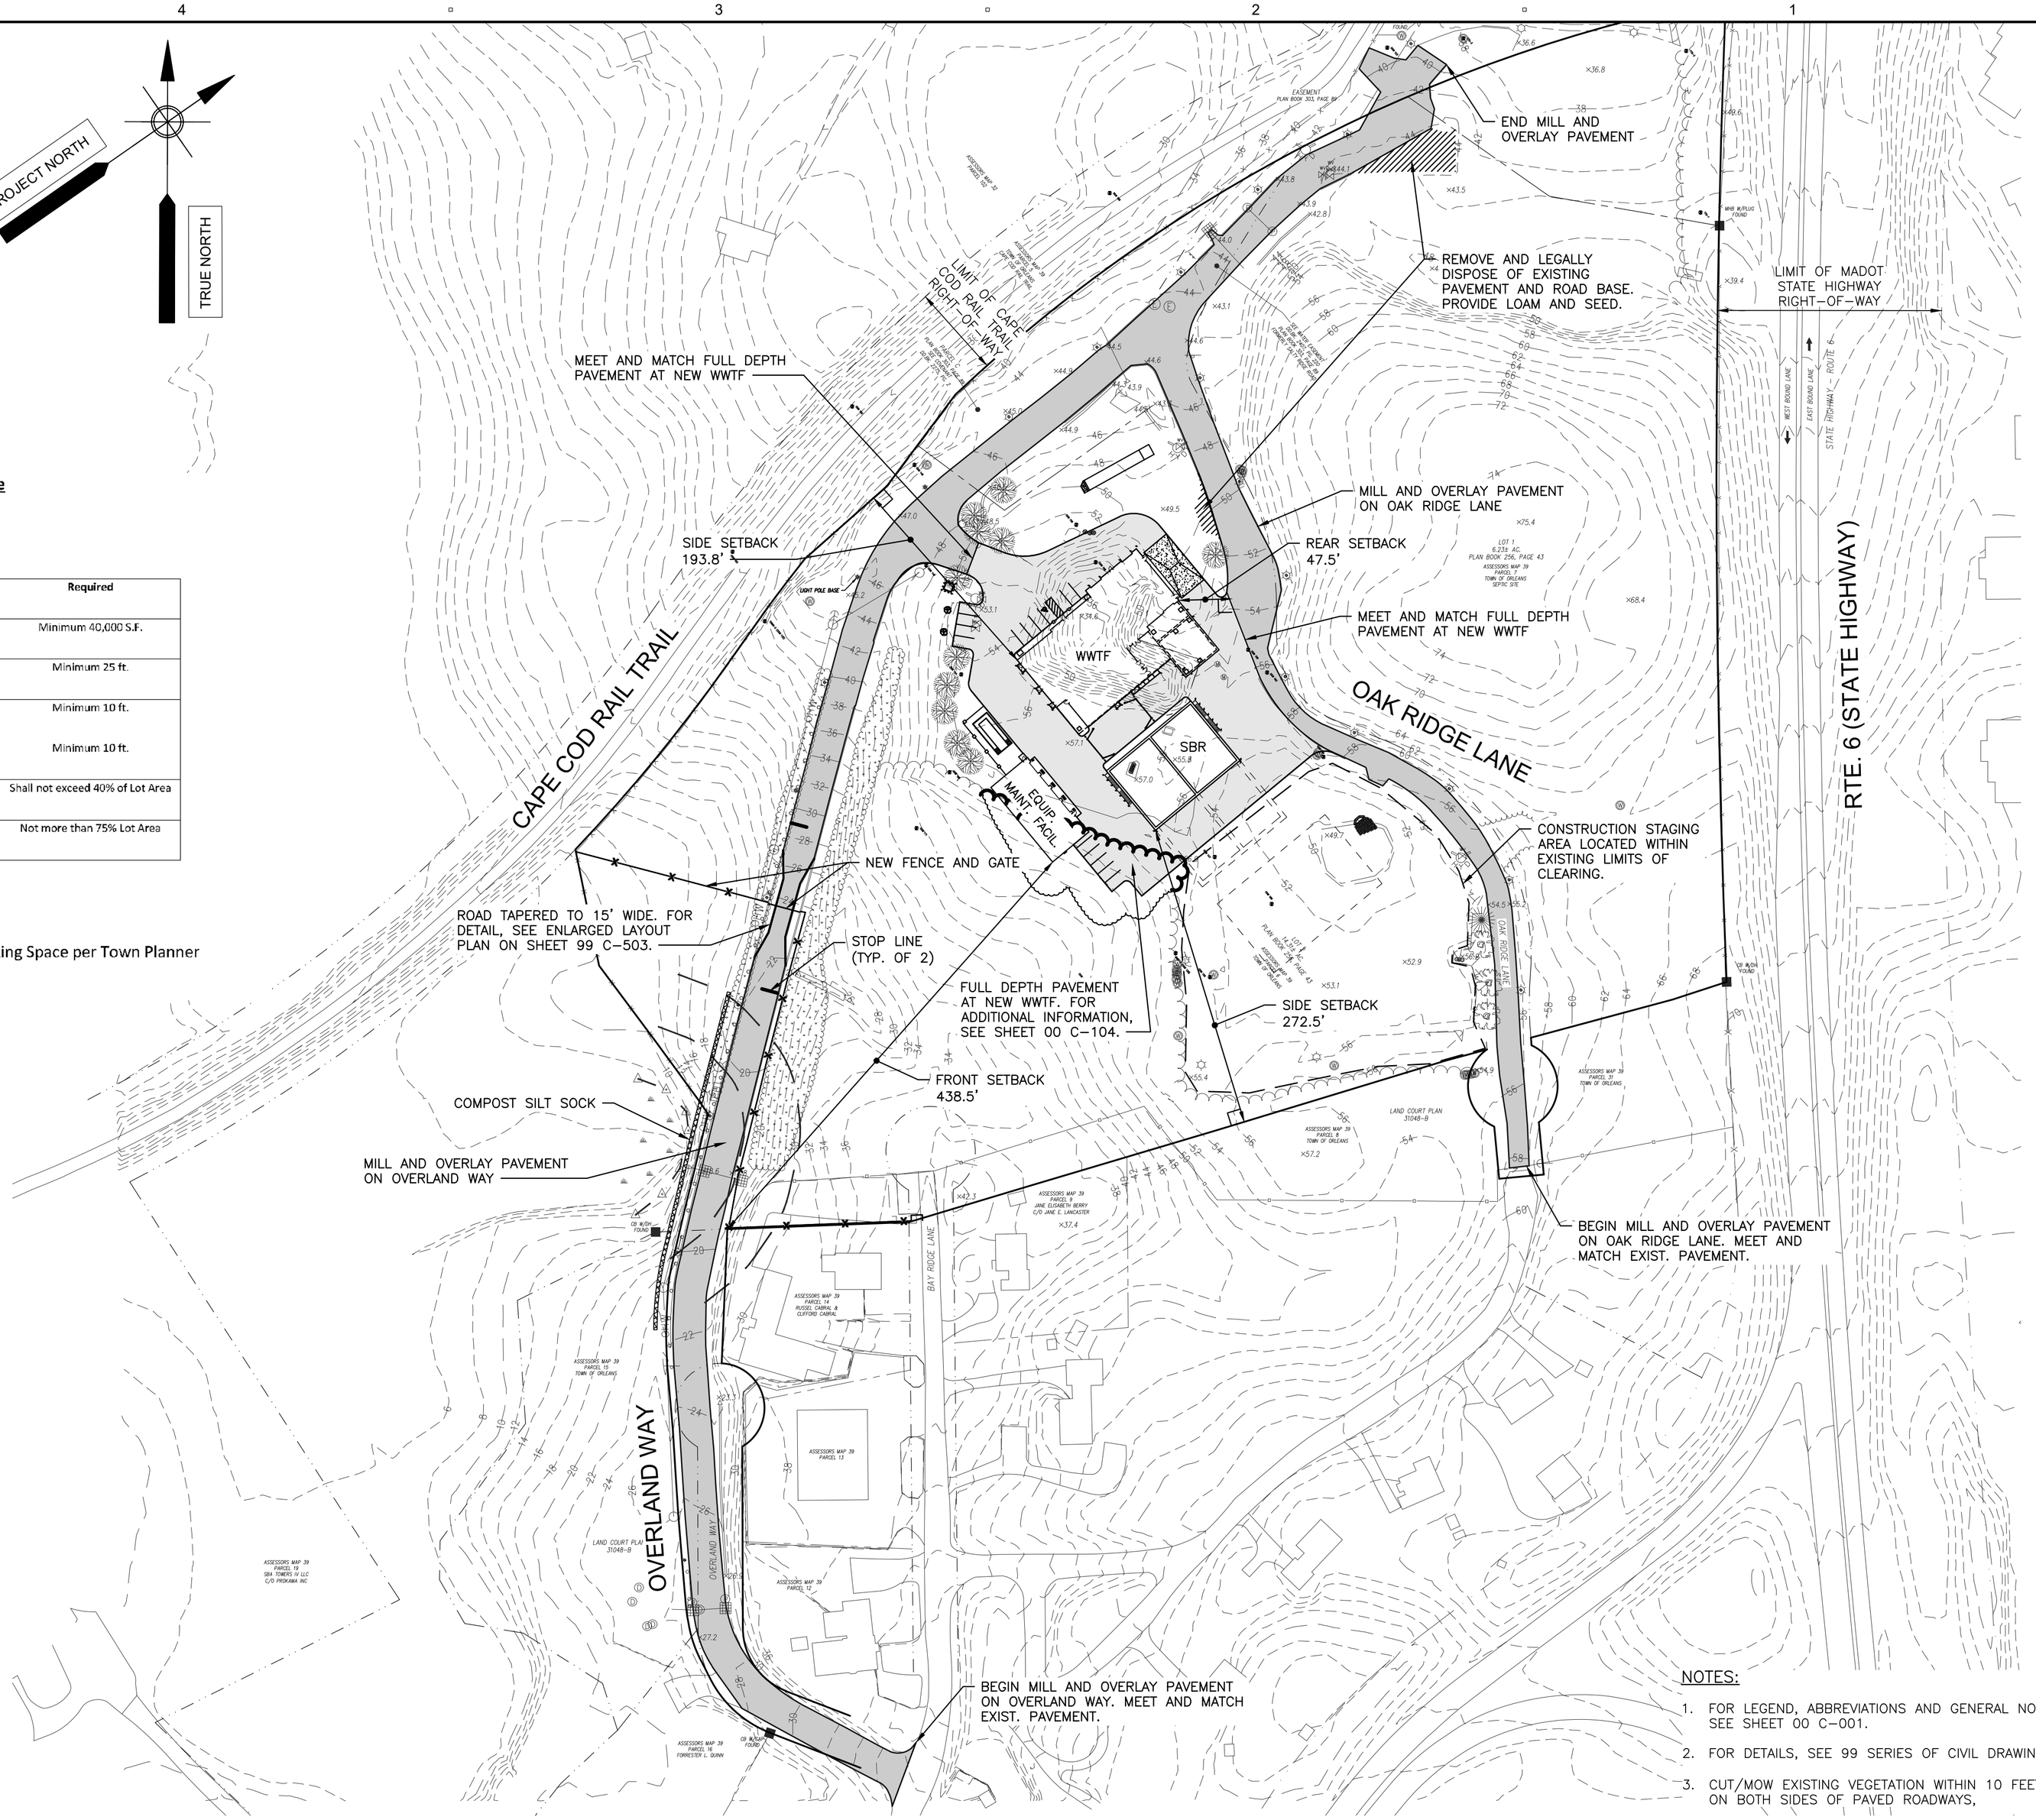
## Zoning Compliance Table

**Zoning District: GB**
**Use: Municipal**

| | Proposed | Required |
|---|---|---|
| **Lot Area (Upland)** | 158,919 S.F. | Minimum 40,000 S.F. |
| **Setback - Front Yard** | 438.5 ft. | Minimum 25 ft. |
| **Setback - Side Yard** | 193.8 ft. | Minimum 10 ft. |
| **Setback - Rear Yard** | 47.5 ft. | Minimum 10 ft. |
| **Floor Area Ratio** | 14,363 S.F./617,681 S.F. *100 = 2.3% | Shall not exceed 40% of Lot Area |
| **Impervious Surface** | 95,615 S.F./617,681 S.F. *100 = 15.5% | Not more than 75% Lot Area |

Parking Requirements:

Employees Maximum Shift: 6
15 Parking Spaces Provided Including One Van Accessible Parking Space per Town Planner Direction.



## PLAN

SCALE: 1"=80'

NOTES:

1. FOR LEGEND, ABBREVIATIONS AND GENERAL NOTES, SEE SHEET 00 C-001.
2. FOR DETAILS, SEE 99 SERIES OF CIVIL DRAWINGS.
3. CUT/MOW EXISTING VEGETATION WITHIN 10 FEET ON BOTH SIDES OF PAVED ROADWAYS,

1" = 80' — 0 — 80 — 160 — 240 — SCALE FEET

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 2 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 4 pages and 4 pages of attachments for a total of 8 pages.

**ATTACHMENTS**

1. SECTION 02445, VINYL FENCE

**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. TABLE OF CONTENTS
   A. Page TOC-2, DIVISION 2 - EQUIPMENT, add “Section 02445, Vinyl Fence”.
   B. Page TOC-4, DIVISION 11 - EQUIPMENT, add “Section 11306, Prefabricated Low-Pressure Sewerage Pump Station”.
2. SECTION 00200, INSTRUCTIONS TO BIDDERS
   A. Page 00200-2, ARTICLE 1.01, RECEIPT AND OPENING OF BIDS, Paragraph B., delete the words “Any bid received from a bidder who did not attend the mandatory pre-bid conference will be returned to the applicant unopened. No exceptions will be made.” in its entirety.
   B. Page 00200-2, ARTICLE 1.01, RECEIPT AND OPENING OF BIDS, Paragraph F., delete the paragraph in its entirety and replace with the following new paragraph:
      F. A non-mandatory Pre-Bid Conference was held on February 20, 2020 at 9:00 am at the Town of Orleans, 19 School Road, Orleans, MA 02653. Refer to the attached Attendance List.

3. SECTION 00410, FORM OF GENERAL BID

   A. Page 00410-2, Paragraph 2, second sub-paragraph, delete the words "…the proposed work, attended the mandatory pre-bid conference, and…" and replaced with the words "…the proposed work and…".

4. SECTION 01500, TEMPORARY FACILITIES

   A. Page 00410-5, Article 3.09, Scaffolding, delete the article in its entirety and replace with the following new article:

      3.09 - SCAFFOLDING

      A. The Contractor shall furnish, erect, maintain in a safe condition and remove all scaffolding required for the execution of the work except for the work performed by the Filed Sub-Bid subcontractors.

      B. All Filed Sub-Bid subcontractors shall furnish, erect, maintain in a safe condition and remove all scaffolding required for the execution of their work.

      C. Neither the Engineer nor the Owner will act as an arbitrator on questions of whether the Contractor or any of his subcontractors shall furnish or remove scaffolding required for any portion of the work.

5. SECTION 02445, VINYL FENCE

   A. Add new SECTION 02445, VINYL FENCE as attached.

6. SECTION 02053, PAVING, CURBING, SIDEWALKS AND ROADWAYS

   A. Page 02053-4, Article 2.07, Paragraph A., delete the paragraph in its entirety and replace with the following new paragraph:

      A. Cement concrete for walks shall be of 5,000 psi compressive strength at 28 days and shall conform to Section M4.02.00 (air entrained) of the State Specifications.

7. SECTION 11308, RECESSED IMPELLER PUMPS AND APPURTENANCES

   A. Page 11308-12, Article 3.07, Paragraph B., delete subparagraph B.3 in its entirety.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. ADDENDUM No. 1

   A. Changes to the Contract Drawings, Item No. 5, delete the words "Add new DRAWING 99 DI-602 as attached." and replace with the words "Add new DRAWING 00 C-108 as attached."

2. DRAWING 00 G-002, INDEX OF DRAWINGS

   A. INSTRUMENTATION add "99 DI-602".

3. DRAWING 00 C-104, SITE LAYOUT PLAN - WWTF

   A. Delete the words "10' High White Vinyl Fence" in its entirety and replace with the words "10' High White Vinyl Fence. Fence shall have 5" x 5" (Heavy Wall) Posts, 3" x 3" Rails and 7/8" x 1-1/2" (Heavy Wall) Pickets."

4. DRAWING 00 D-003, PROCESS PIPING SCHEDULE

   A. Add the following new Pipe to the schedule:

| Legend | Service | System Design Conditions | | | |
|---|---|---|---|---|---|
| | | Temp. (Deg. F) | | Pressure (PSI) | |
| | | Oper. | Max. | Work. | Max |
| W1 | Municipal Water | 40 | 80 | 60 | 150 |

| Piping | | | | |
|---|---|---|---|---|
| Material | Diameter Range | Sch./Class | Lining/Coating | Joint Type |
| Ductile Iron | All | See Specs. | Cement | Flanges/Restrained Mechanical Joint |

| Insultation | | Valving | | |
|---|---|---|---|---|
| Type | Thickness (In.) | Block | Check | Throttling |
| --- | --- | Gate | --- | --- |

| Test Requirements | | | | Specs. Section Number | Remarks |
|---|---|---|---|---|---|
| Pressure (PSI) | Medium | Test Duration (Min.) | Leakage Allowance (See Notes) | | |
| 150 | Water | 60 | Zero | 02600 | --- |

5. DRAWING 10 DI-603, SLUDGE TRANSFER PUMPS P&ID

   A. Delete the words “Type III” and replace with the words “Type I”.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The work of this section includes all labor, materials, tools and equipment necessary to furnish and install vinyl fence as specified herein and as shown on the drawings.

B. Attention is directed to the GENERAL INFORMATION and DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Materials brochures.
2. Fabric and post samples showing size, color, and finish.
3. Drawings showing height of fence, sizes and types of materials used for entire fencing system.

**1.05 - PRODUCT HANDLING**

A. All materials shall be shipped, stored, handled and installed according to the written recommendations of the supplier and as to not to degrade quality, serviceability or appearance.

**1.06 - DESIGN CRITERIA**

A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

2. D256: Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.
3. D638: Standard Test Method for Tensile Properties of Plastics.
4. D648: Standard Test Method for Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position.

B. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

## PART 2 - PRODUCTS

### 2.01 - MATERIALS

A. General. Entire fence and gate system shall be white vinyl.

B. Materials of Construction

1. Cell classification as per ASTM D1784 - 14344B
2. Tensile Strength - 6,500 psi as per ASTM D638
3. Izod impact (ft. lbs/in notch) 23'C - 5.0 O'C - 2.0 - ASTM D256
4. Tensile modulus 425,000 psi as per ASTM D638
5. Deflection Temperature 67° C as per ASTM D648
6. Thermal expansion 3 x 10.5 in / in F

### 2.02 - COMPONENTS

| Component | Cross Section (inch) | Wall Thickness (inch) | Corner Radius (inch) |
|---|---|---|---|
| Posts | 4 x 4 | 0.140 | 11/32 |
| | 5 x 5 | 0.135 - Standard Wall | 3/8 |
| | 5 x 5 | 0.170 - Heavy Wall | 3/8 |
| Rails | 1 1/2 x 1 1/2 | 0.120 | 7/32 |
| | 1 3/4 x 3 1/2 | 0.100 | 13/32 |
| | 3 x 3 1/2 - 'T' Rail | 0.095 | 13/32 |
| | 2 x 6 - Hollow | 0.125 | 5/16 |
| | 1 1/2 x 5 1/2 - Ribbed | 0.090 | 11/32 |
| | 2 x 6 - Ribbed | 0.090 | 5/16 |
| | 3 x 3 | 0.110 | 5/16 |
| | 3 1/2 x 3 1/2 | 0.115 | 3/8 |
| Pickets | 7/8 x 1 1/2 | 0.060 | 3/16 |
| | 7/8 x 1 1/2 - Heavy Wall | 0.090 | 3/16 |
| | 7/8 x 3 | 0.060 | 3/16 |
| | 7/8 x 6 - Ribbed | 0.060 | 3/16 |
| | 7/8 x 7 - Tongue & Groove | 0.060 | 1/16 |
| | 1 1/2 x 1 1/2 | 0.060 | 7/32 |

### 2.03 - GATES – NOT USED

## PART 3 - EXECUTION

### 3.01 - VERIFICATION OF CONDITIONS

A. Before the start of the work of this Section, verify that the project is ready for this work.

B. Verify that field measurements are as shown on approved shop drawings and/or manufacturer's instructions.

C. Verify that the equipment or material is in conformance with the approved shop drawings and specifications and resolve any deviations.

D. Notify subcontractors involved or affected by this work and coordinate the work with them.

### 3.02 - INSTALLATION

A. Installation shall be made by skilled mechanics experienced in erection of this type of fence.

B. All posts shall be set in concrete foundations to a minimum depth of 48 inches. Diameter of the foundation shall be post O.D. plus 12-inches. The foundation shall be a 1-2-4 mixture of concrete and shall be 54 inches deep, minimum. All foundations shall extend approximately 1 inch above grade and shall slope away from the post to provide for proper drainage.

C. Line posts shall be spaced at a maximum of 10-foot intervals. Intermediate rails shall be used to brace end and gate posts to the adjacent line post, and corner posts to the 2 adjacent line posts. Changes in line of 30 degrees or more shall be considered corners.

D. All connections shall be in accordance with the manufacturer’s recommendations.

E. Any abraded areas of fence shall be replaced at no cost to the Owner.

### 3.03 - CONTRACT CLOSEOUT

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT

**END OF SECTION**

February 19, 2020

**ADDENDUM NO. 3**

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. ADDENDUM NO. 2

   A. Changes to be Made to the Contract Specifications, delete Item 4. in its entirety and replace with the following new item:

      3.09 – SCAFFOLDING AND HOISTING

      A. The Contractor shall furnish, erect, maintain in a safe condition and remove all scaffolding required for the execution of the work except for the work performed by the Filed Sub-Bid subcontractors. The Contractor shall provide, set up and maintain in a safe condition all derricks and hoisting machinery, perform all hoisting operations in a safe method and remove all derricks and hoisting machinery as required for the execution of their work, except for the work performed by the Filed Sub-Bid subcontractors.

      B. All Filed Sub-Bid subcontractors shall furnish, erect, maintain in a safe condition and remove all scaffolding required for the execution of their work. All Filed Sub-Bid subcontractors shall provide, set up and maintain in a safe condition all derricks and hoisting machinery, perform all hoisting operations in a safe method and remove all derricks and hoisting machinery as required for the execution of their work.

      C. Neither the Engineer nor the Owner will act as an arbitrator on questions of whether the Contractor or any of his subcontractors shall furnish or remove scaffolding required for any portion of the work.

2. GENERAL

   A. Sub-Bid Opening - March 18, 2020 at 2:00 pm.

   B. General Bid Opening - March 25, 2020 at 2:00 pm.

   C. The Owner has pre-selected the manufacturers for the following equipment: (a) Septage Receiving Station; (b) Rotary Drum Thickeners; (c) Effluent Disk Filters; and (d) Sequencing Batch Reactors. All payment terms, performance guarantees, warranties and the like shall be in accordance with the following section: (a) SECTION 11333 - SEPTAGE RECEIVING STATION; (b) SECTION 11365 - ROTARY DRUM THICKENERS; (c) SECTION 11399 - EFFLUENT DISK FILTERS; and (d) SECTION 11600 - SEQUENCING BATCH REACTORS. In the event of a discrepancy between the Proposals and these sections, these sections shall govern.

3. TABLE OF CONTENTS

   A. Page TOC-2, DIVISION 0 – BIDDING AND CONTRACT REQUIREMENTS, add SECTION 00310, BID BOND, as attached.

   B. Page TOC-2, DIVISION 02 – SITE WORK, add SECTION 02065, TEMPORARY BY-PASS PIPING AND SERVICE CONNECTIONS, as attached

   C. Page TOC-4, DIVISION 08 – DOORS AND WINDOWS, add SECTION 08210, FLUSH WOOD DOORS, as attached.

4. SECTION 00100, ADVERTISEMENT FOR BIDS

   A. Page 00100-1, Paragraph 3., first subparagraph, delete the words "…until 10:00 a.m. prevailing time, on March 11, 2020 at which time and place…" and replace with the words "…until 2:00 p.m. prevailing time, on March 18, 2020 at which time and place…".

5. SECTION 00200, INSTRUCTIONS TO BIDDERS

   A. Page 00200-2, ARTICLE 1.01, RECEIPT AND OPENING OF BIDS, Paragraph F., delete the paragraph in its entirety and replace with the following new paragraph:

      "F. A non-mandatory Pre-Bid Conference was held on February 20, 2020 at 9:00 am at the Town of Orleans, 19 School Road, Orleans, MA 02653. Refer to the attached Attendance List and Presentation."

6. SECTION 00310, BID BOND

   A. Add new SECTION 00310, BID BOND as attached.

7. SECTION 00410, FORM OF GENERAL BID

   A. Page 00410-2, Paragraph 5., delete subparagraph D. in its entirety and replace with the following new subparagraph:

      D. Bidder shall print out in Landscape Format and submit the completed Microsoft Excel Proposal Form. In addition, Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com).

   B. Delete "Orleans_MA-2019-01-Bid Form_v2" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_4-02-28-20" in both hard copy and Microsoft Excel format.

8. DOCUMENT 00420, FORM OF SUBBID

   A. Delete "Orleans_MA-2019-01-SubBid Form_v2" in its entirety and replace with the attached new "Orleans_MA-2019-01-SubBid Form_Add_4-02-28-20" in both hard copy and Microsoft Excel format.

9. SECTION 00800, SUPPLEMENTARY CONDITIONS

   A. Page 00800-2, ARTICLE 5 - BONDS AND INSURANCE NOTICE TO CONTRACTOR, SC-5.04, add the following new paragraph:

      The General Contractor shall carry the coverage for Subcontractors by naming the Subcontractors, the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured at the limits specified herein. SECTION 05020A-3, INSURANCE REQUIREMENTS FOR INCLUSION IN ALL SPECIFICATIONS AND CONTRACTS are separate from the Owners and Contractors Protective Liability and shall name the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured.

10. SECTION 00830, STATE STATUTES AND REGULATIONS COMMONWEALTH OF MASSACHUSETTS

    A. Page 00830-1, ARTICLE A. – Revisions to General Conditions, Paragraph A., add the following to the end of Subparagraph 4.:

       Town of Orleans building permit fees are waived.

11. SECTION 01020, ALLOWANCES

    A. Page 01020-2, ARTICLE 1.05 - ALLOWANCES FOR PRODUCTS, delete Paragraph C. in its entity and replace with the following new paragraph:

       C. The scheduled allowances are as follows:

**SCHEDULED ALLOWANCES**

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 1 | Electric Company Connection/Service Fee | $125,000 | 2.J. |
| 2 | Telephone Company Connection/Service Fee | $30,000 | 2.K. |
| 3 | Gas Company Connection/Service Fee | $30,000 | 2.L. |
| 4 | Planting Operations | $30,000 | 2.M. |
| 5 | Section 11333 - Septage Receiving Station | $400,000 | 2.N. |
| 6 | Section 11399 - Effluent Disk Filters | $450,000 | 2.O. |
| 7 | Section 11600 - Sequencing Batch Reactors | $550,000 | 2.P. |
| 8 | Section 11365 - Rotary Drum Thickeners | $225,000 | 2.Q.. |

Notes:

1. Item No. 1 - The allowance is for the cost by the Electric Company to provide all labor, materials, tools, and equipment required for providing electrical service to the WWTF and Effluent Disposal Site.

2. Item No. 2 – The allowance is for the cost by the Telephone Company to provide all labor, materials, tools, and equipment required for providing telephone service to the WWTF.
3. Item No. 3 - The allowance is for the cost by the Gas Company to provide all labor, materials, tools, and equipment required for providing gas service to the WWTF.
4. Item No. 4 - The allowance is for the cost of the Contractor to provide all labor, materials, tools, and equipment required to purchase and plant landscaping at the WWTF and/or Effluent Disposal Site.
5. Item No. 5 - The allowance is for the cost of the preselected equipment manufacturer to furnish all materials required for the Septage Receiving Station as specified in Section 11333, Septage Receiving Station and as included in the manufacturer's proposal.
6. Item No. 6 - The allowance is for the cost of the preselected equipment manufacturer to furnish all materials required for the Effluent Disk Filters as specified in Section 11399, Effluent Disk Filters and as included in the manufacturer's proposal.
7. Item No. 7 - The allowance is for the cost of the preselected equipment manufacturer to furnish all materials required for the Sequencing Batch Reactors as specified in Section 11600, Sequencing Batch Reactors and as included in the manufacturer's proposal.
8. Item No. 8 - The allowance is for the cost of the preselected equipment manufacturer to furnish all materials required for the Rotary Drum Thickeners as specified in Section 11365, Rotary Drum Thickeners and as included in the manufacturer's proposal.

12. SECTION 01030, SPECIAL REQUIREMENTS

    A. Page 01030-5, ARTICLE 1.11 - SCOPE OF WORK AND SEQUENCE OF CONSTRUCTION, Paragraph O., delete the words "No construction activity shall be allowed on the Project for two working days prior to the following dates:" in its entirety and replace with the words "No construction activity shall be allowed on the Project on the following dates, unless otherwise approved by the Owner:"

13. SECTION 02210, EARTH EXCAVATION, BACKFILL, FILL AND GRADING

    A. Page 02210-2, ARTICLE 1.01 – SCOPE, add the following new Paragraph D.:

       D. Existing on-site materials may be used for backfilling non-structural excavations and constructing embankments and fills.

14. SECTION 02435, CRUSHED STONE

    A. Page 02435-2, ARTICLE 2.01 - MATERIAL, Paragraph B, add the following new subparagraph:

       5. Sources of PGA are as follows:

David Johansen, Director Department of Public Works
Town of Dennis
120 Theophilus F. Smith Road
South Dennis, MA 02660
Phone: 508-760-6220
e-Mail: djohansen@town.dennis.ma.us

Reagan Bissonnette, Executive Director
Northeast Resource Recovery Association
2101 Dover Road
Epsom, NH 03234
Phone: 603-736-4401
e-Mail: rbissonnette@nrra.net

15. SECTION 02520, WICK CONSTRUCTION AND TESTING

    A. Page 02520-6, ARTICLE 1.07 – WARRANTY, delete Paragraph C. in its entirety and replace with the following new paragraph:

       C. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

16. SECTION 02725, MANHOLES, CATCH BASINS, HANDHOLES, AND PULL BOXES

    A. Delete the section in its entirety and replace with the new section as attached.

17. SECTION 03345, CONCRETE FLOOR TREATMENT

A. Page 03345-3, ARTICLE 2.01 – LIQUID HARDENER (LQH), delete the article in its entirety and replace with the following new article:

2.01 – LIQUID HARDENER (LQH) – Not Used

B. Page 03345-4, ARTICLE 3.02 – APPLICATION, delete Paragraph A. in its entirety and replace with the following new paragraph:

A. LIQUID HARDENER (LQH) – Not Used

18. SECTION 03450, PRECAST ARCHITECTURAL CONCRETE

A. Page 03450-1, add the following after the section name: (Filed Sub-Bid Required).

B. Page 03450-1, PART 1 – GENERAL, add the following new paragraph:

1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 03450, PRECAST ARCHITECTURAL CONCRETE is a part of DIVISION 04, MASONRY which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 04120, STONE VENEER.

B. The Work of SECTION 03450, PRECAST ARCHITECTURAL CONCRETE requires the Subcontractor to perform all Work specified under this section.

C. Page 03450-1, ARTICLE 1.01 - SCOPE, add the following new sentence to the end of Paragraph A.:

The precast cap at the top of the cultured stone veneer shall have dimensions of 3 1/2-inches x 3 1/2-inches.

19. SECTION 04120, STONE VENEER

A. Page 04120-1, PART 1 – GENERAL, delete Paragraph B. in its entirety and replace with the following new paragraph:

B. A sub-bid submitted for the Work of DIVISION 4, MASONRY shall include the complete Work specified in all of the following Sections:

1. SECTION 04120, STONE VENEER
2. SECTION 04200, UNIT MASONRY AND ACCESSORIES
3. SECTION 03450, PRECAST ARCHITECTURAL CONCRETE

20. SECTION 04200, UNIT MASONRY AND ACCESSORIES

A. Page 04200-2, ARTICLE 1.01 - SCOPE, Paragraph B., delete subparagraph 5. in its entirety and replace with the following new subparagraph:

5. Cavity wall insulation including spray foam insulation.

B. Page 04200-2, ARTICLE 1.01 - SCOPE, Paragraph B., delete subparagraph 19. in its entirety and replace with the following new subparagraph:

19. Air/Vapor Barrier Membrane provided by the General Contractor and installed by the filed sub-bid subcontractor.

21. SECTION 05120, STRUCTURAL STEEL

A. Add new SECTION 05120, STRUCTURAL STEEL, as attached.

22. SECTION 05500, MISCELLANEOUS METAL

    A. Page 05500-1, PART 1 – GENERAL, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. A sub-bid submitted for the Work of DIVISION 5, METALWORK shall include the complete Work specified in all of the following Sections:

            1. SECTION 05500, MISCELLANEOUS METAL
            2. SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS
            3. SECTION 05120, STRUCTURAL STEEL

    B. Page 05500-1, PART 1 – GENERAL, Paragraph D. add the following drawings

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 C-104 | 00 C-105 | 00 D-102 | 00 D-001 | 00 D-002 | 10 D-100 | 10 D-101 |
| 10 D-102 | 10 D-103 | 10 D-104 | 10 D-105 | 10 D-106 | 10 D-301 | 10 D-302 |
| 10 D-303 | 10 D-304 | 10 D-305 | 10 D-306 | 10 D-307 | 10 D-308 | 15 D-101 |
| 15 D-102 | 15 D-103 | 15 D-104 | 15 D-301 | 30 D-101 | 99 D-501 | 99 D-503 |

    C. Page 05500-11, ARTICLE 2.14 – HATCHES, delete Paragraph D. in its entirety and replace with the following new paragraph:

        D. Type J, Type JD and Type HL-93 hatches that are not shown connected to a drainage system shall be provided with extensions to the drainage coupling to allow drainage to the area below or sumps.

    E. Page 05500-11, ARTICLE 2.14 – HATCHES, add the following new Paragraph G.:

        G. Type HL-93 hatches shall be single leaf or double leaf, watertight, self-draining type. Door leaf shall be of 3/8-inch thick aluminum diamond pattern plates reinforced with aluminum stiffeners as required and capable of withstanding an AASHTO HL-93 wheel load. Channel frame shall be 1/2-inch thick aluminum with anchor flange around the perimeter. Each door leaf shall be equipped with a minimum of two (2) hinges, with stainless steel pins, compression spring operators enclosed in telescopic tubes to afford easy operation, and an automatic hold-open arm with release handle. Snap locks with removable handle and safety chains shall be provided. A 1-1/2-inch drainage coupling shall be located in the front right corner of the channel frame. Hardware shall be stainless steel with factory mill finish and bituminous coating applied to exterior of frame.

    F. Page 05500-12, add the flowing new ARTICLE 2.16 – BAR RACK:

        A. Provide Manual Bar Rack, Drainage Plate and Bar Clamp in accordance with the detail shown on Drawing 99 D-501 - Details I with regards to shape, size, material and detail indicated and suitable for the purpose intended.

23. SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS

    A. Page 05511-1, add the following after the section name: (Filed Sub-Bid Required).

    B. Page 05511-1, PART 1 – GENERAL, add the following new paragraph:

        1.00 - SUBBID REQUIREMENTS

            A. The Work of SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS is a part of DIVISION 5, METAL WORK which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 05500, MISCELLANEOUS METAL.

            B. The Work of SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS requires the Subcontractor to perform all Work specified under this section.

24. SECTION 06610, FIBERGLASS REINFORCED PRODUCTS AND FABRICATIONS

    A. Add new SECTION 06610, FIBERGLASS REINFORCED PRODUCTS AND FABRICATIONS, as attached.

25. SECTION 07160, BITUMINOUS DAMPPROOFING

    A. Page 07160-2, ARTICLE 1.00 – SUBBID REQUIREMENT, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. A sub-bid submitted for the Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION shall include the complete Work specified in all of the following Sections:

            1. SECTION 07610, BITUMINOUS DAMPPROOFING

            2. SECTION 07840, FIRESTOPPING

            3. SECTION 07900, JOINT SEALANTS

26. SECTION 10999, BUILDING SPECIALTIES

    A. Page 10999-6, ARTICLE 2.06 - ALUMINUM FLOOR HATCHES AND FRAMES, delete the article in its entity and replace the following new article:

        2.06 - ALUMINUM FLOOR HATCHES AND FRAMES – Not Used

27. SECTION 11309, CHOPPER PUMPS AND APPURTENANCES

    A. Page 11309-13, Article 3.08, Paragraph B, delete subparagraph 3. in its entirety.

28. SECTION 11333, SEPTAGE RECEIVING STATION

    A. Page 11333-7, ARTICLE 2.01, MANUFACTURERS OF SEPTAGE RECEIVING STATION, delete Paragraph B. in its entirety and replace with the following new paragraph:

        a. The Owner has pre-selected Huber Technology, Inc as the manufacturer of the Septage Receiving Station. No Substitutions are allowed.

    B. Page 11333-14, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

29. SECTION 11365, ROTARY DRUM THICKENERS

    A. Page 11365-23, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

30. SECTION 11399, EFFLUENT DISK FILTERS

    A. Page 11399-17, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

31. SECTION 11600, SEQUENCING BATCH REACTORS

    A. Page 11600-23, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

32. SECTION 13330, PROCESS INSTRUMENTS

A. Add new SECTION 13330, PROCESS INSTRUMENTS, as attached.

33. SECTION 13330A, DATA SHEETS

    A. Add new SECTION 13330A, DATA SHEETS, as attached.

34. SECTION 13331, CONTROL SYSTEM INTEGRATION

    A. Add new SECTION 13331, CONTROL SYSTEM INTEGRATION, as attached.

35. SECTION 13350, SCADA EQUIPMENT

    A. Add new SECTION 13350, SCADA EQUIPMENT, as attached.

36. SECTION 15855, FIBERGLASS REINFORCED PLASTIC DUCT, DAMPERS AND APPURTENANCES

    A. Add new SECTION 15855, FIBERGLASS REINFORCED PLASTIC DUCT, DAMPERS AND APPURTENANCES, as attached.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 10 A-301, BUILDING SECTIONS

    A. Key Note 2, delete the words "…Retardant Treated 2 x 4 Handrails…" and replace with the words "…Retardant Treated 2" x 4" Toe Plates @ 6" A.F.F. for the Entire Length of Attic Space and 2" x 4" Handrails…"

2. DRAWING 10 S-101, FOUNDATION PLAN I

    A. Delete the words "1-1/2" Aluminum Grating El. 39.82" and replace with the words "1-3/4" FRP Grating El. 39.82".

3. DRAWING 10 S-102, FOUNDATION PLAN II

    A. Delete the words "1-1/2" Aluminum Grating El. 39.67" and replace with the words "1-3/4" FRP Grating El. 39.67".

    B. Delete the words "1-1/2" Aluminum Grating El. 39.75" and replace with the words "1-3/4" FRP Grating El. 39.75".

4. DRAWING 10 S-105, ROOF LEVEL PLAN, add the following new note:

    Note: W12 x 117 bearing detail similar to Section 11 shown on Drawing 10 S-302.

5. DRAWING 20 S-101, STORAGE FACILITY GRADE LEVEL PLAN

    A. FOUNDATION/GRADE LEVEL PLAN, add the following new Note 3.:

        3. No grading or sumps are required at the four L.P. EL 56.85 locations. The flat spots are the locations of the 4-inch floor drains shown on DRAWING 20 P-101, EQUIPMENT STORAGE FACILITY PLAN."

6. DRAWING 99 S-502, STRUCTURAL STANDARD DETAILS II

    A. TRENCH DRAIN IN SLAB WITH SLAB BLOCKOUT, add the following new note:

        Note: Refer to SECTION 15400, PLUMBING SYSTEMS for trench drain specification.

7. DRAWING 99 S-506, STRUCTURAL STANDARD DETAILS II

    A. INTERIOR TOP OF WALL CONNECTION PARALLEL TO TRUSSES, , add the following new note:

        Note: The continuous L5 x 3 x 3/16 is typical for all interior non-bearing wall. The angles do not have attachment to the CMU.

8. DRAWING 00 D-008, PROCESS FLOW DIAGRAPH III

    A. Add a 4-inch knife gate valve on the septage receiving truck connection before the pinch valve and rock trap.

9. DRAWING 10 D-104, FACILITY – UPPER PLAN I

   A. Add the following new notes:

      Notes:

      1. The framing, grating, supports, ladders, railing and the like located around the Rotary Drum Thickeners shall be designed by the fabricator and constructed of FRP. The ladders shall be integral with the railing system. Refer to Section 06610 - Fiberglass Reinforced Products and Fabrications.
      2. The hatches in the following locations shall be HL-93 rated:
         a. Truck Bay
         b. Thickened Sludge Storage Tank
         c. Post Equalization Tank
         d. Pre-Equalization Tanks

   B. Add a 4-inch knife gate valve on the septage receiving truck connection before the pinch valve and rock trap.

10. DRAWING 10 D-105, FACILITY – UPPER PLAN II

   A. Add the following new note:

      Note: The framing, grating, supports, stair, railing and the like located around the Effluent Disk Filters shall be designed by the fabricator and constructed of FRP. The stair shall be integral with the railing system. Refer to Section 06610 - Fiberglass Reinforced Products and Fabrications.

11. DRAWING 10 D-306, SECTION IV

   A. Section 7, delete the words “2 Cubic Yard Screenings Dumpster” and replace with the words “Two - 13.5 Cu. Ft. Capacity Tilt Trucks by Tough Guy, Manufacturer No. 21VK502”.

12. DRAWING 00 P-002, SCHEDULES AND CONTROLS

   A. Plumbing Fixture Schedule, delete Tag No. P-7 and replace with the following new tag number.

| Tag No. | Manufacturer & Model Number | Fixture Type | Fixture Dimensions (Where Applicable) |
|---|---|---|---|
| P-7 | Quench750 | Drinking Water Dispenser | 13.5” X 14.5” X 40.5” |

| Water Usage | Soil or Waste | Vent | Cold Water | Hot Water | Tempered Water | Remarks |
|---|---|---|---|---|---|---|
| --- | --- | --- | 1/2” | --- | --- | Break Room |

13. DRAWING 20 P-101, EQUIPMENT STORAGE FACILITY PLAN

   A. Add the following new note:

      Note: All below slab plumbing drain lines shall be concrete encased.

14. DRAWING 10 DI-603, SLUDGE TRANSFER PUMPS P&ID

   A. Delete the words “P-14” and replace with the words “P-10”.

15. DRAWING 10 E-001, WWTF – ELECTRICAL SITE PLAN - POWER

   A. Add the following new note:

      Note: Only the duct banks that contain primary service conductors (Duct Bank No. 02) are to be concrete encased.

16. DRAWING 30 E-001, WICK DISTRIBUTION VAULT – ELECTRICAL SITE PLAN

    A. Add the following new note:

       Note: Only the duct banks that contain primary service conductors from the utility (Duct Bank No. 01) are to be concrete encased.

17. DRAWING 99 E-502, ELECTRICAL DETAILS II

    A. Add the following new note:

       Note: Only the duct banks that contain primary service conductors (Duct Bank No. 02) are to be concrete encased.

18. DRAWING 00 DI-603, SYSTEM ARCHITECTURE 3

    A. Note 1, delete the note in its entirety and replace with the following new note:

       1. Pump Station PLC panels, remote communication hardwired and configuration/integration to be provided under this contract. See Pumping Station Instrumentation Drawings under Contract 2019-02, Drawing Numbers 00 DI-601, 01 DI-601, 01 DI-602, 02 DI-601, 02 DI-602, 03 DI-601, 03 DI-602 and 99 DI-601 for reference regarding I/O quantity, as attached.

19. DRAWING 00 DI-606, EFFLUENT PUMPS P&ID

    A. Delete the plug valves and replace with butterfly valves.

**CHANGES TO BE MADE TO THE CONTRACT ATTACHMENTS**

1. Add new “Town of Orleans, MA, Downtown Area Collection System Layout, dated February 2020”, as attached.

WWTF Effluent Disposal Site

# Project Overview (cont.)

- **General Scope of Work**
  - Wastewater Treatment Facility
    - 350,000 gpd Sequence Batch Reactor
    - Located at 20 Overland Way
  - Effluent Disposal
    - Five Wicks
    - Located at 32 Lots Hollow Road
- **Time for Completion – 654 Calendar Days / 372 Working Days**
- **Bidding Submission Requirements**
  - Sub-Bids Due to Orleans, MA: March 11, 2020 by 10:00 am E.S.T.
  - General Bids Due to Orleans, MA: March 25, 2020 by 2:00 pm E.S.T.
  - Attachments to the Bid

# Project Overview (cont.)

## Attachments to the Bid

- Insurance Requirements
- Statement of State Tax Compliance
- Certificate of Non-Collusion
- Acknowledgement of Principal, if a Corporation or a Partnership
- Certification of OSHA 10-Hour Training
- Massachusetts Diesel Retrofit Form
- DCAMM Certificate of Eligibility
- DCAMM Update Statement

## Post Bid Attachments

- State Revolving Loan
  - Disadvantaged Business Enterprise (DBE) Goals
    - Minimum 4.2 Percent D/MBE Participation
    - Minimum 4.5 Percent D/WBE Participation
  - Two Low Bidders to Submit Close of Business on the Third Business Day After Bid Opening
    - DBE Forms - EEO-DEP-190C and EEO-DEP-191C
    - DBE Certification of United States Citizenship Form

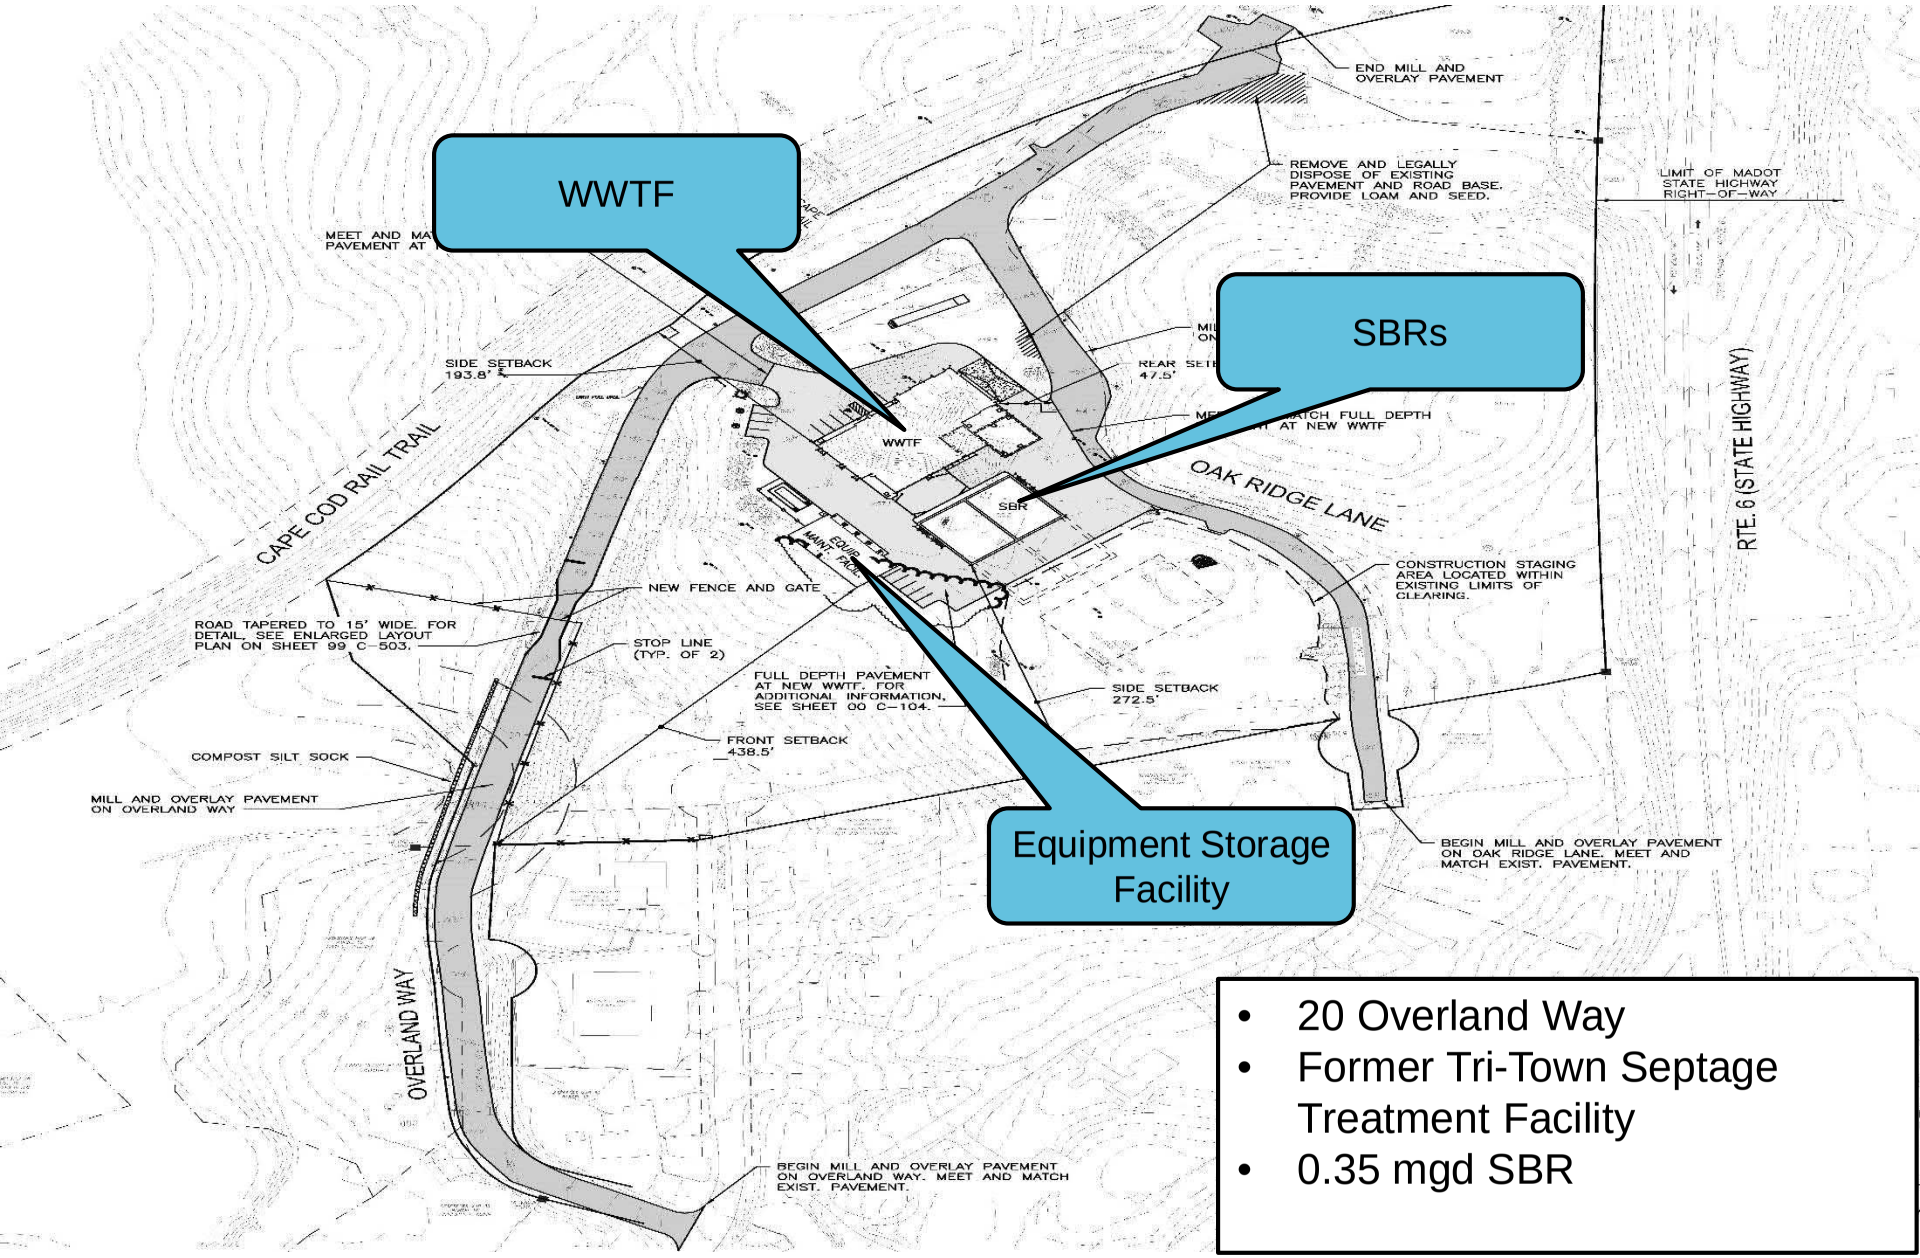
# Project Overview (cont.)

## Prequalified Filed Sub-Bid Subcontractors

- Masonry
- Miscellaneous Metal Work
- Roofing and Flashing
- Metal Windows
- Glass and Glazing
- Painting
- Plumbing
- Heating, Ventilating and Air Conditioning
- Electrical Work

## Prequalified and Other DCAMM Certified Filed Sub-Bid Subcontractors

- Waterproofing and Dampproofing
- Tile
- Fire Protection



- 20 Overland Way
- Former Tri-Town Septage Treatment Facility
- 0.35 mgd SBR

# Project Overview (cont.)
# WWTF

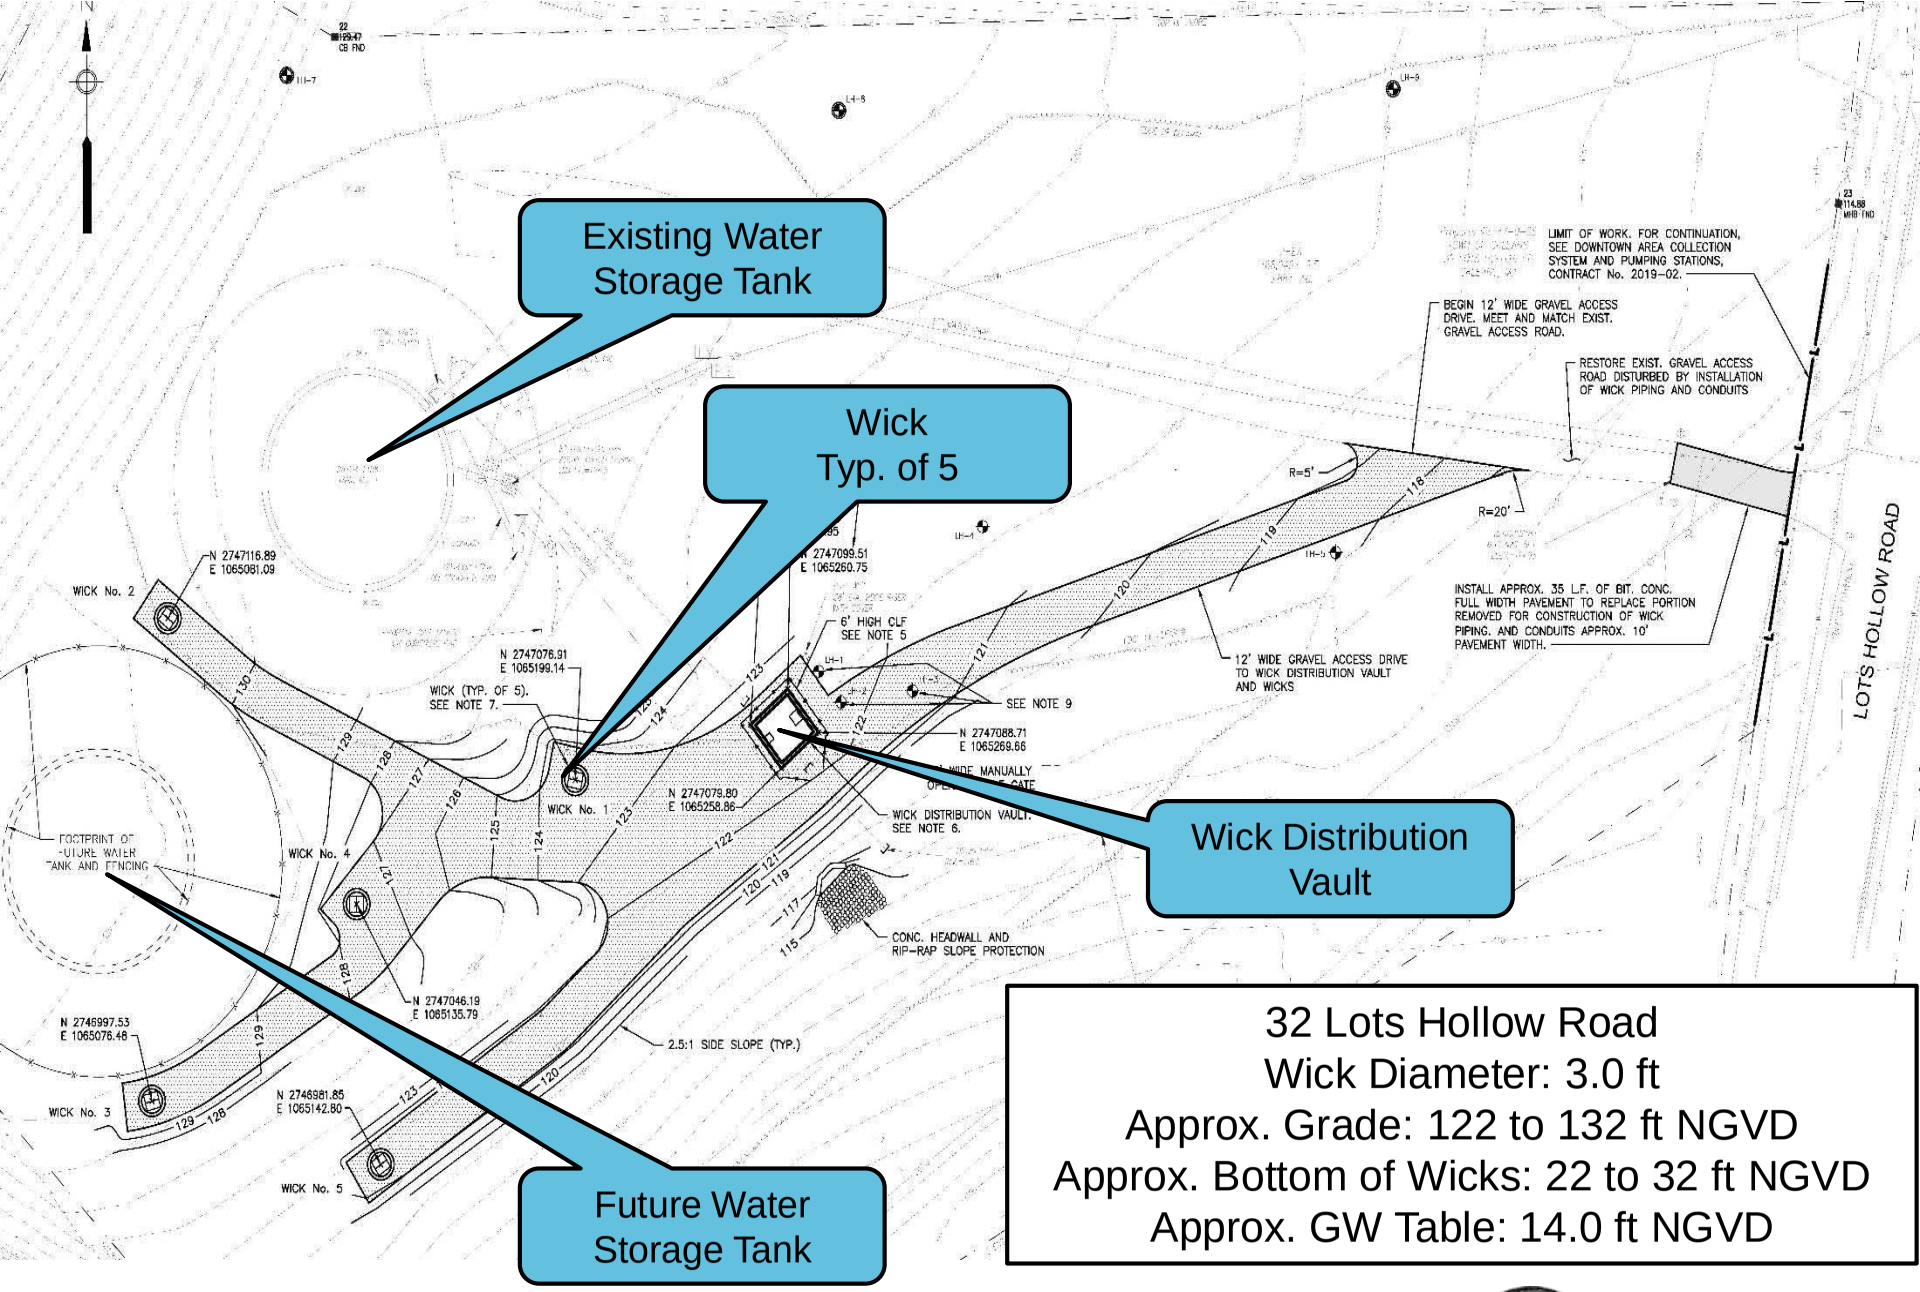
## Buildings

- WWTF
  - Administrative Spaces
  - Laboratory
  - Control Room
  - Chemical Storage Rooms
  - Mechanical and Electrical Rooms
  - Men's and Women's Rooms
  - Headworks
  - Disk Filter Room
  - Garage and Septage Receiving Area
  - Pump Room
- Equipment Storage Facility
  - Four Bays
  - Work Room / Shop

## Major Wastewater Treatment Components

- Influent Screening
- Septage Receiving Station
- Two Pre-equalization Tanks
- Two SBRs
- Two Effluent Disk Filters
- One Post-equalization Tank
- Two in-line Ultraviolet Reactors
- Two Waste Sludge Storage Tanks
- One Dual Rotary Drum Thickener
- One Thickened Sludge Storage Tank
- Chemical Storage and Feed Systems
- One Odor Control System

# Project Overview (cont.)
# WWTF



32 Lots Hollow Road
Wick Diameter: 3.0 ft
Approx. Grade: 122 to 132 ft NGVD
Approx. Bottom of Wicks: 22 to 32 ft NGVD
Approx. GW Table: 14.0 ft NGVD

AECOM
Tighe&Bond

# Special Attention to Specifications and Bidding Conditions

- **Preconstruction Requirements**
  - Submittals
  - Digital Videodisc Recording
  - Health and Safety Plan
  - Traffic Management Plan
    - Prepare and Submit to Town and Engineer for Review and Approval
    - Detours and Road Accessibility
    - Responsible for Ordering and Coordinating Traffic Details
  - Project Schedule
- **Progress Schedule - “Two-week Look Ahead”**
  - Summarizes Anticipated Construction Activities
  - Thursday of Each Week

# Special Attention to Specifications and Bidding Conditions (cont.)

- **Permits and Licenses Obtained**
  - Cape Cod Commission – Consistency Review
  - Massachusetts Historical Commission
  - MassDEP – CWMP Approval
  - MassDEP – Site Assignment
  - Orleans, MA - Conservation Commission – Determination of Applicability
  - Old King's Highway Regional Historic District Committee – Certificate of Appropriateness
- **Permits and Licenses Anticipated to be Obtained**
  - MassDEP – Groundwater Discharge Permit
- **Town Permits to be Issued After the Contract Award**

# Special Attention to Specifications and Bidding Conditions (cont.)

- **EPA Construction General Permit**
  - Prepare a SWPPP and File an NOI with EPA
  - Implement SWPPP and Perform Required Inspections
- **Hours of Operation**
  - No Outdoor Activities Permitted Before 7:00 am or After 5:00 pm
  - No Outdoor Activities Permitted Saturday, Sunday, Legal Holidays and the Two Days Preceding the Legal Holidays
- **Crushed Stone and Processed Glass Aggregate**
- **Existing Utilities and Utility Coordination**

# Special Attention to Specifications and Bidding Conditions (cont.)

- **Construction Staging Areas**
  - Compost Shed Area
  - Eastern Area of WWTF Site
  - Other Areas Subject to Owner's Approval
- **Archeological Sensitive Areas - Work Area and Site Disturbance Within the Limit-of-Work Shown**
- **Monthly Photographs**
- **Future Site Expansion**
  - Areas of the WWTF Site are Designated for Future Expansion
  - No Permanent Structures/Utilities to be Constructed These Areas

# Special Attention to Specifications and Bidding Conditions (cont.)

- **Manufacturer's Services**
  - Installation and Startup
  - Correction of Defects
  - Testing
  - Training
- **Post Construction**
  - Photographs and Record Drawings
  - Operation and Maintenance Manuals
  - Manufacturer's Services
  - Spare Parts

# Addendums

- **Addendum No. 1 – Issued on February 13, 2020**
- **Addendum No. 2 – Issued on February 19, 2020**
- **Addendum No. 3 – Issued on February 19, 2020**
- **Addendum No. 4 – Issue by March 6, 2020**
  - Bid Forms (Excel)
  - Non-Mandatory Pre-Bid Conference Attendance List
  - Applicable Questions and Answers
- **Addendum No. 5 – Issue by March 20, 2020**
  - Sub-Bid Results
  - Applicable Questions and Answers

# Site Visit

- **Effluent Disposal - 32 Lots Hollow Road**
- **WWTF - 20 Overland Way**

# Questions and Answers

**SECTION 00310**

**BID BOND**

Know all men by these presents, that we, the undersigned, _____

_____ as Principal, and _____

as Surety, are hereby held and firmly bound unto the Town of Orleans, MA, 19 School Road, Orleans, MA 02653 hereinafter called "Owner", in the penal sum of five (5) percent of the value of the Bid for the payment of which, well and truly to be made, we hereby jointly and severally bind ourselves, successors and assigns.

Signed, this _____ day of _____.

The Condition of the above obligation is such that whereas the Principal has submitted to the Town of Orleans, MA, 19 School Road, Orleans, MA 02653, hereinafter called "Owner", attached hereto and hereby made a part hereof to enter into a Contract in writing for Contract No. 2019-01, Downtown Area Wastewater Treatment Facility and Effluent Disposal.

Now, therefore,

(a) If said Bid shall be rejected, or

(b) If said Bid shall be accepted and the Principal shall execute and deliver a Contract in SECTION 00520, AGREEMENT attached hereto (properly completed in accordance with said Bid) and shall furnish a Bond for its faithful performance of said Contract, and for the payment of all persons performing labor or furnishing materials in connection therewith, and shall in all other respects perform the agreement created by the acceptance of said Bid, then this obligation, shall be void, otherwise the same shall remain in force and effect; it being expressly understood and agreed that the liability of the Surety for any and all claims hereunder shall, in no event, exceed the penal amount of this obligation as herein stated.

The Surety, for value received, hereby stipulates and agrees that the obligations of said Surety and its Bond shall be in no way impaired or affected by any extension of the time within which the Owner may accept such Bid and said Surety does hereby waive notice of any such extension.

In witness whereof, the Principal and the Surety have hereunto set their hands and seals, and such of them as are corporations have caused their corporate seals to be hereto affixed and these presents to be signed by their proper officers, the day and year first set forth above.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The Work of this section includes furnishing all labor, materials, tools and equipment necessary to construct precast concrete manholes, catch basins, handholes, and pull boxes including bases complete with inverts, tables, steps, frames, grates and covers, mancatchers, fittings, piping and concrete encasements for drop manholes as specified herein and as shown on the Contract Drawings

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

### 1.04 - SUBMITTALS

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals shall include shop drawings showing complete fabrication and construction details, materials, weights, dimensions, clearances, anchorage details, piping and utility requirements. Submittals shall include at least the following:

1. Precast concrete manholes, catch basins, handholes and pull boxes.
2. Frames, covers, and grates.
3. Horizontal joint sealing material.
4. Pipe connections.
5. Manhole steps.
6. Manhole Encapsulation System.

**1.05 - PRODUCT HANDLING**

A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.

B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**PART 2 - PRODUCTS**

**2.01 - PRECAST SECTIONS FOR MANHOLES**

A. Precast reinforced concrete sections for drain manholes, sewer manholes, valve manholes, chemical or process manholes, (hereinafter referred to as "manholes") and catch basins, shall conform to the applicable requirements of ASTM C478. Sections and bases shall have a minimum wall thickness of the dimensions shown on the Contract Drawings. Unless otherwise detailed on the Contract Drawings all sections shall be of precast concrete. Flat top sections to be substituted for conical sections of manholes and catch basins in areas of low cover shall be indicated in submittals and shall conform to the requirements for precast concrete sections for handholes.

B. Unless otherwise shown on the Contract Drawings manholes shall be 4-foot in diameter for pipe up to 24-inches in diameter unless the angle between two 24-inch pipes is less than 120 degrees. In such cases and when the size of the pipe is less than 36-inches a 5-foot inside diameter manhole shall be used. Where the pipe is 36-inches in diameter or greater, the diameter of the structure shall be as shown on the Contract Drawings.

C. Exterior surfaces of all precast manholes shall be given one shop coat of bituminous waterproofing.

D. All lifting holes and areas of the factory coating that have been compromised shall be filled and/or patched with mortar and coated with one coat of bituminous waterproofing.

**2.02 - HORIZONTAL JOINTS**

A. Horizontal joints between sections of manholes, unless otherwise specified herein, shall be sealed with a self-sealing butyl rubber based flexible joint sealant in rope form. Sealant material shall be Kent-Seal No. 2 as manufactured by Hamilton-Kent Mfg. Co., Kent, Ohio; C-S146 as manufactured by Concrete Products Supply Co. Div., Press Seal Gasket Corp., Fort Wayne, Indiana; Ram-Nek as manufactured by K.T. Snyder Co., Inc., Houston, Texas. Sealant shall be installed in accordance with the manufacturers written instructions.

B. Horizontal joints between sections of precast concrete drain manholes and catch basins shall be mortared with mix specified herein.

**2.03 - MANHOLE STEPS**

A. Manhole steps shall be of steel reinforced copolymer polypropylene conforming to ASTM C478, cast-in-place or installed utilizing inserts approved by the Engineer.

B. All steps shall be 12-inches on center with abrasive step surface and safety edge, drop front design, 1-inch diameter and 16-inches wide. Metal items embedded in concrete shall be painted with a zinc chromate primer.

**2.04 - PRECAST SECTIONS FOR ELECTRICAL MANHOLES, HANDHOLES, AND PULL BOXES**

A. Refer to DIVISION 16, ELECTRICAL.

**2.05 - PIPE CONNECTIONS**

A. Premolded elastomeric sealed joints shall be used at the joints between the pipe and sewer manhole sections. Premolded elastomeric sealed joints shall be A-Lok, Res-Seal, Press-Wedge II, Lock Joints Flexible Manhole Sleeve, or Kor-N-Seal Joint Sleeve.

B. Mortar shall be used between pipe and structure in the storm drainage systems. Mortar mix shall be as specified herein.

C. Manholes shall be manufactured with knockout panels for future pipe connections/ extensions at the locations shown on the Contract Drawings.

**2.06 - MANHOLE FRAMES AND COVERS**

A. Manhole frames and covers shall be in accordance with the detail shown on the drawings. The Owner has standardized on this manhole frame and cover and therefore no substitutes are allowed.

B. Bolted and gasketed manhole frames and covers shall be in accordance with the detail shown on the drawings. The Owner has standardized on this manhole frame and cover and therefore no substitutes are allowed.

**2.07 - BRICK**

A. Brick shall conform to ASTM C32 and shall be new, water struck, first quality, whole, sound brick.

B. For tables and inverts, Type SS shall be used with cement mortar (no lime).

**2.08 - MORTAR**

A. Mortar shall be composed of one-part Portland cement to two parts sand with 20 percent hydrated lime.

B. Portland cement shall conform to the requirements of ASTM C150. Sand shall conform to the requirements of ASTM C144. Hydrated lime shall conform to the requirements of ASTM C207.

**2.09 - WATER**

A. Water shall be clean, fresh and free from organic matter, oil, acid, alkali, or deleterious substances.

**2.10 - BEDDING MATERIAL**

A. Bedding material under structures herein shall be as detailed and as specified in SECTION 02220, EARTH EXCAVATION, BACKFILL, FILL AND GRADING.

**2.11 - CONCRETE**

A. Concrete for tables, inverts, paved invert fillings, encasements, floor fillings and similar items shall be as specified in DIVISION 3, CONCRETE.

**2.12 - POLYVINYL CHLORIDE PIPE**

A. Polyvinyl Chloride pipe for drop manhole connections shall conform to ASTM D3034 and shall be SDR35.

**2.13 - MID LEVEL PLATFORM**

A. All manholes with a depth of 20-feet or greater from rim to invert shall have installed at the midpoint of the manhole a mid-level platform. The mid-level platform shall be installed in accordance with the details on the Contract Drawings.

**2.14 - MANHOLE ADJUSTING RINGS – Not Used**

**2.15 - MANHOLE ENCAPSULATION SYSTEM**

A. All manholes shall be installed with an external manhole encapsulation system that seals: (1) the interface between the precast concrete manhole and the frame and cover and (2) all manhole joints which are located below groundwater.

B. The manhole encapsulation system shall be designed to prevent leakage of water into the manhole and shall be either one of the following:

1. The manhole encapsulation system shall be a heat shrinkable wraparound sleeve system and shall have an overall thickness of 0.100-inches with a minimum width of 12-inches. The manhole encapsulation shall be "Wrapid Seal Manhole Encapsulation System" as manufactured by Canusa, A Division of Shaw Pipe Resources, Riser-Wrap as manufactured by Pipeline Seal and Insulator, Inc. or equal.

2. The manhole encapsulation system shall be a rubber sleeve made of EPDM (Ethylene Propylene Diene Monomer) rubber with a minimum thickness of 65 mils with a minimum width of 12-inches. Each unit shall have a 2-inch wide mastic strip on the top and bottom edge of the rubber wrap. The mastic shall be non-hardening butyl rubber sealant, with a minimum thickness of ¼-inch. The manhole encapsulation shall be "Infi-Shield Seal Wrap" as manufactured by Sealing System, Inc. or equal.

**2.16 - CARBON ODOR CONTROL UNIT – Not Used**

**PART 3 - EXECUTION**

**3.01 - PRECAST REINFORCED CONCRETE STRUCTURES**

A. Precast Reinforced Concrete Structures shall be installed as shown on the Contract Drawings and at a maximum spacing of 300 linear-feet. Precast sections shall be installed so that the entire structure is vertically plumb and the steps are in a true line. All erection holes and horizontal joists shall be filled solid with non-shrinking grout. The top uppermost precast section shall be set at a grade that will allow for the installation of a minimum of two courses and a maximum of five courses of manhole adjusting rings prior to setting the cast iron frame and cover. Furnish and use suitable slings, hooks and cables for the proper handling of the sections.

B. Surfaces of sewer pipe to be bonded to cast-in-place concrete bases shall be cleaned of all dust, dirt, grease, laitance, and loose or spalling concrete and given, where applicable, a coat of bonding compound in conformance with the sealant or gasket manufacturer's recommendations.

C. Tables and inverts shall be constructed of brick and concrete for sewer manholes, and of concrete for drain manholes as shown on the Contract Drawings. The size and shape of the invert shall accurately conform to the adjoining sewer or drains pipes. Any change in size or direction shall be even and as gradual as possible. Concrete floor filling for chemical or process pullbox sumps shall be as shown on the details.

D. Knockout panels for future sewer extensions shall be manufactured into precast manhole, as specified above, at the locations shown on the Contract Drawings. Stubs shall not be used.

**3.02 - MANHOLE COVERS AND FRAMES**

A. In paved surfaces, grates, covers and frames shall be set 1/4-inch below the finish grade of the roadway utilizing cement mortar to hold the frame in place, as shown of the Contract Drawings.

B. The temporary roadway surface elevation shall be maintained and the grates, frames, and covers shall be set 3/4-inch above the grade of the temporary resurfacing utilizing either cement mortar or bituminous concrete to hold the frame in place. A slope, constructed of bituminous concrete pavement, shall be placed around the entire grate, frame and cover for a distance of 6-inches from the grate, frame and cover.

C. Any voids created in the road gravel or pavement when raising the grate, frame and cover from its temporary elevation to its permanent elevation shall be filled with concrete.

**3.03 - DROP CONNECTIONS**

A. Drop connections shall be installed for manholes, which have invert elevation differences greater than 3-feet. No exterior drop connections are allowed.

B. Drop connections for manholes shall be constructed utilizing polyvinyl chloride pipe, elastomeric sealed joints, and Type 316 stainless steel mounting hardware and materials. Drops shall be constructed in accordance with the Contract Drawings.

C. The size of the drop piping shall be 8-inches when the size of the sewer main is less than 24-inches. When the sewer main is equal to or larger than 24-inches, the drop piping shall be 12-inches in diameter.

**3.04 - LEAKAGE TESTS**

A. Leakage tests shall be made and observed by the Engineer on each sewer manhole. The test shall be an exfiltration, infiltration test or vacuum test made as described below:

1. Preparation for Testing

a. After the manhole has been assembled in place, all lifting holes and horizontal joints shall be filled and pointed with a non-shrinking mortar. The test shall be made prior to placing the tables and invert and before filling and pointing the horizontal joints.

b. If the groundwater table has been allowed to rise above the bottom of the manhole, it shall be lowered for the duration of the test. All pipes and other openings into the manhole shall be suitably plugged and plugs braced to prevent blow out.

2. Backfilling

a. The test may be conducted before backfilling around the manhole.

b. There will be adjustment in the leakage allowance for unknown causes including, but limited to, leaking plugs and absorption. It will be assumed that all loss of water during the test is a result of leaks through the joints or through the concrete.

3. The Contractor has the option of test method depending upon the actual field conditions. The following are acceptable test methods:

a. If the measured ground water table is above the highest joint in the manhole, and if there is not leakage into the manhole as determined by the Engineer, the Contractor may perform an infiltration or vacuum test as described herein.

b. If the measured ground water table height is lower than the invert of the manhole, the Contractor may perform an exfiltration or a vacuum test.

**3.05 - TEST PROCEDURES**

A. Infiltration Test

1. The manhole interior shall be visually inspected. The manhole shall be considered acceptable for use when no infiltration of ground water is observed on the interior surfaces of the manhole.

B. Exfiltration Test

1. The manhole shall be filled with water to the top of the cone section. If the excavation has not been backfilled and observation indicates no visible leakage, that is, no water visibly moving down the surface of the manhole, the manhole shall be considered satisfactorily watertight.

2. If the test as described above is unsatisfactory as determined by the Engineer or if the manhole excavation has been backfilled the test shall be continued. A period of time may be permitted, if the Contractor so wishes, to allow for absorption.

3. At the end of this period, the manhole shall be refilled to the top of the cone, if necessary, and the measuring time of at least 8 hours shall begin. At the end of the test period, the manhole shall be refilled to the top of the cone, measuring the volume of water added. This amount shall be extrapolated to a 24-hour rate and the leakage determined on the basis of depth. The leakage for each manhole shall not exceed 1 gallon per vertical foot for a 24-hour period.

4. If the test fails, but the leakage does not exceed 3 gallons per vertical foot per day, repairs shall be made in accordance with industry standard repair methods as to bring the leakage within the allowable rate of 1 gallon per vertical foot per day. If the leakage exceeds 3 gallons per vertical foot per day, it shall be the Contractor's responsibility to uncover the manhole as necessary and to disassemble, reconstruct or replace it as required, at no cost to the Owner. The manhole shall then be retested.

C. Vacuum Test

1. If the vacuum test is performed in lieu of the infiltration or exfiltration test the Contractor shall take any and all steps necessary to assure the Engineer that the water table is below the invert of the manhole throughout the test. Any and all measures necessary by the Contractor to lower the ground water table below the invert of the manhole will be at the Contractor's expense. The vacuum test shall be based on the following criteria:

   a. Manhole test pressures and time shall be as follows:

      (1) Initial test pressure, 10-inches Hg (i.e., 20-inch absolute).

      (2) Test time, 1-inch Hg drop to 9-inch Hg in 2 minutes minimum allowable, for 0 to 10-foot-deep manholes; 2-1/2 minutes minimum allowable for 10 foot to 15 foot deep manholes; 3 minutes minimum allowable for manholes greater than 15 foot in depth.

   b. If the pressure drop exceeds 1-inch Hg in 2 minutes the manhole shall be repaired and retested.

   c. If a manhole fails to meet a 1-inch Hg drop in 1 minute after repair, the manhole shall be water exfiltration tested and repaired as necessary.

   d. Testing using either air or water shall be done whenever possible prior to backfilling to assist in locating leaks. Joint repairs by parging are to be done on both outside and inside of the joint to ensure a permanent seal. Vacuum testing draws together the joint and applies high pressure to the elastomeric joint material. Properly placed and sized elastomeric joint material must be used to avoid leakage or to enable sections to be separated if necessary to affect a repair.

**3.06 - MANHOLE ADJUSTING RINGS – Not Used**

**3.07 - MANHOLE ENCAPSULATION SYSTEM**

A. The external manhole encapsulation system shall be installed in accordance with the manufacturer’s written instructions. All surfaces shall be free of dirt, sharp points and preheated to remove moisture.

B. The Contractor’s personnel shall be trained by the manufacturer in the proper method of application of the external manhole encapsulation system. The Contractor shall have the manufacturer’s field service representative present during the application of external manhole encapsulation system on the first two manholes encapsulated.

**3.08 - VISUAL INSPECTION**

A. At the conclusion of the work, all manholes, catch basins, handholes and pull boxes shall be visually inspected by the Engineer to insure a straight and plumb alignment.

B. All manholes, catch basins, handholes and pull boxes that are not straight and plumb shall be removed and replaced.

**3.09 - CLEANUP**

A. Upon completion, of all construction and testing, and prior to final acceptance all debris shall be removed from manholes and the tables cleaned.

**3.10 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

## PART 1 – GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 05120, STRUCTURAL STEEL is a part of DIVISION 5, METAL WORK which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 05500, MISCELLANEOUS METAL.

B. The Work of SECTION 05120, STRUCTURAL STEEL requires the Subcontractor to perform all Work specified under this section.

### 1.01 - DESCRIPTION

A. The term "Structural Steel" is used as defined in accordance with the AISC Code of Standard Practice.

B. Provide structural steel as specified and as shown on contract drawings.

C. Detailing, fabrication and erection of structural steel shall comply with all applicable OSHA regulations.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

### 1.04 - SUBMITTALS

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submit in advance of fabrication complete information necessary for the fabrication of each component and part of the structural steel framing. Include the following:

1. Member size and length.
2. Bill of materials.
3. Material specifications.
4. Bolt hole size and bolt size.
5. Cuts, copes, and bevels.
6. Piece marks for field assembly.
7. Splices.

C. Submit erection drawings showing complete information necessary for the erection of each component part of the structural steel framing. Include the following:

1. Dimensions for alignment and elevations of each member.
2. Location of members and attachments by match-marking of piece numbers.
3. Type, location and details of each field connection.
4. Number of shear connectors on each member.
5. Anchor bolts and setting plans.

D. Do not develop shop drawings by using reproductions of contract drawings.

E. Submittals for Evidence of Conformity to Specifications: Certified mill test reports containing results of chemical and mechanical test as specified by ASTM A6 for the following material:

1. Structural steel shapes.
2. Structural steel bars.
3. Structural steel plates.

F. In addition to the certified mill test reports, the fabricator shall provide an affidavit stating that the structural steel furnished meets the requirements of the ASTM specification for the grade furnished. Qualification test reports bearing witness certification by an independent testing laboratory for each welder, welding operator and tacker to be employed in the work.

**1.05 - PRODUCT HANDLING**

A. Comply with the requirements in SECTION 01610, DELIVERY, STORAGE AND HANDLING.

B. Load structural members in such a manner that they may be transported and unloaded without being over-stressed, deformed or otherwise damaged.

C. Protect structural steel members and packaged materials from corrosion and deterioration. Store material in a dry area.

D. Support materials stored outdoors above ground surfaces on wood runners and protected with acceptable effective and durable covers.

E. Do not place materials on the structure in a manner that might cause distortion or damage to the members or the supporting structures. The Contractor shall repair or replace damaged materials or structures as directed by the Engineer.

**1.06 - DESIGN CRITERIA**

A. Structural Connections: AISC Specification for Structural Steel Buildings. Design connections not fully detailed on the Drawings to resist the loads shown on the Contract Drawings or specified.

B. Where beam end reactions are not shown, design the connection for one-half the total allowable uniform load in kips for beams laterally supported at the given span, as determined by the tables for allowable loads on beams in the AISC Manual of Steel Construction, in addition to any axial loads identified on the Drawings.

C. Unless otherwise noted on Contract Drawings, design connections for ASTM A325 bolts, bearing-type connection with threads included in shear plane.

**1.07 - QUALITY ASSURANCE**

A. Comply with requirements in SECTION 01400, QUALITY ASSURANCE and as specified.

B. Provide structural steel in accordance with AISC Standard for Structural Steel Buildings and the Code of Standard Practice for Steel Buildings and Bridges, unless otherwise specified herein.

C. Design connections not detailed on the Drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the jurisdiction where the Project is located.

D. Steel fabricator shall have 5 years experience minimum in structural steel fabrications.

E. Steel erector shall have 5 years experience minimum in structural steel erection.

F. Welding Qualification and Certification:

1. Furnish written welding procedure for welds in conformance with the AWS D 1.1.

2. Each welder, welding operator and tack welder shall be certified by test to perform type of work required in conformance with AWS D 1.1.

3. If a welder or welding operator has not been engaged in a specific welding process for a period of six months or more, that individual shall be deemed unqualified and shall not perform work on the project until the individual has been qualified again by testing in conformance with AWS D 1.1.

4. Maintain duplicate qualification and certification records at the job site readily available for examination.

G. Tolerances:

1. Maintain tolerances conforming to AISC Code of Standard Practice.

2. Permissible variation tolerances conforming to ASTM A 6.

H. Field Measurements

1. The Contractor shall verify dimensions and shall make any field measurements necessary and shall be fully responsible for accuracy and layout of the work.

2. The Contractor shall review the Contract Drawings and any discrepancies shall be reported to the Engineer for clarification prior to starting fabrication.

E. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 - Products**

**2.01 - STRUCTURAL STEEL**

A. W shapes in conformance with ASTM A 992 unless otherwise indicated or specified.

B. C, M, S and HP shapes in conformance with ASTM A 572, Grade 50, unless otherwise specified or shown on contract drawings.

C. Angles, plates and bars in conformance with ASTM A 36.

D. Round, square and rectangular structural tube members (HSS) in conformance with ASTM A 500, Grade B.

E. Steel pipe in conformance with ASTM A 53, Grade B.

F. Hot-Dip Galvanized Carbon Steel in conformance with ASTM A 123.

**2.02 - FASTENERS**

A. Carbon Steel Bolts, Nuts and Washers: ASTM A 307, Grade A.

B. High-strength fasteners in conformance with ASTM A325, Type 1.

C. Nuts and washers ASTM A 563 and F 436.

D. Hot-dip Galvanized Bolts, nuts and washers in conformance with ASTM A 153.

**2.03 - ANCHOR BOLTS**

A. Steel anchor bolts in conformance with ASTM F1554, grade 36.

**2.04 - WELDED STUDS:**

A. Weld studs in conformance with the requirements of ASTM A108, Grade 1015 or 1020.

**2.05 - WELDING**

A. Class E70XX electrodes.

B. Provide equipment for welding, electrodes, welding wire and fluxes capable of producing indicated welds when used by certified welders under AWS welding procedures. Provide welding materials that comply with requirements of AWS Structural Welding Code.

**2.06 - SHOP FABRICATION**

A. Fabricate each element and connection as indicated on the fabrication shop drawings accepted by the Engineer. Fabricate and shop assemble work to the greatest extent practical in conformance with following publications:

1. AISC Manual
2. AISC Specification for Structural Joints
3. AISC Detailing Manual
4. AWS Structural Welding Code

B. Perform shearing, manual flame cutting with mechanically guided torch and chipping such that it will not induce residual stress in metal being cut. Radii of re-entrant corners shall be as large as practicable but not less than 3/4 inch (19 mm). Perform flame cutting so that metal being cut is not carrying stress. Finish exposed edges.

C. Provide full cross section bearing on milled ends of columns, crane rails, monorails and bearing stiffeners.

**2.07 - CONNECTIONS**

A. Connect members with ASTM A 325 high strength bolts unless otherwise specified or shown on contract drawings. Provide clean-cut holes without torn or ragged edges and remove outside burrs.

B. Provide high-strength bolted construction assemblies in accordance with the AISC Specifications for Structural Joints.

1. Bolted parts shall fit solidly together when assembled and shall not be separated by gaskets or any other interposed compressible material.
2. Joint surfaces shall be free of burrs and foreign materials. Score hot-dipped galvanized contact surfaces with a wire brush or blasted prior to assembly. Grinding of surfaces is not permitted.
3. If the thickness of the material is not greater than the normal diameter of the bolt plus 1/8 inch, the holes may be punched. If the thickness of the material is greater than the normal diameter of the bolt plus 1/8 inch, drill it full size or subpunch 1/16 inch smaller than the bolt diameter and ream to full size.
4. Provide bolt hole diameters not more than 1/16 inch in excess of the nominal bolt diameter unless otherwise specified in contract drawings.

5. Provide required slotted or oversize bolt holes as specified in the AISC Specification for Structural Joints. Tighten each bolt to provide the minimum tension shown in the AISC Specification for Structural Joints for the size and grade of bolts used

6. Provide required slotted or oversize bolt holes as specified in the AISC Specification for Structural Joints.

C. Provide full cross section bearing on milled ends of columns, crane rails, monorails, and bearing stiffeners.

D. Welded Connections:

1. Weld connections indicated or specified.

2. Provide complete weather seal weldments made with 1/16 inch minimum continuous fillets to members having Type S and E Service and to welded connections that will be galvanized.

E. Make connections with ASTM A 307 carbon steel bolts only when specified or shown in contract drawings.

F. Provide ASTM F 1554 anchor bolts with washer and heavy hex nuts. Provide hot-dip galvanized anchor bolts, washers and heavy hex nuts with galvanized steel.

**2.08 - GALVANIZE**

A. Provide hot-dip galvanizing in conformance with ASTM A 123, Grade 100 to steel indicated or specified to be galvanize coated.

B. Provide hot-dip galvanizing, in conformance with ASTM A 153, to bolts, nuts and washers that will be used with galvanized steel.

C. Complete fabrication and prepare surfaces of steel by removing weld spatter, flux, residue, burrs and metal surface defects before galvanizing. Clean weldments with power wire brush prior to galvanizing.

D. Provide steel dipped into solution of zinc chloride plus ammonium chloride immediately prior to galvanizing. Do not use galvanizing process utilizing flux blanket overlaying molten zinc.

E. Chromate treat pieces that will be in contact with or encased in concrete or masonry after galvanizing.

1. Two coats of one of the following coating systems may be substituted for the chromate treatment:

a. Series 161 Tneme-Fascure by Tnemec Co. Inc.

b. CARBOGUARD 891 VOC by Carboline.

c. Valspar-Series 89 by Valspar Corp., Baltimore

d. Or accepted equivalent product.

2. Prepare the steel surface in conformance with the manufacturer's printed instructions immediately before applying the initial coat of the two coat system.

F. Tap bolt nuts after hot-dip galvanizing in conformance with ASTM A 563.

G. Inspect galvanized material for compliance with these specifications. Mark the material with a clearly visible stamp indicating the name of the galvanizer, the ASTM number and the weight of zinc coating in ounces per sq. ft.

**2.09 - GALVANIZE TOUCH-UP**

A. Galvanize Touch-Up: Where galvanizing is damaged, touch-up abraded areas, using brushed-on method, with zinc-rich coating. Touch-up repair with zinc-rich coating of not less than 3 mil and not more than 6 mil dry film thickness.

B. Touch-up damaged galvanized surfaces with one of the following zinc rich coatings:

1. Endupor, zinc-rich coating by Dampney Manufacturing Co., Everett, MA

2. ZiRP, zinc-rich coating by Duncan Galvanizing Corp., Everett, MA

3. ZRC Cold Galvanizing Compound or ZRC Galvilite by ZRC Worldwide, Division of Norfolk Corp., Marshfield, MA;

4. Or accepted equivalent product.

## PART 3 - EXECUTION

### 3.01 - ERECTION OF STRUCTURAL STEEL

A. Conform to the referenced AISC standards. Brace and secure work until permanent connections are completed. Provide accessories and fasteners to secure the work in place whether or not shown or specified.

B. Erect work plumb, square, and true to line and level and in precise positions. Provide temporary bracing and guys to counteract loads and stresses to which structure may be subjected, including those due to erection equipment and its operation.

C. Align the various members to the lines and elevations indicated within the specified erection tolerances. Make adjustments to members prior to making permanent connections. Permanently connect the work in a sequence that will minimize lock-in stress.

D. Splice members only where shown or specified. On exposed welded connections, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces. Comply with AISC specifications for bearing, adequacy of temporary connections, alignment, and the removal of paint on surfaces adjacent to field welds.

E. Do not enlarge holes in members by burning or the use of drift pins, except in secondary bracing members. Ream holes that must be enlarged to place bolts. Do not use gas-cutting torches in the field for correcting fabrication errors in the structural framing.

### 3.02 - DAMAGED MEMBERS

A. Replace members that are bent, twisted, or damaged. Remove members that are impaired in appearance, strength, or serviceability and replace with new members at no additional cost to Owner.

### 3.03 - MISFITS AT BOLTED CONNECTIONS

A. Immediately notify the engineer where misfits in erection bolting are encountered. The Contractor shall submit a method to remedy the misfit for review by the Engineer. The Engineer will determine whether the remedy is acceptable or if the member must be refabricated.

B. Do not enlarge incorrectly sized or misaligned holes in members by burning or by the use of drift pins. The Contractor shall notify the Engineer immediately and submit a proposed method of remedy for review by the Engineer.

### 3.04 - ANCHOR BOLTS

A. Install anchor bolts by using templates, setting drawings, and instructions provided by the fabricator. Verify positions of bolts prior to delivery of steel; report errors or deviation for adjustment. After anchor bolts have been embedded, protect threads by applying grease and by having the nuts screwed on until the metalwork is installed.

### 3.05 - COLUMN BASEPLATES AND BEARING PLATES

A. Set columns with base plates attached and bearing plates for beams and similar structural members to their proper alignment and elevation using shim packs. Tighten anchor bolts after members have been positioned and plumbed. Protruding wedges, shims, or other leveling devices shall not be removed but cut off flush with the base plate prior to packing with grout.

### 3.06 - HIGH STRENGTH BOLTS

A. Provide workmanship and techniques for bolted construction in conformance with requirements of AISC Specification for Structural Joints and as indicated or specified.

B. Install ASTM A 325 bolts with hardened washer under element being turned in tightening. Install plate washers in both outer plies when using oversize and slotted holes. Install galvanized washer under bolt head and nut when using galvanized bolts.

C. Do not reuse galvanized high-strength bolts, nuts and washers.

### 3.07 - WELDING

A. Workmanship and techniques for welded construction to conform to requirements of AWS Structural Welding Code and as indicated or specified.

B. No field welding permitted unless indicated on Engineer approved fabrication shop drawings.

C. No field welding permitted on galvanized steel.

**3.08 - CLEAN-UP**

A. Upon completion of the work, remove surplus materials, rubbish, and debris resulting from the operations, including disused equipment and implements of service, and leave the entire structure and site, insofar as the work of this section is concerned, in a neat, clean, and acceptable condition.

**3.09 - CLOSEOUT ACTIVITIES**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

This Page Intentionally Left Blank.

## PART 1 – GENERAL

### 1.01 - DESCRIPTION

A. This section includes:

1. FRP Grating and Treads.
2. FRP Molded Grating.
3. FRP Structural Shapes.
4. FRP Stairs.
5. FRP Railing.
6. FRP Ladders and Cages.
7. FRP Plank Covers.

B. Furnish all labor, materials, equipment and incidentals necessary to install the fiberglass polymer products specified.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Detail shop drawings indicating:

a. Dimensions.

b. Sectional assembly.

c. Location and identification mark.

d. Connections, connections to structure and fastening methods.

e. Size and location of supporting frames required.

f. Materials of construction.

g. Installation instructions.

2. Catalog data and design tables showing limits for span length and deflection under various and concentrated loads.

3. Stamped by Professional Structural Engineer registered in State where the project is located.

**1.05 - PRODUCT HANDLING**

A. Comply with the requirements specified in SECTION 01610, DELIVERY, STORAGE AND HANDLING.

B. Store materials during and after shipment to prevent cracking, twisting, bending, breaking, chipping or damage of any kind to materials, including damage due to over exposure to sun.

C. Remove material that is damaged from the site, at no cost to the Owner.

D. Identify and match-mark all materials, items, and fabrications for installation and field assembly.

E. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. Sustainable Design

1. Product Data for Credits MR 4.1 and Credit MR 4.2: For products having recycled content, provide documentation indicating percentages (by weight) of post-consumer and pre-consumer recycled content. For each recycled product used, include a statement indicating costs.

2. Product Certificates for Credit MR 5.1: For products extracted, harvested and manufactured within 500 miles of the project site, provide documentation indicating percentages (by weight) of regional materials that meet the criteria. For each regional product used, include a statement indicating costs.

**1.07 - QUALITY ASSURANCE**

A. Comply with the requirements specified in SECTION 01400, QUALITY ASSURANCE.

B. Provide documentation showing that the Contractor doing this work has a minimum of 5 years experience in the manufacture and installation of FRP systems similar to that indicated for this project, with sufficient capacity to produce required units without causing delay of work.

C. Install materials in accordance with the manufacturer’s instructions.

**1.08 - REFERENCES**

A. ASTM International (ASTM):

1. D70: Standard Test Method for Density of Semi-Solid Bituminous Materials (Pycnometer Method).

2. D256: Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

3. D635: Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.

4. D638: Standard Test Method for Tensile Properties of Plastics.

5. D695: Standard Test Method for Compressive Properties of Rigid Plastics.

6. D696: Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between-30 Degree C and 30 Degree C with a Vitreous Silica Dilatometer.

7. D732: Standard Test Method for Shear Strength of Plastics by Punch Tool.

8. D790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

9. D792: Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement.
10. D2583: Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.
11. D3918: Standard Terminology Relating to Reinforced Plastic Pultruded Products.
12. E84: Standard Test Method for Surface Burning Characteristics of Building Materials.
13. G152: Standard Practice for Operating Open Flame Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials
14. G153: Standard Practice for Operating Enclosed Carbon Arc Light Apparatus for Exposure of Nonmetallic Materials.

B. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 - PRODUCTS**

**2.01 - MANUFACTURERS**

A. Seasafe, Inc.

B. Strongwell

C. IMCO Reinforced Plastics, Inc.

D. International Grating, Inc.

E. Fibergrate Composite Structures, Inc.

F. Creative Pultrusions, Inc.Or acceptable equivalent product.general:

G. Provide new materials free from defects and imperfections that might affect performance of finished product.

H. After fabrication, seal cut ends, holes and abrasions of FRP shapes with a compatible resin coating to prevent intrusion of corrosion and moisture.

I. Fabricate so that exposed surfaces are smooth and true to form.

J. Manufacture FRP products using vinyl ester resin with flame retardant and UV inhibitor additives. Provide synthetic surface veil covering exterior surface. Provide FRP shapes with flame spread of 25 or less in accordance with ASTM E84.

K. Provide FRP products exposed to weather with ultraviolet inhibitor and one mil thick UV coating to shield from ultra-violet light.

L. Provide Type 316L stainless steel metal accessories unless noted otherwise.

**2.02 - FRP GRATING AND STAIR TREADS**

A. Design Requirements:

1. Grating:
   a. Design grating and support system to sustain dead loads and superimposed live loads.
   b. 100 psf (4.8 kPa) uniform live load or 300 pound (1.3 kN) concentrated live load, whichever produces maximum stress.
2. Stair Treads:
   a. 100 psf (4.8 kPa) uniform live load or 300 pound (1.3 kN) concentrated live load on an area of 4 square inches (2,600 square millimeters) located in the center of the tread, whichever produces greater stress.

3. Deflection:

   a. 1/4-inch (6 mm) maximum under uniform live load of 100 psf (4.8 kPa) for grating and stair treads.

   b. L/240 maximum for support members.

B. Fabricate grating and Stair Treads from pultruded bearing bars and cross rods. Assemble grating using a locking cross-rod design that makes a permanent connection between the cross-rod and bearing bar, and is completely bond into a one-piece panel.

C. Color shall be gray. Stair treads shall have a safety yellow nosing.

D. Provide grating with a slip resistant epoxy grit surface.

E. Use Type 316L stainless steel grating hold down clamps spaced as required by manufacturer, but not greater than 4 feet (1,200 mm) on center. Provide two at each support with a minimum of four per panel.

F. Position grating sections flat and square with ends bearing minimum 1-1/4 inches (30 mm) on supporting structure.

G. Provide embedded angle support frames with continuous integral anchor for grating set in concrete openings unless noted otherwise.

H. Maximum Grating Clearances:

1. 1/4-inches (6 mm) from vertical steel sections.

2. 1/2-inches (12 mm) from concrete and masonry walls.

3. 1/4-inches (6 mm) between sections and at ends.

**2.03 - MOLDED GRATING**

A. Design Requirements:

1. Grating:

   a. Design grating and support system to sustain dead loads and superimposed live loads.

   b. 100 psf (4.8 kPa uniform live load or 300 pound (1.3 kN) concentrated live load, whichever produces maximum stress.

2. Deflection:

   a. 1/4-inches (6 mm) maximum under uniform live load of 100 psf (4.8 kPa for grating and stair treads.

   b. L/240 maximum for support members.

B. Continuous glass filament reinforcement, approximately 30 percent glass to resin ratio.

C. Resin rich exterior surfaces free of air bubbles and dry glass.

D. Color shall be safety yellow gray.

E. Provide a slip resistant quartz grit applied surface.

F. Provide Type 316L stainless steel hold down clamps spaced as required by manufacturer, but not greater than 4 feet (1,200 mm) on center. Provide two at each support with a minimum of four per panel.

G. Position grating sections flat and square with ends bearing minimum 1-1/4 inches (30 mm) on supporting structure.

H. Set grating set in concrete openings with embedded angle support frames having continuous integral anchor unless noted otherwise.

I. Maximum Grating Clearances:

1. 1/4-inches (6 mm) from vertical steel sections.
2. 1/2-inches (12 mm) from concrete and masonry walls.
3. 1/4-inches (6 mm) between sections and at ends.

**2.04 - STRUCTURAL SHAPES**

A. Design requirements:

1. Design Loads:
   a. Design structural framing to sustain dead loads and superimposed live loads.
   b. 100 psf (4.8 kPa) uniform live load or 300 pound (1.3 kN) concentrated live load, whichever produces maximum stress.
2. Deflection:
   a. L/240 maximum.

B. Manufacture structural shapes by the pultrusion process.

C. Provide structural shapes with a UV inhibitor.

D. Provide structural shapes containing a glass fiber reinforced vinyl ester resin matrix, approximately 50 percent glass by weight with a synthetic surface veil outer layer covering the exterior surfaces. Provide glass strand rovings shall be for longitudinal strength. Provide continuous strand glass mats or stitched reinforcements shall for transverse strength.

E. Provide Type 316L stainless steel bolts and washers.

F. Abrade joint surfaces to be bonded to remove surface gloss and be free of burrs or other foreign materials that would prevent proper adhesion.

**2.05 - STAIRS**

A. Fabricate from FRP structural shapes form material as specified.

B. If rise and runs are not noted on Drawings, use OSHA standards for rise and run.

C. Provide Stair Treads from material as specified.

D. Provide handrail from material as specified.

E. Use Type 316 stainless steel bolts throughout.

**2.06 - RAILING**

A. Design requirement:

1. Design railing system to meet the configuration and loading requirements of OSHA, IBC or local buildings codes. Apply requirements of the most stringent code.

B. Fully bond all post to rail connections with an epoxy adhesive and with an internal connection for added strength and durability. Provide smooth transitions between post and rail connections.

C. Provide kickplates where required by OSHA. Kick plate shall be 4 inches by 1/2-inch (100 mm by 12 mm) thick pultruded shape attached to posts with stainless connectors.

D. Color shall be safety yellow.

E. Fabricate handrail to standard two-rail design unless noted otherwise.

1. Post Locations:

a. No greater than 12 inches (25 mm) from horizontal or vertical change in handrail direction.

b. Post centers shall be no greater than 60 inches (1,500 mm) apart on any straight run of rail.

c. Post centers shall be no greater than 48 inches (1,200 mm) apart on inclined rail section.

F. Provide side mounted, base mounted, embedded, or removable anchorage mounted handrail as noted on Drawings.

G. Accurately locate handrail sections and erect plumb and level.

**2.07 - LADDERS AND CAGES**

A. Design requirement:

1. Design ladder and cage system to meet the configuration and loading requirements of OSHA, IBC or local buildings codes. Apply requirements of the most stringent code .

B. Provide ladder side rails 2 inches by 2 inches by 0.156 inches (50 mm by 50 mm by 4 mm) minimum thickness square tubes manufactured by the pultrusion process.

C. Provide ladder rungs pultruded 1 inch (25 mm) diameter minimum solid round bar with slip resistance epoxy grit surface.

D. Install ladder fiberglass stand-off brackets at a maximum of 6 feet (1,800 mm) on center.

E. Fabricate ladder cages per OSHA, from FRP Hoops and Straps. Hoops are to be 3 inches by 1/4-inch (75 mm by 6 mm) preformed FRP. Hoop spacing shall be a maximum of 4 feet (1200 mm) on center. Straps shall be 2 inches by 3/16-inch (50 mm by 5 mm) FRP spaced at 9 inches (230 mm) on center maximum. Bond hoops and straps with epoxy adhesives and riveted with Type 316 stainless steel rivets. Attach hoops to side rails in manner that provides hand clearance throughout length of ladder.

F. Ladder and Cage shall be safety yellow.

**2.08 - PLANK COVER**

A. Design Requirements:

1. Design Loads:

a. Design structural framing to sustain dead loads and superimposed live loads.

b. 100 psf (4.8 kPa) uniform live load or 300 pound (1.3 kN) concentrated live load, on an area of 4 square inches (2,600 square millimeters) located in the center of the plank, whichever produces greater stress.

2. Deflection:

a. 1/4-inches (6 mm) maximum.

B. Manufacture planks by the pultrusion process. Provide planks 2 inches (50 mm) deep and 24 inches (600 mm) wide with interlocking joints on outside legs of plank. The glass fiber reinforcement for the planks shall be a core of continuous glass strand rovings wrapped with continuous strand glass mat. A synthetic surface veil shall be the outermost layer covering the exterior surfaces.

C. Provide planks with UV inhibitor and a skid resistant surface.

D. Cap ends of individual plank pieces with channel caps.

E. Provide 3/8-inches (10 mm) diameter bent stainless steel rod recessed lifting handles. Provide one two handles at each end of individual pieces.

F. Set planks in concrete openings with embedded angle support frames having continuous integral anchor unless noted otherwise. Bear planks on length as required by plank manufacturer.

G. Color shall be gray.

## PART 3 - EXECUTION

### 3.01 - EXAMINATION

A. Remove and replace damaged items at no cost to Owner.

B. Examine supports for size, layout and alignment. Maintain surfaces free of debris.

### 3.02 - INSTALLATION

A. Install and make connections in accordance with accepted submittals and manufacturer's written instructions.

B. Install materials accurately in location and elevation, level and plumb. Field fabricate as necessary for accurate fit.

C. Coordinate and furnish anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction.

### 3.03 - CLOSEOUT ACTIVITIES

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide process instruments as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

C. The System Integrator (SI) shall furnish process instruments as specified and in accordance with the Contract Documents.

D. Instrument Product Sheets are in Attachment A.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

### 1.04 - SUBMITTALS

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Field Instrumentation

C. Submit the following shop drawings in accordance with Section 01300.

D. All submittals provided by the Contractor under this specification section shall be reviewed by the System Integrator (SI) prior to submittal to the Engineer. SI comments shall be incorporated into the submittal provided to the Engineer for review and approval. The SI shall provide a statement with each submittal indicating that the submittal has been reviewed, all SI comments has been addressed and that the submittal is reviewed by the SI.

E. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.

1. Failure to include a copy of the marked-up specification sections will result in rejection of the entire submittal with no further review and consideration.

F. Submit Product Data Sheets, in accordance with ISA-S20 with the information noted below and other data pertinent to the equipment and the application.

1. Initial submission for review to accompany Shop Drawings:

a. The product manufacturer and the supplier or representative.

b. The complete model or catalogue number(s) including any special options.

c. The available adjustment range(s) and the operating range(s).

2. Second Submission during pre-commissioning, testing and calibration period:

a. Serial numbers, part numbers, dates of installation and calibration.

b. Calibration and programming procedure.

c. Calibration and programming documentation.

d. Provide linkage or range adjustments sealed by colored lacquer following calibration.

e. This submission is for signature by the Contractor and the Engineer following acceptance of the operation of each instrument.

3. Final Submission of signed-off Product Data Sheets included with Operating and Maintenance Instruction Manuals:

a. All of the above information.

b. Phone number and email address of contact person for product support/service.

G. Submit Shop Drawings for all instruments. Manufacturers' catalog cuts and product specifications shall be accepted only if the following information is clearly indicated and highlighted for the equipment proposed:

1. Submit information on each instrument to demonstrate compliance with the data sheet.

2. Tag names, quantities, options provided, full description and performance data.

3. Installation details depicting mounting assemblies, physical dimensions.

4. Termination details, clearly indicating the type and lengths of external wiring required and electrical connections.

5. Power supply rating, input and output signal ranges, maximum measured process range and calibrated scale, physical, electrical and environmental requirements.

6. Specific catalog model numbers for each piece of equipment and its accessory options, clearly referenced by the respective instrument or equipment tag name. Improperly tagged items shall be rejected.

7. Sales bulletins and other general publications are not acceptable as submittals except where necessary to provide supplemental technical data.

H. Submit a separate document with manufacturers' recommended list of spare parts, including individual pricing with the shop drawings.

I. Drawing submissions shall clearly show the enclosures proposed for each instrument.

J. Submit completed Calibration forms and Instrument Installation Checklist forms.

K. Submit schedule of proposed instrument nametag inscriptions.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. Where possible, all equipment shall be provided by the same manufacturer.

C. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings and on the data sheets.

D. References:

1. American Petroleum Institute (API):

    a. RP 551: Process Measurement Instrumentation

2. International Society of Automation (ISA):

    a. S-20: Specification Forms for Process Measurement and Control Instruments, Primary Elements, and Control Valves.

3. National Electrical Manufacturers Association (NEMA):

    a. 250: Enclosures for Electrical Equipment (1000 Volts Maximum).

**1.07 - QUALITY ASSURANCE**

A. All instruments shall be UL listed or equivalent listing system when UL listing is not available.

**1.08 - WARRANTY**

A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS.

B. In addition, the equipment shall be warranted to be free from defects in workmanship, design and materials for a period of 5 years from shipment. If any part of the equipment should prove to be defective during the warranty period, the manufacturer at no expense to the Owner shall replace the part.

C. All installed equipment shall conform to the contract specifications and to manufacturer’s published specifications. The warranty shall begin at the substantial completion date and remain in effect for a period of one (1) year from that date. The Contractor shall repair, adjust, service and/or replace any defective equipment, materials, or other parts of the system at the Contractor's sole cost. The Owner will incur no costs for service or replacement of parts during the warranty period. All third party warranties shall be passed through from the Contractor to the Owner.

D. The Contractor shall warrant that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply.

E. The Contractor shall warrant that the system will function in accordance with the manufacturer's published technical description guides and as specified herein.

**PART 2 - PRODUCTS**

**2.01 - GENERAL REQUIREMENTS**

A. Provide instruments with enclosure rating indicated on electrical drawings or in instrument Product Sheet - whichever is more stringent.

B. Instruments shall have an integral indicator to display the current process measurement, calibrated in engineering units. Blind instruments shall be provided with a separate digital indicator mounted adjacent to the instrument as specified.

C. Provide electronic instruments with linear 4-20 mA DC isolated output signals capable of driving a maximum load of 750 ohms.

D. Electronic instruments shall have integral configuration capability. Instruments without integral configuration capability shall be provided with a wireless remote handheld terminal. One handheld terminal shall be provided for each type of device in the Contract Documents.

E. Provide standard instrument process connections of 1/2 inch (12.7 mm) NPT female, other than pressure gauges which shall be 1/2-inch (12.7 mm) NPT male.

F. Instruments shall be of current manufacturer design. Obsolete equipment or equipment that has been identified for withdrawal from the market by the manufacturer before date of shop drawing submittal shall not be accepted.

G. Field measure lengths for transducer cables and similar items prior to ordering and supply adequate cable length for application.

**2.02 - MATERIALS**

A. Provide manufacturer's written certificate that the materials of construction are suitable for the service and process fluids.

**2.03 - EQUIPMENT**

A. Provide instruments in accordance with the Product Sheets, Schedules, and Special Construction notes in the attachments to this Section.

**2.04 - ACCESSORIES**

A. Provide the necessary mounting brackets and mechanical shields to secure and protect transducers and other instrumentation devices.

B. Provide all electrical connections, transducer junction boxes, power supplies, and accessory items or options required to satisfy each application.

C. Provide cable between transducers and transmitter units with adequate length based on the location of the devices as shown on the Contract Drawings. Cables shall be continuous run with no splices.

D. Mounting brackets shall be AISI 316 Stainless Steel, and design to securely fasten the devices.

E. Provide shields for outdoor mounted electronic instrument with integral displays, to provide protection against rain, ice and snow and shade from the sun.

F. Provide all special instrumentation communication cables, transducer cables, power cables, process sensing/sampling lines and capillary tubing in field measured lengths without joints or couplings in accordance with the Manufacturer's written instructions.

G. Provide identification nametags for instruments, engraved stainless steel, 3 inch x 1.5 inch x 1/16 inch. Affix to component with minimum 18 AWG minimum stainless steel wire or stainless steel screws. Provide inscription in block letters with following lines, text height as indicated:

1. Line 1: Device Tag and Name, ¼ inch.
2. Line 4: Power Source, 1/6 inch.

**PART 3 – EXECUTION**

**3.01 - VERIFICATION OF CONDITIONS**

A. Before the start of the Work of this Section, verify that the project is ready for this Work.

B. Verify that field measurements are as shown on approved shop drawings and/or manufacturer's instructions.

C. Verify that the equipment or material is in conformance with the approved shop drawings and specifications and resolve any deviations.

D. Notify subcontractors involved or affected by this Work and coordinate the Work with them.

**3.02 - INSTALLATION**

A. All materials and equipment shall be installed in a neat, workmanlike manner.

B. Minimum requirements of all wiring of the equipment shall be as specified under DIVISION 16 - ELECTRICAL.

C. Provide proper installation of the equipment in accordance with manufacturer’s written instructions and/or as approved by the Engineer. Coordinate the proper installation of equipment with the Work of all other trades.

**3.03 - PAINTING**

A. Shop painting and the surface preparation is a part of the Work specified in this section and shall be as specified in SECTION 09900, PAINTING.

**3.04 - CLEAN UP**

A. Prior to start-up and field testing, all foreign matter shall be removed from the equipment.

B. Spillage of lubricants used in servicing the system shall be cleaned from all equipment and concrete surfaces.

**3.05 - MANUFACTURER'S FIELD SERVICES**

A. Manufacturer's Field Services shall be provided for installation and startup for the equipment as follows:

1. 7 calendar days (via ## separate trips to project site).

**3.06 - MANUFACTURER'S TRAINING**

A. Manufacturer's training shall be provided for training of Owner's personnel for the equipment at the project site as follows:

1. 3 calendar days (via ## separate trips to project site).

**3.07 - LUBRICATION REQUIREMENTS**

A. All lubricating oils required for the first year of operation shall be provided.

**3.08 - SPARE PARTS**

A. Provide spare parts as indicated on the instruments’ data sheets.

**3.09 - SHOP TESTING – Not Used**

**3.10 - INSTALLATION**

A. Provide, install, test, calibrate and commission instruments and all peripheral devices necessary in accordance with the Contracts Documents.

B. Install instruments as follows:

1. Install instruments in accordance with the manufacturer's written instructions.
2. Instruments shall be pedestal or wall mounted. Mounting brackets shall not be fastened to process piping or equipment.
3. Mounting brackets, Screws, bolts, nuts and other fasteners shall be 316 Stainless Steel.
4. Do not mount instruments on vibrating structures (e.g. handrails), or on piping or near equipment that induces vibration.

C. Locate instruments as follows:

1. Locate instruments and their associated sensors, local isolation valves, isolation switches and other related accessories so that they are readily accessible for operation, maintenance or removal.
2. Orient instrument displays to be easily viewed from a standing position.
3. Position instruments so that they do not block or obstruct walkways or access points and provide space around installation for removal of covers, etc.
4. Unless otherwise indicated in the Contract Documents, mount instruments 55 inches above finished floors, grade or platforms. Allow for cabinet plinth/floor-pad heights when locating panel instruments.
5. Do not mount instruments below or directly adjacent to lines conveying corrosive chemicals or near sources of leakage or spillage.
6. Where manual operation of valves or equipment is required, based on an instrument reading, the indicator shall be located adjacent to the valve or equipment local control panel.
7. Confirm instrument mounting locations with the Engineer to ensure accurate process measurements.
8. Any instrument that is not easily accessible for operation or maintenance, or any indicator that is not easily and readily visible shall be relocated as directed by the Engineer at no charge to the Contract.

D. Provide process isolation devices such as valves on instrument lines for maintenance and instrument removal, without disruption to the process.

E. When installing conduit entry points in instruments, protect internally mounted equipment from vibration, shock and metal filings. All enclosure penetrations shall maintain the equipment or panel NEMA and UL rating.

F. Process sample and sensing lines:

1. Instrument sample and sensing lines shall be 1/2-inch (12.7 mm) 316 Stainless Steel, cut and bent by methods and tools recommended by the tubing supplier, with compression type fittings.
2. Install process sensing lines to avoid accumulation of vapor or gas (on liquid service) and accumulation of liquid or condensate (on vapor or gas service), as appropriate. Instruments on liquid service shall be mounted below sensing lines, with process tapping points taken from the side of the process line. Instruments on gas service shall be mounted above the sensing lines, with process tapping points taken from the top of the process line.

3. Protect sample and sensing lines throughout their length and secure to eliminate sagging, by using painted/galvanized angle iron and clips.

4. Avoid sharp bends in lines and coil any excess close to the sensor end. Protect the coiled capillary by clipping instrument stanchion.

5. Locate all drain plugs below the lowest tube fitting, union or valve. Slope horizontal tubing toward drain plug by minimum 1 percent. Provide drain plugs on all tubed instrument systems.

G. Provide cable and sample or sensing line lengths so instrument/transducer could be removed from the process without disconnecting process piping.

H. Provide transducers with stilling wells and mounting hardware.

**3.11 - PRE-COMMISSIONING**

A. Provide, install, test, calibrate and commission instruments and all peripheral devices necessary in accordance with the Contracts Documents.

B. Install instruments as follows:

1. Install instruments in accordance with the manufacturer's written instructions.

2. Instruments shall be pedestal or wall mounted. Mounting brackets shall not be fastened to process piping or equipment.

3. Mounting brackets, Screws, bolts, nuts and other fasteners shall be 316 Stainless Steel.

4. Do not mount instruments on vibrating structures (e.g. handrails), or on piping or near equipment that induces vibration.

C. Locate instruments as follows:

1. Locate instruments and their associated sensors, local isolation valves, isolation switches and other related accessories so that they are readily accessible for operation, maintenance or removal.

2. Orient instrument displays to be easily viewed from a standing position.

3. Position instruments so that they do not block or obstruct walkways or access points and provide space around installation for removal of covers, etc.

4. Unless otherwise indicated in the Contract Documents, mount instruments 55 inches above finished floors, grade or platforms. Allow for cabinet plinth/floor-pad heights when locating panel instruments.

5. Do not mount instruments below or directly adjacent to lines conveying corrosive chemicals or near sources of leakage or spillage.

6. Where manual operation of valves or equipment is required, based on an instrument reading, the indicator shall be located adjacent to the valve or equipment local control panel.

7. Confirm instrument mounting locations with the Engineer to ensure accurate process measurements.

8. Any instrument that is not easily accessible for operation or maintenance, or any indicator that is not easily and readily visible shall be relocated as directed by the Engineer at no charge to the Contract.

D. Provide process isolation devices such as valves on instrument lines for maintenance and instrument removal, without disruption to the process.

E. When installing conduit entry points in instruments, protect internally mounted equipment from vibration, shock and metal filings. All enclosure penetrations shall maintain the equipment or panel NEMA and UL rating.

F. Process sample and sensing lines:

1. Instrument sample and sensing lines shall be 1/2-inch (12.7 mm) 316 Stainless Steel, cut and bent by methods and tools recommended by the tubing supplier, with compression type fittings.

2. Install process sensing lines to avoid accumulation of vapor or gas (on liquid service) and accumulation of liquid or condensate (on vapor or gas service), as appropriate. Instruments on liquid service shall be mounted below sensing lines, with process tapping points taken from the side of the process line. Instruments on gas service shall be mounted above the sensing lines, with process tapping points taken from the top of the process line.

3. Protect sample and sensing lines throughout their length and secure to eliminate sagging, by using painted/galvanized angle iron and clips.

4. Avoid sharp bends in lines and coil any excess close to the sensor end. Protect the coiled capillary by clipping instrument stanchion.

5. Locate all drain plugs below the lowest tube fitting, union or valve. Slope horizontal tubing toward drain plug by minimum 1 percent. Provide drain plugs on all tubed instrument systems.

G. Provide cable and sample or sensing line lengths so instrument/transducer could be removed from the process without disconnecting process piping.

H. Provide transducers with stilling wells and mounting hardware.

**3.12 - COMMISSIONING**

A. Demonstrate instrument calibration and loop checks. Each loop check shall be witnessed by, and successfully demonstrated to the Engineer for sign-off.

**3.13 - MANUFACTURER SERVICES AND CERTIFICATION OF INSTALLATION**

A. Provide the services of a trained, qualified manufacturer's representative to test, program and start the instruments to ensure correctness of installation, calibration, testing, start-up, commissioning and training.

B. Manufacturer field services shall be split into three stages: inspection during installation, start up and commissioning, plant operation personnel training.

C. The qualified representative shall:

1. Provide on-site supervision of installation, commissioning and testing for the initial and critical stages of the work as agreed to with the manufacturer/supplier and as required by the Engineer. The Engineer may order additional supervision at no additional cost to the Contract if, in their opinion, procedures are compromised.

2. Provide operation and maintenance instruction to the plant operation personnel.

D. Provide all materials, labor and equipment to make any adjustments to the installation as required by the manufacturer or the Engineer.

E. On completion of installation and testing, provide written certification from the manufacturer confirming that the equipment is installed correctly, is in full operating condition, and is operating in accordance with its design rating. Submit the original certificate to the Engineer.

**3.14 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

OTHER REQUIREMENTS:

5. All wetted parts must be suitable for the intended service conditions.
6. Provide field replaceable sensor, Salt Bridge, Standard Cell Solution, ORP reference solution (500mL Bottles)
7. Supply each probe with 50 feet of cable, with a weatherproof plug on each end for connection to the transmitter. Provide a cover permanently attached to protect the probe when not in use.

FOR SUBMERSIBLE SENSORS

8. Provide a suspension assembly to mount transmitter and sensor. Provide upright 316 Stainless Steel post to mount transmitter and support transverse pipe assembly with easily removed clamps. Provide transverse pipe to hold sensor assembly. Provide weather shield to protect transmitter. Provide complete assembly like E+H CYY 101 w/ immersion assembly or tube. Do not mount transmitter and or analyzer to the railings.
9. Provide each probe with a 316 stainless steel mounting brackets.

| | | |
|---|---|---|
| 29. | Temp Control | : THERMOSTATICALLY CONTROLLED TO 39°F IN 210 MIN, COMPRESSOR WITH BAKED ENAMEL FINIS, PROVIDE COPPER REFRIGERANT LINES W/ CONFORMAL COATING TO PROTECT AGAINST H2S ATTACK |

SERVICE CONDITIONS

| | | |
|---|---|---|
| 30. | Fluid | : WASTEWATER |
| 31. | Sample Temperature | : 2° TO 50° C (36° TO 120° F) |
| 32. | Pressure Range | : 11 PSIG MAXIMUM FOR SAMPLING IN PRESSURIZED LINES |
| 33. | Ambient Temp. | : -15° TO 40° C (5° TO 104° F) |

OTHER REQUIREMENTS

34. Provide sample pump to sustained sample velocity of 1.9ft/s in a 3/8" line. Pump shall automatically purge the sample line after each sample is drawn. Peristaltic pump tubing shall be silicon. Where peristaltic pumps are specified, provide 4 spare pump tubing kits
35. Provide sampler with a flow assembly for sampling from pressurized lines, pressure not to exceed 11 psig. Inlet connection shall be ¾" hose barb with union coupling. Outlet connection shall be 1 ¼" hose barb with union coupling. Outlet shall vent to drain at atmosphere. Sampler connection shall be 3/8" NPT
36. Provide electronics and refrigeration located in upper compartment of the NEMA 4X sampler, and shall be accessible to the operator
37. Provide sampler with a distribution arm to allow change of sample mode from composite to discreet without field retrofit
38. Provide sampler with industrial flash drive to maintain up to eight data-logs simultaneously. The data shall be visible on the operator interface screen and capable of download without interruption of process
39. Provide inputs for up-to 2 analog and 2 discrete inputs for flow paced and event triggered sampling
40. Provide the ability to run multiple programs simultaneously, and the ability to change sampling modes without operator interface. Sampler shall allow manual override

MISCELLANEOUS

| | | |
|---|---|---|
| 41. | Manufacturer(s) | : ENDRESS+HAUSER, HACH, MANNING OR EQUAL |

NOTES.

a. Provide 2 complete sample line replacement kits including; 10M sample line ferrules, clamps and strainer.
b. Provide sampler who has local representation within 100 miles of the project site. Sample manufacturers without local representation will not be considered.
c. Provide a minimum of two (2)site visit(s) not to exceed 10 hours per visit by the sampler manufacturer's authorized technician to commission the sampler(s). Commissioning shall include inspection of installation, wiring verification, initial programming, function check, loop check, operator field and classroom training, written report
d. Contractor shall install the sampler mechanically and electrically prior to the commencement of commissioning services
e. Provide warranty from the sample such that the sampler(s) shall be free from manufacturing defects for a period of thirty six (36) months from date of commissioning and submission of written commissioning report as specified in paragraph "c" above

NOTES.

27. For open channel or tank mounted sensors, the probe lengths shall be as specified elsewhere. Furnish probe with sufficient number of swivel clamps to attach the sensor to the rail or vertical post and hold it rigidly in place. Design clamps specifically for the intended application and fit them with stainless steel set screws, dowel pins, bolts, nuts and washers.
28. Design transmitter to permit the entire electronics assembly to be removed from the enclosure as a single unit for prompt replacement from spare parts inventory in case of electronics failure or other damage.
29. Furnish one complete spare analyzer of each model, to cover the range herein specified.

30. Furnish a one year supply of spare parts, as recommended by the manufacturer, for each different model used.
31. The manufacturer of the analyzer shall furnish initial start-up and calibration services when notified by the Contractor that all units are installed, powered and ready for operation.
32. Services shall be furnished by the manufacturer to provide instruction to the operating personnel in the operation and maintenance of the analyzer.

MISCELLANEOUS

| | | |
|---|---|---|
| 24. | Manufacturer | : MSA, VULCAIN, DETECTOR OR APPROVED EQUAL |

NOTES.

a. Provide one year's supply of calibration gas. Assume each unit is calibrated once per week.

b. Provide analyzers and sensors which require only a single 3 conductor 16 AWG shielded cable per sensor between analyzer and sensor for distances up to 1000 feet between analyzer and sensor.

c. Design sensor to operate in an atmosphere of 100 ppm of hydrogen sulfide for up to 24 hours with no more than 5% reduction in sensor response time.

d. Provide system that shall be connected to controller over a multidrop 4-wire loop

e. Calibration shall be by means of a non-intrusive hand held infrared calibration controller. Sensor/transmitter LCD display shall instruct user when to apply span and zero gas during calibration. Sensor/transmitter shall automatically adjust internal settings to proper calibration values and provide "replace sensor" indication when sensor nears its end-of-life. Time and date stamp of last successful calibration shall be retained in sensor/transmitter internal memory along with minimum, maximum and average gas values.

f. Provide a total of two (2) hand held calibrator/controllers for all sensor transmitters.

**GAS DETECTION LOCATION GUIDELINES**

| GAS | LOCATION | TYPE SENSOR | PROPERTIES |
|---|---|---|---|
| LEL-GASOLINE | 18" ABOVE FF | CATALYTIC BEAD | Heavier then air |
| LEL-METHANE | CEILING | CATALYTIC BEAD | |
| H2S | 18" ABOVE FF | ELECTROCHEMICAL | Heavier then air |
| O2 | 5-6' ABOVE FF | ELECTROCHEMICAL | |

**CONTINUOUS ON-LINE MULTI-PARAMETER ANALYZER SPECIFICATION**

---

**DATA SHEET 50.14**

---

GENERAL

| | | | |
|---|---|---|---|
| 1. | Tag Number | : | SEE TABLE BELOW |
| 2. | Service | : | SEE TABLE BELOW |
| 3. | P&ID No. | : | SEE TABLE BELOW |
| 4. | Location | : | SEE MECHANICAL DRAWINGS |

INTEGRATED CONTROL UNIT ANALYZER (TRANSMITTER)

| | | | | |
|---|---|---|---|---|
| 5. | Type | : | MICROPROCESSOR BASED. | |
| 6. | Range | : | PARAMETER | RANGE |
| | | : | AMMONIA-NITROGEN | 0.1-1000 mg/l |
| | | : | NITRATE-NITROGEN | 0.1-1000 mg/l |

USER INTERFACE (Separate Transmitter for Nitrate and Ammonia Probe)

| | | | |
|---|---|---|---|
| 7. | Display | : | GRAPHIC DISPLAY W 320X240 PIXEL RESOLUTION. |
| 8. | Key Pad | : | 5 OPERATING KEYS FOR MEASUREMENT, CALIBRATION SET, SYSTEM SETTINGS, SWITCHING MENU AND ESCAPE. |
| 9. | Input Power | : | 120-230 VAC, 50/60 HZ |
| 10. | Output Signal | : | 4 - 20 mADC |
| 11. | Protection | : | EMI/RFI, LIGHTENING SURGE |
| 12. | Enclosure | : | SEE AREA CLASSICIATION SCHEDULE ON 00 E-601. |
| 13. | Operating Temp | : | -20~55℃ |

NITRATE ($NO_3$) PROBE

| | | | |
|---|---|---|---|
| 14. | Type | : | IN-SITU NITRATE SENSOR WITHOUT SAMPLE PREPARATION. LIGHT ABSORPTION IN PROPORTION TO CONCENTRATION |
| 15. | Measuring Principle | : | SPECTRAL MEASUREMENT IN THE UV/VIS RANGE (190 TO 230nm). |
| 16. | Probe | : | OPTICAL NITRATE PROBE, PATH LENGTH 1mm. |
| 17. | Range | : | 0.01 TO 25 mg/l, 0.1 TO 100mg/l |
| 18. | Flow Velocity | : | LESS THAN 3 m/s. |
| 19. | Operating Tem. | : | 0~45℃. |
| 20. | PH Range | : | 4~9 |
| 21. | Salt Content | : | LESS THAN 5000mg/l IN MEDIUM. |
| 22. | Automatic Cleaning | : | VALVE MODULE FOR AUTOMATIC COMPRESSED AIR CLEANING, 3~7 BAR. |
| 23. | UV/VIS Module | : | CONNECTION MODULE FOR UV/VIS SENSOR. |
| 24. | Accuracy | : | < ±3% OF MEASURED VALUE |

AMMONIA PROBE

| | | | |
|---|---|---|---|
| 25. | Type | : | IN-SITU AMMONIA SENSOR WITH OUT SAMPLE PREPARATION |
| 26. | Electrodes | : | INTEGRATED MEASURING AND COMPENSATION ELECTRODE |
| 27. | Temperature Compensation | : | REQUIRED |

| | | | |
|---|---|---|---|
| 28. | Matrix Adjustment | : | YES |
| 29. | pH Range | : | 4-9 |
| 30. | Measuring Range | : | 0.2-1290 mg/l |
| 31. | Accuracy | : | < ±5% OF MEASURED VALUE |

PROCESS CONDITIONS

| | | | |
|---|---|---|---|
| 32. | Fluid | : | WASTEWATER MIX LIQUOR |
| 33. | Operating Temp. | : | 5 TO 100° C (40 TO 100° F) |

MISCELLANEOUS

| | | | |
|---|---|---|---|
| 34. | Manufacturer | : | WTW, ENDRESS + HAUSER, HACH OR APPROVED EQUAL |
| 35. | Model | : | VARION PLUS SET WITH IQ SENSOR NET; STAMOSENS; AISE/NITRAX WITH SC200 CONTROLLER |

NOTES.

a. All wetted parts shall be suitable for the intended service conditions.

b. Provide initial calibration and commissioning. Commissioning shall require as a minimum 3−days of operation w/ factory trained technician to operate and maintain system. MTTR greater then 30 minutes shall restart the commissioning time.

c. Provide training for staff during commissioning period in addition to training specified in other sections of specifications.

d. The Manufacturer of the analyzer(s) shall furnish one year's service starting from the completion of the initial commissioning and calibration. This service shall be rendered in a maximum of three site visits and shall include replacement parts as needed to keep the analyzer in proper operation. The start-up, calibration, spare parts and extended service shall be included in the Contractor's price.

| 33. | Sys. Repeatability | : +/- 0.1% OF FULL SCALE |
| 34. | Empty Pipe Detect. | : REQUIRED |
| 35. | Local Display | : MULTI-LINE LC FOR MEASURED VARIABLE, DIAGNOSTICS PLUS BAR GRAPH AND KEY PAD |
| 36. | Local Totalizer | : REQUIRED, 6 DIGIT, NON RESET |
| 37. | Cable Length | : APPROX. 50 FEET PROVIDED BY METER MANUFACTURER |

MISCELLANEOUS

| | | |
|---|---|---|
| 39. | Manufacturer(s) | : FOXBORO, E+H, KROHNE OR SIEMENS |
| 40. | Model No. | : 2000 SERIES, PROMAG W, ENVIROMAG OR MAG 5100 |

NOTES.

a. Provide grounding ring from meter manufacturer. Fabricated grounding rings from a third party shall not be accepted.

b. Provide meter manufacturers cable between the meter and the transmitter.

c. Wet calibrate all meters (at 3 points over the specified flow range) by gravimetric or volumetric methods that are traceable to NIST (National Institute Standard Testing).

d. Provide certificate of wet calibration to the engineer/owner prior to meter installation.

e. Provide, by the meter manufacturer, insitu calibration of all meters prior to system acceptance. Submit written calibration report from the manufacturer to the engineer.

f. **PROVIDE 316 STAINLESS STEEL MOUNTING HARDWARE** including all nuts and bolts connecting the meter to the process pipe.

g. Contractor to provide all power and signal cable in rigid conduit or liquid-tight conduit. See electrical specification for product specifications.

h. Contractor to provide grounding from ground rings to meter and meter to ground, using green size 10 AWG (6mm) ground wire. The Contractor shall install ground as directed by the meter manufacturer or to nearest water pipe. Contractor is responsible for all connections.

i. Remote communication must not interfere with the analog output signal. Use frequency shift keying (FSK) technique for communication.

|---|---|---|
| 29. | Operating Temp. : | -30° TO 50°C (-20° TO 125°F). |
| 30. | Operating Pressure | : ATMOSPHERIC |

MISCELLANEOUS

31. Intercon Cable : 30M (100 FEET) OR GREATER SO THE TRANSMITTER CAN BE MOUNTED FOR OPERATOR ACCESS

32. Manufacturer(s) : FLOWLINE, DREXELBROOK, KROHNE, SIEMENS OR EQUAL

NOTES.

a. Provide all mounting hardware.

b. Provide detailed instructions for installation of sensor, transmitter and mounting hardware.

c. Provide 316 SS wall sleeve w/ 150mm (6-inch) flange for mounting in top of tanks or wells.

d. Provide barrier for intrinsically safe applications

e. Provide lightning and surge protection

f. Provide detailed installation wiring diagrams specific to the installation application.

g. Provide 316 SS (fiberglass for chemical applications) UNISTRUT® floor or wall bracket for indicator or remote mount transmitter.

h. Provide linearization functions to measure flow in open channels or weirs. Provide linearization calculations to determine tank volumes.

i. Other transmitter housing material may be considered for non-hazardous area application.

**PRESSURE ISOLATOR RING SPECIFICATION**

---

**DATA SHEET 1457.1**

---

GENERAL

| | | | |
|---|---|---|---|
| 1. | Tag Number | : | SEE DATA SHEET 1454 |
| 2. | Service | : | SEE DATA SHEET 1454 |
| 3. | P&ID No. | : | SEE DATA SHEET 1454 |
| 4. | Location | : | SEE MECHANICAL DRAWINGS |

A. Pressure Sensor Rings:

1. Manufacturers:
   a. Onyx
   b. Or an acceptable equivalent product.
2. 1-inch and Larger: Provide sensor/isolators that fit inside the bolt circle of 150-lb (Class 150).
3. 3/4-inch and Smaller: Provide sensor/isolators full flange or threaded as specified and indicated. For chemical system provide full flange, threaded connections are not acceptable.
4. Face to face length of the sensor: Conform to Specification MSS-SP67.
5. Type: Flow through design with flexible sleeve around full circumference. The centersection shall have a cavity behind the sleeve filled with silicone fluid to transfer pressure to the gauge.
6. Rigidly support all pressure instruments by a post at least 7/8-inch diameter welded to the isolator. On sensor rings with more than one instrument, provide all connections 1/2-inch NPT as a minimum. 1/4-inch NPT fittings are not acceptable.
7. Provide sensor/isolator rings that do not have any fill plugs or valves that can be inadvertently removed with the resultant loss of fill fluid. Pressure sensor/isolators using valves are not acceptable.
8. Provide liquid filled sensor/isolators permanently vacuum sealed at the factory with a modular seal consisting of a membrane and needle fitting to allow removal and replacement of pressure instruments without compromising the vacuum fill. Sensor/isolators using valves are not acceptable.
9. Provide the needle fitting with both 1/4-inch NPTF threads and 1/2-inch NPTM threads.
10. Provide the pressure sensor/isolator capable of operating under pressure with all pressure instruments removed with no loss of fill fluid and without the need for isolating valves.
11. Attach pressure instruments to the isolator with a hand tightened lock ring.
12. It shall be possible to remove or attach pressure instruments to the isolator without requiring the use of any tools.
13. Permanently fill the pressure sensor with high viscosity silicone instrument oil to damp out surges or pressure spikes without the requirement for a separate snubber.
14. Pressure rating: 200 psi minimum for all lines tested at 150 psi or less and 600 psi minimum per lines tested above 150 psi.

15. Materials:
    a. Process water:
        (1) Center – 316 stainless
        (2) End Plates – 316 stainless
        (3) Elastomer – EPDM
        (4) Fluid – silicone
        (5) Stinger – 316 stainless
        (6) Pipe – 316L stainless
    b. 15% sodium hypochlorite (sg 1.20)
        (1) Center – Kynar coated carbon steel
        (2) End Plates – Kynar
        (3) Elastomer – Viton
        (4) Fluid – silicone
        (5) Stinger – 316 stainless
        (6) Pipe – 316L stainless

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Control System Integration as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

C. The System Integrator (SI) is responsible for making all components of the system operate as a whole. This includes but is not limited to:

1. Configuring equipment software provided under SECTION 13350, SCADA EQUIPMENT.

2. Program all network hardware provided under SECTION 13345, DATA NETWORK.

3. Program the SCADA system to display and control the WWTF operation system.
4. Program the WWTF and Collection System PLCs provided under SECTION 13340, PLC CONTROL PANELS to implement the controls and the WWTF operation system.
5. Provide coordination and support the installation and programming of the instruments, provided under SECTION 13330, PROCESS INSTRUMENTS.
6. Provide witness testing for equipment shop testing and performing field testing as specified.
7. Review of shop drawings submittals of process equipment and PLC based control panels provided under other divisions.
8. Provide configuration direction to the Contractor for all process equipment control panels supplied with equipment.
9. Create HMI screens to replicate screens of the process equipment control panels supplied under other divisions.
10. Provide coordination and support, including control panel shop drawing review, for the instrumentation and control systems for all OEM packages.
11. Provide classroom and hands-on training to the owner's staff on operation of the system.

D. The Contractor shall be responsible for the assistance of the SI with the coordination of equipment furnished in this contract with the overall control system requirements.

E. Design the system and equipment used therein, to resume normal operation without manual intervention, following resumption of power after a power failure.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. "Work" shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Detailed network architecture drawings howing all network components.

2. Submit print outs of all SCADA screens for Owner and Engineer’s review and comment.

3. Submit red-line markup of P&ID that reflects all changes to the design throughout the construction process.

4. Table of IP addresses for all devices.

5. Submit PLC program.

6. Submit Network switch, firewall, and gateway configuration files.

7. Record and submit the configuration of each networked devices.

8. Project narrative.

9. Test Results

10. Test Plans.

C. All submittals provided by the Contractor shall be reviewed by the System Integrator (SI) prior to submittal to the Engineer. SI comments shall be incorporated into the submittal provided to the Engineer for review and approval. The SI shall provide a statement with each submittal indicating that the submittal has been reviewed, all SI comments have been addressed and that the submittal is reviewed by the SI.

D. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.

1. Failure to include a copy of the marked-up specification sections will result in resection of the entire submittal with no further review and consideration.

E. Operation and Maintenance Manuals:

1. Submit operating and maintenance instructions. Incorporate functional description of entire system.

F. Submit "record copy" of all drawings previously submitted for review within 30 days after completion of system installation as part of operating and maintenance instructions. Show all changes and modifications made during installation. Define special maintenance requirements particular to system along with special calibration and test procedures.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. Where possible, all equipment shall be provided by the same manufacturer.

C. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Work of SI service personnel shall be coordinated by the Contractor.

B. Coordinate with mechanical and electrical systems suppliers to identify any signal isolation, signal boosting devices or auxiliary relays that may be required to complete the system.

C. System energizing not allowed prior to receipt of certified statement from Contractor and SI approving system and authorizing energizing of system.

**1.08 - WARRANTY**

A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS.

B. The Contractor shall provide a warranty that all of the equipment is new and of recent manufacture, all materials and workmanship are of good quality, free from faults or defects in accordance with the requirements of these specifications. The Warranty shall be secured by a Performance Bond issued jointly to the CONTRACTOR and the OWNER for 100 percent of the PROPOSAL price. The Contractor agrees to furnish a Warranty in the sum of the full amount of the Proposal price and duly executed by the said Contractor as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the OWNER, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Contractor. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

C. The Warranty shall be for a period of four (4) years from Substantial Completion of the construction contract. The Contractor will be responsible for execution of warranties during the warranty period should the need arise.

D. It is the Contractor’s responsibility to resolve any and all warranty claims.

E. The Warranty shall be provided as part of the shop drawing submittal. Submittals which do not include the required Warranty Bond will be summarily rejected and returned to the Contractor without further review and consideration.

F. The Contractor shall warrant that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply.

G. The Contractor shall warrant that the system will function in accordance with the manufacturer’s published technical description guides and as specified herein.

**1.09 - REFERENCES**

A. American Petroleum Institute (API):

1. RP 551: Process Measurement Instrumentation

B. International Society of Automation (ISA):

1. S-20: Specification Forms for Process Measurement and Control Instruments, Primary Elements, and Control Valves.

C. National Electrical Manufacturers Association (NEMA):

1. 250: Enclosures for Electrical Equipment (1000 Volts Maximum).

D. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 - PRODUCTS – Not Used**

**PART 3 - EXECUTION**

**3.01 - VERIFICATION OF CONDITIONS**

A. Before the start of the Work of this Section, verify that the project is ready for this Work.

B. Verify that field measurements are as shown on approved shop drawings and/or manufacturer's instructions.

C. Verify that the equipment or material is in conformance with the approved shop drawings and specifications and resolve any deviations.

D. Notify subcontractors involved or affected by this Work and coordinate the Work with them.

**3.02 - MANUFACTURER'S FIELD SERVICES**

A. Manufacturer's Field Services shall be provided for installation and startup for the equipment as follows:

1. 7 calendar days (via ## separate trips to project site).

**3.03 - MANUFACTURER'S TRAINING**

A. Manufacturer's training shall be provided for training of Owner's personnel for the equipment at the project site as follows:

1. 3 calendar days (via ## separate trips to project site).

**3.04 - SPARE PARTS – Not Used**

**3.05 - GENERAL INSTALLATION**

A. The locations of equipment, transmitters, alarms and similar devices are diagrammatic only. Exact locations shall be coordinated by the contractor and the SI during development and fabrication of systems.

B. Provide PLC programming services and control system integration as specified and indicated.

**3.06 - SHOP TESTING**

A. The SI shall attend, witness and coordinate shop testing activities of instrumentation and control system equipment as referenced in their respective specification sections.

**3.07 - FIELD TESTING**

A. All field testing activities shall be coordinated and led by the SI with the Contractor support.

B. Calibration and loop testing.

1. The SI shall provide supervision of all calibration and loop testing by the contractor.

2. Instrument calibration shall be provided by the instrument manufacturer. The field calibration shall be provided with a NIST traceable calibrator. The calibration report shall include;

a. Factory calibration sheet

b. Field (not hand written) calibration sheet

c. Picture of installed instrument

3. The calibration records shall include the instrument serial number and the project instrument tag on all documents. The calibration records shall be submitted electronically so they may be incorporated into the Owners asset data base.

4. The SI shall provide supervision for continuous loop testing. Loop testing shall occur following instrument calibration. The test shall check Continuity of all wiring from devices in the field to the control system IO terminations. Next send and receive inputs and outputs from the field to the HMI (this does not mean simulate w/ a signal generator). Valves should be opened and closed, analyzers should be placed in known solution strengths and discrete devices cycled on and off. Note - before chemical tanks are filled w/ chemicals their levels should be check with water - this can be completed during the leak testing process.
5. The Loop Diagrams will be included in the loop testing. The loop diagrams will checked against field conditions to confirm:
    a. Analog range
    b. Terminal numbers
    c. All control wiring
    d. Power source, grounding, isolation and lightning protection
    e. Signal ground shield showing cutting and taping in field

C. As a minimum, the control system testing shall include the following:
1. Operational Readiness Test (ORT).
2. Application Software Operational Readiness Test (ASORT).
3. Field Acceptance Test (FAT).

D. The test shall be in the cause and effect format. The person conducting the test shall initiate an input (cause) and upon the system's or subsystem's producing the correct result (effect), the specific test requirement will have been satisfied. The SI shall provide a detailed step by step test procedure for review and approval by the Engineer.

E. All tests shall be conducted in accordance with prior Owner and Engineer approved procedures, forms and checklist. Each specific test to be performed and shall be described and a space provided after it for sign off by the appropriate party after its satisfactory completion.

F. Signed copies of the test procedures prepared by SI, forms and checklists will constitute the required test documentation.

G. Provide all special testing materials and equipment. Wherever possible, perform tests using actual process variables, equipment, and data. Where it is not practical to test with real process variables, equipment and data, provide suitable means of simulation. Define these simulation techniques in the test procedures.

H. The SI shall coordinate all testing with the Owner and Engineer.

I. The Owner and Engineer reserves the right to test or retest all specified functions whether or not explicitly stated in the prior approved Test Procedures with no additional cost.

J. The Owner's and Engineer’s decision shall be final regarding the acceptability and completeness of all testing.

K. The SI shall furnish the services of field service engineers, all special calibration and test equipment and labor to perform the field tests.

L. Operational Readiness Test (ORT):
1. General: Prior to the Field Acceptance Test, the entire system shall be certified (inspected, tested and documented) that it is READY for operation.
2. Loop/Component Inspections and Tests: The entire system shall be checked for proper installation, calibrated and adjusted on a loop by loop and component by component basis by the SI following field installation, to demonstrate and document the system is in conformance with related submittals and these specifications. The Contractor is required to confirm that the system is properly wired, terminated and tagged from the field wiring nearest to the primary elements or equipment to the PLC I/O.

3. The SI shall maintain the Loop Status Reports and Components Calibration sheets at the jobsite and make them available to the Owner and/or Engineer at all times.

4. The Engineer reserves the right to witness and sign off all tests conducted by the SI. The Engineer shall review and initial all Loop Status Sheets and Component Calibration Sheets and spot check their entries periodically and upon completion of the tests. Any deficiencies found shall be corrected. Final versions of these test sheets shall be submitted to the Owner and/or Engineer at all times.

M. Application Software Operational Readiness Test (ASORT):

1. During the entire ASORT, all panels and HMI equipment shall be powered, fully interconnected per the approved control system architecture drawing, and ready for testing.

2. The SI shall be responsible for testing all control and monitoring loops by simulation of field inputs and outputs. These inputs/outputs shall be simulated at the point nearest to the field element or equipment after conduit and wire have been installed and tagged as specified and indicated, but prior to transition of the wiring of field devices from the existing control system to the new control system. Field I/O will be simulated as follows:

   a. Discrete Input: Jumper at field input to simulate contact closure.

   b. Discrete Output: Relay and plug-in mounting base with matching coil voltage and indicating light to confirm output signal.

   c. Analog Input: 4-20mADC current source to simulate field analog transmitters.

   d. Analog Output: Multi-meter with mA range to confirm analog output from source.

3. Working with the Contractor's assistance to provide simulated field inputs/outputs as described above, the SI will confirm the PLC programming and HMI configurations and controls for each loop. Closed loop controls, such as wetwell level control, shall be simulated by manual simulation of feedback signal to confirm expected response.

4. The SI shall provide, or coordinate with the Contractor to provide, copies of all approved shop drawings; copies of all as-built drawings; PLC and HMI manufacturer's literature.

N. Field Acceptance Test:

1. Prior to the Field Acceptance Test, the entire installed instrument and control system shall be certified by the SI that it is ready for operation. All preliminary testing, inspection, and calibration shall be complete. The intent of the FAT is for all responsible parties, working together, to prove the installed system operates in accordance with the Specifications. Each party is responsible for verifying the completeness of all system components furnished, installed, and configured by their respective firm or subcontractors.

2. A witnessed Field Acceptance Test shall be performed on the complete system to demonstrate that it is operating and in compliance with these specifications. Each specified function shall be demonstrated on a paragraph by paragraph, loop by loop, and site by site basis.

3. Loop specific and non loop specific tests shall be the same as specified under factory testing, WFT and AST.

4. In the event of rejection of any part or function of a SI furnished system, the Contractor and SI shall perform repairs or replacement within 10 days and at no additional cost to Owner.

5. Updated versions of the documentation specified to be provided for during the field acceptance tests shall be made available to the Owner and Engineer at the job sites both before and during the tests. In addition, one copy of all O & M Manuals shall be made available to the Owner and Engineer at the job sites both before and during testing.

**3.08 - FUNCTIONAL START-UP TESTING**

A. After completion of the Field Acceptance Test, the Instrumentation and Control System shall be tested as a component of the Functional Start-up Testing. All furnished hardware and software shall operate for a period of 14 consecutive days, under conditions of full plant process operation, without a single non field repairable malfunction.

B. During this test, Owner operations personnel and SI personnel shall be present as required. The Contractor and the SI are expected to provide personnel for this test who have an intimate knowledge of the hardware and the SI provided software of the system. Coordinate staffing requirements during the test to coincide with normal shift operations as much as possible. Off-shift emergencies shall be fully supported by Contractor and SI staff. Provide staff with cell phones and/or pagers to ensure that support staff is available by phone and/or on-site within four hours of a request by operations staff.

C. While the start-up testing is proceeding, the Owner shall have full use of the system.

D. Any malfunction to the system during the tests shall be analyzed and corrected. The Owner shall determine whether any such malfunctions are sufficiently serious to warrant a repeat of this test.

E. Any malfunction during the Start-up Testing which cannot be corrected within 24 hours of occurrence, or more than two similar failures of any duration, will be considered as a non field repairable malfunction.

F. Upon completion of repairs, the associated test shall be repeated as specified herein.

G. In the event of rejection of any part or function, perform repairs or replacement within 10 days and at no additional cost to the Owner.

H. The total availability of the system shall be greater than 90% during this test period. Availability shall be defined as:

AVAILABILITY = (TOTAL TIME – DOWN TIME)/(TOTAL TIME) * 100%

I. Upon successful completion of the startup operation test and subsequent review and approval of complete system final documentation, the system shall be considered Substantially Complete, after approval by the Owner and Engineer.

**3.09 - TRAINING**

A. Upon completion of the start-up, provide competent training personnel for a period of not less than three, 8-hour working days, excluding travel time, for training of personnel in the use, operation and maintenance of the instrumentation and control system. Training to utilize the submitted operation and maintenance manuals and record copy drawings as reference materials. Training to be for 6 personnel in each class. Each class to be of a 4 hour duration.

**3.10 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 13350**

**SCADA EQUIPMENT**

## PART 1 - GENERAL

### 1.01 - SCOPE

A. Provide SCADA equipment as specified and in accordance with the Contract Documents. The equipment shall include, but not limited to, servers, uninterruptable power supplies (UPSs), human machine interface (HMI) equipment, and all software packages required to provide a complete and functional control and communication system.

B. Equipment Product Sheets are in Attachment A.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to, the following.

1. SCADA Network Hardware

C. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.

1. Failure to include a copy of the marked-up specification sections will result in rejection of the entire submittal with no further review and consideration.

D. Submit Manufacturer Product Data Sheets, with the information noted below and other data pertinent to the equipment and the application.

1. The product manufacturer technical data sheets.

2. The complete model or catalogue number(s) including any special options.

E. Licensing documentations for all software packages.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTIONS 01610, DELIVERY, STORAGE AND HANDLING and SECTION 13300, PROCESS INSTRUMENTS.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - WARRANTY**

A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS

B. The Contractor shall provide a warranty that all of the equipment is new and of recent manufacture, all materials and workmanship are of good quality, free from faults or defects in accordance with the requirements of these specifications. The Warranty shall be secured by a Performance Bond issued jointly to the CONTRACTOR and the OWNER for 100 percent of the PROPOSAL price. The Contractor agrees to furnish a Warranty in the sum of the full amount of the Proposal price and duly executed by the said Contractor as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the OWNER, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Contractor. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

C. The Warranty shall be for a period of four (4) years from Substantial Completion of the construction contract. The Contractor will be responsible for execution of warranties during the warranty period should the need arise.

D. It is the Contractor’s responsibility to resolve any and all warranty claims.

E. The Warranty shall be provided as part of the shop drawing submittal. Submittals which do not include the required Warranty Bond will be summarily rejected and returned to the Contractor without further review and consideration.

F. The Contractor shall warrant that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply.

G. The Contractor shall warrant that the system will function in accordance with the manufacturer’s published technical description guides and as specified herein.

**PART 2 - PRODUCTS**

**2.01 - SOFTWARE**

A. Provide Qty (2); Client software packages for new Thin Clients to match existing.

**2.02 - UNINTRUPTABLE POWER SUPPLY (UPS)**

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.03 - THIN CLIENT**

A. General:

1. The Thin Client system shall be based on Microsoft terminal services (remote desktop services) solution, with applications presented to user stations based on thin client hardware. The management of this architecture, including servers, thin client terminals, users, applications and security shall be centrally and securely handled by the proposed Management Software.

2. The Thin Client software will operate on the SCADA server as a virtual machine. Provide Thin Client in the Primary Server and backup Thin Client in the SCADA backup server.

B. Thin Client Hardware shall conform to the following:

1. Thin Client hardware shall be Thin Manager ready and shall not require modification from the manufacturer's standard offering.
2. Hardware shall be capable of using Microsoft Remote Desktop Protocol (RDP) and the associated data compression and encryption.
3. Hardware shall be capable of supporting Network Level Authentication (NLA).
4. Hardware shall be compatible with the supplied Management software.
5. Hardware shall support terminal side USB mouse and keyboard.
6. Hardware shall support local serial ports.
7. Hardware shall support high color, high resolution, and be capable of supporting screen resolutions up to 3840x2160 (UHD).
8. Hardware shall neither require nor contain cooling fans.
9. Hardware shall neither require nor contain local permanent storage (i.e. no flash or hard drive shall be necessary or installed).
10. Hardware shall not require a local operating system to boot.
11. Hardware shall have the ability to boot from the server over a standard network.
12. Hardware shall support standard Ethernet network infrastructures.
13. Hardware shall support using either DHCP, static IP configuration, or terminal profile based IP assignment.
14. In conjunction with the Management Software, the ability to configure hardware shall be supported.
15. Hardware shall support the ability to utilize a single keyboard and mouse to control multiple thin clients.
16. Hardware shall support the ability to utilize a single thin client with up to 5 monitors to drive multiple stations, each with their own display, keyboard and mouse.
17. Hardware shall support the ability to move applications from one monitor to another with a thin client that supports multiple monitors. This should be fully configurable.
18. Hardware shall support automatic login to a predetermined terminal server and start a session without operator input.
19. Hardware shall be capable of interfacing with smart card readers.
20. Hardware shall be capable of redundant networking.
21. Hardware shall be able to utilize multiple network interfaces on the Thin Client for different LAN segments.
22. Hardware shall be capable of interfacing with any touch screen controller.
23. Thin Client Terminals:
    a. Thin Clients shall be set-up to run a terminal session of the HMI by connecting to the SCADA Terminal Server.

C. Thin Client Terminals

1. Compact, fanless, tower form factor with flexible mounting options; desktop or panel mount as indicated on the Contract Drawings.
2. 500 MHz processor minimum.
3. 256 MB of RAM minimum.
4. Video graphics card capable of 1600 x 900 pixels, 60Hz refresh rate and 16-bit color minimum. VGA output.

5. Operating temperature of 10 degrees Celsius to 50 degrees C
6. 110 Ports & devices
    a. Minimum of two USB 2.0 ports supporting USB mouse and keyboard.

D. Interface devices
1. Generic USB keyboard, no hot keys or number pad onboard
2. Two button USB optical mouse with scroll wheel
3. Monitor
    a. LCD flat panel 20-inch nominal size minimum
    b. UHD support for 3840 x 2160 resolution
    c. 16 ms response time maximum
    d. 250 nits (cd/m2) brightness
    e. 400 to 1 contrast ratio minimum
    f. Vertica1 viewing angle of 85 degrees minimum
    g. Horizontal viewing angle of 85 degrees minimum
    h. Analog GRB, Digital DVI-D
    i. Adjustable height stand for desktop applications
    j. Panel mount option for installations in PLC panels as indicated with screen minimum size of 15 inches. Screen shall be touch type unit.

E. Networking:
1. The onboard network interface shall have the following features
    a. Support for latest Microsoft operating system.
    b. Fast Ethernet port accepting standard CAT-6 cables for Ethernet communications
    c. IEEE 802.3ab support for gigabit networking standard
    d. IEEE 802.Q VLAN support
    e. Auto sensing 10/100 Mbps or faster
    f. Support either DHCP or static IP configuration.

F. Power supply shall be capable of providing necessary power. Thin Client and monitor shall be I20VAC from UPS.

G. Thin Client Hardware
1. Qty (2) Thin Client Terminals shall be Arista; Microbox 7824B-B01-003-DR, no equal, to match existing.
2. Qty (2) 24” Panel mount video monitors shall be Arista; ADM-1824AP-001, no equal, to match existing.

**2.05 - MANAGEMENT SOFTWARE:**

A. The Management Software shall be able to support configuration of Servers, Thin Clients ('terminals') and Applications from a central interface.
1. Software shall allow centralized configuration of all aspects of the proposed architecture. No client based configuration shall be required.
2. Software shall support connectivity, configuration and interoperability with Microsoft Terminal Services operating systems from Windows 2003 Server through to the latest offering (currently Windows Server 2016).
3. Management software shall be capable of running on the operating systems specified.

4. Software shall support management of the overall terminal services architecture.
5. Software shall permit terminals to be remotely configured and reset from the central interface without the need for the administrator to be at the physical location of the terminal.
6. Software shall permit Windows authentication with auto-login features.
7. Software shall permit automatic login to a predetermined terminal server and start a session without operator input.
8. It shall be possible to configure multiple terminal servers to be used in a load balancing manner without implementing clustering.
9. Load balancing shall be automatically handled by the software and shall be tunable based on CPU utilization, Memory usage and Process usage on the server.
10. Software shall support the ability to queue access requests to the server and complete when resources are available.
11. Software shall support the ability to configure multiple terminal servers to be used and provide the ability to 'failover' to the backup terminal server if the current terminal server fails.
12. Software shall support Shadowing of terminals from management software (Shadowing refers to the ability to view, with authorization, any terminal screen on the managed network).
13. Software shall support the ability to Shadow one terminal on one or more terminals.
14. Software shall have monitoring capabilities to detect and display terminal server assignment, login status, terminal load, and terminal server load.
15. Should a thin client fail, the software should provide the ability to allow quick replacement of the failed client with a spare, with no required configuration changes.
16. Should a thin client fail, the replacement terminal shall be automatically reconnected to the existing (disconnected) terminal session.
17. Software shall support the automatic logout of a session after a configurable period of inactivity.
18. Software shall support the integration of IP camera video as either an overlay on an existing terminal screen or as a separate client application.
19. Software shall support software decoding of IP camera streams as well as hardware decoding (with appropriate thin client hardware).
20. Multiple video streams shall be able to be configured onto a single client display.
21. Software shall permit configuration permitting sound from an application, or from multiple applications, to be played from the thin client device.
22. Software shall support easy backup and restoration of the configured architecture.
23. Software shall be extensible, preferably utilizing an ActiveX control or .NET component.
24. Software shall support the delivery of applications from multiple terminal servers to a single thin client and visualize the sessions simultaneously.
25. Software shall support the management of applications being delivered to a PC based platform.
26. Software shall support industrial and commercially available thin client hardware.
27. The Management Software shall be able to be used from a portable, network connected mobile device.
28. Software shall support remote configuration with an iOS device such as an iPad or iPhone, or Android device.
29. Thin client emulation software shall be available to provide operator level functionality from a network connected iOS or Android devices.

30. The thin client emulation software shall not permit the operator to configure or otherwise interact in an administrative capacity with the network.
31. The thin client emulation software shall support delivery of applications to the mobile device based on location.
32. The thin client emulation software shall support location-based resolvers including Quick Response (QR) Codes, Bluetooth Beacons, Global Positioning System (GPS) and WiFi Access Points.
33. Upon location-based resolution, the thin client emulation software shall support different actions based on the user's access group, including Interactive Shadow, Non-interactive Shadow, Manual Transfer, Force Transfer and Clone.
34. The thin client emulation software shall support the combination of location resolvers to create a geo-fence for application delivery.
35. Security of the configuration and access to servers shall be managed and configured with the Management Software.
36. Software shall support but not require different levels of access for security based on user identity.
37. Users shall be able to be placed into security groups for easy management.
38. Software shall support Application access based on user identity.
39. Software shall support configuring of Applications such that only the Application window is presented to the user (i.e. no desktop or Start menu), thereby denying access to unauthorized programs.
40. User level access shall be able to be configured independent of any operating system-based authentication, such as Active Directory, and shall not require access to such for configuration.
41. User level access using Microsoft Active Directory or other operating system-based authentication shall however be supported.
42. The software shall support synchronization with Microsoft Active Directory organization units (OU).
43. Software shall support the storage of credentials that can be pushed to Microsoft Active Directory.
44. Software shall support automatic password generation at a configurable interval while maintaining Microsoft Active Directory complexity requirements.
45. Software shall support the delivery of applications based on a user's assignment to a Microsoft Active Directory security group.
46. Software shall permit automatic launching of programs without operator input.
47. Software shall support the ability for a supervisor to access their authorized applications and desktop from any configured terminal.
48. Software shall support the ability to permit or deny users, or groups of users, access to applications unless suitably authorized and authenticated.
49. Software shall support blocking of interrupt key sequences such as CTL+ALT+DEL and CTL+ESC.
50. Local terminal USB ports shall not be connected to the server.
51. The Management Software shall be able to manage licensing within the central interface.
52. Licensing shall be flexible based on the number of clients managed on the network.
53. The number of servers managed as a part of the architecture shall not be restricted by the management software license.
54. It shall be possible to add more client licenses to the network without disturbing the connected clients.
55. There shall be a level of licensing which permits an unlimited number of clients to be connected and managed without the need to purchase additional client licenses.

**2.06 - SPARE PARTS**

A. Provide recommended spare parts list with unit prices.

**PART 3 - EXECUTION**

**3.01 - INSTALLATION**

A. Provide, install, test and commission SCADA Equipment and all peripheral devices necessary in accordance with the Contracts Documents.

B. The SI shall install, configure and setup all software packages provided.

**3.02 - FIELD TESTING**

A. Demonstrate system functional operation after completion of installation and prior to plant start up. Refer to SECTION 13331, CONTROL SYSTEM INTEGRATION for control system field testing requirements.

**3.03 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

| 1. | Manufacturer(s): | EATON, BEST, SOLA, APC OR EQUAL |

NOTES.

a. Provide UPS system such that upon failure of the UPS feeder, batteries provided with UPS immediately take over as the power source.

b. Provide external bypass switch with three circuit breakers Make-Before-Break system. Provide bypass to isolate the UPS equipment for maintenance. Provide bypass with switch test so the switch may be tested without the risk of dropping the load caused by static switch failure.

c. Provide static transfer switch to transfer load upon loss of power at the output of the UPS.

d. Provide UPS sizing documentations in the shop drawing submittal. UPS shall supply power to PLCs, RIOs, SCADA severs, Thin Client nodes, network communications equipment workstations and field instruments. Provide sizing documentations analysis which are based on required load plus minimum of 10% spare capacity.

## PART 1 – GENERAL

### 1.01 - SCOPE

A. The Work of this section includes furnishing all labor, materials, tools and equipment necessary to provide Fiberglass Reinforced Plastic Duct Dampers and Appurtenances as specified and/or as shown on drawings.

B. Provide duct and dampers for odor abatement systems with all appurtenances to make it operable, as indicated and in compliance with Contract Documents.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all the sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 – DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

### 1.04 - SUBMITTALS

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accoirdance with the provisions of the DOCUMENT 00700, GENEREAL CONDITIONS, and SECTION 01300, SUBMITTALS.

1. Submittals required under this section include, but are not limited to the following.

a. When the Contractor proposes tanks which requires an arrangement differing from that indicated on the drawings or specified, prepare and submit for review detailed structural, mechanical, and electrical drawings and equipment lists, utilities consumption schedule and operating instructions, showing all necessary changes and embodying all special features of the equipment he proposes to furnish. Make changes, if accepted at no additional cost to Owner.

b. Certified shop and working drawings. Drawings for the duct and dampers shall also include a complete description of the laminate construction as specified within this section and be accompanied by a detailed postcure procedure that will be utilized.

c. Drawings shall include plan views, sectional views, title block, and details of all related items. In cases where certain information is Proprietary and is omitted, provided a statement indicating that the information is proprietary and is being omitted.

d. Files shall include Tag Names, Parts List (identifying each component), Dimensions, and connection sizes.

e. Files shall be drawn to scale.

f. Drawings shall be in conformance with all other requirements as specified in this specification.

2. A letter from the resin supplier stating that the material used for this project will comply with the specification and meet all corrosion requirements.

3. Design calculations performed by the manufacturer and stamped by a Professional Engineer for record purposes.

4. Samples, representative of the ductwork, construction method and material used to be supplied on this project.

5. Schematic and wiring schematic with interconnection diagram showing description of operations. List component identification of schematic diagrams as stated herein, along with component instruction manual references.

6. Manufacturer's literature and specifications. Show catalog dates.

7. Operating and maintenance instructions and parts list.

   a. In operating instructions incorporate a functional description of entire system including system schematics.

   b. In maintenance instructions, clearly define requirements for particular system and show special calibration and test procedures.

8. Clearly mark all drawings and data to show only items applicable to work. Show all data, nozzle schedule, bill of materials, rated capacities, material of construction, layouts and construction details of all components. Show dimensions, mounting and external connection details on all drawings.

9. Number and identify all equipment to correspond with terminology on drawings. Also use these numbers on all submittals sheets and shop drawings.

10. Four copies of manufacturer's recommended regeneration instructions, procedures and safety precautions. Provide detailed instructions for particular system as required.

11. List of 5 operating installations to demonstrate compliance with the requirements of Paragraph 1.07.H.

    a. Provide current (verified) contact information for each installation.

12. Paint manufacturer's product data and specifications indicated conformance to shop painting requirements specified including statement of compliance for compatibility.

13. Manufacturer's literature as needed to supplement certified data.

14. Two (2) sample cutouts demonstrating 100 mils ( liner, and filament wound structural laminate. Samples to be a minimum of 8-inch diameter cut out, and a 12-inch diameter piece of duct at least 12 inches (300 mm) long complying with RTP-1 visual level I.

15. Copies of burial calculations for at least 3 sizes of duct between 12-inch and 48-inch .

16. Submit details of:

    a. Resin Type

    b. Types and amounts of filler

    c. Corrosion liner description

    d. Reinforcement types for hand lay-up or chopped laminates

e. For filament-wound laminates:

(1) Helix angle

(2) Glass content range

(3) Strand yield

(4) Strand by inch in the winding band

(5) Ply thickness

(6) Amount of chop or unidirectional roving interspersed with winding, if any, and location within laminate.

f. For all Fabricated parts:

(1) Construction type

(2) Laminate thickness

(3) Ply sequences

(4) Glass content range

g. For all secondary overlays (both interior and exterior):

(1) Laminate thickness

(2) Ply sequences and widths

(3) Construction details for all other special configurations and fabricated parts.

17. Shop test results.
18. Motor shop test results.
19. Qualifications of field service technician.
20. Schematic control and power wiring diagrams.
21. Shop and Field inspections reports.
22. List of recommended spare parts other than those specified.
23. Recommendations for short and long term storage.
24. Special tools.
25. Shop and field testing procedures and equipment to be used.
26. Number of service technician days provided and per diem field service rate.
27. Manufacturer’s product data, specifications, and color charts for shop painting.
28. Provide a listing of the materials recommended for service specified and indicated. Provide documentation showing compatibility with process fluid and service specified and as indicated.
29. The most recent ISO 9001 series certification.
30. Material Certification:

a. Provide certification from the manufacturer that the materials of construction specified are recommended and suitable for the service conditions specified and indicated. If materials other than those specified are proposed based on incompatibility with the service conditions, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated including an installation list of a minimum of five (5) installations in operation for a minimum of three (3) years. Provide proposed materials at no additional cost to the Owner.

b. Where materials are not specified, provide technical data and certification that the proposed materials are recommended and suitable for the service conditions specified and indicated.

31. A copy of the contract mechanical process, electrical and instrumentation drawings, with addenda that are applicable to the equipment specified in this section, marked to show all changes necessary for the equipment proposed for this specification section. If no changes are required, mark all drawings with "No changes required".

    a. Failure to include all drawings applicable to the equipment specified in this section will result in rejection of the entire submittal with no further review.

32. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations and clarifications from the specified requirements.

    a. If deviations and clarifications from the specifications are indicated, therefore requested by the Contractor, provide a detailed written justification for each deviation and clarification.

    b. Failure to include a copy of the marked-up specification sections and or the detailed justifications for any requested deviation or clarification will result in rejection of the entire submittal with no further review and consideration.

**1.05 - PRODUCT HANDLING**

A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.

B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

C. Comply with the requirements specified in SECTION 01610, DELIVERY, STORAGE AND HANDLING.

**1.06 - DESIGN CRITERIA**

A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.

B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

C. The design conditions and other pertinent requirements for the equipment specified in this section are indicated on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Do work required by and in accordance with applicable State and local codes; arrange for permits, inspections and tests required by these codes; and provide complete systems ready for use. Provide tanks and accessories that conform to applicable safety standards including those for safety of personnel.

B. Provide components to manufacturer's standard for service intended unless otherwise required.

C. Provide components and accessories of manufacturers' latest and proven design.

D. The drawings and specifications direct attention to certain required features of the tanks, but do not purport to cover details entering into its design, construction and installation; nevertheless, provide tanks so that systems will be complete and ready for operation.

E. Provide field services as required for installation, with factory-trained technician to assist in determining location.

F. Coordinate the work schedule of other parts of the chemical systems manufacturer's service personnel during construction, testing, start-up, and acceptance, to coordinate with the tank manufacturer.

G. Upon completion of the installation, provide services of above serviceman for field testing.

H. Turn on no form of energy to any part of system prior to receipt by Engineer of certified statement of approval of installation from Contractor containing his supplier's authorization to energize system unless done by the supplier's servicemen may do so for purposes of checkout.

**PART 2 - PRODUCTS**

**2.01 - FRP DUCT**

A. Materials and Fabrication:

1. Type: Filament wound rated at design pressures as specified and indicated.
2. Minimum wall thickness, in accordance with SMACNA Table 5-7 and as specified:
    a. 2-inch through 14-inch: 0.145-inch.
    b. 16-inch through 22-inch: 0.180-inch.
    c. 24-inch through 30-inch: 0.220-inch.
    d. Wall thickness of the duct furnished shall not at any point be less than specified minimum wall thickness when measured in accordance with ASTM D3567.
    e. Rectangular ductwork thickness: As specified in SMACNA and as specified and indicated. In no case shall the rectangular duct thickness be less than substituting the long side of the rectangular duct for the round equivalent thickness.
3. Grade: Type 1, Grade 2 RTRP, Class E per ASTM D2310 and D2996.
4. Provide all ducts designed for not less than 20 inches water column pressure, and 15 inches water column vacuum.
5. The design, applicable construction, and inspections shall be in accordance with SMACNA, and visual inspection criteria in accordance with ASME RTP-1. Table 6, Visual Level II.
6. Provide a minimum structural safety factor of 4 in the design of all ducting.
7. Maximum deflection of rectangular ducts under deadload and operating conditions: Not to exceed 1 percent of the width of the longest side.
8. Resin: Hetron FR992, Derakane (Ashland Inc.) 510 or equal, selected to meet the exposures and temperatures of the air to be exhausted.
9. Minimum barcol hardness: 36.
10. Fillers other than antimony trioxide added for flame retardancy are not acceptable and should not exceed 5 percent by weight.
11. A thixotropic agent for viscosity control may be used as recommended by the resin manufacturer. No thixotropic agent is to be used in the corrosion liner or on surfaces to be in contact with the corrosive environment.
12. Flame spread rating: 25 or less per ASTM E84.
13. Catalyst: DHD9 or Hi-Point 90 per resin manufacturer.
14. Corrosion liner:
    a. Inner surface: One ply of 10 mils thick minimum C-glass surfacing veil saturated with vinylester resin.
    b. Provide the surface veil overlapped a minimum of 1 inch with two (2) layers of 1-1/2 oz./sq. ft. chopped strand mat following the surface veil layers.
    c. Corrosion liner is to gel completely before proceeding with structural laminates. In no case shall the interruption exceed 12 hours.
    d. Total liner thickness: 100 mils minimum.
    e. No thixotropic agent or fire retardant additive is to be used in the liner resin.

f. Corrosion liner: Not less than 20 percent or more than 30 percent glass by weight.

g. Provide liner passing ASME RTP-1 Table 6, level II visual inspection. Total glass content 25 percent to 30 percent.

15. Structural layer: Filament wound of Hetron FR992, or Derakane 510 premium grade, vinylester resin and Type E 250 strand yield continuous glass roving.

a. Band width: 2.25 inches using (7) strands per inch.

b. Filament winding cycle thickness: 0.06 inches maximum.

c. Glass content 55 percent to 65 percent.

d. Winding angle: 65 degrees ± 2 degrees for increased vacuum service.

16. Provide the exterior of all laminates containing sufficient resin to insure a relatively smooth surface free from exposed glass fibers or sharp projections.

17. Provide an ultraviolet stabilizer added to the final coat of resin that also incorporates paraffinated wax curing elements.

18. Provide ductwork located outdoors with an exterior colored surface coat.

a. Color: White or as selected by Owner.

19. Provide ductwork located indoors with two (2) coats of PPG Speedhide 42-7 Intumescent paint to provide a class 1 flame and smoke rating.

20. ASTM E84 Steiner Tunnel test results shall be attached as part of the submittal packet.

21. Standard lengths: Provide in accordance with the manufacturers published product data sheets and accepted shop drawings.

22. Duct stiffness: Minimum rated stiffness in accordance with ASTM D2412 for the pipe laying conditions.

23. Markings on duct and spool pieces shall be in accordance with shop drawings.

**2.02 - FITTINGS AND JOINTS**

A. Fittings:

1. Hand-layup construction fabricated from the same resin and have the same strength as the FRP ductwork.

2. Internal diameter of all fittings: Equal to the adjacent duct.

3. Tolerance on angles of all fittings: +/- 1 degree for 24 inch diameter and smaller and +/- 1/2 degree for 30 inch diameter and larger.

B. Elbows:

1. Radius: 1.5 times the diameter.

2. 24-inch and smaller: Smooth radius.

3. 30-inch and larger: Mitered.

4. Bends 30 degrees and less: 1 miter, 2 piece

5. Bends 31 degrees to 60 degrees: 2 miter, 3 piece

6. Bends 61 degrees to 90 degrees: 4 miter, 5 piece

C. Turning Vanes:

1. Provide turning vanes and splitters at all single mitered bends 46 degrees and greater and similar fittings that are not one-piece smooth radius fittings per SMACNA standards.

2. Turning Vanes: Filament wound and reinforced with unidirectional glass, metallic vanes are not acceptable.

D. Flange Joints:

1. Provide flanged connections at flexible connectors, expansion joints, vessels, grease filters, fans, and other locations as indicated.

2. Flanges:

a. Hand lay-up construction with dimensions in accordance with NBS PS 15-69 and the Duct Dimension Schedule.

b. Flanges 24-inch and smaller: One piece integral, SMACNA Thermoset Duct construction manual and supplied undrilled for field drilling and alignment.

3. Flanges shall be drilled in accordance with NBS PS 15-69 -Table 2. acks of flange face shall be flat so that washer seats fully on bolt face and flange backing.

4. Flange Faces: Perpendicular to the axis of the duct within 1/2 degree.

5. Flange Faces: Flat to within +/- 1/32 inch for sizes 18-inch and smaller and flat within +/- 1/16 inch for sizes 20-inch and larger.

6. Gaskets: EPDM, full face, minimum 1/8-inch thick.

7. Hardware: Type 316 stainless steel.

E. Duct Joints:

1. Butt and wrap joint type connections.

2. Fittings: Butt and wrap joint type connections.

3. Apply adhesive material for field joining in rolls and resin containers no larger than five gallons.

4. Provide all joints per SMACNA standard, and per manufacturer's laminate schedule and procedures.

**2.03 - EXPANSION JOINTS**

A. Expansion Joints:

1. Provide expansion joints where indicated and where required for flexibility and to accommodate the duct support system.

2. Provide flanged joints where connecting ductwork to vessels, grease filters, fans, equipment and other locations as indicated.

3. Provide slip-type joints where flanges joints are not specified or indicated.

4. Type: W-design configuration with integral flanges suitable for service with FRP duct under the conditions specified and indicated.

5. Material: EPDM

6. Backing Rings: 3/8-inch thick, 2 inches wide, Type 316 stainless steel.

7. Extension: 3 inches .

8. Compression: 2.5 inches .

9. Lateral Offset: 2.5 inches .

10. Thickness: 1/4-inch minimum.

11. Bolts, Nuts and Washers: Type 316 stainless steel.

B. Manufacturers:

1. RM-Holz (Holz Rubber Company, Inc.)
2. Metraflex, Inc.
3. Garlock (EnPro Industries)
4. Mercer Rubber Company

**2.04 - DUCT DRAINS**

A. Provide 1 inch minimum CPVC pipe and CPVC ball valve trapped duct drains on all low points in all main, branch and riser ducts to allow removal of condensate.

1. Provide piping in accordance with SECTION 15370, PROCESS PIPING AND APPURTENANCES and valves in accordance with SECTION 15101, PROCESS VALVES AND APPURTENANCES.

B. For ducts located outdoors insulate the drains, trap and piping with 1-inch (25 mm) of insulation in accordance with SECTION 15370, PROCESS PIPING AND APPURTENANCES.

**2.05 - DAMPERS**

A. Provide factory fabricated dampers conforming to AMCA 500D requirements and as specified.

B. Provide FRP dampers manufactured from the same materials and resin as specified for duct.

C. Materials and Construction:

1. Blades: Two (2) piece, molded including blade stiffeners. Provide damper blade offset 5 degrees in the closed position to form a normal stop.
2. Axle: Pultruded FRP made of the same resin as specified for the duct and continuous strand roving.
3. Control Shaft: Provide axle extending 6 inches (150 mm) beyond frame, full length vinylester with Type 316 stainless steel pins embedded transverse of axle.
4. Bearings: Molded PTFE with 10 percent carbon and graphite fill.
5. O-Rings: Viton.
6. Metallic parts in contact with the air stream are not acceptable.

D. Provide the following type of dampers for the service specified:

1. Balancing:
   a. Opposed multi-blade type.
2. Isolation:
   a. Butterfly type constructed of one gauge heavier than respective duct.
   b. Provide dampers equipped with full circumference extruded double tadpole blade seals.
   c. Butterfly damper leakage: Not to exceed 2.9 cfm/sq. ft. against 26 inches W.C.
3. Volume damper:
   a. Butterfly type, locking quadrant of same material as duct.

E. Provide manual dampers with lever type, locking quadrant operator Identified with OPEN and CLOSE positions.

F. Where indicated, provide electric motor operators as specified herein.

G. Dampers shall be of self-supporting construction and shall not deflect or deform while free standing.

H. Dampers shall have flanged ends for connection to ductwork and equipment.

I. Manual Operators:

1. Dampers 16-inch and larger: Provided gear operators with an epoxy coating.

2. Dampers 14-inch and smaller: Provide hand quadrant actuators fabricated of Type 316 stainless steel with a 5-stage locking quadrant indicator.

J. Balancing Dampers:

1. Manual: Provide a fully adjustable slot with an extra hole drilled in the handle for contractor to "drill and pin-in place" once system is balanced so handle cannot vibrate loose.

2. Electric: Provide as specified.

K. Chain wheel operators: Provide galvanized steel chainwheels with galvanized steel chain and chain guides for all dampers with operator or gear operators higher than 6.5 feet above operating floor level.

1. Provide chain that reaches to within 3 feet of the operating floor level.

2. For dampers with gear operator mount with chainwheel in the vertical position.

3. Provide in accordance with SECTION 15101, PROCESS VALVES AND APPURTENANCES.

L. Electric Motor Actuators:

1. Provide in accordance with SECTION 15109, ELECTRIC MOTOR ACTUATORS AND APPURTENANCES.

2. For fan inlet service provide modulating actuators.

**2.06 - AIR INLETS**

A. Material compatible with ductwork system specified.

B. Provide Type 316L stainless steel wire mesh bird screen for all fresh air intakes.

C. Each air exhaust from each of the tanks shall have a volume damper as indicated and specified.

**2.07 - DUCT SYSTEM SUPPORTS**

A. Duct Support:

1. Provide supports for all ducts designed and furnished by the duct system supplier in accordance with SECTION 15056, PIPE SUPPORTS and as specified herein.

2. Provide hanger spacing as indicated in ASTM D3982.

3. Provide ductwork supported from structure by straps or rods. Provide Type 316L stainless steel angle iron brackets to support ducts where structure is not available.

4. For exterior duct, design and provide free standing duct supports to meet specified duct spacing requirements and specified loads.

5. Provide anchors, inserts or clamps to secure hangers to structures. Provide Type 316 stainless steel anchors, screws and bolts. Provide in accordance with manufacturers recommendations and Factory Mutual limitations and restrictions.

B. Provide all duct supports shall be designed to withstand seismic loads as indicated and specified.

**PART 3 - EXECUTION**

**3.01 - VERIFICATION OF CONDITIONS – Not Used**

**3.02 - INSTALLATION**

A. General:

1. Install ducts, dampers and appurtenances in accordance with manufacturer's recommendations.

2. Prior to installation, inspect each duct length and all fittings, flush clean of any debris or dust, and straightened, if not true. All duct and fittings shall be equally cleaned before assembly.

3. Provide all materials and equipment required.

**3.03 - PAINTING**

A. Primer and Finish Paint: Shop apply to all exterior ferrous surfaces, high solids epoxy in accordance with SECTION 09940, SHOP PAINTING.

B. Ferrous surfaces which are not to be painted shall be given a shop applied coat of grease or rust resistant coating.

C. Provide additional shop paint coating for touch-up to all surfaces after installation and testing is completed and equipment accepted.

D. After installation and accepted testing by the Engineer Contractor shall apply touch-up paint to all scratched, abraided and damaged shop painted surfaces. Coating type and color shall match shop painting.

**3.04 - CLEAN UP**

A. Prior to start-up and field testing all foreign matter shall be removed from the equipment.

B. Spillage of lubricants used in servicing the system shall be cleand from all equipment and concrete surfaces.

**3.05 - MANUFACTURER'S FIELD SERVICES**

A. Manufacturer's Field Services shall be provided as specified herein.

**3.06 - MANUFACTURER'S TRAINING – Not Used**

**3.07 - LUBRICATIONS REQUIREMENTS- Not Used**

**3.08 - SPARE PARTS**

A. Provide in accordance with SECTION 01600, CONTROL OF MATERIALS and as specified herein.

B. Provide spare parts that are identical to and interchangeable with similar parts installed.

C. Provide the following spare parts, all identical and interchangeable with similar parts installed in Work:

1. Two spare gaskets of all types, materials and sizes.

2. One (1) set of all special tools.

**3.09 - DUCTWORK**

A. Assemble per SMACNA, Standards as specified hereinbefore.

B. Do not exceed 6-feet spacing of hangers on horizontal ducts; 4-feet on vertical ducts.

C. Support ductwork from structure by 16-gauge straps. Use hanger material compatible with ducts; use angle brackets to support vertical ducts.

D. Use anchors, inserts or clamps to secure hangers to structures; use stainless steel anchors if drilled-in type are installed.

E. Install duct connections to masonry openings airtight. Pack the space between the sleeve and framed prepared opening and the duct and the duct insulation with mineral wool or other FM approved fire resistant material.

F. Flanged connections to equipment, 3-inch minimum length.

G. FRP ductwork:

1. Joints, finished joints in accordance with NBS PS 15-69 Standards.

**3.10 - SYSTEM TESTING**

A. Test at 1.5 times the system design pressure specified and indicated.

B. Determine leakage by loss of pressure, soap solution, chemical indicator, or other positive and accurate method. All fixtures, devices, or other accessories connected to the lines and which would be damaged if subjected to the test pressure shall be disconnected and ends of the branch lines plugged or capped as required during the testing procedures.

**3.11 - SYSTEM BALANCING**

A. Adjust manual and automatic control devices to balance air flows so they perform as indicated and specified.

B. Balance air systems so each outlet is within 10-percent and each fan is within 5-percent of values indicated.

C. Submit report to the Owner outlining balancing procedures used; report to include:

1. Type of measuring devices used.

2. Air quantities at each outlet, damper and fan.

3. Fan speeds.

4. Fan suction and discharge pressures.

5. Air quantities through fan, by test and by summation of air quantities at outlets.

D. Make all adjustments necessary to place equipment in specified working order at time of above tests.

E. Remove all replace equipment at no additional cost to the Owner with equipment that will meet all requirements specified and indicated if unable to demonstrate to the satisfaction of the Engineer that equipment will perform the service specified, indicated and as submitted and accepted.

**3.12 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**BASIS OF AWARD** - The OWNER's present funding constraint limits award of this contract to $22,350,000. The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraint will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding the total of $22,350,000. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in May 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

**One Million Eight Hundred Forty Thousand Dollars and No Cents**

**$ 1,840,000.00**

Date:

TO: ALL GENERAL BIDDERS EXCEPT THOSE EXCLUDED:

A. The undersigned proposes to furnish all labor and materials required for completing, in accordance with the hereinafter described Drawings, Specifications and Addenda, all the Work specified in Section No.

of the Specifications and in any Drawings as specified in such section contained in the Contract Documents titled Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486 prepared by AECOM, 9 Jonathan Bourne Drive, Pocasset, MA 02559.

| Item No. | Description |
|---|---|

## PART I - BASE BID

1. The work of the Subbidder for all Work of the Project other than that covered by other items, as specified, the lump sum of

$ - l.s.

2. The Work of the Subbider including all Work for Effluent Disposal Facility other than that covered by other items, as specified, the lump sum of

$ - l.s.

## TOTAL OF PART I - BASE BID

$ -

## PART II - ALTERNATIVES

A-1 For Addition of the Equipment Storage Facility, as specified, the lump sum of

$ - l.s.

A-2 For Addition of the Fiber Optic Conduits and Handholes, as specified, the lump sum of

$ - l.s.

A-3 For Addition of the Tracer Wire, as specified, the lump sum of

$ - l.s.

A-4 For Addition of SBR Transfer Pump No. 4, as specified, the sum of

$ - l.s.

A-5 For Addition of SBR Blower No. 4, as specified, the sum of

$ - l.s.

A-6 For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of

$ - l.s.

B. This Subbid includes Addenda numbered _____ through _____ inclusive.

C. This Sub-bid:

___ may be used by any General Bidder except:

_____

___ may only be used by the following General Bidders:

_____

(To exclude Gneral Bidders, instert "X" in one box only and fill in blank following that box. Do not answer "C" if no General Bidders are excluded.)

D. The undersigned agrees that, if it is selected as Subbidder, it will, within five (5) days, Saturdays, Sundays and legal holidays excluded, after presentation of a Subcontract by the General Bidder selected as General Contractor, execute with such General Bidder a Subcontract in accordance with the terms of this Subbid, and contingent upon the execution of the General Contract and, if requested so to do in the general bid by such General Bidder, who shall pay the premiums therefor, furnish a Performance and Payment Bond of a surety company qualified to do business under the laws of the Commonwealth and satisfactory to the Awarding Authority, in the full sum of the Subcontract Price.

E. The names of all persons, firms and corporations furnishing to the undersigned labor or labor and materials for the class or classes or part thereof of Work for which the provisions of the section of the Specifications for this subtrade require a listing in this paragraph, including the undersigned if customarily furnished by persons on its own payroll and in the absence of a contrary provision in the Specifications, the name of each such class of Work or part thereto and the Bid Price for each such class of Work or part thereof are:

1. Name:

_____

Class of Work:

_____

Bid Price:

$ -

2 Name:

_____

Class of Work:

_____

Bid Price:

$ -

3. Name:

Class of Work:

Bid Price:
$ -

4. Name:

Class of Work:

Bid Price:
$ -

5. Name:

Class of Work:

Bid Price:
$ -

Note: Do not give Bid Price for any class or part thereof furnished by the undersigned.

F. The undersigned agrees that the above list of Bids to the undersigned represents bona fide Bids based on the hereinbefore described Drawings, Specifications and Addenda and that, if the undersigned is awarded the Contract, they will be used for the work indicated at the amounts stated, if satisfactory to the Awarding Authority.

G. The undersigned further agrees to be bound to the General Contractor by the terms of the hereinbefore described Drawings, Specifications, including all general conditions stated therein, and Addenda, and to assume toward it all the obligations and responsibilities that it, by those documents, assumes toward the Owner.

H. The undersigned offers the following information as evidence of its qualifications to perform the Work as Bid upon according to all requirements of the Drawings and Specifications:

1. Number of Years have been in business under present business name _____

2. Ever failed to complete any work awarded? _____

3. List one or more recent buildings with names of general contractor and engineer or architect on which you served as subcontractor for work of similar character as required for the above-named building.

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

## GENERAL NOTES

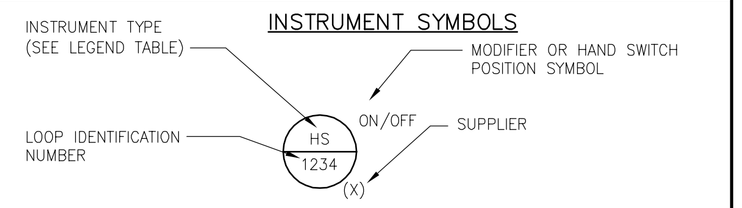
1. INSTRUMENT SUFFIX:

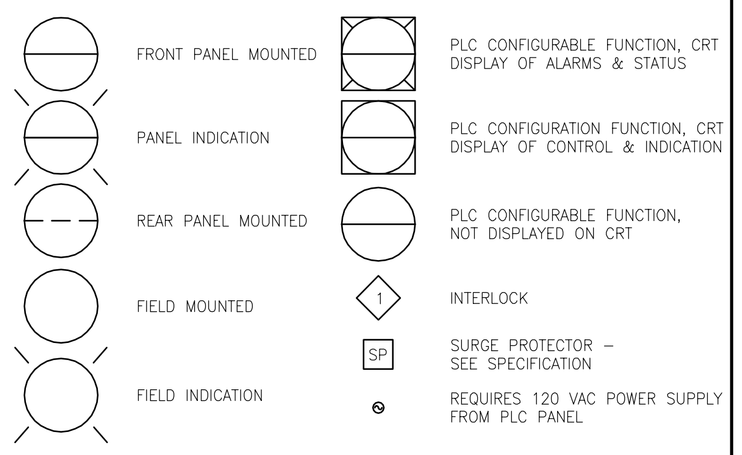
   NUMERIC SUFFIXES IDENTIFY INSTRUMENTS WITH DIFFERENT FUNCTIONS (E.G., A RUN AND AN OUT OF SERVICE LIGHT) ARE PRECEDED BY A DECIMAL POINT (E.G., AA:MIL-343.1 AND AA:MIL-343.2

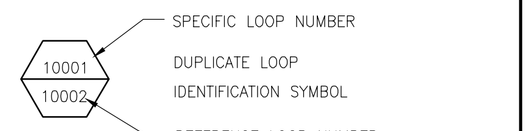
   ALPHABETIC SUFFIXES IDENTIFY MULTIPLE OCCURRENCES OF INSTRUMENTS WITH THE SAME FUNCTION (E.G.,TWO VALVE INDICATORS IN DIFFERENT PANELS, (E.G. AA:ZIL-161.1A, AND AA:ZIL-161.1B).

2. SEE MECHANICAL FOR ISOLATION RING DETAIL

## INSTRUMENT SYMBOLS







## SUPPLIERS

ALL INSTRUMENTS ARE SPECIFIED BY INSTRUMENTATION (I) UNLESS INDICATED BY;

(E) SPECIFIED BY ELECTRICAL (X) EXISTING

(M) SPECIFIED BY MECHANICAL (H) SPECIFIED BY HVAC

(F) FURNISHED WITH EQUIPMENT (P) SPECIFIED BY PLUMBING

CONTRACTOR SHALL PROVIDE ALL INSTRUMENTS AS SPECIFIED ON DATA SHEETS ATTACHED TO SPECIFICATION SECTION 13300

March 10, 2020

**ADDENDUM NO. 5**

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 5 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 14 pages and 32 pages of attachments for a total of 46 pages.

**ATTACHMENTS**

1. SECTION 00310, BID BOND (EJCDC)
2. Orleans_MA-2019-01-Bid Form_Add_5-03-10-20
3. Orleans_MA-2019-01-SubBid Form_Add_5-03-10-20
4. SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS
5. DRAWING 00 C-104, SITE LAYOUT PLAN – WWTF
6. DRAWING 99 DI-602, MISC SIGNALS II AND TABLE OF RESPONSIBILITY

**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. ADDENDUM No. 4
   - A. Changes Made to the Contract Drawings
     - 1) Item 19., delete reference to DRAWING 00 DI-606, EFFLUENT PUMPS P&ID and replace with DRAWING 10 DI-606, EFFLUENT PUMPS P&ID.
2. GENERAL
   - A. Sub-Bid Opening - March 18, 2020 at 2:00 pm.
   - B. General Bid Opening - March 25, 2020 at 2:00 pm.
3. TABLE OF CONTENTS
   - A. Page TOC-2, DIVISION 0 – BIDDING AND CONTRACT REQUIREMENTS, add SECTION 00310, BID BOND (EJCDC), as attached.

4. SECTION 00310, BID BOND

   A. Add new SECTION 00310, BID BOND (EJCDC) as an alternative Bid Bond Form, as attached.

5. SECTION 00410, FORM OF GENERAL BID

   A. Delete "Orleans_MA-2019-01-Bid Form_Add_4-02-28-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_5-03-10-20" in both hard copy and Microsoft Excel format.

6. SECTION 00420, FORM OF SUBBID

   A. Delete "Orleans_MA-2019-01-SubBid Form_Add_4-02-28-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-SubBid Form_Add_5-03-10-20" in both hard copy and Microsoft Excel format.

7. SECTION 01025, MEASUREMENT AND PAYMENT

   A. Page 01025-8, BID ITEM A4 – SBR TRANSFER PUMP NO. 4, add the following to the end of Paragraph A.:

      All equipment, piping, valves, electrical work and instrumentation and the like for SBR Transfer Pump No. 4 shall be furnished in accordance with drawings and specifications for SBR Transfer Pumps No. 1, 2 and 3. The work is shown on the following drawings:

      1. Drawing 00 D-006 - Process Flow Diagram I
      2. Drawing 10 D-102 - Facility Lower Plan II
      3. Drawing 10 E-006 - WWTF – Electrical Single Line Diagram II – MCC.10-1
      4. Drawing 10 E-102 - WWTF – Lower Level – Power Plan II
      5. Drawing 10 DI-603 - SBR Transfer Pumps P&ID

   B. Page 01025-8, BID ITEM A5 – SBR BLOWER NO. 4, add the following to the end of Paragraph A.:

      All equipment, piping, valves, electrical work and instrumentation and the like for SBR Blower No. 4, shall be furnished in accordance with drawings and specifications for SBR Blowers No. 1, 2 and 3. The work is shown on the following drawings:

      1. Drawing 00 D-006 - Process Flow Diagram I
      2. Drawing 10 D-103 - Facility Lower Plan III
      3. Drawing 10 E-005 - WWTF – Electrical Single Line Diagram I – SWBD.10-1
      4. Drawing 10 E-102 - WWTF – Lower Level – Power Plan II
      5. Drawing 10 DI-610 - SBR Blowers P&ID

   C. Page 01025-8, BID ITEM A6 – SBR AERATION DIFFUSER GRIDS, add the following to the end of Paragraph A.:

      All equipment, piping, valves and the like for thirds SBR Aeration Diffuser Grid in each SBR Tank, shall be furnished in accordance with drawings and specifications for the first two SBR Aeration Diffuser Grids furnished in each SBR Tank. The work is shown on the following drawings

      1. Drawing 15 D-101 - SBR Lower Plan I *
      2. Drawing 15 D-102 - SBR Lower Plan II *
      3. Drawing 15 D-103 -SBR Upper Plan I *
      4. Drawing 15 D-104 -SBR Upper Plan II *
      5. Drawing 15 E-101 - SBRS – Power Plan

      *Two Base Bid Diffusers Shown and the Third Diffuser Shown Horizontally

8. SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS

   A. Delete the section in its entirety and replace with the new section as attached.

9. SECTION 02435, CRUSHED STONE

A. Page 02435-2, ARTICLE 1.04 – SUBMITTALS, delete Paragraph B in its entirety and replace with the following new paragraph:

B. Submittals required under this section include, but are not limited to the following:

1. Gradation test results from the Contractor's Independent Testing Laboratory, must be submitted at least two (2) weeks prior to hauling material, for the Engineer's acceptance.

2. If crushed stone is utilized, a 10-pound sample shall be submitted, if requested by the Engineer.

3. If Processed Glass Aggregate (PGA) is utilized, a 10-pound sample shall be submitted. In addition, provide a certified test report that indicates that the PGA is free of debris and other materials that is associated with the glass recycling process.

B. Page 02435-2, ARTICLE 2.01 - MATERIAL, Paragraph B, add the following to the end of subparagraph 2.:

Other glass products (i.e. fluorescent lights, video screens, automobile glass, lead crystal, etc.) shall not be incorporated into PGA.

10. SECTION 02520, WICK CONSTRUCTION AND TESTING

A. Page 02520-2, ARTICLE 1.01 - SCOPE, add the following as new Paragraph E.:

E. Specialty Contractors provided for consideration:

B. Page 02520-6, ARTICLE 1.07 – WARRANTY, delete Paragraph C. in its entirety and replace with the following new paragraph:

C. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during the warranty period should the need arise.

11. SECTION 06225, EXTERIOR FINISH CARPENTRY

A. Page 06225-3, ARTICLE 2.01 – EXTERIOR TRIM, add the following new paragraphs:

B. Trim

1. Size of Vertical Trims: 1-1/2-inch thick, 3-1/2-inch wide, smooth sanded edge.
2. Size of Fascia Boards: 3/4-inch thick, 9-1/2-inch wide Fascia boards, and 3/4-inch thick, 2-1/2-inch wide Fascia boards.
3. Size of Frieze Boards: 3/4-inch thick, 5-1/2-inch wide Frieze boards.
4. Texture: Smooth.
5. Color: As selected by Architect from manufacturer's full range of industry colors.

C. Fiber Cement Soffit

1. General: ASTM C1186, Type A, Grade II, fiber-cement board, noncombustible when tested according to ASTM E136; with a flame-spread index of 25 or less when tested according to ASTM E84.
2. Nominal Thickness: Not less than 5/16-inch.
3. Pattern: 12-inch wide sheets.
4. Texture: Smooth.
5. Ventilation: Provide perforated continuous soffit vents- see accessories.
6. Color: As selected by Architect from manufacturer's full range of industry colors.

D. Beam and Post Wraps

1. Size: 3/4-inch thick, largest panel available to avoid joints.
2. Texture: Smooth.
3. Color: As selected by Architect from manufacturer's full range of industry colors.

12. SECTION 04200, UNIT MASONRY AND ACCESSORIES

A. Page 04200-2, ARTICLE 1.01, SCOPE, Paragraph B., delete subparagraph 19., in its entirety and replace with the following new subparagraph:

19. Air/Vapor Barrier Membrane (furnished by the Contractor and installed by the filed sub-contractor which is located behind the masonry veneer).

B. Page 04200-10, ARTICLE 2.07, CAVITY WALL INSULATION, delete the article in its entirety and replace with the following new article:

2.07 - CAVITY WALL INSULATION – Not Used

C. Page 04200-15, ARTICLE 3.16 – CAVITY WALL INSULATION, delete the article in its entirety and replace with the following new article:

3.16 - CAVITY WALL INSULATION – Not Used

13. SECTION 05500, MISCELLANEOUS METAL

    A. Page 05500-12, add the following new ARTICLE 2.17 – Z-GIRT SYSTEM:

    2.17 – Z-GIRT SYSTEM

    A. Basis of Design: ThermaFast Z-Track

    B. Materials Properties

    i. Design loads: Wind pressure and self-weight of cladding as indicated on the project's Architectural/Structural Drawings and as required by the International Building Code.

    ii. ASTM A1003/A1003M Structural Grade 50 (340) Type H, ST50H (ST340H): 50ksi (340MPa) minimum yield strength, 65ksi (450MPa) minimum tensile strength, with ASTM A653/A653M G90 (Z275) hot dipped galvanized coating.

    iii. Thickness: 54 mil minimum (16 gauge, 0.0566-inch design thickness)

    iv. Thermal Tape: Thickness 1/16-inch, Density 15 lbs/ft3 (ASTM D-1667)

    v. Thermal Conductivity k-factor: 0.3 (ASTM C-518)

14. SECTION 07461, SIDING

    A. Page 07461-4, ARTICLE 2.02 - SIDING, Paragraph A., delete the words "and Soffit panels".

    B. Page 07461-4, ARTICLE 2.02 - SIDING, delete Paragraph C. in its entirety and replace with the following new paragraph:

    C. Corner Boards (Interior and Exterior)

    1. Size of Vertical Trims: 5/4-inch thick, 11-1/4-inch wide, smooth sanded edge.

    2. Texture: Smooth.

    3. Color: As selected by Architect from manufacturer's full range of industry colors.

    C. Page 07461-4, ARTICLE 2.02- SIDING, delete Paragraph D. in its entirety.

    D. Page 07461-4, ARTICLE 2.02 - SIDING, delete Paragraph E. in its entirety.

15. SECTION 07600, WALL FLASHING AND SHEET METALWORK

    A. Page 07600-1, PART 1 – GENERAL, add the following new article:

    1.00 - SUBBID REQUIREMENTS

    A. The Work of 3.SECTION 07600, WALL FLASHING AND SHEET METALWORK is a part of DIVISION 7, THERMAL AND MOISTURE PROTECTION which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 07610, METAL ROOFING.

    B. The Work of 3.SECTION 07600, WALL FLASHING AND SHEET METALWORK requires the Subcontractor to perform all Work specified under this section.

16. SECTION 07610, METAL ROOFING

    A. Page 07610-1, ARTICLE 1.00 – SUB-BID REQUIREMENTS, delete Paragraph B. in its entirety and replace with the following new paragraph:

    B. A sub-bid submitted for the Work of DIVISION 7, THERMAL AND MOISTURE PROTECTION shall include the complete Work specified in all of the following Sections:

    1. SECTION 07610, METAL ROOFING

    2. SECTION 07710, ROOF SPECIALTIES

    3. SECTION 07600, WALL FLASHING AND SHEET METALWORK

B. Page 07610-1, ARTICLE 1.00 – SUB-BID REQUIREMENTS, delete Paragraph F. in its entirety and replace with the following new paragraph:

F. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: SECTION 07610, METAL ROOFING,
SECTION 07710, ROOF SPECIALTIES and
SECTION 07600, WALL FLASHING AND SHEET METALWORK

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-01

C. Page 07610-7, ARTICLE 2.04- FINISHES, Paragraph A., delete subparagraph 2.b. In its entirety and replace with the following new subparagraph:

b. Topcoat shall yield a 0.7 mil minimum thick coating. Topcoat shall be fully cured and of consistent color throughout Project.

D. Page 07610-7, ARTICLE 2.04- FINISHES, Paragraph A., delete subparagraph 4. In its entirety and replace with the following new subparagraph:

4. Back Coat: Corrosion resistant primer plus wash coat, 0.2 mil minimum total dry thickness.

17. SECTION 08500, FIXED WINDOWS

A. Page 08500-3, ARTICLE 1.04 – SUBMITTALS, Paragraph B., add the following to the end of subparagraph 3.:

Manufacturer to provide a recommendation of the thermal-break system as part of the submittal.

B. Page 08500-10, ARTICLE 2.01 – MANUFACTURERS, add the following new paragraphs:

E. Basis of Design: (1) Kawneer: NX-3800 Window Series and (2) Fire Rated Window: Fyre-Tec – Series H950 Heavy Fixed Lite.

F. Source Limitations

1. Windows shall be from a single source and from a single manufacturer.

2. A single manufacturer providing windows under this section and SECTION 08550, WINDOWS is acceptable assuming that the manufacturer meets all the performance criteria specified in both sections and as shown on the drawings.

C. Page 08500-10, ARTICLE 2.02 – MATERIALS, add the following new paragraph:

L. Windborne-Debris Resistance: Capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to ASTM E1886 and testing information in ASTM E1996 and requirements of authorities having jurisdiction.

D. Page 08500-11, ARTICLE 2.03 – WINDOW OPERATION, Paragraph A., delete the words “Projected Double Hung Windows…” and replace with the words “Double Hung Windows…”.

E. Page 08500-13, ARTICLE 2.06 – ALUMINUM FINISHES, Paragraph B., delete subparagraph 1. in its entirety and replace with the following new subparagraph:

1. Color: As selected by Engineer from manufacturer's full range.

18. SECTION 08550, WINDOWS

A. Page 08550-3, ARTICLE 1.00 – SUBBID REQUIREMENTS, Paragraph A., delete the sentence "See SECTION 08500 – FIXED WINDOWS." In its entirety and replace with the following new sentence "See SECTION 08500 – WINDOWS."

B. Page 08550-2, ARTICLE 1.04 – SUBMITTALS, Paragraph B., add the following to the end of the subparagraph 1.:

Manufacturer to provide a recommendation of the thermal-break system as part of the submittal.

C. Page 08550-7, ARTICLE 2.02 – MANUFACTURERS, Paragraph A., add the following new subparagraph:

4. Basis of Design: Crystal Window and Door Systems, Ltd., Series 5500 Heavy Commercial / Architectural Aluminum Thermal-Break Tilt Windows

D. Page 08550-7, ARTICLE 2.02 – MANUFACTURERS, delete Paragraph B. in its entirety and replace with the following new paragraph:

B. Source Limitations

a. Windows shall be from a single source and from a single manufacturer.

b. A single manufacturer providing windows under this section and SECTION 08500, FIXED WINDOWS is acceptable assuming that the manufacturer meets all the performance criteria specified in both sections and as shown on the drawings.

E. Page 08550-7, ARTICLE 2.03 – ALUMINUM WINDOWS, Paragraph C., delete subparagraph 4. in its entirety and replace with the following new subparagraph:

4. Low-E Coating:

a. Glass: 1-in. thick clear, insulating-glass units, with low-E coating pyrolytic on third surface for tinted windows.

b. Tint: Solar gray with visible light transmittance of 18%.

F. Page 08550-8, ARTICLE 2.04 – ACCESSORIES, Paragraph C., add the following new subparagraph:

3. Location: Window W4

19. SECTION 09800, PROTECTIVE COATING

A. Page 09800-2, ARTICLE 1.01 – SCOPE, add the following new paragraph:

C. Non-wood Products specified in SECTION 06225, EXTERIOR FINISH CARPENTRY and SECTION 07461, SIDING do not require Protective Coatings.

B. Page 09800-4, ARTICLE 2.02 – CONCRETE CONTAINMENT PROTECTIVE COATING (PC-1), delete Paragraph A., in its entirety and replace with the following new paragraph:

A. Locations:

1. Chemical Storage Room 1

2. Chemical Storage Room 2

C. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), delete Paragraph A., in its entirety and replace with the following new paragraph:

A. Locations:

1. Pre-Equalization Tanks

2. Waste Sludge Storage Tanks

3. Thickened Sludge Storage Tank

4. Pre-Equalization Tank

D. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), Paragraph C., delete subparagraph 1.b. in its entirety and replace with the following new subparagraph:

a. Finish: Tnemec Series 435 Perma Glaze Modified Polyamine Epoxy at 125.0 mils DFT.

E. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), Paragraph D., delete subparagraph 1.b. in its entirety and replace with the following new subparagraph:

b. Topcoat: Tnemec Series 435 Perma Glaze Modified Polyamine Epoxy at 80-100 mils DFT.

20. SECTION 10475, EMERGENCY AND MISCELLANEOUS EQUIPMENT

A. Page 10475-3 ARTICLE 2.04 - MISCELLANEOUS EQUIPMENT – OTHER INDUSTRIAL SUPPLY CATALOGS, delete Item 33 in its entirety and replace with the following new item:

| Item Number | Description | Manufacturer and Catalog No. | Quantity |
|---|---|---|---|
| 33 | Not Used | --- | --- |

21. SECTION 10525, FIRST AID AND FIRE FIGHTING EQUIPMENT

A. Page 10525-3, ARTICLE 2.01 – EQUIPMENT, Paragraph A., delete subparagraph 4. in its entirety and replace with the following new subparagraph:

4. Locate first-aid cabinets in each of the following buildings and rooms, location determined by Engineer.

| Location | Room Number | Quantity |
|---|---|---|
| WWTF - Break Room | 103 | 1 |
| WWTF - Control Room | 116 | 1 |
| WWTF - Basement Pump Room | 126 | 1 |
| Equipment Storage Facility | 201 | 1 |
| Equipment Storage Facility – Work Room | 202 | 1 |

22. SECTION 10600, IDENTIFICATION SYSTEMS

A. Page 10600-4, ARTICLE 2.02 – INTERIOR SIGNAGE, delete the article in its entirety and replace with the following new article:

2.02 – INTERIOR SIGNAGE

A. Refer to SECTION 10440 - SIGNS

B. Page 10600-7, SIGN SCHEDULE, delete Item 4. in its entirety and replace with the following new item:

| Location and Quantity of Signs | Sign Type | Overall Size (in.) | Lettering Text | Letter Size (in.) | Colo of Wording | Color of Backing | Additional Graphics |
|---|---|---|---|---|---|---|---|
| 4. Not Used | --- | --- | --- | --- | --- | --- | --- |

C. Page 10600-7, SIGN SCHEDULE, delete Item 10. in its entirety and replace with the following new item:

| Location and Quantity of Signs | Sign Type | Overall Size (in.) | Lettering Text | Letter Size (in.) | Colo of Wording | Color of Backing | Additional Graphics |
|---|---|---|---|---|---|---|---|
| 10. Area/room identification signs | Refer to SECTION 10440 - SIGNS | | | | | | |

23. SECTION 11333, SEPTAGE RECEIVING STATION

    A. Page 11333-17, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

24. SECTION 11365, ROTARY DRUM THICKENERS

    A. Page 11365-14, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

25. SECTION 11398, DIESEL ENGINE-GENERATOR SET AND APPURTENANCES

    A. Page 11398-6, ARTICLE 2.03 - ENGINE GENERATOR ENCLOSURE, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. Provide fixed means as necessary for personnel and equipment access to generator doors including stairs, platforms or catwalks. Stairs, platforms or catwalks shall be provided in accordance with SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS

    B. Page 11398-6, ARTICLE 2.03 - ENGINE GENERATOR ENCLOSURE, Paragraph I., delete subparagraph 3.c. in its entirety and replace with the following new subparagraph:

        c. Provide aluminum stairs, railings and platforms for enclosure access as required. Stairs, railings and platforms shall be provided in accordance with SECTION 05511, PRE-ENGINEERED ALUMINUM STAIRS

26. SECTION 11399, EFFLUENT DISK FILTERS

    A. Page 11399-17, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

27. SECTION 11600, SEQUENCING BATCH REACTORS

    A. Page 11600-23, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor shall be involved with and contractually tied to performance/process testing during this warranty period and shall address any warranty items during these warranty period should the need arise.

28. SECTION 13300, INSTRUMENTATION AND CONTROL SYSTEM – GENERAL

    A. Page 13330-5, ARTICLE 1.08 – WARRANTY, delete the article in its entirety and replace with the following new article:

        1.08 - WARRANTY

            A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS.

B. Equipment Manufacturer

1. The Equipment Manufacturer shall provide a warranty that all of the equipment is new and of recent manufacture, all materials and workmanship are of good quality, free from faults or defects in accordance with the requirements of these specifications. In addition, the Equipment Manufacturer shall warrant that the system will function in accordance with the manufacturer's published technical description guides and as specified herein. The Warranty, obtained by the Equipment Manufacturer, shall be secured by a Performance Bond issued jointly to the Equipment Manufacturer and the Owner. The Equipment Manufacturer agrees to furnish a Warranty in the sum of 100 percent of the equipment price and duly executed by the said Equipment Manufacturer as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the Owner, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Equipment Manufacturer. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

2. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract.

3. The Equipment Manufacturer shall be responsible for execution of warranties during the warranty period should the need arise.

C. Contactor

1. The Contractor shall provide a warranty that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply. The Warranty, obtained by the Contractor, shall be secured by a Performance Bond issued jointly to the Contractor and the Owner. The Contractor agrees to furnish a Warranty in the sum of the full amount of the equipment price and duly executed by the said Contactor as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the Owner, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Equipment Manufacturer. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

2. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract.

3. The Contractor shall be responsible for execution of warranties during the warranty period should the need arise.

D. It is the Contractor's and Equipment Manufacturer's responsibility to resolve any and all warranty claims.

E. The Warranties shall be provided as part of the shop drawing submittal. Submittals which do not include the required Warranty Bonds will be summarily rejected and returned to the Contractor without further review and consideration.

29. SECTION 13345, DATA NETWORK

A. Page 13345-2, ARTICLE 1.01 – SCOPE, Paragraph A., delete the words "Provide, terminate, test and put in operation…" and replace with the words "Provide, terminate, test and put in operation…".

B. Page 13345-2, ARTICLE 1.01 – SCOPE, Paragraph B., delete the paragraph in its entirety and replace with the following new paragraph:

B. Fiber optic cables shall be provided for use with the WWTF SCADA control system, including the fiber required for the Pump Station and Collection System.

C. Page 13345-6, ARTICLE 2.02 – FIBER OPTIC CABLE, add the following new paragraph:

3. Provide a minimum of 4-foot coil of spare fiber in each handhole throughout the cable length. Quantity and locations of handholes as shown on Electrical drawings.

D. Page 13345-11, ARTICLE 2.13 – RADIO, add the following new paragraphs:

C. Pump Station No. 1 (Namskaket Pump Station)

1. Provide Yagi Antenna TELEWAVE ANT220Y7-WR or approved equal.

a. Antenna must be installed at 12-foot elevation. See Contract Drawings for details.

2. Provide CalAMP Viper SC+200 radio modem or approved equal.

D. Effluent Disposal Site

1. Provide Yagi Antenna TELEWAVE ANT220Y7-WR or approved equal.

a. Antenna must be installed at 87-foot elevation on nearby water tank. See Contract Drawings for details.

2. Provide CalAMP Viper SC+200 radio modem or approved equal.

E. Page 13345-12, ARTICLE 2.14 – SPARE PARTS, Paragraph B., delete the paragraph in its entirety and replace with the following new paragraph:

B. Furnish one Ethernet switch and one firewall of each type provided.

F. Page 13345-12, ARTICLE 3.01 – GENERAL, Paragraph A., delete the paragraph in its entirety and replace with the following new paragraph:

A. Provide all material, equipment, and labor to install the fiber optic cables and network devices including but not limited to terminating and testing as indicated, and as specified.

G. Page 13345-12, ARTICLE 3.02 – INSTALLATION, delete the article in its entirety and replace with the following new article:

3.02 - INSTALLATION

A. Fiber optic cable installation shall be by the Electrical Contractor.

30. SECTION 15857, ODOR CONTROL SYSTEMS – CARBON

A. Page 15857-2, ARTICLE 1.01 – SCOPE, Paragraph C., delete subparagraph 2. In its entirety.

31. SECTION 16120, ELECTRIC WIRES AND CABLES

A. Page 16120-7, add the following as new ARTICLE 3.05 - INSTALLATION OF FIBER OPTIC CABLE

3.05 - INSTALLATION OF FIBER OPTIC CABLE

A. Install fiber optic cable as indicated on the Contract drawings. Provide all material, equipment, and labor to install the fiber optic cables.

B. Install fiber optic cable in accordance with fiber optic cable manufacturer requirements.

C. Fiber optic cable is supplied under DIVISION 13, SPECIAL CONSTRUCTION in specification SECTION 13345, DATA NETWORK in accordance with Table of Responsibility for Electrical, General and System Integrator on Contract Drawing 00 E-602.

D. Install cable directly from shipping reels. Ensure that cable is not:

1. Dented, nicked, or kinked.

2. Subjected to pull stress greater, or bend radius less, than manufacturer’s specification.

3. Subjected to treatment which may damage fiber strands during installation.

E. Conduit: Install fiber optic cable directly in conduit.

F. Identification: Identify each cable on both ends, all pull points it goes through and in all hand holes/ man holes.

G. Sequencing: Provide cables in accordance with sequencing requirements.

H. Handholes:

1. Provide supports for cables at maximum 300-millimeter centers along sides of manholes.
2. Provide a minimum 4-foot coil of spare fiber in each manhole throughout the cable length.
3. Install fiber optic cables in underground ducts. Rod and swab out ducts prior to installing cables.
4. Install fiber optic cables in the conduit systems provided inside buildings and structures.

B. Page 16120-7, ARTICLE 3.05 – FIELD CABLE TESTS, revised the article number to 3.06.

C. Page 16120-7, ARTICLE 3.06 – CONTRACT CLOSEOUT, revised the article number to 3.07.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 00 C-104, SITE LAYOUT PLAN – WWTF

A. Delete the drawing in its entirety and replace with the new drawing as attached.

B. Delete Note 5 in its entirety and replace with the following new note:

5. Ground Improvement Shall Be Performed For SBR Foundation Soils (SBR No. 1 and SBR No. 2) In Accordance With Specification SECTION 02351, VIBRO-COMPACTION AND VIBRO-REPLACEMENT.

2. DRAWING 10 A-401, ENLARGED PLANS, ELEVATIONS, SCHED. – CONTROL ROOM

A. Control Room Accessory Schedule, add the following to new Item 25:

| Item Number | Generic Name | Room | Count | Width | Height |
|---|---|---|---|---|---|
| 25 | Chair | Crtl Rm | 2 | 2’ – 3’1/2” | 3’ – 11” |

| Depth | Family | Model | Manufacturer | Comments |
|---|---|---|---|---|
| 3’ – 5” | Executive High-Back Chair | HIEH2 | The Hon Company | --- |

3. DRAWING 10 A-404, ENLARGED PLANS, ELEVATIONS, SCHED. – OFFICE/COPIER ROOM

A. Office/Copier Room Accessory Schedule, add the following to Item 11:

| Model | Manufacturer | Comments |
|---|---|---|
| WC7855 | Xerox | Copy, Email, Print, Scan and Fax |

4. DRAWING 10 DI-603, SBR TRANSFER PUMPS P&ID

A. Add the following new Note:

Note:

9. The PIs for (SBR.TP-1 thru 3) shall be provided by the Contractor as specified in SECTION 11308, RECESSED IMPELLER PUMPS AND APPURTENANCES.

5. DRAWING 10 DI-606, EFFLUENT PUMPS P&ID
   A. Add the following new Note:

      Note:

      1. The PIs for (EFF.P-1 thru 3) shall be provided by the Contractor as specified in SECTION 11316, PROCESS PUMPS AND APPURTENANCES.

   B. Delete the three High-Pressure Switches and associated components in their entirety.
6. DRAWING 10 DI-610, SBR BLOWERS P&ID
   A. Delete the words “SBR-PLC” and replace with words “SBR-1-CP”.
   B. Add the following new Note:

      Note:

      1. SBR-1-CP shall be provided by the vendor.
7. DRAWING 10 DI-613, SLUDGE TRANSFER PUMPS P&ID
   A. Add the following new Note:

      Note:

      1. The PIs for (SL.TP-1 thru 3) shall be provided by the Contractor as specified in SECTION 11308, RECESSED IMPELLER PUMPS AND APPURTENANCES.
8. DRAWING 10 DI-615, THICKENED SLUDGE STORAGE TANK AND PUMPS P&ID
   A. Add the following new Note:

      Note:

      1. The PIs for (TSL.P-1 thru 3) shall be provided by the Contractor as specified in SECTION 11309, CHOPPER PUMPS AND APPURTENANCES.
9. DRAWING 15 DI-601, SBRs P&ID
   A. Add the following new Note 3:

      3. The control panel shown is SBR-1-CP and shall be provided by the vendor.
10. DRAWING 99 DI-602, MISC SIGNALS II AND TABLE OF RESPONSIBILITY
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

**CHANGES TO BE MADE TO THE CONTRACT ATTACHMENTS**

*Note: Addresses are to be used for giving any required notice.*
*Provide execution by any additional parties, such as joint venturers, if necessary.*

Note: The Bidder may submit their standard Bid Bond as long as it fully complies with the requirements of DOCUMENT C-430.

EJCDC ENGINEERS JOINT CONTRACT DOCUMENTS COMMITTEE

PENAL SUM FORM

1. Bidder and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to pay to Owner upon default of Bidder the penal sum set forth on the face of this Bond. Payment of the penal sum is the extent of Bidder's and Surety's liability. Recovery of such penal sum under the terms of this Bond shall be Owner's sole and exclusive remedy upon default of Bidder.

2. Default of Bidder shall occur upon the failure of Bidder to deliver within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents.

3. This obligation shall be null and void if:

   3.1 Owner accepts Bidder's Bid and Bidder delivers within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents, or

   3.2 All Bids are rejected by Owner, or

   3.3 Owner fails to issue a Notice of Award to Bidder within the time specified in the Bidding Documents (or any extension thereof agreed to in writing by Bidder and, if applicable, consented to by Surety when required by Paragraph 5 hereof).

4. Payment under this Bond will be due and payable upon default of Bidder and within 30 calendar days after receipt by Bidder and Surety of written notice of default from Owner, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.

5. Surety waives notice of any and all defenses based on or arising out of any time extension to issue Notice of Award agreed to in writing by Owner and Bidder, provided that the total time for issuing Notice of Award including extensions shall not in the aggregate exceed 120 days from the Bid due date without Surety's written consent.

6. No suit or action shall be commenced under this Bond prior to 30 calendar days after the notice of default required in Paragraph 4 above is received by Bidder and Surety and in no case later than one year after the Bid due date.

7. Any suit or action under this Bond shall be commenced only in a court of competent jurisdiction located in the state in which the Project is located.

8. Notices required hereunder shall be in writing and sent to Bidder and Surety at their respective addresses shown on the face of this Bond. Such notices may be sent by personal delivery, commercial courier, or by United States Registered or Certified Mail, return receipt requested, postage pre-paid, and shall be deemed to be effective upon receipt by the party concerned.

9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent, or representative who executed this Bond on behalf of Surety to execute, seal, and deliver such Bond and bind the Surety thereby.

10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond shall be deemed to be included herein as if set forth at length. If any provision of this Bond conflicts with any applicable statute, then the provision of said statute shall govern and the remainder of this Bond that is not in conflict therewith shall continue in full force and effect.

11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

**BASIS OF AWARD** - The OWNER's present funding constraint limits award of this contract to $22,350,000. The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraint will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding the total of $22,350,000. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in May 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The Contractor shall be responsible for furnishing of all labor, equipment, appliances and materials and performing all operations in connection with the facility testing and inspection and startup and performance testing prior to final acceptance of all process systems, including the coordination of all performance tests and the furnishing of operating instructions for all equipment.

B. Start-up and Testing Requirements for individual equipment systems shall be as indicated for all equipment as specified in individual sections in DIVISION 11 - EQUIPMENT, DIVISION 15 - MECHANICAL and DIVISION 16 - ELECTRICAL.

C. HVAC systems shall be tested and balanced in accordance with DIVISION 15, MECHANICAL. Fire Protection Systems shall be commissioned in accordance with DIVISION 10, SPECIALTIES and DIVISION 15, MECHANICAL.

D. Electrical and Fire Alarm tests shall be performed as specified in DIVISION 16 - ELECTRICAL.

E. The Instrumentation and Control System tests shall be performed as specified in DIVISION 13 - SPECIAL CONSTRUCTION

F. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 1, GENERAL REQUIREMENTS, Specification Sections, apply to this section

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

10. “Shop Testing” shall mean testing that is done by the manufacturer either at the place of manufacture, the place of assembly, or at another location where the required testing apparatus is located, for the purpose of proving that the equipment meets the requirements of the pertinent technical specification(s). All costs associated with Shop Testing shall be at additional cost to the Owner.

11. “Physical Checkout, Inspection and Certification” shall mean the process of physically inspecting products by the Contractor and manufacturer/supplier after they have been installed in the work, and then certifying that the products have been properly and completely installed and are ready for field and/or start-up. All costs associated with Physical Checkout, Inspection and Certification shall be at additional cost to the Owner.

12. “Field Testing” or “Functional Testing” shall mean testing that is performed by the Contractor and manufacturer/supplier on process equipment that has been installed in the work and after the Physical Checkout, Inspection and Certification, for the purpose of proving that the tested products meet the requirements of the pertinent technical specifications. All costs associated with Field Testing or Functional Testing shall be at additional cost to the Owner.

13. “System Testing” shall mean testing performed on a "system" comprised of two or more pieces of equipment, after the equipment has been installed in the work, and after Physical Checkout, Inspection and Certification and Field Testing has been completed, for the purpose of providing that the system meets requirements as specified and as indicated. All costs associated with System Testing shall be at additional cost to the Owner.

14. "Clear Water Testing" shall mean a test conducted on all items and systems performed with portable water after Physical Checkout, Inspection and Certification, Field Testing and System Testing have been satisfactorily conducted by the Contractor and manufactures/suppliers and the they are satisfied that the equipment is operating as specified. All costs associated with Clear Water Testing shall be at additional cost to the Owner except as specified herein.

15. "Start-up" shall mean the initial operation of the completed facility and processes by the Owner, utilizing wastewater and related substances (sludge, wastewater, scum), or other media which the facility has been designed to process.

16. "Performance Testing" shall mean testing performed by the Contractor and manufacturers/supplies to verify performance of the individual components under actual operating conditions. The tests shall indicate compliance with the performance requirements in the individual specification sections. All costs associated with Performance Testing shall be at additional cost to the Owner.

17. "Final Acceptance" shall mean passing of the Performance Testing of individual components under actual operating conditions.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Data and certificates in accordance with SECTION 01300, SUBMITTALS and as specified herein.

2. Detailed specific start-up plans for each mechanical or process system.

**1.05 - SHOP TESTING**

A. When required by the technical specifications, perform shop testing prior to delivery of the equipment or material. Provide thirty days written notice indicating the time and place of testing. Submit the following for approval thirty days prior to this notice.

1. Description of the Test - Specifically outlining how tests will conform to the requirements in the technical specifications.

2. Testing Devices That Will be Used in the Tests - Description must state what portion of the tests that the devices will perform or measure, and device accuracy. Submit sample measurement results and catalog cuts.

3. Personnel Used to Perform the Tests - Resumes, qualifications, and experience shall be submitted. As a minimum, personnel shall have three years' experience with the manufacturer and operation of the equipment to be tested and will have participated in five similar tests during this period of experience.

4. Schedule for Testing - Schedule shall include frequency of measurements, personnel present and contingency plans for equipment and/or test failure.

5. Test Forms - Submit all forms used to record and report on shop test data, for approval, prior to the test. Forms shall include description of test, equipment used, personnel present, equipment tag ID numbers, and measurements made. Forms shall conform to the Engineer's format for heading and check off sections. Forms shall have a place for signature by the chief testing person, and an officer of the company that the tests performed are true, accurate, have me the required criteria, and that the equipment will operate as indicated and as specified.

B. Shop test procedures will be reviewed and returned by the Engineer. Incorporate minor comments on the procedures, equipment, or personnel prior to testing. Major comments by the Engineer will require a resubmission of the shop test procedure and proposed test date. The Contractor will be notified, in writing by the Engineer, if a formal resubmission is required with the transmittal of the review comments.

C. Submit the following within one week after completion of the tests for approval:

1. Completed test forms, for each device tested, on forms as approved prior to the test.
2. Completed certification, the content of which was approved prior to the tests.
3. A written summary of testing, reporting on the results and summarizing the entire procedure.
4. A schedule for retesting, if necessary. Perform any retesting required to fulfill the intent of the technical specification test requirements at no additional cost to the Owner.

**1.06 - PHYSICAL CHECKOUT, INSPECTION AND CERTIFICATION**

A. When required by the technical specifications, perform field or functional testing on installed equipment. If none are required by the technical specifications, complete field / functional testing as detailed below. Field / functional testing shall be in addition to and not in lieu of, any shop testing either required or otherwise performed. Perform testing as a part of the overall testing process defined herein. However, the following specific instructions shall also apply. Provide thirty days written notice indicating the date and time for testing one piece of equipment, or a series of equipment pieces.

Submit with this notice the following for approval by the Engineer:

1. Description of the Tests - Outline how the test will conform to the requirements in the technical specifications.
2. Testing Devices That Will Be Used in the Tests - Description shall state what portion of the tests that the devices will perform or measure, and device accuracy. Submit sample measurement results and catalog cuts.
3. Personnel Used to Perform the Tests - Resumes, qualifications, and experience. As a minimum, personnel must have three years' experience with the manufacturer and operation of the equipment to be tested and will have participated in five similar tests during this period of experience.
4. Schedule of Testing - Schedule shall include frequency of measurements, personnel present and contingency plans for equipment and/or test failure.
5. Test Forms - Review and comment on all forms provided by the Engineer for recording reporting on the field test data, prior to the test.
6. Material and Equipment Required for the Test - This material and equipment shall be supplied by the Contractor or his/her subcontractors at no additional cost to the Owner.
7. Water and Power Requirements - Water and power requirements shall be identified in the plan by the Contractor and will be supplied by the Contractor for field testing purposes only. The Contractor shall provide all temporary piping and wiring required for field testing; and equipment and labor for the reuse of the test water.
8. Disposal of Waste – The Contractor is responsible for the legal disposal of all wastes generated from the testing.

B. Field test procedures will be reviewed and returned by the Engineer. Incorporate minor comments on the procedures, equipment, or personnel prior to testing. Major comments by the Engineer will require a resubmission of the field test procedure and proposed test date. The Contractor will be notified, in writing, by the Engineer if a formal resubmission is required with the transmittal of the review comments.

C. Submit within one week after completion of the tests, the following to the Engineer for approval.

1. Completed test forms for each device tested on forms provided prior to the tests.
2. Completed certification documentation, the content of which was approved prior to the tests.
3. A written summary of testing, reporting on the results and summarizing the entire procedure.
4. A schedule for retesting, if necessary. Perform any retesting required to fulfill the intent of the technical specification test requirements at no additional cost to the Owner.

D. Minimum Field Test Requirements

1. Calibrate equipment as required. For pumps, use water as a calibration liquid.
2. Test equipment and systems through a normal start, normal stop, and all emergency shutdown sequences.
3. Complete a four-hour running test. For variable speed units, the test shall include running for three complete cycles of one-hour duration at the maximum and minimum speeds for one half of each of those cycles. Operate each system through its normal automatic sequence of operation. During the four-hour test, observe and record all level indications, flow indicators, and pressure indicators.
4. If the equipment utilizes a local programmable logic controller (PLC), verify that the PLC is capable of operating and controlling the system as specified in the individual specification sections. Also verify all communications with distributed control system (DCS) are as specified.
5. For equipment not supplied with a PLC, verify that the instrumentation and control system is capable of operating and controlling the system.
6. Check safety devices, and interlocks for satisfactory operation. Check instrumentation and control systems for conformance with the Specifications.
7. Check for system leaks and proper valve operation.
8. Demonstrate to the Owner's Representative that all temporary jumpers and/or bypass have been removed and that all of the components are operating under their own controls as designated.
9. Coordinate start-up activities with the Owner's representative and with the Engineer prior to commencing system start-up.

E. Motor Testing

1. Visually inspect the motor for any physical damage.
2. Before energizing any machine, visually inspect for serviceability. Verify that proper alignment has been performed. Check nameplate for electrical power requirements.
3. Test run all motors before placing into regular service. A check on the motor for rotation, speed, current and temperature rise shall be made and the results recorded. Maintain the proper color codes for phase identifications. A motor phase rotation meter should be used prior to connection at motor to prevent later swaps of phase wires.

F. Engine Generator Test

1. Visual and Mechanical Inspection.
    a. Compare equipment nameplate data with drawings and specifications.
    b. Inspect physical and mechanical condition.
    c. Inspect correct anchorage and grouting.
2. Electrical and Mechanical Tests.
    a. Perform an insulation-resistance test on generator winding with respect to ground in accordance with ANSI/IEEE Standard 43. Calculate polarization index.
    b. Test protective relay per applicable NETA standards.
    c. Perform phase-rotation test to determine compatibility with load requirements.
    d. Functionally test engine shutdown for low oil pressure, over temperature overspeed, and other features as applicable.
    e. Conduct performance test in accordance with ANSI/NFPA Standard 110, (Installation Acceptance).
    f. Verify correct function of governor and regulator.
    g. Test circuit breakers per applicable NETA standards.

G. Upon completion of installation of all permanent equipment and related shop and field testing, the manufacturer's technical service representative shall inspect and, as necessary, adjust and/or calibrate the equipment. The inspection shall consider the completeness and integrity of the installation, the alignment and clearances of the equipment parts with respect to each other, and the sufficiency of any required sealing, lubricants or packing.

H. The technical service representative shall submit the results of the inspection including certification that the equipment was properly installed and is operating as specified and as installed. The report should verify that the equipment is ready for sustained operation and free from defects that would render the guarantee null and void.

**1.07 - FIELD TESTING OR FUNCTIONAL TESTING**

A. Field Testing or Functional Testing shall be made at on each piece of process equipment.

B. Field Testing or Functional Testing shall be conducted by the Contractor and manufacturer/supplier utilizing portable water to demonstrate to the satisfaction of the Engineer that the equipment is ready for System Testing.

C. Fourteen days' notice of scheduled start-up of individual equipment items or mechanical systems, the Contractor shall prepare a schedule of activities and provide the schedule to the Engineer for review and approval. The following representatives, as appropriate, shall be present simultaneously for the Field Testing or Functional Testing

1. General Contractor;
2. Electrical Subcontractor;
3. Equipment Manufacturer's Technical Service Representative;
4. Instrumentation and Control Equipment Representative;
5. System Integrator; and
6. Owner, OPM and Engineer.

D. The following must be completed prior to start-up and testing:

1. Controls and alarm systems shall be tested to show it is capable of transmitting and annunciating all specified control points to the facility-wide SCADA system;
2. All safety equipment shall be installed and operating properly;
3. Training of Contractor Operator personnel by manufacturer's technical service representatives has been completed; and
4. All spare parts, tools, lubricants shall be delivered to the Owner.
5. Installation drawings delivered to the Owner.

E. The Contractor shall, upon orders by the Engineer, startup, adjust and place in satisfactory operation all equipment constructed under this contract. At the discretion of the Engineer, individual startups may be required for various phases of the work or individual systems. The Engineer may order the start-ups prior to the completion of non-essential items of work.

F. As soon as practical after the initial start-up, the Contractor shall arrange for the manufacturer's representatives to perform all field tests and complete all additional training.

**1.08 - SYSTEM TESTING**

A. System Testing shall be made after all equipment that comprises of a complete system has been installed and a final testing and inspection and all startup activities have been satisfactorily conducted by the Contractor and manufacturer/supplier and the Contractor is satisfied that the equipment is operating as specified. System are identified as follows:

1. Liquid Stream (Influent Screen, Pre-Equalization Tanks, Mixing Blowers, SBR Transfer Pumps, SBRs and SBR Blowers) as shown on Drawing 00 D-006 - Process Flow Diagram I and Drawing 00 D-007 - Process Flow Diagram II;

2. Effluent Stream (Disk Filters, Post Equalization Tank, Post Equalization Tank Mixers, Effluent Pumps, UV System and Effluent Disposal) as shown on Drawing 00 D-007 - Process Flow Diagram II;

3. Plant Water (Plant Water System, Bladder Tank, Foam Spray Pump and Plant Water Storage Tank) as shown on Drawing 00 D-007 - Process Flow Diagram II;

4. Septage Receiving (Septage Receiving Station, Waste Sludge Tanks, Mixing Bowers as shown on Drawing 00 D-008 - Process Flow Diagram III;

5. Sludge Processing (Sludge Transfer Pumps, Rotary Drum Thickeners, Polymer Feed System, Thickened Sludge Storage Tank, Mixing Bowers and Thickened Sludge Pumps) as shown on Drawing 00 D-008 - Process Flow Diagram III; and

6. Odor Control (Odor Control System and Septage Receiving Station, Waste Sludge Tanks, Mixing Bowers as shown on Drawing 00 D-009 – Odor Control Air Flow Diagram.

B. The successful performance of all systems shall be demonstrated to the satisfaction of the Engineer by completing the System Testing utilizing portable water. Unless especially required in technical specifications, the System Testing will consist of operating each system for an uninterrupted four hours or as otherwise specified.

C. Failure of equipment to operate as specified will require the System Test to be reperformed for the full period. At no time during the System Testing shall any equipment or system be operated under a more severe condition than the maximum design condition for which the equipment is rated.

**1.09 - CLEAR WATER TESTING**

A. Clear Water Testing (4-hour) shall be conducted on all items and systems shall be made after all equipment has been installed for a given unit process and a final testing and inspection and all startup activities have been satisfactorily conducted by the Contractor and the Contractor is satisfied that the equipment is operating as specified.

B. Clear Water Testing shall not be conducted until completion of the “Certification of Proper Equipment Installation” by the Equipment Manufacturer and “Verification of Manufacturer’s Training” (Refer to SECTION 01030, SPECIAL REQUIREMENTS on each piece of process equipment.

C. The Contractor shall continue to conduct the Clear Water Test until the test has successfully run for 4 continuous hours.

D. The Contractor is responsible for all repairs and/or replacement of equipment and/or components of the equipment that does not function in accordance with the Contract Documents, approved shop drawings and manufacturer’s operational requirements.

E. The Contractor is responsible for all costs associated with conducting the 4-hour Clear Water Test including but, not limited to, labor, equipment, tools and supplies except as follows:

1. The Contractor is responsible for making all arrangements and gathering necessary permissions from the Owner’s water district for use of water.

2. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and shall be borne by the Contractor.

3. The water is obtained from the Owner ate not cost but, the water shall be metered and the use of backflow prevention device(s) shall be required as approved by the Owner.

F. The Clear Water Test shall be performed with the OWNER, OPM, ENGINEER, Contract Operator and MassDEP in attendance. The Clear Water Test shall be scheduled at least twenty-one (21) days in advance so that OWNER, OPM, ENGINEER, Contract Operator and MassDEP personnel can be present.

**1.10 - SUBSTANTIAL COMPLETION**

A. Issuance of Substantial Completion shall occur following the successful completion of Clear Water Testing.

**1.11 – START UP**

A. Contract Operations

1. The Town of Orleans, Massachusetts will seek proposals from qualified firms capable of providing full-service operation and maintenance of the Downtown Area Collection System, Pumping Stations, WWTF and Effluent Disposal.

2. Operation and Maintenance services will be provided in a safe, secure, effective and efficient manner and will be in full compliance with GWDP Permit requirements of the MassDEP, applicable laws of the Commonwealth of Massachusetts and regulations of the Massachusetts Department of Environmental Protection.

3. Procurement of the Contract Operator is anticipated to be completed July 2021. Personnel from the Contractor Operator will be on-site during the last 6 to 8 months of construction to observe and/or be involved with the following:

   a. Construction Activities;

   b. Physical Checkout, Inspection and Certification;

   c. Field Testing or Functional Testing;

   d. Training;

   e. System Testing; and

   f. Clear Water Testing.

B. Operation and Maintenance

1. Upon the successful completion of the Clear Water Testing and the Issuance of the Substantial Completion, the OWNER will notify Property Owners that they have up to one year to connect into the wastewater system.

2. Upon the successful completion of the Clear Water Testing and the Issuance of the Substantial Completion, the Contract Operator will be responsible for Start-up and Operation and Maintenance of the Downtown Area Collection System, Pumping Stations, WWTF and Effluent Disposal.

3. Operation and Maintenance shall include, but not be limited to, the following

   a. Staffing – Number and Qualifications Required by MassDEP.

   b. Maintenance - Building and Grounds, Equipment, etc.;

   c. Maintain the Inventory of Spare Parts, Tools and Supplies, and the like;

   d. Process Control – SCADA System, Sampling and Analysis, etc.;

   e. Septage Receiving and Processing;

   f. Sludge Processing and Legal Disposal;

   g. Consumables – Power, Chemicals and the like; and

   h. Training of their Personnel –Additional Training (i.e. Safety Program, Standard Operating Procedures, etc.) Not Including Training Specified and Conducted by the Contractor and Manufacturers/Suppliers.

**1.12 - PERFORMANCE TESTING**

A. Performance Testing by the Contractor shall occur within the one-year warranty period but shall not occur until an average of 50,000 gpd of raw wastewater is being received at the facility. The Performance Testing will occur as soon as an average of 50,000 gpd of raw wastewater being received at the facility.

B. Since the facility may be underloaded during start-up, the following is required:

1. The Contractor shall coordinate the stat-up activities with the SBR manufacturer, Aqua Aerobics.

2. The system will be started-up by placing one SBR reactor in service.

3. Aqua Aerobics has run a preliminary design scenario for the reactor at its lowest loading to determine the quantity of seed required to be obtained by the Contractor. Refer to the attachment to this section.

    a. The design shows how much flow from the Pre-Equalization Tanks(s) is required for the SBR biology to be self-sustaining.

    b. This is an estimate based on a blend of raw wastewater entering the facility and flow from the Septage Receiving Station.

C. Performance Tests and Performance Criteria: Specific performance testing criteria are listed for specific equipment and systems in the Division 11 through Division 16 specifications. Compliance with these performance test requirements shall be demonstrated during the full system testing or otherwise demonstrated prior to substantial completion.

D. In the event of a failure to demonstrate satisfactory facility performance on the first or any subsequent attempt, it shall be the responsibility of the Contractor to make all the necessary and required changes, replacements, and tests to make the units meet the specified operating and efficiency requirements.

E. If equipment is unable to operate, initial calibration and/or additional adjustments are required, or representatives are absent, the start-up or tests shall be canceled at that time and full rescheduling will be required. Damages shall be assessed to the Contractor for time and expenses wasted on scheduling, coordinating and attending the failed performance test by the Owner, OPM, Engineer and Manufacturer Representatives.

F. Once the complete facility system has successfully passed the Performance Testing, the Contractor can submit a request for payment for money withheld.

**1.11 - ROLES AND RESPONSIBILITIES DURING START-UP AND TESTING**

A. The Contractor shall not operate any of the existing facilities at any time. This shall include the starting and stopping of equipment or opening and closing of valves. Whenever the Contractor believe their work will affect or be impacted by the existing facilities operation, they shall so notify the Engineer in writing three (3) working days prior to the intended start of the work. This notification shall clearly detail the work to be completed, the method by which the existing facilities operation may be impacted, and the assistance requested of the Owner.

B. Contractor's Responsibilities: The Contractor shall be responsible for furnishing and installing all of the several kinds and types of equipment required in the treatment facilities, and for testing each individual piece of equipment, all combinations of equipment as they may operate one in conjunction with another, and the complete system, such that each component and the total unit may operate in an acceptable fashion to the Engineer, the Owner, and to any other municipal, State or Federal authorities within whose jurisdiction the operation of the facility may be a concern, at no additional costs to the Owner:

1. Develop specific start-up plans and schedule.

2. Provide specific start-up material and operating supplies until substantial completion. Supplies include lubricants, chemicals, gases, specialized fluids, electric power, water and all other required appurtenances.

3. Provide all specified third-party testing and laboratory costs at no additional costs to the Owner.

4. Provide manufacturer's representative to provide guidance during performance testing.

5. Provide to the Engineer a list of 24 hour, "on call" representative supervisory persons who will monitor the start-up and performance testing.

6. Provide the necessary craft or labor assistance, in the event of an emergency equipment failure requiring immediate attention, (emergency is defined as a failure of function which precludes the further operation of a critical segment of; or the whole of the work) with a response time of not less than four hours from the time of notification. The time of notification is defined as the time of contact between the Engineer's representative and the Contractor's representative.

7. Correct all failures or equipment problems identified during start-up when notified by the Engineer. Resolve and correct all equipment or system failures during the performance testing.

8. Provide manufacturer's representatives and operating supplies for retesting of systems that fail to pass the initial performance tests due to deficiencies in products or workmanship at no additional cost to the Owner.

9. Provide training as specified.

10. Prior to starting the start-up and testing, the Contractor shall provide and field calibrate certified flow meters (by using volumetric calibration), flow recorders, all electrical meters, and electrical recorders. The Contractor shall provide a test procedure, wiring diagram of field test recorders and instrumentation, and a field calibration report on the installed meter.

11. Review procedures for performance testing.

12. Attend meetings related to the review of start-up plan(s).

13. Clarify submittals, testing requirements, schedules, or other items related to the start-up of the equipment and facilities specified and indicated in the Contract Documents.

C. The Owner's Responsibilities

1. Assist in the start-up testing activities. The Owner will endeavor to be cooperative with the Contractor when required. However, it is emphasized that the existing facilities operations and treatment take precedence and only requests that do not adversely affect the flow or treatment will be considered. Additionally, any assistance given to the Contractor must be completed when the Owner's schedule and manpower permit. There may be instances when the Owner cannot provide assistance at the time of the Contractor's request and this shall not be the basis for a claim by the Contractor.

2. Provide staff to operate and maintain equipment, systems, and facilities requiring start-up.

**1.12 - TREATMENT EQUIPMENT USAGE**

A. Any partial or full usage of the proposed equipment by the Owner, and/or his employees or agents, prior to acceptance shall be the responsibility of the Contractor.

**1.13 - OPERATIONAL EXPENSES**

A. During the construction stage and start-up period, before Substantial Completion, the Contractor shall bear all expenditures and operational expenses of all systems included in the project including, but not limited to, labor, equipment, tools, electrical power, chemicals, maintenance, and fuel.

B. The Contractor shall be responsible for the proper handling, sampling, and lab testing and analysis from the testing and start-up of facility processes.

C. During Performance Testing, the Contractor shall bear the costs for Contractor and manufacturer/suppliers, including but not limited to labor, equipment and tools.

**1.14 - GUARANTEE**

A. The Contractor shall guarantee the materials and equipment furnished and the performance thereof to be in accordance with the requirements of the Contract Documents.

B. The Contractor agrees upon written notice to make promptly and without charge, all necessary changes, corrections, and replacements (including installation of replacement parts) required to make good all defects developing in the material or equipment, under ordinary use and proper care, within a period of twelve months after substantial completion of the Project.

**PART 2 - PRODUCTS**

**2.01 - TEST EQUIPMENT**

A. The Contractor shall provide all test equipment, including kWh demand meters and recorders, instruments, analyzers, handling equipment, etc., required to sample and test the various systems. All test equipment must have been tested and calibrated within six months of their use on this contract.

**PART 3 - EXECUTION – Not Used**

**END OF TEXT**

# AquaSBR - Sequencing Batch Reactor - Design Summary

**Design#: 158326**

**Project:** ORLEANS MA

**Option:** Sample Start up Conditions for SBR

*Designed by Tamera Knapp on Thursday, November 7, 2019*

AQUA-AEROBIC SYSTEMS, INC.
A Metawater Company

## DESIGN INFLUENT CONDITIONS

**Avg. Design Flow** = 0.05 MGD = 189 m3/day

**Max Design Flow** = 0.05 MGD = 189 m3/day

## DESIGN PARAMETERS

| | Influent | mg/l | Effluent Required | <= mg/l | Effluent Anticipated | <= mg/l |
|---|---|---|---|---|---|---|
| **Bio/Chem Oxygen Demand:** | BOD5 | 200 | BOD5 | 15 | BOD5 | 15 |
| **Total Suspended Solids:** | TSS | 200 | TSS | 15 | TSS | 15 |
| **Total Kjeldahl Nitrogen:** | TKN | 40 | -- | -- | -- | -- |
| **Total Nitrogen:** | -- | -- | TN | 7 | TN | 7 |
| **Phosphorus:** | Total P | 4 | -- | -- | -- | -- |

## SITE CONDITIONS

| | Maximum | Minimum | Design | Elevation (MSL) |
|---|---|---|---|---|
| **Ambient Air Temperatures:** | 77 F 25.0 C | 30 F -1.1 C | 77 F 25.0 C | 60 ft |
| **Influent Waste Temperatures:** | 68 F 20.0 C | 50 F 10.0 C | 68 F 20.0 C | 18.3 m |

## SBR BASIN DESIGN VALUES

**No./Basin Geometry:** = 1 Rectangular Basin(s)

**Freeboard:** = 2.0 ft = (0.6 m)

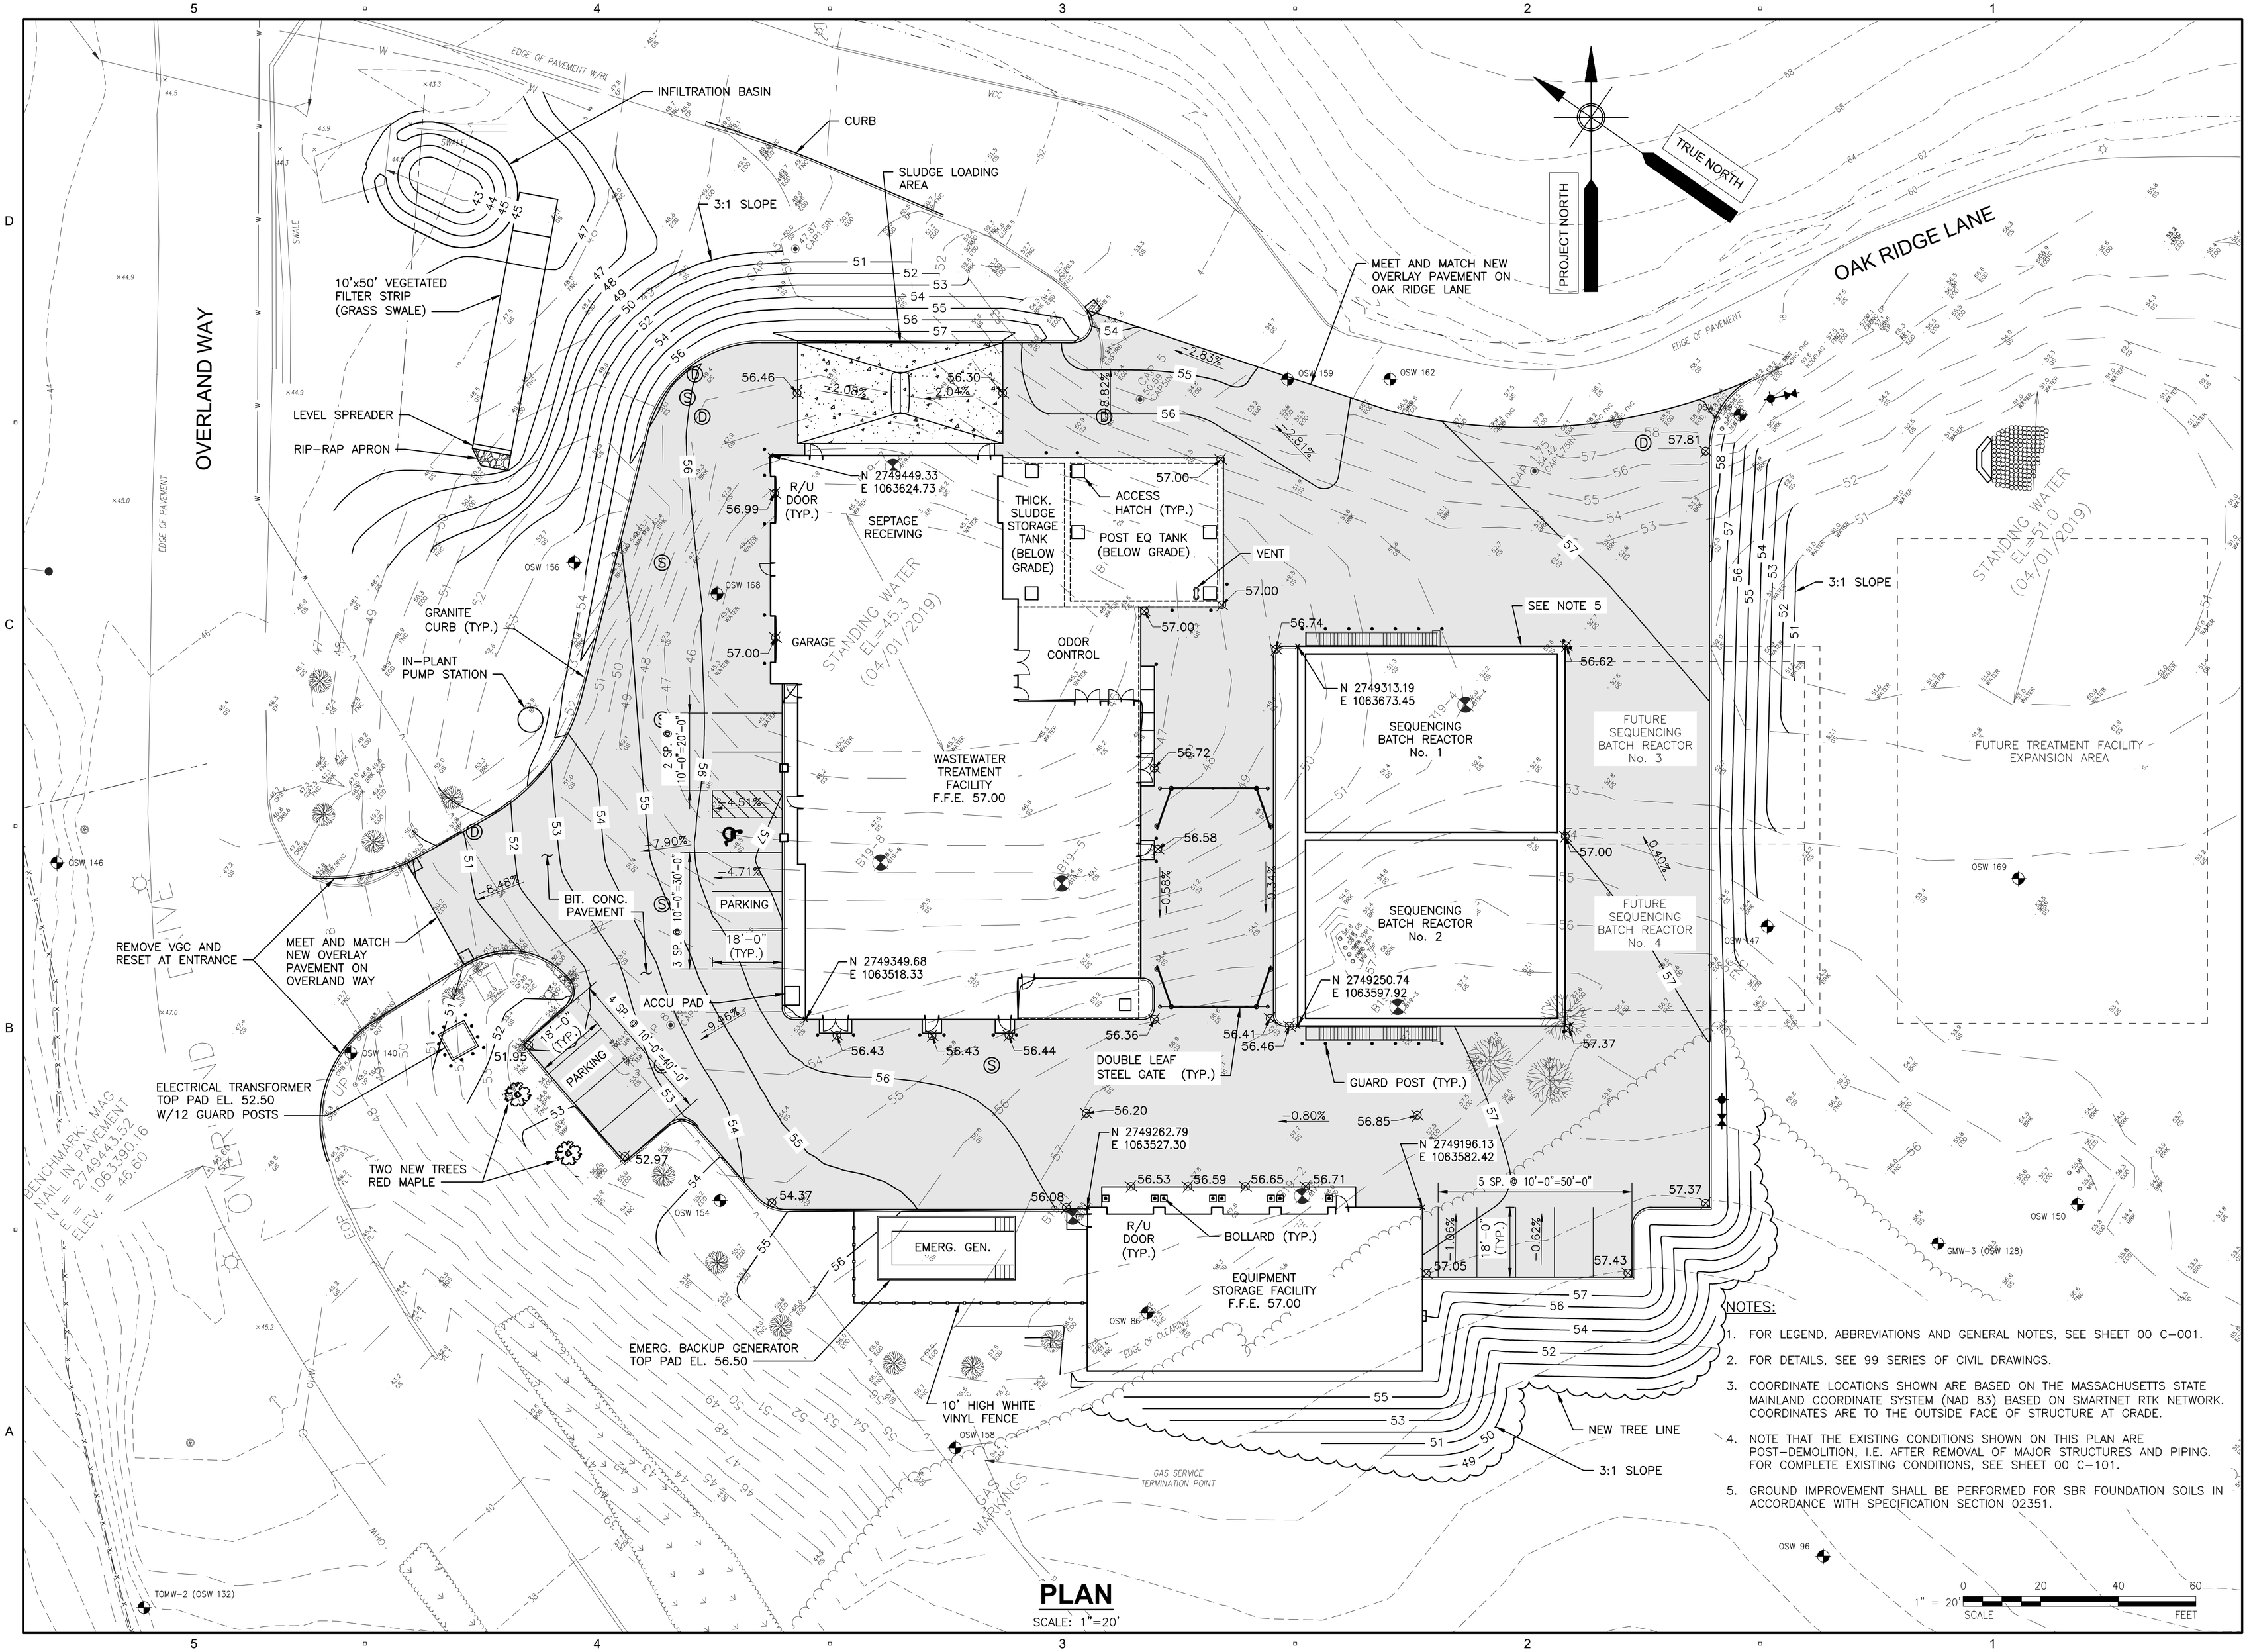
**Length of Basin:** = 65.0 ft = (19.8 m)

**Width of Basin:** = 45.0 ft = (13.7 m)

| | Water Depth | | Basin Vol./Basin | | |
|---|---|---|---|---|---|
| **Min** | = 14.5 ft | = (4.4 m) | **Min** | = 0.318 MG | = (1,203.4 m³) |
| **Avg** | = 15.7 ft | = (4.8 m) | **Avg** | = 0.343 MG | = (1,298.0 m³) |
| **Max** | = 15.7 ft | = (4.8 m) | **Max** | = 0.343 MG | = (1,298.0 m³) |

| | | |
|---|---|---|
| **Number of Cycles:** | = 2 per Day/Basin (advances cycles beyond MDF) | |
| **Cycle Duration:** | = 12.0 Hours/Cycle | |
| **Food/Mass (F/M) ratio:** | = 0.026 lbs. BOD5/lb. MLSS-Day | |
| **MLSS Concentration:** | = 1200 mg/l @ Min. Water Depth | |
| **Hydraulic Retention Time:** | = 6.858 Days @ Avg. Water Depth | |
| **Solids Retention Time:** | = 43.6 Days | |
| **Est. Net Sludge Yield:** | = 0.799 lbs. WAS/lb. BOD5 | |
| **Est. Dry Solids Produced:** | = 66.6 lbs. WAS/Day | = (30.2 kg/Day) |
| **Est. Solids Flow Rate:** | = 100 GPM (1997 GAL/Day) | = (7.6 m³/Day) |
| **Decant Flow Rate @ MDF:** | = 333.0 GPM (as avg. from high to low water level) | = (21.0 l/sec) |
| **LWL to CenterLine Discharge:** | = 3.0 ft | = (0.9 m) |
| **Lbs. O2/lb. BOD5** | = 1.25 | |
| **Lbs. O2/lb. TKN** | = 4.60 | |
| **Actual Oxygen Required:** | = 181 lbs./Day | = (82.1 kg/Day) |
| **Air Flowrate/Basin:** | = 154 SCFM | = (4.4 Sm3/min) |
| **Max. Discharge Pressure:** | = 8.4 PSIG | = (58 KPA) |
| **Avg. Power Required:** | = 181.2 KW-Hrs/Day | |

This Page Intentionally Left Blank.



## PLAN

SCALE: 1"=20'

0 20 40 60
1" = 20' SCALE FEET

NOTES:

1. FOR LEGEND, ABBREVIATIONS AND GENERAL NOTES, SEE SHEET 00 C-001.
2. FOR DETAILS, SEE 99 SERIES OF CIVIL DRAWINGS.
3. COORDINATE LOCATIONS SHOWN ARE BASED ON THE MASSACHUSETTS STATE MAINLAND COORDINATE SYSTEM (NAD 83) BASED ON SMARTNET RTK NETWORK. COORDINATES ARE TO THE OUTSIDE FACE OF STRUCTURE AT GRADE.
4. NOTE THAT THE EXISTING CONDITIONS SHOWN ON THIS PLAN ARE POST-DEMOLITION, I.E. AFTER REMOVAL OF MAJOR STRUCTURES AND PIPING. FOR COMPLETE EXISTING CONDITIONS, SEE SHEET 00 C-101.
5. GROUND IMPROVEMENT SHALL BE PERFORMED FOR SBR FOUNDATION SOILS IN ACCORDANCE WITH SPECIFICATION SECTION 02351.

PATH/FILENAME: P:\60587515 - ORLEANS DOWNTOWN AREA WWTP\SHEETS\DI\99 DI-602.DWG
LAST UPDATE: Friday, March 06, 2020 2:13:37 PM
PLOT DATE: Friday, March 06, 2020 2:13:54 PM

March 12, 2020

**ADDENDUM NO. 6**

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 6 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 10 pages and 30 pages of attachments for a total of 40 pages.

**ATTACHMENTS**

1. SECTION 00410, FORM FOR GENERAL BID

**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. GENERAL

   A. Sub-Bid Opening – April 1, 2020 at 11:00 am.

   B. General Bid Opening – April 15, 2020 at 2:00 pm.

   C. Sub-Bid Opening Results – An addendum will be issued providing the results of the Sub-Bid Opening. The addendum will instruct the General Contractor Bidders to carry a specific dollar amount for that subtrade on the Bid Form. Following the opening of the General Bids, new sub-bids will be solicited from three or more qualified subcontractors via a written quotation process. The Owner will open these sub-bids publicly and read them aloud at the time and place specified in the solicitation. The Owner will select the lowest responsible and eligible sub-bidder to which the winning General Contractor has no objection. An adjustment to the General Contract price will be made via a Change Order to reflect the difference between the amount the General Contractor Bidders carried and the actual subcontract cost. The General Contractor is not entitled to overhead and profit on the incremental difference between the amount carried and the amount of the new sub-bid.

   D. The Bid and Subbid Forms in Excel Format can be downloaded from the Tighe & Bond website. You must click on “pre-qualified” to access the Forms.

2. SECTION 00100, ADVERTISEMENT FOR BIDS

   A. Page 00100-1, Paragraph 2, delete the words "…not more than 372 working days." and replace with the words "…not more than 411 working days."

   B. Page 00100-1, Paragraph 3.a, first subparagraph, delete the words "…until 2:00 p.m. prevailing time, on March 25, 2020 at which time and place…" and replace with the words "…until 2:00 p.m. prevailing time, on April 15, 2020 at which time and place…".

   C. Page 00100-1, Paragraph 3.b, first subparagraph, delete the words "…until 2:00 p.m. prevailing time, on March 18, 2020 at which time and place…" and replace with the words "…until 11:00 a.m. prevailing time, on April 1, 2020 at which time and place…".

3. SECTION 00200, INSTRUCTIONS TO BIDDERS

   A. Page 00200-6, ARTICLE 1.09 - ADDENDA AND INTERPRETATIONS, Paragraph B., delete the words "…be received at least ten working days prior…" and replace with the words "…be received at least seven working days prior…".

4. SECTION 00410, FORM OF GENERAL BID

   A. Delete SECTION 00410, FORM FOR GENERAL BID in its entirety and replace with the following new section as attached.

5. SECTION 00520, AGREEMENT

   A. Page 00520-2, Paragraph 5, delete the words "…within 654vcalendar days, using not more than 372 working days split into four phases." and replace with the words "…within 654 calendar days, using not more than 411 working days."

6. SECTION 00520, ATTACHMENT A - ADDITIONAL FORMS TO BE SUBMITTED WITH THE BID, PART A - INSURANCE REQUIREMENTS FOR INCLUSION IN ALL SPECIFICATIONS AND CONTRACTS

   A. Page 00520A-3, add the following to the end of Item 2):

      The minimum limit of liability of $5,000,000.00 is a standalone certificate that cannot be satisfied by using another certificate to satisfy this requirement.

   B. Page 00520A-3, delete Item 4) in its entirety and replace with the following new item:

      4) X - Builder's Risk - Amount of the General Contractor's Contract

   C. Page 00520A-3, delete Item 5) in its entirety and replace with the following new item:

      5) ___ - Professional Liability/ Errors and Omissions - Not Required.

7. SECTION 01025, MEASUREMENT AND PAYMENT

   A. Page 01025-8, BID ITEM A6 – SBR AERATION DIFFUSER GRIDS, add the following to the end of Paragraph A.

      The SBR Drawings show the locations of the three aeration grids in each basin. Two aeration girds in each basin are to be furnished under the Base Bid and associated allowance for SECTION 11600, SEQUENCING BATCH REACTORS. The third aeration grid in each basin are to be furnished under this bid item.

8. SECTION 07610, METAL ROOFING

   A. Page 07610-3, ARTICLE 1.05 – QUALITY ASSURANCE, add the following new paragraph:

      E. Workmanship and methods for sheet metal work shall conform to the applicable requirements of the National Roofing Contractors Association, New England Approved Roofers Association Manual and the Sheet Metal and Air Conditioning Contractors National Association.

B. Page 07610-4, ARTICLE 2.01 – MANUFACTURER, Paragraph A., delete the paragraph in its entirety and replace with the following new paragraph:

A. Acceptable Manufacturers

1. Classic Metal Roof Systems

2. Approved Equal

C. Page 07610-5, ARTICLE 2.02 – MATERIALS, Paragraph A., delete the words "…minimum thickness of 0.032, 3105-H14 aluminum …" and replace with the words "…minimum thickness of 0.024, 3105-H14 aluminum …".

D. Page 07610-5, ARTICLE 2.03 – ACCESSORIES, Paragraph C., delete the words "…minimum thickness of 0.032 aluminum and coated…" and replace with the words "…minimum thickness of 0.024 aluminum and coated…".

E. Page 07610-5, ARTICLE 2.03 – ACCESSORIES, Paragraph D., delete the words "…4-inch x 6-inch, 0.032 aluminum with …" and replace with the words "…4-inch x 6-inch, 0.024 aluminum with …".

9. SECTION 00800, SUPPLEMENTARY CONDITIONS

A. Page 00800-2, ARTICLE 5 - BONDS AND INSURANCE NOTICE TO CONTRACTOR, SC-5.04, add the following new paragraph:

The General Contractor shall carry the coverage by naming the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured at the limits specified herein. SECTION 05020, INSURANCE REQUIREMENTS FOR INCLUSION IN ALL SPECIFICATIONS AND CONTRACTS are separate from the Owners and Contractors Protective Liability and shall name the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured.

10. SECTION 04200, UNIT MASONRY AND ACCESSORIES

A. Page 04200-2, ARTICLE 1.01 - SCOPE, Paragraph B., delete subparagraph 5. in its entirety and replace with the following new subparagraph:

5. Cavity wall insulation including spray foam insulation in accordance with SECTION 07200, BUILDING INSULATION.

B. Page 04200-2, ARTICLE 1.01, SCOPE, Paragraph B., delete subparagraph 19., in its entirety and replace with the following new subparagraph:

19. Air/Vapor Barrier Membrane (furnished by the Contractor and installed by the filed sub-contractor on the CMU).

11. SECTION 05500, MISCELLANEOUS METAL

A. Page 05500-14, add the following new ARTICLE 3.15 – Z-GIRT SYSTEM:

3.17 – Z-GIRT SYSTEM

A. Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction.

B. Attach cladding support system to steel stud backup with a minimum of two #10-16 self-drilling screws to each stud. Additional screws may be required for high design wind pressures per manufacturer's recommendations.

C. Attach cladding panels or tiles to cladding support system per cladding panels manufacturer's recommendations.

D. Door Openings: Install framing below sills of openings to match framing required above door heads.

E. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly and support closures and to make partitions continuous from floor to underside of solid structure.

B. Page 05500-14, rename ARTICLE 3.15 – CONTRACT CLOSEOUT to ARTICLE 3.16 – CONTRACT CLOSEOUT.

12. SECTION 08210, FLUSH WOOD DOORS

    A. Page 08210-4, ARTICLE 2.02 - SOLID CORE DOORS, Paragraph B., delete subparagraph 3. In its entirety and replace with the following new subparagraph:

        20. Facing:

            a. Wood Veneer: Closed-grain hardwood.

            b. Veneer Grade: A

            c. Veneer Species: Natural Birch

            d. Veneer Cut: Plain Sliced

            e. Veneer Match: Book Matched (Uniform Pattern)

            f. Assembly of Veneer on Door Face: Running Match (Non-Symmetrical Appearance Veneer Pieces of Unequal Widths)

13. SECTION 08920, TRANSLUCENT WALL PANELS

    A. Page 08920-1, ARTICLE 1.02 – MEASUREMENT AND PAYMENT, add the following new paragraph:

        B. The Work of this section requires the Contractor to perform all Work specified under this section.

    B. Page 08920-2, ARTICLE 1.06 – QUALITY CRITERIA, Paragraph C., delete subparagraph 2.d. in its entirety and replace with the following new subparagraphs:

        d. “U” Factor: Minimum of 0.53.

        e. Wind Load Requirement: Panel system and fasteners to withstand a wind load as shown on Drawing 00 S-002, STRUCTURAL NOTES II.

    C. Page 08920-3, ARTICLE 2.01 - MATERIALS, Paragraph B., delete subparagraph 2 and subparagraph 3. in their entirety and replace with the following new subparagraphs:

        2. Exterior and interior face sheets shall have thickness with a variation in thickness not greater than plus or minus 10 percent capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to ASTM E1886 and testing information in ASTM E1996 and requirements of authorities having jurisdiction.

        3. Color: As selected by Architect from manufacturer’s full range of industry colors.

    D. Page 08920-3, ARTICLE 2.01 - MATERIALS, Paragraph E., delete the words “Fin Battens and” in their entirety.

14. SECTION 10475, EMERGENCY AND MISCELLANEOUS EQUIPMENT

    A. Page 10475-9, ARTICLE 2.05 - PROJECTION SCREEN AND PROJECTOR, add the following new paragraph:

        C. Projection Screen and Projector to be located in Room 105 of the WWTF.

    B. Page 10475-9, ARTICLE 2.06 - MARKER BOARD, add the following new paragraph:

        E. Marker Boards to be located in the field by the Engineer.

    C. Page 10475-10, ARTICLE 2.07 - BULLETIN BOARD, add the following new paragraph:

        D. Bulletin Boards to be located in the field by the Engineer.

15. SECTION 10525, FIRST AID AND FIRE FIGHTING EQUIPMENT

A. Page 10525-3, ARTICLE 2.01 – EQUIPMENT, Paragraph B., add the following new subparagraph:

4. Locate fire extinguishers in each of the following buildings and rooms at locations determined by Engineer.

| Type | Building | Room Number | Quantity |
|---|---|---|---|
| Type 1 Dry Chemical (Class B and C) | WWTF | 101 | 3 |
| | WWTF | 104 | 1 |
| | WWTF | 108 | 2 |
| | WWTF | 117 | 1 |
| | WWTF | 118 | 1 |
| | WWTF | 119 | 1 |
| | WWTF | 135 | 1 |
| Type 2 Multi-Purpose (Class A, B and C) | WWTF | 102 | 1 |
| | WWTF | 109 | 1 |
| | WWTF | 115 | 1 |
| | WWTF | 126 | 2 |
| | Equipment Storage Facility | 201 | 3 |
| | Equipment Storage Facility | 202 | 1 |
| Type 3 Carbon Dioxide (Class B and C) | --- | --- | --- |
| Type 4 Clean Streaming Agent | --- | --- | --- |

16. SECTION 10999, BUILDING SPECIALTIES

A. Page 10999-3, ARTICLE 2.04 - HORIZONTAL BLINDS, Paragraph B., add the following new subparagraph:

6. Horizontal blinds shall be located on all exterior windows.

B. Page 10999-5, ARTICLE 2.05 - FALL PROTECTION DEVICES, Paragraph B., delete the article in its entirety and replace with the following new article:

2.05 - FALL PROTECTION DEVICES – Not Used

C. Page 10999-8, ARTICLE 2.09 - SELF-CLOSING SAFETY GATES, add the following new paragraph:

C. Locations

1. DRAWING 10 A-406 – ENLARGED STAIR 1 PLANS, at the Top of Stair 1 at Grade Level.

2. DRAWING 10 A-407 – ENLARGED STAIR 2 PLANS, at the Top of Stair 2 at Grade Level.

17. SECTION 11350, ULTRAVIOLET DISINFECTION EQUIPMENT

A. Page 11350-5, ARTICLE 2.01 – SYSTEM DESCRIPTION, Paragraph D., add the following new subparagraphs:

3. The UV system is fed from Panel Board DP.10-5 as shown on Drawing 10 E-608. DP.10-5 ratings are as shown on Drawing 10 E-602.

4. The design layout does not include motor operated valves associated with the UV System. Flow into each UV Reactor is controlled by manual butterfly valves.

B. Page 11350-5, ARTICLE 2.01 – SYSTEM DESCRIPTION, Paragraph F., delete the paragraph in its entirety and replace with the following new paragraph:

F. The UV system shall consist of two UV Reactors (one operating and one stand-by) proving full redundancy. The UV System shall be comprised of the following components:

1. UV reactors: (2) two
2. Number of lamps per reactor: As required to meet the design conditions specified herein and with a system dimension that fits within the foot print shown on the drawings
3. Control Panel: (1) one per reactor
4. PLC: (1) one per reactor.
5. UV Intensity Sensor: (1) one per reactor
6. Wiping System per reactor: Automatic Mechanical

C. Page 11350-6, Article 2.03 - UV DISINFECTION EQUIPMENT CONSTRUCTION, Paragraph B., delete subparagraph 3. in its entirety and replace with the following new subparagraph:

3. UV reactor shall be supplied with ANSI 150 lb. flanged inlet/outlet connections with maximum diameter of 16 inches and provided with the necessary reducers for connections to the 8-inch upstream and downstream piping.

D. Page 11350-5, 2.03 - UV DISINFECTION EQUIPMENT CONSTRUCTION, Paragraph B.16., add the following to the end of the subparagraph:

Pipe supports to be provided by the Contractor with coordination with the manufacturer in order to allow for proper operation and maintenance on the UV System.

E. Page 11350-6, ARTICLE 2.03 - UV DISINFECTION EQUIPMENT CONSTRUCTION, Paragraph I, delete subparagraph 9.a. in its entirety and replace with the following new subparagraph:

a. Communication between the UV reactors and the plant control center shall be through the following protocol:

(1) Ethernet. If the vendor's typical communication protocol is not Ethernet, the UV vendor is responsible for all communication configuration to provide Ethernet out of the control panel.

F. Page 11350-10, Article 3.03 – FIELD AND FUNCTIONAL TESTING, add the following new paragraph:

B. Provide services of factory-trained Service Technician, specifically trained on type of equipment specified:

1. Service Technician must be present on site for all items listed below. Person-day requirements listed are exclusive of travel time, and do not relieve Contractor of the obligation to place equipment in operation as specified.
2. Installation: Inspect grouting, location of anchor bolts; setting, leveling, alignment, field erection; coordination of piping, electrical and miscellaneous utility connection - 1 person-day.
3. Functional Testing: Calibrate, check alignment and perform a functional test with portable water - 1 person-day.
4. Field Performance Testing: 1 person-day.
5. Vendor Training: Provide classroom and field operation and maintenance instruction including all materials, slides, videos, handouts and preparation to lead and teach classroom sessions - 1 person-day.
6. Credit to the Owner, all unused service person-days specified above, at the manufacturer's published field service rate.
7. Any additional time required of the factory trained service technician to assist in placing the equipment in operation, or testing to correct deficiencies in installation, equipment or material shall be provided at no additional cost to the Owner.

18. SECTION 12484, ENTRANCE FLOOR MATS AND FRAMES

    A. Page 12484-4, ARTICLE 2.01 - ENTRANCE FLOOR MATS AND FRAMES, GENERAL, delete the article in its entirety and replace with the following new article:

       2.01- ENTRANCE FLOOR MATS AND FRAMES, GENERAL – Not Used

19. SECTION 13300, INSTRUMENTATION AND CONTROL SYSTEM – GENERAL

    A. Page 13300-5, ARTICLE 1.08 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

       A. Equipment Manufacturer – Not Used

    B. Attachment A – Instruments Product Sheets, Page 13330-A5, Dissolved Oxygen Specification, delete Item 10 in its entirety and replace with the following new item:

       10. Mounting: SUSPENSION ASSEMBLY HOLDER

    C. Attachment A – Instruments Product Sheets, Page 13330-A15, Continuous On-Line Multi-Parameter Analyzer Specification, delete Item d. in its entirety.

20. SECTION 13330, PROCESS INSTRUMENTS

    A. Page 13330-6, ARTICLE 3.05 - MANUFACTURER'S FIELD SERVICES, delete the article in its entirety and replace with the following new article:

       3.05 - MANUFACTURER'S FIELD SERVICES

          A. Manufacturer's Field Services shall be provided for installation, startup and training for the equipment as follows:

             1. 3 working days (via 2 separate trips to project site).

    B. Page 13330-6, ARTICLE 3.06 - MANUFACTURER'S TRAINING, delete the article in its entirety and replace with the following new article:

       3.06 – NOT USED

21. SECTION 15400, PLUMBING SYSTEMS

    A. Page 15400-2, ARTICLE 1.00 - SUB-BID REQUIREMENTS, Paragraph D., add the following drawings:

       10 S-103 10 S-301 10 S-302 10 S-107 99 S-502

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 00 C-104, SITE LAYOUT PLAN - WWTF

    A. Add the following new Note 6.:

       6. If Alterative No. A-1 – Equipment Storage Facility is not accepted, all grading, pavement, curbing, site utilities, emergency generator, fencing and the like shall be constructed as shown. All underground utilities shall be terminated 10-feet from the face of the Equipment Storage Facility.

2. DRAWING 10 A-601, ROOM FINISH SCHEDULE

    A. Delete Room No. 109 and Room Number 126 in their entirety and replace with the following new information:

| Room Number | Room Name | Floor | | Wall | |
|---|---|---|---|---|---|
| | | Material | Finish | Material | Finish |
| 109 | Mech. Rm | SC | --- | PT | TBD |
| 126 | Basement Pump Room | SC | --- | --- | --- |

| Ceiling | | Base | | |
|---|---|---|---|---|
| **Material** | **Finish** | **Material** | **Finish** | **Notes** |
| MRB | TBD | RB | TBD | |
| --- | --- | --- | --- | |

3. DRAWING 10 A-503, DETAILS – MISC. I

   A. Detail 1, Alum Hatch HL-93, add the following new note:

      Note:

      1. HL-93 Hatch required due to the weight of the vehicle(s) that are anticipated to utilize the Garage (Room 102).

4. DRAWING 10 A-505, EXTERIOR SECTION DETAILS

   A. Typical Chimney Detail, add the following notes:

      Notes:

      1. Precast Trim shall be 2-inches thick.
      2. Prefabricated Chimney Caps shall be furnished under SECTION 05500, MISCELLANEOUS METAL.

5. DRAWING 10 A-601, ROOM FINISH SCHEDULE

   A. Room Finish Schedule, modify the Room Finish Schedule as follows

| Room Number | Room Name | Floor | | Wall | |
|---|---|---|---|---|---|
| | | **Material** | **Finish** | **Material** | **Finish** |
| 101 | Truck Bay | EFC | TBD | PC | TBD |
| 102 | Garage | EFC | TBD | PC | TBD |
| 117 | Polymer Rm | EFC | TBD | PC | TBD |
| 118 | Headworks | EFC | TBD | PC | TBD |
| 119 | Disk Filter Rm | EFC | TBD | PC | TBD |
| 128 | SBR – 1 | --- | --- | --- | --- |
| 129 | SBR – 2 | --- | --- | --- | --- |
| 135 | Soda Ash Rm | EFC | TBD | PC | TBD |

| Room Number | Ceiling | | Base | | |
|---|---|---|---|---|---|
| | **Material** | **Finish** | **Material** | **Finish** | **Notes** |
| 101 | FRP | TBD | --- | --- | --- |
| 102 | FRP | TBD | --- | --- | --- |
| 117 | FRP | TBD | --- | --- | --- |
| 118 | FRP | TBD | --- | --- | --- |
| 119 | FRP | TBD | --- | --- | --- |
| 128 | --- | --- | --- | --- | --- |
| 129 | --- | --- | --- | --- | --- |
| 135 | FRP | TBD | --- | --- | --- |

6. DRAWING 10 A-603, WINDOWS AND LOUVER SCHEDULES

   A. HVAC Louver Schedule, add L10 as follows:

| | | | Group | | | |
|---|---|---|---|---|---|---|
| **Type** | **Width** | **Height** | **Head** | **Jamb** | **Sill** | **Count** |
| L10 | 4’ – 0” | 2’ – 0” | LH-1 | LJ-1 | LS-1 | 4 |

7. DRAWING 20 A-601, EQUIPMENT STORAGE FACILITY – DOOR SCHEDULE AND DETAILS

   A. Door Schedule, modify the door specifications as follows:

| Door | Size | | Door | | | Frame | | |
|---|---|---|---|---|---|---|---|---|
| **Number** | **Width** | **Height** | **Type** | **Material** | **Finish** | **Type** | **Material** | **Finish** |
| 002 | 3” – 0” | 7” – 0” | F | Alum | PT | 1 | Alum | PT |
| 010 | 3” – 0” | 7” – 0” | F | Alum | PT | 1 | Alum | PT |
| 011 | 6” – 4” | 7” – 0” | FF | HM | PT | 1 | HM | PT |

| Door | Detail | | | | HDW | |
|---|---|---|---|---|---|---|
| **Number** | **Head** | **Jamb** | **Sill** | **Fire Rating** | **Group** | **Notes** |
| 002 | DH-2 | DJ-2A/B | DS-2 | --- | 30 | --- |
| 010 | DH-2 | DJ-SA/B / DJ-3A/B | DS-2 | --- | 30 | --- |
| 011 | DH-1 | DJ-1 | DS-1 | 60 MIN. | 80 | --- |

   B. Door Schedule, add the following note:

      Note: Finish of all Doors and Frames shall be “PT”.

8. DRAWING 20 A-602, EQUIPMENT STORAGE FACILITY – DOOR DETAILS CONT.

   A. Details, delete the words “Insulated Hollow Metal Door” in all locations and replace with the words “Door (See Schedule)”.

9. DRAWING 10 S-103, GRADE LEVEL PLAN I

   A. Grade Level Plan I, add the following new note:

      3. Modular Type System Trench Drains furnished under SECTION 15400, PLUMBING SYSTEMS.

10. DRAWING 10 S-107, SLUDGE LOADING PAD

   A. Grade Level Plan, add the following new note:

      3. Modular Type System Trench Drain furnished under SECTION 15400, PLUMBING SYSTEMS.

11. DRAWING 00 D-006, PROCESS FLOW DIAGRAM I

   A. SBR Transfer Pump suction Header, add an 8” Plug Valve between SBR TP-1 and SBR TP-2.

   B. SBR Transfer Pump suction Header, add an 8” Plug Valve between SBR TP-2 and SBR TP-3.

12. DRAWING 10 D-102, FACILITY LOWER PLAN II and DRAWING 10 D-103, FACILITY LOWER PLAN III

    A. SBR Transfer Pump Suction Header, add an 8" Plug Valve between SBR TP-1 and SBR TP-2.

    B. SBR Transfer Pump Suction Header, add an 8" Plug Valve between SBR TP-2 and SBR TP-3.

**CHANGES TO BE MADE TO THE CONTRACT ATTACHMENTS**

None

**END OF ADDENDUM NO. 6**

**SECTION 00410**

**FORM OF GENERAL BID**

1. Proposal of _____ (hereinafter called "Bidder")*

   (_) a corporation, organized and existing under the laws of the State of _____

   (_) a partnership

   (_) a joint venture

   (_) a limited liability company

   (_) an individual doing business as _____

   *Check corporation, partnership, joint venture, LLC or individual as applicable.

2. To the Town of Orleans, MA (hereinafter called "Owner") regarding: Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486.

   The Bidder, in compliance with your invitation for bids for Downtown Area WWTF and Effluent Disposal having examined the plans and specifications with related documents and the site of the proposed work, attended the mandatory pre-bid conference, and being familiar with all of the conditions surrounding the construction of the proposed project including the availability of materials and labor, hereby proposes to furnish all superintendence, labor, services, materials, equipment, plant, machinery, apparatus, appliances, tools, supplies, bailing, shoring, removal, and all other things necessary to construct the project in accordance with the contract documents, within the time set forth below, and at the prices stated below. These prices are to cover all expenses incurred in performing the work required under the contract documents, of which this bid is a part.

   The Bidder hereby agrees that if selected as the Contractor it will commence work under this contract on or before a date to be fixed in the written “Notice to Proceed” given by the Owner to the Contractor and to fully complete the project within 654 calendar days, using not more than 411 working days.

   The Bidder further agrees to pay as liquidated damages the sum of $6,700 for each consecutive calendar day and/or working day thereafter during which the work as not been fully completed, as provided in the “Liquidated Damages” provisions of SECTION 00800 - SUPPLEMENTARY CONDITIONS.

3. Bidder acknowledges receipt of the following addenda:

| No. | Dated | No. | Dated |
|---|---|---|---|
| 1 | | 6 | |
| 2 | | 7 | |
| 3 | | 8 | |
| 4 | | 9 | |
| 5 | | 10 | |

4. Bidder agrees to perform all the work, including 10all incidental labor, materials and equipment necessary for the satisfactory completion of the work and in full compliance with the contents and intent of the Specifications and/or Drawings of the work.

5. Bid Proposal

   A. The BID PROPOSAL unit prices shall include all labor, materials, bailing, shoring, removal, overhead, profit, insurance, engineering costs, etc., to cover the finished work of the several kinds called for. The Bidder understands that all bids for this project are subject to the applicable bidding laws of the Commonwealth of Massachusetts, including General Laws Chapter 149, Section 44D and Section 44E, as amended.

   B. Bidder shall complete and submit the Proposal Form. The bidder is not allowed to submit a proposal that has been printed out and prices typewritten or written by hand. Failure to utilize the Microsoft Excel Proposal Form shall void the bid.

   C. Use of the Microsoft Excel Proposal Form

      1. Upon Opening the Microsoft Excel Proposal Form:

         a) A yellow bar will appear on the top of the screen labeled as "*Security Warning*"

         b) You must select the "*Enable Content*" button in order to properly access the file.

            1) This will enable macros in the excel file, as you must enable macros to properly view the file.

            2) If you do not enable macros, the excel document will be invalid.

         c) Manually enter the Bidder's Name in the blue box.

         d) Manually enter the Date in the blue box.

         e) Manually enter the unit cost in the blue boxes for each bid item. Allowances have already been prepopulated.

         f) The document will automatically update the cost estimates (Unit Price in Words; Extended Totals and Bid Total based on the user's unit cost input into the blue boxes for each bid item.

      2. In Order to Save the Proposal Form Document.

         a) The document must be saved as a file with macros enabled.

         b) Please save as the file type "Excel Macro-Enabled Workbook (*.xlsm)".

         c) If the file is saved incorrectly as a different file type, the document will be invalid.

      This process must be repeated for every time the document is opened and saved.

   D. Bidder shall print out in Landscape Format and submit the completed Microsoft Excel Proposal Form. In addition, Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format on a Thumb Drive.

   E. In the event of a discrepancy between the price in words and the price in figures, the words shall govern. In the event of a discrepancy between the total of the items and the total stated, the total of the items shall govern.

   F. In the event of a discrepancy between the printed out completed Microsoft Excel Proposal Form and the completed Microsoft Excel Proposal Form in ".xlsm" format, the printed out completed Microsoft Excel Proposal Form shall govern.

   G. Interlineation, alteration or erasure may void the bid.

   H. Bid security is attached in the sum of five percent (5%) of the total bid in accordance with the conditions of SECTION 00200 - INSTRUCTIONS TO BIDDERS. The bid security may become the property of the Owner in the event the contract and bond are not executed within the time set forth above.

   I. The undersigned states that no officer, agent or employees of the Owner directly or indirectly has a financial interest in this Bid.

6. The time period for holding bids, where Federal approval is not required is 30 days, Saturdays, Sundays and legal holidays excluded, after the opening of bids and where Federal approval is required, the time period for holding bids is 30 days, Saturdays, Sundays and holidays excluded after Federal approval.

7. State Taxes - Pursuant to M.G.L.c.62C, s49A I certify under the penalties of perjury that I, to my best knowledge and belief, have filed all state tax returns and paid all State Taxes required under law.
8. Award
   A. The contract will be awarded to the lowest responsible and eligible bidder.
   B. Bidder understands that the Owner reserves the right to reject any or all bids and to waive any informalities in the bidding as deemed to be in the best interest of the Owner.
   C. The Owner reserves the right to reject any bid in the event that any bid item or items are obviously unbalanced or appear to the Owner to be so unbalanced as to affect or to be liable to affect adversely any interest of the Owner.
   D. The Owner reserves the right to reject any or all bids if it deems it to be in its best interest to do so. The Owner reserves the right to award the Contract based on sufficiency of appropriated funds to complete the work.
   E. In the event the lowest bids from responsive and responsible bidders are tied, the following methods of breaking the tie shall be employed unless otherwise provided for in these bid documents: The bidder's names shall be entered on a slip of paper and placed in a hat. The award shall then be made to the bidder whose slip is drawn from the hat. The drawing of the slip from the hat shall be performed in the presence of the tied bidders unless they waive their right to be present in writing.
9. Within 10 days of receipt of the written notice of acceptance of this bid, the Bidder will execute the formal agreement attached in SECTION - AGREEMENT and provide the requisite payment and performance bonds and certificates of insurance.
10. The selected Contractor shall furnish a performance bond and a payment bond each in an amount at least equal to one hundred percent (100%) of the contract prices in accordance with SECTION 00610 - PERFORMANCE BOND, SECTION 00615 - PAYMENT BOND, and as stipulated in paragraph 5.01 of SECTION 00700 - GENERAL CONDITIONS of these specifications.
11. The Owner reserves the right to withhold the fair market value for work not completed in addition to the retainage on work completed. Unbalanced bid items will specifically be subject to review and to this potential withholding from periodic payment applications.
12. The Undersigned, as Bidder, declares as follows:
   A. The only parties interested in this BID as Principals are named herein;
   B. The Bidder has carefully examined the site of the proposed Work and fully informed and satisfied himself as to the conditions there existing, the character and requirements of the proposed Work, the difficulties attendant upon its execution and the accuracy of all estimated quantities stated in this BID, and has carefully read and examined the Drawings, the annexed proposed AGREEMENT and the Specifications and other Contract Documents therein referred to and knows and understands the terms and provisions thereof;
   C. This BID is made without collusion with any other person, firm, or corporation;
   D. No officer, agent, or employee of the Owner is directly or indirectly interested in this BID; and
   E. Understands that information relative to subsurface and other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) has been furnished only for his information and convenience without any warranty or guarantee, expressed or implied, that the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered will be the same as those shown on the Drawings or in any of the other Contract Documents and agrees that the Bidder shall not use or be entitled to use any such information made available to him through the Contract Documents or otherwise or obtained by him in his own examination of the site, as a basis of or ground for any claim against the Owner or the Engineer arising from or by reason of any variance which may exist between the aforesaid information made available to or acquired by him and the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered during the construction work, and has made due allowance therefore in this BID.
13. Equal Employment Opportunity/Affirmative Action Provisions - C.30 s39 (c)
   A. The undersigned hereby certifies that he is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work.

B. The undersigned bidder hereby certifies he/she will comply with the specific affirmative action steps contained in the Equal Employment Opportunity/Affirmative Action (EEO/AA) provisions of this Contract, including compliance with the Disadvantaged Business Enterprise provisions as required under these contract provisions. The contractor receiving the award of the contract shall incorporate the EEO/AA provisions of this contract into all subcontracts and purchase orders so that such provisions will be binding upon each subcontractor or vendor.

14. Non-Debarment - C.30 s39 (a)

A. The undersigned certifies under penalties of perjury that this bid is in all respects bonafide, fair and made without collusion or fraud with any other person. As use in this paragraph the "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

B. The undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder; and is not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency.

15. Suspension and Debarment

A. The EPA prohibits the use of suspended or debarred contractors and suppliers in SRF financed contracts. All SRF financed contracts and subcontracts must include the following language requiring compliance with 2 CFR 180 and 2 CFR 1532.

B. Bidders must fully comply with Subpart C of 2 CFR Part 180 and 2 CFR Part 1532, entitled responsibilities of Participants Regarding transactions (Doing Business with Other Persons). Contractors, subcontractors, or suppliers that appear on the Excluded Parties List System at www.usgovxml.com/dataservice.aspx?ds=EPLS are not eligible for award of any contracts funded by the Massachusetts State Revolving Fund.

16. Diesel Retrofit Program - The undersigned bidder hereby certifies he/she will comply with the Massachusetts Department of Environmental Protection's Diesel Retrofit Program Statement of Intent to Comply (see Appendix B).

17. The undersigned offers the following information as evidence of its qualifications to perform the work as bid upon according to all the requirements of the plans and specifications.

A. Have been in business under present name for _____years.

B. The Bidder shall state below what work of a similar character to that included in the proposed contract it has done within the last 1o years, and give references that will enable the Owner to judge its experience, skill and business standing (add supplementary page(s) if necessary).

**Project No. 1**

C. The names and addresses of all persons interested in the bid (if made by a partnership or corporation) as Principals, are as follows (add supplementary page(s) if necessary):

| Name | Address |
|---|---|
| | |
| | |
| | |
| | |

18. Pursuant to M.G.L. CH. 62C, Sec 49A, the undersigned Bidder certifies under the penalties of perjury that it is in compliance with all laws of the Commonwealth relating to taxes, reporting of employees and contractors, and withholding and remitting child support.

19. The undersigned Bidder hereby certifies that (1) it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work; and (2) that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee.

20. The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used in this paragraph the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity which sells materials, equipment or supplies used in or for, or engages in the performance of, the same or similar construction, reconstruction, installation, demolition, maintenance or repair work or any part thereof.

21. The undersigned further certifies under penalty of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, Section 25C (10) of Chapter 152 (workers' compensation) or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder.

# APPENDIX B

## APPENDIX B
## DIESEL RETROFIT PROGRAM

The Department of Environmental Protection ("DEP") has developed the Diesel Retrofit Program in response to increasing public health concerns with the emissions from diesel engines and vehicles.

**Diesel Construction Equipment Standard**

All diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") must have the following pollution control device installed unless exempt as provided below:

1. Emission control technology verified by U.S. Environmental Protection Agency ("EPA") or the California Air Resources Board ("CARB") for use with non-road engines;
2. Emission control technology verified by EPA or CARB for use with on-road engines provided that such equipment is operated with diesel fuel that has no more than 15 parts per million sulfur content (i.e. Ultra Low Sulfur Diesel fuel); or
3. Emission control technology certified by the manufacturer that such technology meets or exceeds the emission reductions provided by on-road or off-road emission control technology verified by EPA or CARB, i.e. that a Diesel Oxidation Catalyst is achieving the following minimum emission reductions: particulate matter 20%; carbon monoxide 40%; volatile organic compounds 50%; or a Diesel Particulate Filter is achieving a minimum of 85% emission reductions for particulate matter.

Emission control devices, such as oxidation catalysts or particulate filters, shall be installed on the exhaust system side of the Diesel Construction Equipment. The Contractor shall be responsible to insure that the emissions control technology is operated, maintained, and serviced as recommended by the manufacturer.

For the latest up-to-date list of EPA verified-technologies, see:
https://www.epa.gov/verified-diesel-tech
For the latest up-to-date list of CARB verified technologies, see:
http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm

**Exemptions**

The following Diesel Construction Equipment shall be exempt from the standard above. The Contractor shall include such Diesel Construction Equipment in the required recordkeeping:

1. Diesel Construction Equipment not owned by the Contractor and used in the performance of the work under this Contract for 30 calendar days (cumulative days but not necessarily consecutive) or less;
2. Unless otherwise exempt, additional Diesel Construction Equipment originally not anticipated to be used under the Contract or used as permanent replacement after the work under the Contract has commenced, for 15 calendars days from the date such Diesel Construction Equipment is brought on site;

DEP-DMS-B Page 1 of 6

pspkg 2018-07-11

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

3. Diesel Construction Equipment with an engine that meets the EPA particulate matter (PM) Tier emission standards in effect at the start of the Contract for non-road diesel engines for the applicable engine power group (e.g., as of January 1, 2009, a piece of Diesel Construction Equipment with a Tier 3 engine is exempt from meeting the standard until the piece of Diesel Construction Equipment is available with a Tier 4 engine) provided that if such emissions standards are superseded during the Contract then such Diesel Construction Equipment must be retrofitted in accordance with the standards above prior to the end of the Contract;
4. A large crane (e.g. a sky crane or link belt crane which is responsible for critical lift operations) if such device would adversely affect the operation of the crane provided the Contractor submits to the municipality's project engineer written technical justification documenting the adverse impact on operation; and
5. Diesel Construction Equipment that the project engineer has determined is necessary to control a compelling emergency including but not limited to, the need for rescue vehicles or other equipment to prevent harm to human beings or additional equipment required to address a catastrophic emergency such as structure collapse or imminent collapse. After the compelling emergency is controlled, such non-compliant equipment must be removed from the Contract site and may not be used in further performance of the work under this Contract. Meeting Contract deadlines is not a compelling emergency.

**Contractor Certification**

Each bidder shall submit as part of its bid, the Statement of Intent to Comply. Within 10 days of being notified that it has been awarded a contract, the bidder and each of its Contractors and Subcontractors shall submit a Diesel Retrofit Program Contractor Certification. Each such Certification shall contain the following information for each piece of Diesel Construction Equipment:

1. Contractor or Subcontractor name;
2. Equipment type, make, model;
3. Vehicle Identification Number or VIN;
4. Engine model and year of manufacture;
5. Engine HP rating;
6. Emission Control Device (ECD) type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
7. ECD make, model, and manufacturer;
8. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
9. ECD installation date;
10. Type of fuel to be used; and
11. Whether the equipment is owned or rented.

**Recordkeeping**

Each Contractor and Subcontractor shall maintain detailed records of all Diesel Construction Equipment used under the Contract, including the dates and duration times the Diesel Construction Equipment is

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

used at the Contract site. Records shall be available for inspection by DEP. Each Contractor and Subcontractor shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site.

For Diesel Construction Equipment that has an emissions control device with a manufacturer's certification, the Contractor shall maintain records of all supporting emissions test data and test procedures. If upon review the emissions reductions are not supported by the test data and test procedures, then the emissions control device may need to be replaced with a compliant retrofit device.

**Project Regulatory Agreement**

The following language shall be included section 4 (Covenants of the Borrower) of the municipality's Project Regulatory Agreement if it receives funds from the State Revolving Fund:

> The Borrower shall require each Contractor and Subcontractor to submit the Diesel Retrofit Program Contractor Certification to DEP and the Borrower prior to commencing work on the Project. The Borrower shall not allow any Contractor or Subcontractor to commence work at the Project site prior to submitting such Certification.

**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

***Each Contractor and its Subcontractor(s) must sign and submit this form to DEP DMS project engineer, 5th Floor, MassDEP, One Winter Street, Boston, MA 02108 and the Municipality within 10 days after the Contractor is notified that it is awarded the Contract.***

**Local Governmental Unit** _____ **SRF Project No.** _____

**Contract No.** _____ **Contact Title** _____

**Contractor** _____

I, _____, an authorized signatory for _____, whose principal place of business is at _____ do hereby certify that any and all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") have pollution control devices, such as oxidation catalysts or particulate filters, installed on the exhaust system side of the diesel combustion engine equipment in accordance with the Diesel Retrofit Program Standard.

I am submitting on behalf of _____ a list of all said Diesel Construction Equipment, labeled "Diesel Retrofit List," that will be used in connection with this Contract by _____. I hereby certify that the information on the attached Diesel Retrofit List is correct and accurate as of the date of signature. The List includes the following information for each piece of Diesel Construction Equipment:

1. Equipment type, make, model;
2. Vehicle Identification Number or VIN;
3. Engine model and year of manufacture;
4. Engine HP rating;
5. Emission Control Device ("ECD") type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
6. ECD make, model, and manufacturer;
7. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
8. ECD installation date;
9. Type of fuel to be used; and
10. Whether the equipment is owned or rented.

**APPENDIX B** (cont.)

**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

_____shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site. _____shall maintain detailed records of all Diesel Construction Equipment used at the Contract site, including the dates and duration times the Diesel Construction Equipment is used at the Contract site. _____ shall make such records available for inspection by DEP. _____shall ensure that the emissions control technology for each piece of Diesel Construction Equipment is operated, maintained, and serviced as recommended by the manufacturer. _____ shall retrofit prior to the end of the Contract any Diesel Construction Equipment no longer exempt from meeting the Diesel Construction Equipment Standard under exemption 3 (because it had an engine that met the EPA particulate matter (PM) Tier emission standards currently in effect at the start of the Contract for non-road diesel engines for the applicable engine power group and such emissions standards were superseded during the Contract).

I acknowledge that this certificate is being furnished as a requirement under this Contract and is subject to applicable State and federal laws, both criminal and civil. Signed under pains and penalty of perjury on this date _____.

## APPENDIX E
## CONSTRUCTION BID SPECIFICATIONS
## SPECIAL PROVISIONS FOR DISADVANTAGED BUSINESS ENTERPRISES
## MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
### DIVISION OF MUNICIPAL SERVICES

DISADVANTAGED BUSINESS ENTERPRISE PROGRAM BACKGROUND

In May 2008 a United States Environmental Protection Agency (EPA) rule became effective that changed the Minority Business Enterprise (MBE) and Women Business Enterprise (WBE) Program to a Disadvantaged Business Enterprise (DBE) Program.

For firms to qualify under the old MBE/WBE program they needed to be socially disadvantaged and had to be certified by the Supplier Diversity Office (SDO). Under the new DBE rule, the firms must be both **socially** and **economically** disadvantaged, **citizens of the United States**, and certified as a DBE. Women and certain minorities are presumed to be socially disadvantaged. The economic disadvantage is measured by the owner's initial and continuing personal net worth of less than $1,320,000.

Because the Clean Water Act requires the use of MBEs and WBEs, these firms will still be utilized in the State Revolving Fund (SRF) Loan Program, but they must also be certified as DBEs.

SDO will continue to be the certifying agency for the SRF program. SDO certifies firms under the federal Department of Transportation program, which is acceptable for use in the SRF program. An additional form has been added to the DBE package to verify that DBEs are owned or controlled by United States citizens.

BID SPECIFICATIONS

**I.** In this contract, the percentage of business activity to be performed by disadvantaged business enterprise(s) (DBE) shall not be less than the following percentages of the total contract price or the percentage submitted by the contractor in the Schedule of Participation, whichever is greater:

Disadvantaged MBE (D/MBE) 4.2% Disadvantaged WBE (D/WBE) 4.5%

EEO-DEP-E Page 1 of 16

pspkg 2018-07-11

## II. DEFINITIONS

For the purpose of these provisions, the following terms are defined as follows:

A. Awarding Authority – Entity that awards a prime contract under a State Revolving Fund loan.

B. Bidder - Any individual, partnership, joint venture, corporation, or firm submitting a price, directly or through an authorized representative, for the purpose of performing construction or construction related activities under a Contract.

C. Certified DBE – A DBE certified by the United States Small Business Administration, under its 8(a) Business Development Program (13 CFR part 124, subpart A) or its Small Disadvantaged Business Program (13 CFR part 124, subpart B); The United States Department of Transportation (DOT), under its regulations for Participation by DBSs in DOT programs (49 CFR parts 23 and 26); or SDO in accordance with 40 CFR part 33; provided that the certification meets the U.S. citizenship requirement under 40 CFR §33.202 or §33.203.

D. Compliance Unit - A subdivision of MassDEP's Affirmative Action Office designated to ensure compliance under these provisions.

E. Contractor - Any business that contracts or subcontracts for construction, demolition, renovation, survey, or maintenance work in the various classifications customarily used in work and that is acting in this capacity under the subject contract.

F. Construction Related Services - Those services performed at the work site ancillary to, and/or in support of, the construction work, such as hauling, trucking, equipment operation, surveying or other technical services, etc. For the purposes hereof, supply and delivery of materials (e.g. pre-cast concrete elements) to the site by a supplier who has manufactured those goods, or substantially altered them before re-sales shall be considered as "construction related services

G. Construction Work - The activities at the work site, or labor and use of materials in the performance of constructing, reconstructing, erecting, demolishing, altering, installing, disassembling, excavating, etc, all or part of the work required by the Contract Documents.

H. Disadvantaged Business Enterprise (DBE) - An entity owned or controlled by a socially and economically disadvantaged individual as described by Public Law 102-389 (42 U.S.C. 4370d) or an entity owned and controlled by a socially and economically disadvantaged individual as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note); a Small Business Enterprise (SBE); a Small Business in a Rural Area (SBRA); or a Labor Surplus Area Firm (LAF), a Historically Underutilized Business (HUB) Zone Small Business Concern, or a concern under a successor program.

I. Equipment Rental Firm - A firm that owns equipment and assumes actual and contractual responsibility for renting said equipment to perform a useful function of the work of the contract consistent with normal industry practice

J. Good Faith Efforts – The race and/or gender neutral measures described in 40 CFR 33, subpart C.

K. HUBZone - A historically underutilized business zone, which is an area located within one or more qualified census tracts, qualified metropolitan counties, or lands within the external boundaries of an Indian reservation.

L. HUBZone small business concern - A small business concern that appears on the List of Qualified HUBZone Small Business Concerns maintained by the Small Business Administration.

M. Joint Venture - An agreement between SDO certified DBE and a non-DBE or non-DBE controlled enterprise.

1. A pairing of companies will be considered a DBE joint venture if the SDO certified DBE which is part of the relationship has more than 51% of the profits that are derived from that project.

2. A joint venture between a certified DBE subcontractor and a non DBE subcontractor, in which the DBE for that proportion of the joint venture's contract equal to the DBE participation in the joint venture.

3. Whenever a general bid is filed by a joint venture with a certified DBE participant in the joint venture that does not exercise more than 51% control over management and profits, that joint venture shall be entitled to credit as a DBE for that portion of the joint venture's contract equal to the DBE participation in the joint venture. Minority As deemed by SDO.

N. Labor surplus area firm (LSAF) - A concern that together with its first-tier subcontractors will perform substantially in labor surplus areas (as identified by the Department of Labor in accordance with 20 CFR part 654). Performance is substantially in labor surplus areas if the costs incurred under the contract on account of manufacturing, production or performance of appropriate services in labor surplus areas exceed 50 percent of the contract price.

O. Letter of Intent – Certified document signed by the principal(s) of the DBE with respect to the work to be performed under contract.

P. Local Government Unit (LGU) – A city, town, or municipal district which applies for a loan under the Clean Water Trust Program.

Q. Material Supplier – A vendor certified by SDO as a DBE in sales to supply industry from an established place of business or source of supply, and that vendor.

1. Manufactures goods from raw materials, or substantially utilizes them in the work, or substantially alters them before resale, entitling the general contractor to DBE credit for 100% of the purchase order.

2. Provides and maintains a storage facility for materials utilized in the work, entitling the general contractor to DBE credit for 10% of the purchase order

R. Minority and Women Business Enterprise (M/WBE) – Any business concern certified by the SDO as a bona-fide M/WBE. A bona-fide M/WBE is a business whose minority group/women ownership interests are real, which have at least 51% ownership and control over management and operation.

S. Percent of Total Price – Is the percentage to be paid to the DBE, work they perform, as compared to the total bid price

T. Recipient - An agency, person or political subdivision which has been awarded or received financial assistance by the Trust or MassDEP.

U. Small business, small business concern or small business enterprise (SBE) - A concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding, and qualified as a small business under the criteria and size standards in 13 CFR part 121.

V. Small business in a rural area (SBRA) - A small business operating in an area identified as a rural county with a code 6-9 in the Rural-Urban continuum Classification Code developed by the United States Department of Agriculture in 1980.

W. SDO – The Supplier Diversity Office.

X. Subcontractor – A company, firm, joint venture, or individual who enters into an agreement with a contractor to provide services pursuant to an award of financial assistance.

Y. Total Contract Price – The total amount of compensation to be paid for all materials, work or services rendered in the performance of the contract

Z. Trust – The Massachusetts Clean Water Trust established by M.G.L. c.29.

## III. REQUIREMENTS FOR CONTRACT AWARD

DBE packages must be submitted by the two lowest bidders on the project. Following bid opening, the LGU shall notify the two lowest bidders to submit DBE packages to the LGU or the LGUs consultant, as directed. By the close of business on the third business day after notification, the two lowest bidders, including a bidder who is a MBE, WBE or DBE, shall submit the following information:

A. A Schedule of Participation (Form EEO-DEP-190). The Schedule of Participation shall list those certified DBEs the bidder intends to use in fulfilling the contract obligations, the nature of the work to be performed by each certified DBE subcontractor and the total price they are to be paid.

   1. A listing of bona-fide services such as a professional, technical, consultant or managerial services, assistance in the procurement of essential personnel, facilities, equipment, materials, or supplies required for performance of the contract, and reasonable fees or commissions charged.

   2. A listing of haulers, truckers, or delivery services, not the contractors, including reasonable fees for delivery of said materials or supplies to be included on the project.

B. A Letter of Intent (Form EEO-DEP-191) for each DBE the bidder intends to use on the project. The Letter of Intent shall include, among other things, a reasonable description of the work the certified DBE is proposing to perform and the prices the certified DBE proposes to charge for the work. A Letter of Intent shall be jointly signed by the certified DBE and the General Contractor who proposes to use them in the performance of the Contract.

C. Each DBE must also sign and return the DBE Certification of United States Citizenship form to verify that the firm is owned or controlled by a United States citizen.

D. The SDO "DBE Certification" as prepared by each certified DBE.

E. A completed Request for Waiver form and backup documentation should the goals not be achieved (See IV below).

## IV. REQUIREMENTS FOR MODIFICATION OR WAIVERS.

The bidder shall make every possible effort to meet the minimum requirements of certified DBE participation. If the percentage of DBE participation submitted by the bidder on its Schedule of Participation (EEO-DEP-190) does not meet the minimum requirements, the bid may be rejected by the Awarding Authority and found not to be eligible for award of the contract.

In the event that the bidder is unable to meet the minimum requirements of DBE participation, the bidder shall submit with his/her submittal required in Section III. Requirement of Contract Award a Request for Waiver form (EEO-DEP-490). The Awarding Authority shall review the waiver request to determine if the request should proceed. If approved by the Awarding Authority, the Awarding Authority shall submit the waiver request and supporting documentation, with a recommendation to MassDEP within five days of receipt of the Request for Waiver. MassDEP in conjunction with the project manager, Compliance Unit, will determine whether the waiver will be granted.

The waiver request shall include detailed information as specified below to establish that the bidder has made a good faith effort to comply with the minimum requirements of DBE participation specified in Part I. In addition, the bidder must show that such efforts were undertaken well in advance of the time set for opening of bids to allow adequate response. A waiver request shall include the following:

A. A detailed record of the effort made to contact and negotiate with the certified DBE, including, but not limited to:

   1. names, addresses and telephone numbers of all such companies contacted;

   2. copies of written notices(s) which were sent to certified DBE potential subcontractors, prior to bid opening;

   3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

   4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price;

   5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/ women-focused media detailing the opportunities for participation.

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after MassDEP receives all required information and documentation, it shall make a decision in writing, whether the waiver is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing. If the waiver request is denied, the bid shall be rejected by the Awarding Authority, or the contract will be determined ineligible for SRF funding.

   If a Request for Waiver is denied by MassDEP and the bid is rejected by the Awarding Authority, the Awarding Authority may then move to the second bidder on the project. At the Awarding Authority's discretion, it may collect a DBE package from the third bidder on the project.

## V. DISADVANTAGED BUSINESS ENTERPRISES PARTICIPATION

A. Reporting Requirements

1. The Contractor's utilization of certified DBEs will be documented based upon submittal of the LGU's monthly Payment Requisitions as reported on Form-2000. The Form-2000 form will show all certified DBEs performing work on the project regardless of any billing activity for that month. For auditing and accounting purposes, the Contractor periodically may be required to submit copies of canceled checks verifying that payments have been made to the certified DBE as listed on the schedule. The Contractor may also be required to submit current schedules on utilization of all DBEs to indicate when their services will commence and be billed for.

2. During the life of the Contract, the Contractor's fulfillment of the percentage requirements in Part I shall be determined with reference to the Contract price as follows:

   A. If the price in the Contract executed exceeds the base bid price (e.g., because an alternate was selected or because unit prices were used in awarding the Contract), the Contractor shall submit for approval by MassDEP a revised Schedule of Participation by certified DBEs satisfying the percentage requirements and such other information concerning additional DBE participation as may be requested by MassDEP.

   B. If the Contract price increases after execution due to change orders or other adjustments, MassDEP may require the Contractor to subcontract additional work or to purchase additional goods and services from certified DBEs up to the percentages stated in Part I.

## VI. COMPLIANCE

A. If the Schedule or any of the Letters of Intent are materially incomplete or not submitted in a timely manner, the LGU may rescind its vote of award; treat the bid informal as to substance and reject the bid. If the bid is incomplete in any other respect than the Schedule the LGU with the approval of MassDEP may waive the informalities upon satisfactory completion of the required information by the Contractor and the certified DBE as applicable.

B. If the LGU finds that the percentage of certified DBE participation submitted by the contractor on its Schedule does not meet the percentage requirement in Part I, it shall rescind its vote of award and find such contractor not to be eligible for award of the contract.

C. The Contractor shall not perform with its own organization, or subcontract to any other primary or subcontractor any work designated for the named certified DBEs on the schedule submitted by the Contractor under Part III without the approval of MassDEP.

D. A Contractor's compliance with the percentage requirement in Part I shall continue to be determined by reference to the required percentage of the total contract price as stated in Section I even though the total of actual contract payments may be greater or less than the bid price.

E. If the Contractor for reasons beyond its control cannot comply with Part III in accordance with the Schedule submitted under Part III, Section B, the contractor must submit to MassDEP as soon as they are aware of the deficiency, the reason for its inability to comply. Proposed revisions to the Schedule stating how the contractor intends to meet its obligations under these conditions must be submitted within ten (10) working days of notification.

F. If the Contractor is becomes aware by any means that that DBE is no longer certified, the Contractor shall immediately notify MassDEP. The Contractor shall use good faith efforts to retain a substitute certified DBE.

G. If a certified DBE listed by the bidder in its Schedule of M/WBE contractors fails to obtain a performance or payment bond requested by the bidder, said failure shall not entitle the bidder to avoid the requirements of Part III (A). After a bidder has been awarded the contract, he shall not change the certified DBE listed in its Schedule at the time of the award or make any other such substitutions without the written approval of MassDEP.

## VII. SANCTIONS

A. If the Contractor does not comply with the terms of these Special Provisions, the Awarding Authority may (1) suspend any payment for the work that should have been performed by a certified DBE pursuant to the schedule, or (2) require specific performance of the Contractor's obligation by requiring the Contractor to subcontract with a DBE for any contract or specialty item at the contract price established for that item in the proposal submitted by the Contractor.

B. To the extent that the Contractor has not complied with the terms of these Special Provisions, the Awarding Authority may retain in connection with Estimates and Payments an amount determined by multiplying the bid price of this contract by the percentage in Section I, less the amount paid to DBE's for work performed under the contract and any payments already suspended under VII A.

C. The Awarding Authority may suspend, terminate or cancel this contract, in whole or in part, or may call upon the Contractor's surety to perform all terms and conditions in the contract, unless the contractor is able to demonstrate his compliance with the terms

of these Special Provisions, and further deny to the Contractor, the right to participate in any future contracts awarded by the Awarding Authority for a period of up to three years.

D. In any proceeding involving the imposition of sanctions by the Awarding Authority, no sanctions shall be imposed if the Awarding Authority finds that the contractor has taken every possible measure to comply with these Special Provisions or that some other justifiable reason exists for waiving these Special Provisions in whole or in part.

E. The contract shall provide such information as is necessary in the judgment of the Awarding Authority to ascertain its compliance with the terms of these Special Provisions.

F. A contractor shall have the right to request suspension of any sanctions imposed under this section upon demonstrating that he is in compliance with these Special Provisions.

MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
DIVISION OF MUNICIPAL SERVICES

## SCHEDULE OF PARTICIPATION FOR SRF CONSTRUCTION

**Project Title:** _____ **Project Location:** _____

**Disadvantaged Minority Business Enterprise Participation in the SRF Loan Work**

| Name & Address of D/MBE | Nature of Participation | Dollar Value of Participation |
|---|---|---|
| 1. | | |
| 2. | | |
| 3. | | |
| | **Total D/MBE Commitment:** | **$** |
| **Percentage D/MBE Participation** = (Total D/MBE Commitment) / (Bid Price) = | | **%** |

**Disadvantaged Women Business Enterprise Participation in the SRF Loan Work**

| Name & Address of D/WBE | Nature of Participation | Dollar Value of Participation |
|---|---|---|
| 1. | | |
| 2. | | |
| 3. | | |
| | **Total D/WBE Commitment:** | **$** |
| **Percentage D/WBE Participation** = (Total D/WBE Commitment) / ( Bid Price) = | | **%** |

The Bidder agrees to furnish implementation reports as required by MassDEP to indicate the D/MBEs and D/WBE(s) which it has used or intends to use. Breach of this commitment constitutes a breach of the contract.

Name of Bidder: _____

Date: _____ By: _____
Signature

NOTE: Participation of a DBE may be counted in only their certified category; the same dollar participation cannot be used in computing the percentage of D/MBE participation and again of D/WBE participation.

## DBE CERTIFICATION OF UNITED STATES CITIZENSHIP

For the SRF program, under the EPA Disadvantage Business Enterprise (DBE) Rule, a DBE must be owned or controlled by a socially and economically disadvantaged person that is also a **citizen of the United States** (*See* 40 CFR 33.202). "Ownership" is defined at 13 CFR 124.105 and "control" is defined at 13 CFR 124.106.

DBEs are certified for the SRF program through the Supplier Diversity Office using the federal Department of Transportation (DOT) DBE rules. EPA allows the use of DBEs certified under the DOT rules as long as they are also United States citizens. To ensure compliance with the EPA rule, MassDEP must verify United States citizenship through the completion of the following form for each DBE used on the project.

SRF Project Number _____

Contract Number _____

Contract Title _____

DBE Subcontractor _____

The undersigned, on behalf of the above named DBE subcontractor, hereby certifies that the DBE firm is either owned or controlled by a person or persons that are citizens of the United States.

**REQUEST FOR WAIVER FOR SRF CONSTRUCTION**

Upon exhausting all known sources and making every possible effort to meet the minimum requirements for DBE participation, the Bidder may seek relief either partially or entirely from these requirements by submitting a completed waiver package by the close of business on the third business day after notification by the LGU. Failure to comply with this process shall be cause to reject the bid thereby rendering the Bidder not eligible for award of the contract.

General Information

Project Title: _____ Project Location: _____

Bid Opening (time/date) _____

Bidder: _____

Mailing Address: _____

Contact Person: _____ Telephone No. (  ) _____ Ext. _____

Minimum Requirements

The bidder must demonstrate that good faith efforts were undertaken to comply with the percentage goals as specified. The firm seeking relief must show that such efforts were taken appropriately in advance of the time set for opening bid proposals to allow adequate time for response(s) by submitting the following:

A. A detailed record of the effort made to contact and negotiate with disadvantaged minority and/or woman owned businesses, including:

1. names, addresses, telephone numbers and contact dates of all such companies contacted;

2. copies of written notice(s) which were sent to DBE potential subcontractors prior to bid opening;

3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price.

5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/women-focused media detailing the opportunities for participation;

EEO-DEP-490C Page 1 of 2

EEO-DEP-E Page 14 of 16

pspkg 2018-07-11

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after submission of all required information and documentation, MassDEP shall make a determination, in writing, whether the waiver request is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing.

CERTIFICATION

The undersigned herewith certifies that the above information and appropriate attachments are true and accurate to the best of my knowledge and that I have been authorized to act on behalf of the bidder in this matter.

**CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS**

1. GENERAL

   A. Sub-Bid Opening – April 22, 2020 at 11:00 a.m.

   B. General Bid Opening – April 29, 2020 at 2:00 pm.

   C. The Bid and Sub-bid Forms in Excel Format may be downloaded from the Tighe & Bond website. You must click on the "pre-qualified" button to access the Forms. Once obtained, in most cases a yellow bar will appear on the top of the screen labeled as "Security Warning". If this occurs, you must select the "Enable Content" button in order to properly utilize the file.

   D. No Pre-Filed Submission of a Sub-bid Form is required on this Project.

2. ADDENDUM NO. 6

   A. Subbid Results, delete the second sentence in its entirety and replace with the following new sentence:

      The addendum will instruct the General Contractor Bidders to carry a specific dollar amount on the Bid Form for subtrades in which the Owner: (a) rejects all sub-bids in a filed sub-bid category; (b) does not receive any subbids in a filed sub-bid category; and/or (c) only receives sub-bids restricted to the use of one or more general bidders, in a particular category.

3. SECTION 00100, ADVERTISEMENT FOR BIDS

   A. Page 00100-1, Paragraph 3.a, first subparagraph, delete the words "…until 2:00 p.m. prevailing time, on April 15, 2020 at which time and place…" and replace with the words "…until 2:00 p.m. prevailing time, on April 29, 2020 at which time and place…".

   B. Page 00100-1, Paragraph 3.b, first subparagraph, delete the words "…until 11:00 a.m. prevailing time, on April 1, 2020 at which time and place…" and replace with the words "…until 11:00 a.m. prevailing time, on April 22, 2020 at which time and place…".

4. SECTION 00410, FORM OF GENERAL BID

   A. Page 00410-1, Paragraph 5., delete subparagraph B. in its entirety and replace with the following new subparagraph:

      B. Bidder shall complete, printout in Landscape Format, and submit the Proposal Form with a combination of typed and handwritten entries. Failure to utilize the Microsoft Excel Proposal Form shall void the bid.

   B. Page 00410-2, Paragraph 5., delete subparagraph D. in its entirety and replace with the following new subparagraph:

      D. Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com). The bidder is not allowed to submit a Microsoft Excel Proposal Form that has been prices typewritten or written by hand.

   C. Page 00410-6, Item 22., delete Paragraph J. in its entirety and replace with the following new paragraph:

      J. Not Used.

   D. Page 00410-6, Item 22., delete Paragraph K. in its entirety and replace with the following new paragraph:

      K. Not Used

   E. Page 00410-6, Item 22., delete Paragraph O. in its entirety and replace with the following new paragraph:

      O. Not Used

   F. Delete "Orleans_MA-2019-01-Bid Form_Add_6-03-12-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_7-03-24-20" in both hard copy and Microsoft Excel format.

5. SECTION 00420, FORM OF SUBBID

   A. Delete "Orleans_MA-2019-01-SubBid Form_Add_5-02-10-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-SubBid Form_Add_7-03-24-20" in both hard copy and Microsoft Excel format.

6. SECTION 00520, AGREEMENT, ATTACHMENT A - ADDITIONAL FORMS TO BE SUBMITTED WITH THE BID, PART A - INSURANCE REQUIREMENTS FOR INCLUSION IN ALL SPECIFICATIONS AND CONTRACTS

   A. Page 00520A-3, delete Item 2) in its entirety and replace with the following new item:

      2) X - "Broad Form" Comprehensive General Liability including, but not limited to, Bodily Injury, Personal Injury and Property Damage Liability, Full Contractual Liability and liability arising from Explosion, Collapse and Underground Damage and all other applicable insurance necessary to carry out the contractual obligation to proceed under the contract. Provide a minimum limit of liability of $5,000,000.00 utilizing: (a) a standalone certificate or (b) a minimum $2,000,000.00 General Liability Policy combined with Umbrella Policy.

   B. Page 00520A-3, delete Item 4) in its entirety and replace with the following new item:

      4) X - Builder's Risk - Amount of the General Contractor's Contract including a flood sublimit of $1,000,000.

   C. Page 00520A-3, delete Item 5) in its entirety and replace with the following new item:

      5) ___ - Professional Liability/ Errors and Omissions - Not Required.

7. SECTION 01020, ALLOWANCES

   A. Page 01020-2, ARTICLE 1.05 - ALLOWANCES FOR PRODUCTS, Paragraph C., Scheduled Allowances, add the following new allowance:

**SCHEDULED ALLOWANCES**

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 9 | Compressed Air System | $30,000 | A-1 |

8. SECTION 01025, MEASUREMENT AND PAYMENT

   A. Page 01025-7, PART IV – ALTERNATIVES, ITEM A-2 – - FIBER OPTIC CONDUITS AND HANDHOLES, add the following to the end of Paragraph A.:

      The General Contractor on Contract 2019-02, Downtown Area Collection System and Pumping Stations will provide the Fiber Optic Conducts and Handholes between the Limit-of-Work shown of DRAWING 00 C-106, YARD PIPING PLAN II & PROFILE – WWTF to Pumping Station No. 1 to the Limit-of-Work shown on DRAWING 00C-203, YARD PIPING PLAN – EFFLUENT DISPOSAL.

      The General Contractor and Electrical Contractor on Contract 2019-01, Downtown Area WWTF and Effluent Disposal will provide the Fiber Optic Conducts and Handholes within the WWTF Site and within the Effluent Disposal Site. The Electrical Contractor on Contract 2019-01, Downtown Area WWTF and Effluent Disposal will provide the Fiber Optic Cables in the Fiber Optic Conduits and Handholes provided under both Contracts as shown of DRAWING 10 E-003, WWTF – ELECTRICAL SITE PLAN – FIBER NETWORK I and DRAWING 10 E-004, WWTF – ELECTRICAL SITE PLAN – FIBER NETWORK II.

   B. Page 01025-8, PART IV – ALTERNATIVES, ITEM A-3 – TRACER WIRE, add the following to the end of Paragraph A.:

      The Work of this section shall be provided by the General Contractor.

   C. Page 01025-8, PART IV – ALTERNATIVES, ITEM A-4 – SBR TRANSFER PUMP NO. 4, add the following to the end of Paragraph A.:

      All piping, valves and fittings and the like shown in “gray” or “dashed” on the Drawing 10 D-102 - Facility Lower Plan II shall be included as part of the scope of work of Bid Item A-4.

   D. Page 01025-8, PART IV – ALTERNATIVES, ITEM A-5 – SBR BLOWER NO. 4, add the following to the end of Paragraph A.:

      All piping, valves and fittings and the like shown in “gray” or “dashed” on the Drawing 10 D-103 - Facility Lower Plan III shall be included as part of the scope of work of Bid Item A-5.

   E. Page 01025-8, PART IV – ALTERNATIVES, ITEM A-6 – SBR AERATION DIFFUSER GRIDS, add the following to the end of Paragraph A.:

      The Base Bid includes two SBR Diffuser Grids. Bid Item A-6 includes of one additional diffuser grid per SBR tank (2 total). All piping, valves and fittings and the like shown in “bold” on the drawings shall be provided as part of the Base Bid. The Work of Bid Item A-6 does not require electrical work.

9. SECTION 01400, QUALITY ASSURANCE

   A. Page 01400-3, ARTICLE 1.08 – QUALITY CONTROL AND CONTROL OF WORK, add the following new paragraph to the end of the article:

      K. The Contractor’s Project Superintendent, meeting the same QC Manager qualifications, may also act as the QC Manager.

10. SECTION 01600, CONTROL OF MATERIALS

   A. Page 01600- 5, ARTICLE 1.10 – WARRANTY, add the following new paragraph:

      D. Unless otherwise specified in the individual equipment sections that equipment warranties are limited to 12 months from the date of Substantial Completion.

11. SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS

   A. Delete the section in its entirety and replace with the new section as attached.

12. SECTION 01680, PHYSICAL CHECKOUT; SHOP, FIELD AND FUNCTIONAL TESTING

   A. Page 01680-1, ARTICLE 1.01 – SCOPE, add the following new paragraph:

      D. This section shall apply to all components of the facility except as otherwise specified in other sections.

13. SECTION 02444, CHAIN LINK FENCE AND GATES

A. Page 02444-4, ARTICLE 2.01 – MATERIALS, Paragraph H., delete subparagraph 6.k. in its entirety and replace with the following new subparagraph:

k. Gate Access System Controls:

1) Provide gate access system with pushbutton to be located at WWTF Control Room to remotely open/close gate system. Provide gate control panel with hardwired contacts for use with remote pushbutton.

2) Provide (2) keypads for local open/close control of gate. Provide (1) keypad for mounting at passenger car height, and (1) keypad for mounting at truck height. Keypads shall be hardwired to gate control panel for local open/close control of gate. Keypads shall be programmable.

3) Provide intercom system for 2-way remote communication including (1) intercom to be located at WWTF Control Room, (1) intercom for mounting at passenger car height, and (1) intercom for mounting at truck height.

4) The gate shall fail-safe open upon loss of power. In addition, gate shall have a manual by-pass of the gate controller.

B. Page 02444-4, ARTICLE 2.01 – MATERIALS, Paragraph H., delete subparagraph 6.m. in its entirety and replace with the following new subparagraph:

m. Ten (10) openers shall be provided to be used by the Owner during construction. Openers shall be compact, one-button decodable transmitter remote control.

C. Page 02444-3, ARTICLE 2.01 – MATERIALS, Paragraph H., delete subparagraph 6.n. in its entirety and replace with the following new subparagraph:

n. The gate controls shall be reprogrammed following completion of the Project. Twenty (20) openers shall be provided to the Owner. Openers shall be compact, one-button decodable transmitter remote control.

14. SECTION 02520, WICK CONSTRUCTION AND TESTING

A. Page 02520-2, ARTICLE 1.01 - SCOPE, Paragraph E., delete Hub Foundation information and replace with the following new information:

Hub Foundation Co., Inc.
139 Billerica Road
Chelmsford, MA 01824
Phone: 978-456-2387
http://hubfoundation.com/

B. Page 02520-2, ARTICLE 1.01 - SCOPE, add the following as new Paragraph F.:

F. Specialty Contractor utilized for the installation of the existing Wick is:

Desmond Well Drilling, Inc.
5 Rayber Road
Orleans, MA 02653
Phone: 508-240-1000
https://desmondwelldrilling.com/

15. SECTION 02725, MANHOLES, CATCH BASINS, HANDHOLES, AND PULL BOXES

A. Page 02725-4, SECTION 2.06 – MANHOLE FRAMES AND COVERS, delete Item B. and replace with the following new item:

B. Bolted and gasketed manhole frames and covers shall be in accordance with the detail shown on the drawings. The Owner has standardized on this manhole frame and cover and therefore no substitutes are allowed.

16. SECTION 02890, TRACER WIRE

    A. Page 02890, ARTICLE 1.01 – SCOPE, add the following new paragraph:

        C. The Work of this section shall be provided by the General Contractor.

17. SECTION 03300, CAST-IN-PLACE CONCRETE

    A. Page 03300-22, ARTICLE 3.10 – CONCRETE FINISHES, Table 03300-4, Finish Designation, add the following new sentence to the Area Applied:

        Minimum liquid level elevation of the SBR's is 69.00.

18. SECTION 03345, CONCRETE FLOOR TREATMENT

    A. Page 03345-1, ARTICLE 1.01 - SCOPE, add the following new paragraph:

        C. The Work of this section shall be provided by the General Contractor.

19. SECTION 04200, UNIT MASONRY AND ACCESSORIES

    A. Page 04200-2, ARTICLE 1.01, SCOPE, Paragraph B., delete subparagraph 5., in its entirety and replace with the following new subparagraph:

        5. Cavity wall insulation including spray foam insulation shall be provided by the filed sub-bid subcontractor in accordance with SECTION 07200, BUILDING INSULATION.

    B. Page 04200-2, ARTICLE 1.01, SCOPE, Paragraph B., delete subparagraph 19., in its entirety and replace with the following new subparagraph:

        19. Air/Vapor Barrier Membrane. The Air/Vapor Barrier Membrane shall be provided by the filed sub-bid subcontractor. The entire cavity (stone veneer and siding) shall receive the air/vapor barrier against the CMU.

20. SECTION 05500, MISCELLANEOUS METAL

    D. Page 05500-2, ARTICLE 1.00, SUBBID REQUIREMENTS, Paragraph D., add the following Reference Drawing, 99 C-605 with regards to the hatches and 0.33-inch thick steel plates.

    E. Page 05500-11, ARTICLE 2.12 - FALL PREVENTION SYSTEM FOR LADDERS, delete the article in its entirety and replace with the following new article:

        ARTICLE 2.12 - FALL PREVENTION SYSTEM FOR LADDERS – Not Used

    F. Page 05500-12, delete ARTICLE 2.17 – Z-GIRT SYSTEM, in its entirety.

21. SECTION 06200, CARPENTRY

    A. Page 06200-5, add the following new ARTICLE 2.06 – Z-GIRT SYSTEM:

        2.06 – Z-GIRT SYSTEM

            A. Basis of Design: ThermaFast Z-Track

            B. Materials Properties

                i. Design loads: Wind pressure and self-weight of cladding as indicated on the project's Architectural/Structural Drawings and as required by the International Building Code.

                ii. ASTM A1003/A1003M Structural Grade 50 (340) Type H, ST50H (ST340H): 50ksi (340MPa) minimum yield strength, 65ksi (450MPa) minimum tensile strength, with ASTM A653/A653M G90 (Z275) hot dipped galvanized coating.

                iii. Thickness: 54 mil minimum (16 gauge, 0.0566-inch design thickness)

                iv. Thermal Tape: Thickness 1/16-inch, Density 15 lbs/ft3 (ASTM D-1667)

                v. Thermal Conductivity k-factor: 0.3 (ASTM C-518)

22. SECTION 09500, ACOUSTICAL CEILINGS

    A. Page 09500-4, ARTICLE 2.02 - SUSPENSION SYSTEM, delete Paragraph A. in its entirety and replace with the following new paragraphs:

        A. Suspension systems for acoustical units shall be a steel lay-in exposed system and shall conform to the requirements of ASTM Specification C635 heavy duty type. Suspension system shall be completely compatible with the acoustical units and lighting fixtures.

        B. Edge or wall molding shall be steel with colored factory applied vinyl paint finish, with a 3/4 inch reveal as detailed on the drawings, color to be selected by the Engineer. Wall moldings shall have a flange of not less than 15/16 inch and shall be provided with inside and outside corner caps.

        C. Wire shall be zinc-coated, 12 gage steel wire unless otherwise recommended by suspension system manufacturer.

        D. Hangers shall be the sizes and types recommended by the suspension system manufacturer.

23. SECTION 09800, PROTECTIVE COATING

    A. Page 09800-4, ARTICLE 2.03 – STEEL TANKS (PC-2), delete the article in its entirety and replace with the following new article:

        2.03 – STEEL TANKS (PC-3) - Not Used

    B. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), delete Paragraph A., in its entirety and replace with the following new paragraph:

        A. Locations:

            1. Pre-Equalization Tanks

            2. Waste Sludge Storage Tanks

            3. Thickened Sludge Storage Tank

            4. Post-Equalization Tank

    C. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), Paragraph C., delete subparagraph 1.b. in its entirety and replace with the following new subparagraph:

        b. Finish: Tnemec Series 435 Perma Glaze Modified Polyamine Epoxy at 100.0 mils DFT applied in two coats.

    D. Page 09800-5, ARTICLE 2.04 – CONCRETE TANKS (PC-3), Paragraph D., delete subparagraph 1.b. in its entirety and replace with the following new subparagraph:

        b. Topcoat: Tnemec Series 435 Perma Glaze Modified Polyamine Epoxy at 100 mils DFT applied in two coats.

24. SECTION 10506, METAL LOCKERS

    A. Page 10506-3, ARTICLE 2.20 – LOCKER DATA, delete Paragraph A in int entirety and replace with the following new article:

        A. Locations, sizes and quantities as follows.

        1. Location and Quantities: As shown on the drawings.

        2. Size and Type: Men’s and Women’s Room are 15” W x 15” D x 6’ H single tier lockers.

25. SECTION 11140, COMPRESSED AIR SYSTEMS

    A. Page 11140-2, ARTICLE 1.01- SCOPE, Paragraph A., add the following new sentence to the end of the paragraph:

        The Compressed Air System shall be provided as part of the Equipment Storage Facility. The location of the air compressor, hose reels and the like will be determined in the field. All piping shall be surfaced mounted within the Equipment Storage Facility.

B. Page 11140-2, ARTICLE 1.02- MEASUREMENT AND PAYMENT, add the following new paragraph:

B. An allowance is specified in SECTION 01020, ALLOWANCES which is required to be utilized by the Contractor during the preparation of their bid for PART IV – ALTERNATIVES, Item A-1 - Addition of the Equipment Storage Facility. The measurement and payment shall include all work required, including but not limited to, all necessary equipment, labor, materials and supplies, connection to all necessary utilities, and the like, in order to provide the Compressed Air System. Paid invoices from the equipment suppliers and detailed labor, materials and supplies worksheets shall be submitted to the Engineer by the Contractor. Should the actual charge exceed the amount or be less than the amount indicated, the difference will be paid by or returned to the Owner.

26. SECTION 11333, SEPTAGE RECEIVING STATION

A. Page 11333-17, ARTICLE 3.04 – WARRANTY, Paragraph B., add the following new sentence to the end of the paragraph:

The allowance specified in SECTION 01020, ALLOWANCES has been adjusted to be greater than the Cost Proposal submitted by the manufacture and therefore, shall be utilized to cover the cost of the discrepancy between the Proposal and this section.

27. SECTION 11365, ROTARY DRUM THICKENERS

A. Page 11365-2, ARTICLE 1.10 - SCOPE, Paragraph C., add the following new sentence to the end of the paragraph:

The allowance specified in SECTION 01020, ALLOWANCES has been adjusted to be greater than the Cost Proposal submitted by the manufacture and therefore, shall be utilized to cover the cost of the discrepancy between the Proposal and this section.

28. SECTION 11399, EFFLUENT DISK FILTERS

A. Page 11399-17, ARTICLE 3.04 – WARRANTY, Paragraph C., add the following new sentence to the end of the paragraph:

The allowance specified in SECTION 01020, ALLOWANCES has been adjusted to be greater than the Cost Proposal submitted by the manufacture and therefore, shall be utilized to cover the cost of the discrepancy between the Proposal and this section.

29. SECTION 11600, SEQUENCING BATCH REACTORS

A. Page 11600-23, ARTICLE 3.04 – WARRANTY, delete Paragraph B. in its entirety and replace with the following new paragraph:

B. The allowance specified in SECTION 01020, ALLOWANCES has been adjusted to be greater than the Cost Proposal submitted by the manufacture and therefore, shall be utilized to cover the cost of the discrepancy between the Proposal and this section.

30. SECTION 11324, CHEMICAL PERISTALTIC METERING PUPS AND APPURTENANCES

A. Page 11324-5, ARTICLE 2.01 – SYSTEM DESCRIPTION, Paragraph B.1., add the following to the end of the subparagraph:

The Owner will provide the totes, filled with the proper chemicals, for facility start-up and operation.

B. Page 11324-5, ARTICLE 2.01 – SYSTEM DESCRIPTION, Paragraph C.1., add the following to the end of the subparagraph:

The Owner will provide the totes, filled with the proper chemicals, for facility start-up and operation.

31. SECTION 11326, MECHANICALLY CLEANED FINE SCREENS AND APPURTENANCES

    A. Page 11326-7, ARTICLE 2.04 - FINE SCREEN CONSTRUCTION, Paragraph A.1., delete the words "Provide spiral constructed of high-strength carbon steel." and replace with the following new words "Provide spiral constructed of high-strength AISI Type 316L stainless steel."

    B. Page 11326-7, ARTICLE 2.04 - FINE SCREEN CONSTRUCTION, Paragraph B., delete the words "…of perforated 14 gage Type 316L stainless..." and replace with the following new words "…of perforated 14 gage (minimum) Type 316L stainless 316L stainless…."

32. SECTION 11398, DIESEL ENGINE-GENERATOR SET AND APPURTENANCES

    A. Page 11398-1, ARTICLE 1.01 – SCOPE, add the following new paragraph:

        K. The Work of this section shall include the Physical Checkout, Inspection and Certification as specified in SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS.

33. SECTION 12484, ENTRANCE FLOOR MATS AND FRAMES

    A. Delete the Section in its entirety.

34. SECTION 15900, HVAC CONTROL SYSTEMS

    A. Page 15900-2, ARTICLE 1.01 – SCOPE, delete subparagraph G.1 and replace with the following new subparagraph:

        1. All HVAC control system equipment, devices, hardware and software shall be manufactured by either Alerton Controls, Allen-Bradley, Siemens, or Schneider Electric. Unless otherwise indicated, HVAC control system products shall be by only one of these manufacturers and there shall be no mixing of products by different manufacturers, except as permitted by the selected manufacturer amongst the three named hereinabove.

    B. Page 15900-25, ARTICLE 2.16 – CONTROL WIRING, delete subparagraph B.1.c. in its entirety.

35. SECTION 16050, ELECTRICAL WORK - GENERAL

    A. Delete SECTION 16050, ELECTRICAL WORK - GENERAL in its entirety and replace with the attached new section.

36. SECTION 16110, ELECTRICAL RACEWAY SYSTEMS

    A. Delete SECTION 16050, ELECTRICAL WORK - GENERAL in its entirety and replace with the attached new section.

37. SECTION 16721, FIRE ALARM SYSTEM

    A. Add new SECTION 16721, FIRE ALARM SYSTEM as attached.

38. SECTION 16724, SECURITY ALARM SYSTEM

    A. Add new SECTION 16724, SECURITY ALARM SYSTEM as attached.

39. SECTION 16761, VIDEO SURVEILLANCE SYSTEM

    A. Add new SECTION 16761, VIDEO SURVEILLANCE SYSTEM as attached.

40. SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT

    A. Delete SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT in its entirety and replace with the attached new section.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWINGS 99 C-504 – DETAILS IV, add the following new note:

    2. The Double Leaf Steel Gate shall be provided under SECTION 00500 MISCELLANEOUS METAL.

2. DRAWING 10 A-103, ROOF PLAN, add the following new note:

   Note: Truss Manufacturer to provide gable end trusses at all gable roofs flush with exterior face of CMU. Exterior wall construction at the gables above the masonry construction is similar.

3. DRAWING 10 A-505 – EXTERIOR SECTIONS DETAILS

   A. Typical Chimney Detail, add the following new note:

      3. The metal chimney cap is not a prefabricated item and therefore is required to be fabricated. The following are design criteria for the fabrication:

         a. Size: Match the exterior dimension shown for each respective chimney.

         b. Height of opening are determined by HVAC drawings and louver openings.

         c. Material: Painted Aluminum (see requirements in SECTION 05500 – MISCELLANEOUS METAL).

         d. The cap slope for the top should be a 3:12 pitch so as to shed water and snow.

4. DRAWING 10 A-601, ROOM FINISH SCHEDULE

   A. Delete Room No. 104 and Room No. VEST-1 in its entirety and replace with the following new information:

| Room Number | Room Name | Floor | | Wall | |
|---|---|---|---|---|---|
| | | Material | Finish | Material | Finish |
| 104 | Sodium Hypochlorite / PACL Room | EFC | --- | PT | --- |
| VEST-1 | Vestibule | VF | TBD | PT | TBD |

| Ceiling | | Base | | |
|---|---|---|---|---|
| Material | Finish | Material | Finish | Notes |
| FRP | --- | --- | --- | |
| ACT | TBD | PVC | TBD | Surface Entry Mat |

5. DRAWING 00 D-003, PROCESS PIPING SCHEDULE

   A. Add the following new Pipe to the schedule:

| Legend | Service | System Design Conditions | | | |
|---|---|---|---|---|---|
| | | Temp. (Deg. F) | | Pressure (PSI) | |
| | | Oper. | Max. | Work. | Max |
| INF | Raw Wastewater | 40 | 80 | --- | --- |

| Piping | | | | |
|---|---|---|---|---|
| Material | Diameter Range | Sch./Class | Lining/Coating | Joint Type |
| Ductile Iron | All | See Specs. | Cement | Flanges/Restrained Mechanical Joint |

| Insultation | | Valving | | |
|---|---|---|---|---|
| Type | Thickness (In.) | Block | Check | Throttling |
| --- | --- | --- | --- | --- |

| Test Requirements | | | | Specs. Section Number | Remarks |
|---|---|---|---|---|---|
| Pressure (PSI) | Medium | Test Duration (Min.) | Leakage Allowance (See Notes) | | |
| 150 | Water | 60 | Zero | 02615 | --- |

6. DRAWING 00 D-006, PROCESS FLOW DIAGRAM I, add the following new note:

   Note: SA is the location of where Soda Ash (SA) will be manually added, as required, by the operating staff.

7. DRAWING 10 D-101, FACILITY LOWER PLAN I, add the following new note:

   Note: The 1" Polymer lines shall be run in the Basement Pump Room (Room 126) up to the Polymer Room (Room 117) through the pipe chase located at Column Line 5 and about 9' south of Colum Line D. The Polymer piping shall not run through the Pre-Equalization Tank No. 1.

8. DRAWING 10 D-304, SECTIONS IV, Section 4, SBI, delete the words "8" x 9" RED" and replace with the words "8" 90 Deg. S.R. ELL. FLG. x FLR.".

9. DRAWING 10 D-304, SECTIONS IV, add the following new note:

   Note: Refer to plan Drawing 10 D-105 for Section No. 4 and Section No. 5. Section No. 4 shows the 10" OC piping penetrating the floor as intended. Section No. 5 is cut behind Section No. 4, showing the 10" OC pickup, in the foreground, terminating above the finished floor of the Headworks Room.

10. DRAWING 10 D-307, SECTIONS VII, Section 7, TSL, delete the words "8" x 9" RED" and replace with the words "8" 90 Deg. L.R. ELL. FLG. x FLR."

11. DRAWING 15 D-104, SBR UPPER PLAN II, add the following new note:

    Note: Revise the 6-inch SBI piping configuration to be at EL. 75.00

12. DRAWING 00 E-001, ELECTRICAL LEGEND, ABBREVIATIONS AND GENERAL NOTES

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

13. DRAWING 00 E-601, ELECTRICAL SCHEDULES I

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

14. DRAWING 00 E-602, ELECTRICAL SCHEDULE II

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

15. DRAWING 10 E-001, WWTF – ELECTRICAL SITE PLAN – POWER

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

16. DRAWING 10 E-002, WWTF - ELECTRICAL SITE PLAN - SYSTEMS

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

17. DRAWING 10 E-003, WWTF ELECTRICAL SITE PLAN – FIBER NETWORK I

    A. Delete the drawing in its entirety and replace with the new drawing as attached.

18. DRAWING 10 E-004, WWTF ELECTRICAL SITE PLAN – FIBER NETWORK II
    A. Delete the drawing in its entirety and replace with the new drawing as attached.
19. DRAWING 10 E-005, WWTF – ELECTRICAL SINGLE LINE DIAGRAM I – SWBD.10-1
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

B. DRAWING 10 E-006, WWTF – ELECTRICAL SINGLE LINE DIAGRAM II – MCC.10-1
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

C. DRAWING 10 E-007, ELECTRICAL SINGLE LINE DIAGRAM II – MCC.10-2
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

D. DRAWING 10 E-102, WWTF – LOWER LEVEL - POWER PLAN II
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

E. DRAWING 10 E-103, WWTF – LOWER LEVEL -SYSTEMS PLAN I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

F. DRAWING 10 E-104, WWTF – LOWER LEVEL -SYSTEMS PLAN II
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

G. DRAWING 10 E-201, WWTF – GRADE LEVEL -POWER PLAN I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

H. DRAWING 10 E-202, WWTF – GRADE LEVEL – POWER PLAN II
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

I. DRAWING 10 E-301, WWTF – LOWER LEVEL - SECURITY PLAN I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

J. DRAWING 10 E-302, WWTF – GRADE LEVEL – SECURITY PLAN I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

K. DRAWING 10 E-604, WWTF – ELECTRICAL RISER DIAGRAMS I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

L. DRAWING 10 E-607, WWTF – ELECTRICAL RISER DIAGRAMS IV
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

M. DRAWING 10 E-608, WWTF – ELECTRICAL RISER DIAGRAMS V
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

N. DRAWING 10 E-610, WWTF – ELECTRICAL RISER DIAGRAMS VII
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

O. DRAWING 10 E-613, ELECTRICAL WIRING SCHEMATICS I
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

P. DRAWING 10 E-614, ELECTRICAL WIRING SCHEMATICS II
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

Q. DRAWING 10 E-617, ELECTRICAL WIRING SCHEMATICS V
    A. Delete the drawing in its entirety and replace with the new drawing as attached.

R. DRAWING 20 E-602, EQUIPMENT STORAGE FACILITY – WIRING SCHEMATICS

   A. Delete the drawing in its entirety and replace with the new drawing as attached.

S. DRAWING 99 E-503, ELECTRICAL DETAILS III

   A. Delete the drawing in its entirety and replace with the new drawing as attached.

T. DRAWING 00 FA-001, FIRE ALARM LEGEND, ABBREVIATIONS AND GENERAL NOTES

   A. Delete the drawing in its entirety and replace with the new drawing as attached.

| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | | | $ - |

**BASIS OF AWARD** - The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraints will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding its fudning constraints. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in June 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

TO: ALL GENERAL BIDDERS EXCEPT THOSE EXCLUDED:

A. The undersigned proposes to furnish all labor and materials required for completing, in accordance with the hereinafter described Drawings, Specifications and Addenda, all the Work specified in Section No.

of the Specifications and in any Drawings as specified in such section contained in the Contract Documents titled Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486 prepared by AECOM, 9 Jonathan Bourne Drive, Pocasset, MA 02559.

| Item No. | Description |
|---|---|

**PART I - BASE BID**

1. The work of the Subbidder for all Work for the WWTF other than that covered by other items, as specified, the lump sum of

$ - l.s.

2. The Work of the Subbider including all Work for Effluent Disposal Facility other than that covered by other items, as specified, the lump sum of

$ - l.s.

**TOTAL OF PART I - BASE BID**

$ -

**PART II - ALTERNATIVES**

A-1 For Addition of the Equipment Storage Facility, as specified, the lump sum of

$ - l.s.

A-2 For Addition of the Fiber Optic Conduits and Handholes, as specified, the lump sum of

$ - l.s.

A-3 For Addition of the Tracer Wire, as specified, the lump sum of

$ - l.s.

A-4 For Addition of SBR Transfer Pump No. 4, as specified, the sum of

$ - l.s.

A-5 For Addition of SBR Blower No. 4, as specified, the sum of

$ - l.s.

A-6 For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of

$ - l.s.

B. This Subbid includes Addenda numbered _____ through _____ inclusive.

C. This Sub-bid:

_____ may be used by any General Bidder except:

_____

_____ may only be used by the following General Bidders:

_____

(To exclude Gneral Bidders, instert "X" in one box only and fill in blank following that box. Do not answer "C" if no General Bidders are excluded.)

D. The undersigned agrees that, if it is selected as Subbidder, it will, within five (5) days, Saturdays, Sundays and legal holidays excluded, after presentation of a Subcontract by the General Bidder selected as General Contractor, execute with such General Bidder a Subcontract in accordance with the terms of this Subbid, and contingent upon the execution of the General Contract and, if requested so to do in the general bid by such General Bidder, who shall pay the premiums therefor, furnish a Performance and Payment Bond of a surety company qualified to do business under the laws of the Commonwealth and satisfactory to the Awarding Authority, in the full sum of the Subcontract Price.

E. The names of all persons, firms and corporations furnishing to the undersigned labor or labor and materials for the class or classes or part thereof of Work for which the provisions of the section of the Specifications for this subtrade require a listing in this paragraph, including the undersigned if customarily furnished by persons on its own payroll and in the absence of a contrary provision in the Specifications, the name of each such class of Work or part thereto and the Bid Price for each such class of Work or part thereof are:

1. Name:

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

## PART 1 - GENERAL

### 1.01 - SCOPE

A. The Contractor shall be responsible for furnishing of all labor, equipment, appliances and materials and performing all operations in connection with the facility testing and inspection and startup and performance testing prior to final acceptance of all process systems, including the coordination of all performance tests and the furnishing of operating instructions for all equipment.

B. Start-up and Testing Requirements for individual equipment systems shall be as indicated for all equipment as specified in individual sections in DIVISION 11 - EQUIPMENT, DIVISION 15 - MECHANICAL and DIVISION 16 - ELECTRICAL.

C. HVAC systems shall be tested and balanced in accordance with DIVISION 15, MECHANICAL. Fire Protection Systems shall be commissioned in accordance with DIVISION 10, SPECIALTIES and DIVISION 15, MECHANICAL.

D. Electrical and Fire Alarm tests shall be performed as specified in DIVISION 16 - ELECTRICAL.

E. The Instrumentation and Control System tests shall be performed as specified in DIVISION 13 - SPECIAL CONSTRUCTION

F. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 1, GENERAL REQUIREMENTS, Specification Sections, apply to this section

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

10. “Shop Testing” shall mean testing that is done by the manufacturer either at the place of manufacture, the place of assembly, or at another location where the required testing apparatus is located, for the purpose of proving that the equipment meets the requirements of the pertinent technical specification(s). All costs associated with Shop Testing shall be at no additional cost to the Owner.

11. “Physical Checkout, Inspection and Certification” shall mean the process of physically inspecting products by the Contractor and manufacturer/supplier after they have been installed in the work, and then certifying that the products have been properly and completely installed and are ready for field and/or start-up. All costs associated with Physical Checkout, Inspection and Certification shall be at n0 additional cost to the Owner.

12. “Field Testing” or “Functional Testing” shall mean testing that is performed by the Contractor and manufacturer/supplier on process equipment that has been installed in the work and after the Physical Checkout, Inspection and Certification, for the purpose of proving that the tested products meet the requirements of the pertinent technical specifications. All costs associated with Field Testing or Functional Testing shall be at no additional cost to the Owner.

13. “System Testing” shall mean testing performed on a "system" comprised of two or more pieces of equipment, after the equipment has been installed in the work, and after Physical Checkout, Inspection and Certification and Field Testing has been completed, for the purpose of providing that the system meets requirements as specified and as indicated. All costs associated with System Testing shall be at n0 additional cost to the Owner.

14. “Clear Water Testing” shall mean a test conducted on all items and systems performed with portable water after Physical Checkout, Inspection and Certification, Field Testing and System Testing have been satisfactorily conducted by the Contractor and manufactures/suppliers and the they are satisfied that the equipment is operating as specified. All costs associated with Clear Water Testing shall be at no additional cost to the Owner except as specified herein.

15. “Start-up” shall mean the initial operation of the completed facility and processes by the Owner, utilizing wastewater and related substances (sludge, wastewater, scum), or other media which the facility has been designed to process.

16. “Performance Testing” shall mean testing performed by the Contractor and manufacturers/supplies to verify performance of the individual components under actual operating conditions. The tests shall indicate compliance with the performance requirements in the individual specification sections. All costs associated with Performance Testing shall be at no additional cost to the Owner.

17. “Final Acceptance” shall mean passing of the Performance Testing of individual components under actual operating conditions.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Data and certificates in accordance with SECTION 01300, SUBMITTALS and as specified herein.

2. Detailed specific start-up plans for each mechanical or process system.

**1.05 - SHOP TESTING**

A. When required by the technical specifications, perform shop testing prior to delivery of the equipment or material. Provide thirty days written notice indicating the time and place of testing. Submit the following for approval thirty days prior to this notice.

1. Description of the Test - Specifically outlining how tests will conform to the requirements in the technical specifications.

2. Testing Devices That Will be Used in the Tests - Description must state what portion of the tests that the devices will perform or measure, and device accuracy. Submit sample measurement results and catalog cuts.

3. Personnel Used to Perform the Tests - Resumes, qualifications, and experience shall be submitted. As a minimum, personnel shall have three years' experience with the manufacturer and operation of the equipment to be tested and will have participated in five similar tests during this period of experience.

4. Schedule for Testing - Schedule shall include frequency of measurements, personnel present and contingency plans for equipment and/or test failure.

5. Test Forms - Submit all forms used to record and report on shop test data, for approval, prior to the test. Forms shall include description of test, equipment used, personnel present, equipment tag ID numbers, and measurements made. Forms shall conform to the Engineer's format for heading and check off sections. Forms shall have a place for signature by the chief testing person, and an officer of the company that the tests performed are true, accurate, have me the required criteria, and that the equipment will operate as indicated and as specified.

B. Shop test procedures will be reviewed and returned by the Engineer. Incorporate minor comments on the procedures, equipment, or personnel prior to testing. Major comments by the Engineer will require a resubmission of the shop test procedure and proposed test date. The Contractor will be notified, in writing by the Engineer, if a formal resubmission is required with the transmittal of the review comments.

C. Submit the following within one week after completion of the tests for approval:

1. Completed test forms, for each device tested, on forms as approved prior to the test.

2. Completed certification, the content of which was approved prior to the tests.

3. A written summary of testing, reporting on the results and summarizing the entire procedure.

4. A schedule for retesting, if necessary. Perform any retesting required to fulfill the intent of the technical specification test requirements at no additional cost to the Owner.

**1.06 - PHYSICAL CHECKOUT, INSPECTION AND CERTIFICATION**

A. When required by the technical specifications, perform field or functional testing on installed equipment. If none are required by the technical specifications, complete field / functional testing as detailed below. Field / functional testing shall be in addition to and not in lieu of, any shop testing either required or otherwise performed. Perform testing as a part of the overall testing process defined herein. However, the following specific instructions shall also apply. Provide thirty days written notice indicating the date and time for testing one piece of equipment, or a series of equipment pieces.

Submit with this notice the following for approval by the Engineer:

1. Description of the Tests - Outline how the test will conform to the requirements in the technical specifications.

2. Testing Devices That Will Be Used in the Tests - Description shall state what portion of the tests that the devices will perform or measure, and device accuracy. Submit sample measurement results and catalog cuts.

3. Personnel Used to Perform the Tests - Resumes, qualifications, and experience. As a minimum, personnel must have three years' experience with the manufacturer and operation of the equipment to be tested and will have participated in five similar tests during this period of experience.

4. Schedule of Testing - Schedule shall include frequency of measurements, personnel present and contingency plans for equipment and/or test failure.

5. Test Forms - Review and comment on all forms provided by the Engineer for recording reporting on the field test data, prior to the test.

6. Material and Equipment Required for the Test - This material and equipment shall be supplied by the Contractor or his/her subcontractors at no additional cost to the Owner.

7. Water and Power Requirements - Water and power requirements shall be identified in the plan by the Contractor and will be supplied by the Contractor for field testing purposes only. The Contractor shall provide all temporary piping and wiring required for field testing; and equipment and labor for the reuse of the test water.

8. Disposal of Waste – The Contractor is responsible for the legal disposal of all wastes generated from the testing.

B. Field test procedures will be reviewed and returned by the Engineer. Incorporate minor comments on the procedures, equipment, or personnel prior to testing. Major comments by the Engineer will require a resubmission of the field test procedure and proposed test date. The Contractor will be notified, in writing, by the Engineer if a formal resubmission is required with the transmittal of the review comments.

C. Submit within one week after completion of the tests, the following to the Engineer for approval.

1. Completed test forms for each device tested on forms provided prior to the tests.
2. Completed certification documentation, the content of which was approved prior to the tests.
3. A written summary of testing, reporting on the results and summarizing the entire procedure.
4. A schedule for retesting, if necessary. Perform any retesting required to fulfill the intent of the technical specification test requirements at no additional cost to the Owner.

D. Minimum Field Test Requirements

1. Calibrate equipment as required. For pumps, use water as a calibration liquid.
2. Test equipment and systems through a normal start, normal stop, and all emergency shutdown sequences.
3. Complete a four-hour running test. For variable speed units, the test shall include running for three complete cycles of one-hour duration at the maximum and minimum speeds for one half of each of those cycles. Operate each system through its normal automatic sequence of operation. During the four-hour test, observe and record all level indications, flow indicators, and pressure indicators.
4. If the equipment utilizes a local programmable logic controller (PLC), verify that the PLC is capable of operating and controlling the system as specified in the individual specification sections. Also verify all communications with distributed control system (DCS) are as specified.
5. For equipment not supplied with a PLC, verify that the instrumentation and control system is capable of operating and controlling the system.
6. Check safety devices, and interlocks for satisfactory operation. Check instrumentation and control systems for conformance with the Specifications.
7. Check for system leaks and proper valve operation.
8. Demonstrate to the Owner's Representative that all temporary jumpers and/or bypass have been removed and that all of the components are operating under their own controls as designated.
9. Coordinate start-up activities with the Owner's representative and with the Engineer prior to commencing system start-up.

E. Motor Testing

1. Visually inspect the motor for any physical damage.
2. Before energizing any machine, visually inspect for serviceability. Verify that proper alignment has been performed. Check nameplate for electrical power requirements.
3. Test run all motors before placing into regular service. A check on the motor for rotation, speed, current and temperature rise shall be made and the results recorded. Maintain the proper color codes for phase identifications. A motor phase rotation meter should be used prior to connection at motor to prevent later swaps of phase wires.

F. Engine Generator Test

1. Visual and Mechanical Inspection.
    a. Compare equipment nameplate data with drawings and specifications.
    b. Inspect physical and mechanical condition.
    c. Inspect correct anchorage and grouting.

2. Electrical and Mechanical Tests.

   a. Perform an insulation-resistance test on generator winding with respect to ground in accordance with ANSI/IEEE Standard 43. Calculate polarization index.

   b. Test protective relay per applicable NETA standards.

   c. Perform phase-rotation test to determine compatibility with load requirements.

   d. Functionally test engine shutdown for low oil pressure, over temperature overspeed, and other features as applicable.

   e. Conduct performance test in accordance with ANSI/NFPA Standard 110, (Installation Acceptance).

   f. Verify correct function of governor and regulator.

   g. Test circuit breakers per applicable NETA standards.

G. Upon completion of installation of all permanent equipment and related shop and field testing, the manufacturer's technical service representative shall inspect and, as necessary, adjust and/or calibrate the equipment. The inspection shall consider the completeness and integrity of the installation, the alignment and clearances of the equipment parts with respect to each other, and the sufficiency of any required sealing, lubricants or packing.

H. The technical service representative shall submit the results of the inspection including certification that the equipment was properly installed and is operating as specified and as installed. The report should verify that the equipment is ready for sustained operation and free from defects that would render the guarantee null and void.

**1.07 - FIELD TESTING OR FUNCTIONAL TESTING**

A. Field Testing or Functional Testing shall be made at on each piece of process equipment.

B. Field Testing or Functional Testing shall be conducted by the Contractor and manufacturer/supplier utilizing portable water to demonstrate to the satisfaction of the Engineer that the equipment is ready for System Testing.

C. Fourteen days' notice of scheduled start-up of individual equipment items or mechanical systems, the Contractor shall prepare a schedule of activities and provide the schedule to the Engineer for review and approval. The following representatives, as appropriate, shall be present simultaneously for the Field Testing or Functional Testing

   1. General Contractor;

   2. Electrical Subcontractor;

   3. Equipment Manufacturer's Technical Service Representative;

   4. Instrumentation and Control Equipment Representative;

   5. System Integrator; and

   6. Owner, OPM and Engineer.

D. The following must be completed prior to start-up and testing:

   1. Controls and alarm systems shall be tested to show it is capable of transmitting and annunciating all specified control points to the facility-wide SCADA system;

   2. All safety equipment shall be installed and operating properly;

   3. Training of Contractor Operator personnel by manufacturer's technical service representatives has been completed; and

   4. All spare parts, tools, lubricants shall be delivered to the Owner.

   5. Installation drawings delivered to the Owner.

E. The Contractor shall, upon orders by the Engineer, startup, adjust and place in satisfactory operation all equipment constructed under this contract. At the discretion of the Engineer, individual startups may be required for various phases of the work or individual systems. The Engineer may order the start-ups prior to the completion of non-essential items of work.

F. As soon as practical after the initial start-up, the Contractor shall arrange for the manufacturer's representatives to perform all field tests and complete all additional training.

**1.08 - SYSTEM TESTING**

A. System Testing shall be made after all equipment that comprises of a complete system has been installed and a final testing and inspection and all startup activities have been satisfactorily conducted by the Contractor and manufacturer/supplier and the Contractor is satisfied that the equipment is operating as specified. System are identified as follows:

1. Liquid Stream (Influent Screen, Pre-Equalization Tanks, Mixing Blowers, SBR Transfer Pumps, SBRs and SBR Blowers) as shown on Drawing 00 D-006 - Process Flow Diagram I and Drawing 00 D-007 - Process Flow Diagram II;

2. Effluent Stream (Disk Filters, Post Equalization Tank, Post Equalization Tank Mixers, Effluent Pumps, UV System and Effluent Disposal) as shown on Drawing 00 D-007 - Process Flow Diagram II;

3. Plant Water (Plant Water System, Bladder Tank, Foam Spray Pump and Plant Water Storage Tank) as shown on Drawing 00 D-007 - Process Flow Diagram II;

4. Septage Receiving (Septage Receiving Station, Waste Sludge Tanks, Mixing Bowers as shown on Drawing 00 D-008 - Process Flow Diagram III;

5. Sludge Processing (Sludge Transfer Pumps, Rotary Drum Thickeners, Polymer Feed System, Thickened Sludge Storage Tank, Mixing Bowers and Thickened Sludge Pumps) as shown on Drawing 00 D-008 - Process Flow Diagram III; and

6. Odor Control (Odor Control System and Septage Receiving Station, Waste Sludge Tanks, Mixing Bowers as shown on Drawing 00 D-009 – Odor Control Air Flow Diagram.

B. The successful performance of all systems shall be demonstrated to the satisfaction of the Engineer by completing the System Testing utilizing portable water. Unless especially required in technical specifications, the System Testing will consist of operating each system for an uninterrupted four hours or as otherwise specified.

C. Failure of equipment to operate as specified will require the System Test to be reperformed for the full period. At no time during the System Testing shall any equipment or system be operated under a more severe condition than the maximum design condition for which the equipment is rated.

**1.09 - CLEAR WATER TESTING**

A. Clear Water Testing (4-hour) shall be conducted on all items and systems shall be made after all equipment has been installed for a given unit process and a final testing and inspection and all startup activities have been satisfactorily conducted by the Contractor and the Contractor is satisfied that the equipment is operating as specified.

B. Clear Water Testing shall not be conducted until completion of the “Certification of Proper Equipment Installation” by the Equipment Manufacturer and “Verification of Manufacturer’s Training” (Refer to SECTION 01030, SPECIAL REQUIREMENTS on each piece of process equipment.

C. The Contractor shall continue to conduct the Clear Water Test until the test has successfully run for 4 continuous hours.

D. The Contractor is responsible for all repairs and/or replacement of equipment and/or components of the equipment that does not function in accordance with the Contract Documents, approved shop drawings and manufacturer’s operational requirements.

E. The Contractor is responsible for all costs associated with conducting the 4-hour Clear Water Test including but, not limited to, labor, equipment, tools and supplies except as follows:

1. The Contractor is responsible for making all arrangements and gathering necessary permissions from the Owner's water district for use of water.
2. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and shall be borne by the Contractor.
3. The water is obtained from the Owner ate not cost but, the water shall be metered and the use of backflow prevention device(s) shall be required as approved by the Owner.

F. The Clear Water Test shall be performed with the OWNER, OPM, ENGINEER, Contract Operator and MassDEP in attendance. The Clear Water Test shall be scheduled at least twenty-one (21) days in advance so that OWNER, OPM, ENGINEER, Contract Operator and MassDEP personnel can be present.

**1.10 - SUBSTANTIAL COMPLETION**

A. Issuance of Substantial Completion shall occur following the successful completion of Clear Water Testing.

**1.11 – START UP**

A. Contract Operations

1. The Town of Orleans, Massachusetts will seek proposals from qualified firms capable of providing full-service operation and maintenance of the Downtown Area Collection System, Pumping Stations, WWTF and Effluent Disposal.
2. Operation and Maintenance services will be provided in a safe, secure, effective and efficient manner and will be in full compliance with GWDP Permit requirements of the MassDEP, applicable laws of the Commonwealth of Massachusetts and regulations of the Massachusetts Department of Environmental Protection.
3. Procurement of the Contract Operator is anticipated to be completed July 2021. Personnel from the Contractor Operator will be on-site during the last 6 to 8 months of construction to observe and/or be involved with the following:
    a. Construction Activities;
    b. Physical Checkout, Inspection and Certification;
    c. Field Testing or Functional Testing;
    d. Training;
    e. System Testing; and
    f. Clear Water Testing.
4. The Contract Operator is a separate contract directly between the Town and a third-party Service Provider and is not part of the scope of work of this Project.

B. Operation and Maintenance

1. Upon the successful completion of the Clear Water Testing and the Issuance of the Substantial Completion, the OWNER will notify Property Owners that they have up to one year to connect into the wastewater system.
2. Upon the successful completion of the Clear Water Testing and the Issuance of the Substantial Completion, the Contract Operator will be responsible for Start-up and Operation and Maintenance of the Downtown Area Collection System, Pumping Stations, WWTF and Effluent Disposal.

3. Operation and Maintenance shall include, but not be limited to, the following

   a. Staffing – Number and Qualifications Required by MassDEP.

   b. Maintenance - Building and Grounds, Equipment, etc.;

   c. Maintain the Inventory of Spare Parts, Tools and Supplies, and the like;

   d. Process Control – SCADA System, Sampling and Analysis, etc.;

   e. Septage Receiving and Processing;

   f. Sludge Processing and Legal Disposal;

   g. Consumables – Power, Chemicals and the like; and

   h. Training of their Personnel –Additional Training (i.e. Safety Program, Standard Operating Procedures, etc.) Not Including Training Specified and Conducted by the Contractor and Manufacturers/Suppliers.

**1.12 - PERFORMANCE TESTING**

A. Performance Testing by the Contractor shall occur within the one-year warranty period but shall not occur until an average of 50,000 gpd of raw wastewater is being received at the facility. The Performance Testing will occur as soon as an average of 50,000 gpd of raw wastewater being received at the facility.

B. Since the facility may be underloaded during start-up, the following is required:

   1. The Contractor shall coordinate the stat-up activities with the SBR manufacturer, Aqua Aerobics.

   2. The system will be started-up by placing one SBR reactor in service.

   3. Aqua Aerobics has run a preliminary design scenario for the reactor at its lowest loading to determine the quantity of seed required to be obtained by the Contractor. Refer to the attachment to this section.

      a. The design shows how much flow from the Pre-Equalization Tanks(s) is required for the SBR biology to be self-sustaining.

      b. This is an estimate based on a blend of raw wastewater entering the facility and flow from the Septage Receiving Station.

C. Performance Tests and Performance Criteria: Specific performance testing criteria are listed for specific equipment and systems in the Division 11 through Division 16 specifications. Compliance with these performance test requirements shall be demonstrated during the full system testing or otherwise demonstrated prior to substantial completion.

D. In the event of a failure to demonstrate satisfactory facility performance on the first or any subsequent attempt, it shall be the responsibility of the Contractor to make all the necessary and required changes, replacements, and tests to make the units meet the specified operating and efficiency requirements.

E. If equipment is unable to operate, initial calibration and/or additional adjustments are required, or representatives are absent, the start-up or tests shall be canceled at that time and full rescheduling will be required. Damages shall be assessed to the Contractor for time and expenses wasted on scheduling, coordinating and attending the failed performance test by the Owner, OPM, Engineer and Manufacturer Representatives.

F. Once the complete facility system has successfully passed the Performance Testing, the Contractor can submit a request for payment for money withheld (five percent of the equipment purchase price minus value of warranty work) for the following:

   1. SECTION 11333, SEPTAGE RECEIVING STATION

   2. SECTION 11365, ROTARY DRUM THICKENERS

   3. SECTION 11399, EFFLUENT DISK FILTERS

   4. SECTION 11600, SEQUENCING BATCH REACTORS

**1.12 - ROLES AND RESPONSIBILITIES DURING START-UP AND TESTING**

A. The Contractor shall not operate any of the existing facilities at any time. This shall include the starting and stopping of equipment or opening and closing of valves. Whenever the Contractor believe their work will affect or be impacted by the existing facilities operation, they shall so notify the Engineer in writing three (3) working days prior to the intended start of the work. This notification shall clearly detail the work to be completed, the method by which the existing facilities operation may be impacted, and the assistance requested of the Owner.

B. Contractor's Responsibilities: The Contractor shall be responsible for furnishing and installing all of the several kinds and types of equipment required in the treatment facilities, and for testing each individual piece of equipment, all combinations of equipment as they may operate one in conjunction with another, and the complete system, such that each component and the total unit may operate in an acceptable fashion to the Engineer, the Owner, and to any other municipal, State or Federal authorities within whose jurisdiction the operation of the facility may be a concern, at no additional costs to the Owner:

1. Develop specific start-up plans and schedule.
2. Provide specific start-up material and operating supplies until substantial completion. Supplies include lubricants, chemicals, gases, specialized fluids, electric power, water and all other required appurtenances.
3. Provide all specified third-party testing and laboratory costs at no additional costs to the Owner.
4. Provide manufacturer's representative to provide guidance during performance testing.
5. Provide to the Engineer a list of 24 hour, "on call" representative supervisory persons who will monitor the start-up and performance testing.
6. Provide the necessary craft or labor assistance, in the event of an emergency equipment failure requiring immediate attention, (emergency is defined as a failure of function which precludes the further operation of a critical segment of; or the whole of the work) with a response time of not less than four hours from the time of notification. The time of notification is defined as the time of contact between the Engineer's representative and the Contractor's representative.
7. Correct all failures or equipment problems identified during start-up when notified by the Engineer. Resolve and correct all equipment or system failures during the performance testing.
8. Provide manufacturer's representatives and operating supplies for retesting of systems that fail to pass the initial performance tests due to deficiencies in products or workmanship at no additional cost to the Owner.
9. Provide training as specified.
10. Prior to starting the start-up and testing, the Contractor shall provide and field calibrate certified flow meters (by using volumetric calibration), flow recorders, all electrical meters, and electrical recorders. The Contractor shall provide a test procedure, wiring diagram of field test recorders and instrumentation, and a field calibration report on the installed meter.
11. Review procedures for performance testing.
12. Attend meetings related to the review of start-up plan(s).
13. Clarify submittals, testing requirements, schedules, or other items related to the start-up of the equipment and facilities specified and indicated in the Contract Documents.

C. The Owner's Responsibilities

1. Assist in the start-up testing activities. The Owner will endeavor to be cooperative with the Contractor when required. However, it is emphasized that the existing facilities operations and treatment take precedence and only requests that do not adversely affect the flow or treatment will be considered. Additionally, any assistance given to the Contractor must be completed when the Owner's schedule and manpower permit. There may be instances when the Owner cannot provide assistance at the time of the Contractor's request and this shall not be the basis for a claim by the Contractor.
2. Provide staff to operate and maintain equipment, systems, and facilities requiring start-up.

**1.13 - TREATMENT EQUIPMENT USAGE**

A. Any partial or full usage of the proposed equipment by the Contractor, and/or his employees or agents, prior to acceptance shall be the responsibility of the Contractor.

**1.14 - OPERATIONAL EXPENSES**

A. During the construction stage and start-up period, before Substantial Completion, the Contractor shall bear all expenditures and operational expenses of all systems included in the project including, but not limited to, labor, equipment, tools, electrical power, chemicals, maintenance, and fuel.

B. The Contractor shall be responsible for the proper handling, sampling, and lab testing and analysis from the testing and start-up of facility processes.

C. During Performance Testing, the Contractor shall bear the costs for Contractor and manufacturer/suppliers, including but not limited to labor, equipment and tools.

**1.15 - GUARANTEE**

A. The Contractor shall guarantee the materials and equipment furnished and the performance thereof to be in accordance with the requirements of the Contract Documents.

B. The Contractor agrees upon written notice to make promptly and without charge, all necessary changes, corrections, and replacements (including installation of replacement parts) required to make good all defects developing in the material or equipment, under ordinary use and proper care, within a period of twelve months after substantial completion of the Project.

**PART 2 - PRODUCTS**

**2.01 - TEST EQUIPMENT**

A. The Contractor shall provide all test equipment, including kWh demand meters and recorders, instruments, analyzers, handling equipment, etc., required to sample and test the various systems. All test equipment must have been tested and calibrated within six months of their use on this contract.

**PART 3 - EXECUTION – Not Used**

**END OF TEXT**

See Attachment

This Page Intentionally Left Blank.

# AquaSBR - Sequencing Batch Reactor - Design Summary

**Design#: 158326**

**Project:** ORLEANS MA

**Option:** Sample Start up Conditions for SBR

*Designed by Tamera Knapp on Thursday, November 7, 2019*

AQUA-AEROBIC SYSTEMS, INC.
A Metawater Company

## DESIGN INFLUENT CONDITIONS

**Avg. Design Flow** = 0.05 MGD = 189 m3/day

**Max Design Flow** = 0.05 MGD = 189 m3/day

## DESIGN PARAMETERS

| | Influent | mg/l | Effluent Required | <= mg/l | Effluent Anticipated | <= mg/l |
|---|---|---|---|---|---|---|
| **Bio/Chem Oxygen Demand:** | BOD5 | 200 | BOD5 | 15 | BOD5 | 15 |
| **Total Suspended Solids:** | TSS | 200 | TSS | 15 | TSS | 15 |
| **Total Kjeldahl Nitrogen:** | TKN | 40 | -- | -- | -- | -- |
| **Total Nitrogen:** | -- | -- | TN | 7 | TN | 7 |
| **Phosphorus:** | Total P | 4 | -- | -- | -- | -- |

## SITE CONDITIONS

| | Maximum | Minimum | Design | Elevation (MSL) |
|---|---|---|---|---|
| **Ambient Air Temperatures:** | 77 F 25.0 C | 30 F -1.1 C | 77 F 25.0 C | 60 ft |
| **Influent Waste Temperatures:** | 68 F 20.0 C | 50 F 10.0 C | 68 F 20.0 C | 18.3 m |

## SBR BASIN DESIGN VALUES

**No./Basin Geometry:** = 1 Rectangular Basin(s)

**Freeboard:** = 2.0 ft = (0.6 m)

**Length of Basin:** = 65.0 ft = (19.8 m)

**Width of Basin:** = 45.0 ft = (13.7 m)

| | Water Depth | | Basin Vol./Basin | | |
|---|---|---|---|---|---|
| **Min** | = 14.5 ft | = (4.4 m) | **Min** | = 0.318 MG | = (1,203.4 m³) |
| **Avg** | = 15.7 ft | = (4.8 m) | **Avg** | = 0.343 MG | = (1,298.0 m³) |
| **Max** | = 15.7 ft | = (4.8 m) | **Max** | = 0.343 MG | = (1,298.0 m³) |

| | | |
|---|---|---|
| **Number of Cycles:** | = 2 per Day/Basin (advances cycles beyond MDF) | |
| **Cycle Duration:** | = 12.0 Hours/Cycle | |
| **Food/Mass (F/M) ratio:** | = 0.026 lbs. BOD5/lb. MLSS-Day | |
| **MLSS Concentration:** | = 1200 mg/l @ Min. Water Depth | |
| **Hydraulic Retention Time:** | = 6.858 Days @ Avg. Water Depth | |
| **Solids Retention Time:** | = 43.6 Days | |
| **Est. Net Sludge Yield:** | = 0.799 lbs. WAS/lb. BOD5 | |
| **Est. Dry Solids Produced:** | = 66.6 lbs. WAS/Day | = (30.2 kg/Day) |
| **Est. Solids Flow Rate:** | = 100 GPM (1997 GAL/Day) | = (7.6 m³/Day) |
| **Decant Flow Rate @ MDF:** | = 333.0 GPM (as avg. from high to low water level) | = (21.0 l/sec) |
| **LWL to CenterLine Discharge:** | = 3.0 ft | = (0.9 m) |
| **Lbs. O2/lb. BOD5** | = 1.25 | |
| **Lbs. O2/lb. TKN** | = 4.60 | |
| **Actual Oxygen Required:** | = 181 lbs./Day | = (82.1 kg/Day) |
| **Air Flowrate/Basin:** | = 154 SCFM | = (4.4 Sm3/min) |
| **Max. Discharge Pressure:** | = 8.4 PSIG | = (58 KPA) |
| **Avg. Power Required:** | = 181.2 KW-Hrs/Day | |

# PART 1 - GENERAL

**1.00 - SUBBID REQUIREMENTS**

A. The Work of this Section requires a single filed subbid in accordance with MGL c.149, s.44A through 44H, inclusive, as amended.

B. A sub-bid submitted for the Work of DIVISION 16, ELECTRICAL shall include the complete Work specified in all of the following Sections:

1. SECTION 16050, ELECTRICAL WORK – GENERAL
2. SECTION 16110, ELECTRICAL RACEWAY SYSTEMS
3. SECTION 16120, ELECTRIC WIRES AND CABLES
4. SECTION 16160, PANELBOARDS
5. SECTION 16260, LOW VOLTAGE VARIABLE FREQUENCY DRIVE UNIT
6. SECTION 16320, GENERAL PURPOSE DRY-TYPE TRANSFORMERS
7. SECTION 16359, ELECTRICAL SYSTEM STUDIES
8. SECTION 16366, LOW VOLTAGE SWITCHBOARD
9. SECTION 16400, SURGE PROTECTION DEVICES
10. SECTION 16402, UNDERGROUND DISTRIBUTION SYSTEM
11. SECTION 16450, GROUNDING
12. SECTION 16481, ELECTRIC HEAT TRACING
13. SECTION 16601, LIGHTNING PROTECTION
14. SECTION 16721, FIRE ALARM SYSTEM
15. SECTION 16724, SECURITY SYSTEM
16. SECTION 16761. VIDEO SURVEILLANCE SYSTEM
17. SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT
18. SECTION 16920, 600-VOLT MOTOR CONTROL CENTER
19. SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS

C. In accordance with MGL c 149 §44E, each sub-bidder shall list in the Form for Sub-Bid the name and bid price of each person, firm or corporation performing labor or labor and materials for each class of work or part thereof listed below; provided that any sub-bidder may, without listing any bid price, list his own name for any such class of work or part thereof and perform that work with persons on his own payroll, if such sub-bidder, after sub-bid opening, shows to the satisfaction of the Authority that he/she does customarily perform such class of work or part thereof with employees on his own payroll who are mechanics or laborers as referred to in MGL c 149 §26, and is qualified to do so.

1. None

D. Reference Drawings

1. The Work of DIVISION 16, ELECTRICAL is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 E-001 | 00 E-601 | 00 E-602 | 10 ED-001 | 10 ED-002 | 10 ED-003 | 10 E-001 |
| 10 E-002 | 10 E-003 | 10 E-004 | 10 E-005 | 10 E-006 | 10 E-007 | 10 E-101 |
| 10 E-102 | 10 E-103 | 10 E-104 | 10 E-201 | 10 E-202 | 10 E-203 | 10 E-204 |
| 10 E-205 | 10 E-206 | 10 E-301 | 10 E-302 | 10 E-303 | 10 E-601 | 10 E-602 |
| 10 E-603 | 10 E-604 | 10 E-605 | 10 E-606 | 10 E-607 | 10 E-608 | 10 E-609 |
| 10 E-610 | 10 E-611 | 10 E-612 | 10 E-613 | 10 E-614 | 10 E-615 | 10 E-616 |
| 10 E-617 | 15 E-101 | 15 E-102 | 15 E-601 | 15 E-602 | 25 E-101 | 30 E-001 |
| 30 E-002 | 30 E-101 | 30 E-601 | 99 E-501 | 99 E-502 | 99 E-503 | 00 FA-001 |
| 10 FA-101 | 10 FA-102 | 10 FA-201 | 10 FA-202 | | | |

2. The Work of DIVISION 16, ELECTRICAL for Alternative A-1is shown on the Contract Drawing(s) numbered:

| | | | | | | |
|---|---|---|---|---|---|---|
| 00 E-001 | 00 E-601 | 00 E-602 | 20 E-101 | 20 E-102 | 20 E-601 | 20 E-602 |
| 99 E-501 | 99 E-502 | 99 E-503 | 00 FA-001 | 20 FA-101 | | |

E. Requirements for Submitting Subbids

1. Subbids for Work under this section shall comply with the requirements of MGL c.149, s.44F; shall be filed in a form furnished by the Awarding Authority, in a sealed envelope, at the time and place stipulated in DOCUMENT 00010, ADVERTISEMENT FOR BIDS and as specified in DOCUMENT 00200, INSTRUCTION TO BIDDERS. The following shall appear on the upper left-hand corner of the envelope:

Name of Subbidder: _____

Subbid for: DIVISION 16, ELECTRICAL

Town of Orleans, MA

Downtown Area WWTF and Effluent Disposal

Contract No. 2019-1

F. The Work of this Section requires the Subcontractor to install all materials furnished by it unless otherwise specified.

**1.01 - SCOPE**

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide General Electric Work as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

C. Division 1: General Requirements

D. Division 16: Electrical

E. The Diesel Generator System shall be supplied under Section 11398. Provide all conduit, wiring and terminations for system operation as indicated.

F. Provide conduit, wiring and terminations for all field-mounted instruments furnished and mounted under other Divisions, including process instrumentation primary elements, transmitters, local indicators and control panels. Install vendor furnished cables specified under Specification Section 13300.

G. Provide conduits, wiring and terminations for power feeders for HVAC equipment provided under Division 15 and as shown on the electrical drawings.

H. Provide and install control stations shown on the electrical drawings local to equipment supplied under other divisions.

I. Provide and install safety disconnect switches shown on the electrical drawings local to equipment supplied under other divisions.

J. Motors shall be provided by the Contractor under Section 01171. All associated conduit, wire and terminations of motors shall be provided under Division 16.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Shop Drawings and Data: Include manufacturer's drawings, bills of material, panel and equipment layouts, catalog data, schematics diagrams, interconnection diagrams, wiring diagrams and other documentary or descriptive information for each assembly submitted in one package.

    1. Bills of material: Include a numbered list of all components, with manufacturer's name, catalog number, rating, and other identification. Place item number or identification on all other drawings where item appears.

    2. Submit equipment installation instructions in separate submittals from other shop drawings.

    3. Mark shop drawings and data submitted showing only items applicable to specific contract.

    4. Make submission of drawings for those components where dimensions of equipment, location of conduit entrances, are required to facilitate construction in accordance with the construction schedule.

    5. Include one-line diagrams, schematic diagrams, wiring diagrams, control sequence diagrams, relay diagrams, and metering. Submit only completed drawings showing all local and remote devices associated with each item. Submit one complete package of shop drawings. Partial submittals will be returned without action.

    6. Submit time-current characteristic curves for all circuit breakers and fuses.

    7. Submit instruction manuals for installation, operation, and maintenance of equipment, and parts list. Mark standard publications forming a part of this contract. Cross out, blank out, or otherwise delete non-applicable items. Submittals which do not clearly indicate items and features provided will be rejected.

    8. Install permanent nameplates on all devices or pieces of equipment for which use or identification is not readily apparent, such as starters, relays, contactors, pushbuttons, indicating lights, and switches. Make sure position of nameplates are readable after equipment installation.

    9. Provide services of the manufacturer's representative as specified in the applicable specification sections.

2. Submit inspection and testing forms for all electrical distribution equipment to be inspected and tested under this section.

3. Submit data sheets for the insulation resistance testing of conductors and equipment prior to performing operating testing. List all cables and equipment to be tested.

4. Provide space on data sheet forms to enter the results of testing, instruments used with serial numbers, and name of personnel performing testing. This data to be filled out during testing.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. Provide operational systems for both normal and standby electric power systems, normal and emergency lighting systems, security systems, CCTV systems, grounding systems, electrical heat tracing, lightning protection systems, fire alarm systems, radio system and other specified systems, including the installation and wiring of miscellaneous equipment and devices. Perform all Work and testing as indicated and specified to provide operationally ready electrical systems.

1. Provide conduit, wiring and connections for power, motors, motor controllers, control devices, lighting, control panels, instrumentation and alarms and for equipment furnished by others as indicated on the Contract Drawings.

2. Provide temporary circuits, overcurrent devices, conduit and wiring, and other temporary electrical equipment required to complete the Work of DIVISION 16, ELECTRICAL. All other temporary electrical Work including site temporary power service shall be provided under SECTION 01500, TEMPORARY FACILITIES.

3. Disconnect and remove existing electrical systems indicated for demolition under this Contract.

4. Engage the services of an Independent Electrical Testing Firm to perform the field inspections, tests and adjustments specified in SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS.

5. Provide the services of a specialty firm to provide short circuit, coordination and Arc Flash analysis for the electrical distribution system in accordance with SECTION 16359, ELECTRIAL SYSTEM STUDIES.

6. Provide lightning protection, fire alarm, radio system and telephone systems as specified herein.

7. Install all raceways and equipment to meet the seismic requirements of SECTION 01900, SEISMIC REQUIREMENTS. Raceways supports and equipment anchoring shall be provided as specified in SECTION 16110, ELECTRICAL RACEWAY SYSTEMS.

8. All electrically powered equipment and devices provided under other Sections are connected to electrical systems as part of the Electrical Work, as indicated. Provide all conduits, wiring and wiring terminations as indicated.

9. Provide all supervision, labor, materials, tools, test instruments or other equipment or services and expenses to test, adjust, set, calibrate, functionally and operationally check all Work and components of the various electrical systems and circuitry throughout the installation.

D. Provide set up, and maintain all derricks, hoisting machinery, staging, and planking and perform all hoisting required to complete the Electrical Work.

E. General Contractor to provide earth and rock excavation, backfill, concrete masonry, concrete reinforcement, and construction joints required for Electrical work.

F. Obtain all necessary permits required to complete the work of DIVISION 16 – ELECTRICAL WORK.

**1.07 - QUALITY ASSURANCE**

A. Install electrical Work in conformance with latest rules and requirements of National Fire Protection Association Standard No. 70 (National Electrical Code) and the Massachusetts Electrical Code.

**1.08 - REFERENCES**

A. National Electrical Safety Code (NESC)

B. Occupational Safety and Health Administration (OSHA)

1. OSHA Part 1910; Subpart S, 1910.308

2. OSHA Part 1926; Subpart V, 1926.950 through 1926.960

C. National Fire Protection Association (NFPA)

1. ANSI/NFPA 70B: Electrical Equipment Maintenance

2. NFPA 70E: Electrical Safety Requirements for Employer Workplaces

3. ANSI/NFPA 70: National Electrical Code

4. ANSI/NFPA 780: Lightning Protection Code

5. ANSI/NFPA 101: Life Safety Code

D. National Electrical Manufacturers Association (NEMA)

E. American National Standards Institute (ANSI)

1. ANSI C2: National Electrical Safety Code

2. ANSI Z244-1: American National Standard for Personnel Protection

F. Insulated Cable Consultants Association (ICEA)

G. Instrument Society of America (ISA)

H. Underwriters Laboratories (UL)

I. Factory Mutual (FM)

J. International Electrical Testing Association (NETA) – Acceptance Testing Specification for Electric Power Distribution Equipment and Systems (STD)

K. Institute of Electrical and Electronics Engineers (IEEE)

L. Massachusetts Electrical Code

M. All inspections and tests shall utilize the following references:

1. Project Design Specifications

2. Project Design Drawings

3. Project Short Circuit and Coordination Study

4. Manufacturer’s shop drawings submittals and instruction manuals applicable to each particular apparatus.

N. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**1.09 - INTERFERENCE AND ERRONEOUS LOCATIONS**

A. Verify in field, all data and final locations of Work installed under other Sections required for placing of electrical Work.

B. Do not run conduit in floor slabs or walls of buildings unless indicated.

**1.10 - SEISMIC REQUIREMENTS**

A. Conform to the requirements indicated on structural drawings and as specified in SECTION 01900, SEISMIC REQUIREMENTS and as specified herein.

**1.11 - APPROVAL AND MARKING EQUIPMENT**

A. All devices and materials shall be listed and/or labeled by Underwriters' Laboratories, Inc., wherever standards have been established by that agency. Where Underwriters' Laboratories listing is not available for equipment, submit certified test reports of recognized, independent testing laboratory, approved by the local inspecting authority, indicating that equipment is in conformance with local code requirements or any other applicable requirements.

B. Mark equipment, devices and material with name or trademark of manufacturer and rating in volts and amperes and other information on a nameplate.

**1.12 - ELECTRICAL SYSTEM STUDIES**

A. Provide electrical system studies as specified in SECTION 16359, ELECTRICAL SYSTEM STUDIES. The specialty firm performing the study shall have no contractual or business ties with the electrical distribution system supplier.

B. The electrical system protection trip settings resulting from the study shall be provided to the electrical testing firm specified under SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS to adjust and set the electrical system parameters in the field.

C. The Arc Flash Labels shall be generated by the specialty firm under SECTION 16359, ELECTRICAL SYSTEM STUDIES and installed in the field by the Contractor under Division 16.

**1.13 - ELECTRIC SERVICE**

A. Electrical power system for the facility shall operate at 480 volt, 3-phase, 3-wire, 60-Hertz.

B. Provide electrical low voltage distribution system that operates on 120/208 volt, 3-phase, 4 wire, 60-Hertz obtained from the power system by step down transformer(s).

C. Contact the following organization for coordinating the incoming power requirements for the project:

EVERSOURCE
Kathleen White
484 Willow Street
Yarmouth, MA 02673
Kathleen.white@eversource.com
(508) 790-9021

D. The organization identified above will furnish and install:

1. Pad-mounted transformer, including metering equipment.
2. Primary cable.
3. Connection and terminations of all primary cables at the service transformer.

E. The following shall be provided under other divisions:

1. Poured and pre-cast concrete, construction joints, and form work for ductlines, manholes, and handholes.
2. Concrete pad for transformer in accordance with Eversource standards.
3. Rebar, inserts, embedments, windows, ladders, pulling iron and related material.
4. Excavation and backfill.
5. Manhole and handhole frames and covers.
6. Manhole and handhole waterproofing.

F. The following shall be furnished and installed under this division:

1. Secondary cables of sufficient length for termination at the transformer.
2. Connection and terminations of all secondary cables at the service transformer.
3. Grounding at pad.
4. Hardware in manholes and handholes including cable supports, ground rods, ground cables, and associated equipment.

**1.14 - INCOMING FIBER OPTIC TELEPHONE AND DATA SERVICE**

A. Contact the following organization for coordinating the incoming fiber optic requirements for the project:

OpenCape Corporation
Barnstable County Complex
3195 Main Street
Barnstable, MA 02630
508-362-2224
https://opencape.org/

B. The organization identified above will furnish and install:

1. Telephone and Data Service Conductors from overhead service poles to telephone system handhole (THH.10-1).
2. Comcast network switch and hardware at WWTF telephone/data backboard.

C. The following shall be furnished and installed under this division:

1. Telephone and Data Service Conductors from telephone system handhole (THH.10-1) and WWTF telephone/data backboard at
2. Telephone/data service backboard at the WWTF electrical room.
3. Dual telephone/data service outlets as shown on Contract electrical drawings.
4. Telephone/data service conduit and cabling from Comcast hardware to dual telephone/data service outlets.

**1.15 - EQUIPMENT SPECIFIED ELSEWHERE**

A. Certain items of control equipment and other equipment are indicated on electrical drawings for connection, but are specified and provided in other sections pertaining to plumbing, heating, ventilating and air conditioning, mechanical process, diesel generator system, and instrumentation, etc.

B. Electrical Ductline System:

1. The following shall be provided under other divisions.
    1. Poured and pre-cast concrete, construction joints, and form work for ductlines, manholes, and handholes.
    2. Rebar, inserts, embedments, windows, ladders, pulling iron and related material.
    3. Excavation and backfill.
    4. Core drilling of existing concrete.
    5. Manhole and handhole frames and covers.
    6. Manhole and handhole waterproofing.

2. The following shall be provided under this Division.

    1. Conduit, fittings, and supports.

    2. Hardware in manholes and handholes including cable supports, ground rods, ground cables, and associated equipment.

    3. Wires, cables. And conductors, including splicing.

**1.16 - HAZARDOUS AREAS**

A. Equipment, materials and installation in areas designated as hazardous shall comply with NEC Articles 500, 501, 502 and 503.

B. Equipment and materials installed in hazardous areas shall be UL listed for the hazardous area classification.

**1.17 - CODE, INSPECTION AND FEES**

A. Equipment, materials and installations shall comply with the requirements of the local authority having jurisdiction.

B. Obtain all permits and arrange for all inspections.

**1.18 - TESTS AND SETTINGS**

A. Test systems and equipment furnished under Division 16 and replace all defective Work and equipment at no additional cost. Refer to the individual equipment sections and SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS for additional specific testing requirements. Employ the services of an Independent Testing Company, other than the manufacturer of the electrical distribution system, to perform the tests specified.

B. Field testing and commissioning shall be performed in accordance with the latest revisions of NETA Standard ATS "Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems" and SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS.

C. A typed test report for each component tested shall be submitted. The firm doing the testing shall include, in the report, their opinion whether or not the equipment being tested complies with the specification. Any discrepancies shall be noted in the concluding summary of the report. Test report forms shall be in compliance with NETA standards. Five complete copies shall be provided. Reports shall be signed by the person in charge of the field testing, an officer of the firm performing the tests and an officer of the Electrical Subcontractor.

D. In addition to the specific testing requirements listed in the individual sections, the following tests and settings shall be performed:

    1. Mechanical inspection, testing and settings of circuit breakers, disconnect switches, motor starters, overload relays, control circuits and equipment for operation.

    2. Check the full load current draw of each motor. Check ampere rating of thermal overloads for motors and submit a typed record of the same, including MCC cubicle location and driven load designation, motor service factor, horsepower, and Code letter. If incorrect thermal overloads are installed replace same with the correct size overload.

    3. Check power and control power fuse ratings. Replace fuses if they are found to be of the incorrect size.

    4. Check settings of the motor circuit protectors. Adjust settings to allow the motor to be started when under load conditions.

    5. Check motor nameplates for correct phase and voltage.

    6. Check rotation of motors prior to testing the driven load.

    7. Check interlocking, control and instrument wiring for each system and/or part of a system to prove that the system will function as indicted by control schematic and wiring diagrams.

8. Inspect each piece of equipment in areas designated as HAZARDOUS to make sure that installed equipment has rating as specified in Paragraph 1.14.

9. Verify all terminations at transformers, equipment, panels and enclosures by producing a 1, 2, 3 rotation on a phase sequenced motor when connected to “A”, “B” and “C” phases.

**1.19 - INTERPRETATION OF DRAWINGS**

A. Coordinate the conduit installation with other trades and the actual supplied equipment. Coordinate equipment conduits top and/or bottom entries as required for the equipment installation and as specified and indicated on the Contract Drawings.

B. Install each 3-phase circuit in a separate conduit unless otherwise indicated.

C. Install all conduits and wiring system as indicated on and matching the Contract drawings. Conduits shall not be combined unless otherwise indicated on Contract drawings.

D. Conduit shown exposed shall be installed exposed; conduit shown concealed should be installed concealed.

E. All fittings and boxes shall be provided for a complete raceway installation.

F. Verify the exact locations and mounting heights of lighting fixtures, switches and receptacles prior to installations.

G. Except where dimensions are shown, the locations of equipment, fixtures, and outlets indicated are approximate only. Obtain information relevant to the placing of electrical Work and in case of any interference with other Work.

H. Circuit layouts are not intended to show the number of fittings, pull boxes, or other installation details. Furnish all labor and materials to install and place in operation all power, lighting and other electrical systems indicated.

I. Raceways and conductors for the fire alarm and telephone systems are not indicated. Interconnection descriptions are indicated in their Riser Diagrams as indicated. Provide raceways and conductors, as required by the system manufacturer, for a complete and operating system. Raceways shall be installed concealed in all finished spaces and installed exposed in process spaces.

J. Raceways and conductors for lighting, switches, receptacles, and other miscellaneous low voltage power and signal systems as specified are not indicated. Raceways and conductors shall be provided for lighting, switches and receptacles for a complete and operating system.

**1.20 - PHASE BALANCING**

A. The drawings do not attempt to balance the electrical loads across the phases. Circuits on motor control centers and panelboards shall be field connected to result in evenly balanced loads across all phases.

B. Field balancing of circuits shall not alter the conductor color coding requirements as specified in SECTION 16120, ELECTRIC WIRES AND CABLES.

**1.21 - SIZE OF EQUIPMENT**

A. Investigate each space in the structure through which equipment must pass to reach its final location. Coordinate shipping splits with the manufacturer to permit safe handling and passage through restricted areas in the structure.

B. The equipment shall be kept upright at all times during storage and handling.

C. Equipment shall not be physically larger than what is shown on the Contract Drawings.

**1.22 - EQUIPMENT IDENTIFICATION**

A. Identify equipment furnished under Division 16 with the name of the equipment it serves. Switchboard, motor control centers, control panels, panelboards, junction or terminal boxes shall have nameplate designations as indicated. Equipment nomenclature and identification system shall be as specified herein.

B. Nameplates shall be engraved, laminated plastic, 1/16-in. thick by 3/4-in by 2-1/2-in. with 3/16-in. high white letters on a black background.

C. Nameplates shall be screw mounted to NEMA 1 enclosures. Nameplates shall be bonded to all other enclosure types using a waterproof epoxy adhesive. Two-sided foam adhesive tape shall not be used. Where the equipment size does not have space for mounting a nameplate the nameplate shall be permanently fastened to the adjacent mounting surface.

**1.23 - SEQUENCING AND SCHEDULING DEMOLITION WORK**

A. Remove and demolish equipment and materials in such a sequence that the existing and proposed plant will function properly with no disruption of power. Obtain Owner's consent before removing any circuit from continuous service.

**PART 2 – PRODUCTS (NOT USED)**

**PART 3 - EXECUTION**

**3.01 - REMOVAL AND RELOCATION OF MATERIAL AND EQUIPMENT**

A. Carefully dismantle and salvage electrical equipment, switches, fixtures, conduits, cables, wiring, boxes, as necessary to carry out proposed changes. Rehabilitate and relocate items of equipment as required and as indicated or specified.

B. Remove from site and dispose of material and equipment removed.

**3.02 - DEMOLITION**

A. Survey the existing electrical systems and equipment identified for removal with representatives from the other trades and civil site work prior to performing any demolition work. Identify all conduit and equipment to be removed with tags or paint.

B. Where equipment is to be removed all associated ancillary components (e.g. supports, handholes, poles, fixtures, etc.) and associated wiring and conduit shall also be removed.

C. Equipment, building or structures scheduled for complete demolition shall be made safe from electrical shock hazard prior to demolition. Disconnect and remove all electrical power, communications, controls, alarm and signal system.

D. Existing underground electrical systems feeding equipment, building or structures scheduled for complete demolition shall be made safe, disconnected and removed.

E. Equipment scheduled to be turned over to the Owner shall be carefully disconnected, removed and delivered to the Owner where indicated. Provide labor, hoisting and transportation of the equipment. All other miscellaneous electrical materials, devices, etc., associated with the equipment being turned over shall be demolished and removed from the site.

F. Remove electrical work associated with equipment scheduled for demolition except those portions to remain or be reused.

G. Unless otherwise specifically noted, remove unused exposed conduit and support systems back to point of concealment including abandoned circuit above accessible ceiling finishes. Removed unused wiring back to source (or nearest point of usage).

H. Disconnect and remove abandoned electrical equipment unless otherwise indicated or specified.

I. Disconnect and remove abandoned luminaries. Remove brackets, stems, hangers and other accessories.

J. Repair adjacent construction and finishes damaged during demolition and extension work.

K. Where electrical systems pass through the demolition areas to serve other portions of the premises, they shall remain or be suitably relocated and the system restored to normal operation.

L. Trace out existing wiring that is to be relocated or removed and perform the relocation or removed work as required for a complete operating and safe system.

M. Remove exposed conduits, wireways, outlet boxes, pull boxes and hangers made obsolete by the alterations, unless specifically designated to remain. Patch surfaces and provide blank covers for abandoned outlets which are removed.

**3.03 - PROTECTION OF ELECTRICAL EQUIPMENT**

A. Store equipment in compliance with manufacturer's recommendations and as specified herein.

B. Protect electrical equipment from the weather, especially from water dripping or splashing upon it, at all times during shipment, storage, and construction.

C. Do not store equipment outdoors.

D. Where equipment is installed or stored in moist areas, or unheated buildings, provide acceptable means to prevent moisture damage. Provide uniformly distributed source of heat in electrical equipment to prevent condensation and damage to electrical insulation systems.

**3.04 - DEFECTIVE OR DAMAGED EQUIPMENT**

A. Damaged equipment shall not be used. Equipment damaged in shipment, storage, installation or through other means shall be replaced without additional cost.

B. All equipment showing signs of damage shall be rejected regardless of dielectric test results.

C. All electrical equipment is considered "in storage" regardless of location until first energized. Manufacturer's recommendations for storage precautions, conditions and care shall be followed.

D. Equipment that found to be damaged or failed the field inspection and acceptance tests specified under SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS shall be replaced at no additional cost.

**3.05 - STARTING EQUIPMENT DATA LIST**

A. Obtain data from the equipment supplier shop drawing submittals or equipment nameplates and prepare a complete tabulation of all motors over 1/3 hp, electric heaters over 1 kW, air conditioning units and starting equipment, to be furnished on the project.

1. Include in tabulation form the following information:

a. Name and identification of equipment.

b. Manufacturer.

c. Horsepower or kilowatt rating.

d. Voltage.

e. Phase.

f. Speed.

g. Full load current.

h. Locked rotor current or code letter.

i. Type of enclosure (open drip-proof, totally enclosed, fan cooled, etc.).

j. NEMA size of starter or contactor.

k. Overload heater size.

l. Type of starter (full-voltage, reduced-voltage, autotransformer, etc.).

m. Breaker trip setting or fuse size.

n. Voltage of starter operating coil.

o. If starter is at a motor control center, list motor control center number.

2. Final acceptance of the electrical system is contingent upon submittal of the complete motor and equipment tabulation.

3. Arrange tabulation in groups by building location.

4. Furnish six copies of the tabulation to the Engineer when a submission is made.

**3.06 - EQUIPMENT ENCLOSURE**

A. The equipment enclosure classification of the plant areas are indicated within the Area Classification Schedule shown on the drawings. Provide all equipment, devices, installations and material meeting the requirements of this schedule.

**3.07 - AS BUILT DRAWINGS**

A. At the completion of the Project, provide two sets of contract drawings that are marked to show the as-installed equipment, devices, conduits, underground duct lines locations, layouts, wiring and any revisions to the Contract Drawings occurred during construction. As built drawings markup shall be complete and provide a detailed and accurate representation of as installed field conditions of all equipment provided under this Contract.

**3.09 - INSTALLATION**

A. Provide conduit, wire and field connections for all motors, motor controllers, control devices, control panels and electrical equipment furnished under other Divisions.

1. All dimensions shall be field verified at the job site and coordinated with the Work of all other trades.

2. Provide electrical installation working drawings containing the following:

1. Concealed and buried conduit layouts, shown on floor plans. The layouts shall include locations of process equipment, motor control centers, transformers, panelboards, control panels and equipment, motors, switches, motor starters, junction or pull boxes, instruments and other electrical devices connected to concealed or buried conduits.

2. Coordinate all Work with other divisions.

**3.10 - SLEEVES AND FORMS FOR OPENINGS**

A. Provide and place all sleeves for conduits penetrating floors, walls, partitions. Locate all slots for electrical Work and form before concrete is poured.

B. Exact locations are required for stubbing-up and terminating concealed conduit. Obtain shop drawings and templates from equipment vendors or other Subcontractors and locate the concealed conduit before the slab is poured.

C. Seal all openings, sleeves, penetration and slots as specified in SECTION 16110, ELECTRICAL RACEWAY SYSTEMS.

**3.11 - CUTTING AND PATCHING**

A. Arrange installation of all Work such that cutting and patching is not required.

B. Do not cut joints, beams, girders, columns or any other structural members.

**3.12 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 16110**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16110, ELECTRICAL RACEWAY SYSTEMS is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK - GENERAL.

B. The Work of SECTION 16110, ELECTRICAL RACEWAY SYSTEMS, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Electrical Raceway Systems as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit shop drawings and manufacturer's product data for all raceway systems, accessories, supports and miscellaneous hardware in accordance with the requirements of SECTION 16050, ELECTRICAL WORK – GENERAL.

2. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance. Failure to include a copy of the marked-up specification sections will result in return of the entire submittal without further review and consideration until the marked-up specification are re-submitted with the entire package.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. Provide raceway systems, with matching accessories, fittings and boxes, as indicated and specified.

D. All raceway runs are indicated diagrammatically to outline general routing of raceway. Unless specifically identified for installation in concrete walls or slabs, raceways shall be run exposed with raceway supporting systems. Avoid interfering with pipes, ducts, structural members, or other equipment.

E. Raceways and conductors between lighting, switches, receptacles and other miscellaneous low voltage and signal systems as specified and indicated are not shown on the Plan View Drawings. Raceways and conductors shall be provided for complete and operating systems. Conduit and wiring descriptions are indicated on the Riser Diagrams for the Fire Alarm, Telephone and Instrumentation Systems. Raceways shall be installed exposed unless otherwise indicated. Avoid conflicts with HVAC ducts, cranes, hoists, monorails, equipment hatches, doors, windows, structural beams and process equipment.

F. Provide raceway systems in accordance with the following:

1. In NEMA 1, NEMA 4 or NEMA 12 areas, use galvanized rigid steel raceway systems, fittings and accessories.

2. In chemical areas and those areas designated NEMA 4X, use PVC coated rigid steel raceway systems, fittings and accessories.

3. In classified hazardous areas designated as Class I, Division I and Class 1, Division 2, use PVC coated rigid steel raceway systems, fittings and accessories with tapered threads and sealing fittings as required by the Massachusetts Electrical Code for hazardous applications.

G. All raceway systems shall be installed in accordance with the criteria described in this section.

1. Use Type 316 stainless steel support systems for exterior application, hazardous areas, NEMA 4 and in NEMA 4X areas.

2. NEMA 1 and NEMA 12 areas shall use hot dipped galvanized steel support systems.

H. Aluminum conduit and boxes shall not be used.

I. Provide fire stops for all electrical penetrations through fire rated walls and floors.

**1.08 - SEISMIC REQUIREMENTS**

A. All raceways shall be supported to Massachusetts Electrical Code requirements and conform to the requirements as indicated on the structural drawings and as defined in SECTION 01900, SEISMIC AND WIND REQUIREMENTS.

**PART 2 - PRODUCTS**

**2.01 - ACCEPTABLE MANUFACTURERS**

A. Rigid Metal Conduit and polyvinylchloride-coated rigid steel conduit:

1. Triangle/PWC, Inc.

2. Perma-Cote Industries.

3. Republic Steel Corporation.

4. Robroy Industries.

5. Or equal.

B. Polyvinylchloride (PVC) Conduit:

1. Triangle/PWC, Inc.

2. Robroy Industries.

3. Carlon Electrical Sciences, Inc.

4. Or equal.

C. Flexible Conduit:

1. American Flexible Conduit Company.
2. Anamet, Inc.
3. Electri-Flex Company.
4. International Metal Hose Company.
5. Eaton Crouse-Hinds.
6. Or equal.

D. Boxes and Fittings:

1. O.Z./Gedney Company.
2. Crouse-Hinds Electrical Construction Materials.
3. Appleton Electric Company.
4. Or equal.

E. Fiberglass-Reinforced Polyester Boxes:

1. Crouse-Hinds Electrical Construction Materials.
2. Fibox.
3. Hoffman Engineering Company.
4. Vynckier Enclosure Systems.
5. Or equal.

F. Support Systems:

1. Michigan Hanger Co., (O-Strut).
2. Thomas & Betts (Superstrut).
3. Unistrut Corp.
4. Or equal.

G. Fire Stop Material and Barriers:

1. Nelson Fire Stop Products.
2. Dow Corning Corporation.
3. 3 M Company.
4. Or equal.

**2.02 - MATERIALS AND COMPONENTS**

A. Rigid Metal Conduit:

1. Provide galvanized rigid metal conduit, each with a coupling on one end and thread protector on other end.
2. Hot-dip galvanize rigid steel conduit over entire length, along interior and exterior surfaces, including threads. Conduit shall conform to U.L.-6.

B. Flexible-Metal Conduit:

1. Provide flexible-metal conduit for use in NEMA-1 and NEMA-12 dry areas and match fittings, size, and material to rigid conduit to which it is connected. Flexible-metal conduit shall conform to U.L.-1.

2. Provide liquid-tight PVC coated flexible-metal conduit for use in NEMA-4 damp areas consisting of flexible-metal conduit, with liquid-tight, sunlight-resistant jacket extruded over the conduit. All fittings and accessories shall be PVC coated. Provide stainless steel, braided flexible conduit in NEMA 4X, corrosive areas. On larger than 1-1/4-in., furnish separate external ground wire. Liquid-Tight flexible-metal conduit shall conform to U.L.-360.

3. Provide stainless steel braided flexible conduit in all hazardous areas.

C. Polyvinylchloride (PVC) Conduit:

1. Provide PVC conduit, Schedule 40 conforming to NEMA Standard TC-2 and UL-651. PVC Schedule 40 conduit shall not to be used unless embedded in concrete and unless otherwise indicated on the drawings.

D. Polyvinylchloride-Coated Rigid Steel Conduit:

1. Provide polyvinylchloride-coated (PVC-Coated), rigid steel conduit conforming to NEMA Standard RN-1 consisting of hot-dipped galvanized rigid steel conduit, with a polyvinylchloride jacket bonded to the outside of all conduit surfaces with a nominal thickness of 40 mils meeting the requirements of NEMA RN-1, 3.1. The adhesive strength of the bonding to equal or exceed tensile strength of the coating. Provide couplings and fittings for this conduit conforming to the requirements of NEMA RN-1, 3.5.

2. A two-part urethane coating shall be applied to the interior of all conduit and fittings at a two mil thickness. The interior coating shall be flexible to allow field bending without cracking or flaking.

E. Boxes:

1. In NEMA 1 and NEMA 12 areas, provide standard, sheet-metal, outlet and junction boxes constructed of code-gauge, galvanized sheet steel. Size each box by the Massachusetts Electric Code.

2. Provide boxes containing fixture studs for hanging fixtures. Use concrete-tight boxes for installation in concrete. Do not use shallow boxes unless building construction is such that it is impossible to use standard-depth boxes.

3. Provide outlet boxes and fittings for hazardous locations conforming to U.L.-886 for class, group, and division indicated. Outlet boxes and fittings for hazardous areas shall also meet requirements of NEMA 4 areas.

4. Provide boxes and covers for polyvinylchloride-coated steel conduit made of 316L stainless steel or, in classified areas and outside, galvanized cast iron, with a polyvinylchloride factory-applied coating over the galvanizing. Provide coating thickness of 40- mil. Boxes shall have hubs with extruded sleeves extending beyond the hub in the same manner as specified for conduit couplings. Provide cover screws of Type 316 stainless steel.

5. Provide cast boxes with covers or device plates that can be used for the area classification. Use cover screws of Type 316 stainless steel or high brass for iron boxes.

6. Provide boxes for use with polyvinylchloride conduit made of polyvinylchloride for use as junction boxes and provide high impact strength fiberglass-reinforced polyester boxes for use as device boxes, pull boxes, and terminal boxes. Size each box as required by the Massachusetts Electrical Code.

7. Where designated in the drawings, provide pull boxes above or below motor control center installations 20 inches by 20 inches by 12 inches deep. Boxes of dimensions 10 inches by 10 inches by 6 inches deep and larger shall be hung from ceilings constructed of angle or channel frames. Provide neoprene gaskets for sealing. Sectionalize covers longer than 36-in. to facilitate handling and gasket sectionalized covers where covers meet, using angle iron or channel cross members at the joint. Sheet metal shall be No. 12-gauge galvanized sheet steel. Fabricate interior angles and supports of galvanized steel. Provide each box with a grounding lug for connection to the nearest ground bus. Current capacity of ground lug shall be that required by the Massachusetts Electrical Code for the largest feeder entering the equipment.

8. Provide terminal blocks in all terminal boxes, panels, and instrumentation cabinets/panels requiring terminations as indicated or by wiring diagrams for equipment actually purchased. All terminals shall be rated 600V, 20 amp. All terminals shall be screw type with provisions for white markers.

9. In NEMA 4 and NEMA 4X areas, provide 316L stainless steel outlet and junction boxes. Size each box as required by the Massachusetts Electric Code.

F. Fittings:

1. Provide cast-iron fittings of malleable iron or a mixture of gray iron and cast steel.

2. Provide expansion fittings where conduits cross expansion joints. Equip these fittings with grounding straps, clamps, and copper bonding jumpers.

3. For PVC conduit, provide PVC fittings that can be solvent welded to match conduit.

4. Provide PVC-coated coupling and fittings for PVC-coated conduit with an integral, bonded, overlapping pressure-sealing sleeve of the same thickness as conduit coating. Provide extended sleeves one pipe diameter or 2-in. (whichever is less) beyond the end of the coupling so sleeve of coupling makes a watertight fit with the plastic jacket on the conduit when coupled together. Sealing sleeves at threaded connections shall seal out vapors and liquids.

5. Provide PVC coated fittings and accessories with PVC-coated rigid galvanized steel conduit.

G. Supports:

1. Provide raceway component supports which are meant to function with the raceway, and will support the raceway as indicated and meet the NEC and manufacturer’s requirements.

2. Provide Type 316 stainless steel hangers, threaded rods, channels, straps, clips, and clamps for raceways provided in hazardous areas, NEMA-4 and NEMA-4X areas. Provide stainless steel bolts, nuts and washers.

3. Provide hot dipped galvanized steel support system for raceways installed exposed in NEMA-1 and NEMA-12 areas.

4. Provide support for flexible conduit with components which do not compress and do not deform conduit.

**2.03 - FIRESTOP PRODUCTS**

A. Only firestop systems listed and tested to the UL 1479 Standard complete with prototype test data showing their individual applications shall be used.

B. Fire resistance ratings of installed firestop systems shall not be less than the fire resistance rating of the surrounding fire separation or firewall.

C. All listed system designs selected for use shall have a smoke seal incorporated within the rated firestop systems.

D. All firestop materials that will come directly in contact with plastic pipe or plastic coated wire shall have undergone Firestop Material compatibility testing by the Firestop Systems manufacturer and/or the pipe or wire manufacturer.

E. All firestop materials and smoke seals shall have elastomeric characteristics to allow for building settling and seismic movement.

F. All firestop materials and smoke seals shall be free of asbestos.

G. Site firestop systems must be installed in accordance with the UL 1479 Standard listed system design limitations.

H. All listed system designs used must provide a Flame (F), Temperature (T) and Hose (H) stream rating in accordance with those outlined in the most recent BOCA codes, include any additional requirements of the Work in this Section.

**PART 3 - EXECUTION**

**3.01 - INSTALLATION**

A. Provide all material, equipment, and labor to install the electrical raceway systems as indicated and as specified herein.

B. Perform all Work in accordance with the Massachusetts Electric Code.

C. Use no conduit less than 3/4-in. in diameter.

D. Install raceways, boxes, enclosures, and cabinets as indicated, according to manufacturer's printed instructions.

**3.02 - METHODS OF RESTRAINING RACEWAYS**

A. Utilize threaded rod with rod stiffeners and transverse channel braces at 45 degrees angle, at 15-ft. on center, maximum, and on one side of rod support.

B. Utilize longitudinal bracing with channel braces at 30 feet on center, maximum.

C. Strap raceways directly to transverse channel braces, using pipe strap with both ends of strap bolted into the channel brace.

D. Do not rigidly brace raceways to different parts of a building that may respond differently during an earthquake. Seismic restraints shall not limit expansion and contraction of the raceway support system.

E. Provide flexible connections for conduits 2-in. outside diameter or greater than when terminating to fixed equipment to prevent loss of raceway integrity in the event of an earthquake.

**3.03 - INSTALLATION OF FITTINGS**

A. Install expansion fittings and bonding jumpers wherever conduits cross structural expansion joints. Keep the fittings in line with conduit, and install with regard to temperature so that full working range of expansion is available.

B. Do not install fittings to replace elbows and pull boxes. Use oversize fittings whenever large cable is installed, in order to maintain bending radius.

C. Terminate ends of all floor conduits installed for future use with couplings and readily removable plugs set flush with finished floor surface. Cap spare wall conduits at wall where they enter building.

D. Equip ends of all conduits with conduit fittings. Fit conduits terminating at motor control center or power distribution equipment, or in box above or below, with grounding type bushings, or solidly ground by locknuts or other fittings. Connect each grounding bushing to ground bus by a bare or green-covered copper wire. Do not use ground wire smaller than 12 awg. Install ground wire larger than 12 gauge when indicated. Where conduits terminate in unprotected areas or where bonding is required over expansion joint, flexible conduit or equivalent; use ground wires No. 6 Awg. copper or larger. Copper bonding jumpers are required over expansion joints.

E. Terminate conduits entering gasketed sheet-metal boxes or gasketed sheet-metal equipment enclosures with gasketed hubs.

F. Terminate conduits entering nongasketed sheet-metal boxes or enclosures with double locknuts and insulated bushings, or equivalent.

G. Make joints tight. Use raceway fittings compatible with raceway use and location.

**3.04 - INSTALLATION OF RACEWAYS**

A. Install exposed raceways parallel or at right angles to walls and ceiling beams. Make all changes in directions with bends, elbows, and pull boxes. Space parallel runs evenly throughout. Attach in place with hangers and fasteners. Ground raceways by connection to grounded enclosures, bonding, or other means, to obtain permanent low resistance path to ground throughout installation. Raceway sections in single run and in parallel runs shall be of same type and finish.

1. Run parallel or banked raceways together, on common supports.

2. Install raceways level and square. Provide minimum 7 ft. headroom.

B. Support raceways concealed above suspended ceilings from slab above ceiling in same manner as exposed raceways. Do not support raceways from ceiling supports.

C. Provide cast-in-place inserts in concrete to support all runs, unless otherwise permitted. Use stainless steel sleeve type concrete anchors for installing boxes, and conduit supports. Provide Type 316 stainless steel nuts, bolts, and washers, for use with concrete anchors. Wedge inserts shall not be used.

D. Support conduits by hangers or pipe straps spaced according to Massachusetts Electrical Code, but in no case more than 10 feet on centers.

E. Stub-Up Connections: Extend conduits through concrete floor for connection to freestanding equipment with an adjustable top or coupling threaded inside for plugs, and set flush with the finished floor. Extend conductors to equipment with PVC coated rigid steel conduit. Flexible metal conduit may be used 6 inches above the floor.

F. Provide sleeves passing through exterior walls and slabs which are wall entrance seals of watertight construction. Furnish watertight seal between slab and sleeve, and between sleeve and conduit or cable. Use wall-entrance seals of malleable iron with watertight sealing gland which may be tightened any time after installation.

G. Do not use dissimilar metals in conjunction with each other. Use insulation between adjoining surfaces so as to eliminate direct contact and any resultant electrolysis. Maintain electrical continuity of system. Use bituminous impregnated felt, heavy bituminous coatings, nonmetallic separators or washers as insulation.

H. Install fittings to match raceway being used.

I. Install expansion fittings wherever conduits cross structural expansion joints. Keep fittings in line with conduit, and install with regard to temperature so that full working range of expansion is available.

J. Where conduits pass through firewalls, grout hole around the conduit to the full depth of the material penetrated using U.L. listed fire stop material.

K. Provide separate metallic raceways for all low voltage instrumentation raceways 50 volts and below shielded wiring, data highway wiring, and fire alarm wiring and install 12-inches from control and power raceways.

L. Terminations: Where raceways are terminated with locknuts and bushings, align the raceway to enter squarely, and install the locknuts with dished part against the box; use two locknuts, one inside and one outside the box.

M. Where terminating in threaded hubs, screw the raceway or fitting tight into the hub so the end bears against the wire protection shoulder. Where chase nipples are used, align the raceway so the coupling is square to the box, and tighten the chase nipple so no threads are exposed.

N. Install pull wires in all empty raceways. Use No. 14 AWG zinc-coated steel or monofilament plastic line having 200-lb. tensile strength. Leave 12 inches of slack at each end of the pull wire.

O. Keep raceways 6 inches away from parallel runs of flues and steam or hot water pipes. Install horizontal raceway runs above water and steam piping.

P. Complete raceway installation before beginning conductor installation.

Q. Use temporary closures to prevent foreign matter from entering raceway.

R. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portion of bends is not visible above the finished slab.

S. Conduit in transition (from below to above grade, through walls and through concrete) shall be PVC coated rigid galvanized steel (PVC-RGS). The transition shall be made below grade at the final sweep before the transition for exposed conduit. PVC-RGS conduit shall extend one (1) foot minimum above transition finished floor.

**3.05 – BENDS**

A. Make all bends to prevent distortion of circular cross section. Field bent conduit shall have an inside radius of nine diameters.

B. The maximum number of bends in any single conduit run shall be in accordance with the Massachusetts Electrical Code requirements.

**3.06 - CUTTING, THREADING AND CONNECTING**

A. Make all field cuts in conduits squarely, file cut ends, ream to remove rough edges and thread in accordance with Massachusetts Electric Code. No running thread shall be permitted. Make all connections mechanically strong and tight, with connectors. Where conduit surface coating is damaged or removed in the cutting, threading or reaming process, restore the surface to its original condition.

**3.07 - CONDUIT CLEANING**

A. Clean conduits before and after installation, ream ends free of burrs, and free inside surfaces from all imperfections.

B. After installation of each new conduit run, snake the run with band to which is attached a tube cleaner with cylindrical mandrel of a diameter 85 percent of nominal diameter of conduit. Remove and replace all conduit through which mandrel will not pass.

C. Use a sponge with steel brush to clean steel conduit and use a sponge with nylon brush to clean PVC conduits.

D. After cleaning, protect ends of all conduit with standard caps to prevent entrance of water, concrete, debris, or other foreign substance.

**3.08 - CONDUIT DRAINAGE**

A. Pitch conduit to drain to outlet boxes, or install so as to avoid trapping moisture. Where dips are unavoidable in exposed conduits, install fitting to match conduit system with drain hole at low point.

**3.09 - INSTALLATION OF BOXES**

A. Unless otherwise indicated, install NEMA 1 or NEMA 12 sheet metal boxes only in dry, accessible locations. Install NEMA 4 and 4X rated boxes in exterior concrete or masonry walls, in floor slabs, in basements, all other below grade locations and elsewhere as indicated. Unless otherwise indicated, cast metal boxes shall be used where vapor-tight fixtures are required, for all surface mounting of wall switches and receptacles and for all outdoor use.

B. Install boxes in conformance with all the requirements of Massachusetts Electric Code. Install boxes designed for type of construction involved. Support boxes in same manner as conduit. Size boxes to provide bending radius for wire or cable of eight times diameter or in accordance with Massachusetts Electric Code, whichever is larger.

C. Center all outlets in panels, or spaces and adjust to structural finish. Where specific locations are not indicated, locate outlets with respect to equipment served.

D. Place all outlet boxes, junction boxes and pull boxes, in accessible locations when they are installed above or behind plastered ceilings, furred spaces, or suspended ceilings. Install access panels. Mark all access panels for all boxes so panels can be readily located in future. Mark, using metal tabs or plastic buttons which cannot mark ceilings or walls, that can be used for type of construction being used.

E. Assemble cast-metal boxes with threaded conduit hubs in such manner that conduit connections and gasketed covers are watertight. Close all unused threaded openings with pipe plugs and compound.

F. Provide cast boxes with covers and device plates that can be used for the area classification. Install screws of Type 316 stainless steel or high brass for iron boxes.

**3.10 - FLEXIBLE CONNECTIONS TO MOTORS AND EQUIPMENT**

A. At all motors and electrically operated equipment to which conduit connections are made, install with a connection between end of conduit and terminal box of motor or other equipment.

B. Install the conduits in locations permitting direct connection to motors.

C. Make connections between rigid raceway and motor or equipment subject to vibration and adjustment using flexible conduit. Make each connection with one quarter bend so that no vibration can be transmitted beyond flexible connection.

D. Use maximum of 6 feet of flexible conduit for equipment subject to vibration, noise transmission, or movement; and for all motors. Use liquid tight flexible conduit in wet or damp locations. Install liquid-tight flexible metal conduit in areas subject to wetting due to fire protection sprinklers or broken or ruptured water line. Locate conduit to reduce the possibility of damage to the exterior flexible conduit jacket. Use fittings that screw into flexible conduit and provide gaskets. Install separate ground conductor across flexible connections.

**3.11 - HAZARDOUS AREAS**

A. Install all conduits, fittings, equipment and devices within areas to comply with requirements of Massachusetts Electrical Code including Hazardous Locations, Class, Division, and Group as indicated on the Contract Drawings.

B. In such hazardous locations, seal conduits terminating at boxes enclosing circuit-opening equipment at entrance to enclosure with compound-filled, commercial, sealing fittings to prevent passage of explosive or combustible gases through conduits.

C. Seal all conduits leading from or entering such hazardous locations at points of exit or entrance with two-part epoxy sealant.

D. Install conduit connections with five threads tightly engaged, and made up with thread compound.

E. Where drain/seal fittings are required, they shall be of malleable iron construction with an internal drainage path which provides a visual means to see that the compound chamber is filled. The installation shall enable the drain/breather fitting and filler plug to be installed right after the compound is poured.

F. Provide stainless steel braided flexible conduit rated for hazardous area locations when making connection between rigid raceway and motor or equipment subject to vibration and adjustment.

**3.12 - FIRESTOP INSTALLATION**

A. Firestop and smoke seal gaps and holes in all fire separation and firewall construction through which conduit, wire, cable, pass as a result of Electrical Work using a Listed System Design.

B. In combustible construction, firestop and smoke seal all through electrical penetrations of the faces as above and firestop and smoke seal all penetrations that enter or exit (transverse) the edges of one fire separation into another fire separation. (i.e. where the header or sill plate is penetrated in the interior of a wall separation into the hollow ceiling or floor cavity of the adjacent separation.)

C. Apply firestop systems at unpenetrated electrical openings and sleeves installed for future use through fire separations and firewalls.

D. All Electrical items that pass through, transverse or terminate within fire separations or firewalls must be firestopped. Firestopping forms part of the Work of this Section.

E. All recessed electrical boxes or panels in fire separations shall be noncombustile (steel) and must be separated by one stud or joist cavity. Back to back installations and/or combustible (plastic) boxes and panels are not allowed unless the gypsum board trade has constructed a fire rated enclosure equal to that of the fire separation rating around each box or panel.

F. All holes or voids created in fire separations or firewalls for single penetrating wires, cables and conduit the annular spare shall not exceed 1” (25mm) for penetrating items up to 2” (50 mm) in outside diameter. For penetrating items over 2” (50 mm) in outside diameter the annular space must not exceed 1½” (37 mm).

G. All holes or voids created in fire separations or firewalls for multiple penetrating electrical items must have a fill ratio 50% of the overall void or hole size.

H. In all firestop systems that require mineral wood or ceramic fiber backer or filler materials, these materials must be dry and free of other contaminants before, during and after installation of sealant firestop materials. Alkaline water contamination of the backer or filler materials may cause corrosion of metallic penetrating items.

I. Apply firestop systems and smoke seals in strict accordance with manufacturer's instructions and Listed Systems Designs to provide temperature and flame rated seals, to prevent the passage of fire and smoke.

**3.13 - PROTECTION**

A. Provide protection and install in accordance with manufacturer printed instructions such that coatings, finishes, and enclosures are without damage or deterioration at completion of Project.

B. Repair damage to PVC with matching touch-up coating recommended by the manufacturer.

**3.14 - CHECKOUT AND TESTING**

A. Provide in accordance with SECTION 16050, ELECTRICAL WORK - GENERAL and SECTION 16998, FIELD INSPECTION AND ACCEPTANCE TESTS and as specified herein.

B. Check overhead conduit system installation by using the following check list:

1. Conduits are supported on independent supports (i.e., not on process piping, pipe ways, or piping hangers).
2. Exposed conduits are run, parallel or perpendicular to structural members.
3. Conduits are routed far away from fire hazards and heat sources.
4. Conduits are supported at the specified intervals.
5. Pull boxes and fittings are installed so that covers are removable. Verify that covers are installed and tightly bolted with gaskets provided where needed.
6. Circular cross sectional area is same at conduit bends. Single bends do not exceed 90 degrees.
7. Conduits are terminated in threaded hubs or bushings to prevent damage to wire.
8. Conduits joints are tight.
9. Seal fittings and/or sealing compound is installed at moisture barriers to prevent entry of moisture and gases into equipment and/or where indicated.
10. Drains and conduit seals are installed on vertical conduit runs entering devices, equipment, and enclosures to prevent entrance of moisture and gases.
11. Flexible conduit is installed at motors and other equipment as specified. Verify that cabling and conduit runs are identified at each end.

**3.15 - CONDUIT SEALS**

A. Furnish and install sealant to maintain fire ratings of walls and floors in annular space between conduit and building finish.

B. Apply sealant after cable installation and all testing.

C. Furnish and install moisture/fire proof sealant in conduit interior and cable interstitial space where conduits enter/leave electric rooms, in all control panels, terminal boxes, motor control centers, and switchboard.

**3.16 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 16721**

**FIRE ALARM SYSTEM**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16721, FIRE ALARM SYSTEM is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK -.

B. The Work of SECTION 16721, FIRE GENERAL ALARM SYSTEM, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - DESCRIPTION

A. Provide, test, and place into operating condition an electrically operated, microprocessor based, UL listed, four-wire, analog/addressable, electrically supervised, Class “A” fire detection and evacuation system as indicated and specified.

B. The System shall include, but not be limited to: Fire Alarm Control Panels FACP or panels required for each building, remote annunciator panel, power supplies, fire alarm initiating and indicating devices including addressable monitor and control modules, fire alarm dialer, fire alarm radio communicator, interfaces to building sprinkler system, conduit, wire, fittings, and accessories required to provide a complete operating system. All devices and units shall be located in accordance with the Contract Drawings.

C. The fire alarm system shall be tied into the Town of Orleans, Massachusetts Fire Alarm System Remote Monitoring Service provider via radio transmitted signal.

D. Provide radio fire alarm communicator hardware in accordance with the Town of Orleans Fire Department requirements. Provide radio Intellinet 7788F-ULP Series with accessories 7041E (Subscriber Handheld Programmer) and 7794 (IntelliPro Fire Full Data Module) or equal. Provide the main Fire Alarm Panel with compatible means to network with the specified radio communicator for full data reporting.

E. Prior to the installation of the system, the manufacturer of the system and system installer shall obtain from the Town of Orleans, an Application for Fire Alarm Service, and a copy of all local requirements and obtain all permits and approvals.

F. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT C-700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT C-700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations and clarifications from the specified requirements.

1) Failure to include a copy of the marked-up specification sections will result in return of the entire submittal with no further review and consideration.

2. Submit installer and system supplier qualifications and list of three similar projects with name and phone number of contact person.

3. Provide a complete list of equipment and materials, including manufacturer's descriptive and technical literature, catalog cuts. Shop drawings shall contain complete wiring and schematic diagrams for the equipment furnished, riser diagrams with cable sizes and quantities, equipment layout, and any other details required to demonstrate that the system has been coordinated and will properly function as a unit.

4. Submit manufacturer's printed installation instructions.

5. Submit a statement indicating that the battery size selected is a minimum of 125% of the provided system load. The specified limit shall include supervisory power requirements for all equipment, and alarm power requirements for all equipment.

6. Submit a statement indicating that voltage drop is within ratings of all devices.

7. Wiring diagrams from the fire alarm system integrator or supplier differentiating clearly between factory and field installed wiring. Include diagrams for equipment and for system with all terminals and interconnections identified. Identify all diagrams to be specific to this project and distinguish between field and factory wiring.

8. Spare Parts Data - Submit list of spare parts provided.

9. Operating and Maintenance Instruction Manuals:

    1) Operating instruction manuals, outlining the step-by-step procedures required for system startup and operation shall be furnished. The instructions shall include the manufacturer's name, model number, service manual parts list and brief description of all equipment and their basic operating features.

    2) Maintenance instructions manuals outlining maintenance procedures shall be furnished. The manual shall include a troubleshooting guide listing possible breakdown and repairs and a simplified connection wiring diagram for the system as installed. Provide the names, addresses, and telephone numbers of service organizations that provide technical assistance and carry stock of repair parts for the system to be furnished.

    3) Performance Test Reports: Upon completion of the installed system the Electrical Subcontractor shall submit in booklet form all field tests performed to prove compliance with the specified performance criteria. Each test report shall indicate the final position of controls.

10. Submit Certificate of Compliance, signed by manufacturers of fire alarm system components certifying that their products comply with specified requirements.

11. Submission to Authorities Having Jurisdiction: In addition to routine submission of the above material, make an identical submission to the authorities having jurisdiction. Include copies of annotated Contract Drawings as needed to depict component locations to facilitate review. Upon receipt of comments from the authorities having jurisdiction, submit them for review. Resubmit if required to make clarifications or revisions to obtain approval.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.

E. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

1. Type of System

a. Fire Alarm System: The fire alarm system shall operate as a low voltage analog/addressable type system and shall automatically initiate fire alarm signals whenever any manual or automatic fire detecting devices are placed into an alarm mode. The system shall indicate areas of alarm and sound local alarms. Alarm signals shall be consistent throughout the building. Initiating loops and bell loops shall be wired as four-wire class A loops. All initiating loops and horn/light loops shall be complete with necessary switches, meters, relays, pilot lights, surge arresters and addressable modules as required. A minimum of one thermal cut-out or fuse and surge arrestor for every bell circuit shall be provided.

b. The system shall be capable of operating with a single break or ground fault condition in the initiating or alarm sounding circuits.

c. Evacuation Alarms: Coded evacuation alarm: A fire alarm signal shall be employed for notifying the occupants to evacuate. An annunciator shall indicate the specific location of the fire. The fire alarm system security provider shall be signaled automatically through the fire alarm radio reporting system.

d. Trouble Signals: During abnormal conditions such as an open wire or a ground fault, or where both conditions occur at one point, the system shall be capable of automatically transmitting clear, intelligible trouble signals.

e. Power Supply for the System: A dedicated branch-circuit for supplying power to the alarm system shall be provided for the Fire Alarm Control Panel (FACP). The branch circuits shall be automatically energized from an auxiliary electrical power system during failures of the normal power supply. Battery backup power shall be through use of rechargeable, sealed type storage batteries and battery charger.

f. The system shall interface to HVAC and fire sprinkler system, and other building systems as required by applicable codes to provide monitoring and control functions as described herein.

2. Network Communication

a. The network architecture shall be based on a Local Area Network (LAN), a firmware package which utilizes a peer-to-peer, inherently regenerative communication format and protocol. The protocol shall be based on ARCNET or equivalent.

b. There shall be no master, polling computer, central file computer, display controller or other central element.

c. There shall be no cascading of CPUs or master-slave relationships at the network level to facilitate network communications.

d. Failure of any node shall not cause failure or communication degradation of any other node or change the network communication protocol among surviving nodes located within distance limitations.

3. Sequence of Operation

a. When a fire-alarm condition is detected by one of the system's initiating devices, the following functions shall immediately occur:

1) All automatic programs assigned to the alarm point shall be executed and the associated indicating devices and relays activated.

2) All fire-alarm horns/strobes and beacons shall operate.

3) The system alarm on the Fire Alarm Control Panel and Remote Annunciator Command Center will indicate condition.

4) The Town Fire Alarm System Remote Monitoring Service provider shall be signaled automatically via transmitted radio signal.

5) Fan systems, i.e., shutdown, exhaust and pressurization operations to be initiated.

6) Auxiliary contact shall be provided to connect to facility PLC system to indicate fire alarm condition.

b. When a trouble condition is detected by one of the system's initiating or indicating circuits, the following functions shall immediately occur

1) System Trouble will be indicted on FACP and Annunciator Command Center.

2) A local trouble-sounding device in the FACP and Annunciator Command Control shall be activated. This sound shall be distinct from the alarm sound.

3) The appropriate message will appear on the LCD display at the FACP and Annunciator Command Center.

4) Auxiliary contact shall be provided to connect to facility PLC system to indicate system trouble.

C. Seismic Design Requirements

1. Conform to the requirements indicated on the structural drawings and as specified in SECTION 01900. SEISMIC AND WIND REQUIREMENTS.

**1.07 - QUALITY ASSURANCE**

A. Regulatory Agencies:

1. National Fire Protection Association (NFPA)

2. Underwriters' Laboratories (UL)

3. Massachusetts Electrical Code

4. Town of Orleans Fire Department

B. Standard Products: Material and equipment shall be the latest standard products of a single manufacturer regularly engaged in the manufacture of the product for the 5 years as a minimum.

C. Qualifications of the installer before commencing work: Submit information demonstrating that the supplier has successfully installed fire alarm systems of the same scope, type and design as specified.

1. Submit copies of all required Licenses and Bonds as required in the State having jurisdiction.

2. Installer shall be qualified by the Underwriter's Laboratories to certify the complete system to be UL listed upon completion of the installation.

D. Nameplates: All components of equipment shall have the manufacturer's name, address, type or style, and catalog number on a plate securely attached to the equipment.

E. Tags: Tags with stamped identification number shall be furnished for keys and locks. Tags shall be furnished to identify cable and conduit runs, wiring circuits, and all spare parts.

F. Keys and Locks: All locks shall be keyed alike.

G. Onsite Technician Services

1. Provide the services of a representative or technician certified by the manufacturer of the system, experienced in the installation and operation of the type of system provided.

2. The representative shall be licensed in the State.

3. The technician shall supervise installation, software documentation, adjustment, preliminary testing, final testing and certification of the system, and Underwriters Laboratories listing certification requirements.

4. Provide services of the manufacturer's service representative during installation, startup and testing, for a period of three (3) working day(s) plus travel where a working day is equivalent to 8 hours.

5. Provide one person-day of vendor training.

O. Massachusetts Electric Code.

P. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 - PRODUCTS**

**2.01 - MANUFACTURERS**

A. Simplex.

B. Honeywell, Inc.

C. Notifier.

D. Or approved equal.

**2.02 - MATERIAL AND EQUIPMENT**

A. Provide following system:

1. Provide an analog and addressable fire detection system. System shall be fully programmable at the FACP interface without the need for any external communication/programming device.

B. General Product Description:

1. The Fire-Alarm Control Panel (FACP) shall be capable of fire detection, equipment supervision and control, alarm management, and historical data collection and archiving.

2. The fire detection system shall have the following features:

   a. Analog/Addressable Devices

   b. Field programmability

   c. Individual ground fault annunciation

C. Communications

1. The FACP shall have sufficient memory to support its operating system and databases including:

   a. Fire management

   b. Alarm management

   c. Historical/Trend Data

   d. Maintenance Support Applications

   e. Custom Processes

   f. Operator/IO

2. Communication Ports: Provide data communication ports for simultaneous operation of devices such as industry standard printers, programming terminal, PC, transponder and annunciator.

3. Integrated On-Line Diagnostics: The FACP shall continuously perform self-diagnostics, communication diagnostics and diagnostics on all subsidiary equipment.

4. Surge and Transient Protection: Isolation shall be provided at all field point terminations to suppress induced voltage transients where required. Surge arrestors shall provide protection from all non-signal electrical surges that could cause damage to the equipment. Line surge arrestors shall be isolated from the electrical circuitry that they are protecting.

D. System Software Features:

1. All necessary software to form a complete operating system as described in this specification shall be provided.

2. The software programs specified in this section shall be provided as an integral part of the panel and shall not be dependent upon any higher-level computer for execution.

3. Alarm Management: Alarm management shall be provided to monitor, buffer, and direct alarm reports to operator devices and memory files. The control unit shall have capability of performing alarm analysis and signaling. At no time shall the panel's ability to report alarms be affected by operator activity.

4. Status Change Report: All alarm or point change reports shall include the point's English language description, and the time and date of occurrence.

5. Prioritization: The user shall be able to define the specific system reaction for each point. Alarms shall be prioritized to minimize nuisance reporting and to speed operator response to critical alarms. A minimum of three priority levels shall be provided.

6. Report Routing: Alarm reports shall be archived for future recall.

7. Alarm Messages: In addition to the point's description and the time and date, the user shall be able to print, display or store a custom alarm message to more fully describe the alarm condition or direct operator response.
8. The FACP shall be capable of storing a library of at least 900 events.
9. History Mode:
    a. The system shall be able to store and display at least 900 system events that have occurred in a non-volatile buffer memory.
    b. Display of these events shall be accomplished on-site through the use of the front control panel indicators and switches.
10. Field Configurable:
    a. The system shall be fully configurable and expandable without the need for EPROM programmers. All configuration shall be accomplished through downloading of programs from a computer.
    b. Reconfiguration shall not require knowledge of any programming languages or require any special training.
    c. All programs shall be stored in non-volatile memory.
    d. Entry into program mode shall require a special key and a special password entered into the front panel.

E. Analog Device Interface:

1. The Analog Device Interface will be capable of supporting devices as indicated on drawings with minimum of 25% spare capacity for future devices.
2. The analog addressable device interface shall contain its own microprocessor control.
3. The analog addressable device interface shall communicate and provide power to all devices on its loop over a single pair of wires. The fire-alarm system shall function as a Class A system.
4. The analog interface board shall receive analog information from all intelligent detectors and shall process this information to determine normal, alarm, or trouble conditions. The analog information may also be used for automatic test and determination of maintenance requirements.
5. Communication with all connected devices shall be performed every 5 seconds or less. Average time to detect an alarm shall be less than 10 seconds (longer for alarm verification detectors).

F. Notification Appliance Circuit:

1. The FACP shall provide supervised Class A notification circuits as indicated on drawings with 50 percent spare capacity for future devices. The circuit capacity shall be 2.0 amperes maximum per circuit, maximum of 8.0 amperes from the FACP's power supply. If a short-circuit trouble occurs on one of the circuits, it will not affect the operation of the remaining circuits.

G. Function Relays:

1. The FACP shall provide of Form "C" relay contacts, quantity as required, rated at 2 A at 120 VAC. These relays may be programmed to activate on alarm from any initiating zone or any combination of initiating zones, analog devices or addressable modules.

H. Central Processing Unit (CPU)

1. The CPU shall communicate with the operator interface, LCD display, LED display and control all other modules in the panel. Removal, disconnection or failure of any control panel shall be detected and reported by the Central Processing Unit.

2. The CPU shall contain and execute all control-by-event programs for specific action to be taken if a fire situation is detected in the system. Such control-by-event programs shall be held in non-volatile programmable memory and shall not be lost even if system primary and secondary power failure occurs. The CPU shall also provide a real time clock for time annotation on the display and remote optional printer.

I. Operator Display

1. The operator display shall provide all controls and indicators used by the system operator. The display shall contain, and display as needed, custom alphanumeric message for all intelligent detectors and addressable modules. Such message information shall be stored in programmable non-volatile memory.

2. The display board shall provide an 80-character alphanumeric Liquid Crystal Display (LCD). It shall also 24 LEDs for system indication such as AC POWER; SYSTEM ALARM; SYSTEM TROUBLE; ACKNOWLEDGE; SIGNAL SILENCE, etc.

3. Factory programmable system indications and keys shall be available for unique functions. Keys shall be referred to as “Hot Keys”.

4. The Display Interface shall provide a 15-key touch keypad with control capability to command all system functions, and entry of any numeric information. The keypad shall include means to enter a minimum of two different passwords to prevent unauthorized manual control.

5. Ground fault indication shall be displayed on a system and initiating zone basis.

J. Communications Ports

1. The system shall provide the following interfaces:

a. One port for remote annunciator command center

b. One port for Central Station/Town-tie connection

c. One port for service and field programming

d. One port for Printer

K. Mechanical Design

1. The Fire Alarm Control Panel (FACP) shall be housed in a cabinet designed for mounting directly to a wall or vertical surface. The back box and door shall be constructed with provisions for electrical conduit connections. The door shall provide a key lock and shall include an opening for viewing.

2. The FACP shall be modular in structure for ease of installation and maintenance.

L. One Person Test Feature

1. The control unit shall include a special one-person test feature, which will allow a single person to test all initiating devices and indicating appliance in a system without returning to the panel to reset the system. A special password shall be required to enter the test mode. The service-technician shall be able to re-select the initiating and indicating circuits that are to be included in the one-person test mode. The Walk-Test shall include a special audible indication that a trouble has been detected on an analog device, for the service-technician to check proper system wiring.

M. Provide addressable monitor modules to interface manual FACP to stations, sprinkler system pressure switches, and other detection components as required.

N. Provide isolator modules in addressable loops between groups of devices in a loop to isolate short-circuit problems to within a section of a loop. The module shall be capable of being mounted in a 4 x 4 x 2 1/8-inch junction box.

O. Fire-Alarm Initiating Devices

1. Addressable Devices: All addressable detectors shall:

   a. Provide a test means whereby they will simulate an alarm condition and report that condition to the FACP. Such a test may be initiated at the detector itself, by activating a magnetic switch, or may be activated remotely on command from the control panel.

   b. Provide address-setting means on the detector head using rotary decimal switches. The detectors shall also store an internal identifying code which the FACP shall use to identify the type of detector.

   c. Provide dual alarm and power LEDs. Both LEDs shall flash under normal conditions, indicating that the detector is operational and in regular communication with the control panel. Both LEDs may be placed into steady illumination by the control panel, indicating that an alarm condition has been detected. An output connection shall also be provided in the base to connect an external remote alarm LED.

   d. Include a twist-lock base.

2. Addressable pull stations shall, on command from the control panel, send data to the panel representing the state of the manual switch and the addressable communication module status. They shall use a key operated test-reset lock and shall be designed so that after actual emergency operation, they cannot be restored to normal use except by the use of a key. All operated stations shall have a positive, visual indication of operation and utilize a key type reset. Manual stations shall be constructed of Lexan with clearly visible operating instructions provided on the cover. The word FIRE shall appear on the front of the stations in raised letters, 1.75 inches or larger. Mount stations inside a red, weatherproof enclosure with a clear polycarbonate hinged front cover where station is indicated on the drawings as NEMA 4, NEMA 4X and hazardous areas.

3. Beam Smoke Detector shall be provided as indicated on the Contract Drawings and shall consist of infrared light beam based transmitter/receiver unit and a reflector mounted on the opposite wall. The Beam Smoke Detector shall be provided with a reset device.

4. Analog/Addressable Thermal Detectors: Thermal detectors shall use an electronic sensor to respond to temperatures exceeding 135 deg. F or 190 deg. F as noted on the plans. Sensing elements shall be replaced without removing the detector base. The detector shall, on command from the control panel, send data to the panel representing the analog temperature level. These addressable detectors shall connect with two wires to one of the control addressable input circuits.

5. Thermal detectors provided in NEMA-4 and NEMA-4X areas shall be rate compensation type as manufactured by Edwards Series 302, Honeywell Series 302 or approved equal.

6. Each detector shall be provided with a steel mounting plate, and the entire unit shall mount on a double gang electrical box.

7. Sprinkler System Pressure and Tamper Switches: Furnish and wire addressable monitor modules to send signals to the FACP for monitoring of sprinkler system flow and pressure tamper switch operation where indicated on drawings.

8. Provide devices to match the NEMA ratings indicated within the Area Classification Schedule on the Contract Electrical Drawing 00 E-601.

P. Fire Alarm Indicating Devices

1. Visual appliances shall be installed as shown on the drawings in accordance with the requirements of the U.L. 1971 standard and NFPA 72. Where multiple visual signals are visible from any location, circuitry shall be incorporated for the synchronization of the flash rate.

   a. UL 1971 Listed for Emergency Devices for Hearing Impaired in all public mode installations.

   b. Strobes shall meet UL 1971 flash rate.

c. All visual signals shall incorporate a Xenon flashtube enclosed in a rugged Lexan lens or equivalent with solid state circuitry.

d. The strobe intensity shall be rated per UL 1971.

e. The strobes shall be available for semi-flush or surface mounting and in conjunction with audible signals as required.

2. Alarm Horns: Audible evacuation signals shall be furnished and installed as shown on the drawings meeting the following requirements:

a. Audible Notification appliance shall be electronic and use solid state components.

b. Each electronic signal shall provide four (4) field selectable alarm tones. The tones shall consist of slow hoop, continuous, temporal or interrupted.

c. The device shall provide U.L. dBA measurement at 10 feet shall be a minimum of 85 dBA for separately mounted audible signals.

d. The device shall have provisions for standard reverse polarity type supervision and in/out field wiring using terminals that accept #14 AWG wiring.

3. Audiovisual Alarm Horns: Audiovisual Alarm Horns shall have a high intensity flashing light and alarm horn as an integral unit. Both audio and visual components shall operate from the 24 volt dc polarized indicating circuits. The horn assembly shall be housed in a rugged, die-cast enclosure, and the electronic light source shall be sealed in silicone and protected by a Lexan lens. The word FIRE shall appear on the lens. Audiovisual alarm devices shall meet the requirements of visual appliances and alarm horns above. Single and/or dual projectors shall be supplied as shown on the plans.

4. In NEMA-4 and NEMA-4X areas provide weatherproof rated indicating devices or devices enclosed in weatherproof enclosure with clear Polycarbonate front cover.

Q. Power Supply

1. The power supply for the FACP and fire alarm peripherals shall be integral to the FACP. The power supply shall provide FACP and peripheral power needs.

2. Positive-temperature-coefficient thermistors, circuit breakers, or other over-current protection shall be provided on all power outputs.

3. Input power shall be 120 VAC 60 Hz. The power supply shall provide internal batteries and charger. Internal battery capacity shall be sized as required to meet system requirements.

4. The main power supply shall provide a battery charging circuit consisting of a fully automatic standby battery charger, rate compensated, capable of maintaining battery in fully charged state and be capable of recharging batteries to 70% of alarm capacity within 12 hours. Provide for normal operation of entire system for 24 hours with power remaining to sound alarms for 5 minutes.

5. Provide charger with the following supervised functions: circuit protection for shorts, open, disconnected or reversed polarity battery connection, supervision or protection of high or low voltage, overcharging and charger failure. Automatic load shedding or battery disconnect on deep discharge to prevent battery damage.

6. Batteries shall be 24 V, rechargeable, gelled electrolyte, totally sealed, fully charged with al interconnections ready for service, maintenance free, long-life.

R. Wiring: Wiring shall be in accordance with NFPA No. 70 and as indicated. All wiring shall be color coded.

S. Remote Annunciator Command Center

1. The remote Annunciator Command Center shall be an 80 (4 x 20) character back-lit LCD type capable of displaying up to 3200-point messages. The remote annunciator shall have the capability of driving up to 576 LEDs for future graphic notification. They shall be sixteen switch inputs that can be used for various system functions; lamp test, trouble silence, general alarm, scroll, system reset, network reset, etc. All fire-alarm controls shall be operational from the Annunciator Command Center.

2. The remote annunciator shall have non-volatile memory. Annunciators which rely on the FACP for memory will not be accepted.

3. The remote Annunciator Command Center shall be flush mounted with switches located with a locked panel, and easily visible through a glass or plastic viewing plate. Panel door shall have a keyed lock identical to the lock on the main fire alarm control panel (FACP).

T. Duct Mounted Smoke Detectors:

1. Furnish and install all duct mounted addressable type smoke detectors in accordance with NFPA 90A and 72. Detectors shall be 4-wire, addressable, Class A. Duct mounted smoke detectors shall be of the self-contained ionization type used for duct mounting rated for the air speed to be encountered in the duct, and with sampling tube and box assembly. Each smoke detector shall be provided with double pole, double throw alarm contacts. The locking cover box shall house a POWER ON light, an alarm indicator light, a reset switch, and a detector, all prewired ready for final wiring connections. Sampling tubes shall extend the full width of the ducts in which they are mounted. Each smoke detector shall be provided with remote test station capable of reset and detector status and alarm test function. Smoke detectors shall be as listed by the U.L., Inc. When any one of the smoke detectors is activated it shall:

e. Activate a visual alarm at the smoke detector and a visual and audible alarm at fire alarm system.

f. Close relay dry contracts wired to its associated temperature control panel terminal strip, to close a remote alarm.

**2.03 - SPARE PARTS AND SPECIAL TOOLS**

A. Provide one spare FACP mother board and two (of each type provided) of the following:

1. Pull Stations
2. Manual Pull Stations
3. Smoke Detectors
4. Thermal Detectors
5. Alarm Horns
6. Alarm Strobes

B. Three sets of special tools necessary for the maintenance of the equipment shall be furnished. Two spare sets of fuses of each type and size required and five spare lamps for each type shall be furnished. Spare parts shall be listed on submittal list.

**PART 3 - EXECUTION**

**3.01 - INSTALLATION**

A. Install fire alarm system as indicated on the drawings, in accordance with the manufacturer's diagrams and printed instructions, except where otherwise indicated.

1. Wiring: Wiring for systems shall be installed in rigid conduit, as specified in Section 16110: ELECTRICAL RACEWAY SYSTEMS.

2. External wiring between the control panel and the stations and horns/lights shall connect to terminal strips in accessible locked cabinets. Connections to the terminal strips shall be made with terminal spade lugs or with approved type terminal blocks. Terminal cabinets shall be installed at each point where a station circuit riser originates or any point along a circuit where a tap is made. The conductors for the fire alarm system shall not be installed in conduits, junction boxes, or outlet boxes with conductors of lighting and power systems. The sum of the cross-sectional areas of individual conductors shall not exceed 40 percent of the interior cross-sectional area of the conduit. Gutter space to accommodate all necessary wiring shall be provided.
3. Panels: Panel enclosures shall comply with the requirements of UL 864. Enclosures having doors over 48 inches in height shall be provided with a three-point catch and lock; all other doors shall contain a cabinet type cylinder lock. Inserts shall be blind fastened so that no screws show on the panel front.
4. Detectors: Detectors shall be installed in accordance with manufacturer's printed instructions.
5. All wiring for the system shall be in accordance with Massachusetts Electric Code.
6. Provide complete wiring and conduit between all equipment. All devices shall be mounted upon UL listed boxes. Wiring splices and transposing or changing of colors will not be permitted.
7. All junction boxes shall be painted red and labeled as “Fire Alarm System” with decal or approved markings.
8. Fire Alarm control systems and equipment shall be connected to separate dedicated branch circuits, sized as required for proper service. Circuits shall be labeled “FIRE ALARM.”

**3.02- PERMITS AND CERTIFICATIONS**

A. Obtain all required local permits.

1. Provide UL certification of the installation.

**3.03 - FIELD TESTING**

A. Notify the Owner 30 days before the performance and acceptance tests are to be conducted. The tests shall be performed in the presence of the Owner or his authorized representative. Furnish all instruments and personnel required for the tests. Tests shall be conducted for the following:

1. Verify that the system is free of grounds or open circuits. Wiring runs shall be tested for continuity, short circuits and grounds before system is energized. The FACP shall indicate when a ground or open circuit exists.
2. All alarm initiating devices shall be observed and logged for correct zone and sensitivity. These devices and their bases shall be tagged with adhesive tags located in an area not visible when installed, showing the initials of the installing technician and date.
3. Verify that all strobes, horns, stations, transmitters, automatic detectors and supervisory devices are functioning as specified.
    a. Strobes and horns shall deliver the correct foot-candle and sound pressure levels decibels of the specified device.
    b. Stations shall close the circuits specified and deliver specified alarm codes.
    c. Automatic detectors shall actuate the specified zones when the appropriate fire or smoke conditions are generated. The detectors shall be exposed to actual smoke used to simulate this test on each and every smoke detector as located in the building; no other test will be accepted.
    d. Panels and supervisory devices shall display and control functions as specified. Loss of AC system power shall also be tested.
    e. Radio communication of alarms to the Town fire alarm security provider shall be demonstrated and documented.

B. System tests to be performed under the supervision of the fire alarm system contractor's qualified representative and the local fire authority.

C. The acceptance inspector shall be notified before the start of the required tests. All items found at variance with the drawings or this specification during testing or inspection by the acceptance-inspector, shall be corrected.

D. Perform all tests to verify the correction of any defect found in the initial testing. If testing identifies system modifications are required to accomplish the required operation, perform all required work and retest the system.

**3.04 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 16724**

**SECURITY ALARM SYSTEM**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16724, SECURITY ALARM SYSTEM is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK - GENERAL.

B. The Work of SECTION 16724, SECURITY ALARM SYSTEM, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - DESCRIPTION

A. Provide and test a complete security detection and alarm system as indicated and specified. Contract Drawings contain plan and riser diagrams showing the location and type of all alarm points and equipment.

B. The security alarm system shall monitor the integrity of all alarm initiating circuits and shall be provided with automatically charged standby batteries to maintain system operation for 4 hours in the normal supervisory mode plus have sufficient capacity to operate in the alarm mode for 15 minutes at the conclusion of this supervisory time period. Batteries shall be supervised for connection to the system and a low voltage threshold. The automatic battery charger shall be capable of charging fully the discharge system batteries to 100 percent in 8 hours.

C. All equipment and components shall be Underwriters Laboratory (UL) listed.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit shop drawings in conformance to UL 1076 and UL 681 and consisting of a complete list of equipment and materials, including manufacturer's descriptive and technical literature, catalog cuts and battery sizing calculation.
2. Submit complete system wiring schematic diagrams and point to point wiring diagrams for the equipment furnished, equipment layout, and any other details required to demonstrate that system has been coordinated and will properly function as a unit.
3. Provide a list of recommended spare parts.
4. Provide Operating and Maintenance Instruction Manual.
5. Performance Test Reports: Upon completion of installed system, submit in booklet form all field tests performed to prove compliance with specified performance criteria including final position of controls.
6. Provide a final as-built system wiring diagrams.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with Section 01610, DELIVERY, STORAGE AND HANDLING and as specified herein.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. Sequence of Operation

1. Door or window entry will be annunciated at the control panel and will initiate a remote alarm to Distributed Control System. Keypad bypass switches shall be provided at all doors.

D. Service

1. The equipment manufacturer shall have a local branch office staff with trained, full-time employees who are capable of performing testing, inspecting, repair, and maintenance services.

**1.07 - QUALITY ASSURANCE**

A. Standard Products: Material and equipment to be the latest standard products of a manufacturer regularly engaged in the manufacture of the products.

B. Nameplates: Major components of equipment to have the manufacturer’s name, address, type or style, and catalog number on a plate securely attached to the equipment.

C. Tags: Tags with stamped identification number to be furnished for keys and locks and all spare parts furnished for the Authority’s stock to maintain the system. Furnish and install tags to identify cable and conduit runs and wiring circuits on the installed system.

D. Keys and Locks: Key all locks alike.

E. Accessibility: Provide enclosures with ample gutter space to allow proper clearance between the enclosure and live parts of the panel equipment. If more than one modular unit is required to form a control panel, provide the units installed in a single cabinet large enough to accommodate all units, and allow ample gutter space for interconnections of panels and field wires.

F. Verify that conduit size and wire quantity, size, and type are suitable for the equipment supplied. Review the proper installation of each type of device with the equipment supplier prior to installation.

1. Provide Services of Service Technician, specifically trained on type of equipment specified.

G. 1.09 - SEISMIC DESIGN REQUIREMENTS

1. Conform to the requirements indicated on the structural drawing S-1 and as specified in SECTION 01900, SEISMIC AND WIND REQUIREMENTS.

2. It shall be the responsibility of manufacturer and supplier along with the Electrical Contractor to conform to the seismic design requirements for this project and for the work of this specification section.

**1.08 - REFERENCES**

A. National Fire Protection Agency (NFPA)

1. NFPA 72: National Electrical Code (NEC)

B. Underwriter's Laboratories, Inc. (UL).

1. UL 1076: UL Standard for Safety Proprietary Burglar Alarm Units and System.

2. UL 681: UL Standard for Safety Installation and Classification of Mercantile and Bank Burglar Alarm Systems.

C. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 - PRODUCTS**

**2.01 - MANUFACTURERS**

A. Robert Bosch, Inc. ON, Canada.

B. Honeywell, Inc., S. Minneapolis, MN.

C. Tyco Simplex Grinnell, BC, Canada.

D. Or equal

**2.02 - ALARM SYSTEM OPERATION**

A. The system shall be comprised of ten zones. Zones shall be programmable for Instant, Delay, Day Supervisory, Silent, Priority (non shuntable). Loop Response Time shall be programmable. System shall detect faulty read only memory (ROM) on power up. System shall be continually supervised by a watch dog Microprocessor Timer.

B. The system shall be armed, disarmed, reset, monitored and altered by the use of the system main keypad. The system shall provide fail safe arming preventing arming of the system if a zone has been violated or is not fully closed. System shall indicate which zone has door(s) not fully closed.

C. Actuation of any device shall cause the following to occur.

1. Sound the interior audible device at the Control Panel.

2. Activate the built-in digital telephone dialer or communicator, seize the protected premises telephone line and automatically report the alarm to a remote location.

3. Indicate the alarm condition at keypads.

D. Acknowledgment of alarms or troubles, in conjunction with interrogation of other systems activity (i.e. alarm memory, bypassing of zones, etc) shall require the use of a Personal Authorization Code (PAC) number to be entered in the keypad.

E. Up to ninety (30) user PAC codes can be utilized with the system. Programming of these codes shall be field programmable into EEProm memory without the use of any special programming tools (i.e. Prom burners or factory programming methods). Programming will occur through the systems digital remote keypad. A user programming code will be required to make such changes. The remote keypad shall provide a means to verify programmed instructions through binary information displayed by the system's status indicators. No special displays or other associated hardware will be permitted to review program contents. Power outages or complete battery discharge shall not affect programmed field instructions.

F. Provide capability for all door entrances to be programmable for exit/entry time delays (1 to 255 seconds), providing a warning tone when in the timing sequence. All other system contacts shall provide an instant alarm if system has been armed and in the timing sequence.

G. During a daytime disarmed condition, all door or window switches or any initiating alarm appliance shall be indicated through the system status indicators if in alarm condition. If the panel is armed these appliances will actuate the control, sound the signals and alert the monitoring station through the built in communicator.

H. Signal cut off time shall be programmable from 1 to 255 minutes.

I. The panel shall contain a daytime disarmed supervisory mode. It shall be configurable to either provide a latching or auto-restore mode of operation. With this function any zone that is violated will provide local annunciation without sounding the signals or activating the communicator. If in the auto-restore mode, the keypad sounder will activate and restore when the contact is open then closed. If in the latching mode, the keypad will sound until reset from the keypad with the PAC code. A SPDT relay will be provided in the control to activate auxiliary sounding devices.

J. The system shall incorporate a door strike output timed or toggled (on/off) to provide either automatic timed entrance when disarmed or manual activation through the keypad with PAC number.

K. System alarms shall be retained in EEProm memory until reset using the PAC number. Complete power outage shall not affect alarm memory recall.

L. An auxiliary beacon at the front door shall be provided when system is alarm.

M. The system shall include the following features as a minimum.

1. Supervised monitoring of all indicating appliance wiring both in the daytime or bypassed condition.
2. Separate alarm, trouble, bypass, ready to arm and secure indicators at each keypad control station. Keypads shall be flush mounted.
3. Dead front design control panel/with all indicators and control switches located behind a locked door.
4. Automatic transfer to standby batteries upon power failure.
5. Inclusion for a digital dialer compatible with Owner's requirements and all major receivers including Adcor; Ademco; Franklin; Osborne; Hoffman; Radionics; Sescoa; ADT; Silent Knight and Varitech.
6. Watch dog microprocessor monitoring.
7. Fully field keypad programmable EEProm memory.
8. Dynamic 24 hour battery load test.
9. Continuous monitoring of fuses for auxiliary voltage outputs.
10. Six stage lightning protection.
11. Shunt by zone from keypad.
12. Zone auto shunt or auto/restore after alarm.
13. Retained alarm memory.
14. Digital communicator shall be approved to comply with applicable FCC codes. Unit shall feature either pulse or touch tone dialing. "Call Waiting" tones shall not prevent proper operation. The following communicator parameters shall be programmable from the keypad and not require either Prom burners or other factory programming methods.
    a. Report by zone.
    b. Single or two line extended reporting.
    c. Two account codes.
    d. Split reporting.
    e. Opening and closing reports by user codes.
    f. Closing ring back.
    g. Restoral reporting.
    h. Programmable abort.
    i. Supervisory reporting of all trouble conditions.

j. Programmable delay before dialing.

k. Programmable dial attempts.

l. Programmable delay between dial attempts.

m. Programmable test reporting for intervals of 12 hours up to 7 days.

n. Shunt by zone reporting.

o. AC failure and AC restoral reporting.

p. Low battery and battery restoral reporting.

q. Memory error reporting.

r. Listen in capabilities.

15. Bell test on arming.

16. Auxiliary light output during alarm conditions.

17. Door strike output either timed or keypad accessible.

18. Keypad tamper.

19. Uploading of memory contents available to IBM PC compatible host.

20. Provide optional cellular telephone service as back-up system should phone lines be interrupted.

21. Output contacts to transmit a signal to the General Alarm Panel.

22. Output contacts to transmit a signal to the Distributed Control System.

**2.03 - ALARM SYSTEM COMPONENTS**

A. System shall include a local security alarm control panel with alarm indicating lights, door switches, window detectors, motion detectors, key pad by-pass switches, power supply, conduit, and wiring. Quantity of contacts to be monitored as required.

1. Provide multi-zone control panel surface mounted as indicated.

2. Control panel shall have built-in battery backup and shall provide up to 900 mA power auxiliary devices. Voltage shall be regulated at 13.8 VDC. Automatic system shutdown will occur at 7.5 VDC to prevent false alarming.

3. During alarm condition sup to 3.0 Amps of power shall be available to drive sirens and auxiliary functions.

4. Control panel shall be provided with a two sound siren driver.

5. Control panel shall be listed UL Commercial Grade A Local Burglar, Grade B and C Central Station Burglar. Unit shall be provided with a Simplex; Honeywell; Johnson & Controls or equal, attack proof enclosure featuring heavy gauge/welded seam construction and be provided with two tamper switches to supervise front and rear tampering.

6. Provide zone expander module permitting the connection of 3 N/O zones in addition to the basic eight zones.

7. Provide equipment and enclosures to comply with National Electric Code including Hazardous Locations, Class, Division, and Group as indicated on Contract Drawings.

8. Keypads - Provide weatherproof keypads as indicated. Keypads shall be provided with a built in sounder for audible system signaling. Keypads are not to be externally mounted unless mounted in weatherproof enclosures. Keypads shall operate via multiplex communications to provide total system indication and access code authorization over four conductors.

9. Door/Window Contacts/Switches - Provide UL listed magnetic flush mounted contacts and magnets. Each contact shall be provided with matching magnet. All contacts shall be hermetically sealed for long term 10,000,000 cycle contact. Switch contacts shall be of the reed blade type with rhodium plating eliminating cold-welding; sticking and resistance build-up. All switches shall be 100 percent factory tested prior to installation.

10. Outside High Powered, Weather Resistant, Siren Speaker - Provide, as indicated, weatherproof 30 Watt Siren Speaker. Unit shall feature 125 dB at 10-ft. sound output and shall be provided with N/C tamper loop to supervise against removal.

11. Outside Tamper Resistant Weatherproof Enclosure - Provide tamper resistant enclosure provided with two tamper switches to supervise against front cover and wall mounting.

12. Glass Break Detectors - Provide UL listed Glass Break Detectors as indicated. Units shall feature state of the art, thick film technology and be of the solid state Piezo electric glass break detector type. Device type shall contain discriminating circuits that detect only the specific mechanical ultrasonic frequencies generated by breaking glass. Sensors shall protect a 10-ft. radius of glass area. Sensors shall be of the N/C variety and shall each feature a latching LED to indicate the appropriate detector in alarm.

13. Provide programmable timers for entry delay, exit delay, access, alarm cut-off, and audible output.

14. Provide zone alarms which are selectable as instant or delay.

15. Electronics provided with memory to retain arm and disarm status and alarm memory.

16. Microprocessor monitoring circuit shall be provided.

17. Lightning and surge protection devices shall be provided.

18. Provide resonating type sounder device for the annunciation of an alarm condition at the panel.

B. Provide touch tone digital communication device with primary and secondary dialing capability.

C. Size and type of wire for the systems shall be as recommended by the system supplier.

**2.04 - SPARE PARTS**

A. Provide recommended spare parts list.

**PART 3 - EXECUTION**

**3.01 - INSTALLATION**

A. Provide security system complete and operating as indicated and specified. Provide all equipment, wiring, conduit and outlet boxes required for the installation of a complete and operating system in accordance with applicable codes, the manufacturer's recommendations, as indicated and this Section. All wiring shall be a completely separate conduit system. Color coded wires shall be used throughout. Wiring shall conform to the National Electrical Code.

B. Devices and Panel: Install security alarm devices and panel in accordance with manufacturer's printed instructions.

**3.02 - FIELD TESTING**

A. Provide checkout, field and functional testing to verify all features of the system are fully operational.

**3.03 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16761, VIDEO SURVEILLANCE SYSTEM is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK - GENERAL.

B. The Work of SECTION 16761, VIDEO SURVEILLANCE SYSTEM, requires the Subcontractor to perform all Work specified under this section.

### 1.01 - DESCRIPTION

A. Provide and test a fully-integrated Video Surveillance System to accomplish the specified access control and monitoring functions.

B. Include all system design, configuration, programming, installation, wiring, electrical service, connection to the monitoring system, mounting hardware, appurtenance, and testing necessary for a fully functional Video Surveillance to meet operational requirements.

C. Provide and test all wiring and cabling required for the Video Surveillance System to operate in compliance with the specified requirements. Include system component installation, interfacing equipment items, and interconnecting wiring.

D. Provide all software, hardware, devices, workstations, power supplies, accessories, wiring, special cables, training, and support required for the specified system operation.

E. Provide all required electrical work in accordance with Division 16.

F. Provide specific design with detail drawings and associated documentation extending the general requirements specified into a complete and operating system.

G. Connect, test, demonstrate and commission all system hardware, software, and system controls.

H. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT C-700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT C-700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Provide Bill of Materials with manufacturer catalog cut sheets that are clearly annotated to show which devices and options are being submitted.

2. Provide CCTV control panel dimensional drawings and panel elevations showing component layouts. Drawings shall be to-scale.

3. Provide control panel wiring schematics clearly indicating all required field wiring.

4. Indicate all components and network topology. Include the following as a minimum:

   a. Overall system block diagram, hardware placement, rack and equipment panel arrangements and layouts.

   b. A functional description of the block diagram. Describe the overall system operation, interaction between system elements, and system operator interactions.

   c. Include the manufacturer's name and model number for each hardware item shown on the block diagram, as well as auxiliary equipment such as power supplies.

   d. Include a system architecture drawing showing the system controller, monitors, recorders, cameras and point-to-point connection diagrams showing cable types and device terminal numbers; layout drawings for the control consoles, including front, side and plan views with all components identified; and pole, pole base and mounting bracket detail drawings.

   e. Include web-based connections between facilities on system architecture drawings.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified.

D. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.

E. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

C. System Description

   1. Work includes furnishing, calibrating, adjusting, testing, documenting, and start-up of a complete video surveillance, recording, and access control system.

   2. Provide equipment for a complete and operational system.

   3. Provide system architecture as shown on Contract drawings.

   4. Provide electrical and communications wiring and installation required for a fully functional system. As part of the system, provide all appurtenance, including electrical service and mounting hardware to make the system complete, including all duct banks, CCTV camera poles, conduit and wire, and transformers required for the CCTV system.

**1.06 - QUALITY ASSURANCE**

A. Standard Products: Material and equipment to be the latest standard products of a manufacturer regularly engaged in the manufacture of the products. All equipment shall be new. Provide quality assurance in accordance with SECTION 16050, ELECTRICAL WORK - GENERAL.

B. Accessibility: Provide enclosures with ample clearance to allow proper separation between the enclosure and live parts of the panel equipment. If more than one modular unit is required to form a control panel, provide the units installed in a single cabinet large enough to accommodate all units, and allow ample clearance for interconnections of panels and field wires.

C. Ensure that conduit size and wire quantity, size, and type are suitable for the equipment supplied. Review the proper installation of each type of device with the equipment supplier prior to installation. Services of Service Technician specifically trained on type of equipment specified. Person-day requirements listed exclusive of travel time.

1. Assist in location of devices, methods of mounting, and field erection -2 person-day
2. Start-up and testing -2 person-day
3. Person-day is defined as one 8-hour day, excluding travel time.

**1.08 - REFERENCES**

A. Underwriters Laboratories (UL).

B. American National Standards Institute (ANSI):

1. ANSI C136.3 – Roadway Lighting Equipment-Luminaire Attachments.

C. American Society for Testing and Materials (ASTM)

D. National Electrical Manufacturers Association (NEMA).

E. Electronic Industries Association (EIA).

F. National Electrical Code (NEC).

G. Massachusetts Electrical Code.

H. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

**PART 2 – PRODUCTS**

**2.01 - CCTV CAMERAS**

A. Provide quantities of cameras at locations shown on Contract drawings.

B. Provide CCTV Cameras with:

1. Pan/tilt drives and weatherproof housing.
2. Hardware for building and pole mounting.
3. CCTV infrared illuminators.
4. Power over Ethernet (PoE).

C. CCTV cameras shall continuously monitor:

1. WWTF entrances and exits.
2. WWWTF main site entrance gate.
3. Locations as indicated on Contract electrical drawings.

**2.02 - CONTROL PANELS**

A. Provide CCTV Control Panels (CCTV CPs) as indicated:

1. Waste Water Treatment Facility CCTV Control Panel (CCTV-CP.10-1)

B. Provide 120VAC rated, UL listed Control Panel with:

1. Uninterruptable power supplies (UPS) to supply standby power to entire camera, monitoring and recording system. UPS shall be sized to provide 15 minutes of operation time upon loss of normal power.
2. Surge Protection Devices (SPD)
3. Power supplies as required for CCTV system devices

**2.03 - CCTV WORKSTATION**

A. Provide a dedicated CCTV Monitoring Workstation at the Waste Water Treatment Plant Control Room (RM 116).

B. Provide CCTV Display Monitor:

1. Flat Screen CRT display monitor with minimum viewable image size of 19.8 inches.
2. 300 cd/m2 minimum brightness.
3. Digital on-screen controls.
4. Maximum resolution of 1600x900@85Hz or better.

C. Provide CCTV Monitoring Workstation with:

1. Flat Screen CRT display monitor with minimum viewable image size of 19.8 inches.
2. Video management software
3. Video storage
4. Programmable automatic controls for CCTV equipment.
5. System software capable of web-based monitoring of remote facility CCTV camera feeds.
6. Power supply: 110 VAC, 60Hz. Power cords supplied.
7. Audio: 1-channel (line in or microphone in, line out).

**2.04 - WIRE AND CABLE**

A. Provide wire, cable and raceways in accordance with Div. 16 requirements and in accordance with SECTION 16120 – ELECTRIC WIRES AND CABLES.

1. Communications cabling and ancillary components necessary to provide a complete and functional system.
   a. Links between CCTV-CP.10-1 (Network Rack) cameras shall be Ethernet.
   b. Provide web-based link for the CCTV camera system to allow remote viewing.

**PART 3 – EXECUTION**

**3.01 - EXAMINATION**

A. Inspect facility that is to be monitored by this Section.

**3.02 - INSTALLATION**

A. Configure, install, interconnect, and test all system equipment as specified.

B. Provide all labor, materials and equipment necessary to furnish and install the CCTV System as specified.

C. Install in accordance with the manufacturer's instructions and locate equipment as indicated, unless otherwise directed.

D. Installation shall be in accordance with the Massachusetts Electrical Code.

E. System Grounding: Isolate video components from multiple grounds by use of insulating spacers, nylon camera mounting bolts, and electrical tape around coaxial splices.

F. Provide terminal blocks for all necessary interconnecting wiring. Secure all cable bundles with cable ties. Provide support bars in enclosures for cable bundles.

G. Label all indicators, switches, monitors, jacks and controls. Permanently tag all cables with wire markers covered with clear heat-shrink tubing.

H. Terminate spare equipment outputs with appropriate terminators.

I. Provide continuous wiring between equipment or junction box terminals.

**3.03 - ADJUSTING**

A. Conduct process operational assistance for each system component as placed into service.

**3.04 - DEMONSTRATION**

A. Provide start-up services, include programming required to make the system fully functional, energizing all equipment, testing each camera, testing viewing and recording system, and fully demonstrating each component of the system.

B. Start up

1. Inspect each System for conformity and compliance of materials, equipment and construction.

2. Adjust all control components to provide stable control of System.

**3.05 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

**SECTION 16900**

## PART 1 - GENERAL

### 1.00 - SUBBID REQUIREMENTS

A. The Work of SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT is a part of DIVISION 16, ELECTRICAL which requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. See SECTION 16050, ELECTRICAL WORK - GENERAL.

B. The Work of SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT requires the Subcontractor to perform all Work specified under this section.

### 1.01 - SCOPE

A. The Work of this section includes all labor, materials, tools, and equipment required for the furnishing of all materials required to provide Electrical Control and Miscellaneous Electrical Equipment as specified herein and/or as shown on the Contract Drawings.

B. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

### 1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. "Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

### 1.04 - SUBMITTALS

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. Submit shop drawings and manufacturer's product data, brochures including wiring diagrams in accordance with SECTION 16050, ELECTRICAL WORK - GENERAL.
2. Wiring diagrams to show control interface points provided with other equipment.

3. Shop drawings to include:
    a. Outline drawings with elevations.
    b. Equipment arrangement drawings.
    c. Anchor bolt location drawings.
    d. Electrical schematics and wiring diagrams.
    e. Electrical fuse/circuit breaker characteristic.
    f. Equipment performance curves and technical data.
    g. Bill of installation/assembly materials.
    h. Equipment weights.
    i. Completed manufacturer’s data sheets.
    j. Assembly sizes and weights.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - REFERENCES**

A. Underwriter's Laboratories, Inc. (U.L.):
    1. UL-467: UL Standard for Safety, Grounding and Bonding Equipment.
    2. UL-489: UL Standard for Safety, Molded-Case Circuit Breakers and Circuit Breaker Enclosures.
    3. UL-823: Electrical Heaters for Use in Hazardous (Classified) Locations.

B. National Electrical Manufacturers Association (NEMA):
    1. 250: Enclosures for Electrical Equipment (1000 volts maximum).
    2. ICS 1: General Standards for Industrial Control and Systems.
    3. ICS 2: Industrial Control Devices, Controllers and Assemblies.
    4. ICS 4: Terminal Blocks for Industrial Use.

C. American Society for Testing and Materials (ASTM) Publications:
    1. D 178: Specification for Rubber Insulating Matting.

D. National Fire Protection Association (NFPA):

1. NFPA-70 National Electric Code (NEC).

E. Massachusetts Electric Code.

**1.08 - SEISMIC REQUIREMENTS**

A. Conform to the requirements as indicated on Structural Drawing 00-S-001 and as specified in SECTION 01900, SEISMIC AND WIND REQUIREMENTS.

**1.09 - DESCRIPTION**

A. Provide and connect the electrical control equipment and miscellaneous electrical equipment, including such instruments and devices indicated and specified. Device enclosures for electrical equipment shall comply with the requirements of Massachusetts Electric Code including Hazardous Locations, Class, Division, and Group as indicated.

**PART 2 - PRODUCTS**

**2.01 - ACCEPTABLE ELECTRICAL DISTRIBUTION MANUFACTURERS**

A. Allen-Bradley.

B. General Electric Company.

C. Cutler-Hammer.

D. Square D Company.

E. Appleton Electric Company.

F. Crouse-Hinds Company.

G. O-Z/Gedney.

H. Or equal.

**2.02 - ACCEPTABLE STAINLESS STEEL/GALVANIZED STEEL CHANNEL MANUFACTURERS**

A. Unistrut Corp.

B. Power-Strut.

C. B-Line Systems, Inc.

D. Or equal.

**2.03 - ACCEPTABLE FIBERGLASS CHANNEL MANUFACTURER**

A. Omnistrut, Champion Fiberglass.

B. Durostrut, Enduro Composite Systems.

C. Struttech, Entrum Industries.

D. Or equal.

**2.04 - SAFETY DISCONNECT SWITCHES**

A. Provide heavy duty type, safety switches, with external operating handles, 3 PST, rated 600 volt, 60 Hertz with ampere rating as indicated, and having provisions for padlocking.

B. Provide rejection type fuses, 600 volts, 200,000 A.I.C., dual element, time delay, Class RK-5.

C. Heavy duty safety switches to be UL listed, and meet or exceed NEMA Standard KS1.

**2.05 - PUSHBUTTON AND SELECTOR SWITCH STATIONS**

A. Provide RUN-OFF-REMOTE (ROR) switches, start-stop, push buttons, tumbler switches and other accessory devices as necessary for the control of motors and other electrical equipment or devices as indicated where shown on the wiring schematics and/or plan drawings.

B. Provide pushbutton and selector switch stations made for heavy-duty service and with momentary or maintaining contacts as indicated or as necessary for starting and stopping of equipment with 10 amp contact ratings.

C. Acceptable manufacturers of heavy-duty switches and pushbuttons are Square D, Cutler-Hammer, Allen Bradley or equal. Indicating lights to be led cluster type.

D. At stations provide nameplates with white letters on black background.

E. Provide explosion proof stations approved for use in Massachusetts Electric Code, Class I, Division 1, Group C & D areas. Stations shall also meet NEMA 4X area requirements.

F. Provide galvanized cast-iron enclosures for NEMA Type 4 watertight stations.

G. Provide fiberglass reinforced polyester NEMA Type 4X enclosures for stations located in highly corrosive areas. Provide gaskets and Type 316 stainless steel screws, to prevent entry of chemicals.

**2.06 - MANUAL MOTOR STARTERS**

A. Provide manual motor starters where indicated and for 120-volt, 60-Hertz fractional horsepower motors.

B. Provide each manual motor starter with overload heater or heaters of suitable capacity for motor-running over-current protection for motor it controls. Provide manual starters as single or 2 pole, as necessary, and with toggle mechanisms indicating OFF and ON positions. Provide manual starters with built-in HAND-OFF-AUTO switches. Provide enclosures as indicated.

C. Manual starters to be located within sight of motors, as defined by Massachusetts Electric Code.

**2.07 - WALL-MOUNTED COMBINATION STARTERS**

A. Unless otherwise indicated, provide each combination starter with motor circuit protector and full-voltage magnetic starter. Provide starters in an enclosure that meets the requirements of the enclosure schedule. Provide motor circuit protectors and starters as specified in SECTION 16920, 600-VOLT MOTOR CONTROL CENTERS.

B. Indicating lights shall be LED cluster type, heavy-duty, oil-tight units. Lights shall be Red for “OFF” position, Green for “ON” position and Amber for “Alarms”.

**2.08 - CONTROL PANELS AND ELECTRICAL ENCLOSURES**

A. Provide enclosures with back panels constructed of at least 14 gage steel and provided with terminal blocks for connection of external wiring. Provide door and body stiffeners in panels over 36 inches in length. NEMA 4 and NEMA 4X panels shall be provided with hand operated quick disconnects of 316 stainless steel material.

B. Provide UL listed and NEMA rated pushbuttons, LED cluster type indicator lights and switches of heavy duty, oil tight types. Provide relays of industrial types, with 120-volt, 60-Hertz operating coils, and contacts rated for intended service. Power from fused control power transformers.

C. Provide nameplates for each panel and each device on panel. Nameplates of laminated plastic material, at least 3/32 in. thick, and with white letters on a black background.

D. Secure nameplates with self-tapping, Type 316 stainless steel metal screws.

E. Terminal Blocks:

1. Provide terminal blocks rated for 600 volts with screw type terminals.

2. Terminal blocks to be one piece with full barriers.

3. Acceptable manufacturers of terminal blocks are General Electric, Marathon, Weidmuller or equal.

F. Provide print pocket on inside of enclosure and include as-built drawings.

G. Where 480V AC and 120 VAC are required within the same enclosure, install components to insure separation of wiring for the panel voltage circuits.

H. Free standing enclosures shall be provided with light fixtures, light switch and 20 amp GFI protected receptacle. Light fixtures shall be UL listed for wet locations and provided with glass globe, metal guard and 100 watt incandescent lamp.

I. Where visual strobe or warning lamps are required, provide heavy duty beacon. Acceptable manufacturers are Edwards Signal Catalogue No. 93, Hubbell, Gamewell or equal.

J. Where audible horn alarms are required, provide from the following acceptable manufacturers: Edwards Signal 870P, Simplex, Faraday, or equal.

K. Where intrinsically safe wiring is required within the panels, the following requirements shall be met:

1. Within enclosures, conductors or intrinsically safe (IS) circuits shall be separated two inches from conductors of any non-intrinsically safe circuit. Within the enclosure the conductors shall be secured.

2. Intrinsically safe wiring shall not be routed in the same conduit as non-IS wiring.

3. Terminals in panels with IS wiring shall be identified in a manner that will prevent unintentional interference with the control circuits during testing and servicing.

L. All indicating lamps to be LED cluster type. Provide “Red” lights to indicate equipment on status. Provide “Green” lights to indicate equipment off status. Provide “Amber” to indicate alarm conditions.

M. Provide enclosures types to meet the requirement of the area classification schedule indicated on the Contract Electrical Drawings.

**2.09 - RUBBER MATS**

A. Provide insulating rubber mats conforming to ASTM D-178 Type I, Class I: Mats shall be 3 ft. wide and have a length equal to the equipment before which they are to be placed. Provide two spare mats, each 12-feet long as spares.

B. Provide mats for transformers, switchboard, panelboards, motor control centers, control panels, SCADA racks, Fire Alarm Panels and variable frequency drives.

**2.10 - CONTACTORS AND RELAYS**

A. Provide mechanically held, heavy duty industrial type contactors (relays) for lighting control, rated 30 amps, 600 volts, with number of poles as indicated.

B. Provide contactor in the required NEMA enclosure suitable for wall mounting. Provide circuit breaker or fuse protection on each ungrounded pole. Provide mechanically held contactor from the following acceptable manufacturers: Automatic Switch Company 917 series, Cutler-Hammer, Square D or equal.

C. Provide control power transformer with primary and secondary fuse protection. Control power to be 120 volts, single phase.

D. Provide solid-state, industrial grade timing relays from the following acceptable manufacturers: Allen Bradley Series 700, Cutler-Hammer, Siemens or equal.

E. Provide industrial grade relays, NEMA rated, from the following acceptable manufacturers: Square D Class 8501, Cutler-Hammer, Allen Bradley or equal.

**2.11 - NAMEPLATES**

A. Provide nameplates for equipment (including pushbutton and selector switch stations) listed in this Section to designate the equipment controlled and their function.

B. Nameplates shall be laminated black bakelite with one-quarter inch (1/4-in.) high, white, recessed letters. Securely attach to the equipment with Type 316 stainless steel screws, or rivets. Adhesives, glue or cements will not be permitted.

C. Provide all junction boxes, pull boxes, disconnect switches and control panels with a nameplate to designate the system wiring contained within.

D. Install nameplates in a location near or on the equipment or devices.

**2.12 - TERMINAL BLOCKS**

A. Provide terminal blocks in all terminal boxes panels, control and instrumentation cabinets/panels requiring terminations as indicated on drawings or by wiring diagrams for equipment actually purchased. All terminals shall be rated 600V, 20 amp. All terminals shall be screw type with provisions for white wire markers.

**2.13 - CHANNEL**

A. Provide Type 316 stainless steel channel or fiberglass channel with corresponding accessories as specified in SECTION 16110, ELECTRICAL RACEWAY SYSTEMS and herein.

B. Provide hot-dipped galvanized after fabrication for steel channel and accessories.

C. Provide channel of the proper material to match equipment classifications, per SECTION 16110, ELECTRICAL RACEWAY SYSTEMS.

**PART 3 - EXECUTION**

**3.01 - CHANNELS**

A. Install Type 316 stainless steel for mounting of electrical equipment in outdoor areas, NEMA 4 or 4X areas, and on below grade, outside building and structure walls.

B. Install galvanized steel channels for interior building mounting of electrical equipment except for those locations listed in Paragraph 3.02.A of this Section.

C. Install fiberglass channel in chemical areas with NEMA 4X enclosures.

**3.02 - PHYSICAL CHECKOUT AND TESTING**

A. Provide field and functional testing in accordance with SECTIONS 16050, ELECTRICAL WORK - GENERAL and 16998, FIELD INSPECTION AND ACCEPTANCE TESTS and as specified herein.

**3.03 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF SECTION**

SPECIAL PURPOSE RECEPTACLE, TYPE AND AMPERE RATING AS INDICATED ON PLAN

WP — DUPLEX RECEPTACLE (GROUND TYPE), "WP" DENOTES WEATHERPROOF, "XP" DENOTES EXPLOSION PROOF

RECESSED TELEPHONE/DATA OUTLET, MOUNTED 48" AFF

SURFACE MOUNTED TELEPHONE/DATA OUTLET MOUNTED 48" AFF

RECESSED DATA OUTLET MOUNTED 48" AFF

SURFACE MOUNTED DATA OUTLET, MOUNTED 48" AFF

RI — REMOTE INDICATOR

I — SURFACE MOUNTED INTERCOM WALL OUTLET AND HAND STATION, MOUNTED 48" A.F.F.

I — CEILING FLUSH MOUNTED INTERCOM SPEAKER

I — TRUMPET TYPE INTERCOM LOUDSPEAKER

## SECURITY

CR — CARD ACCESS READER (MOUNTED 3'-6" A.F.F.)

KP — KEYPAD ENTRY (MOUNTED 3'-6" A.F.F.)

EDL — ELECTRONIC DOOR LOCK (COORD. MOUNTING HEIGHT WITH ARCHITECTURAL PLANS AND DOOR HARDWARE REQUIREMENTS)

MD REX — REQUEST TO EXIT DETECTOR (COORD. MOUNTING HEIGHT WITH ARCHITECTURAL PLANS AND DOOR HARDWARE REQUIREMENTS)

CCTV CAMERA WITH INFRARED ILLUMINATOR (CEILING MOUNTED)

CRCP — CARD READER CONTROL PANEL (MOUNTED 3'-6" A.F.F.

SSCP — SECURITY CONTROL PANEL (MOUNTED 3'-6" A.F.F.)

MD — MOTION DETECTOR (CEILING MOUNTED)

MD REX — REQUEST TO EXIT MOTION DETECTOR (CEILING MOUNTED)

IS-D — INTRUSION SWITCH - DOOR

IS-W — INTRUSION SWITCH - WINDOW GLASS/BREAK

## LEGEND:

DEMOLITION WORK - COORDINATE DISCONNECTING AND REMOVING ELECTRICAL WORK WITH DEMOLITION WORK PROVIDED UNDER OTHER DIVISIONS AND EXISTING CONDITIONS.

NEW WORK

EXISTING WORK

## GENERAL NOTES

1. SWITCHBOARD AND MCC COMPARTMENT DESIGNATIONS AS FOLLOWS:
   - BLANK: NOT INTENDED FOR USE, PLATE ONLY.
   - SPACE: CONTAINS NECESSARY BUS AND HARDWARE FOR FUTURE ADDITION OF BREAKERS OR STARTERS WITHIN SIZE RANGE SHOWN
   - SPARE: CONTAINS A COMPLETE BREAKER, VFD OR STARTER INSTALLED, SIZE AS INDICATED AVAILABLE FOR FUTURE USE.
2. CONDUIT INSTALLATIONS ARE SHOWN DIAGRAMMATICALLY ONLY AND SHALL BE INSTALLED IN A MANNER TO PREVENT CONFLICTS WITH EQUIPMENT AND STRUCTURAL CONDITIONS. EXPOSED CONDUITS SHALL BE INSTALLED PARALLEL TO BEAMS AND WALLS.
3. CONDUIT AND WIRE (NOT SHOWN) FOR LIGHTING FIXTURES, SWITCHES AND/OR RECEPTACLES SHALL BE FURNISHED AND INSTALLED AND SHALL BE:
   - A. 3/4" (MIN.) RIGID METAL CONDUIT
     - A1. EXPOSED IN UNFINISHED AREAS.
     - A2. CONCEALED ABOVE SUSPENDED CEILINGS AND IN WALLS IN FINISHED AREAS.
   - B. NO. 12 CU. WIRE (MIN.) TYPE "THWN/THHN" NO. OF WIRES AS REQUIRED, INCLUDING GROUND. PROVIDE TRAY RATED CABLE WHEN RUN IN CABLE TRAY.
4. PROVIDE COMPONENTS AND DEVICE ENCLOSURES RATED IN ACCORDANCE WITH THE NEMA RATINGS ON THE AREA CLASSIFICATION SCHEDULE.
5. DUCT BANK CONDUIT SIZES ARE GIVEN IN THE DUCT BANK CALLOUTS. WHERE THE SAME CONDUIT NUMBER IS USED BOTH IN THE DUCT BANK AND IN A BUILDING, THE CONDUIT SIZE GIVEN IN THE CONDUIT SCHEDULE APPLIES TO THE CONDUIT IN THE BUILDING ONLY.
6. FURNISH METAL PIPE SLEEVES FOR CONDUITS ROUTED THROUGH WALLS TO THE CONTRACTOR FOR PLACING IN WALLS PRIOR TO POURING OF CONCRETE.

REMARKS:

* PROVIDE EQUIPMENT AND INSTALLATION TO COMPLY WITH AREA CLASSIFICATION REQUIREMENTS.

** RADIUS SHALL EXTEND TO ALL DIRECTIONS UNLESS SPECIFICALLY IDENTIFIED AS A HORIZONTAL OR VERTICAL RADIUS.

R1 = OUTDOORS ARE AREAS NOT ENCLOSED BY WALLS AND CEILING.

R2 = SEE FIGURE R2 THIS SHEET.

R3 = TANKS AND ENCLOSED STRUCTURES 1
CLASS 1 DIVISION 1 INSIDE TANK/STRUCTURE
CLASS 1 DIVISION 1 WITHIN 0.9 M (3 FT) RADIUS FROM VENT
CLASS 1 DIVISION 2 WITHIN 1.5 M (5 FT) RADIUS FROM VENT
CLASS 1 DIVISION 2 WITHIN 0.9 M (3 FT) HORIZONTAL RADIUS FROM HATCH
CLASS 1 DIVISION 2 WITHIN 1.5 M (5 FT) VERTICAL RADIUS FROM HATCH
NEMA 4X AREA BEYOND CLASSIFIED RADIUS
SEE FIGURE R3 THIS SHEET.

R4 = TANKS NOT ENCLOSED, OPEN TO ATMOSPHERE
CLASS I DIVISION 2 INSIDE TANK FROM MINIMUM OPERATING WATER SURFACE TO THE TOP OF THE TANK WALL
CLASS I DIVISION 2 RADIUS EXTENDS 0.46 M (18 IN.) ABOVE THE TOP OF THE TANK AND EXTENDING 0.46 M (18 IN.) BEYOND THE XTERIOR WALL.
CLASS I DIVISION 2 RADIUS 0.46 M (18 IN.) ABOVE GRADE EXTENDING 3 M (10 FT) HORIZONTALLY FROM THE EXTERIOR TANK WALLS.
SEE FIGURE R4 THIS SHEET.

R5 = PRIMARY ODOR ODOR CONTROL
CLASS I DIVISION 2 EXTENDS 0.9 M (3 FT) RADIUS FROM VENT. NEMA 4X BEYOND.

## LUMINAIRE SCHEDULE

| LUMINAIRE TYPE | LUMINAIRE MTG | LAMP TYPE | LAMP WATTS | VOLTAGE | GUIDELINE MANUFACTURER | OR EQUAL | REMARKS AND OPTIONS |
|---|---|---|---|---|---|---|---|
| BM1 | PEND | LED | 45 | MVOLT | LITHONIA SERIES FEM LED | OR EQUAL | LUMINAIRE 4'-0", ONE-PIECE FIBERGLASS HOUSING, LED'S MOUNTED TO CORE CIRCUIT BOARD, SPREAD LIGHT DISTRIBUTION, POLYCARBONATE LENS, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S (6,000 LUMENS), CRI OF 80, NEMA 4X LISTED. |
| BM2 | PEND | LED | 59 | MVOLT | LITHONIA SERIES FHE LED | OR EQUAL | LUMINAIRE 2'-0", ONE-PIECE FIBERGLASS HOUSING, LED'S MOUNTED TO CORE CIRCUIT BOARD, MEDIUM LIGHT DISTRIBUTION, CLEAR POLYCARBONATE LENS, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S (9,000 LUMENS), CRI OF 80, NEMA 4X LISTED. |
| BM3 | PEND | LED | 79 | MVOLT | LITHONIA SERIES FHE LED | OR EQUAL | LUMINAIRE 2'-0", ONE-PIECE FIBERGLASS HOUSING, LED'S MOUNTED TO CORE CIRCUIT BOARD, MEDIUM LIGHT DISTRIBUTION, CLEAR POLYCARBONATE LENS, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S (12,000 LUMENS), CRI OF 80, NEMA 4X LISTED. |
| BM4 | PEND/ WALL/ CEILING | LED | 20 | MVOLT | LITHONIA SERIES CLX LED STRIP | OR EQUAL | LUMINAIRE 4'-0", STEEL HOUSING, BAKED WHITE POLYESTER FINISH, LED'S MOUNTED TO CORE CIRCUIT BOARD, WIDE LIGHT DISTRIBUTION, DIFFUSE ACRYLIC LENS, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S (3,000 LUMENS), CRI OF 80, UL LISTED. |
| CJ1 | GRID | LED | 16 | 120 | LITHONIA SERIES 2VTL | OR EQUAL | LUMINAIRE 2'-0" x 2'-0" RECESSED GRID MODEL, ACRYLIC LINEAR PRIMATIC DIFFUSER, VOLUMETRIC LIGHT DISTRIBUTION, WHITE PAINTED REFLECTOR, DIE-FORMED FRAME, HIGH EFFICIENCY LED DRIVERS, LED'S MOUNTED TO CORE CIRCUIT BOARDS, 0-10V DIMMING DRIVER, 2,000 NOMINAL LUMENS, 4000K LED'S, MINIMUM OF 80 CRI, IC RATED, CSA CERTIFIED. PROVIDE DRYWALL CEILING ADAPTER WITH TRIM KIT WHEN NOT USED WITH A DROP CEILING |
| CJ2 | GRID | LED | 26 | 120 | LITHONIA SERIES 2VTL | OR EQUAL | LUMINAIRE 2'-0" x 2'-0" RECESSED GRID MODEL, ACRYLIC LINEAR PRIMATIC DIFFUSER, VOLUMETRIC LIGHT DISTRIBUTION, WHITE PAINTED REFLECTOR, DIE-FORMED FRAME, HIGH EFFICIENCY LED DRIVERS, LED'S MOUNTED TO CORE CIRCUIT BOARDS, 0-10V DIMMING DRIVER, 3,000 NOMINAL LUMENS, 4000K LED'S, MINIMUM OF 80 CRI, IC RATED, CSA CERTIFIED. PROVIDE DRYWALL CEILING ADAPTER WITH TRIM KIT WHEN NOT USED WITH A DROP CEILING |
| CJ3 | GRID | LED | 33 | 120 | LITHONIA SERIES 2VTL | OR EQUAL | LUMINAIRE 2'-0" x 2'-0" RECESSED GRID MODEL, ACRYLIC LINEAR PRIMATIC DIFFUSER, VOLUMETRIC LIGHT DISTRIBUTION, WHITE PAINTED REFLECTOR, DIE-FORMED FRAME, HIGH EFFICIENCY LED DRIVERS, LED'S MOUNTED TO CORE CIRCUIT BOARDS, 0-10V DIMMING DRIVER, 4,000 NOMINAL LUMENS, 4000K LED'S, MINIMUM OF 80 CRI, IC RATED, CSA CERTIFIED. PROVIDE DRYWALL CEILING ADAPTER WITH TRIM KIT WHEN NOT USED WITH A DROP CEILING |
| DD1 | GRID | LED | 112 | 120 | CROUSE-HINDS SERIES HAZARD-GARD EVLL | OR EQUAL | CLASS I, DIVISION 1 LUMINAIRE, COPPER FREE ALUMINUM HOUSING, GRAY POWDER COAT FINISH, HIGH EFFICIENCY LED DRIVERS, LED'S MOUNTED TO CORE CIRCUIT BOARDS, 11,000 NOMINAL LUMENS, 4000K LED'S, MINIMUM OF 80 CRI, STAINLESS STEEL HARDWARE, UL LISTED. |
| DD2 | GRID | LED | 149 | 120 | CROUSE-HINDS SERIES HAZARD-GARD EVLL | OR EQUAL | CLASS I, DIVISION 1 LUMINAIRE, COPPER FREE ALUMINUM HOUSING, GRAY POWDER COAT FINISH, HIGH EFFICIENCY LED DRIVERS, LED'S MOUNTED TO CORE CIRCUIT BOARDS, 13,000 NOMINAL LUMENS, 4000K LED'S, MINIMUM OF 80 CRI, STAINLESS STEEL HARDWARE, UL LISTED. |
| EM1 | WALL | LED | 50 | MVOLT | PARAFLEX SERIES DCSLM | OR EQUAL | WALL MOUNTED LUMINIARE, DIE CAST ALUMINUM HOUSING, THERMOSET POWDER COAT FINISH, (CUSTOM COLORED FINISH TO BE APPLIED TO THIS FIXTURE, COORDINATE COLOR WITH ARCHITECT), 4000K LED'S (5,193 LUMENS), HIGH EFFICIENCY DRIVER, BUTTON TYPE PHOTOCELL, FIELD ADJUSTABLE DISTRIBUTION, POLYCARBONATE LENS, CRI OF 80, WET LOCATION LISTED. |
| EM2 | WALL | LED | 40 | 120/277V | DIALIGHT SERIES SAFESITE LED AREA LIGHT | OR EQUAL | CLASS I, DIVISION 1, WALL MOUNTED LUMINAIRE, COPPER FREE ALUMINUM HOUSING, GRAY POLYESTER FINISH, GLASS LENS, STAINLESS STEEL HARDWARE, 0 DEGREE WALL MOUNT ACCESSORY, 4000K LED'S (4,001 - 5000 LUMENS), 0-10V DIMMING, HIGH EFFICIENCY DRIVER, -40°C to +65°C OPERATING TEMPERATURE RANGE, 6kv SURGE SUPPRESOR, MINIMUM CRI OF 80, UL LISTED. |
| EU1 | WALL | LED | **2-6** | MVOLT | EMERGI-LITE SERIES JS-HP | OR EQUAL | EMERGENCY BATTERY UNIT, GRAY STEEL HOUSING, 12 VOLT, 40 WATT BATTERY WITH TWO 6 WATT LED HEADS, NON-AUDIBLE ADVANCED DIAGNOSTICS AND SELF-TEST, NEMA 1 LISTED, UL LISTED. PROVIDE BACKUP BATTERY POWER TO REMOTE HEADS RH1A/1B AND RH2A/2B AS SHOWN ON CONTRACT DRAWINGS. |
| EU2 | WALL | LED | 2-6 | MVOLT | EMERGI-LITE SERIES HP | OR EQUAL | EMERGENCY BATTERY UNIT, GRAY FIBERGLASS HOUSING, STAINLESS STEEL HARDWARE, 12 VOLT, 40 WATT BATTERY WITH TWO 6 WATT LED HEADS, NON-AUDIBLE ADVANCED DIAGNOSTICS AND SELF-TEST, NEAM 4X LISTED, UL LISTED. PROVIDE BACKUP BATTERY POWER TO REMOTE HEADS RH1A/1B AND RH2A/2B AS SHOWN ON CONTRACT DRAWINGS. |
| EU3 | WALL | LED | 2-4 | MVOLT | AZZ SERIES XPEL | OR EQUAL | CLASS I, DIVISION 1, EMERGENCY BATTERY UNIT, COPPER FREE ALUMINUM HOUSING, GRAY BAKED ON EPOXY FINISH, STAINLESS STEEL HARDWARE, TWO 4 WATT LED HEADS, MEDIUM BEAM DISTRIBUTION HEADS, NICKEL-CADIUM BATTERY, UL LISTED. PROVIDE BACKUP BATTERY POWER TO REMOTE HEAD K2 AS SHOWN ON CONTRACT DRAWINGS. |
| FA | PEND/WALL /CEILING | LED | - | 120 | LITHONIA SERIES CONTRACTOR SELECT EXR LED EXITS | OR EQUAL | EXIT SIGN, INJECTION-MOLDED THERMOPLATIC HOUSING, SINGLE FACE, RED LETTERS, WHITE BACKGROUND, NICKEL-CADIUM BATTERY, TEST SWITCH, STATUS INDICATOR, NEMA 1 |
| FB | PEND/WALL /CEILING | LED | - | 120 | CROUSE-HINDS SERIES UX | OR EQUAL | EXIT SIGN, CAST ALUMINUM HOUSING (WHITE) WITH CLEAR POLYCARBONATE LENS, EQUIPPED WITH NICKEL CADIUM BATTERY, LONG LIFE LED'S, RED LETTERING, SELF DIAGNOSTICS/SELF TESTING, TIME DELAY, NEMA 4X LISTED. |
| FC | WALL/ PEND | LED | - | 120 | AZZ SERIES XPEX | OR EQUAL | EXIT SIGN, CLASS I, DIVISION 1, COPPER FREE ALUMINUM HOUSING, GRAY POWDER COAT FINISH, EQUIPPED WITH NICKEL CADIUM BATTERY, LONG LIFE LED'S, ACRYLIC LENS, SINGLE FACE, RED LETTERING, SELF DIAGNOSTICS, STAINLESS STEEL HARDWARE, UL LISTED. |
| K1 | WALL | LED | 1-4.1 | - | SURE-LITES SERIES SEL SERIES REMOTE | OR EQUAL | EMERGENCY WEATHER-RESISTANT REMOTE HEAD, POLYCARBONATE HOUSING, UNIVERSAL VOLTAGE INPUT FROM 4.8V THROUGH 12V, 1-4.1 WATT HEADS (285 LUMENS), GREY FINISH, WET LOCATION, UL LISTED. |
| K2 | WALL | LED | 1-4 | - | AZZ SERIES XPEL REMOTE HEAD | OR EQUAL | CLASS I, DIVISION I REMOTE HEAD, COPPER FREE HOUSING, PROVIDE EXPLOSION PROOF MOUNTED BOX FOR REMOTE HEAD UNIT, 1-4 WATT HEADS (285 LUMENS), GREY FINISH, UL LISTED. (TO BE POWERED ONLY OFF OF EU3 LUMINAIRES) |
| RH1A | WALL | LED | 1-4.1 | - | SURE-LITES SERIES SEL SERIES REMOTE | OR EQUAL | EMERGENCY WEATHER-RESISTANT REMOTE HEAD, POLYCARBONATE HOUSING, UNIVERSAL VOLTAGE INPUT FROM 4.8V THROUGH 12V, 1-4.1 WATT HEAD (285 LUMENS), WHITE FINISH, WET LOCATION, UL LISTED. |
| RH1B | WALL | LED | 2-4.1 | - | SURE-LITES SERIES SEL SERIES REMOTE | OR EQUAL | EMERGENCY WEATHER-RESISTANT REMOTE HEAD, POLYCARBONATE HOUSING, UNIVERSAL VOLTAGE INPUT FROM 4.8V THROUGH 12V, 2-4.1 WATT HEADS (285 LUMENS), WHITE FINISH, WET LOCATION, UL LISTED. |
| RH2A | WALL | LED | 1-5 | - | EMERGI-LITE SERIES SURVIVE-ALL EF39 | OR EQUAL | SURFACE REMOTE EMERGENCY FIXTURE, ALUMINUM BACKPLATE, CLEAR POLYCARBONATE LIGHT COVER, FULLY GASKETED, 1-5 WATT 12V VOLT LED HEAD, NEMA 4X, UL LISTED, STAINLESS STEEL ACCESSORIES. |
| RH2B | WALL | LED | 2-5 | - | EMERGI-LITE SERIES SURVIVE-ALL EF39 | OR EQUAL | SURFACE REMOTE EMERGENCY FIXTURE, ALUMINUM BACKPLATE, CLEAR POLYCARBONATE LIGHT COVER, FULLY GASKETED, 2-5 WATT 12V VOLT LED HEADS, NEMA 4X, UL LISTED, STAINLESS STEEL ACCESSORIES. |
| RC1 | RECESSED | LED | 23 | MVOLT | GOTHAM LIGHTING - SERIES 6" EVO | OR EQUAL | RECESSED MOUNTED DOWN LIGHT, STEEL HOUSING, POLYCARBONATE LENSED LIGHT ENGINE, WHITE FLANGE FINISH, WIDE LIGHT DISTRIBUTION, SEMI SPECULAR DIFFUSER, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S, (2,000 LUMENS), MINIMUM CRI OF 80, WET LOCATION WITH COVERED CEILINGS, UL LISTED. |
| SL1 | POLE | LED | 107 | 120-277V | STERNBERG LED E450LED EURO SERIES | OR EQUAL | LUMINAIRE WITH CAST ALUMINUM HOUSING, EURO LANTERN DESIGN, BLACK TEXTURED FINISH, TYPE T3 DISTRIBUTION, 21 HIGH OUTPUT 3500K LED'S (6485 LUMENS), LED'S MOUNTED TO CORE CIRCUIT BOARD, FLAT ACRYLIC LENS, 0-10V DIMMING, HIGH EFFICIENCY 1400mA DRIVER, MINIMUM CRI OF 80, R3 SLIP FITTER, POST TOP MOUNTING, WET LOCATION, BUTTON STYLE PHOTOCELL, UL LISTED. (MOUNTED ON LUMEC POLE BY SIGNIGY; RA61U-14-BKTX). |
| ST1 | STAN. | LED | 30 | UNIV. | AZZ (RIGALITE) SERIES SAFJ LED | OR EQUAL | CLASS I, DIVISION 2 LUMINAIRE, LOW COPPER ALUMINUM HOUSING, WIDE LIGHT DISTRIBUTION PATTERN, CLEAR LOW PROFILE GLASS LENS, STAINLESS STEEL LENS GUARD, HIGH EFFIENCY DRIVER, 0-10V DIMMING, 30 WATTS, 4000K LED'S @ 1250ma (3,059 LUMENS), 10kV SURGE PROTECTION, BAKED-ON EPOXY GREY FINISH, MINIMUM CRI OF 70. MOUNTED ON 1-1/2" CONDUIT WITH 1-1/2" 90° STANCHION MOUNT ADAPTER, 110 MPH RATED ASSEMBLY, STAINLESS STEEL HARDWARE, UL LISTED. |
| WC1 | WALL | LED | 27 | MVOLT | LITHONIA SERIES CONTEMPORARY CYLINDER 2'-0" LED VANITY WITH SWITCHABLE COLOR TEMP. | OR EQUAL | LUMINAIRE 2'-0", STEEL HOUSING BRONZE FINISH, LED'S MOUNTED TO CORE CIRCUIT BOARD, ACRYLIC DIFFUSER LENS, 0-10V DIMMING, HIGH EFFICIENCY DRIVER, 4000K LED'S, (1,850 LUMENS), MINIMUM CRI OF 90, DAMP LOCATION, UL LISTED. |

EMERGENCY FIXTURES

### TABLE OF RESPONSIBILITY - FIBER NETWORK SCOPE FOR WWTF & COLLECTION SYSTEM CONTRACTS

| | ELEMENT | COLLECTION SYSTEM/ PUMP STATIONS CONTRACT 2019-01 | WWTF/EFFLUENT DISPOSAL CONTRACT 2019-02 |
|---|---|---|---|
| 1 | FURNISH AND INSTALL FIBER OPTIC NETWORK CABLE | | X |
| 2 | FURNISH AND INSTALL CONDUITS FOR FIBER CONNECTION FROM WWTF TO RT. 7 CROSSING (TRENCH SECTIONS S1, S2) (EHH-S1, EHH-S2) 1 | | X |
| 3 | FURNISH AND INSTALL CONDUITS FOR FIBER CONNECTION FROM RT.7 CROSSING TO PS #1 (TRENCH SECTION S3) (EHH-S3.01/02/03/04) 1 | X | |
| 4 | FURNISH AND INSTALL CONDUITS FOR FIBER CONNECTION FROM PUMP STATION #1 TO LOTS HOLLOW RD. (TRENCH SECTION S4) (EHH-S4.01/02/03/04/05/06/07/08/09/10/11/12) 1 | X | |
| 5 | FURNISH AND INSTALL CONDUITS FOR FIBER CONNECTION FROM LOTS HOLLOW RD. TO WICK DIST. VAULT (TRENCH SECTION S5) (EHH-S5) 1 | | X |

### EQUIPMENT GROUNDING SCHEDULE

PROVIDE GROUNDING CONDUITS AND WIRES INDICATED FROM EQUIPMENT LISTED TO THE GROUNDING LOOP OR TO THE GROUNDING BUS BARS AS INDICATED AND IN ACCORDANCE WITH THE CONDUIT AND WIRE SCHEDULE. FOR GROUNDING OF PIPING AND OTHER MISCELLANEOUS ITEMS PROVIDE COMPLETE GROUNDING SYSTEM IN ACCORDANCE WITH THE REQUIREMENTS OF THE LOCAL REGULATIONS

| EQUIPMENT | GROUNDING CONDUIT AND WIRE | QTY. | NOTES |
|---|---|---|---|
| PAD MOUNTED TRANSFORMER | [G11] | TWO | TO GROUNDING LOOP |
| DIESEL GENERATOR GEN.10-1 ENCLOSURE | [G11] | TWO | TO GROUNDING LOOP |
| 2000 AMPS SWITCHBOARD | - | TWO | TO GROUND BUS BAR |
| MOTOR CONTROL CENTER | [G7] | TWO | TO GROUND BUS BAR |
| LESS THAN 300 HP TO 100 HP VFD UNIT | [G5] | ONE | TO GROUND BUS BAR |
| LESS THAN 100 HP TO 50 VFD UNIT | [G4] | ONE | TO GROUND BUS BAR |
| 100 AMPS DISTRIBUTION PANEL | [G3] | ONE | TO GROUND BUS BAR 1 |
| 45 KVA DRY-TYPE TRANSFORMER | [G5] | ONE | TO GROUND BUS BAR |
| 30 KVA DRY-TYPE TRANSFORMER | [G4] | ONE | TO GROUND BUS BAR |
| 480VAC EQUIPMENT LOCAL CONTROL PANELS | [G2] | ONE | TO GROUNDING LOOP |
| FIRE ALARM CONTROL PANELS | [G2] | ONE | TO GROUND BUS BAR |
| PLC CONTROL PANELS | [G3] | ONE | TO GROUNDING LOOP |
| ANTENNA | [G2] | ONE | TO GROUNDING LOOP |
| 100 HP AND LARGER MOTOR FRAMES | [G4] | ONE | RUN GROUND WIRE AND CONDUIT TO THE GROUNDING LOOP OR THE NEAREST GROUND BUS BAR |
| ANY STEEL TANK | [G4] | TWO | RUN GROUND WIRE AND CONDUIT TO THE GROUNDING LOOP OR THE NEAREST GROUND BUS BAR |
| BUILDING STEEL COLUMNS | [G4] | ONE | GROUND EVERY OTHER STEEL COLUMN TO GROUND LOOP OR NEAREST GROUND BUS USING EXOTHERMIC WELD CONNECTIONS. |
| GROUND BUS BAR | [G10] | TWO | TO GROUNDING LOOP |
| OUTDOOR TANKS, PUMP, MOTORS, PANELS OR EQUIPMENT | [G4] | ONE | TO GROUNDING LOOP 1 |
| OUTDOOR LIGHT, CCTV AND UTILITY POLES | [G4] | ONE | TO GROUNDING LOOP |
| OUTDOOR METAL WALKWAYS, HANDRAILS | [G4] | ONE | TO GROUNDING LOOP |

### TABLE OF RESPONSIBILITY - ELECTRICAL, HVAC & PLUMBING

| | ELEMENT | HVAC CONTRACTOR | PLUMBING CONTRACTOR | ELECTRICAL CONTRACTOR |
|---|---|---|---|---|
| 1 | 480VAC, AND 120VAC POWER TO EXHAUST FANS AND PUMPS | | | X |
| 2 | 480VAC, AND 120VAC POWER TO HVAC AND PLUMBING CONTROL PANELS | | | X |
| 3 | HVAC AND PLUMBING CONTROL SYSTEM COMPONENTS (INCLUDING, BUT NOT LIMITED TO PANELS, COMPUTER WORK STATIONS, CONTROLLERS, RELAYS, TRANSFORMERS, SENSORS, SWITCHES, CONTROL VALVES, CONTROL DAMPERS, DAMPER ACTUATORS, ETC.) | X | X | |
| 4 | CONTROL WIRING, CONDUIT AND CONNECTIONS REQUIRED FOR THE CONTROL OF THE HVAC AND PLUMBING SYSTEMS (INCLUDING, BUT NOT LIMITED TO, CONTROL WIRING FOR THERMOSTATS, SENSORS, RELAYS, CONTROL VALVES, CONTROLLERS, SWITCHES, DAMPERS, HVAC NETWORK CABLE, ETC.) | X | X | |
| 5 | POWER WIRING, CONDUIT AND CONNECTIONS REQUIRED FOR POWERING ANCILLARY HVAC, ATC AND PLUMBING DEVICES (INCLUDING, BUT NOT LIMITED TO, DEVICE POWER FOR 120VAC/24VDC DAMPERS, THERMOSTATS, CONTROL VALVES, RELAYS, SENSORS, ETC.) | X | X | |
| 6 | ADJUSTING CONTROL SET POINTS FOR HVAC AND PLUMBING SYSTEM EQUIPMENT | X | X | |
| 7 | ALL SPECIFIED HVAC/PLUMBING CONTROLS TESTING AND REMEDIAL WORK TO MAKE SYSTEMS FULLY FUNCTIONAL AND OPERATE IN ACCORDANCE WITH THE CONTROL SEQUENCES | X | X | |
| 8 | CONTROL WIRING BETWEEN MCC AND SCADA FOR HVAC AND PLUMBING ALARMS | | | X |
| 9 | CONTROL WIRING BETWEEN MCC AND HVAC (ATC) AND PLUMBING CONTROL PANELS | | | X |
| 10 | CONTROL WIRING BETWEEN HVAC (ATC) AND PLUMBING CONTROL PANELS AND PLANT SCADA | | | X |
| 11 | CONTROL WIRING BETWEEN HVAC CONTROL PANELS (ATC) AND FIRE ALARM CONTROL PANEL | | | X |
| 12 | CONTROL WIRING BETWEEN DUCT MOUNTED SMOKE DETECTORS AND ASSOCIATED AIR HANDLING UNIT STARTERS AT MCC AND FIRE ALARM SYSTEM | | | X |
| 13 | CONTROL WIRING BETWEEN SPRINKLER SYSTEM DEVICES AND FIRE ALARM SYSTEM | | | X |
| 14 | MCC LOCATED MOTOR STARTERS AND VFDS FOR 3ϕ HVAC EXHAUST FANS & PLUMBING EQUIPMENT | | | X |
| 15 | STAND ALONE 1ϕ/3ϕ MOTOR STARTERS & VFDS FOR HVAC AND PLUMBING EQUIPMENT | | | X |
| 16 | STAND ALONE VFDS AND CONTROLS FOR BOILER SYSTEM PUMPS | X | | |
| 17 | SAFTEY DISCONNECT SWITCHES AT HVAC AND PLUMBING EQUIPMENT (BESIDES DISCONNECTS FOR CABINET UNIT HEATERS (CUH) THAT SHALL BE SUPPLIED INTEGRAL TO HEATER UNIT) | | | X |
| 18 | PROVIDE DUCT MOUNTED SMOKE DETECTORS | | | X |
| 19 | INSTALL DUCT MOUNTED SMOKE DETECTORS | X | | |

### TABLE OF RESPONSIBILITY - ELECTRICAL, GENERAL, AND SYSTEM INTEGRATOR

| | ELEMENT | GENERAL CONTRACTOR | SYSTEM INTEGRATOR | ELECTRICAL CONTRACTOR |
|---|---|---|---|---|
| 1 | FURNISH, TEST AND CALIBRATE INSTRUMENTS | | X | |
| 2 | INSTALL INSTRUMENTS | X | | |
| 3 | INSTALL FIELD LOCATED DEVICES ASSOCIATED WITH INSTRUMENTS INCLUDING TRANSMITTERS, INDICATORS, CONTROL PANELS, AND ANCIALLARY COMPONENTS THAT ARE NOT LOCATED WITHIN PROCESS PIPING AND TANKS. LOCATIONS SHALL BE AS INDICATED ON THE ELECTRICAL DRAWINGS. | X | | |
| 4 | FURNISH NETWORK EQUIPMENT, SCADA THIN CLIENT WORKSTATIONS/ENCLOSURES | | X | |
| 4 | FURNISH AND INSTALL INTERCONNECTING WIRE, CABLE, CONDUIT, AND CONNECTIONS FOR INSTRUMENTS | | | X |
| 5 | FURNISH AND INSTALL ETHERNET CABLES | | | X |
| 6 | PROVIDE FIBER OPTIC CABLE, PATCH PANELS AND ASSOCIATED HARDWARE | | X | |
| 7 | INSTALL FIBER OPTIC CABLE | | | X |
| 8 | TERMINATE AND TEST FIBER OPTIC CABLE | | X | |
| 9 | FURNISH AND INSTALL GAS MONITORING CONTROL PANELS, HORN STROBES AND ALARM DEVICES | | | X |
| 10 | FURNISH GAS MONITORING ANALYZER SENSORS AND TRANSMITTERS | X | | |
| 11 | INSTALL GAS MONITORING ANALYZER SENSORS AND TRANSMITTERS | | | X |

NOTES:

1. PROVIDE ELECTRICAL SERVICE IN ACCORDANCE WITH EVERSOURCE REQUIREMENTS.
2. PROVIDE COMCAST TELEPHONE/DATA SERVICES IN ACCORDANCE WITH COMCAST REQUIREMENTS.
3. SEE SHEET 10 E-002 FOR DUCT BANK SECTION NO. 10 CONTINUATION TO SITE ENTRANCE MOTORIZED GATE AND SECURITY SYSTEM DEVICES. SEE SECURITY SYSTEM RISER DIAGRAM ON 10 E-604.
4. SEE SHEET 10 E-002 FOR SITE LIGHTING PLANS AND SITE CCTV CAMERA PLANS. (1)
5. GENERATOR GEN.10-1 AND TRANSFORMER MVT.10-1 GROUNDING SHOWN ON SHEET 10 E-303.
6. PROVIDE FIRE ALARM RADION SYSTEM EQUIPMENT IN ACCORDANCE WITH THE CITY OF ORLEANS FIRE DEPARTMENT REQUIREMENTS FOR REMOTE COMMUNICATION OF FIRE ALARM SIGNALS. SEE FIRE ALARM SYSTEM DRAWING 00 FA-001 FOR FIRE ALARM SYSTEM COMMUNICATION.
7. COORDINATE THE ANTENNA MOUNTING HEIGHT AND LOCATION WITH THE RESULTS OF THE RADIO PATH SURVEY.
8. CONDUIT AND WIRE FOR 3-PH GENERATOR POWER TO BE RUN CONCEALED TO SWBD.10-1. CONTROL WIRING AND 208/120VAC CONDUCTORS TO BE RUN CONCEALED TO JUNCTION BOX AT ELECTRICAL ROOM

## HANDHOLE AND DUCT BANK NOTES

1. ALL CONCRETE INSERTS, FITTINGS AND ACCESSORIES ARE TO BE FABRICATED FROM HEAVY–DUTY STAINLESS STEEL.
2. ALL CONCRETE FOR HANDHOLES AND DUCT RUNS TO BE CLASS "A" (4000 PSI) AS PER THE STRUCTURAL SPECIFICATIONS.
3. ALL CONDUIT AND OTHER EQUIPMENT IN HANDHOLES SHALL BE BONDED WITH A NO. 4, STRANDED COPPER CABLE (MINIMUM).
4. ALL 4" OR LARGER STEEL CONDUIT BENDS SHALL HAVE A 36" RADIUS (MINIMUM).
5. ALL CABLES SHALL BE TAGGED WITH A PROTECTED PLASTIC TAG OF DISTINCTIVE COLOR AND MARKING FOR EACH VOLTAGE. THE TAGS WILL GIVE VOLTAGE AND CIRCUIT NUMBER ASSIGNED BY THE CONTRACT DRAWING CONDUIT AND WIRE SCHEDULE.
6. CONTRACTOR TO SIZE THE CIRCULAR OPENINGS IN THE HANDHOLE ROOF FROM FRAMES ACTUALLY FURNISHED.
7. PLASTIC DUCT SPACERS SHALL BE INSTALLED ON 4 FT. CENTERS. JOINTS ARE TO BE STAGGERED BETWEEN TIERS TO PROVIDE NOT LESS THAN 12 INCH LONGITUDINAL SEPARATION BETWEEN JOINTS SEPARATION BETWEEN JOINTS IN ANY TWO ADJOINING CONDUITS.
8. THE SIZE OF A HANDHOLE WINDOW DEPENDS ON THE NUMBER OF CONDUITS IN THE INCOMING DUCTLINE. TO DETERMINE THE ACTUAL WINDOW SIZE AND LOCATION, SEE THE DUCT SECTION. THE WINDOW OPENING MUST ALSO BE A MINIMUM OF ONE FOOT ABOVE HANDHOLE FLOOR AND / OR ONE FOOT BELOW HANDHOLE ROOF. EACH MANHOLE WINDOW SHOULD BE OFFSET FROM THE CENTER OF THE WALL SO THAT ONE VERTICAL EDGE IS CLOSE TO THE INTERSECTION OF TWO WALLS.
9. ALL STEEL CONDUIT SHALL BE TERMINATED IN HANDHOLES WITH CONDUIT GROUNDING BUSHINGS.
10. HANDHOLE COVER SHALL HAVE THE WORD "ELECTRIC" CAST ON THE COVER.
11. INSTALL TWO PULLING–IN IRONS OPPOSITE CENTER OF EACH ENTERING DUCT RUN. ONE 6" BELOW ROOF AND ONE 6" ABOVE FLOOR.
12. ALL DUCTS SHALL DRAIN FROM HIGH POINT TO HANDHOLE WITH A SLOPE OF NOT LESS THAN 4" PER 100 FEET.

## GENERAL NOTES

1. CONDUIT INSTALLATIONS ARE SHOWN DIAGRAMMATICALLY ONLY AND SHALL BE INSTALLED IN A MANNER TO PREVENT CONFLICTS WITH EQUIPMENT AND STRUCTURAL CONDITIONS. EXPOSED CONDUITS SHALL BE INSTALLED PARALLEL TO BEAMS AND WALLS.
2. ITEMS SHALL BE PROVIDED WITH NEMA ENCLOSURE AS INDICATED ON THE EQUIPMENT ENCLOSURE SCHEDULE.
3. ALL DEVICES SHALL COMPLY WITH THE LATEST VERSION OF THE ADA (AMERICANS WITH DISABILITIES ACT).
4. THE CONTRACTOR SHALL FURNISH, MATERIALS, TOOLS AND OTHER EQUIPMENT REQUIRED TO INSTALL THE WORK SHOWN AND SPECIFIED. THE CONTRACTOR SHALL FURNISH AND INSTALL ALL ITEMS NECESSARY FOR A COMPLETE ELECTRICAL SYSTEM MATERIALS SHALL BE NEW AND SHALL BEAR THE REGISTERED UL MARK. WORK SHALL CONFORM WITH THE NATIONAL FIRE PROTECTION ASSOCIATION STANDARD 70 (NEC) AND APPLICABLE FEDERAL, STATE AND LOCAL CODES. CONTRACTOR SHALL SECURE PERMITS AND PAY THE FEES REQUIRED TO CARRY OUT HIS WORK. THE CONTRACTOR SHALL FURNISH COPIES OF CERTIFICATES AND PERMITS TO THE OWNER.
5. THE DRAWINGS AND SPECIFICATIONS INDICATE THE INTENT OF THE DESIGN AND SHALL BE CONSIDERED AS DIAGRAMMATIC ONLY. EXACT LOCATIONS FOR DEVICES AND EQUIPMENT SHALL BE DETERMINED AT THE SITE, AS WORK PROGRESSES DIMENSIONS AND CONDITIONS SHALL BE CHECKED AND VERIFIED BY THE CONTRACTOR AT THE SITE. FINAL WORK SHALL BE DOCUMENTED ON AS BUILT RECORD DRAWINGS.
6. PULL STATIONS, HORN/STROBES, SMOKE DETECTORS, ETC INDICATE QUANTITY, EXACT LOCATIONS OF DEVICES SHALL BE DETERMINED IN THE FIELD AND COORDINATED WITH ARCHITECTURAL DRAWINGS.
7. CONTRACTOR SHALL VERIFY ALL DOORS SWINGS BEFORE INSTALLING BACK BOXES.
8. ALL FIRE ALARM STROBES SHALL BE FIELD ADJUSTABLE AND THE POWER SUPPLY SHALL BE SIZED BASED ON ALL THE STROBES HIGHEST SETTING.
9. ITEMS SHALL BE PROVIDED WITH MINIMUM NEMA ENCLOSURE RATING AS INDICATED ON THE AREA CLASSIFICATION SCHEDULE.
10. DUCT BANK CONDUIT SIZES ARE GIVEN IN THE DUCT BANK SECTION CALLOUTS. WHERE THE SAME CONDUIT NUMBER IS USED BOTH IN THE DUCT BANK AND IN A BUILDING, THE CONDUIT SIZE GIVEN IN THE CONDUIT SCHEDULE APPLIES TO THE CONDUIT IN THE BUILDING ONLY.
11. PROVIDE SCHEDULE 40 POLYVINYL CHLORIDE (PVC) CONDUITS FOR POWER AND CONTROL CIRCUITS WITHIN CONCRETE ENCASED DUCT BANK SYSTEM. PROVIDE RIGID GALVANIZED STEEL CONDUITS FOR 50 VOLTS AND BELOW CIRCUITS, INSTRUMENTATION, COMMUNICATIONS I/O, DATA HIGHWAY, FIRE ALARM AND COMMUNICATIONS NETWORKS WITHIN CONCRETE ENCASED DUCT BANK.
12. CONSOLIDATION OF CONDUITS IS NOT ACCEPTABLE WITHOUT ENGINEERS APPROVAL.
13. SEE SPECIFICATION 01015 FOR SEQUENCE OF WORK LIMITATIONS.
14. SEE FIRE PROTECTION SHEET 99 FP–502 SPRINKLER SYSTEM RISER DIAGRAM FOR SPRINKLER SYSTEM FIRE PROTECTION DEVICES AND ZONE CONTROL VALVES.
15. PROVIDE FIRE ALARM RADIO SYSTEM FOR REMOTE COMMUNICATION WITH THE CITY OF ORLEANS FIRE DEPARTMENT IN ACCORDNACE WITH THE CITY OF ORLEANS FIRE DEPARTMENT REQUIREMENTS. FIRE ALARM ANTENNA SHOWN AT WWTF ROOF ON ELECTRICAL SITE PLAN 10 E–001.
16. PROVIDE DRY CONTACTS FOR REMOTE INDICATION OF FIRE ALARM CONDITION TO HVAC AUTOMATIC TEMPERATURE CONTROL PANEL 10–ATC–1/20–ATC–1.

**ADDENDUM NO. 8**

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 8 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 10 pages and 36 pages of attachments for a total of 46 pages.

## ATTACHMENTS

1. Orleans_MA-2019-01-Bid Form_Add_8-04-10-20
2. MassDEP Groundwater Discharge Permit 993-0
3. Drawing 10 E-006, WWTF – Electrical Single Line Diagram II – MCC.10-1
4. Drawing 10 E-302, WWTF – Grade Level – Security Plan I

## CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS

1. GENERAL
   - A. Sub-Bid Opening – May 6, 2020 at 11:00 a.m.
   - B. General Bid Opening – May 13, 2020 at 2:00 pm.
   - C. The Bid and Sub-bid Forms in Excel Format may be downloaded from the Tighe & Bond website. You must click on the "pre-qualified" button to access the Forms. Once obtained, in most cases a yellow bar will appear on the top of the screen labeled as "Security Warning". If this occurs, you must select the "Enable Content" button in order to properly utilize the file.
2. ADDENDUM NO. 4
   - A. Page AD.4-9 Item No.14, Delete "DRAWING 10 DI-603, SLUDGE TRANSFER PUMPS P&ID" and replace with "DRAWING 10 P-106, FACILITY UPPER PLAN II WATER AND GAS".

3. ADDENDUM NO. 5

   A. Page AD.5-12 Item No.4A, Delete "9. The PIs for (SBR.TP-1 thru 3) shall be provided by the Contractor as specified in SECTION 11308, RECESSED IMPELLER PUMPS AND APPURTENANCES." and replace with "1. The PIs for (SBR.TP-1 thru 3) shall be provided by the Contractor as specified in SECTION 11308, RECESSED IMPELLER PUMPS AND APPURTENANCES".

4. ADDENDUM NO. 7

   A. Attachment: SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS, Footnote, delete "Addendum No. 5" and replace with "Addendum No. 7".

5. SECTION 00100, ADVERTISEMENT FOR BIDS

   A. Page 00100-1, Paragraph 3.a, first subparagraph, delete the words "…until 2:00 p.m. prevailing time, on April 29, 2020 at which time and place…" and replace with the words "…until 2:00 p.m. prevailing time, on May 13, 2020 at which time and place…".

   B. Page 00100-1, Paragraph 3.b, first subparagraph, delete the words "…until 11:00 a.m. prevailing time, on April 22, 2020 at which time and place…" and replace with the words "…until 11:00 a.m. prevailing time, on May 6, 2020 at which time and place…".

6. SECTION 00410, FORM OF GENERAL BID

   A. Delete "Orleans_MA-2019-01-Bid Form_Add_6-03-12-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_8-04-10-20" in both hard copy and Microsoft Excel format.

7. DOCUMENT 00858, SPECIAL CONDITIONS - PERMITS AND LICENSES

   A. Page 00858-1, ARTICLE 1.01 - LIST OF PERMITS AND/OR LICENSES, Paragraph A, add the following new subparagraph:

      7. Massachusetts Department of Environmental Protection – Groundwater Discharge Permit

   B. Page 00858-1, ARTICLE 1.01 - LIST OF PERMITS AND/OR LICENSES, delete Paragraph B in its entirety and replace with the following new paragraph:

      B. Not Used.

8. SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS

   A. Page 01650-2, ARTICLE 1.02 - MEASUREMENT AND PAYMENT, add the following new paragraph:

      B. An allowance has been identified in SECTION 01020, ALLOWANCES for the Contractor to perform Performance Testing following Substantial Completion. The measurement and payment shall include all work required, including but not limited to, all necessary equipment, labor, materials, supplies, manufacturer's services, and the like, in order to perform Performance Testing as specified herein and in other sections. Detailed expenditures shall be submitted to the Engineer by the Contractor. Should the actual charge exceed the amount or be less than the amount indicated, the difference will be paid by or returned to the Owner.

   B. Page 01650-11, ARTICLE 1.14 - OPERATIONAL EXPENSES, Paragraph C., delete the paragraph in its entirety and replace with the following new paragraph:

      C. During Performance Testing, the Contractor shall bear the costs for Contractor and manufacturer/suppliers, including but not limited to labor, equipment, tools, supplies, manufacturer's services and the like, as approved by the Engineer. The manufacturer of the following equipment shall perform an equipment check-out and complete any repairs necessary within one month of the Contractor conducting Performance Testing:

         1. SECTION 11333, SEPTAGE RECEIVING STATION
         2. SECTION 11365, ROTARY DRUM THICKENERS
         3. SECTION 11399, EFFLUENT DISK FILTERS
         4. SECTION 11600, SEQUENCING BATCH REACTORS

         The allowance specified in SECTION 01020, ALLOWANCES shall be used to cover these costs.

9. SECTION 01020, ALLOWANCES

   A. Page 01020-2, ARTICLE 1.05 - ALLOWANCES FOR PRODUCTS, Paragraph C., add Item No. 9 as follows:

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 9 | Performance Testing | $50,000 | 2.R. |

   Notes:

   9. Item No. 9 - The allowance is for the cost of the Performance Testing in accordance with SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS.

10. SECTION 02520, WICK CONSTRUCTION AND TESTING

   A. Page 02520-2, ARTICLE 1.01 - SCOPE, Paragraph E., add the following Specialty Contractors:

      O. E. Dube & Son, Inc
      769 Daniel Webster Highway
      Merrimack, NH 03054
      Phone: 603-669-4810

   B. Page 02520-2, ARTICLE 1.01 - SCOPE, add the following as new Paragraph G.:

      G. Wick Design

         1) The Wick design is different from a typical water-well design. The Wicks are not intended for the extraction of water for drinking water supply. In fact, the bottom of the Wicks are located in unsaturated soils above the water table. MassDEP does not allow a Wick to be designed like a typical water supply well using a well screen. Therefore, the typical water-well design does not apply.

         2) The gravel within the Wick must be installed against the natural formation. The bottom of the Wicks will be installed above the water table. The WWTF effluent will be discharged above the center of the Wick and will flow to the base of the Wick, where it will discharge out of the Wick, flowing into the natural formation. Flow from the Wick should always flow into the formation.

         3) Similarly designed Wicks have been online since 2004 with no apparent plugging from surrounding soils.

         4) The stainless-steel well screen referenced in the specifications applies to the three 6-inch diameter Wick access wells that will be installed in each Wick. These access wells will be used to observe Wick performance, once the Wicks become operational and for maintenance purposes.

   C. Page 02520-2, ARTICLE 1.01 - SCOPE, add the following as new Paragraph H.:

      H. Wick Drilling

         1) The proposed drilling method is to be submitted by the Contractor for review and approval by the ENGINEER. Preferred methods of drilling are caisson drilling and dual rotary drilling, or other means suitable to the Engineer.

         2) The specified plumbness criterion for the Wicks is a critical component for proper operation and maintenance.

11. SECTION 02620, INSULATION AND JACKETING

   A. Delete the section in its entirety.

12. SECTION 02645, MONITORING WELL INSTALLATION AND DEVELOPMENT

A. Page 02645-1, ARTICLE 1.01 – SCOPE, delete the section in its entirety and replace with the following new section:

1.01 - SCOPE

A. The Work of this section includes furnishing all labor, materials, tools and equipment necessary to perform all operations in connection with the monitoring well installation and development, preparing records of the drilling, ingress and egress, as specified and/or as shown on the Contract Drawings.

B. A total of four new monitoring wells (LH-6, LH-7, LH-8 and LH-9) are to be installed at 32 Lots Hollow Road. The location and coordinates of the new monitoring wells is attached to the end of this section. Boring logs of existing monitoring wells at the site are attached to the end of this section. The monitoring wells are to be constructed in accordance with MassDEP standard monitoring well guidelines. The monitoring wells will consist of 2-inch diameter PVC risers and 10-foot lengths of schedule 40, slotted PVC screen. The screens are to be surrounded by a filter pack of sand and the annulus of the borehole above the screen is to be sealed with bentonite clay. Each monitoring well is to be protected with a locked protective casing permanently cemented into place.

C. A total of three existing monitoring wells (LH-1, LH-2 and LH-3) are to be modified by removing the existing above ground cover, cutting the existing PVC casing to just below the proposed grade, and completing the wells with a flush to ground protective casing (6-inch minimum diameter), a removable locking cap and concrete pad. The location and coordinates of the monitoring wells are attached to the end of this section.

D. Contractor shall visit the Project Site, examine conditions and become thoroughly acquainted with the conditions for performing the Work. Contractor shall study the Specifications for the Work and compare the same with the information gathered during the examination of the Project Site, as no extra compensation will be authorized for extra Work caused by unfamiliarity with the Project Site and/or the conditions peculiar to the Work.

E. Attention is directed to the GENERAL INFORMATION and DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

B. Page 02645-5, ARTICLE 2.03 – PROTECTIVE METAL CASINGS, COVERS AND LOCKS, delete the article in its entirety and replace with the following new article:

2.03 - PROTECTIVE METAL CASINGS, COVERS AND LOCKS

A. Provide protective metal casing(s) (guard pipes) with lockable covers a minimum of 5-feet in linear dimension.

B. Provide protective metal flush to ground protective cover (minimum 6-inch diameter) with lockable expandable cap.

C. Provide keyed alike metal locks for each.

D. Provide 10 keys.

C. Page 02645-5, ARTICLE 3.02 – INSTALLATION OF 2-INCH DIAMETER OBSERVATION WELLS, delete the article in its entirety and replace with the following new article:

3.02 – OBSERVATION/MONITORING WELLS

A. Installation of 2-inch Diameter Observation/Monitoring Wells

1. Wells shall be installed using hollow-stem auger or direct-push drilling equipment. Drilling equipment shall be sufficiently designed and powered to achieve depths of 150 feet in sand and gravel formations typical of Cape Cod. Drilling equipment shall have rotary capability, in case of obstructions, such as cobbles.

2. Wells shall be driven in the sequence, number and locations designated by the Engineer. Drilling and well installation Work shall be completed on an interrupted basis.
3. Borehole(s) shall be a 4.5-inch diameter cased hole.
4. Drilling shall proceed to a depth of approximately 130 feet below ground surface.
5. Continuous soil cores shall be obtained in no longer than 5-foot lengths.
6. 2-inch diameter PVC well screen shall be securely joined to the steel or PVC well casing. The entire string of casing and screen shall then be inserted inside the borehole to the bottom.
7. The 4.5-inch diameter drive casing shall be extracted and the native soil formation shall be allowed to cave in on the observation well screen and casing. If necessary, quartz sand shall be added to the annulus where the borehole does not collapse.
8. Bentonite shall be installed in the annulus where the borehole penetrates clay or sandy clay. In addition, a 2-foot long bentonite seal shall be installed in the annulus between the borehole wall and the well casing at the water table.
9. Where PVC is used for well casing, a suitable steel protective pipe shall be installed over the PVC and secured in place from ground surface to 3 feet below ground surface by placing quartz sand inside and outside the protective pipe. The top of the protective pipe shall have a locking cap. Steel protective pipes for PVC observation wells shall be set such that the rim of the PVC and the rim of the steel pipe are at the same elevation.
10. All caps for steel and PVC wells shall have vent holes.
11. Each well shall be installed at the depths approved by the Engineer.
12. Each observation well shall be developed by diaphragm pumping, flushing, backwashing, plunging, airlifting, centrifugal or submersible pumping, as appropriate, until it is substantially free of sand.
13. Wells shall be numbered consecutively, as directed by the Engineer. The well number shall be clearly marked with heavy duty weather-resistant paint or permanent marker at the top of each well casing and/or guard-pipe. The top of the well casing shall be left two feet above the ground at the well and special short lengths shall be used if required.
14. Complete written records of all Work shall be kept on forms supplied by the Engineer or a form prepared by the Contractor and acceptable to the Engineer. Permanent records shall be submitted to the Engineer within three (3) working days of completion of the Work.
15. Notify subcontractors involved or affected by this Work and coordinate the Work with them.

B. Observation/Monitoring Well Modification

1. Existing observation/monitoring wells LH-1, LH-2 and LH-3 are to be modified by removing the existing above ground steel protective cover and concrete pad.
2. Existing PVC casing shall be cut to 3 to 5 inches below the proposed grade, as approved by the Engineer.
3. Complete wells with a flush to grade protective cover (6-inch minimum diameter) secured with a concrete pad.
4. Each 2-inch diameter PVC well shall be installed with a vented lockable cap.
5. The location of the observation/monitoring wells are shown on the figure attached to the end of this section.
6. The wells are to be protected during construction and repaired or replaced if damaged.

13. SECTION 03300, CAST-IN-PLACE CONCRETE

    A. Page 03300-22, ARTICLE 3.10 – CONCRETE FINISHES, add the following new paragraph:

        E. The following concrete fill locations do not require the use of an epoxy bonding agent:

            1. WWTF Basement Floor
            2. Pre-Equalization Tanks
            3. SBR Tanks
            4. Post-Equalization Tank
            5. Waste Activated Sludge Storage Tanks
            6. Thickened Sludge Storage Tank
            7. Plant Water Tank

14. SECTION 03420, PRECAST REINFORCED CONCRETE VAULTS

    A. Delete the section in its entirety.

15. SECTION 04120, STONE VENEER

    A. Page 04120-4, ARTICLE 2.01 – MANUFACTURERS, Paragraph A, delete subparagraph 2. in its entirety and replace with the following new subparagraph:

        2. Natural Stone Veneer International (NSVI), 390 W Rolling Meadows Drive, Fond du Lac, WI 54937; Tel: 920-923-2800. Web: www.NSVI.com

16. SECTION 08500, FIXED WINDOWS

    A. Page 08500-10, ARTICLE 2.01 – MANUFACTURERS, delete Paragraph E. in its entirety and replace with the following new paragraph:

        E. Basis of Design: (1) Kawneer, Norcross, GA: NX-3800 Window Series and (2) Fire Rated Window: Fyre-Tec – Series H950 Heavy Fixed Lite. Other acceptable manufacturers are: Technical Glass Products (TGP), Perrysburg, OH and Steel Windows and Doors USA, Bridgeport, CT.

    B. Page 08500-11, ARTICLE 2.03 – WINDOW OPERATION, Paragraph A.1., delete the subparagraph in its entirety and replace with the following new subparagraph:

        1. Not Used.

17. SECTION 11333, SEPTAGE RECEIVING STATION

    A. Page 11333-17, ARTICLE 3.03 – PROCESS PERFORMANCE GUARANTEE, Paragraph A., delete the words "…will occur three (3) years from Substantial Completion…" and replace with the following new words "…will occur one (1) year from Substantial Completion…".

18. SECTION 11365, ROTARY DRUM THICKENERS

    A. Page 11365-13, ARTICLE 3.03 – PROCESS PERFORMANCE GUARANTEE, Paragraph A., delete the words "…will occur three (3) years from Substantial Completion…" and replace with the following new words "…will occur one (1) year from Substantial Completion…".

19. SECTION 11399, EFFLUENT DISK FILTERS

    A. Page 11399-16, ARTICLE 3.03 – PROCESS PERFORMANCE GUARANTEE, Paragraph A., delete the words "…will occur three (3) years from Substantial Completion…" and replace with the following new words "…will occur one (1) year from Substantial Completion…".

20. SECTION 11600, SEQUENCING BATCH REACTORS

    A. Page 11600-22, ARTICLE 3.03 – PROCESS PERFORMANCE GUARANTEE, Paragraph A., delete the words "…will occur three (3) years from Substantial Completion…" and replace with the following new words "…will occur one (1) year from Substantial Completion…".

21. SECTION 13345, DATA NETWORK

A. Page 13345-2, ARTICLE 1.01 – SCOPE, Paragraph A., add the following to the end of the paragraph:

The work of this section shall be by the Contractor and as specified in SECTION 13300, INSTRUMENTATION AND CONTROL SYSTEM – GENERAL.

22. SECTION 13350, SCADA EQUIPMENT

A. Page 13350-7, add the following as new Article 2.06:

2.06 - COMPUTER WORK STATIONS

A. Provide quantity as shown on Contract Drawing 00 DI-601, SYSTEM ARCHITECTURE 1.

B. Industrial computer with panel mount 15-inch touch screen by Advantech or Equal.

C. Computer shall have the following minimum configuration:

1. Processor Intel Xenon quad Core
2. Processor Speed: 2GHZ
3. Dual Screen LCD flat HD screen, 20-inch size for desktop style work stations.
4. One (1) TB SATA har drive for data storage
5. One (1) 500GB SATA Hard Drive for operating system and applicable software
6. Internal DVD+/-RW Drive, 16X
7. PCI Graphics Card with 4 GB memory.
8. 4 MB L2 Cache Memory.
9. One 10/100/1000 Mbps RJ-45 connectivity Ethernet cards.
10. Scroll mouse.
11. Standard Windows keyboard.
12. One EIA-232 Serial Port.
13. 1 Parallel Ports standard.
14. 4 USB 2.0/3.0Ports.
15. Sound Card and speakers.
16. Panel mount option for installations in PLC panels as indicated with screen minimum size of 15 inches. Screen shall be touch type unit.

B. Page 13350-7, add the following as new Article 2.07:

2.07 - PRINTERS

A. Provide quantity as shown on Contract Drawing 00 DI-601, SYSTEM ARCHITECTURE 1.

B. Laser type color printer with scanner.

C. Color printers shall be capable of printing on letter

D. Printers shall be capable of printing on letter (8.5” x 11”) or tabloid (11”x17”) sheets of paper. The printer shall accept paper fed manually or from one of two paper trays, each with a minimum capacity of 200 sheets. The printer shall print at least 35 pages of text per minute at a resolution of 1200 dpi or greater. The printer shall contain a minimum of 48 MB of on-board RAM, expandable to 320 MB. The report printer shall be a Hewlett Packard LaserJet P4015 series or equal.

E. Report printer(s) shall be provided with a 10/100/1000 Base-TX interface to provide connectivity to the computers over the Ethernet network

C. Page 13350-7, add the following as new Article 2.08:

2.08 - LAPTOPS

A. Provide 2 Laptops.

B. Hardware

1. Provide Intel i7 Quad Core Processor, 2.6 GHz Minimum
2. 32 GB DDR4 Memory, and L2 512KB RAM cache
3. 1-DB SSD Hard disk.
4. Integrated controller
5. CDRW/DVD combo drive.
6. NVIDA GeForce graphics card.
7. 17-inch full HD Panel
8. I/O Ports 1- Parallel, 3 USB, 1 Serial, 1 HDMI 1 Keyboard (PS/2, 1 PS/2 Mouse
9. 104 Key Enhanced PS/2 Keyboard
10. Mouse Touch Pad
11. Network Interface 10/100/1000 Mbps
12. Power Supply – 115 VAC/60HZ, 230 VAC/50Hz

C. Software

1. Microsoft Office Professional, Adobe Acrobat Professional, HMI Software Configuration Package, PLC Control system programming software
2. Operating SystemMicrosoft windows professional latest version or latest version of Windows server based on configuration.
3. Provide all software as the most current release at the time of shop drawing submittal
4. Provide software keys.

D. Service – 1st, 2nd, and 3rd year on site included

E. Purchase the laptops within 1 year prior to substantial completion of the project with the most current hardware available at that time.

F. Manufactures – Dell, HP, IBM

8. SECTION 15900, HVAC CONTROL SYSTEMS

A. Page 15900-2, ARTICLE 1.01 – SCOPE, delete the first sentence in subparagraph G.1 and replace with the following new sentence:

All HVAC control system equipment, devices, hardware and software shall be manufactured by either Alerton Controls, Allen-Bradley, Johnson Controls, Inc. Siemens, or Schneider Electric.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 10 A-401, ENLARGED PLANS, ELEVATIONS, SCHED. – CONTROL ROOM

   Control Room Accessory Schedule, replace the Models for the following Item Numbers:

| Item Number | Model | Item Number | Model |
|---|---|---|---|
| 2 | W25C361624L | 5 | W25C361624L |
| 3 | W25C361648 | 6 | W25C361648 |
| 4 | W25C361624 | 7 | W25C361624 |

2. DRAWING 10 A-402, ENLARGED PLANS, ELEVATIONS, SCHED. – LAB ROOM

   Laboratory Room Accessory Schedule, replace the Generic Names, Models and Manufacturer for the following Item Numbers:

| Item Number | Generic Name | Model | Manufacturer |
|---|---|---|---|
| 3 | | Not Used | |
| 5 | Cabinet | W21C361615 | Kewaunee Scientific Corporation |
| 6 | Cabinet | W25C361648 | Kewaunee Scientific Corporation |
| 7 | Cabinet | W25C361615L | Kewaunee Scientific Corporation |
| 8 | Cabinet | W25C361624 | Kewaunee Scientific Corporation |
| 11 | Cabinet | W25C361630 | Kewaunee Scientific Corporation |
| 15 | Drawer | D08C352224 | Kewaunee Scientific Corporation |
| 16 | Corner Cabinet | G15C352214 | Kewaunee Scientific Corporation |
| 18 | Cabinet | W25C361615L | Kewaunee Scientific Corporation |
| 20 | Cabinet | W25C361624L | Kewaunee Scientific Corporation |
| 22 | Cabinet | E41C292248 | Kewaunee Scientific Corporation |
| 28 | Drawer | D08C352230 | Kewaunee Scientific Corporation |
| 36 | Drawer | D08C352230 | Kewaunee Scientific Corporation |
| 38 | Case | S41C842236 | Kewaunee Scientific Corporation |

3. DRAWING 10 A-406, ENLARGED STAIR 1 PLANS

   A. Stair 1 - Grade Level, add the following new note:

      Note: Safety Gate shall be provided at the top of the stairs. Refer to Safety Gate Detail on DRAWING 10 A-503, DETAILS MISC. I.

4. DRAWING 10 A-407, ENLARGED STAIR 2 PLANS

   A. Stair 2 - Grade Level, add the following new note:

      Note: Safety Gate shall be provided at the top of the stairs. Refer to Safety Gate Detail on DRAWING 10 A-503, DETAILS MISC. I.

5. DRAWING 10 A-502, SBR PLAN AND RAILING DETAILS, add the following new note:

   Note: Aluminum grating shall be used for stair treads and stair landings on the exterior access stairs to SBR tanks.

6. DRAWING 00 S-001, STRUCTURAL NOTES I
   A. Concrete, add the following to the end of Note 4:
      E. The following are the locations that qualify as a "Liquid Containing Structure":
         - WWTF Tank Covers
         - WWTF Basement Columns
         - Containment Curbs and Equipment Pads
         - SBR Tank Walkways
         - Plant Water Storage Tank Cover Slab
         - Sludge Loading Pad
         - Wick Distribution Box Cover Slab
7. DRAWING 10 D-304, SECTIONS IV, Section 4, Headworks, delete the 10" OC pickup penetrating the floor into Pre-Equalization Tank No. 1.
8. DRAWING 10 E-006, WWTF – ELECTRICAL INGLE LINE DIAGRAM II – MCC.10-1
   A. Delete the drawing in its entirety and replace with the new drawing as attached.
9. DRAWING 10 E-302, WWTF – GRADE LEVEL – SECURITY PLAN I
   A. Delete the drawing in its entirety and replace with the new drawing as attached.

**CHANGES TO BE MADE TO THE CONTRACT ATTACHMENTS**

| A-1 | For Addition of the Equipment Storage Facility, as specified, the sum of | | | $ - |
| A-2 | For Addition of Fiber Optic Conduits and Handholes, as specified, the sum of | | | $ - |
| A-3 | For Addition of Tracer Wire, as specified, the sum of | | | $ - |
| A-4 | For Addition of SBR Transfer Pump No. 4, as specified, the sum of | | | $ - |
| A-5 | For Addition of the SBR Blower No. 4, as specified, the sum of | | | $ - |
| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | | | $ - |

**BASIS OF AWARD** - The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraints will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding its funding constraints. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in June 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

**$ -**

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, PART III - FILED SUBBIDS, and PART IV - ALTERNATIVES (Item A-1), inclusive**

RE: ORLEANS – Final Individual Groundwater Discharge Permit, Town of Orleans Wastewater Treatment Facility, 29 Overland Way, Orleans Massachusetts and 32 and 43 Lots Hollow Road
Transmittal No. X282490
Groundwater Discharge Permit No.: 993-0

Dear Mr. Kelly:

In response to your application for a permit to discharge into the ground treated effluent from the proposed Town of Orleans Wastewater Treatment Facility and after due public notice, I hereby issue the attached final permit.

Since no comments objecting to the issuance of the permit were received by the Department during the public comment period, in accordance with 314 CMR 2.08, the permit becomes effective at issuance.

Parties aggrieved by the issuance of this permit are hereby advised of their right to request an Adjudicatory Hearing under the provisions of Chapter 30A of the Massachusetts General Laws and 314 CMR 1.00, Rules for the Conduct of Adjudicatory Proceedings. Unless the person requesting the adjudicatory hearing requests and is granted a stay of the terms and conditions of this permit, the permit shall remain fully effective.

Should you have any questions regarding this matter, please contact me at (508)946-2814 or at brian.dudley@mass.gov.

Very truly yours,

Gerard M. R. Martin for

# Individual Groundwater Discharge Permit
# Fact Sheet

## I. APPLICANT, FACILITY INFORMATION, and DISCHARGE LOCATION

**Name and Address of Applicant:** Town of Orleans, 19 School Road, Orleans, Massachusetts 02653

**Name and Address of Facility where discharge occurs:** Wastewater treatment at 29 Overland Way, Orleans, Massachusetts with discharges at 32 and 43 Lots Hollow Road, Orleans, Massachusetts.

**Discharge Information:**

Groundwater Discharge Permit Number: 993-0

The Groundwater Discharge Permit will allow the applicant to discharge 228,900 gallons per day (annual average) with a maximum of 595,100 gallons per day for Phase 1 and 350,000 gallons per day (annual average) with a maximum of 883,800 gallons per day for Phase 2 of treated sanitary wastewater from a municipal wastewater treatment facility to groundwaters of the Commonwealth.

The discharge sites are not in a Zone II or Interim Wellhead Protection Area of any public drinking water supply.

## II. LIMITATIONS AND CONDITIONS

Discharge permit limitations are as listed in the ground water permit and are in conformance with 314 CMR 5.00, the Groundwater Discharge Permit Program.

## III. PERMIT BASIS AND EXPLANATION OF EFFLUENT LIMITATIONS

An Individual Groundwater Discharge permit is required for this discharge in accordance with the Massachusetts Clean Water Act, M.G.L. c. 21, s. 26-53 and 314 CMR 5.03.

Effluent limitations are based upon the location of the discharge, the level of treatment, consideration of human health protection criteria and protection of the groundwaters of the Commonwealth.

The discharge will be via wicks located at 32 Lots Hollow Road. 43 Lots Hollow Road will serve as a backup site.

## IV. COMMENT PERIOD, HEARING REQUESTS, AND PROCEDURES FOR FINAL DECISIONS

The public comment period for this permit is thirty (30) days following public notice in *The Environmental Monitor*. The public notice for this Individual Groundwater Discharge Permit occurred on February 10, 2020

Requests for an adjudicatory hearing must be submitted within thirty (30) days of the issuance/denial of the permit, by any person who is aggrieved by such issuance/denial.

A final decision on the issuance/denial of this permit will be made after the public notice period, and review of any comments received during this period.

## V. STATE CONTACT INFORMATION

Additional information concerning the draft permit may be obtained between the hours of 9:00 a.m. and 5:00 p.m. Monday through Friday excluding holidays, from:

## INDIVIDUAL GROUNDWATER DISCHARGE PERMIT

Name and Address of Applicant: Town of Orleans, 19 School Road, Orleans, Massachusetts 02653

Date of Application: August 29, 2019
Application/Permit No. 993-0

Date of Issuance: March 31, 2020
Date of Expiration: March 31, 2025

Effective Date: March 31, 2020

## AUTHORITY FOR ISSUANCE

Pursuant to authority granted by Chapter 21, Sections 26-53 of the Massachusetts General Laws, as amended, 314 CMR 2.00, and 314 CMR 5.00, the Massachusetts Department of Environmental Protection (the Department or MassDEP) hereby issues the following permit to: **Town of Orleans** (hereinafter called "the permittee") authorizing discharges to the ground from the wastewater treatment facility located at **Town of Orleans Wastewater Treatment Facility, 29 Overland Way, Orleans Massachusetts** with effluent recharge located at **32 and 43 Lots Hollow Road, Orleans, Massachusetts** such authorization being expressly conditional on compliance by the permittee with all terms and conditions of the permit hereinafter set forth.

I. SPECIAL CONDITIONS

**A. Effluent Limits**

1) The permittee is authorized to discharge into the ground from the wastewater treatment facilities for which this permit is issued a treated effluent whose characteristics within one month of startup and continuing thereafter shall not exceed the following values:

| Effluent Characteristics | Discharge Limitations |
|---|---|
| Flow | Phase 1: 228,900 gpd (annual average)<br>595,100 gpd (maximum day)<br>Phase 2: 350,000 gpd (annual average)<br>883,800 gpd (maximum day) |
| Oil and grease | 15 mg/l |
| Total Suspended Solids (TSS) | 30 mg/l |
| Total Nitrogen ($NO_2 + NO_3 + TKN$) | 10 mg/l |
| Nitrate-Nitrogen | 10 mg/l |
| Biochemical Oxygen Demand, 5-day @20°C ($BOD_5$) | 30 mg/l |
| Settleable Solids | 0.1 ml/l |
| Fecal Coliform | 200 colonies/100 ml |
| Total Residual Chlorine | 4 mg/l |

a) The pH of the effluent shall not be less than 6.5 nor greater than 8.5 at any time or not more than 0.2 standard units outside the range measured at the upgradient monitoring wells (LH-6 and MW-14).

b) Prior to discharging Phase 2 flow, the Permittee shall evaluate the operational experience with the wicks to determine if the wicks at 32 Lots Hollow Road are capable of accommodating the maximum day flow. Pending the results of that evaluation, the Department reserves the right to require development of additional wicks with plans to be submitted by the Permittee through a BRP WP 68 Treatment Works Plan Approval Without Permit Modification.

c) The compliance sampling point for Total Residual Chlorine shall be at the end of the force main prior to discharge into the wicks.

d) Redevelopment and cleaning of the wicks may periodically require dosages of chlorine in excess of the effluent limit. Redevelopment and cleaning procedures and protocols shall be included in the WWTF's Operation and Maintenance Manual (O&M) as approved by the Department. The permittee shall provide the Department with a 24 hour notification in advance of any redevelopment and cleaning activity, except in an instance of extreme emergency in which case notification shall be within 24 hours of emergency redevelopment and cleaning activity.

e) The discharge of the effluent shall not result in any demonstrable adverse effect on the groundwater or violate any water quality standards that have been promulgated.

f) The monthly average concentration of BOD and TSS in the discharge shall not exceed 15 percent of the monthly average concentrations of BOD and TSS in the influent into the permittee's wastewater treatment facility.

g) When the average annual flow exceeds 80 percent of the permitted flow limitations, the permittee shall submit a report to the Department describing what steps the permittee will take in order to remain in compliance with the permit limitations and conditions, inclusive of the flow limitations established in this permit.

## B. Monitoring and Reporting

1) The permittee shall monitor and record the quality of the **influent** and the quality and quantity of the **effluent** prior to discharge to the leaching facilities according to the following schedule and other provisions:

**INFLUENT:**

| Parameter | Minimum Frequency of Analysis | Sample Type |
|---|---|---|
| pH | Daily | Grab |
| Septage (quantity) | Daily | report |
| TSS | Weekly | 24-hr Composite |
| $BOD_5$ | Monthly | 24-hr Composite |
| Oil & Grease | Monthly | Grab |
| Total Nitrogen ($NO_2 + NO_3 + TKN$) | Monthly | 24-hr Composite |
| Sodium | Monthly | Grab |
| Chloride | Monthly | Grab |
| Volatile Organic Compounds | Quarterly | Grab |

**EFFLUENT:**

| Parameter | Minimum Frequency of Analysis | Sample Type |
|---|---|---|
| Flow | Daily | Continuous reading |
| pH | Daily | Grab |
| $BOD_5$ | Monthly | 24-hr Composite |
| Total Nitrogen ($NO_2$+$NO_3$+TKN) | Monthly | 24-hr Composite |
| Nitrate Nitrogen | Monthly | 24-hr Composite |
| Ammonia as Nitrogen | Monthly | 24-hr Composite |
| Total Suspended Solids | Weekly | 24-hr Composite |
| Settleable Solids | Weekly | Grab |
| Total Dissolved Solids | Weekly | Grab |
| Total Solids | Weekly | Grab |
| Oil & Grease | Monthly | Grab |
| Fecal Coliform | Monthly | Grab |
| Total Phosphorus | Quarterly | Grab |
| Orthophosphate | Quarterly | Grab |
| Total Residual Chlorine | If and When Applied | Grab |
| Volatile Organic Compounds | Annually | Grab |

a) After one full year of monitoring the Total Phosphorus and Orthophosphate results, the Department may determine, upon the request of the permittee, that the frequency of monitoring may be reduced if, in the judgment of the Department, the results of the sampling indicate that existing phosphorus levels will not adversely impact downgradient receptors. If the Department reduces the frequency of monitoring for Total Phosphorus and Orthophosphate, the Department reserves the right to resume more frequent monitoring if the Department determines that phosphorus levels are impacting downgradient receptors.

b) Total Residual Chlorine shall only be reported if it is added to the treatment process as part of wick well maintenance. Use of chlorine shall be noted in the monthly discharge monitoring reports and effluent concentrations shall be noted at that time.

c) Testing for Total Suspended Solids (TSS), Total Dissolved Solids (TDS), and Total Solids (TS) is to monitor for solids discharging to the wicks.

2) The permittee shall install the approved monitoring wells at least 90 days prior to treatment facility start-up. The permittee shall install the upgradient monitoring wells, LH-6 and MW-14 and the downgradient monitoring wells LH-7, LH-8 and LH-9 as shown on the approved plan titled "Figure 11, Groundwater Monitoring Locations 32 and 43 Lots Hollow Road" as found in the " Project Summary of the Groundwater Discharge Permit (GWDP) Application 32 and 43 Lots Hollow Road, Town of Orleans, Massachusetts" prepared by AECOM Technical Services, Inc. and dated July 24, 2019. Labels identifying each monitoring well's identification in accordance with the above-referenced approved plan shall be affixed to the steel protective casing of each monitoring well.

The permittee shall monitor, record and report the quality of water in the approved monitoring wells according to the following schedule and other provisions:

| **Parameter** | **Sample type** | **Sampling Frequency** |
|---|---|---|
| pH | Grab | Monthly |
| Static Water Level Elevation | Measurement | Monthly |
| Specific Conductance | Grab | Monthly |
| Total Nitrogen | Grab | Quarterly |
| Nitrate Nitrogen | Grab | Quarterly |
| Total Phosphorus | Grab | Quarterly |
| Orthophosphate | Grab | Quarterly |
| Volatile Organic Compounds | Grab | Annually |

a) Static Water Level shall be expressed as an elevation and shall be referenced to the surveyed datum established for the site. It shall be calculated by subtracting the depth to the water table from the surveyed elevation of the top of the monitoring well's PVC well casing/riser.

b) After one full year of monitoring the Total Phosphorus and Orthophosphate results, the Department may determine, upon the request of the permittee, that the frequency of monitoring may be reduced if, in the judgment of the Department, the results of the sampling indicate that existing phosphorus levels will not adversely impact downgradient receptors. If the Department reduces the frequency of monitoring for Total Phosphorus and Orthophosphate, the Department reserves the right to resume more frequent monitoring if the Department determines that phosphorus levels are impacting downgradient receptors.

3) Any grab sample or composite sample required to be taken less frequently than daily shall be taken during the period of Monday through Friday inclusive. All composite samples shall be taken over a 24 hour period.

4) The permittee shall submit all monitoring reports within 30 days of the last day of the reporting month to MassDEP and to the Board of Health, 59 School Road, Orleans, Massachusetts 02653. All discharge monitoring reports submitted to MassDEP must be submitted through eDEP. To register for electronic submission go to: **http://www.mass.gov/eea/agencies/massdep/service/online/edep-online-filing.html**

## C. Supplemental Conditions

1) The permittee shall notify the Department at least thirty (30) days in advance of the proposed transfer of ownership of the facility for which this permit is written. Said notification shall include a written agreement between the existing and new permittees containing a specific date for transfer of permit, responsibility, coverage and liability between them.

2) A staffing plan for the facility shall be submitted to the Department once every two years and whenever there are staffing changes. The staffing plan shall include the following components:

a) The operator(s)'s name(s), operator grade(s) and operator license number(s);
b) The number of operational days per week;
c) The number of operational shifts per week;
d) The number of shifts per day;
e) The required personnel per shift;
f) Saturday, Sunday and holiday staff coverage;
g) Emergency operating personnel

The initial staffing plan will be submitted to the Department prior to the wastewater treatment facility's clean water test.

3) The permittee is responsible for the operation and maintenance of all sewers, pump stations, and treatment units for the permitted facility, which shall be operated and maintained under the direction of a properly certified wastewater operator.

4) Operation and maintenance of the proposed facility must be in accordance with 314 CMR 12.00, "Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Discharges", and, 257 CMR 2.00, "Rules and Regulations for Certification of Operators of Wastewater Treatment Facilities".

a) The facility has been rated (in accordance with 257 CMR 2.00), to be a Grade 5 facility. Therefore, the permittee shall provide for oversight by a Massachusetts Certified Wastewater Treatment plant operator (Chief Operator) Grade 5 or higher. The permittee will also provide for a backup operator who shall possess at least a valid Grade 5 license.

b) The date and time of the operator's inspection along with the operator's name and certification shall be recorded in the log book on location at the treatment facility. All daily inspection logs consistent with the O&M Manual requirements shall be kept at the facility for a period of three (3) years.

c) Records of operation of wastewater treatment facilities or disposal systems required by the Department shall be submitted on forms supplied by the Department or on other forms approved by the Department for such use. Monthly reports shall be certified by the wastewater treatment plant operator in charge and shall be included in the discharge monitoring reports submitted each month.

5) If the operation and maintenance of the facility is to be contracted to a private concern, the permittee shall submit a copy of the contract, consistent with what is required by the approved Operation & Maintenance manual and signed only by the contractor, to the appropriate MassDEP Regional Office for review and approval ninety (90) days **prior** to the start up of the facility. Along with the contract, a detailed listing of all contract operation obligations of the proposed contractor at other facilities shall also be submitted. The permittee shall not begin operation of the treatment facility until the Department approves the contract.

6) All tests or analytical determinations to determine compliance with permit standards and requirements:

a) Effluent samples shall be collected, transported and stored in accordance with *Standard Methods for the Examination of Water and Wastewater;*

b) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 unless other methods are approved by the Department; and,

c) Samples shall be analyzed by a Massachusetts Certified laboratory unless otherwise approved by the Department.

7) The permittee shall notify the appropriate MassDEP Regional Office, in writing, within thirty (30) days of the following events:

a) The date of treatment plant start up.
b) Any interruption of the treatment system operation, other than routine maintenance.
c) Final shutdown of the treatment system.

8) The permittee shall contract to have any and all solids and sludges generated by the treatment system for which this permit is issued removed off site by a properly licensed waste hauler for disposal at an EPA/MassDEP approved facility. The name and license number of the hauler along with the quantity of wastes removed and the date(s) of removal shall be reported by the permittee in writing to the appropriate MassDEP Regional Office.

9) Simultaneously with the permit renewal application at year fifteen (2035) following the initiation of plant operations, the permittee shall submit two reports to the Department for its review and approval:

   a) An engineering report, prepared by a registered professional engineer, that outlines in sufficient detail what modifications (if any) to the facility or other changes are required to insure that the facility can remain in compliance with its GWDP and other applicable requirements through the next 5 year permit term (year 2040) and beyond; and

10) In the event that effluent limits are not met, or the discharge is determined to impair groundwater quality in accordance with 314 CMR 5.16(1), the permittee may be obligated to modify, supplement or replace the permitted treatment process so as to ensure that the discharge does not impair the ability of the groundwater to act as an actual or potential source of potable water.

11) Pursuant to M.G.L. Chapter 21A, section 18(a), and 310 CMR 4.03, holders of this Permit may be subject to annual compliance assurance fees as assessed each year on July 1st and invoiced by MassDEP. Failure of the Permit holder to pay applicable annual compliance assurance fees shall result in the automatic suspension of the permit by operation of law under the statute. If fee non-payment continues for sixty days or more, MassDEP has the statutory option of revoking the Permit, denying any other pending permit applications filed by the Permit holder or taking other enforcement action. Permit holders are required to notify MassDEP in writing if they wish to relinquish or transfer a permit. Failure to do so will result in the continued assessment of fees.

**D. Appeal Rights**

During the thirty (30) day period following issuance of this permit, a Notice of Claim for an Adjudicatory Appeal may be sent by any person aggrieved (the "Petitioner") by the issuance to:

Case Administrator
Office of Appeals and Dispute Resolution
Massachusetts Department of Environmental Protection
One Winter Street/2nd Floor
Boston, MA 02108

310 CMR 1.01(6)(b) requires the Notice of Claim to: include sufficient facts to demonstrate aggrieved person status; state the facts which are grounds for the appeal specifically, clearly and concisely; and, state relief sought. The permit shall become or remain effective at the end of the 30 day appeal period unless the person filing the Notice of Claim requests, and is granted, a stay of its terms and conditions. If a permit is modified under 314 CMR 2.10, only the modified terms and conditions may be subject to an Adjudicatory Appeal. All other aspects of the existing permit shall remain in effect during any such Adjudicatory Appeal.

Per 310 CMR 4.06, the hearing request to the Commonwealth will be dismissed if the filing fee is not paid. Unless the Petitioner is exempt or granted a waiver, a valid check payable to the Commonwealth to Massachusetts in the amount of $100.00 must be mailed to:

Commonwealth of Massachusetts
Department of Environmental Protection
P.O. Box 4062
Boston, MA 02211

The filing fee is not required if the Petitioner is a city, town, county, or district of the Commonwealth, federally recognized Indian tribe housing authority effective January 14, 1994, or any municipal housing authority; or, per MGL 161A s. 24, the Massachusetts Bay Transportation Authority. The Department may waive the adjudicatory hearing filing fee for a Petitioner who shows that paying the fee will create an undue financial hardship. A Petitioner seeking a waiver must file, along with the hearing request, an affidavit setting forth the facts believed to support the claim of undue financial hardship.

## II. GENERAL PERMIT CONDITIONS

### 5.16: General Conditions

The following conditions apply to all individual and general permits:

(1) No discharge authorized in the permit shall cause or contribute to a violation of 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*. Upon promulgation of any amended standard, the permit may be modified to comply with such standard in accordance with the procedures in 314 CMR 2.10: *Modification, Suspension, Revocation and Renewal of Permits and General Permit Coverage* and 314 CMR 5.12. Except as otherwise provided in 314 CMR 5.10(3)(c), 5.10(4)(a)2. and 5.10(9), no discharge authorized in the permit shall impair the ability of the ground water to serve as an actual or potential source of potable water. Evidence that a discharge impairs the ability of the ground water to serve as an actual or potential source of potable water includes, without limitation, analysis of samples taken in a downgradient well that demonstrates one or more exceedances of the applicable water quality based effluent limitations set forth in 314 CMR 5.10. In those cases where it is shown that a measured parameter exceeds the applicable water quality based effluent limitations set forth in 314 CMR 5.10 at the upgradient monitoring well, evidence that a discharge impairs the ability of the ground water to serve as an actual or potential source of potable water is deemed to exist if a measured parameter in any downgradient well exceeds the level of that same measured parameter in the upgradient well for the same sampling period. A statistical procedure approved by the Department shall be used to determine when a measured parameter exceeds the allowable level.

(2) Duty to Comply. The permittee shall comply at all times with the terms and conditions of the permit, 314 CMR 5.00, M.G.L. c. 21, §§ 26 through 53, and all applicable state and federal statutes and regulations.

(3) Standards and Prohibitions for Toxic Pollutants. The permittee shall comply with effluent standards or prohibitions established by § 307(a) of the Federal Act, 33 U.S.C. § 1317(a), for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.

(4) Proper Operation and Maintenance. The permittee shall at all times properly operate and maintain all facilities and equipment installed or used to achieve compliance with the terms and conditions of the permit, 314 CMR 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Discharges*, and 257 CMR 2.00: *Certification of Operators of Wastewater Treatment Facilities*. All equipment shall be maintained in an acceptable condition for its intended use.

(5) Duty to Halt or Reduce Activity. Upon reduction, loss, or failure of the treatment facility, the permittee shall, to the extent necessary to maintain compliance with its permit, control production, discharges, or both, until the facility is restored or an alternative method of treatment is provided. A permittee may not raise as a defense in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the permit.

(6) Power Failure. In order to maintain compliance with the effluent limitations and prohibitions of the permit, the permittee shall either:

(a) provide an alternative power source sufficient to operate the wastewater control facilities; or

(b) halt, reduce or otherwise control production or all discharges upon the reduction, loss, or failure of the primary source of power to the wastewater control facilities.

(7) Duty to Mitigate. The permittee shall take all reasonable steps to minimize or prevent any adverse impact on human health or the environment resulting from non-compliance with the permit. Additionally, the permittee shall take all necessary steps to prevent an operational upset of the PWTF or POTW.

(8) Duty to Provide Information. The permittee and any operator of the permitted facility shall furnish to the Department within a reasonable time as specified by the Department any information which the Department may request to determine whether cause exists for modifying, suspending, revoking and reissuing, or terminating the permit, or to determine whether the permittee is complying with the terms and conditions of the permit.

(9) Inspection and Entry. The permittee shall allow the Department or its authorized representatives to:

(a) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records required by the permit are kept;

(b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(c) Inspect at reasonable times any facilities, equipment, practices, or operations regulated or required under the permit; and

(d) Sample or monitor at reasonable times for the purpose of determining compliance with the terms and conditions of the permit.

(9A) The permittee shall physically secure the treatment works and monitoring wells and limit access to the treatment works and monitoring wells only to those personnel required to operate, inspect and maintain the treatment works and to collect samples.

(9B) The permittee shall identify each monitoring well by permanently affixing to the steel protective casing of the well a tag with the identification number listed in the permit.

(10) Monitoring. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 unless other test procedures are specified in the permit.

(11) Recordkeeping. The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by the permit, and all records of all data used to complete the application for the permit, for a period of at least five years from the date of the sample, measurement, report or application. This period may be extended by request of the Department at any time. Records of monitoring information shall include without limitation:

(a) The date, exact place, and time of sampling or measurements;
(b) The individual(s) who performed the sampling or measurement;
(c) The date(s) analyses were performed;
(d) The individual(s) who performed the analyses;
(e) The analytical techniques or methods used; and
(f) The results of such analyses.

(12) Prohibition of Bypassing. Except as provided in 314 CMR 5.16(13), bypassing is prohibited and the Department may take enforcement action against a permittee for bypassing unless:

(a) The bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
(b) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if the permittee could have installed adequate backup equipment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
(c) The permittee submitted notice of the bypass to the Department:
1. In the event of an anticipated bypass, at least ten days in advance, if possible; or
2. In the event of an unanticipated bypass, as soon as the permittee has knowledge of the bypass and no later than 24 hours after its first occurrence.

(13) Bypass not Exceeding Limitations. The permittee may allow a bypass to occur which does not cause effluent limitations to be exceeded, but only if necessary for the performance of essential maintenance or to assure efficient operation of treatment facilities.

(14) Permit Actions. The permit may be modified, suspended, or revoked for cause. The filing of a request by the permittee for a permit modification, reissuance, or termination, or a notification of planned changes or anticipated non-compliance does not stay any permit condition.

(15) Duty to Reapply. If the permittee wishes to continue an activity regulated by the permit after the expiration date of the permit, the permittee must apply for and obtain a new permit. The permittee shall submit a new application at least 180 days before the expiration date of the existing permit, unless permission for a later date has been granted by the Department in writing.

(16) Property Rights. The permit does not convey any property rights of any sort or any exclusive privilege.

(17) Other Laws. The issuance of a permit does not authorize any injury to persons or property or invasion of other private rights, nor does it relieve the permittee of its obligation to comply with any other applicable Federal, State, or local law, or regulation.

(18) Oil and Hazardous Substance Liability. Nothing in the permit shall be construed to preclude the institution of any legal action or relieve the permittee of any responsibilities, liabilities, or penalties to which the permittee is or may be subject under § 311 of the Federal

Act, 33 U.S.C. § 1321, and M.G.L. c. 21E.

(19) Removed Substances. Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewaters shall be disposed in a manner consistent with applicable Federal and State laws and regulations including, but not limited to, the Massachusetts Clean Waters Act, M.G.L. c. 21, §§ 26 through 53, and the Federal Act, 33 U.S.C. § 1251 *et seq.*, the Massachusetts Hazardous Waste Management Act, M.G.L. c. 21C, and the Federal Resource Conservation and Recovery Act, 42 U.S.C. § 6901, *et seq.*, 310 CMR 19.000: *Solid Waste Management* and 310 CMR 30.000: *Hazardous Waste*.

(20) Reporting Requirements.

(a) Monitoring Reports. Monitoring results shall be reported on a Discharge Monitoring Report (DMR) at the intervals specified in the permit. If a permittee monitors any pollutant more frequently than required by the permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR. Beginning on December 2, 2017, a permittee shall submit all DMRs electronically, using the electronic reporting system designated by the Department. A permittee may seek a waiver of this requirement by submitting a written request for the Department's approval.

(b) Compliance Schedules. Reports of compliance or non-compliance with, or any progress reports on interim and final requirements contained in any compliance schedule in the permit shall be submitted no later than 14 days following each schedule date.

(c) Planned Changes. The permittee shall give notice to the Department as soon as possible of any planned physical alterations or additions to the permitted facility or activity which could significantly change the nature or increase the quantity of pollutants discharged. Unless and until the permit is modified, any new or increased discharge in excess of permit limits or not specifically authorized by the permit constitutes a violation.

(d) Anticipated Non-compliance. The permittee shall give advance notice to the Department of any planned changes in the permitted facility or activity which may result in non-compliance with permit requirements.

(e) 24 Hour Reporting. The permittee shall report any non-compliance which may endanger health or the environment. Any information shall be communicated orally within 24 hours of the time the permittee becomes aware of the circumstances. A written submission shall also be provided within five days of the time the permittee becomes aware of the circumstances. The written submission shall contain: a description of the non-compliance, including exact dates and times, and if the non-compliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the non-compliance. The following shall be included as information which must be reported within 24 hours:

1. Any unanticipated bypass which exceeds any effluent limitation in the permit; and
2. Any violation of a maximum daily discharge limitation for any of the pollutants required by the permit to be reported within 24 hours.

(f) Other Non-compliance. The permittee shall report all instances of non-compliance not reported under 314 CMR 5.16(20)(a), (b), or (e) at the time monitoring reports are submitted. The reports shall contain the information listed in 314 CMR 5.16(20)(e).

(g) Toxics. All manufacturing, commercial, mining, or silvicultural dischargers must notify

the Department as soon as they know or have reason to believe:

1. That any activity has occurred, or will occur, that would result in the discharge of any toxic pollutant listed in 314 CMR 3.17: *Appendix B - Toxic Pollutants* not limited by the permit, if that discharge will exceed the highest of the following notification levels:

a. 100 micrograms per liter (100 ug/l);

b. 200 micrograms per liter (200 ug/l) for acrolein and acrylonitrile, 500 micrograms per liter (500 ug/l) for 2,4-dinitrophenol, and for 2-methyl-4,6-dinitrophenol, and one milligram per liter (1 mg/l) for antimony;

c. Five times the maximum concentration value reported for that pollutant in the permit application; or

2. That they have begun or expect to begin to use or manufacture as an intermediate or final product or byproduct any toxic pollutant which was not reported in the permit application.

(h) Indirect Dischargers. All Publicly Owned Treatment Works shall provide adequate notice to the Department of the following:

1. Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to § 301 or § 306 of the Federal Act, 33 U.S.C. § 1311 or 1316, if it were directly discharging those pollutants; and

2. Any substantial change in the volume or character of pollutants being introduced into the POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.

(i) Information. Where a permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Department, it shall promptly submit the relevant facts or correct information.

(j) The permittee shall notify the Department in writing within seven days of any change in contract operators.

(21) Signatory Requirement. All applications, reports, or information submitted to the Department shall be signed and certified in accordance with 314 CMR 5.14 and 5.15.

(22) Severability. The provisions of the permit are severable. If any provision of the permit, or the application of any provision of the permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of the permit, shall not be affected thereby.

(23) Reopener Clause. The Department reserves the right to make appropriate revisions to the permit to establish any appropriate effluent limitations, schedules of compliance, or other provisions, as authorized by the Massachusetts Clean Waters Act, M.G.L. c. 21, §§ 26 through 53, or the Federal Act, 33 U.S.C. § 1251 *et seq.*, to bring all discharges into compliance with these statutes.

(24) Approval of Treatment Works. All discharges and associated treatment works authorized in 314 CMR 5.00 shall remain in compliance with the terms and conditions of the permit. Any modification of the approved treatment works shall require written approval of the Department prior to the construction of the modification.

(25) Transfer of Permits.

(a) RCRA Facilities. Any permit which authorizes the operation of a RCRA facility subject to the requirements of 314 CMR 8.07: *Standards for all other RCRA Facilities* shall be valid only for the person to whom it is issued and may not be transferred.

(b) Transfers by Modification. Except as provided in 314 CMR 5.16(25)(a) and (c), a permit may be transferred by the permittee to a new permittee if the permit has been modified or revoked and reissued in accordance with 314 CMR 5.12(2), or a minor modification is made to identify the new permittee in accordance with 314 CMR 5.12(3) and (4).

(c) Automatic Transfers. For facilities other than Privately Owned Wastewater Treatment Facilities (PWTFs) that treat at least some sewage from residential uses, hospitals, nursing or personal care facilities, residential care facilities, or assisted living facilities, PWTFs that have been required to establish, fund and maintain financial assurance mechanism(s) pursuant to 314 CMR 5.15(6), and RCRA facilities subject to the requirements of 314 CMR 8.07: *Standards for all other RCRA Facilities*, a permit may be automatically transferred in accordance with 314 CMR 5.12(5).

(26) Permit Compliance Fees and Inspection Information. Except as otherwise provided, any permittee required to obtain a ground water discharge permit pursuant to M.G.L. c. 21, § 43, and 314 CMR 5.00 shall submit the annual compliance assurance fee established in accordance with M.G.L. c. 21A, § 18 and 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*, as provided in 314 CMR 2.12: *Applications, Fees and Inspection Information.* The requirement to submit the annual compliance fee does not apply to any local government unit other than an authority. Any permittee required to obtain a ground water discharge permit pursuant to M.G.L. c. 21, § 43 and 314 CMR 5.00, may be required to submit inspection information annually, as provided in 314 CMR 2.12.

## CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS

1. GENERAL

   A. Sub-Bid Opening – May 6, 2020 at 11:00 a.m.

   Sub-Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive Sub-Bids on May 6, 2020 starting at 8:00 a.m. The Sub-Bids will be taken inside to be opened at 11:00 a.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The Sub-Bid Opening will be broadcasted live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

   https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

B. General Bid Opening – May 13, 2020 at 2:00 p.m.

General Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive General Bids on May 13, 2020 starting at 8:00 a.m. The General Bids will be taken inside to be opened at 2:00 p.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The General Bid Opening will be broadcasted live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

C. PDF copies of the Sub-Bids and General Bids received but not including documents not allowed by law, will be available on the Owner's website within 7 calendar days of each bid opening.

2. ADDENDUM NO. 7

A. Page AD.7-3, delete Item No.7, Compressed Air System in its entirety and replace with the following new item:

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 9 | Compressed Air System | $30,000 | A-1B. |

Notes:

9. Item No. 9 - The allowance is for providing a complete Compressed Air System, including all equipment, piping, labor and accessories in accordance with SECTION 11140, COMPRESSED AIR SYSTEMS.

B. Page AD.7-7, Item No. 25, Paragraph B., delete the words "…preparation of their bid for PART IV – ALTERNATIVES, Item A-1 - Addition of the Equipment Storage Facility. The measurement…" and replace with the words "…preparation of their bid for PART IV – ALTERNATIVES, Item A-1B. - Addition of the Equipment Storage Facility. The measurement…".

3. ADDENDUM NO. 8

C. Page AD.8-3, delete Item No.9, Performance Testing in its entirety and replace with the following new item:

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 10 | Performance Testing | $50,000 | 2.R. |

Notes:

10. Item No. 10 - The allowance is for the cost of the Performance Testing in accordance with SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS.

4. SECTION 00410, FORM OF GENERAL BID

A. Delete "Orleans_MA-2019-01-Bid Form_Add_8-04-10-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_9-04-30-20" in both hard copy and Microsoft Excel format.

B. The Bid and Sub-bid Forms in Excel Format may be downloaded from the Tighe & Bond website. You must click on the "pre-qualified" button to access the Forms. Once obtained, in most cases a yellow bar will appear on the top of the screen labeled as "Security Warning". If this occurs, you must select the "Enable Content" button in order to properly utilize the file.

5. SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS

A. Page 01650-9, ARTICLE 1.12 – PERFORMANCE TESTING, Paragraph B.3., add the following new subparagraph:

c. At the time of Performance Testing, the Engineer, Contract Operator and Aqua Aerobics will determine if seed (i.e. quantity and quality) is required to be obtained by the Contractor. If required, the costs to obtain the seed shall be paid for under the allowance specified in SECTION 01020, ALLOWANCES.

B. Page 01650-10, ARTICLE 1.12 - ROLES AND RESPONSIBILITIES DURING START-UP AND TESTING, Paragraph B., add the following new subparagraph:

14. Provide an initial full fill of the emergency generator fuel tank to be used for start-up and testing. Refill the fuel tank following start-up and testing.

6. SECTION 05500, Miscellaneous Metals

A. Page 05500-2, PART 1 - GENERAL, Article 1.00 – SUBBID REQUIREMENTS

Paragraph D.1., add the following Contract Drawing(s) numbered:

10 D-106 30 D-101 30 E-101

B. Page 05500-11, ARTICLE 2.14 HATCHES, Paragraph A., delete the paragraph in its entirety and replace with the following paragraph:

1. Hatches shall be of the styles, types and sizes shown on the Contract Drawings. All hatches and covers shall be rated Heavy Duty intended for use in vehicular travel areas and capable of withstanding HL-93, HS-20 with 30 percent impact, or M306 loading. Manufacturer shall guarantee proper operation and defects in material or workmanship for a period of five (5) years. All hatches shall be of aluminum or cast-iron construction as manufactured by the following manufacturers or an approved equal:

C. Page 05500-11, ARTICLE 2.14 HATCHES, Paragraph B., delete the paragraph in its entirety and replace with the following new paragraph:

A. Exterior Hatches shall have a 1-1/2-inch drainage coupling located in the front right corner of the Hatch channel frame. Hardware shall be stainless steel factory mill finish and bituminous coating applied to the exterior of the frame. Hatches that are not shown connected to a drainage system, shall be provided with extensions to the drainage coupling to allow drainage to the areas below.

D. Page 05500-11, ARTICLE 2.14 HATCHES, delete Paragraph C. in its entirety.

E. Page 05500-11, ARTICLE 2.14 HATCHES, delete Paragraph D. in its entirety.

7. SECTION 07900, JOINT SEALANTS

A. Page 07900-2, ARTICLE 1.01 – SCOPE, renumber Paragraph C. to Paragraph A.

B. Page 07900-2, ARTICLE 1.01 – SCOPE Paragraph A., add the following new subparagraph:

4. Construction joint materials for concrete work shall be in accordance with SECTION 03250, CONCRETE JOINTS AND ACCESSORIES.

C. Page 07900-2, ARTICLE 1.01 – SCOPE, renumber Paragraph D. to Paragraph B.

8. SECTION 09200, FURRING AND GYPSUM CEILING

A. Page 09200-4, ARTICLE 3.02 – INSTALLATION, delete Paragraph B.2. in its entirety and replace with the following new paragraph:

2. Control Joint Spacing: 12 feet o.c. and located as indicated on the drawings.

9. SECTION 09250, DRYWALL CONSTRUCTION

   A. Page 09250-5, ARTICLE 3.02 – GYPSUM WALLBOARD INSTALLATION, Paragraph C.1.a., add the following new subparagraph:

      (4) Install Control Joint in locations indicated on the drawings.

   B. Page 09250-5, ARTICLE 3.02 – GYPSUM WALLBOARD INSTALLATION, Paragraph C.2.a., add the following new subparagraph:

      (3) Install Control Joint in locations indicated on the drawings.

10. SECTION 10420, PLAQUE

   A. Page 10420-2, ARTICLE 2.01 – PLAQUE, Paragraph A., Etched Insert, add the following note:

      Note 1: The Etched Insert is the Town Seal made of the same material as the overall plaque.

   B. Page 10420-3, ARTICLE 2.01 – PLAQUE, after Paragraph C., renumber Paragraph A. and Paragraph B. to Paragraph D. and Paragraph E., respectively.

11. SECTION 10440, SIGNS

   A. Page 10440-5, ARTICLE 2.02 - SAFETY SIGNS, delete Paragraph C through Paragraph F. in their entirety and replace with the following new paragraph:

      C. Refer to SECTION 10600, IDENTIFICATION SYSTEMS for additional information.

12. SECTION 10525, FIRST AID AND FIRE FIGHTING EQUIPMENT

   A. Page 10525-3, ARTICLE 2.01 – EQUIPMENT, Paragraph B. Fire Extinguishers, add the following new subparagraph:

      5. Fire Extinguishers are noted on the DRAWING 00 A-001, ARCHITECTURAL SYMBOLS, NOTES AND ABBREVIATIONS as “FE”. Each FE location is identified above and on the Drawings. All FE are to be surface mounted. No recessed cabinets.

13. SECTION 11326, MECHANICALLY CLEANED FINE SCREENS

   A. Page 11326-8, ARTICLE 2.07 – CONTROL SYSTEM

      1) Paragraph B. add the following sentence to the end of the paragraph:

         PLC shall be MicroLogix 1400 or approved equal.

      2) Add the following as new Paragraph I.:

         I. Miscellaneous

            1. All Panels require UPS. Provide UPS sized to provide at least 15 minutes of back-up power to the PLC.

            2. Provide 10” HMI, Allen Bradley PanelView Plus or approved equal.

            3. Provide a managed industrial Ethernet switch with at least four (4) ports, installed with the panel in order to connect the panel to the plant SCADA system. Managed Ethernet switch shall be Allen Bradley Stratix 8000 or approved equal.

            4. Physical switches (Screen HOA FOR, (2) Screen SOV HOA and E-Stop) shall be provided on the LCS and are not required on the main PLC cabinet.

            5. Screen level measurement shall be Single Siemens HydroRanger 200 HMI with (2) STH Transducers or approved equal.

            6. All PLC’s shall be AB CompactLogix, AB MicroLogix or approved equal.

B. Page 11326-10, ARTICLE 2.09 – MECHANICALLY CLEANED SCREEN SCHEDULE, delete the article in its entirety and replace with the following new article:

2.09 - MECHANICALLY CLEANED SCREEN SCHEDULE

| | |
|---|---|
| Type: | Raw Wastewater, which includes both domestic and industrial conditions. |
| Temperature: | 45 degrees to 65 degrees F |
| pH: | 6-8 |
| Screen Data: | |
| Number of Screens: | 1<br>Note: In the future, another screen may be furnished and installed (not part of this Project) in place of the manual bar rack in the bypass channel. |
| Hydraulic Capacity: | |
| Design Peak Flow: | 1,042 gpm/screen (1.5 mgd) |
| Design Average Flow: | 135 gpm/screen (0.2 mgd) |
| Maximum Headloss in Wastewater at Peak Design Flow at 10 inches downstream submergence: | 10.5. inches |
| Screen Openings Diameter: | 1/4-inch (6 mm) |
| Screening Basket Diameter: | 20 inches |
| Maximum Screen Incline: | 48 degrees |
| Wash System: | |
| Flow Rate (Max): gpm | 15 |
| Pressure Required, psi: | 60 |
| Drive Motor Hp: | 1-1/2 |
| Screen Channel: | |
| Width, in: | 20 |
| Maximum Water Depth, in: | 28 |
| Channel Depth, in: | 44 |
| Discharge Height: | |
| From channel bottom to discharge chute bottom, feet | 2-3/4 |

14. SECTION 11377, ROTARY POSITIVE DISPLACEMENT BLOWERS AND APPURTENANCES

    A. Page 11377-4, ARTICLE 1.07 – QUALITY ASSURANCE, delete the Paragraph F. in its entirety and replace with the following new paragraph:

        F. The Contractor shall obtain the blowers, motors, filters, silencers, acoustical enclosures, controls and appurtenances from the blower manufacturer, as a complete and integrated package to insure proper coordination and compatibility and operation of the system.

            1. Variable frequency motor controllers are supplied under Division 16 in accordance with SECTION 16260, LOW VOLTAGE VARIABLE FREQUENCY DRIVE UNIT.

            2. The blower system must be a complete and integrated package to insure proper coordination and compatibility and operation of the system.

                a. The Contractor shall coordinate the variable frequency motor controllers supplied under Division 16 with the blower and motor manufacturer and submit as part of the shop drawings a written statement signed by the Contractor, blower manufacturer, motor manufacturer and variable frequency motor controller manufacturer that the variable frequency motor controller manufacturer has received the required information from the blower and motor manufacturers and that all parties have reviewed the system and coordinated the equipment selection.

                b. Also include all motor data and information that has been used for the coordination.

15. SECTION 12300, LABORATORY FURNISHINGS

    A. Page 12300-8, ARTICLE 2.01 – FURNISHINGS, Paragraph E.4.d., delete subparagraph (1) in its entirety and replace with the following new subparagraph:

        (1) Fume Hoods shall be in accordance with the Laboratory Room Accessory Schedule on DRAWING 10 A-402, ENLARGED PLANS, ELEVATIONS SCHED. – LAB ROOM.

16. SECTION 12500, FURNITURE

    A. Page 12500-3, ARTICLE 2.01 - MANUFACTURERS, delete Paragraph B. in its entirety and replace with the following new paragraph:

        B. Refer to Furniture Schedule on drawings.

            1. HON furniture is the proprietary manufacturer for all office furniture unless another manufacturer is identified. All other listed items which show a different manufacturer are to be ‘basis of design’ products in order to establish a minimum standard of quality.

17. SECTION 13350, SCADA EQUIPMENT

    A. Page 13350, ARTICLE 2.01 – SOFTWARE, delete Paragraph A. in its entirety and replace with the following new paragraphs:

        A. All software shall be of the latest version available at the time of submittal review.

        B. Rockwell Automation Factory Talk View SE to match software in use at the Water Department. Provide two software clients.

        C. WIN 911 software for plant alarm management.

        D. A SQL database and XL Reporter will be utilized to develop the plant reports. Reports shall be archived daily but shall be readily accessible to plant operators for one week after generation.

        E. Provide CMMS software to receive run time from the SCADA software so that work orders can be triggered on actual time.

        F. Data applications will be stored on external drivers provided by SI with one-touch backup initiation.

18. SECTION 15056, PIPE SUPPORTS

    A. Page 15056-9, ARTICLE 3.08 – INSTALLATION OF BUILDING ATTACHMENTS, delete Paragraph A. in its entirety and replace with the following new paragraph:

        A. Support piping from structural framing, unless otherwise indicated. Support of piping off of structural CMU wall is acceptable. Provide anchorage into grouted cells. Piping can be supported from SBR tank walls.

19. SECTION 15420, PLUMBING INSULATION

    A. Add new SECTION 15420, PLUMBING INSULATION, as attached.

20. SECTION 15500, HEATING, VENTILATING AND AIR CONDITIONING

    A. Page 15500-35. ARTICLE 2.31 – SHEETMETAL DUCTWORK, delete Paragraph A. in its entirety and replace with the following new paragraph:

        A. Provide all ductwork consisting of ducts, plenums and sleeves as required for the various air systems. Except for in chemical storage areas, all ductwork shall be sheetmetal ductwork as specified herein. Ductwork in or serving chemical storage areas and specific process areas as identified on the Drawings shall be fiberglass reinforced plastic conforming to SECTION 15855, FIBERGLASS REINFORCED PLASTIC DUCT, DAMPERS AND APPURTENANCES.

    B. Page 15500-35. ARTICLE 2.32 – FIBERGLASS REINFORCED PLASTIC (FRP) DUCTWORK, delete Paragraph A. in its entirety and replace with the following new paragraph:

        A. Ductwork in or serving chemical storage and specific process areas as identified on the Drawings shall be fiberglass reinforced plastic ductwork in accordance with SECTION 15855, FIBERGLASS REINFORCED PLASTIC DUCT, DAMPERS AND APPURTENANCES.

21. SECTION 15857, ODOR CONTROL SYSTEMS – CARBON

    D. Page 15857-2, ARTICLE 1.01 – SCOPE, Paragraph C., add the following new subparagraph:

        3. All FRP ductwork, mating components, gaskets and all associated hardware between the Odor Control Fan and Mist/Grease Filter.

    E. Page 15857-8, ARTICLE 2.02 - SEISMIC DESIGN REQUIREMENTS, delete Paragraph C. in its entirety and replace with the following new paragraph:

        C. Provide all equipment bases, anchorage and supports designed in accordance with the seismic requirements indicated and specified. The Engineer is responsible for the design of the concrete foundation/equipment pads.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. ADDENDUM NO. 6

    A. Page AD.6-8 Item No. 3, Delete the note in its entirety.

2. DRAWING 00 C-105, YARD PIPING PLAN I – WWTF

    A. Add the following new note:

        4. Gasoline/Oil/Sand Separators shall be in accordance with DRAWING 99 P-502, DETAILS II.

3. DRAWING 00 C-109, DRAIN PROFILES

    A. Drain Profile 1, 12-inch PW Overflow shall be PVC.

4. DRAWING 10 A-102, GRADE LEVEL PLAN

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

5. DRAWING 10 A-201, ELEVATIONS I

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

6. DRAWING 10 A-303, SECTION – WALLS

   A. Detail 1 - South Wall Section, replace "2" Cont. rigid insulation R-10. Typ." with "2" Cont. rigid insulation R-10. Typ. (See note below)"

   B. Detail 1 - South Wall Section, add the following new note:

      Note: 2" rigid insulation thickness is required to meet the minimum R-value requirements listed for mass walls below grade.

7. DRAWING 10 A-402, ENLARGED PLANS, ELEVATIONS, SCHED. – LAB ROOM

   A. Laboratory Room Accessory Schedule, add the following to Item 22:

      Model: E41C292248

      Manufacturer: Kewaunee Scientific Corporation

8. DRAWING 10 A-404, ENLARGED PLANS, ELEVATIONS, SCHED. – OFFICE/COPIER ROOM

   A. Office/Copier Room Accessory Schedule, add the following to Item 3:

      Model: H882 with counter-top to match other furniture.

      Manufacturer: The HON Company

9. DRAWING 10 A-503, DETAILS – MISC. I

   A. Detail 1 - Alum Hatch HL-93, replace "Alum Hatch HL-93" with "Alum. Heavy Duty Hatch".

   B. Detail 1 - Alum. Heavy Duty Hatch, add the following new notes:

      1. All interior and exterior hatches shall be Heavy Duty.

      2. Heavy Duty hatches shall be intended for vehicular loadings and capable of withstanding HL-93, HS-20 with 30 percent impact or M306 loadings.

   C. Detail 3 - Alum Hatch

      1. Delete Detail 3 - Alum Hatch in its entirety.

10. DRAWING 10 A-601, ROOM FINISH SCHEDULE

    A. Room Finish Schedule, add the following new note:

       Note: Floors identified with SC shall be provided with a dustproof sealer in accordance with SECTION 03345, CONCRETE FLOOR TREATMENT.

    B. Room Finish Schedule Legend, add the following new abbreviation:

| Abbreviation | Material |
|---|---|
| EFC | Epoxy Floor Coating |

11. DRAWING 10 A-603, WINDOWS AND LOUVER SCHEDULES

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

12. DRAWING 10 A-608, SIGNAGE

    A. No Storage Sign Detail, add the following new notes:

       Notes:

       1. Signs shall be made of 1/8-inch thick aluminum with stainless steel mounting hardware.

       2. Signs shall be mounted at the base and top of each ladder that accesses the attic.

       3. Four (4) signs shall be provided.

13. DRAWING 99 A-607, PARTITION TYPES

    A. Partition Type V1, add the following remark:

       Partition Type V1 is a shaft wall assembly with stub spacing at 24" on center.

14. DRAWING 00 S-001 – STRUCTURAL NOTES I

    A. CONCRETE, delete Note 5 in its entirety and replace with the following new note:

       5. Provide fiber reinforced concrete having a 28-day compressive strength of 4,000 psi for all concrete infills and toppings. All fill shall be fiber reinforced unless reinforcement is indicated otherwise on the drawings.

15. DRAWING 10 S-104, GRADE LEVEL PLAN II

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

16. DRAWING 00 D-002, GENERAL NOTES AND ABBREVIATIONS

    A. General Note 13, add the following to the end of the note:

       All wall castings with water stops for all buried and submerged pipelines shall be provided in accordance with the Wall Penetration (New Construction) Details shown on DRAWING 99 D-501, DETAILS I.

    B. General Notes, add the following new note:

       34. All pipe support quantities, types, anchorage and the like shall be in accordance with SECTION 15056, PIPE SUPPORTS.

17. DRAWING 00 D-004, SCHEDULES I

    A. Slide Gate Schedule, Tag No. RWW SG-5, 6, add the following new remark:

       Slides Gates are wall mounted against a plain end pipe wall casting in the Headworks channel as shown on DRAWING 10 D-105, FACILITY UPPER PLAN II.

    B. Slide Gate Schedule, Tag No. SBR SG-1, 2, add the following new remark:

       Slides Gates are to be thimble mounted with a Type "F" thimble.

18. DRAWING 10 D-104 – FACILITY UPPER PLAN I

    A. Sodium Hypochlorite/PACL Room, delete the words "Scale (Typical)" and replace with the words "Scale mounted on concrete pedestals (Typical)".

    B. Garage, delete the words "8'- 0" x 8'– 0" Equipment Hatch" and replace with the words "6'- 0" x 6'-0" clear opening Heavy-Duty Equipment Removal/Access Hatch".

    C. Over Thickened Sludge Storage Tank, delete the words "3'- 0" x 3'- 0" Access Hatch (Typ.)" and replace with the words "3'- 0" x 3'- 0" Heavy-Duty Equipment Removal/Access Hatch (Typ.)".

    D. Over Post Equalization Tank, delete the words "3'- 0" x 3'- 0" Equipment Removal Hatch (Typ.)" and replace with the words "3'- 0" x 3'- 0" Heavy-Duty Equipment Removal/access Hatch (Typ.)".

    E. Sodium Hypochlorite / PACL Room, delete the words "FRP Grating (Typ.) El = 56.70. See Arch. Dwg's for Details" and replace with the words ""FRP Grating (Typ.) El = 57.00. See Arch. Dwg's for Details".

    F. Sodium Hypochlorite / PACL Room, add the following new note:

       Scales to be set on the FRP grating. Provide Type 316L stainless steel anchorage connections to the grating in accordance with the scales' manufacturer requirements.

19. DRAWING 10 D-307 – SECTIONS VII

    A. SECTION 8., delete the words "FRP Grating El = 56.70" and replace with the words "FRP Grating El = 57.00".

20. DRAWING 30 D-101, WICK DISTRIBUTION VAULT PLAN AND SECTIONS

    A. Delete the words "3'-0" x 3'-0" Access Hatch" and replace with the words "3'-0" x 3'-0" Heavy Duty Access Hatch".

21. DRAWING 99 D-504, DETAILS IV

    A. Seal Water Panel Piping for Pumps with Packing and Split Mechanical Seal and Pressure Sensors, add the following new notes:

        4. Seal water is required at the pumps without the spiral track mechanical seal - SBR Transfer Pumps and Thickened Sludge Pumps.

        5. Provide floor mounted equipment drain, 2-inch piping and associated fittings and supports from seal water system to basement gutter for each SBR Transfer Pump and each Thickened Sludge Pump.

22. DRAWING 00 M-002, SCHEDULES I

    A. Hydronic Cabinet Unit Heater Schedule, revise 10-CUH-2 TYPE to “Horizontal Recessed-Ceiling Mounted” and Model No. to “Trane/ FFEB020”.

    B. Hydronic Cabinet Unit Heater Schedule, Note 2. add the following to the end of the note: “No OA Connection”.

23. DRAWING 10 M-102, WWTF LOWER PLAN II – DUCTWORK

    A. Basement Pump Rom, Column 4 and between Column F and G, delete the words “24”x12 ER” and replace with the words “24”x12” SAR”.

24. DRAWING 10 M-104, WWTF UPPER PLAN II - DUCTWORK

    A. Note 8., delete the third line and replace with the following:

        To/from water heater 10-DWH-1. Coordinate the location of the duct, flue and heater provided by Plumbing. See Note 7.

25. DRAWING 10 M-108, WWTF MECHANICAL ROOM – PART PLAN

    A. Mechanical Room, at top center of room, delete the words “X” HWS” and replace with the words “4” HWS”.

26. DRAWING 00 E-001, General Notes, add the following new note:

    7. All floor mounted electrical equipment including, but not limited to, Switchboards, MCCs and VFDs, shall be provided with a concrete equipment pad in accordance with DRAWING 99 S-503, STRUCTURAL STANDARD DETAILS III.

27. DRAWING 10 E-003, WWTF – ELECTRICAL SITE PLAN – FIBER NETWORK I

    A. Trench Detail S1 and Trench Detail S-2, revise the trench details to be in accordance with the trench details shown of DRAWING 00 C-106, YARD PIPING PLAN II & PROFILE – WWTF.

28. DRAWING 10 E-606, WWTF – ELECTRICAL RISER DIAGRAMS III

    A. Septage Receiving System – Riser Diagrams

        1) Add the following new note:

            Note: Three E-Stop LCS are required: (a) Main Control Station located in Room 102, Garage; (b) Local Control Station at the Septage Receiving System located in Room 101, Truck Bay; and (c) Sludge Loading Area (Exterior).

        2) Provide inspection door limit switch. Refer to SECTION 99999, ATTACHMENTS - ATTACHMENT A - SECTION 11333 Septage Receiving Station Huber Technology, Inc. Proposal, Instrumentation Drawings and Contract electrical and instrumentation drawings.

29. DRAWING 10 E-101, WWTF – LOWER LEVEL – POWER PLAN I

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

30. DRAWING 10 E-102, WWTF – LOWER LEVEL – POWER PLAN II

    A. Delete the drawing in its entirety and replace with the new drawing, as attached.

31. DRAWING 10 E-606, WWTF – ELECTRICAL RISER DIAGRAMS III
    A. Delete the drawing in its entirety and replace with the new drawing, as attached.
32. DRAWING 10 E-607, WWTF – ELECTRICAL RISER DIAGRAMS IV
    A. Delete the drawing in its entirety and replace with the new drawing, as attached.
33. DRAWING 10 E-614, WWTF – ELECTRICAL WIRING SCHEMATICS II
    A. Delete the drawing in its entirety and replace with the new drawing, as attached.
34. DRAWING 10 E-616, WWTF – ELECTRICAL WIRING SCHEMATICS DIAGRAMS IV
    A. Delete the drawing in its entirety and replace with the new drawing, as attached.
35. DRAWING 10 DI-604, DISK FILTER P&ID
    A. Notes, add the following new note:
        6. The motor operated valves located on the Disk Filter influents shall be provided by the General Contractor.

| **PART IV - ALTERNATIVES** | | | | |
| A-1 | For Addition of the Equipment Storage Facility, as specified, the sum of | | | $ - |
| A-2 | For Addition of Fiber Optic Conduits and Handholes, as specified, the sum of | | | $ - |
| A-3 | For Addition of Tracer Wire, as specified, the sum of | | | $ - |
| A-4 | For Addition of SBR Transfer Pump No. 4, as specified, the sum of | | | $ - |
| A-5 | For Addition of the SBR Blower No. 4, as specified, the sum of | | | $ - |
| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | | | $ - |

**BASIS OF AWARD** - The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraints will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding its funding constraints. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in June 2020.

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

**$** -

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, PART III - FILED SUBBIDS, and PART IV - ALTERNATIVES (Item A-1), inclusive**

## PART 1 - GENERAL

### 1.00 - SUB-BID REQUIREMENTS

A. The Work of SECTION 15420, PLUMBING INSULATION is a part of DIVISION 15, PLUMBING whhich requires a single filed sub-bid in accordance with M.G.L. c.149, s.44A through 44H, inclusive, as amended. DIVISION 15, PLUMBING. See SECTION 15400, PLUMBING SYSTEMS.

B. The Work of SECTION 15420, PLUMBING INSULATION, requires the Subcontractor to perform all Work specified under this section.

**1.01 - SCOPE**

A. Provide new field-applied insulation for new piping as indicated and in compliance with Contract Documents.

B. The Work of this Section shall include all labor, materials, tools, equipment and appurtenances, and performing all operations necessary to furnish and install complete systems in accordance with this Section of these Specifications, the Drawings, and the codes and standards listed herein.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

**1.02 - MEASUREMENT AND PAYMENT**

A. Measurement and payment for the work described in this Section will be made in accordance with the provisions of SECTION 01025 - MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Submit the following in accordance with SECTION 01300, SUBMITTALS and as specified herein.

1. Product Data - Annotate descriptive data to show the specific manufacturer, material and specifications, thicknesses, etc. of each item.

a. Piping insulation and jackets

**1.05 – PRODUCT HANDLING**

A. Provide in accordance with SECTION 01610, DELIVERY, STORAGE AND HANDLING and as specified herein.

B. Shipping:

1. All material shall be shipped, stored, handled and installed in such a manner as not to degrade quality, serviceability, or appearance and maintain material warranties.

C. Receiving:

1. All material shall be delivered to the site in original packages or containers bearing the manufacturer's labels and product identification.

2. Inspect for damage and correctness, and inventory items, upon delivery to site.

3. Store and safeguard material in accordance with manufacturer's recommendations.

4. Store material protected for the weather, humidity and temperature variations, dirt and dust or other contaminants.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - QUALITY ASSURANCE**

A. Provide in accordance with SECTION 01400, QUALITY ASSURANCE and as specified herein.

B. Provisions - Consideration shall be given only to products of manufacturers who demonstrate successful experience in manufacture, performance, and reliability equal to that specified. Materials shall be the product of a single manufacturer insofar as possible.

C. Workmanship and Design - Install products that comply with state, local and federal codes and regulations.

**1.08 - REFERENCES**

A. Except as specified herein, the latest edition of the standards listed below form a part of this Specification to the extent referenced in this Section. Where earlier editions of standards are adopted as referenced in applicable codes, those shall govern. The publications are referred to within the text by the basic designation only.

B. In each of the standards referred to herein, consider the advisory provisions to be mandatory, as though the word, "shall" had been substituted for "should" wherever it appears.

C. American Society for Testing Materials (ASTM):

1. A167: Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip

2. A240: Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels for General Applications

3. C195: Mineral Fiber Thermal Insulating Cement

4. C547: Mineral Fiber Pipe Insulation

5. C1136: Flexible, Low Permeance Vapor Retarders for Thermal Insulation

6. D1784: Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds

7. E 84: Surface Burning Characteristics of Building Materials

D. National Fire Protection Association (NFPA):

1. 255: Method of Test of Surface Burning Characteristics of Building Materials

E. Underwriters Laboratories, Inc. (UL):

1. 723: Test for Surface Burning Characteristics of Building Materials

**1.09 - COOPERATION AND COORDINATION WITH OTHER TRADES**

A. Work shall be performed in cooperation with other trades on the project and so scheduled as to allow efficient completion of the project. Materials and equipment shall be installed as fast as conditions will permit, and installed promptly.

B. Furnish to all other trades advance layout information and shop drawings necessary to permit other trades affected by the Work to install their work properly coordinated and without delay.

C. Where there is evidence that Work installed interferes with the work of other Sections, assist in working out space conditions to make satisfactory adjustments.

D. With the approval of the Engineer and without extra cost to the Owner, make reasonable modifications in Work specified under this Section required to coordinate with normal structural interference's, or for proper execution of specified work.

E. If Work is installed before coordinating with other trades so as to cause interference with the work of such trades, make all necessary changes in Work under this Section.

F. Protect all materials and work of other trades from damage that may be caused by the Work required under this Section and be responsible for repairing any damages caused by such work.

G. Attend regular coordination and job progress meetings required.

**1.10 - CODES, PERMITS AND FEES**

A. Except for additional requirements as specified or indicated under the Work of this Section, materials, workmanship and equipment shall conform with the governing edition of the following regulations, and agency requirements.

1. State and Local Building Codes, including but not limited to, Massachusetts Building Code.
2. Massachusetts Department of Environmental Protection.
3. Local Fire Department
4. Occupational Safety and Health Administration (OSHA)
5. Any other local codes or requirements of Authorities Having Jurisdiction.

B. Pay for all fees and give all notices, file all plans, obtain all permits and licenses, and obtain all necessary approvals from Authorities Having Jurisdiction. Deliver all certificates of inspection to the Authorities Having Jurisdiction. No work shall be covered before examination and approval by Authorities Having Jurisdiction. Replace imperfect or condemned work to conform to inspectional requirements, satisfactory to the Architect, Owner, Engineer and Authorities Having Jurisdiction without extra cost to the Owner. If Work is covered before inspection and approval, pay costs of uncovering and reinstalling the covering, whether it meets contract requirements or not.

**PART 2 - PRODUCTS**

**2.01 - GENERAL**

A. Packaging and Labeling:

1. Every package or standard container of insulation, jackets, cements, adhesives, and coatings delivered to project site shall have manufacturer’s stamp or label attached giving name of manufacturer, brand and description of material. Insulation materials shall be asbestos-free.

B. Surface Burning Characteristics:

1. Materials shall be plenum-rated having flame-spread rating of not more than 25 and a smoke-developed rating of not more than 50, when tested in accordance with NFPA 255, ASTM E84 or UL 723. Insulation materials located exterior to the building perimeter are not required to be fire-rated.

C. Recycled Materials:

1. Provide thermal insulation containing recycled materials to the extent practicable, provided that the materials meet all other requirements of this Section. The minimum recycled material content of the following insulation types are:

a. Rock Wool: 75 percent slag by weight

b. Fiberglass: 20 to 25 percent glass cullet by weight

c. Plastic Rigid Foam: 9 percent recovered material

**2.02 - PIPING INSULATION**

A. Insulation material shall conform to Table 15420-1. Mineral fiber insulation shall be minimum 3.5 pounds per cubic foot density, minimum 500 degrees F rated, and maximum 0.24 R-factory at 75 degrees F. Insulation thickness shall be as listed in Table 15420-2. Insulate all ping listed in these tables. Where piping is located in unheated spaces such as ceiling spaces and crawl spaces or outdoors, provide insulation thickness one inch greater than indicated in Table 15420-2. Insulation exterior shall be factory cleanable, grease resistant, non-flaking and non-peeling.

B. Fittings Insulation - Factory pre-molded insulation inserts for pipe fittings, flanges and valves shaped to fit the specific fitting to be insulated. Inserts shall be of same material as the straight pipe. Inserts shall be of same thickness as the straight pipe insulation.

C. Piping Insulation Jackets:

1. All-Purpose Jacket: Insulation manufacturer's standard reinforced fire-retardant jacket with or without integral vapor barrier as required by the service. In exposed locations, provide jacket with a white surface suitable for field painting.

2. PVC Jackets: ASTM D1784 polyvinyl chloride (PVC) jackets, minimum 20 mil thick, factory pre-molded PVC fitting covers, UV-resistant, gloss white finish.

3. Stainless Steel Jackets: ASTM A167 or ASTM A240; Type 304, minimum thickness of 33 gage, and factory pre-molded fitting covers, smooth surface with factory-applied polyethylene and kraft paper moisture barrier on inside surface.

D. Lavatory Kits - Kits specifically designed for insulating lavatory waste and supply finish piping for ADA compliance, fabricated from UV resistant PVC, with tear-to-fit trim grooves, internal ribs and internal fasteners, and vent slots to keep air space between covers and piping dry, glossy white finish. Manufactured by Truebro or accepted equal.

**2.03 - ADHESIVES, SEALANTS, AND COATING COMPOUNDS**

A. Lagging Adhesive: Fire resistant, for pipe insulation.

1. Provide appropriate class recommended by insulation manufacturer for bonding fibrous glass cloth to unfaced fibrous glass insulation; for bonding cotton brattice cloth to faced and unfaced fibrous glass insulation board; for sealing edges of and bonding fibrous glass tape to joints of fibrous glass board; or for bonding lagging cloth to thermal insulation.

2. Provide appropriate class for attaching fibrous glass insulation to metal surfaces.

B. Insulation and Vapor Barrier Adhesive: ASTM C916, Type I adhesive for securing insulation to metal surfaces and for vapor barrier lap only in building interior.

C. Mineral Fiber Insulation Cement: ASTM C195.

D. Vapor Barrier Coating: Provide in accordance with insulation manufacturers' recommendations.

E. Weatherproof Coating: For outside applications, provide in accordance with insulation and jacket manufacturer's recommendations.

**2.04 - ACCESSORY MATERIALS**

A. Staples: ASTM A167, Type 304 or 316 stainless steel outside-clinch type.

B. Insulation Bands: 1/2-inch wide; 26 gage Type 304 or 316 stainless steel.

C. Vapor Barrier Materials: ASTM C1136. Resistant to flame, moisture penetration, and mold growth, color white.

D. Fibrous Glass Cloth and Tape: 20 by 20 maximum size mesh. Tape shall be 4 inch wide rolls. Tape shall be 4.5 ounces per square yard. In lieu of glass cloth and tape, open weave glass membrane may be provided.

**PART 3 - EXECUTION**

**3.01 - GENERAL**

A. All materials and equipment shall be installed in a neat, workmanlike manner.

B. Arrange for permits, inspections, and tests, in accordance with applicable State and local codes, at the Plumbing Subcontractor's expense. Verify all measurements at job site.

C. Avoid interferences with other trades.

D. Do not insulate the following:

1. Unions
2. ASME stamps
3. Cleanouts or handholes
4. Manufacturer’s nameplates
5. Chrome plated pipes
6. Flexible connectors

**3.02 - VERIFICATION OF CONDITIONS**

A. Before the start of the Work of this Section, verify that the project is ready for this Work.

B. Verify that field measurements are as shown on approved shop drawings and/or manufacturer's instructions.

C. Verify that the equipment or material is in conformance with the approved shop drawings and specifications and resolve any deviations.

D. Notify subcontractors involved or affected by this Work and coordinate the Work with them.

**3.03 - PIPING INSULATION**

A. Insulation (Except Cellular Glass and Calcium Silicate Insulation):

1. Place sections of insulation around pipe and joints tightly butted into place.
2. Vapor Barrier Jacket: When a vapor barrier jacket is required, as indicated in Table 15420-1, on ends of sections of insulation that butt against flanges, unions, valves, fittings, and joints, provide a vapor barrier coating, or manufacturer’s weatherproof coating for outside service, unless pipe insulation is supplied with factory-applied self-seal lap. Apply coating at longitudinal and circumferential laps. Patch damaged jacket material by wrapping a strip of jacket material around the pipe and cementing, stapling, and coating as specified for butt strips. Extend patch not less than 1-1/2 inches past the break in both directions. At penetrations by pressure gages, thermometers, etc. fill voids with coating. Seal with a brush coat of the same coating.

B. Cellular Glass and Calcium Silicate Insulation:

1. Provide in accordance with manufacturer’s printed instructions.

C. Piping Insulation Jackets:

1. All Purpose Jackets

a. Provide all-purpose jackets to cover straight pipe runs. Draw jacket tight and smooth. Secure jacket with fire resistant adhesive, factory-applied self-sealing lap, or stainless steel outward clinching staples spaced not over 4 inches on center and ½ inch minimum from edge of lap. Cover circumferential joints with butt strips, not less than 3 inch wide, of material identical to jacket material. Overlap longitudinal laps of jacket material not less than 1-1/2 inch. Adhesive used to secure butt strip shall be same as that used to secure jacket laps. Apply staples to both edges of butt strips.

2. Polyvinyl Chloride (PVC) Jackets:

a. Provide PVC jacketing system to cover all pipe fittings, flanges and valves of services to be insulated except as noted herein. Do not provide PVC jacketing where exposed to weather. Provide PVC jacketing only in ambient temperatures below 150 degrees F. Do not provide PVC jacketing at insulated pipe through-penetrations.

b. Secure jacketing with jacket manufacturer's solvent welding adhesive to seal all lap joints in the system. For services where vapor barrier is required, provide vapor retarder mastic compatible with PVC as recommended by the jacket manufacturer applied over all lap joints in the jacketing system.

c. Machine cut jacket to smooth edge of circumferential joints. Overlap jacket not less than 2 inches at longitudinal and circumferential joints. Overlap longitudinal joints of horizontal piping down to shed water. On vertical piping, the circumferential seams of the jacket shall overlap the upper edge of the jacket below. Seal ends of all insulated piping with vapor retarder mastic as recommended by the jacket manufacturer.

3. Stainless Steel Jackets:

a. Provide stainless steel jacketing system to cover all straight runs, pipe fittings, flanges and valves of services to be insulated where exposed to weather or exposed to ambient temperatures 150 degrees F and above. Provide stainless steel jacketing at insulated pipe through-penetrations.

b. Provide insulation bands to secure jackets to insulation. Provide factory prefabricated metal covers for insulation on fittings, valves, and flanges. For services where vapor barrier is required, provide vapor retarder mastic as recommended by the jacket manufacturer applied over all lap joints in the jacketing system.

c. Machine cut jacket to smooth edge of circumferential joints. Overlap jacket not less than 2 inches at longitudinal and circumferential joints and secure with insulation bands at not more than 9 inch centers with no less than 3 bands per jacket section. Overlap longitudinal joints of horizontal piping down to shed water. On vertical piping, the circumferential seams of the jacket shall overlap the upper edge of the jacket below. Seal ends of all insulated piping with vapor retarder mastic as recommended by the jacket manufacturer.

D. Hangers and Anchors:

1. Pipe insulation shall be continuous through pipe hangers. Where pipe is supported by insulation, provide insulation protection shields.

2. Where shields are used on pipes 2 inches and larger, provide insulation inserts at points of hangers and supports. Insulation inserts shall be of calcium silicate, cellular glass, molded mineral fiber, rigid foam or other approved material, all minimum 15 psi compressive strength, of the same thickness as adjacent insulation. Insulation inserts shall cover bottom half of pipe circumference and be not less in length than the protection shield. Vapor-barrier facing of insert shall be of same material as facing on adjacent insulation. Seal inserts into insulation with vapor barrier coating or weatherproof coating as applicable.

3. Where anchors are secured to piping carrying medium less than 60 degrees F that is to be insulated, insulate anchors same as piping for a distance not less than four times the insulation thickness to prevent condensation. Vapor seal insulation around anchors.

E. Through-Penetrations:

1. Where interior wall is penetrated, extend a stainless steel jacket 2 inches out on either side of wall and secure on each end with an insulation band. Where floor is penetrated, extend a stainless steel jacket from a point flush with the bottom of the floor slab to a point 10 inches above floor with one insulation band at the floor and one not more than 1 inch from end of stainless steel jacket. Where exterior wall is penetrated, extend stainless steel jacket through sleeve to a point 2 inches beyond interior surface of wall and secure on each end with an insulation band.

2. Provide insulation inserts beneath the stainless steel jacket. Insulation inserts shall be of calcium silicate or cellular glass of the same thickness as adjacent insulation. Insulation inserts shall cover full pipe circumference and be not less in length than the stainless steel jacket. Vapor-barrier facing of insert shall be of same material as facing on adjacent insulation. Seal inserts into insulation with vapor barrier coating.

F. Flanges, Unions, Valves and Fittings for Piping:

1. Factory fabricated removable and reusable insulation covers shall be used. When nesting size insulation is used, overlap 2 inches or one pipe diameter, whichever is larger. Use insulating cement to fill voids. On pipe sizes larger than 2-1/2 inches, elbows insulated using insulation segments shall not have less than three segments per elbow. Place and join segments with manufacturer's recommended water-vapor resistant, fire retardant adhesive appropriate for the temperature limit of the service. Overlap tape seams 1 inch. Total dry film thickness shall be not less than 1/16-inch. Unions are not to be insulated; taper insulation to union at a 45 degree angle.

2. PVC Fitting Covers: Install factory premolded one-piece PVC fitting covers over insulation.

3. Stainless Steel Fitting Covers: Install factory-fabricated one-piece fitting covers over insulation. Secure covers with no less than 3 insulation bands per cover.

G. Piping Exposed to Weather:

1. Stainless Steel Jackets: Provide over insulation. Machine cut jacket to smooth edge of circumferential joints. Overlap jacket not less than 2 inches at longitudinal and circumferential joints and secure with insulation bands at not more than 9 inch centers with no less than 3 bands per jacket section. Overlap longitudinal joints of horizontal piping down to shed water. On vertical piping, the circumferential seams of the jacket shall overlap the upper edge of the jacket below. Cover circumferential strips with butt joints, not less than 4 inches wide, of material identical to the jacket material. Seal joints with a coating recommended by insulation manufacturer for weatherproofing.

2. Flanges, Unions, Valves, Fittings, and Accessories: Insulate and finish as specified hereinbefore for applicable service. Apply two coats of an emulsion type weatherproof mastic for hot service and vapor barrier mastic for cold service recommended by insulation manufacturer. Embed glass tape in the first coat. Overlap tape not less than one inch and the adjoining metal jacket not less than 2 inches.

**3.04 - FIELD QUALITY CONTROL**

A. Except as otherwise permitted herein, Plumbing systems shall be cleaned and tested prior to application of insulation. Obtain Engineer's approval of systems before applying field insulation. Visually inspect to ensure that insulation materials provided conform to Specifications. Inspect installation of insulation for compliance with requirements.

1. Piping systems shall not be insulated before systems pressure testing and related inspections.

**3.05 - CONTRACT CLOSEOUT**

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

**END OF TEXT**

**See Attached Tables**

**TABLE 15420-1**
**INSULATION MATERIAL FOR PIPING**

| Service | Material | Spec | Type | Class | Vapor Barrier Required |
|---|---|---|---|---|---|

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 10 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 2 pages and 20 pages of attachments for a total of 22 pages.

## ATTACHMENTS

1. Orleans_MA-2019-01-Bid Form_Add_10-05-01-20
2. Orleans_MA-2019-01-Subbid Form_Add_10-05-01-20

## CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS

1. GENERAL

   A. Sub-Bid Opening – May 6, 2020 at 11:00 a.m.

   Sub-Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive Sub-Bids on May 6, 2020 starting at 8:00 a.m. The Sub-Bids will be taken inside to be opened at 11:00 a.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The Sub-Bid Opening will be broadcasted live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

   https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

   B. General Bid Opening – May 13, 2020 at 2:00 p.m.

   General Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive General Bids on May 13, 2020 starting at 8:00 a.m. The General Bids will be taken inside to be opened at 2:00 p.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The General Bid Opening will be broadcasted live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

   https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

C. PDF copies of the Sub-Bids and General Bids received but not including documents not allowed by law, will be available on the Owner's website within 7 calendar days of each bid opening.

2. SECTION 00200, INSTRUCTIONS TO BIDDERS

A. ARTICLE 1.03 – PREPARATION OF BID, Paragraph A., delete subparagraph 2.l. in its entirety and replace with the following new subparagraph:

l. The two low bidders shall submit Appendix E - Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services DBE forms (EEO-DEP-190C, EEO-DEP-191C and the DBE Certification of United States Citizenship form) by the close of business on the third business day after the bid opening.

B. ARTICLE 1.03 – PREPARATION OF BID, Paragraph B., delete subparagraph 2.d. in its entirety and replace with the following new subparagraph:

d. Not Used

C. ARTICLE 1.03 – PREPARATION OF BID, Paragraph B., delete subparagraph 2.l. in its entirety and replace with the following new subparagraph:

l. Not Used

3. SECTION 00410, FORM OF GENERAL BID

A. Delete "Orleans_MA-2019-01-Bid Form_Add_9-04-30-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_10-05-01-20" in both hard copy and Microsoft Excel format.

B. The Microsoft Excel Form is not required to be Signed.

C. General Bidders are required to submit: (a) SECTION 00410, FORM OF GENERAL Bid (Pages 00410-1 through 00410-30, inclusive); (b) "Orleans_MA-2019-01-Bid Form_Add_10-05-01-20"; and (c) the additional documents specified in SECTION 00200, INSTRUCTIONS TO BIDDERS.

4. SECTION 00420, FORM OF SUBBID

A. Delete "Orleans_MA-2019-01-SubBid Form_Add_7-03-24-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-SubBid Form_Add_10-05-01-20" in both hard copy and Microsoft Excel format.

B. The Microsoft Excel Form is not required to be Signed.

C. Sub-bidders are required to submit: (a) "Orleans_MA-2019-01-SubBid Form_Add_10-05-01-20"; and (b) the additional documents specified in SECTION 00200, INSTRUCTIONS TO BIDDERS.

5. SECTION 15400, PLUMBING SYSTEMS

A. Page 15400-2, ARTICLE 1.00 - SUB-BID REQUIREMENTS, delete Paragraph B. in its entirety and replace with the following new paragraph:

B. A sub-bid submitted for the Work of DIVISION 15, PLUMBING shall include the complete Work specified in all of the following Sections:

1. SECTION 15195, NATURAL GAS PIPING

2. SECTION 15400, PLUMBING SYSTEMS

3. SECTION 15420, PLUMBING INSULATION

| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | | | $ - |

**BASIS OF AWARD - The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraints will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding its funding constraints. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in June 2020.**

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

TO: ALL GENERAL BIDDERS EXCEPT THOSE EXCLUDED:

A. The undersigned proposes to furnish all labor and materials required for completing, in accordance with the hereinafter described Drawings, Specifications and Addenda, all the Work specified in Section No.

of the Specifications and in any Drawings as specified in such section contained in the Contract Documents titled Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486 prepared by AECOM, 9 Jonathan Bourne Drive, Pocasset, MA 02559.

| Item No. | Description |
|---|---|

**PART I - BASE BID**

1. The work of the Subbidder for all Work for the WWTF other than that covered by other items, as specified, the lump sum of

$ - l.s.

2. The Work of the Subbider including all Work for Effluent Disposal Facility other than that covered by other items, as specified, the lump sum of

$ - l.s.

**TOTAL OF PART I - BASE BID**

$ -

**PART II - ALTERNATIVES**

A-1 For Addition of the Equipment Storage Facility, as specified, the lump sum of

| | | |
|---|---|---|
| $ | - | l.s. |

A-2 For Addition of the Fiber Optic Conduits and Handholes, as specified, the lump sum of

| | | |
|---|---|---|
| $ | - | l.s. |

A-3 For Addition of the Tracer Wire, as specified, the lump sum of

| | | |
|---|---|---|
| $ | - | l.s. |

A-4 For Addition of SBR Transfer Pump No. 4, as specified, the sum of

| | | |
|---|---|---|
| $ | - | l.s. |

A-5 For Addition of SBR Blower No. 4, as specified, the sum of

| | | |
|---|---|---|
| $ | - | l.s. |

A-6 For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of

| | | |
|---|---|---|
| $ | - | l.s. |

B. This Subbid includes Addenda numbered _____ through _____ inclusive.

C. This Sub-bid:

_____ may be used by any General Bidder except:

_____

_____ may only be used by the following General Bidders:

_____

(To exclude Gneral Bidders, instert "X" in one box only and fill in blank following that box. Do not answer "C" if no General Bidders are excluded.)

D. The undersigned agrees that, if it is selected as Subbidder, it will, within five (5) days, Saturdays, Sundays and legal holidays excluded, after presentation of a Subcontract by the General Bidder selected as General Contractor, execute with such General Bidder a Subcontract in accordance with the terms of this Subbid, and contingent upon the execution of the General Contract and, if requested so to do in the general bid by such General Bidder, who shall pay the premiums therefor, furnish a Performance and Payment Bond of a surety company qualified to do business under the laws of the Commonwealth and satisfactory to the Awarding Authority, in the full sum of the Subcontract Price.

E. The names of all persons, firms and corporations furnishing to the undersigned labor or labor and materials for the class or classes or part thereof of Work for which the provisions of the section of the Specifications for this subtrade require a listing in this paragraph, including the undersigned if customarily furnished by persons on its own payroll and in the absence of a contrary provision in the Specifications, the name of each such class of Work or part thereto and the Bid Price for each such class of Work or part thereof are:

1. Name:

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

## RESULTS OF SUBBIDS

1. Results of May 6, 2020 Sub-Bid Opening, as attached.

## CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS

1. GENERAL

   A. General Bid Opening – May 13, 2020 at 2:00 p.m.

      General Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive General Bids on May 13, 2020 starting at 8:00 a.m. The General Bids will be taken inside to be opened at 2:00 p.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The General Bid Opening will be broadcast live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

      https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

   B. PDF copies of the General Bids received, not including documents that are not allowed by law, will be available on the Owner's website within 7 calendar days of the bid opening.

2. ADDENDUM NO. 9

   A. Page AD.9-2, Item No. 5., delete Paragraph B. in its entirety and replace with the following new paragraph:

      B. Page 01650-10, ARTICLE 1.12 - ROLES AND RESPONSIBILITIES DURING START-UP AND TESTING, Paragraph B.14, delete the subparagraph and replace with the following new subparagraph:

         14. Provide an initial full fill of the emergency generator fuel tank to be used for start-up and testing. Refill the fuel tank following start-up and testing. Payment for the cost of the diesel fuel shall be made via the allowance specified in SECTION 01020, ALLOWANCES.

   B. Page AD.9-9, Item No. 18., delete Paragraph A. in its entirety and replace with the following new paragraph:

      A. Sodium Hypochlorite/PACL Room, delete the words “Scale (Typical)” and replace with the words “Scale mounted on FRP Grating (Typical)”.

3. TABLE OF CONTENTS

   A. Page TOC-4, DIVISION 9 – FINISHES, delete SECTION 09681, CARPET TILE.

4. SECTION 00200, INSTRUCTIONS TO BIDDERS

   A. Page 00200-3, ARTICLE 1.03 – PREPARATION OF BID, Paragraph A., delete the paragraph in its entirety and replace with the following new paragraph:

      A. General Bids

         1. Each bid must be submitted on the prescribed form in SECTION 00410, FORM OF GENERAL BID. All blank spaces for bid prices must be filled in, in ink or typewritten, in both words and figures.

         2. Enclosed with the bid shall be the following:

            a. Microsoft Excel Proposal Form (hard copy in Landscape Format). Submit the completed Microsoft Excel Proposal Form in “.xlsm” format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com).

            b. Bid Security (5%).

            c. Completed and signed Bid Proposal, SECTION 00410, FORM OF GENERAL BID– Page 00410-1 through Page 00410-7, inclusive.

            d. Insurance Requirements for Inclusion in All Specifications and Contracts – Provide a letter from bidder’s insurance company(s) documenting ability to obtain the specified minimum insurance limits.

            e. Statement of State Tax Compliance.

            f. Certificate of Non-Collusion.

            g. Acknowledgement of Principal, if a Corporation.

            h. Acknowledgement of Principal, if a Partnership.

            i. Certification of OSHA 10-Hour Training.

            j. Division of Capital Asset Management and Maintenance

               1) Certificate of Eligibility

               2) Update Statement (Form CQ3)

            k. Massachusetts Department of Environmental Protection’s Diesel Retrofit Program Statement of Intent to Comply - Appendix B - Diesel Retrofit Program. To be provided by the Lowest Responsive and Responsible Bidder within five business days of the bid opening.

l. Appendix E - Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services. To be provided by the Lowest Responsive and Responsible Bidder within five business days of the bid opening.

3. Each General Bid must be submitted in a sealed envelope indicating the bidder's name and address and clearly marked "General Bid for Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486".

4. If forwarded by mail, the sealed envelope containing the bid must be enclosed in another envelope addressed as specified in Receipt and Opening of Bids, above.

5. SECTION 00410, FORM OF GENERAL BID

A. Delete SECTION 00410, FORM OF GENERAL BID in its entirety and replace with the new section, as attached.

B. Delete "Orleans_MA-2019-01-Bid Form_Add_10-05-01-20" in its entirety and replace with the attached new "Orleans_MA-2019-01-Bid Form_Add_11-05-08-20" in both hard copy and Microsoft Excel format.

6. SECTION 01020, ALLOWANCES

A. Page 01020-2, ARTICLE 1.05 - ALLOWANCES FOR PRODUCTS, Paragraph C., add Item No. 9 as follows:

| Item Number | Description | Amount | Bid Item |
|---|---|---|---|
| 11 | Diesel Fuel for Emergency Generator | $20,000 | 2.S. |

Notes:

11. Item No. 11 - The allowance is for the cost of the providing Diesel Fuel for the Emergency Generator in accordance with SECTION 01650, FACILITY START-UP AND TESTING REQUIREMENTS.

7. SECTION 01065, STRUCTURAL TESTS AND INSPECTIONS

A. Page 01065-10, ATTACHMENT NO. 1 – PROGRAM OF STRUCTURAL TESTS AND INSPECTIONS, Section CONTROLLED STRUCTURAL FILL (PREPARED FILL), Agent, Item 2., delete "ITA" and replace with "ITA(C)".

B. Page 01065-10, ATTACHMENT NO. 1 – PROGRAM OF STRUCTURAL TESTS AND INSPECTIONS, Section CONTROLLED STRUCTURAL FILL (PREPARED FILL), Scope, Item 2., delete "ITA" and replace with "ITA(C)".

C. Page 01065-10, ATTACHMENT NO. 1 – PROGRAM OF STRUCTURAL TESTS AND INSPECTIONS, Section CONTROLLED STRUCTURAL FILL (PREPARED FILL), delete the note in its entirety.

8. SECTION 08331, INSULATED OVERHEAD COILING DOORS

A. Page 08331-3, ARTICLE 2.02 – MATERIALS, Paragraph A.1., delete Subparagraph a. in its entirety and replace with the following new subparagraph:

a. Powder Coated Aluminum: 18-guage (0.044 inch) aluminum.

B. Page 08331-3, ARTICLE 2.02 – MATERIALS, Paragraph E., delete the paragraph in its entirety and replace with the following new paragraph:

E. Hood: 24-gauge powder coated aluminum with reinforced top and bottom edges. Provide minimum 1/4-inch steel intermediate support brackets.

C. Page 08331-3, ARTICLE 2.02 – MATERIALS, Paragraph F.2., delete the subparagraph in its entirety and replace with the following new subparagraph:

2. Powder Coated Aluminum: Phosphate treatment followed by baked-on polyester powder coat, color as selected by Design Builder from manufacturer's standard color range, minimum 32 colors; minimum 2.5 mils cured film thickness; ASTM D-3363 pencil hardness: H or better.

9. SECTION 09650, RESILIENT FLOORING

A. Page 09650-3, ARTICLE 2.01 – MATERIALS, delete the article in its entirety and replace with the following new article:

2.01 - MATERIALS

A. Vinyl-Composition Floor Tile

1. Non-asbestos formulated and composed of vinyl resins and fillers, free from lumps and unmixed coloring matter and conforming to ASTM F1066, Class 2.

2. Size: 12-in. by 12-in. by 1/8-in. thick.

3. Water-Resistant Type Adhesive: manufacturer's recommended type for installation of vinyl-composition tile over suspended or on-grade concrete subfloors.

4. Colors and Patterns as selected by Design Builder from manufacturer’s full range of colors and patterns

B. Bases

1. Vinyl Bases

a. 4-inch high by 1/8-inch. thick set-on type cove base with tapered top and ribbed back at tile and concrete; straight base at carpet, conforming to ASTM F1861, Type TV, Group 1. Provide preformed internal and external corners with 4-in. returns where necessary.

b. Water-Resistant Type Adhesive: manufacturer's recommended type for installation over suspended and/or concrete subfloors.

c. Colors and Patterns as selected by Design Builder from manufacturer’s full range of colors and patterns.

2. Rubber Base

a. 4-inch high by 1/8-inch thick cove base at tile and concrete; straight base at carpet conforming to ASTM F 1861; Type TS or TP Provide preformed internal and external corners with 4-in. returns where necessary.

b. Water-Resistant Type Adhesive: manufacturer's recommended type for installation over suspended and/or concrete subfloors.

c. Colors and Patterns as selected by Design Builder from manufacturer’s full range of colors and patterns.

3. PVC

a. 4-inch high by 1/8-inch thick cove base at tile and concrete; straight base at carpet conforming to ASTM F1861. Provide preformed internal and external corners with 4-in. returns where necessary.

b. Water-Resistant Type Adhesive: manufacturer's recommended type for installation over suspended and/or concrete subfloors.

c. Colors and Patterns as selected by Design Builder from manufacturer’s full range of colors and patterns.

10. SECTION 10475, EMERGENCY AND MISCELLANEOUS EQUIPMENT

    A. Page 10475-1, ARTICLE 1.02 – MEASUREMENT AND PAYMENT, add the following new paragraph:

        B. The work of this section shall be provided under the PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, Bid Item 2A.

    B. Page 10475-6, ARTICLE 2.04 - MISCELLANEOUS EQUIPMENT – OTHER INDUSTRIAL SUPPLY CATALOGS, delete Item No. 32 in its entirety and replace with the following new item:

| Item Number | Description | Manufacturer and Catalog No. | Quantity |
|---|---|---|---|
| 32 | 8-in Electrical Long Nose Pliers with Wire Cutter | Craftsman CMHT81645 | 1 |

    C. Page 10475-6, ARTICLE 2.04 - MISCELLANEOUS EQUIPMENT – OTHER INDUSTRIAL SUPPLY CATALOGS, delete Item No. 33 in its entirety and replace with the following new item:

| Item Number | Description | Manufacturer and Catalog No. | Quantity |
|---|---|---|---|
| 33 | Not Used | --- | --- |

11. SECTION 11398, DIESEL ENGINE-GENERATOR SET AND APPURTENANCES

    A. Page 11398-1, ARTICLE 1.01 – SCOPE, delete Paragraph D. in its entirety and replace with the following new paragraph:

        D. The unit shall be provided in an outdoor, weather-proof, walk-in, sound attenuated enclosure with an integral sub-base fuel storage tank with a capacity for 72 hours of standby operation.

12. SECTION 13350, SCADA EQUIPMENT

    A. Delete SECTION 13350, SCADA EQUIPMENT in its entirety and replace with the new section, as attached.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

1. DRAWING 10 A-102, GRADE LEVEL PLAN, Room 110, add the following new note;

   The ceiling access hatch located can be relocated to the south (if need be) so long as the 30”x36” required OSHA clearance is provided and at least one of the double doors allows full access to the ladder.

2. DRAWING 10 A-103, ROOF PLAN, add the following new note:

   The location of the south chimney shall be in accordance with this Drawing. The location of the south chimney shown on DRAWING 10 S-105, ROOF LEVEL PLAN, shall be revised in accordance with this Drawing.

3. DRAWING 99 A-607, PARTITION TYPES, for Ceiling Types C4, add the following new remark:

   No hat channels are required. The C-H stud can be installed directly to the underside of the truss. Since these are rated ceiling assemblies, the GWB is attached directly to the C-H studs and 1-inch liner panel is installed like a shaft wall assembly.

4. DRAWING 99 A-607, PARTITION TYPES, for Ceiling Types C5 and C6, add the following new remark:

   No hat channels are required. The C-H stud can be installed directly to the underside of the truss. Since these are rated ceiling assemblies, the GWB is attached directly to the C-H studs and 1-inch liner panel is installed like a shaft wall assembly.

5. DRAWING 00 D-004, SCHEDULES I

   A. Process Pump Schedule, Notes, Thickened Sludge Pumps, delete Item 2 in its entirety and replace with the following new item:

      Full Speed Secondary Rating Point: 975 GPM at 47 Feet with no more than 8 feet of HPSH3.

**SECTION 00410**

**FORM OF GENERAL BID**

1. Proposal of _____ (hereinafter called "Bidder")*

   (_) a corporation, organized and existing under the laws of the State of _____

   (_) a partnership

   (_) a joint venture

   (_) a limited liability company

   (_) an individual doing business as _____

   *Check corporation, partnership, joint venture, LLC or individual as applicable.

2. To the Town of Orleans, MA (hereinafter called "Owner") regarding: Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486.

   The Bidder, in compliance with your invitation for bids for Downtown Area WWTF and Effluent Disposal having examined the plans and specifications with related documents and the site of the proposed work, attended the mandatory pre-bid conference, and being familiar with all of the conditions surrounding the construction of the proposed project including the availability of materials and labor, hereby proposes to furnish all superintendence, labor, services, materials, equipment, plant, machinery, apparatus, appliances, tools, supplies, bailing, shoring, removal, and all other things necessary to construct the project in accordance with the contract documents, within the time set forth below, and at the prices stated below. These prices are to cover all expenses incurred in performing the work required under the contract documents, of which this bid is a part.

   The Bidder hereby agrees that if selected as the Contractor it will commence work under this contract on or before a date to be fixed in the written "Notice to Proceed" given by the Owner to the Contractor and to fully complete the project within 654 calendar days, using not more than 411 working days.

   The Bidder further agrees to pay as liquidated damages the sum of $6,700 for each consecutive calendar day and/or working day thereafter during which the work as not been fully completed, as provided in the "Liquidated Damages" provisions of SECTION 00800 - SUPPLEMENTARY CONDITIONS.

3. Bidder acknowledges receipt of the following addenda:

| No. | Dated | No. | Dated |
|---|---|---|---|
| 1 | | 7 | |
| 2 | | 8 | |
| 3 | | 8 | |
| 4 | | 10 | |
| 5 | | 11 | |
| 6 | | 12 | |

4. Bidder agrees to perform all the work, including all incidental labor, materials and equipment necessary for the satisfactory completion of the work and be in full compliance with the contents and intent of the Specifications and/or Drawings of the work.

5. Bid Proposal

   A. The BID PROPOSAL unit prices shall include all labor, materials, bailing, shoring, removal, overhead, profit, insurance, engineering costs, etc., to cover the finished work of the several kinds called for. The Bidder understands that all bids for this project are subject to the applicable bidding laws of the Commonwealth of Massachusetts, including General Laws Chapter 149, Section 44D and Section 44E, as amended.

   B. Bidder shall complete and submit the Proposal Form. The bidder is not allowed to submit a proposal that has been printed out and priced typewritten or written by hand. Failure to utilize the Microsoft Excel Proposal Form shall void the bid.

   C. Use of the Microsoft Excel Proposal Form

      1. Upon Opening the Microsoft Excel Proposal Form:

         a) A yellow bar will appear on the top of the screen labeled as "*Security Warning*"

         b) You must select the "*Enable Content*" button in order to properly access the file.

            1) This will enable macros in the excel file, as you must enable macros to properly view the file.

            2) If you do not enable macros, the excel document will be invalid.

         c) Manually enter the Bidder's Name in the blue box.

         d) Manually enter the Date in the blue box.

         e) Manually enter the unit cost in the blue boxes for each bid item. Allowances have already been prepopulated.

         f) The document will automatically update the cost estimates (Unit Price in Words; Extended Totals and Bid Total based on the user's unit cost input into the blue boxes for each bid item).

      2. In Order to Save the Proposal Form Document:

         a) The document must be saved as a file with macros enabled.

         b) Please save as the file type "Excel Macro-Enabled Workbook (*.xlsm)".

         c) If the file is saved incorrectly as a different file type, the document will be invalid.

      This process must be repeated for every time the document is opened and saved.

   D. Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com). The bidder is not allowed to submit a Microsoft Excel Proposal Form that has been priced typewritten or written by hand. The Microsoft Excel Form is not required to be Signed.

   E. In the event of a discrepancy between the price in words and the price in figures, the words shall govern. In the event of a discrepancy between the total of the items and the total stated, the total of the items shall govern.

   F. In the event of a discrepancy between the printed out completed Microsoft Excel Proposal Form and the completed Microsoft Excel Proposal Form in ".xlsm" format, the printed out completed Microsoft Excel Proposal Form shall govern.

   G. Interlineation, alteration or erasure may void the bid.

   H. Bid security is attached in the sum of five percent (5%) of the total bid in accordance with the conditions of SECTION 00200 - INSTRUCTIONS TO BIDDERS. The bid security may become the property of the Owner in the event the contract and bond are not executed within the time set forth above.

   I. The undersigned states that no officer, agent or employees of the Owner directly or indirectly has a financial interest in this Bid.

6. The time period for holding bids, where Federal approval is not required is 30 days, Saturdays, Sundays and legal holidays excluded, after the opening of bids and where Federal approval is required, the time period for holding bids is 30 days, Saturdays, Sundays and holidays excluded after Federal approval.

7. State Taxes - Pursuant to M.G.L.c.62C, s49A I certify under the penalties of perjury that I, to my best knowledge and belief, have filed all state tax returns and paid all State Taxes required under law.

8. Award

   A. The contract will be awarded to the lowest responsible and eligible bidder.

   B. Bidder understands that the Owner reserves the right to reject any or all bids and to waive any informalities in the bidding as deemed to be in the best interest of the Owner.

   C. The Owner reserves the right to reject any bid in the event that any bid item or items are obviously unbalanced or appear to the Owner to be so unbalanced as to affect or to be liable to affect adversely any interest of the Owner.

   D. The Owner reserves the right to reject any or all bids if it deems it to be in its best interest to do so. The Owner reserves the right to award the Contract based on sufficiency of appropriated funds to complete the work.

   E. In the event the lowest bids from responsive and responsible bidders are tied, the following methods of breaking the tie shall be employed unless otherwise provided for in these bid documents: The bidder's names shall be entered on a slip of paper and placed in a hat. The award shall then be made to the bidder whose slip is drawn from the hat. The drawing of the slip from the hat shall be performed in the presence of the tied bidders unless they waive their right to be present in writing.

9. Within 10 days of receipt of the written notice of acceptance of this bid, the Bidder will execute the formal agreement attached in SECTION 00520 - AGREEMENT and provide the requisite payment and performance bonds and certificates of insurance.

10. The selected Contractor shall furnish a performance bond and a payment bond each in an amount at least equal to one hundred percent (100%) of the contract prices in accordance with SECTION 00610 - PERFORMANCE BOND, SECTION 00615 - PAYMENT BOND, and as stipulated in paragraph 5.01 of SECTION 00700 - GENERAL CONDITIONS of these specifications.

11. The Owner reserves the right to withhold the fair market value for work not completed in addition to the retainage on work completed. Unbalanced bid items will specifically be subject to review and to this potential withholding from periodic payment applications.

12. The Undersigned, as Bidder, declares as follows:

   A. The only parties interested in this BID as Principals are named herein;

   B. The Bidder has carefully examined the site of the proposed Work and fully informed and satisfied himself as to the conditions there existing, the character and requirements of the proposed Work, the difficulties upon its execution and the accuracy of all estimated quantities stated in this BID, and has carefully read and examined the Drawings, the annexed proposed AGREEMENT and the Specifications and other Contract Documents therein referred to and knows and understands the terms and provisions thereof;

   C. This BID is made without collusion with any other person, firm, or corporation;

   D. No officer, agent, or employee of the Owner is directly or indirectly interested in this BID; and

   E. Understands that information relative to subsurface and other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) has been furnished only for his information and convenience without any warranty or guarantee, expressed or implied, that the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered will be the same as those shown on the Drawings or in any of the other Contract Documents and agrees that the Bidder shall not use or be entitled to use any such information made available to him through the Contract Documents or otherwise or obtained by him in his own examination of the site, as a basis of or ground for any claim against the Owner or the Engineer arising from or by reason of any variance which may exist between the aforesaid information made available to or acquired by him and the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered during the construction work, and has made due allowance therefore in this BID.

13. Equal Employment Opportunity/Affirmative Action Provisions - C.30 s39 (c)

   A. The undersigned bidder hereby certifies that he/she is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work.

B. The undersigned bidder hereby certifies he/she will comply with the specific affirmative action steps contained in the Equal Employment Opportunity/Affirmative Action (EEO/AA) provisions of this Contract, including compliance with the Disadvantaged Business Enterprise provisions as required under these contract provisions. The contractor receiving the award of the contract shall incorporate the EEO/AA provisions of this contract into all subcontracts and purchase orders so that such provisions will be binding upon each subcontractor or vendor.

C. The undersigned bidder hereby certifies he/she will comply with the Equal Employment Opportunity/Affirmative Action (EEO/AA) provisions of this Contract (MassDEP Appendix E - Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services).

14. Non-Debarment - C.30 s39 (a)

A. The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As use in this paragraph the "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

B. The undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder; and is not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency.

15. Suspension and Debarment

A. The EPA prohibits the use of suspended or debarred contractors and suppliers in SRF financed contracts. All SRF financed contracts and subcontracts must include language indicating compliance with 2 CFR 180 and 2 CFR 1532.

B. Bidders must fully comply with Subpart C of 2 CFR Part 180 and 2 CFR Part 1532, entitled responsibilities of Participants Regarding transactions (Doing Business with Other Persons). Contractors, subcontractors, or suppliers that appear on the Excluded Parties List System at www.usgovxml.com/dataservice.aspx?ds=EPLS are not eligible for award of any contracts funded by the Massachusetts State Revolving Fund.

16. Diesel Retrofit Program - The undersigned bidder hereby certifies he/she will comply with the Massachusetts Department of Environmental Protection's Diesel Retrofit Program Statement of Intent to Comply (see Appendix B).

17. The undersigned offers the following information as evidence of its qualifications to perform the work as bid upon according to all the requirements of the plans and specifications:

A. Have been in business under present name for _____years.

B. The Bidder shall state below what work of a similar character to that included in the proposed contract it has done within the last 10 years, and provide references that will enable the Owner to judge its experience, skill and business standing (add supplementary page(s) if necessary).

**Project No. 1**

| Completion Date | Project Name | Contract Amount |

C. The names and addresses of all persons interested in the bid (if made by a partnership or corporation) as Principals, are as follows (add supplementary page(s) if necessary):

| Name | Address |
|---|---|
| | |
| | |
| | |
| | |

18. Pursuant to M.G.L. CH. 62C, Sec 49A, the undersigned Bidder certifies under the penalties of perjury that it is in compliance with all laws of the Commonwealth relating to taxes, reporting of employees and contractors, and withholding and remitting child support.

19. The undersigned Bidder hereby certifies that (1) it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work; and (2) that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee.

20. The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used in this paragraph the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity which sells materials, equipment or supplies used in or for, or engages in the performance of, the same or similar construction, reconstruction, installation, demolition, maintenance or repair work or any part thereof.

21. The undersigned further certifies under penalty of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, Section 25C (10) of Chapter 152 (workers' compensation) or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder.

Respectfully submitted:

# APPENDIX B

## APPENDIX B
## DIESEL RETROFIT PROGRAM

The Department of Environmental Protection ("DEP") has developed the Diesel Retrofit Program in response to increasing public health concerns with the emissions from diesel engines and vehicles.

**Diesel Construction Equipment Standard**

All diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") must have the following pollution control device installed unless exempt as provided below:

1. Emission control technology verified by U.S. Environmental Protection Agency ("EPA") or the California Air Resources Board ("CARB") for use with non-road engines;
2. Emission control technology verified by EPA or CARB for use with on-road engines provided that such equipment is operated with diesel fuel that has no more than 15 parts per million sulfur content (i.e. Ultra Low Sulfur Diesel fuel); or
3. Emission control technology certified by the manufacturer that such technology meets or exceeds the emission reductions provided by on-road or off-road emission control technology verified by EPA or CARB, i.e. that a Diesel Oxidation Catalyst is achieving the following minimum emission reductions: particulate matter 20%; carbon monoxide 40%; volatile organic compounds 50%; or a Diesel Particulate Filter is achieving a minimum of 85% emission reductions for particulate matter.

Emission control devices, such as oxidation catalysts or particulate filters, shall be installed on the exhaust system side of the Diesel Construction Equipment. The Contractor shall be responsible to insure that the emissions control technology is operated, maintained, and serviced as recommended by the manufacturer.

For the latest up-to-date list of EPA verified-technologies, see:
https://www.epa.gov/verified-diesel-tech
For the latest up-to-date list of CARB verified technologies, see:
http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm

**Exemptions**

The following Diesel Construction Equipment shall be exempt from the standard above. The Contractor shall include such Diesel Construction Equipment in the required recordkeeping:

1. Diesel Construction Equipment not owned by the Contractor and used in the performance of the work under this Contract for 30 calendar days (cumulative days but not necessarily consecutive) or less;
2. Unless otherwise exempt, additional Diesel Construction Equipment originally not anticipated to be used under the Contract or used as permanent replacement after the work under the Contract has commenced, for 15 calendars days from the date such Diesel Construction Equipment is brought on site;

DEP-DMS-B Page 1 of 6

pspkg 2018-07-11

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

3. Diesel Construction Equipment with an engine that meets the EPA particulate matter (PM) Tier emission standards in effect at the start of the Contract for non-road diesel engines for the applicable engine power group (e.g., as of January 1, 2009, a piece of Diesel Construction Equipment with a Tier 3 engine is exempt from meeting the standard until the piece of Diesel Construction Equipment is available with a Tier 4 engine) provided that if such emissions standards are superseded during the Contract then such Diesel Construction Equipment must be retrofitted in accordance with the standards above prior to the end of the Contract;
4. A large crane (e.g. a sky crane or link belt crane which is responsible for critical lift operations) if such device would adversely affect the operation of the crane provided the Contractor submits to the municipality's project engineer written technical justification documenting the adverse impact on operation; and
5. Diesel Construction Equipment that the project engineer has determined is necessary to control a compelling emergency including but not limited to, the need for rescue vehicles or other equipment to prevent harm to human beings or additional equipment required to address a catastrophic emergency such as structure collapse or imminent collapse. After the compelling emergency is controlled, such non-compliant equipment must be removed from the Contract site and may not be used in further performance of the work under this Contract. Meeting Contract deadlines is not a compelling emergency.

**Contractor Certification**

Each bidder shall submit as part of its bid, the Statement of Intent to Comply. Within 10 days of being notified that it has been awarded a contract, the bidder and each of its Contractors and Subcontractors shall submit a Diesel Retrofit Program Contractor Certification. Each such Certification shall contain the following information for each piece of Diesel Construction Equipment:

1. Contractor or Subcontractor name;
2. Equipment type, make, model;
3. Vehicle Identification Number or VIN;
4. Engine model and year of manufacture;
5. Engine HP rating;
6. Emission Control Device (ECD) type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
7. ECD make, model, and manufacturer;
8. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
9. ECD installation date;
10. Type of fuel to be used; and
11. Whether the equipment is owned or rented.

**Recordkeeping**

Each Contractor and Subcontractor shall maintain detailed records of all Diesel Construction Equipment used under the Contract, including the dates and duration times the Diesel Construction Equipment is

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

used at the Contract site. Records shall be available for inspection by DEP. Each Contractor and Subcontractor shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site.

For Diesel Construction Equipment that has an emissions control device with a manufacturer's certification, the Contractor shall maintain records of all supporting emissions test data and test procedures. If upon review the emissions reductions are not supported by the test data and test procedures, then the emissions control device may need to be replaced with a compliant retrofit device.

**Project Regulatory Agreement**

The following language shall be included section 4 (Covenants of the Borrower) of the municipality's Project Regulatory Agreement if it receives funds from the State Revolving Fund:

> The Borrower shall require each Contractor and Subcontractor to submit the Diesel Retrofit Program Contractor Certification to DEP and the Borrower prior to commencing work on the Project. The Borrower shall not allow any Contractor or Subcontractor to commence work at the Project site prior to submitting such Certification.

## STATEMENT OF INTENT TO COMPLY

***This form must be signed and submitted by the bidder as part of the bid.***

**Local Governmental Unit** _____ **SRF Project No.** _____

**Contract No.** _____ **Contact Title** _____

**Bidder** _____

**The undersigned, on behalf of the above-named Bidder, agrees that, if awarded the Contract:**

1. **the Bidder shall comply with the Massachusetts Department of Environmental Protection's ("MassDEP") Diesel Retrofit Program by ensuring that all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract are equipped or retrofitted with a pollution control device in accordance with the Diesel Retrofit Program Standard;**
2. **the Bidder shall require all Subcontractors to comply with MassDEP's Diesel Retrofit Program by ensuring all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract are equipped or retrofitted with a pollution control device in accordance with the Diesel Retrofit Program Standard; and**

3. **The Bidder shall submit and shall require each Subcontractor to submit a Diesel Retrofit Program Contractor Certification (form attached) with a Diesel Retrofit List to MassDEP Municipal Services and the Bidder within 10 days of the bidder being notified that it has been awarded the Contract. The Bidder shall require each Subcontractor to update such Certification and List within 2 days of using additional Diesel Construction Equipment on the project under the Contract.**

**APPENDIX B** (cont.)
**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

***Each Contractor and its Subcontractor(s) must sign and submit this form to DEP DMS project engineer, 5th Floor, MassDEP, One Winter Street, Boston, MA 02108 and the Municipality within 10 days after the Contractor is notified that it is awarded the Contract.***

**Local Governmental Unit** _____ **SRF Project No.** _____

**Contract No.** _____ **Contact Title** _____

**Contractor** _____

I, _____, an authorized signatory for _____, whose principal place of business is at _____ do hereby certify that any and all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") have pollution control devices, such as oxidation catalysts or particulate filters, installed on the exhaust system side of the diesel combustion engine equipment in accordance with the Diesel Retrofit Program Standard.

I am submitting on behalf of _____ a list of all said Diesel Construction Equipment, labeled "Diesel Retrofit List," that will be used in connection with this Contract by _____. I hereby certify that the information on the attached Diesel Retrofit List is correct and accurate as of the date of signature. The List includes the following information for each piece of Diesel Construction Equipment:

1. Equipment type, make, model;
2. Vehicle Identification Number or VIN;
3. Engine model and year of manufacture;
4. Engine HP rating;
5. Emission Control Device ("ECD") type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
6. ECD make, model, and manufacturer;
7. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
8. ECD installation date;
9. Type of fuel to be used; and
10. Whether the equipment is owned or rented.

**APPENDIX B** (cont.)

**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

_____shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site. _____shall maintain detailed records of all Diesel Construction Equipment used at the Contract site, including the dates and duration times the Diesel Construction Equipment is used at the Contract site. _____ shall make such records available for inspection by DEP. _____shall ensure that the emissions control technology for each piece of Diesel Construction Equipment is operated, maintained, and serviced as recommended by the manufacturer. _____ shall retrofit prior to the end of the Contract any Diesel Construction Equipment no longer exempt from meeting the Diesel Construction Equipment Standard under exemption 3 (because it had an engine that met the EPA particulate matter (PM) Tier emission standards currently in effect at the start of the Contract for non-road diesel engines for the applicable engine power group and such emissions standards were superseded during the Contract).

I acknowledge that this certificate is being furnished as a requirement under this Contract and is subject to applicable State and federal laws, both criminal and civil. Signed under pains and penalty of perjury on this date _____.

## APPENDIX E
## CONSTRUCTION BID SPECIFICATIONS
## SPECIAL PROVISIONS FOR DISADVANTAGED BUSINESS ENTERPRISES
## MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
### DIVISION OF MUNICIPAL SERVICES

DISADVANTAGED BUSINESS ENTERPRISE PROGRAM BACKGROUND

In May 2008 a United States Environmental Protection Agency (EPA) rule became effective that changed the Minority Business Enterprise (MBE) and Women Business Enterprise (WBE) Program to a Disadvantaged Business Enterprise (DBE) Program.

For firms to qualify under the old MBE/WBE program they needed to be socially disadvantaged and had to be certified by the Supplier Diversity Office (SDO). Under the new DBE rule, the firms must be both **socially** and **economically** disadvantaged, **citizens of the United States**, and certified as a DBE. Women and certain minorities are presumed to be socially disadvantaged. The economic disadvantage is measured by the owner's initial and continuing personal net worth of less than $1,320,000.

Because the Clean Water Act requires the use of MBEs and WBEs, these firms will still be utilized in the State Revolving Fund (SRF) Loan Program, but they must also be certified as DBEs.

SDO will continue to be the certifying agency for the SRF program. SDO certifies firms under the federal Department of Transportation program, which is acceptable for use in the SRF program. An additional form has been added to the DBE package to verify that DBEs are owned or controlled by United States citizens.

BID SPECIFICATIONS

**I.** In this contract, the percentage of business activity to be performed by disadvantaged business enterprise(s) (DBE) shall not be less than the following percentages of the total contract price or the percentage submitted by the contractor in the Schedule of Participation, whichever is greater:

Disadvantaged MBE (D/MBE) 4.2% Disadvantaged WBE (D/WBE) 4.5%

EEO-DEP-E Page 1 of 16

pspkg 2018-07-11

## II. DEFINITIONS

For the purpose of these provisions, the following terms are defined as follows:

A. Awarding Authority – Entity that awards a prime contract under a State Revolving Fund loan.

B. Bidder - Any individual, partnership, joint venture, corporation, or firm submitting a price, directly or through an authorized representative, for the purpose of performing construction or construction related activities under a Contract.

C. Certified DBE – A DBE certified by the United States Small Business Administration, under its 8(a) Business Development Program (13 CFR part 124, subpart A) or its Small Disadvantaged Business Program (13 CFR part 124, subpart B); The United States Department of Transportation (DOT), under its regulations for Participation by DBSs in DOT programs (49 CFR parts 23 and 26); or SDO in accordance with 40 CFR part 33; provided that the certification meets the U.S. citizenship requirement under 40 CFR §33.202 or §33.203.

D. Compliance Unit - A subdivision of MassDEP's Affirmative Action Office designated to ensure compliance under these provisions.

E. Contractor - Any business that contracts or subcontracts for construction, demolition, renovation, survey, or maintenance work in the various classifications customarily used in work and that is acting in this capacity under the subject contract.

F. Construction Related Services - Those services performed at the work site ancillary to, and/or in support of, the construction work, such as hauling, trucking, equipment operation, surveying or other technical services, etc. For the purposes hereof, supply and delivery of materials (e.g. pre-cast concrete elements) to the site by a supplier who has manufactured those goods, or substantially altered them before re-sales shall be considered as "construction related services

G. Construction Work - The activities at the work site, or labor and use of materials in the performance of constructing, reconstructing, erecting, demolishing, altering, installing, disassembling, excavating, etc, all or part of the work required by the Contract Documents.

H. Disadvantaged Business Enterprise (DBE) - An entity owned or controlled by a socially and economically disadvantaged individual as described by Public Law 102-389 (42 U.S.C. 4370d) or an entity owned and controlled by a socially and economically disadvantaged individual as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note); a Small Business Enterprise (SBE); a Small Business in a Rural Area (SBRA); or a Labor Surplus Area Firm (LAF), a Historically Underutilized Business (HUB) Zone Small Business Concern, or a concern under a successor program.

I. Equipment Rental Firm - A firm that owns equipment and assumes actual and contractual responsibility for renting said equipment to perform a useful function of the work of the contract consistent with normal industry practice

J. Good Faith Efforts – The race and/or gender neutral measures described in 40 CFR 33, subpart C.

K. HUBZone - A historically underutilized business zone, which is an area located within one or more qualified census tracts, qualified metropolitan counties, or lands within the external boundaries of an Indian reservation.

L. HUBZone small business concern - A small business concern that appears on the List of Qualified HUBZone Small Business Concerns maintained by the Small Business Administration.

M. Joint Venture - An agreement between SDO certified DBE and a non-DBE or non-DBE controlled enterprise.

1. A pairing of companies will be considered a DBE joint venture if the SDO certified DBE which is part of the relationship has more than 51% of the profits that are derived from that project.

2. A joint venture between a certified DBE subcontractor and a non DBE subcontractor, in which the DBE for that proportion of the joint venture's contract equal to the DBE participation in the joint venture.

3. Whenever a general bid is filed by a joint venture with a certified DBE participant in the joint venture that does not exercise more than 51% control over management and profits, that joint venture shall be entitled to credit as a DBE for that portion of the joint venture's contract equal to the DBE participation in the joint venture. Minority As deemed by SDO.

N. Labor surplus area firm (LSAF) - A concern that together with its first-tier subcontractors will perform substantially in labor surplus areas (as identified by the Department of Labor in accordance with 20 CFR part 654). Performance is substantially in labor surplus areas if the costs incurred under the contract on account of manufacturing, production or performance of appropriate services in labor surplus areas exceed 50 percent of the contract price.

O. Letter of Intent – Certified document signed by the principal(s) of the DBE with respect to the work to be performed under contract.

P. Local Government Unit (LGU) – A city, town, or municipal district which applies for a loan under the Clean Water Trust Program.

Q. Material Supplier – A vendor certified by SDO as a DBE in sales to supply industry from an established place of business or source of supply, and that vendor.

1. Manufactures goods from raw materials, or substantially utilizes them in the work, or substantially alters them before resale, entitling the general contractor to DBE credit for 100% of the purchase order.

2. Provides and maintains a storage facility for materials utilized in the work, entitling the general contractor to DBE credit for 10% of the purchase order

R. Minority and Women Business Enterprise (M/WBE) – Any business concern certified by the SDO as a bona-fide M/WBE. A bona-fide M/WBE is a business whose minority group/women ownership interests are real, which have at least 51% ownership and control over management and operation.

S. Percent of Total Price – Is the percentage to be paid to the DBE, work they perform, as compared to the total bid price

T. Recipient - An agency, person or political subdivision which has been awarded or received financial assistance by the Trust or MassDEP.

U. Small business, small business concern or small business enterprise (SBE) - A concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding, and qualified as a small business under the criteria and size standards in 13 CFR part 121.

V. Small business in a rural area (SBRA) - A small business operating in an area identified as a rural county with a code 6-9 in the Rural-Urban continuum Classification Code developed by the United States Department of Agriculture in 1980.

W. SDO – The Supplier Diversity Office.

X. Subcontractor – A company, firm, joint venture, or individual who enters into an agreement with a contractor to provide services pursuant to an award of financial assistance.

Y. Total Contract Price – The total amount of compensation to be paid for all materials, work or services rendered in the performance of the contract

Z. Trust – The Massachusetts Clean Water Trust established by M.G.L. c.29.

## III. REQUIREMENTS FOR CONTRACT AWARD

DBE packages must be submitted by the two lowest bidders on the project. Following bid opening, the LGU shall notify the two lowest bidders to submit DBE packages to the LGU or the LGUs consultant, as directed. By the close of business on the third business day after notification, the two lowest bidders, including a bidder who is a MBE, WBE or DBE, shall submit the following information:

A. A Schedule of Participation (Form EEO-DEP-190). The Schedule of Participation shall list those certified DBEs the bidder intends to use in fulfilling the contract obligations, the nature of the work to be performed by each certified DBE subcontractor and the total price they are to be paid.

1. A listing of bona-fide services such as a professional, technical, consultant or managerial services, assistance in the procurement of essential personnel, facilities, equipment, materials, or supplies required for performance of the contract, and reasonable fees or commissions charged.

2. A listing of haulers, truckers, or delivery services, not the contractors, including reasonable fees for delivery of said materials or supplies to be included on the project.

B. A Letter of Intent (Form EEO-DEP-191) for each DBE the bidder intends to use on the project. The Letter of Intent shall include, among other things, a reasonable description of the work the certified DBE is proposing to perform and the prices the certified DBE proposes to charge for the work. A Letter of Intent shall be jointly signed by the certified DBE and the General Contractor who proposes to use them in the performance of the Contract.

C. Each DBE must also sign and return the DBE Certification of United States Citizenship form to verify that the firm is owned or controlled by a United States citizen.

D. The SDO "DBE Certification" as prepared by each certified DBE.

E. A completed Request for Waiver form and backup documentation should the goals not be achieved (See IV below).

## IV. REQUIREMENTS FOR MODIFICATION OR WAIVERS.

The bidder shall make every possible effort to meet the minimum requirements of certified DBE participation. If the percentage of DBE participation submitted by the bidder on its Schedule of Participation (EEO-DEP-190) does not meet the minimum requirements, the bid may be rejected by the Awarding Authority and found not to be eligible for award of the contract.

In the event that the bidder is unable to meet the minimum requirements of DBE participation, the bidder shall submit with his/her submittal required in Section III. Requirement of Contract Award a Request for Waiver form (EEO-DEP-490). The Awarding Authority shall review the waiver request to determine if the request should proceed. If approved by the Awarding Authority, the Awarding Authority shall submit the waiver request and supporting documentation, with a recommendation to MassDEP within five days of receipt of the Request for Waiver. MassDEP in conjunction with the project manager, Compliance Unit, will determine whether the waiver will be granted.

The waiver request shall include detailed information as specified below to establish that the bidder has made a good faith effort to comply with the minimum requirements of DBE participation specified in Part I. In addition, the bidder must show that such efforts were undertaken well in advance of the time set for opening of bids to allow adequate response. A waiver request shall include the following:

A. A detailed record of the effort made to contact and negotiate with the certified DBE, including, but not limited to:

   1. names, addresses and telephone numbers of all such companies contacted;

   2. copies of written notices(s) which were sent to certified DBE potential subcontractors, prior to bid opening;

   3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

   4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price;

   5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/ women-focused media detailing the opportunities for participation.

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after MassDEP receives all required information and documentation, it shall make a decision in writing, whether the waiver is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing. If the waiver request is denied, the bid shall be rejected by the Awarding Authority, or the contract will be determined ineligible for SRF funding.

   If a Request for Waiver is denied by MassDEP and the bid is rejected by the Awarding Authority, the Awarding Authority may then move to the second bidder on the project. At the Awarding Authority's discretion, it may collect a DBE package from the third bidder on the project.

## V. DISADVANTAGED BUSINESS ENTERPRISES PARTICIPATION

A. Reporting Requirements

1. The Contractor's utilization of certified DBEs will be documented based upon submittal of the LGU's monthly Payment Requisitions as reported on Form-2000. The Form-2000 form will show all certified DBEs performing work on the project regardless of any billing activity for that month. For auditing and accounting purposes, the Contractor periodically may be required to submit copies of canceled checks verifying that payments have been made to the certified DBE as listed on the schedule. The Contractor may also be required to submit current schedules on utilization of all DBEs to indicate when their services will commence and be billed for.

2. During the life of the Contract, the Contractor's fulfillment of the percentage requirements in Part I shall be determined with reference to the Contract price as follows:

   A. If the price in the Contract executed exceeds the base bid price (e.g., because an alternate was selected or because unit prices were used in awarding the Contract), the Contractor shall submit for approval by MassDEP a revised Schedule of Participation by certified DBEs satisfying the percentage requirements and such other information concerning additional DBE participation as may be requested by MassDEP.

   B. If the Contract price increases after execution due to change orders or other adjustments, MassDEP may require the Contractor to subcontract additional work or to purchase additional goods and services from certified DBEs up to the percentages stated in Part I.

## VI. COMPLIANCE

A. If the Schedule or any of the Letters of Intent are materially incomplete or not submitted in a timely manner, the LGU may rescind its vote of award; treat the bid informal as to substance and reject the bid. If the bid is incomplete in any other respect than the Schedule the LGU with the approval of MassDEP may waive the informalities upon satisfactory completion of the required information by the Contractor and the certified DBE as applicable.

B. If the LGU finds that the percentage of certified DBE participation submitted by the contractor on its Schedule does not meet the percentage requirement in Part I, it shall rescind its vote of award and find such contractor not to be eligible for award of the contract.

C. The Contractor shall not perform with its own organization, or subcontract to any other primary or subcontractor any work designated for the named certified DBEs on the schedule submitted by the Contractor under Part III without the approval of MassDEP.

D. A Contractor's compliance with the percentage requirement in Part I shall continue to be determined by reference to the required percentage of the total contract price as stated in Section I even though the total of actual contract payments may be greater or less than the bid price.

E. If the Contractor for reasons beyond its control cannot comply with Part III in accordance with the Schedule submitted under Part III, Section B, the contractor must submit to MassDEP as soon as they are aware of the deficiency, the reason for its inability to comply. Proposed revisions to the Schedule stating how the contractor intends to meet its obligations under these conditions must be submitted within ten (10) working days of notification.

F. If the Contractor is becomes aware by any means that that DBE is no longer certified, the Contractor shall immediately notify MassDEP. The Contractor shall use good faith efforts to retain a substitute certified DBE.

G. If a certified DBE listed by the bidder in its Schedule of M/WBE contractors fails to obtain a performance or payment bond requested by the bidder, said failure shall not entitle the bidder to avoid the requirements of Part III (A). After a bidder has been awarded the contract, he shall not change the certified DBE listed in its Schedule at the time of the award or make any other such substitutions without the written approval of MassDEP.

## VII. SANCTIONS

A. If the Contractor does not comply with the terms of these Special Provisions, the Awarding Authority may (1) suspend any payment for the work that should have been performed by a certified DBE pursuant to the schedule, or (2) require specific performance of the Contractor's obligation by requiring the Contractor to subcontract with a DBE for any contract or specialty item at the contract price established for that item in the proposal submitted by the Contractor.

B. To the extent that the Contractor has not complied with the terms of these Special Provisions, the Awarding Authority may retain in connection with Estimates and Payments an amount determined by multiplying the bid price of this contract by the percentage in Section I, less the amount paid to DBE's for work performed under the contract and any payments already suspended under VII A.

C. The Awarding Authority may suspend, terminate or cancel this contract, in whole or in part, or may call upon the Contractor's surety to perform all terms and conditions in the contract, unless the contractor is able to demonstrate his compliance with the terms

of these Special Provisions, and further deny to the Contractor, the right to participate in any future contracts awarded by the Awarding Authority for a period of up to three years.

D. In any proceeding involving the imposition of sanctions by the Awarding Authority, no sanctions shall be imposed if the Awarding Authority finds that the contractor has taken every possible measure to comply with these Special Provisions or that some other justifiable reason exists for waiving these Special Provisions in whole or in part.

E. The contract shall provide such information as is necessary in the judgment of the Awarding Authority to ascertain its compliance with the terms of these Special Provisions.

F. A contractor shall have the right to request suspension of any sanctions imposed under this section upon demonstrating that he is in compliance with these Special Provisions.

## SCHEDULE OF PARTICIPATION FOR SRF CONSTRUCTION

**Project Title:** _____ **Project Location:** _____

**Disadvantaged Minority Business Enterprise Participation in the SRF Loan Work**

| Name & Address of D/MBE | Nature of Participation | Dollar Value of Participation |
|---|---|---|
| 1. | | |
| 2. | | |
| 3. | | |
| | **Total D/MBE Commitment:** | **$** |
| **Percentage D/MBE Participation** = (Total D/MBE Commitment) / (Bid Price) = | | **%** |

**Disadvantaged Women Business Enterprise Participation in the SRF Loan Work**

| Name & Address of D/WBE | Nature of Participation | Dollar Value of Participation |
|---|---|---|
| 1. | | |
| 2. | | |
| 3. | | |
| | **Total D/WBE Commitment:** | **$** |
| **Percentage D/WBE Participation** = (Total D/WBE Commitment) / ( Bid Price) = | | **%** |

The Bidder agrees to furnish implementation reports as required by MassDEP to indicate the D/MBEs and D/WBE(s) which it has used or intends to use. Breach of this commitment constitutes a breach of the contract.

Name of Bidder: _____

Date: _____ By: _____
Signature

NOTE: Participation of a DBE may be counted in only their certified category; the same dollar participation cannot be used in computing the percentage of D/MBE participation and again of D/WBE participation.

## DBE CERTIFICATION OF UNITED STATES CITIZENSHIP

For the SRF program, under the EPA Disadvantage Business Enterprise (DBE) Rule, a DBE must be owned or controlled by a socially and economically disadvantaged person that is also a **citizen of the United States** (*See* 40 CFR 33.202). "Ownership" is defined at 13 CFR 124.105 and "control" is defined at 13 CFR 124.106.

DBEs are certified for the SRF program through the Supplier Diversity Office using the federal Department of Transportation (DOT) DBE rules. EPA allows the use of DBEs certified under the DOT rules as long as they are also United States citizens. To ensure compliance with the EPA rule, MassDEP must verify United States citizenship through the completion of the following form for each DBE used on the project.

SRF Project Number _____

**REQUEST FOR WAIVER FOR SRF CONSTRUCTION**

Upon exhausting all known sources and making every possible effort to meet the minimum requirements for DBE participation, the Bidder may seek relief either partially or entirely from these requirements by submitting a completed waiver package by the close of business on the third business day after notification by the LGU. Failure to comply with this process shall be cause to reject the bid thereby rendering the Bidder not eligible for award of the contract.

General Information

Project Title: _____ Project Location: _____

Bid Opening (time/date) _____

Bidder: _____

Mailing Address: _____

Contact Person: _____ Telephone No. (  ) _____ Ext. _____

Minimum Requirements

The bidder must demonstrate that good faith efforts were undertaken to comply with the percentage goals as specified. The firm seeking relief must show that such efforts were taken appropriately in advance of the time set for opening bid proposals to allow adequate time for response(s) by submitting the following:

A. A detailed record of the effort made to contact and negotiate with disadvantaged minority and/or woman owned businesses, including:

1. names, addresses, telephone numbers and contact dates of all such companies contacted;

2. copies of written notice(s) which were sent to DBE potential subcontractors prior to bid opening;

3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price.

5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/women-focused media detailing the opportunities for participation;

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after submission of all required information and documentation, MassDEP shall make a determination, in writing, whether the waiver request is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing.

CERTIFICATION

The undersigned herewith certifies that the above information and appropriate attachments are true and accurate to the best of my knowledge and that I have been authorized to act on behalf of the bidder in this matter.

| A-4 | For Addition of SBR Transfer Pump No. 4, as specified, the sum of | | | $ - |
| A-5 | For Addition of the SBR Blower No. 4, as specified, the sum of | | | $ - |
| A-6 | For Addition of Two SBR Aeration Diffuser Grids (1 per SBR Tank), as specified, the sum of | | | $ - |

**BASIS OF AWARD - The OWNER's goal is to accomplish the work identified in Base Bid (Part I, Part II and Part III) plus as many of the Alternatives (Part IV) as its funding constraints will allow. The BASIS OF AWARD, therefore, is the lowest bid for the sum of Part I, Part II and Part III plus the cost of the greatest number of Alternatives not exceeding its funding constraints. The Alternatives are listed in the order of their priority for award. Bidders must provide a bid figure for each alternative required regardless of the cost. Additional Funding may be obtained at the Annual Town Meeting proposed to be held in June 2020.**

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, and PART III - FILED SUBBIDS, inclusive)**

**$** -

**TOTAL AMOUNT OF BASE BID BASED ON ENGINEER'S ESTIMATE OF QUANTITIES: (Sum total of PART I - MOBILIZATION/DEMOBILIZATION, PART II - WWTF AND EFFLUENT DISPOSAL RELATED WORK, PART III - FILED SUBBIDS, and PART IV - ALTERNATIVES (Item A-1), inclusive**

## PART 1 - GENERAL

### 1.01 - SCOPE

A. Provide SCADA equipment as specified and in accordance with the Contract Documents. The equipment shall include, but not limited to, servers, uninterruptable power supplies (UPSs), human machine interface (HMI) equipment, and all software packages required to provide a complete and functional control and communication system.

B. Equipment Product Sheets are in 13350 Attachment A.

C. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

### 1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

**1.03 - DEFINITIONS**

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.

2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.

3. "Provide" shall mean furnish and install.

4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.

5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.

6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.

8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.

9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

**1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to, the following.

1. SCADA Network Hardware

C. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.

1. Failure to include a copy of the marked-up specification sections will result in rejection of the entire submittal with no further review and consideration.

D. Submit Manufacturer Product Data Sheets, with the information noted below and other data pertinent to the equipment and the application.

1. The product manufacturer technical data sheets.

2. The complete model or catalogue number(s) including any special options.

E. Licensing documentations for all software packages.

**1.05 - PRODUCT HANDLING**

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

C. Provide in accordance with SECTIONS 01610, DELIVERY, STORAGE AND HANDLING and SECTION 13300, PROCESS INSTRUMENTS.

**1.06 - DESIGN CRITERIA**

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

**1.07 - WARRANTY**

A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS

B. The Contractor shall provide a warranty that all of the equipment is new and of recent manufacture, all materials and workmanship are of good quality, free from faults or defects in accordance with the requirements of these specifications. The Warranty shall be secured by a Performance Bond issued jointly to the CONTRACTOR and the OWNER for 100 percent of the PROPOSAL price. The Contractor agrees to furnish a Warranty in the sum of the full amount of the Proposal price and duly executed by the said Contractor as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the OWNER, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Contractor. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

C. The Warranty shall be for a period of four (4) years from Substantial Completion of the construction contract. The Contractor will be responsible for execution of warranties during the warranty period should the need arise.

D. It is the Contractor’s responsibility to resolve any and all warranty claims.

E. The Warranty shall be provided as part of the shop drawing submittal. Submittals which do not include the required Warranty Bond will be summarily rejected and returned to the Contractor without further review and consideration.

F. The Contractor shall warrant that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply.

G. The Contractor shall warrant that the system will function in accordance with the manufacturer’s published technical description guides and as specified herein.

**PART 2 - PRODUCTS**

**2.01 - SOFTWARE**

A. All software shall be of the latest version available at the time of submittal review.

B. Rockwell Automation Factory Talk View SE to match software in use at the Water Department. Provide two software clients.

C. WIN 911 software for plant alarm management.

D. A SQL database and XL Reporter will be utilized to develop the plant reports. Reports shall be archived daily but shall be readily accessible to plant operators for one week after generation.

E. Data applications will be stored on external drivers provided by SI with one-touch backup initiation

**2.02 - UNINTRUPTABLE POWER SUPPLY (UPS)**

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.03 - THIN CLIENT**

A. General:

1. The Thin Client system shall be based on Microsoft terminal services (remote desktop services) solution, with applications presented to user stations based on thin client hardware. The management of this architecture, including servers, thin client terminals, users, applications and security shall be centrally and securely handled by the proposed Management Software.

2. The Thin Client software will operate on the SCADA server as a virtual machine. Provide Thin Client in the Primary Server and backup Thin Client in the SCADA backup server.

B. Thin Client Hardware shall conform to the following:

1. Thin Client hardware shall be Thin Manager ready and shall not require modification from the manufacturer's standard offering.

2. Hardware shall be capable of using Microsoft Remote Desktop Protocol (RDP) and the associated data compression and encryption.

3. Hardware shall be capable of supporting Network Level Authentication (NLA).

4. Hardware shall be compatible with the supplied Management software.

5. Hardware shall support terminal side USB mouse and keyboard.

6. Hardware shall support local serial ports.

7. Hardware shall support high color, high resolution, and be capable of supporting screen resolutions up to 3840x2160 (UHD).

8. Hardware shall neither require nor contain cooling fans.

9. Hardware shall neither require nor contain local permanent storage (i.e. no flash or hard drive shall be necessary or installed).

10. Hardware shall not require a local operating system to boot.

11. Hardware shall have the ability to boot from the server over a standard network.

12. Hardware shall support standard Ethernet network infrastructures.

13. Hardware shall support using either DHCP, static IP configuration, or terminal profile based IP assignment.

14. In conjunction with the Management Software, the ability to configure hardware shall be supported.

15. Hardware shall support the ability to utilize a single keyboard and mouse to control multiple thin clients.

16. Hardware shall support the ability to utilize a single thin client with up to 5 monitors to drive multiple stations, each with their own display, keyboard and mouse.

17. Hardware shall support the ability to move applications from one monitor to another with a thin client that supports multiple monitors. This should be fully configurable.

18. Hardware shall support automatic login to a predetermined terminal server and start a session without operator input.

19. Hardware shall be capable of interfacing with smart card readers.

20. Hardware shall be capable of redundant networking.

21. Hardware shall be able to utilize multiple network interfaces on the Thin Client for different LAN segments.

22. Hardware shall be capable of interfacing with any touch screen controller.

23. Thin Client Terminals:

    a. Thin Clients shall be set-up to run a terminal session of the HMI by connecting to the SCADA Terminal Server.

C. Thin Client Terminals

1. Compact, fanless, tower form factor with flexible mounting options; desktop or panel mount as indicated on the Contract Drawings.
2. 500 MHz processor minimum.
3. 256 MB of RAM minimum.
4. Video graphics card capable of 1600 x 900 pixels, 60Hz refresh rate and 16-bit color minimum. VGA output.
5. Operating temperature of 10 degrees Celsius to 50 degrees C
6. 110 Ports & devices

    a. Minimum of two USB 2.0 ports supporting USB mouse and keyboard.

D. Interface devices

1. Generic USB keyboard, no hot keys or number pad onboard
2. Two button USB optical mouse with scroll wheel
3. Monitor

    a. LCD flat panel 20-inch nominal size minimum
    b. UHD support for 3840 x 2160 resolution
    c. 16 ms response time maximum
    d. 250 nits (cd/m2) brightness
    e. 400 to 1 contrast ratio minimum
    f. Vertica1 viewing angle of 85 degrees minimum
    g. Horizontal viewing angle of 85 degrees minimum
    h. Analog GRB, Digital DVI-D
    i. Adjustable height stand for desktop applications
    j. Panel mount option for installations in PLC panels as indicated with screen minimum size of 15 inches. Screen shall be touch type unit.

E. Networking:

1. The onboard network interface shall have the following features

    a. Support for latest Microsoft operating system.
    b. Fast Ethernet port accepting standard CAT-6 cables for Ethernet communications
    c. IEEE 802.3ab support for gigabit networking standard
    d. IEEE 802.Q VLAN support
    e. Auto sensing 10/100 Mbps or faster
    f. Support either DHCP or static IP configuration.

F. Power supply shall be capable of providing necessary power. Thin Client and monitor shall be I20VAC from UPS.

G. Thin Client Hardware

1. Thin Client Terminals shall be Arista; Microbox 7824B-B01-003-DR or equal.
2. Provide client terminals for the following services:
    a. OWS-01
    b. OWS-02
    c. Flat Screen TV in Conference Room
    d. Flat Screen TV in Control Room

**2.05 - MANAGEMENT SOFTWARE:**

A. The Management Software shall be able to support configuration of Servers, Thin Clients ('terminals') and Applications from a central interface.

1. Software shall allow centralized configuration of all aspects of the proposed architecture. No client based configuration shall be required.
2. Software shall support connectivity, configuration and interoperability with Microsoft Terminal Services operating systems from Windows 2003 Server through to the latest offering (currently Windows Server 2016).
3. Management software shall be capable of running on the operating systems specified.
4. Software shall support management of the overall terminal services architecture.
5. Software shall permit terminals to be remotely configured and reset from the central interface without the need for the administrator to be at the physical location of the terminal.
6. Software shall permit Windows authentication with auto-login features.
7. Software shall permit automatic login to a predetermined terminal server and start a session without operator input.
8. It shall be possible to configure multiple terminal servers to be used in a load balancing manner without implementing clustering.
9. Load balancing shall be automatically handled by the software and shall be tunable based on CPU utilization, Memory usage and Process usage on the server.
10. Software shall support the ability to queue access requests to the server and complete when resources are available.
11. Software shall support the ability to configure multiple terminal servers to be used and provide the ability to 'failover' to the backup terminal server if the current terminal server fails.
12. Software shall support Shadowing of terminals from management software (Shadowing refers to the ability to view, with authorization, any terminal screen on the managed network).
13. Software shall support the ability to Shadow one terminal on one or more terminals.
14. Software shall have monitoring capabilities to detect and display terminal server assignment, login status, terminal load, and terminal server load.
15. Should a thin client fail, the software should provide the ability to allow quick replacement of the failed client with a spare, with no required configuration changes.
16. Should a thin client fail, the replacement terminal shall be automatically reconnected to the existing (disconnected) terminal session.
17. Software shall support the automatic logout of a session after a configurable period of inactivity.
18. Software shall support the integration of IP camera video as either an overlay on an existing terminal screen or as a separate client application.

19. Software shall support software decoding of IP camera streams as well as hardware decoding (with appropriate thin client hardware).
20. Multiple video streams shall be able to be configured onto a single client display.
21. Software shall permit configuration permitting sound from an application, or from multiple applications, to be played from the thin client device.
22. Software shall support easy backup and restoration of the configured architecture.
23. Software shall be extensible, preferably utilizing an ActiveX control or .NET component.
24. Software shall support the delivery of applications from multiple terminal servers to a single thin client, and visualize the sessions simultaneously.
25. Software shall support the management of applications being delivered to a PC based platform.
26. Software shall support industrial and commercially available thin client hardware.
27. The Management Software shall be able to be used from a portable, network connected mobile device.
28. Software shall support remote configuration with an iOS device such as an iPad or iPhone, or Android device.
29. Thin client emulation software shall be available to provide operator level functionality from a network connected iOS or Android devices.
30. The thin client emulation software shall not permit the operator to configure or otherwise interact in an administrative capacity with the network.
31. The thin client emulation software shall support delivery of applications to the mobile device based on location.
32. The thin client emulation software shall support location based resolvers including Quick Response (QR) Codes, Bluetooth Beacons, Global Positioning System (GPS) and WiFi Access Points.
33. Upon location based resolution, the thin client emulation software shall support different actions based on the user's access group, including Interactive Shadow, Non-interactive Shadow, Manual Transfer, Force Transfer and Clone.
34. The thin client emulation software shall support the combination of location resolvers to create a geo-fence for application delivery.
35. Security of the configuration and access to servers shall be managed and configured with the Management Software.
36. Software shall support but not require different levels of access for security based on user identity.
37. Users shall be able to be placed into security groups for easy management.
38. Software shall support Application access based on user identity.
39. Software shall support configuring of Applications such that only the Application window is presented to the user (i.e. no desktop or Start menu), thereby denying access to unauthorized programs.
40. User level access shall be able to be configured independent of any operating system based authentication, such as Active Directory, and shall not require access to such for configuration.
41. User level access using Microsoft Active Directory or other operating system based authentication shall however be supported.
42. The software shall support synchronization with Microsoft Active Directory organization units (OU).
43. Software shall support the storage of credentials that can be pushed to Microsoft Active Directory.
44. Software shall support automatic password generation at a configurable interval while maintaining Microsoft Active Directory complexity requirements.

45. Software shall support the delivery of applications based on a user's assignment to a Microsoft Active Directory security group.
46. Software shall permit automatic launching of programs without operator input.
47. Software shall support the ability for a supervisor to access their authorized applications and desktop from any configured terminal.
48. Software shall support the ability to permit or deny users, or groups of users, access to applications unless suitably authorized and authenticated.
49. Software shall support blocking of interrupt key sequences such as CTL+ALT+DEL and CTL+ESC.
50. Local terminal USB ports shall not be connected to the server.
51. The Management Software shall be able to manage licensing within the central interface.
52. Licensing shall be flexible based on the number of clients managed on the network.
53. The number of servers managed as a part of the architecture shall not be restricted by the management software license.
54. It shall be possible to add more client licenses to the network without disturbing the connected clients.
55. There shall be a level of licensing which permits an unlimited number of clients to be connected and managed without the need to purchase additional client licenses.

**2.06 – COMPUTER WORK STATIONS**

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.07 – PRINTERS**

A. Quantity

1. Provide quantity as shown on Contract Drawing 00 DI-601.

B. All printers shall be Laser type color printer with scanner except one printer will be dot matrix type printer for alarms processing

C. Printers shall be capable of printing on letter (8.5” x 11”) or tabloid (11”x17”) sheets of paper. The printer shall accept paper fed manually or from one of two paper trays, each with a minimum capacity of 200 sheets. The printer shall print at least 35 pages of text per minute at a resolution of 1200 dpi or greater. The printer shall contain a minimum of 48 MB of on-board RAM, expandable to 320 MB. The report printer shall be a Hewlett Packard LaserJet P4015 series or equal.

D. Report printer(s) shall be provided with a 10/100/1000 Base-TX interface to provide connectivity to the computers over the Ethernet network

2.10 – NETWORK SERVERS

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.11 – SCADA EQUIPMENT RACK**

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.12 – TV MONITOR**

A. Provide in accordance with product sheets included in Attachment A of this section.

**2.13 - SPARE PARTS**

A. Provide recommended spare parts list with unit prices.

## PART 3 - EXECUTION

### 3.01 - INSTALLATION

A. Provide, install, test and commission SCADA Equipment and all peripheral devices necessary in accordance with the Contracts Documents.

B. The SI shall install, configure and setup all software packages provided.

### 3.02 - FIELD TESTING

A. Demonstrate system functional operation after completion of installation and prior to plant start up. Refer to SECTION 13331, CONTROL SYSTEM INTEGRATION for control system field testing requirements.

### 3.03 - CONTRACT CLOSEOUT

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

---

GENERAL

| | | | |
|---|---|---|---|
| 1. | Function | : | INTEGRATION OF PLC, HMI, NETOWRK, WORKSTATIONS & PERIPHERALS |
| 2. | Location | : | PART OF CONTROL SYSTEM |

SOFTWARE

| | | | |
|---|---|---|---|
| 3. | PLC Config | : | RSLOGIX 5000 STUDIO PROFESSIONAL EDITION. |
| 4. | HMI Config | : | ROCKWELL FACTORY TALK VIEW SE TO MATCH WHAT IS IN USE AT THE WATER DEPARTMENT. INCLUDE 5 YEARS SUPPORT STARTING 30 DAYS FROM CONTRACT NOTICE TO PROCEED |
| 5. | Historian | : | FACTORYTALK HISTORIAN SITE EDITION, 5000 ACTIVE POINTS |
| 6. | Virtual Software | : | VIRTUAL MACHINE VM WARE OR HYPER V |
| 7. | Thin Client | : | THIN MANAGER |
| 8. | Microsoft: | : | Microsoft Windows Server OEI-16 Core CAL – Data Center Version |

NOTES:

a. Provide all softwares as the most current release available at time of shop drawings submittals.

**UNINTERRUPTIBLE POWER SUPPLY**

---

DATA SHEET NO. 702.1

---

GENERAL

| | | | |
|---|---|---|---|
| 1. | Service | : | LINE POWER CONDITIONING AND BACKUP POWER FOR PLC/SCADA SYSTEM |
| 2. | Location | : | SERVER RACK, WWTF-PLC, WW.PS-1-PLC, WW.PS-2-PLC, WW.PS.3-PLC, WDV-PLC |
| 3. | Input Voltage | : | 208/120 VAC, 3/1 PHASE, 4 WIRE @ 60 HZ +/- 20% |
| 4. | Output Voltage | : | 208/120 VAC, 3/1 PHASE, 4 WIRE @ 60 HZ +/- 3% SINE WAVE, +/- 1% VOLTAGE BALANCE |
| 5. | Input Current Total Harmonic Distortion (THD): 3% AT 100% LOAD – 5% AT 50% LOAD | | |
| 6. | Output Voltage Harmonic Distortion: 2% MAX. AT 100% LOAD – 5% MAX. AT 50% LOAD | | |
| 7. | Power Factor | : | 0.90 AT 100% LOAD – 0.90 AT 50% LOAD |
| 8. | Operating Temp. | : | 50 TO 104 DEG. F. |
| 9. | Surge Protection | : | 6000 VOLT AND MEET IEEE C62.41 CATEGORIES A AND B |
| 10. | Backup Time | : | MINIMUM OF 10 MINUTES MINIMUM AT 120% OF FULL LOAD |
| 11. | KVA Size: | : | 10 KVA MINIMUM AND IN ACCORDANCE WITH SIZING CALCULATIONS REQUIREMENT SPECIFIED. |
| 12. | Low Battery Ind. | : | REQUIRED |
| 13. | Brownout Protection | : | REQUIRED |
| 14. | UPS Type | : | VOLTAGE REGULATION LINE INTERACTIVE |
| 15. | Efficiency | : | 92% MINIMUM |
| 16. | Transfer Time | : | LESS THAN ONE MILLISECOND |
| 17. | Communication | : | RS-232 AND MODBUS ETHERNET COMMINUCATION |
| 18. | Digital Display | : | TOUCH SCREEN |
| 19. | Local Alarms | : | LEDs AND AUDITABLE |
| 20. | Digital Alarm Contacts: | : | LOW BACKUP TIME, OVERLOAD, REPLACE BATTERY, LOW BATTERY, LOAD ON INVERTER, LOAD ON BYPASS LCD FAULT, UPS FUALT |
| 21. | Audible Noise | : | LESS THAN 50 dB @ 3 FT |
| 22. | Certificate | : | UL LISTING |

BATTERY

| | | | |
|---|---|---|---|
| 1. | Type | : | SEALED, LEAD ACID MAINTENANCE FREE |
| 2. | Battery Protection | : | THERMAL, OVERVOLTAGE AND OVERCURRENT |

MISCELLANEOUS

| | | | |
|---|---|---|---|
| 1. | Manufacturer(s) | : | EATON, BEST, SOLA, APC OR EQUAL |

NOTES.

a. Provide UPS system such that upon failure of the UPS feeder, batteries provided with UPS immediately take over as the power source.

b. Provide external bypass switch with three circuit breakers Make-Before-Break system. Provide bypass to isolate the UPS equipment for maintenance. Provide bypass with switch test so the switch may be tested without the risk of dropping the load caused by static switch failure.

c. Provide static transfer switch to transfer load upon loss of power at the output of the UPS.

d. Provide UPS sizing documentations in the shop drawing submittal. UPS shall supply power to PLCs, RIOs, SCADA severs, Thin Client nodes, network communications equipment workstations and field instruments. Provide sizing documentations analysis which are based on required load plus minimum of 10% spare capacity.

**ADDENDUM NO. 12**

**TO**

**DOCUMENTS AND SPECIFICATIONS**

**FOR**

**Downtown Area Wastewater Treatment Facility and Effluent Disposal**

**Contract No. 2019-01 and SRF No. 4486**

**Town of Orleans, MA**

**Department of Public Works & Natural Resources**

This Addendum No. 12 forms a part of the Contract Documents and modifies the Bidding Documents dated January 2020 as noted below. Acknowledge receipt of this Addendum in the space provided in SECTION 00410, FORM OF GENERAL BID. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of 2 pages and 0 pages of attachments for a total of 2 pages.

## ATTACHMENTS

None

## RESULTS OF SUBBIDS

1. Results of May 6, 2020 Sub-Bid Opening, as attached.

## CHANGES TO BE MADE TO THE CONTRACT SPECIFICATIONS

1. GENERAL

   A. General Bid Opening – May 13, 2020 at 2:00 p.m.

      General Bids will be received outside of Orleans' Town Hall. The Owner and/or their representatives will be outside the building to receive General Bids on May 13, 2020 starting at 8:00 a.m. The General Bids will be taken inside to be opened at 2:00 p.m. Access to the Orleans' Town Hall is restricted to the Owner and their representatives. The General Bid Opening will be broadcast live on Channel 18. The Channel 18 feed is also sent to the Owner's livestream on the Owner's webpage. Anyone can access the live feed using the link below.

      https://www.town.orleans.ma.us/orleans-18/pages/ch-18-vod-and-live-streaming-player

   B. PDF copies of the General Bids received, not including documents that are not allowed by law, will be available on the Owner's website within 7 calendar days of the bid opening.

2. SECTION 00410, FORM OF GENERAL BID

   A. Bidder shall complete, printout in Landscape Format, and submit the Proposal Form with a combination of typed and handwritten entries. Failure to utilize the Microsoft Excel Proposal Form shall void the bid.

   B. Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com).

3. SECTION 01025, MEASUREMENT AND PAYMENT

   A. Page 01025-7, PART IV - ALTERNATIVES, ITEM A-2 - FIBER OPTIC CONDUITS AND HANDHOLES,

      ITEM A-2 - FIBER OPTIC CONDUITS AND HANDHOLES

      A. General. The price bid under this Bid Item shall be considered as fair compensation for all labor, equipment, tools and materials necessary to complete the Work as specified, which shall include placement of conduits, handholes, fiber optic cable, radio communications as shown on the contract drawings and all other incidental Work relative thereto in place of providing radio communications at the WWTF, Pump Station No. 2 and Pump Station No. 3 as shown on the contract drawings and Pump Station No. 1 and Effluent Disposal Site (Addendum No. 5).

      B. Measurement. Measurement shall be made based on providing the Fiber Optic Conduits and Handholes, as approved by the Engineer. Contractor shall include: (a) the cost to provide (i.e. furnish, install, terminate and test fiber optic cable, etc.) fiber optic conduits, handholes and fiber optic cable at the WWTF Site and Effluent Disposal Site; and (b) the cost to provide (i.e. furnish, install, terminate and test fiber optic cable, etc.) fiber optic cable in the fiber optic conduits and handholes installed as part of Contract No. 2019-02 , Downtown Area Collection System and Pumping Stations.

      C. Payment. Payment for Fiber Optic Conduits, Handholes and Fiber Optic Cable listed in DOCUMENT 00410, FORM FOR GENERAL BID shall be made at the lump sum bid under the Bid Item.

4. SECTION 02520, WICK CONSTRUCTION AND TESTING

   A. Page 02520-6, ARTICLE 1.07 – WARRANTY, Paragraph C., delete the paragraph in its entirety and replace with the following new paragraph:

      C. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract. The Contractor will be responsible for execution of warranties during the warranty period should the need arise.

**CHANGES TO BE MADE TO THE CONTRACT DRAWINGS**

**END OF ADDENDUM NO. 12**

**SECTION 00100**

**ADVERTISEMENT FOR BIDS**

**TOWN OF ORLEANS, MASSACHUSETTS**

**DOWNTOWN AREA WWTF AND EFFLUENT DISPOSAL**

**CONTRACT NO. 2019-01 AND SRF NO. 4486**

1. The Town of Orleans, MA acting through the Town of Orleans Town Administrator will receive sealed bids for Downtown Area WWTF and Effluent Disposal, Contract No.2019-01 and SRF No. 4486. The scope of work includes constructing: (a) 350,000 gpd Sequence Batch Reactor Wastewater Treatment Facility located at 20 Overland Way; (b) effluent disposal with five 5 wick wells located at 34 Lots Hollow Road; and (c) and all appurtenances as specified and/or as shown on the drawings in order to provide wastewater service to the Downtown Area of Orleans, MA.

2. The Work of the Project shall be completed shall be completed within 654 calendar days following execution of the Contract Document using not more than 411 working days.

3. Bids

   a. Sealed General Bids from pre-qualified General Contractors will be received at the Town Administrator's Office, Orleans Town Hall, 19 School Road, Orleans, Massachusetts, 02653 until 2:00 p.m. prevailing time, on May 13, 2020 at which time and place said bids will be publicly opened and read aloud. Any bid received after this date and time will be returned to the applicant unopened. No exceptions will be made. Faxed/emailed bids will not be accepted.

      Unforeseen Office Closure – if, at the time of the scheduled bid opening, Orleans Town Hall is closed due to uncontrolled events such as fire, snow, ice, wind, or building evacuation, the bid opening will be postponed until 2:00 p.m. on the next normal business day. Bids will be accepted until that date and time.

      Bids must be submitted in a sealed envelope indicating the applicant's name and address and clearly marked "General Bid for "Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486".

      In accordance with MGL c.149, s44D, Bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the category of Sewage Treatment Plant Contractor. An Update Statement (Form CQ3) covering the period from the date of the Bidder's most recently filed Contractor Qualification Statement (CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT.

      Only Bids from pre-qualified General Contractors shall be accepted by the Awarding Authority.

   b. Sealed Sub-Bids from pre-qualified Subcontractors will be received at the Town Administrator's Office, Orleans Town Hall, 19 School Road, Orleans, Massachusetts, 02653 until 11:00 a.m. prevailing time, on May 6, 2020 at which time and place said bids will be publicly opened and read aloud. Any bid received after this date and time will be returned to the applicant unopened. No exceptions will be made. Faxed/emailed bids will not be accepted.

      Unforeseen Office Closure – if, at the time of the scheduled bid opening, Orleans Town Hall is closed due to uncontrolled events such as fire, snow, ice, wind, or building evacuation, the bid opening will be postponed until 2:00 p.m. on the next normal business day. Bids will be accepted until that date and time.

      Bids must be submitted in a sealed envelope indicating the applicant's name and address and clearly marked "Sub-Bid for "Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486". In addition, the sealed envelope shall indicate the applicable Sub-Bid Category.

      In accordance with MGL c.149, s44D, Sub-bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the applicable subbid category noted below. An Update Statement (Form CQ3) covering the period from the date of the Subbidder's most recently filed Contractor Qualification Statement

(CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT.

Only Sub-Bids from prequalified Filed Sub-Bid Subcontractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

- Masonry
- Miscellaneous Metal Work
- Roofing and Flashing
- Metal Windows
- Glass and Glazing
- Painting
- Plumbing
- Heating, Ventilating and Air Conditioning
- Electrical Work

Sub-Bids from Filed Sub-Bid Subcontractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

- Waterproofing and Dampproofing
- Tile
- Fire Protection

4. Bidding Documents may be obtained electronically from the office of the Tighe & Bond, Inc.'s (Owner's Project Manager) website at: http://www.tighebond.com/Projects_Out_to_Bid.php.

   Prospective bidders must complete a one-time registration process on the web site in order to receive log-in credentials. Bidders must log in to the web site to download bidding documents for the project. Bidders will be added to the "plan holders" or prospective bidders list upon downloading the bidding documents for the project.

   Partial sets of Bidding Documents will not be provided by the Owner, Owner's Project Manager nor Engineer. Neither OWNER, Owner's Project Manager nor Engineer will be responsible for full or partial sets of the Contract Documents, including Addenda, if any, obtained from sources other than the Issuing Office. Contract Documents will be available for distribution on February 5, 2020.

   The Instructions to Bidders, Form of General Bid, Agreement, Plans, Specifications, Performance and Payment Bond, and other Contract Documents may be examined between the hours of 9:00 am and 3:00 pm at AECOM Technical Services, Inc., 9 Jonathan Bourne Drive, Pocasset, Massachusetts 02559.

   Interpretations or clarifications to questions (submitted through Tighe & Bond, Inc.'s website in writing - typed, not handwritten), considered necessary by Engineer in response to such questions will be issued by Addenda delivered to all parties recorded as having received the Bidding Documents. Questions received less than seven days prior to the date for opening of Bids may not be answered.

5. A non-mandatory Pre-bid Conference will be held on February 20, 2020 at the Orleans Town Hall, 19 School Road, Orleans, Massachusetts, 02653 at 1:00 p.m. prevailing time. Bidders will have an opportunity to view the site of the work during the non-mandatory Pre-bid Conference.

6. Each bid must be accompanied by a five (5) Percent Bid Security in the form of a bid bond, cash, certified check, treasurer's or cashier's check payable to the Owner in the amount of five percent of the bid, in accordance with SECTION 00200 - INSTRUCTIONS TO BIDDERS. If, upon acceptance of a Bid, a Bidder fails to enter into a Contract with the Town of Orleans, MA, the bid security shall be forfeited to and become the property of the Town of Orleans, MA.

   Contract payment will be by the unit price method and the lump sum price method as indicated on the Bid Proposal. No Bidder may withdraw his/her Bid prior to June 30, 2020 or the date of award whichever shall occur first.

   The successful Bidder must furnish a 100 percent Performance Bond and a 100 percent Payment Bond with a surety company satisfactory to the Town of Orleans, MA and conforming to SECTION 00610, PERFORMANCE BOND and SECTION 00615, PAYMENT BOND.

All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all subbid categories including the categories in which less than three subcontractors were prequalified. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

All bids for this project are subject to applicable bidding laws of Massachusetts, including General Laws Chapter 149, Section 44A through Section 44J, as amended.

7. Prevailing Wage Rates as determined by the Commissioner of Department of Workforce Development under the provision of the Massachusetts General Laws, Chapter 149, Sections 26 to 27D, as amended, apply to this project.

   The Prevailing Wage Rates for those trades people who may be employed for the proposed installation work under this contract is included in the Bid documents. Prevailing Wage Rates for this project were obtain and are included in Document 00830 under Attachment A.

   A weekly certified payroll submittal shall be required of the successful bidder in accordance with MGL C149, S27B. No payments will be made by the Town of Orleans, MA until all payroll information necessary for the Town to determine compliance with prevailing wage law requirements for the time period of the payment request have been submitted.

8. Bidders are not to include in their Bid Proposal sales and compensating use taxes on materials and supplies purchased for this project. All materials used are tax exempt.

9. This Contract to be awarded as the result of this Advertisement for Bids is funded in part through the Massachusetts Department of Environmental Protection, Bureau of Resource Protection, by loans from the Massachusetts Clean Water Trust. This Contract will be subject to the Department of Environmental Protection regulations contained in 310 CMR 44.00, "DEP Selection, Approval and Regulation of Water Pollution Abatement Projects Receiving Financial Assistance from the State Revolving Fund" in effect on the date of issuance of the assistance award (DEP Project Approval Certificate) by the Department.

10. Disadvantaged Business Enterprise (DBE) goals are applicable to the total dollars paid to the construction contract. The goals for this project are a minimum of 4.2 percent D/MBE participation and 4.5 percent D/WBE participation by certified DBEs. The two low bidders shall submit completed DBE forms (EEO-DEP-190C, EEO-DEP-191C and the DBE Certification of United States Citizenship form) by the close of business on the third business day after bid opening. Failure to comply with the requirements of this paragraph may be deemed to render a proposal non-responsive. No waiver of any provision of this section will be granted unless approved by the Department of Environmental Protection (MassDEP)."

11. Bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the category of Sewage Treatment Plant Contractor. An Update Statement form covering the period from the date of the Bidder's most recently filed Contractor Qualification Statement (CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT. The project does not require the Contractor to have MassDOT Highway Division Certification.

12. The Project requires compliance with the Massachusetts Diesel Retrofit Program (MDRP) by use of engine emission controls that are EPA certified, or their equivalent, on the off-road (non-registered) diesel vehicles/equipment used at the job site. Bidders must submit a signed and dated Statement of Intent to Comply as part of their Bid Proposal Document. Failure to comply with these MassDEP requirements may be deemed to render a proposal nonresponsive. No waiver of any provision of these MassDEP requirements will be granted unless approved by the MassDEP.

13. The Contractor shall not discriminate about the personnel employed on this project on the basis of race, color, creed, national origin, gender, sexual preference, handicap or age.

14. The Owner reserves the right to award the Project subject to appropriation.

15. The Town of Orleans, MA reserves the right to accept and/or reject any and all bids and to waive any informalities to the extent allowed by law, and to make the award as deemed to be in the best interest of the Town.

Town of Orleans, MA

John F. Kelly, Orleans Town Administrator

**1.01 RECEIPT AMD OPENING OF BIDS**

A. Town of Orleans, MA herein called the OWNER, will receive sealed Bids for the Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486.

B. Sealed General Bids from pre-qualified General Contractors will be received at the Town Administrator's Office, Orleans Town Hall, 19 School Road, Orleans, Massachusetts, 02653 until 2:00 p.m. prevailing time, on May 13, 2020 at which time and place said bids will be publicly opened and read aloud. Any bid received after this date and time will be returned to the applicant unopened. No exceptions will be made. Faxed/emailed bids will not be accepted.

Bids must be submitted in a sealed envelope indicating the applicant's name and address and clearly marked "General Bid for Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486".

Bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the category of Sewage Treatment Plant Contractor. An Update Statement form covering the period from the date of the Bidder's most recently filed Contractor Qualification Statement (CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT.

Only Bids from pre-qualified General Contractors shall be accepted by the Awarding Authority.

C. Sealed Sub-Bids from pre-qualified Subcontractors will be received at the Town Administrator's Office, Orleans Town Hall, 19 School Road, Orleans, Massachusetts, 02653 until 11:00 a.m. prevailing time, on May 6, 2020 at which time and place said bids will be publicly opened and read aloud. Any bid received after this date and time will be returned to the applicant unopened. No exceptions will be made. Faxed/emailed bids will not be accepted.

Bids must be submitted in a sealed envelope indicating the applicant's name and address and clearly marked "Sub-Bid for Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486". In addition, the sealed envelope shall indicate the applicable Sub-Bid Category.

Sub-bidders are advised that their Bids must be accompanied by a copy of their Certificate of Eligibility issued by the Commissioner of the Division of Capital Asset Management and Maintenance. The Certificate of Eligibility shall be for the applicable subbid category. An Update Statement form covering the period from the date of the Sub-bidder's most recently filed Contractor Qualification Statement (CQS) to the Bid date shall also be submitted with the Bid. A form for the Update Statement is provided in the Contract Documents, as DOCUMENT 00305, UPDATE STATEMENT.

Only Sub-Bids from prequalified Filed Sub-Bid Subcontractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

- Masonry
- Miscellaneous Metal Work
- Roofing and Flashing
- Metal Windows
- Glass and Glazing
- Painting
- Plumbing
- Heating, Ventilating and Air Conditioning
- Electrical Work

Sub-Bids from Prequalified Filed Subcontractors and Other DCAM Certified Sub-Contractors shall be accepted by the Awarding Authority for the following Sub-Bid Categories:

- Waterproofing and Dampproofing
- Fire Protection
- Tile

D. Unforeseen Office Closure – if, at the time of the scheduled bid opening, Orleans Town Hall is closed due to uncontrolled events such as fire, snow, ice, wind, or building evacuation, the bid opening will be postponed until 9:00 a.m. on the next normal business day. Bids will be accepted until that date and time.

E. Any bid may be withdrawn prior to the above scheduled time for the opening of bids or authorized postponement thereof. Any bid received after the time and date specified will not be considered. By submission of a bid, the bidder agrees that this bid shall be good and may not be withdrawn for the number of days, after the opening of bids, as stipulated in the FORM OF GENERAL BID.

F. A non-mandatory Pre-Bid Conference will be held on February 20, 2020 at 9:00 am at the Town of Orleans, 19 School Road, Orleans, MA 02653. Refer to the attached Attendance List

**1.02 LOCATION AND WORK TO BE DONE**

A. The location, general characteristics, and principal details of the Work are indicated on a set of drawings titled "Downtown Area WWTF and Effluent Disposal".

B. Additional drawings showing details in accordance with which the Work is to be done may be furnished by addendum from time to time during the bidding period by the Engineer and shall then become a part of the Contract Documents.

C. The Contractor shall furnish all superintendence, labor, services, materials, equipment, plant, machinery, apparatus, appliances, tools, supplies, bailing, shoring, removal, and all other things necessary to do all work required for the completion of each item of the Work and as herein specified.

D. The Work to be done and paid for under any item shall not be limited to the exact extent mentioned or described but shall include all incidental work necessary or customarily done for the completion of that item.

**1.03 PREPARATION OF BID**

A. General Bids

1. Each bid must be submitted on the prescribed form in SECTION 00410, FORM OF GENERAL BID. All blank spaces for bid prices must be filled in, in ink or typewritten, in both words and figures.

2. Enclosed with the bid shall be the following:

a. Microsoft Excel Proposal Form (hard copy in Landscape Format). Submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com).

b. Bid Security (5%).

c. Completed and signed Bid Proposal, SECTION 00410, FORM OF GENERAL BID– Page 00410-1 through Page 00410-7, inclusive.

d. Insurance Requirements for Inclusion in All Specifications and Contracts – Provide a letter from bidder's insurance company(s) documenting ability to obtain the specified minimum insurance limits.

e. Statement of State Tax Compliance.

f. Certificate of Non-Collusion.

g. Acknowledgement of Principal, if a Corporation.

h. Acknowledgement of Principal, if a Partnership.

i. Certification of OSHA 10-Hour Training.

j. Division of Capital Asset Management and Maintenance

1) Certificate of Eligibility

2) Update Statement (Form CQ3)

k. Massachusetts Department of Environmental Protection's Diesel Retrofit Program Statement of Intent to Comply - Appendix B - Diesel Retrofit Program. To be provided by the Lowest Responsive and Responsible Bidder within five business days of the bid opening.

l. Appendix E - Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services. To be provided by the Lowest Responsive and Responsible Bidder within five business days of the bid opening.

3. Each General Bid must be submitted in a sealed envelope indicating the bidder's name and address and clearly marked "General Bid for Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486".

4. If forwarded by mail, the sealed envelope containing the bid must be enclosed in another envelope addressed as specified in Receipt and Opening of Bids, above.

B. Sub-Bids

1. Each sib-bid must be submitted on the prescribed form in SECTION 00420, FORM OF SUB- BID. All blank spaces for bid prices must be filled in, in ink or typewritten, in both words and figures.

2. Enclosed with the bid shall be the following:

a. Microsoft Excel Proposal Form (hard copy in Landscape Format and ".xlsm" format copy on Thumb Drive);

b. Bid Security (5%);

c. Completed and signed Bid Proposal and Project Reference List;

d. Not Used

e. Statement of State Tax Compliance;

f. Certificate of Non-Collusion;

g. Acknowledgement of Principal, if a Corporation;

h. Acknowledgement of Principal, if a Partnership; and

i. Certification of OSHA 10-Hour Training.

j. Division of Capital Asset Management and Maintenance

1) Certificate of Eligibility

2) Update Statement (Form CQ3)

3) Contractor Qualification Statement (CQS)

k. Massachusetts Department of Environmental Protection's Diesel Retrofit Program Statement of Intent to Comply - Appendix B - Diesel Retrofit Program

l. Not used

3. Each Sub-Bid must be submitted in a sealed envelope indicating the applicant's name and address and clearly marked "Sub-Bid for Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486". In addition, the sealed envelope shall indicate the applicable Sub-Bid Category.

4. If forwarded by mail, the sealed envelope containing the bid must be enclosed in another envelope addressed as specified in Receipt and Opening of Bids, above.

C. In accordance with M.G.L. Chapter 149 Section 44D-1/2 and 44 D-3/4, the following General Contractors and Filed Subcontractors have been prequalified to submit Bids on this Project:

**General Contractors**

**1.04 MODIFICATION OF BIDS**

A. Any bidder may modify its bid by email at any time prior to the scheduled closing time for receipt of bids, provided such transmission is received by the OWNER prior to the closing time, and, provided further, the OWNER is satisfied that a written confirmation of the modification over the signature of the bidder was mailed prior to the closing time. Email bid modifications to jkelly@town.orleans.ma.us.

B. The modification communication shall not reveal the bid price but shall provide the addition or subtraction or other modification so that the final prices or terms will not be known by the Owner until the sealed bid is opened. If written confirmation is not received within two days prior to the closing time, no consideration will be given to the email transmission.

**1.05 OBLIGATION OF BIDDER**

A. At the time of the opening of bids each bidder will be presumed to have inspected the site and to have read and to be thoroughly familiar with the Contract Documents (including all addenda). The failure or omission of any bidder to examine any form, instrument, or document shall in no way relieve any bidder from any obligation in respect of its bid.

**1.06 INFORMATION NOT GUARANTEED**

A. All information given in the Contract Documents relating to subsurface and other conditions, natural phenomena, existing pipes, and other structures is from the best sources at present available to the Owner. All such information is furnished only for the information and convenience of bidders and is not guaranteed.

B. It is agreed and understood that the OWNER does not warrant or guarantee that the subsurface or other conditions, natural phenomena, existing pipes, or other structures encountered during construction will be the same as those indicated in the Contract Documents.

C. It is further agreed and understood that no bidder or Contractor shall use or be entitled to use any of the information made available to it or obtained in any examination made by it in any manner as a basis of or grounds for any claim or demand against the Owner or the Engineer, arising from or by reason of any variance which may exist between the information made available and the actual subsurface or other conditions, natural phenomena, existing pipes or other structures actually encountered during the construction work, except as may otherwise be expressly provided for in the Contract Documents.

**1.07 BID SECURITY**

A. Each bid must be accompanied by a certified check, a bid bond, cash, a treasurer's or cashier's check, payable to the OWNER, in the amount stated in SECTION 00100 - ADVERTISEMENT FOR BIDS. Such deposits will be returned to all except the three lowest responsible and eligible bidders within five days, Saturdays, Sundays, and legal holidays excluded, after the opening of bids, and the remaining deposits will be returned promptly after the OWNER and the accepted bidder have executed the Contract, or if no notice of intent to award has been presented to any bidder within 30 days, Saturdays, Sundays and legal holidays excluded, after the date of the opening of bids, upon demand of the bidder at any time thereafter.

**1.08 TIME FOR COMPLETION**

A. The bidder must agree to commence work on or before a date to be specified in the written "Notice to Proceed" from the OWNER and to fully complete the project within the time limit stated in SECTION 00410, FORM OF GENERAL BID.

**1.09 ADDENDA AND INTERPRETATIONS**

A. No interpretation of the meaning of the plans, specifications or other pre-bid documents will be made to any bidder orally, and if provided orally, shall not be relied upon by bidders unless confirmed in a written addendum. All information given to bidders other than by means of the plans, specifications, or by addenda, as described below, is given informally and shall not be used as the basis of a claim against the OWNER or the ENGINEER.

B. Every request for such interpretation should be in writing (typed, not handwritten) addressed to AECOM, Attention: Martin “Reggie” Donoghue, P.E.,9 Jonathan Bourne Drive, Pocasset, Massachusetts 02559, , or sent via email at Martin.Donoghue@aecom.com and to be given consideration must be received at least seven working days prior to the date fixed for the opening of bids.

C. Addenda will be emailed to all prospective bidders to email addresses furnished by them for such purposes. Bidders picking up sets of bid documents will be given all addenda issued to date and will be required to sign for all documents, acknowledging receipt.

D. Failure of any bidder to receive any such addendum or interpretation shall not relieve such bidder from any obligation under its bid as submitted and each bidder must confirm for itself that it has received all addenda. All addenda so issued shall become part of the Contract Documents.

**1.10 BID OPENING PROCEDURE**

A. The following list of requirements shall be met by each filed bid.

B. Bids shall be filed at the place and before the time specified in Receipt and Opening of Bids, above.

C. The bid and all accompanying documents so required shall be signed by the Bidder or its authorized representative before submission.

D. All bidders shall include with their bids written acknowledgment of receipt of all addenda. Refer to acknowledgment form provided in SECTION 00410, FORM OF GENERAL BID or SECTION 00420, FORM OF SUB-BID.

E. The total dollar amount of each bid will be read, and the three apparent lowest bids will be selected for further consideration. These three apparent low bids will be read aloud for the benefit of the other bidders and the bid opening procedure will be closed. All those present at the bid opening may examine all bids after the bid opening and after the reading of the three apparent low bids.

**1.11 COMPARISON OF BIDS**

A. General Bids

1) General Bids will be compared on the basis of the quantities and unit and lump sum prices stated in the bid forms.

2) In the event that there is a discrepancy in SECTION 00410, FORM OF GENERAL BID between the lump sum or unit prices written in words and figures, the prices written in words will govern.

3) The Owner agrees to examine and consider each SECTION 00410, FORM OF GENERAL BID submitted in accordance with the terms and conditions set forth herein and as set forth in SECTION 00410, FORM OF GENERAL BID.

B. Sub-Bids

1) Sub-Bids will be compared on the basis of the quantities and unit and lump sum prices stated in the bid forms.

2) In the event that there is a discrepancy in SECTION 00420, FORM OF SUB-BID between the lump sum or unit prices written in words and figures, the prices written in words will govern.

3) The Owner agrees to examine and consider each SECTION 00420, FORM OF SUB-BID submitted in accordance with the terms and conditions set forth herein and as set forth in SECTION 00420, FORM OF SUB-BID.

**1.12 STATUTES REGULATING COMPETITIVE BIDDING**

A. Any bid, which does not comply with the provisions of Massachusetts, including General Laws Chapter 149, Section 44A through Section 44J, as amended, need not be accepted and the OWNER may reject every such bid.

**1.13 RIGHT TO REJECT BID**

A. The OWNER may consider informal any bid not prepared and submitted in accordance with the provisions hereof and may waive any informalities or reject any and all bids, should the OWNER deem it to be in the public interest to do so.

B. The OWNER may also reject bids which in its sole judgment are either incomplete, conditional, obscure or not responsive or which contain additions not called for, erasures not properly initialed, alterations, or similar irregularities, and may reject bids for any other reason permitted by law, or the OWNER may waive such omissions, conditions or irregularities.

**1.14 ABILITY AND EXPERIENCE OF BIDDER**

A. No award will be made to any bidder who cannot satisfy the OWNER that he has sufficient ability and experience in this class of work and sufficient capital and plant to enable him to prosecute and complete the work successfully within the time named. The OWNER's decision or judgment on these matters will be final, conclusive, and binding to the fullest extent permitted by law.

B. The OWNER may make such investigations as it deems necessary, and the bidder shall furnish to the OWNER, under oath if so required, all such information and data for this purpose as the OWNER may request.

**1.15 CONDITIONS OF WORK**

A. Each bidder must inform itself fully of the conditions relating to the construction of the project and the employment of labor thereon. Failure to do so will not relieve a successful bidder of its obligation to furnish all material and labor necessary to carry out the provisions of its contract. Insofar as possible the CONTRACTOR, in carrying out its work, must employ such methods or means as will not cause any interruption of or interference with the work of any other contractor.

**1.16 SECURITY FOR FAITHFUL PERFORMANCE**

A. Simultaneously with his delivery of the executed Contract, the CONTRACTOR shall furnish a surety bond or bonds as security for faithful performance of this Contract and for the payment of all persons performing labor and materials under this Contract as specified in SECTION - 00700, GENERAL CONDITIONS included herein, each in the amount of 100 percent of its bid. The surety on such bond or bonds shall be a surety company qualified to do business under the laws of the Commonwealth and satisfactory to the OWNER. The bonds shall remain in force for one year after final acceptance of the work by the OWNER, unless the OWNER, in writing, releases the CONTRACTOR from the obligation sooner.

**1.17 POWER OF ATTORNEY**

A. Attorneys-in-fact who sign Contract bonds must file with each bond a certified and effectively dated copy of their power of attorney.

**1.18 LAWS AND REGULATIONS**

A. Applicable provisions of Massachusetts General Laws and Regulations and/or the United States Code and Code of Federal Regulations govern this Contract and any provision in violation of the foregoing shall be deemed null, void and of no effect. Where conflict between Code of Federal Regulations and State Laws and Regulations exist, the more stringent requirement shall apply

B. The bidder's attention is directed to the fact that all applicable State laws, municipal ordinances, and the rules and regulations of all authorities having jurisdiction over construction of the project shall apply to the Contract throughout, and they will be deemed to be included in the Contract the same as though herein written out in full.

C. Attention is directed to SECTION 00830 - STATE REGULATIONS and to other applicable sections of this specification. In the event of any conflict between provisions of law or regulation quoted or paraphrased in the Contract Documents, the actual provisions of law or regulation shall control.

D. Whenever it is written that an equipment manufacturer must have a specified period of experience with its product, equipment which does not meet the specified experience period can be considered, if the equipment supplier or manufacturer is willing to provide an Letter of Credit or cash deposit for the duration of the specified time period which will guarantee replacement of that equipment in the event of failure.

**1.19 LIQUIDATED DAMAGES FOR FAILURE TO ENTER INTO CONTRACT**

A. The successful bidder, upon its failure or refusal to execute and deliver the Contract, Bonds and Certificates of Insurance required within 10 days after receipt of notice of the acceptance of the bid, shall, except as otherwise provided by applicable law, forfeit to the OWNER, as liquidated damages for such failure or refusal, the security deposited with its bid, provided that the amount forfeited shall not exceed the difference between its bid price and the bid price of the next lowest responsible and eligible bidder.

B. In case of death, disability, bonafide clerical or mechanical error of a substantial nature, or other similar unforeseen circumstances affecting the bidder, its bid deposit will be returned.

**1.20 INDETERMINATE ITEMS AND ESTIMATED QUANTITIES**

A. The work to be done under this Contract has been divided into parts or items, if applicable, to enable each bidder to bid on different portions of the work in accordance with its estimate of their cost and so that the actual quantity of work executed under each item may be paid for at the price bid for that particular item, even though each bidder may have judged that such quantity may be greater or less than the estimated quantity stated in SECTION 00410 - FORM OF GENERAL BID.

**1.21 CONTRACTOR RECORDS**

A. The CONTRACTOR shall comply with the provisions of Massachusetts General Laws, Chapter 30, Section 39R, concerning CONTRACTOR records. This section has been reprinted in Section 00830, STATE REGULATIONS.

**1.22 MINIMUM WAGE RATES – BIDDER'S RESPONSIBILITY**

A. Minimum Wage Rates as determined by the Commissioner of Department of Workforce Development under the provision of the Massachusetts General Laws, Chapter 149, Sections 26 to 27D, as amended, apply to this project. It is the responsibility of the contractor, before bid opening, to request if necessary, any additional information on Minimum Wage Rates for those

trades people who may be employed for the proposed work under this contract. Federal Minimum Wage Rates as determined by the United States Department of Labor under the Davis-Bacon Act also apply to this project.

B. It is the responsibility of the Bidder, before bid opening, to request if necessary, any additional information on Minimum Wage Rates for those trades people who may be employed for the proposed work under this contract.

**1.23 BIDDER CERTIFICATION – OSHA TRAINING**

A. All employees who work on Massachusetts public works construction sites, on projects estimated to cost more than $10,000, must have no less than ten (10) hours of OSHA- approved safety and health training.

B. The Massachusetts Attorney General is authorized to restrain award of construction contracts to any contractor who is in violation of this requirement and to restrain the performance of these contracts by non-complying contractors.

C. Noncompliance with this law will disqualify contractors from bidding on public contracts.

**1.24 SALES TAX EXEMPTION**

A. Materials and equipment purchased for permanent installation in this project will be exempt from the Massachusetts Sales and Use Tax. The exemption certificate number will be furnished to the Contractor. Each bidder shall take exemption into account in calculating his/her bid for the work.

**1.25 GUARANTEE**

A. The Contractor guarantees that the Work and Services to be performed under the Contract, and all workmanship, materials and equipment performed, furnished, used or installed in the construction of the same shall be free from defects and flaws, and shall be performed and furnished in strict accordance with the Drawings, Specifications, and other contract documents, that the strength of all parts of all manufactured equipment shall be adequate and as specified and that the performance test requirements of the Contract shall be fulfilled. This guarantee shall be for a period of one year from and after the date of completion and acceptance of the Work as stated in the final estimate. If part of the Work is accepted in accordance with that subsection of this AGREEMENT titled "Partial Acceptance", the guarantee for that part of the Work shall be for a period of one year from the date fixed for such acceptance.

B. If at any time within the said period of guarantee any part of the Work requires repairing, correction or replacement, the Owner may notify the Contractor in writing to make the required repairs, correction or replacements. If the Contractor neglects to commence making such repairs, corrections or replacements to the satisfaction of the Owner within seven (7) days from the date of receipt of such notice, or having commenced fails to prosecute such Work with diligence, the Owner may employ other persons to make said repairs, correction or replacements, and charge the costs, including compensation for additional professional services, to the Contractor.

C. It is expressly understood, however, that these guarantee provisions shall not absolve the Contractor from any liability to the Owner arising out of a failure to substantially complete the work in accordance with the Drawings and Specifications.

**1.26 BONDING AND INSURANCE**

A. The Contractor must furnish Performance and Payment Bonds, each of which shall be in an amount not less than one hundred (100) percent of the contract price. Contractors should obtain such construction insurance (e.g., Fire and Extended Coverage, Workmen's Compensation, Public Liability and Property Damage, and "All Risk" Builder's Risk) as indicated in the Supplemental Conditions (Section 00800).

**1.27 HEALTH AND SAFETY REGULATIONS**

A. This project is subject to all the Health and Safety Regulations (CFR 29 Part 1926 and all subsequent amendments) as promulgated by the U.S. Department of Labor on June 24, 1974. Contractors are urged to become familiar with the requirements of these regulations, as well as the Occupational Safety and Health Administration's (OSHA) 29 CFR 1910.120.

**1.28 BUY AMERICAN**

A. This project is subject to the American Iron and Steel requirements of P.L. 113-76, the Consolidated Appropriations Act of 2014.

**1.29 ACCESS TO THE PROJECT**

A. The successful Bidder shall provide full and complete access to the project site or any portion thereof by any authorized agent of the Town of Orleans any time during normal working hours throughout the duration of the Contract.

**1.30 TRAFFIC POLICE**

A. Traffic control, when required by the Chief of Police or the Owner, will be paid for by the Owner. The Contractor is required to directly coordinate all Police details.

B. Any police overtime expenses incurred by the Town due to the Contractor working longer than the specified normal workday (ten consecutive hours, Sundays, or holidays) shall be the responsibility of the Contractor, the cost of which will be deducted from the monthly pay requisition. The Contractor will also be charged for any police expenses when police coverage is requested or scheduled in advance by the Contractor, but the Contractor does not work.

**1.31 THIRD PARTY WORK**

A. The Contractor is responsible for maintaining a safe and secure worksite at all times, and for expeditiously repairing any damage done to private property. If, in the opinion of the Owner, the Contractor is negligent in these duties the Owner shall have the right to employ a third party to remedy the problem.

B. Situations which develop and require the services of and payment to a third party will be handled in the following manner:

1) The Contractor will be given a reasonable period of time determined at the discretion of the Owner to remedy the situation without third party involvement. If the Contractor is unavailable, the Owner will authorize work by a third party on the Contractor's behalf;

2) Third party work authorized on the Contractor's behalf by the Owner shall be paid for by the Contractor within a reasonable time period (generally two weeks). If payment is not made within a reasonable time period the Owner will make payment and deduct the cost from the next pay requisition; and

3) In the case of inadequately secured worksites necessitating extra or increase police details or other public safety personnel, the following procedure will be followed. The Contractor (if available) will be notified that the worksite needs to be secured in order to prevent the need for weekend/night police coverage. If the area is not immediately secured as determined by the Owner or Engineer, a police, fire, or highway department detail will be used and the Contractor will be charged for the cost. It is understood that in many instances worksites cannot realistically be secured to a point where police or other safety personnel are not needed. In these instances, the Owner will continue to pay for the coverages.

**1.32 AWARDING AUTHORITY AND PROJECT ADMINISTRATOR**

A. The Awarding Authority for this Project is the Town of Orleans, MA, acting through John Kelly, Town Administrator, 19 School Road, Orleans, MA 02653.

B. The Project Administrator for this Project is the Town of Orleans acting through Thomas Daley, Director of Public Works & Natural Resources, 40 Giddiah Hill Road, Orleans, MA 02653.

**1.33 SAFETY AND HEALTH REGULATIONS**

A. This project is subject to the Safety and Health Regulations of the U.S. Department of Labor set forth in Title 29 CFR, Part 1926 and to all subsequent amendments, and to any applicable Massachusetts regulations. Contractors shall be familiar with the requirements of these regulations.

**1.34 MANUFACTURER'S EXPERIENCE**

A. Whenever it is written that an equipment manufacturer must have a specified period of experience with his product, equipment which does not meet the specified experience period can be considered if the equipment supplier or manufacturer is willing to provide an "Efficiency Guarantee Bond" or cash deposit for the duration of the specified time period which will guarantee replacement of that equipment in the event of failure.

**1.35 DIESEL RETROFIT PROGRAM**

A. This project is subject to the requirements of the Department of Environmental Protection's Diesel Retrofit Program. Bidders must submit a signed and dated Statement of Intent to Comply form as part of their bid proposal documents.

EJCDC ENGINEERS JOINT CONTRACT DOCUMENTS COMMITTEE

PENAL SUM FORM

1. Bidder and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors, and assigns to pay to Owner upon default of Bidder the penal sum set forth on the face of this Bond. Payment of the penal sum is the extent of Bidder's and Surety's liability. Recovery of such penal sum under the terms of this Bond shall be Owner's sole and exclusive remedy upon default of Bidder.

2. Default of Bidder shall occur upon the failure of Bidder to deliver within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents.

3. This obligation shall be null and void if:

   3.1 Owner accepts Bidder's Bid and Bidder delivers within the time required by the Bidding Documents (or any extension thereof agreed to in writing by Owner) the executed Agreement required by the Bidding Documents and any performance and payment bonds required by the Bidding Documents, or

   3.2 All Bids are rejected by Owner, or

   3.3 Owner fails to issue a Notice of Award to Bidder within the time specified in the Bidding Documents (or any extension thereof agreed to in writing by Bidder and, if applicable, consented to by Surety when required by Paragraph 5 hereof).

4. Payment under this Bond will be due and payable upon default of Bidder and within 30 calendar days after receipt by Bidder and Surety of written notice of default from Owner, which notice will be given with reasonable promptness, identifying this Bond and the Project and including a statement of the amount due.

5. Surety waives notice of any and all defenses based on or arising out of any time extension to issue Notice of Award agreed to in writing by Owner and Bidder, provided that the total time for issuing Notice of Award including extensions shall not in the aggregate exceed 120 days from the Bid due date without Surety's written consent.

6. No suit or action shall be commenced under this Bond prior to 30 calendar days after the notice of default required in Paragraph 4 above is received by Bidder and Surety and in no case later than one year after the Bid due date.

7. Any suit or action under this Bond shall be commenced only in a court of competent jurisdiction located in the state in which the Project is located.

8. Notices required hereunder shall be in writing and sent to Bidder and Surety at their respective addresses shown on the face of this Bond. Such notices may be sent by personal delivery, commercial courier, or by United States Registered or Certified Mail, return receipt requested, postage pre-paid, and shall be deemed to be effective upon receipt by the party concerned.

9. Surety shall cause to be attached to this Bond a current and effective Power of Attorney evidencing the authority of the officer, agent, or representative who executed this Bond on behalf of Surety to execute, seal, and deliver such Bond and bind the Surety thereby.

10. This Bond is intended to conform to all applicable statutory requirements. Any applicable requirement of any applicable statute that has been omitted from this Bond shall be deemed to be included herein as if set forth at length. If any provision of this Bond conflicts with any applicable statute, then the provision of said statute shall govern and the remainder of this Bond that is not in conflict therewith shall continue in full force and effect.

11. The term "Bid" as used herein includes a Bid, offer, or proposal as applicable.

**END OF DOCUMENT**

**SECTION 00410**

**FORM OF GENERAL BID**

1. Proposal of _____ (hereinafter called "Bidder")*

   (_) a corporation, organized and existing under the laws of the State of _____

   (_) a partnership

   (_) a joint venture

   (_) a limited liability company

   (_) an individual doing business as _____

   *Check corporation, partnership, joint venture, LLC or individual as applicable.

2. To the Town of Orleans, MA (hereinafter called "Owner") regarding: Downtown Area WWTF and Effluent Disposal, Contract No. 2019-01 and SRF No. 4486.

   The Bidder, in compliance with your invitation for bids for Downtown Area WWTF and Effluent Disposal having examined the plans and specifications with related documents and the site of the proposed work, attended the mandatory pre-bid conference, and being familiar with all of the conditions surrounding the construction of the proposed project including the availability of materials and labor, hereby proposes to furnish all superintendence, labor, services, materials, equipment, plant, machinery, apparatus, appliances, tools, supplies, bailing, shoring, removal, and all other things necessary to construct the project in accordance with the contract documents, within the time set forth below, and at the prices stated below. These prices are to cover all expenses incurred in performing the work required under the contract documents, of which this bid is a part.

   The Bidder hereby agrees that if selected as the Contractor it will commence work under this contract on or before a date to be fixed in the written "Notice to Proceed" given by the Owner to the Contractor and to fully complete the project within 654 calendar days, using not more than 411 working days.

   The Bidder further agrees to pay as liquidated damages the sum of $6,700 for each consecutive calendar day and/or working day thereafter during which the work as not been fully completed, as provided in the "Liquidated Damages" provisions of SECTION 00800 - SUPPLEMENTARY CONDITIONS.

3. Bidder acknowledges receipt of the following addenda:

| No. | Dated | No. | Dated |
|---|---|---|---|
| 1 | | 7 | |
| 2 | | 8 | |
| 3 | | 8 | |
| 4 | | 10 | |
| 5 | | 11 | |
| 6 | | 12 | |

4. Bidder agrees to perform all the work, including all incidental labor, materials and equipment necessary for the satisfactory completion of the work and be in full compliance with the contents and intent of the Specifications and/or Drawings of the work.

5. Bid Proposal

   A. The BID PROPOSAL unit prices shall include all labor, materials, bailing, shoring, removal, overhead, profit, insurance, engineering costs, etc., to cover the finished work of the several kinds called for. The Bidder understands that all bids for this project are subject to the applicable bidding laws of the Commonwealth of Massachusetts, including General Laws Chapter 149, Section 44D and Section 44E, as amended.

   B. Bidder shall complete and submit the Proposal Form. The bidder is not allowed to submit a proposal that has been printed out and priced typewritten or written by hand. Failure to utilize the Microsoft Excel Proposal Form shall void the bid.

   C. Use of the Microsoft Excel Proposal Form

      1. Upon Opening the Microsoft Excel Proposal Form:

         a) A yellow bar will appear on the top of the screen labeled as "*Security Warning*"

         b) You must select the "*Enable Content*" button in order to properly access the file.

            1) This will enable macros in the excel file, as you must enable macros to properly view the file.

            2) If you do not enable macros, the excel document will be invalid.

         c) Manually enter the Bidder's Name in the blue box.

         d) Manually enter the Date in the blue box.

         e) Manually enter the unit cost in the blue boxes for each bid item. Allowances have already been prepopulated.

         f) The document will automatically update the cost estimates (Unit Price in Words; Extended Totals and Bid Total based on the user's unit cost input into the blue boxes for each bid item).

      2. In Order to Save the Proposal Form Document:

         a) The document must be saved as a file with macros enabled.

         b) Please save as the file type "Excel Macro-Enabled Workbook (*.xlsm)".

         c) If the file is saved incorrectly as a different file type, the document will be invalid.

      This process must be repeated for every time the document is opened and saved.

   D. Bidder shall submit the completed Microsoft Excel Proposal Form in ".xlsm" format within 24-hours of the Bid Opening to Tess Laffer via e-mail (tess.laffer@aecom.com). The bidder is not allowed to submit a Microsoft Excel Proposal Form that has been priced typewritten or written by hand. The Microsoft Excel Form is not required to be Signed.

   E. In the event of a discrepancy between the price in words and the price in figures, the words shall govern. In the event of a discrepancy between the total of the items and the total stated, the total of the items shall govern.

   F. In the event of a discrepancy between the printed out completed Microsoft Excel Proposal Form and the completed Microsoft Excel Proposal Form in ".xlsm" format, the printed out completed Microsoft Excel Proposal Form shall govern.

   G. Interlineation, alteration or erasure may void the bid.

   H. Bid security is attached in the sum of five percent (5%) of the total bid in accordance with the conditions of SECTION 00200 - INSTRUCTIONS TO BIDDERS. The bid security may become the property of the Owner in the event the contract and bond are not executed within the time set forth above.

   I. The undersigned states that no officer, agent or employees of the Owner directly or indirectly has a financial interest in this Bid.

6. The time period for holding bids, where Federal approval is not required is 30 days, Saturdays, Sundays and legal holidays excluded, after the opening of bids and where Federal approval is required, the time period for holding bids is 30 days, Saturdays, Sundays and holidays excluded after Federal approval.

7. State Taxes - Pursuant to M.G.L.c.62C, s49A I certify under the penalties of perjury that I, to my best knowledge and belief, have filed all state tax returns and paid all State Taxes required under law.

8. Award

   A. The contract will be awarded to the lowest responsible and eligible bidder.

   B. Bidder understands that the Owner reserves the right to reject any or all bids and to waive any informalities in the bidding as deemed to be in the best interest of the Owner.

   C. The Owner reserves the right to reject any bid in the event that any bid item or items are obviously unbalanced or appear to the Owner to be so unbalanced as to affect or to be liable to affect adversely any interest of the Owner.

   D. The Owner reserves the right to reject any or all bids if it deems it to be in its best interest to do so. The Owner reserves the right to award the Contract based on sufficiency of appropriated funds to complete the work.

   E. In the event the lowest bids from responsive and responsible bidders are tied, the following methods of breaking the tie shall be employed unless otherwise provided for in these bid documents: The bidder's names shall be entered on a slip of paper and placed in a hat. The award shall then be made to the bidder whose slip is drawn from the hat. The drawing of the slip from the hat shall be performed in the presence of the tied bidders unless they waive their right to be present in writing.

9. Within 10 days of receipt of the written notice of acceptance of this bid, the Bidder will execute the formal agreement attached in SECTION 00520 - AGREEMENT and provide the requisite payment and performance bonds and certificates of insurance.

10. The selected Contractor shall furnish a performance bond and a payment bond each in an amount at least equal to one hundred percent (100%) of the contract prices in accordance with SECTION 00610 - PERFORMANCE BOND, SECTION 00615 - PAYMENT BOND, and as stipulated in paragraph 5.01 of SECTION 00700 - GENERAL CONDITIONS of these specifications.

11. The Owner reserves the right to withhold the fair market value for work not completed in addition to the retainage on work completed. Unbalanced bid items will specifically be subject to review and to this potential withholding from periodic payment applications.

12. The Undersigned, as Bidder, declares as follows:

   A. The only parties interested in this BID as Principals are named herein;

   B. The Bidder has carefully examined the site of the proposed Work and fully informed and satisfied himself as to the conditions there existing, the character and requirements of the proposed Work, the difficulties upon its execution and the accuracy of all estimated quantities stated in this BID, and has carefully read and examined the Drawings, the annexed proposed AGREEMENT and the Specifications and other Contract Documents therein referred to and knows and understands the terms and provisions thereof;

   C. This BID is made without collusion with any other person, firm, or corporation;

   D. No officer, agent, or employee of the Owner is directly or indirectly interested in this BID; and

   E. Understands that information relative to subsurface and other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) has been furnished only for his information and convenience without any warranty or guarantee, expressed or implied, that the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered will be the same as those shown on the Drawings or in any of the other Contract Documents and agrees that the Bidder shall not use or be entitled to use any such information made available to him through the Contract Documents or otherwise or obtained by him in his own examination of the site, as a basis of or ground for any claim against the Owner or the Engineer arising from or by reason of any variance which may exist between the aforesaid information made available to or acquired by him and the subsurface and/or other conditions, natural phenomena, existing pipes and other structures (surface and/or subsurface) actually encountered during the construction work, and has made due allowance therefore in this BID.

13. Equal Employment Opportunity/Affirmative Action Provisions - C.30 s39 (c)

   A. The undersigned bidder hereby certifies that he/she is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work.

B. The undersigned bidder hereby certifies he/she will comply with the specific affirmative action steps contained in the Equal Employment Opportunity/Affirmative Action (EEO/AA) provisions of this Contract, including compliance with the Disadvantaged Business Enterprise provisions as required under these contract provisions. The contractor receiving the award of the contract shall incorporate the EEO/AA provisions of this contract into all subcontracts and purchase orders so that such provisions will be binding upon each subcontractor or vendor.

C. The undersigned bidder hereby certifies he/she will comply with the Equal Employment Opportunity/Affirmative Action (EEO/AA) provisions of this Contract (MassDEP Appendix E - Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services).

14. Non-Debarment - C.30 s39 (a)

A. The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As use in this paragraph the "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

B. The undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder; and is not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency.

15. Suspension and Debarment

A. The EPA prohibits the use of suspended or debarred contractors and suppliers in SRF financed contracts. All SRF financed contracts and subcontracts must include language indicating compliance with 2 CFR 180 and 2 CFR 1532.

B. Bidders must fully comply with Subpart C of 2 CFR Part 180 and 2 CFR Part 1532, entitled responsibilities of Participants Regarding transactions (Doing Business with Other Persons). Contractors, subcontractors, or suppliers that appear on the Excluded Parties List System at www.usgovxml.com/dataservice.aspx?ds=EPLS are not eligible for award of any contracts funded by the Massachusetts State Revolving Fund.

16. Diesel Retrofit Program - The undersigned bidder hereby certifies he/she will comply with the Massachusetts Department of Environmental Protection's Diesel Retrofit Program Statement of Intent to Comply (see Appendix B).

17. The undersigned offers the following information as evidence of its qualifications to perform the work as bid upon according to all the requirements of the plans and specifications:

A. Have been in business under present name for _____years.

B. The Bidder shall state below what work of a similar character to that included in the proposed contract it has done within the last 10 years, and provide references that will enable the Owner to judge its experience, skill and business standing (add supplementary page(s) if necessary).

**Project No. 1**

| Completion Date | Project Name | Contract Amount |
|---|---|---|
| | | |
| **Design Engineer** | **Reference Name** | **Telephone No.** |
| | | |

**Project No. 2**

| Completion Date | Project Name | Contract Amount |

| Design Engineer | Reference Name | Telephone No. |

**Project No. 3**

| Completion Date | Project Name | Contract Amount |
|---|---|---|
| Design Engineer | Reference Name | Telephone No. |

**Project No. 4**

| Completion Date | Project Name | Contract Amount |
|---|---|---|
| Design Engineer | Reference Name | Telephone No. |

**Project No. 5**

| Completion Date | Project Name | Contract Amount |
|---|---|---|
| Design Engineer | Reference Name | Telephone No. |

C. The names and addresses of all persons interested in the bid (if made by a partnership or corporation) as Principals, are as follows (add supplementary page(s) if necessary):

| Name | Address |
|---|---|
| | |
| | |
| | |
| | |

18. Pursuant to M.G.L. CH. 62C, Sec 49A, the undersigned Bidder certifies under the penalties of perjury that it is in compliance with all laws of the Commonwealth relating to taxes, reporting of employees and contractors, and withholding and remitting child support.

19. The undersigned Bidder hereby certifies that (1) it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work; and (2) that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee.

20. The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used in this paragraph the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity which sells materials, equipment or supplies used in or for, or engages in the performance of, the same or similar construction, reconstruction, installation, demolition, maintenance or repair work or any part thereof.

21. The undersigned further certifies under penalty of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth of Massachusetts under the provisions of Section Twenty-Nine F of Chapter Twenty-Nine, Section 25C (10) of Chapter 152 (workers' compensation) or any other applicable debarment provisions of any other Chapter of the General Laws or any rule or regulations promulgated thereunder.

MassDEP Appendix B Diesel Retrofit Program

MassDEP Appendix E Construction Bid Specifications – Special Provisions for Disadvantaged Business Enterprises – Massachusetts Department of Environmental Protection Division of Municipal Services

This Page Intentionally Left Blank.

# APPENDIX B

## APPENDIX B
## DIESEL RETROFIT PROGRAM

The Department of Environmental Protection ("DEP") has developed the Diesel Retrofit Program in response to increasing public health concerns with the emissions from diesel engines and vehicles.

**Diesel Construction Equipment Standard**

All diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") must have the following pollution control device installed unless exempt as provided below:

1. Emission control technology verified by U.S. Environmental Protection Agency ("EPA") or the California Air Resources Board ("CARB") for use with non-road engines;
2. Emission control technology verified by EPA or CARB for use with on-road engines provided that such equipment is operated with diesel fuel that has no more than 15 parts per million sulfur content (i.e. Ultra Low Sulfur Diesel fuel); or
3. Emission control technology certified by the manufacturer that such technology meets or exceeds the emission reductions provided by on-road or off-road emission control technology verified by EPA or CARB, i.e. that a Diesel Oxidation Catalyst is achieving the following minimum emission reductions: particulate matter 20%; carbon monoxide 40%; volatile organic compounds 50%; or a Diesel Particulate Filter is achieving a minimum of 85% emission reductions for particulate matter.

Emission control devices, such as oxidation catalysts or particulate filters, shall be installed on the exhaust system side of the Diesel Construction Equipment. The Contractor shall be responsible to insure that the emissions control technology is operated, maintained, and serviced as recommended by the manufacturer.

For the latest up-to-date list of EPA verified-technologies, see:
https://www.epa.gov/verified-diesel-tech
For the latest up-to-date list of CARB verified technologies, see:
http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm

**Exemptions**

The following Diesel Construction Equipment shall be exempt from the standard above. The Contractor shall include such Diesel Construction Equipment in the required recordkeeping:

1. Diesel Construction Equipment not owned by the Contractor and used in the performance of the work under this Contract for 30 calendar days (cumulative days but not necessarily consecutive) or less;
2. Unless otherwise exempt, additional Diesel Construction Equipment originally not anticipated to be used under the Contract or used as permanent replacement after the work under the Contract has commenced, for 15 calendars days from the date such Diesel Construction Equipment is brought on site;

DEP-DMS-B Page 1 of 6

pspkg 2018-07-11

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

3. Diesel Construction Equipment with an engine that meets the EPA particulate matter (PM) Tier emission standards in effect at the start of the Contract for non-road diesel engines for the applicable engine power group (e.g., as of January 1, 2009, a piece of Diesel Construction Equipment with a Tier 3 engine is exempt from meeting the standard until the piece of Diesel Construction Equipment is available with a Tier 4 engine) provided that if such emissions standards are superseded during the Contract then such Diesel Construction Equipment must be retrofitted in accordance with the standards above prior to the end of the Contract;
4. A large crane (e.g. a sky crane or link belt crane which is responsible for critical lift operations) if such device would adversely affect the operation of the crane provided the Contractor submits to the municipality's project engineer written technical justification documenting the adverse impact on operation; and
5. Diesel Construction Equipment that the project engineer has determined is necessary to control a compelling emergency including but not limited to, the need for rescue vehicles or other equipment to prevent harm to human beings or additional equipment required to address a catastrophic emergency such as structure collapse or imminent collapse. After the compelling emergency is controlled, such non-compliant equipment must be removed from the Contract site and may not be used in further performance of the work under this Contract. Meeting Contract deadlines is not a compelling emergency.

**Contractor Certification**

Each bidder shall submit as part of its bid, the Statement of Intent to Comply. Within 10 days of being notified that it has been awarded a contract, the bidder and each of its Contractors and Subcontractors shall submit a Diesel Retrofit Program Contractor Certification. Each such Certification shall contain the following information for each piece of Diesel Construction Equipment:

1. Contractor or Subcontractor name;
2. Equipment type, make, model;
3. Vehicle Identification Number or VIN;
4. Engine model and year of manufacture;
5. Engine HP rating;
6. Emission Control Device (ECD) type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
7. ECD make, model, and manufacturer;
8. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
9. ECD installation date;
10. Type of fuel to be used; and
11. Whether the equipment is owned or rented.

**Recordkeeping**

Each Contractor and Subcontractor shall maintain detailed records of all Diesel Construction Equipment used under the Contract, including the dates and duration times the Diesel Construction Equipment is

**APPENDIX B (cont.)**
**DIESEL RETROFIT PROGRAM**

used at the Contract site. Records shall be available for inspection by DEP. Each Contractor and Subcontractor shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site.

For Diesel Construction Equipment that has an emissions control device with a manufacturer's certification, the Contractor shall maintain records of all supporting emissions test data and test procedures. If upon review the emissions reductions are not supported by the test data and test procedures, then the emissions control device may need to be replaced with a compliant retrofit device.

**Project Regulatory Agreement**

The following language shall be included section 4 (Covenants of the Borrower) of the municipality's Project Regulatory Agreement if it receives funds from the State Revolving Fund:

> The Borrower shall require each Contractor and Subcontractor to submit the Diesel Retrofit Program Contractor Certification to DEP and the Borrower prior to commencing work on the Project. The Borrower shall not allow any Contractor or Subcontractor to commence work at the Project site prior to submitting such Certification.

## STATEMENT OF INTENT TO COMPLY

***This form must be signed and submitted by the bidder as part of the bid.***

**Local Governmental Unit** _____ **SRF Project No.** _____

**Contract No.** _____ **Contact Title** _____

**Bidder** _____

**The undersigned, on behalf of the above-named Bidder, agrees that, if awarded the Contract:**

1. **the Bidder shall comply with the Massachusetts Department of Environmental Protection's ("MassDEP") Diesel Retrofit Program by ensuring that all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract are equipped or retrofitted with a pollution control device in accordance with the Diesel Retrofit Program Standard;**
2. **the Bidder shall require all Subcontractors to comply with MassDEP's Diesel Retrofit Program by ensuring all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract are equipped or retrofitted with a pollution control device in accordance with the Diesel Retrofit Program Standard; and**

3. **The Bidder shall submit and shall require each Subcontractor to submit a Diesel Retrofit Program Contractor Certification (form attached) with a Diesel Retrofit List to MassDEP Municipal Services and the Bidder within 10 days of the bidder being notified that it has been awarded the Contract. The Bidder shall require each Subcontractor to update such Certification and List within 2 days of using additional Diesel Construction Equipment on the project under the Contract.**

**APPENDIX B** (cont.)
**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

***Each Contractor and its Subcontractor(s) must sign and submit this form to DEP DMS project engineer, 5th Floor, MassDEP, One Winter Street, Boston, MA 02108 and the Municipality within 10 days after the Contractor is notified that it is awarded the Contract.***

**Local Governmental Unit** _____ **SRF Project No.** _____

**Contract No.** _____ **Contact Title** _____

**Contractor** _____

I, _____, an authorized signatory for _____, whose principal place of business is at _____ do hereby certify that any and all diesel powered non-road construction equipment and vehicles greater than 50 brake horsepower which will be used in the performance of the work under the Contract (hereinafter "Diesel Construction Equipment") have pollution control devices, such as oxidation catalysts or particulate filters, installed on the exhaust system side of the diesel combustion engine equipment in accordance with the Diesel Retrofit Program Standard.

I am submitting on behalf of _____ a list of all said Diesel Construction Equipment, labeled "Diesel Retrofit List," that will be used in connection with this Contract by _____. I hereby certify that the information on the attached Diesel Retrofit List is correct and accurate as of the date of signature. The List includes the following information for each piece of Diesel Construction Equipment:

1. Equipment type, make, model;
2. Vehicle Identification Number or VIN;
3. Engine model and year of manufacture;
4. Engine HP rating;
5. Emission Control Device ("ECD") type (Diesel Oxidation Catalyst or Diesel Particulate Filter);
6. ECD make, model, and manufacturer;
7. ECD EPA or CARB Verification Number or manufacturer's certification that the DOC or DPF meets or exceeds emission reductions provided by similar emission control technology verified by EPA or CARB;
8. ECD installation date;
9. Type of fuel to be used; and
10. Whether the equipment is owned or rented.

**APPENDIX B** (cont.)

**DIESEL RETROFIT PROGRAM CONTRACTOR CERTIFICATION**

_____shall notify DEP within 48 hours of any new Diesel Construction Equipment brought onto the Contract site. _____shall maintain detailed records of all Diesel Construction Equipment used at the Contract site, including the dates and duration times the Diesel Construction Equipment is used at the Contract site. _____ shall make such records available for inspection by DEP. _____shall ensure that the emissions control technology for each piece of Diesel Construction Equipment is operated, maintained, and serviced as recommended by the manufacturer. _____ shall retrofit prior to the end of the Contract any Diesel Construction Equipment no longer exempt from meeting the Diesel Construction Equipment Standard under exemption 3 (because it had an engine that met the EPA particulate matter (PM) Tier emission standards currently in effect at the start of the Contract for non-road diesel engines for the applicable engine power group and such emissions standards were superseded during the Contract).

I acknowledge that this certificate is being furnished as a requirement under this Contract and is subject to applicable State and federal laws, both criminal and civil. Signed under pains and penalty of perjury on this date _____.

## APPENDIX E
## CONSTRUCTION BID SPECIFICATIONS
## SPECIAL PROVISIONS FOR DISADVANTAGED BUSINESS ENTERPRISES
## MASSACHUSETTS DEPARTMENT OF ENVIRONMENTAL PROTECTION
### DIVISION OF MUNICIPAL SERVICES

DISADVANTAGED BUSINESS ENTERPRISE PROGRAM BACKGROUND

In May 2008 a United States Environmental Protection Agency (EPA) rule became effective that changed the Minority Business Enterprise (MBE) and Women Business Enterprise (WBE) Program to a Disadvantaged Business Enterprise (DBE) Program.

For firms to qualify under the old MBE/WBE program they needed to be socially disadvantaged and had to be certified by the Supplier Diversity Office (SDO). Under the new DBE rule, the firms must be both **socially** and **economically** disadvantaged, **citizens of the United States**, and certified as a DBE. Women and certain minorities are presumed to be socially disadvantaged. The economic disadvantage is measured by the owner's initial and continuing personal net worth of less than $1,320,000.

Because the Clean Water Act requires the use of MBEs and WBEs, these firms will still be utilized in the State Revolving Fund (SRF) Loan Program, but they must also be certified as DBEs.

SDO will continue to be the certifying agency for the SRF program. SDO certifies firms under the federal Department of Transportation program, which is acceptable for use in the SRF program. An additional form has been added to the DBE package to verify that DBEs are owned or controlled by United States citizens.

BID SPECIFICATIONS

**I.** In this contract, the percentage of business activity to be performed by disadvantaged business enterprise(s) (DBE) shall not be less than the following percentages of the total contract price or the percentage submitted by the contractor in the Schedule of Participation, whichever is greater:

Disadvantaged MBE (D/MBE) 4.2% Disadvantaged WBE (D/WBE) 4.5%

EEO-DEP-E Page 1 of 16

pspkg 2018-07-11

## II. DEFINITIONS

For the purpose of these provisions, the following terms are defined as follows:

A. Awarding Authority – Entity that awards a prime contract under a State Revolving Fund loan.

B. Bidder - Any individual, partnership, joint venture, corporation, or firm submitting a price, directly or through an authorized representative, for the purpose of performing construction or construction related activities under a Contract.

C. Certified DBE – A DBE certified by the United States Small Business Administration, under its 8(a) Business Development Program (13 CFR part 124, subpart A) or its Small Disadvantaged Business Program (13 CFR part 124, subpart B); The United States Department of Transportation (DOT), under its regulations for Participation by DBSs in DOT programs (49 CFR parts 23 and 26); or SDO in accordance with 40 CFR part 33; provided that the certification meets the U.S. citizenship requirement under 40 CFR §33.202 or §33.203.

D. Compliance Unit - A subdivision of MassDEP's Affirmative Action Office designated to ensure compliance under these provisions.

E. Contractor - Any business that contracts or subcontracts for construction, demolition, renovation, survey, or maintenance work in the various classifications customarily used in work and that is acting in this capacity under the subject contract.

F. Construction Related Services - Those services performed at the work site ancillary to, and/or in support of, the construction work, such as hauling, trucking, equipment operation, surveying or other technical services, etc. For the purposes hereof, supply and delivery of materials (e.g. pre-cast concrete elements) to the site by a supplier who has manufactured those goods, or substantially altered them before re-sales shall be considered as "construction related services

G. Construction Work - The activities at the work site, or labor and use of materials in the performance of constructing, reconstructing, erecting, demolishing, altering, installing, disassembling, excavating, etc, all or part of the work required by the Contract Documents.

H. Disadvantaged Business Enterprise (DBE) - An entity owned or controlled by a socially and economically disadvantaged individual as described by Public Law 102-389 (42 U.S.C. 4370d) or an entity owned and controlled by a socially and economically disadvantaged individual as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note); a Small Business Enterprise (SBE); a Small Business in a Rural Area (SBRA); or a Labor Surplus Area Firm (LAF), a Historically Underutilized Business (HUB) Zone Small Business Concern, or a concern under a successor program.

I. Equipment Rental Firm - A firm that owns equipment and assumes actual and contractual responsibility for renting said equipment to perform a useful function of the work of the contract consistent with normal industry practice

J. Good Faith Efforts – The race and/or gender neutral measures described in 40 CFR 33, subpart C.

K. HUBZone - A historically underutilized business zone, which is an area located within one or more qualified census tracts, qualified metropolitan counties, or lands within the external boundaries of an Indian reservation.

L. HUBZone small business concern - A small business concern that appears on the List of Qualified HUBZone Small Business Concerns maintained by the Small Business Administration.

M. Joint Venture - An agreement between SDO certified DBE and a non-DBE or non-DBE controlled enterprise.

1. A pairing of companies will be considered a DBE joint venture if the SDO certified DBE which is part of the relationship has more than 51% of the profits that are derived from that project.

2. A joint venture between a certified DBE subcontractor and a non DBE subcontractor, in which the DBE for that proportion of the joint venture's contract equal to the DBE participation in the joint venture.

3. Whenever a general bid is filed by a joint venture with a certified DBE participant in the joint venture that does not exercise more than 51% control over management and profits, that joint venture shall be entitled to credit as a DBE for that portion of the joint venture's contract equal to the DBE participation in the joint venture. Minority As deemed by SDO.

N. Labor surplus area firm (LSAF) - A concern that together with its first-tier subcontractors will perform substantially in labor surplus areas (as identified by the Department of Labor in accordance with 20 CFR part 654). Performance is substantially in labor surplus areas if the costs incurred under the contract on account of manufacturing, production or performance of appropriate services in labor surplus areas exceed 50 percent of the contract price.

O. Letter of Intent – Certified document signed by the principal(s) of the DBE with respect to the work to be performed under contract.

P. Local Government Unit (LGU) – A city, town, or municipal district which applies for a loan under the Clean Water Trust Program.

Q. Material Supplier – A vendor certified by SDO as a DBE in sales to supply industry from an established place of business or source of supply, and that vendor.

1. Manufactures goods from raw materials, or substantially utilizes them in the work, or substantially alters them before resale, entitling the general contractor to DBE credit for 100% of the purchase order.

2. Provides and maintains a storage facility for materials utilized in the work, entitling the general contractor to DBE credit for 10% of the purchase order

R. Minority and Women Business Enterprise (M/WBE) – Any business concern certified by the SDO as a bona-fide M/WBE. A bona-fide M/WBE is a business whose minority group/women ownership interests are real, which have at least 51% ownership and control over management and operation.

S. Percent of Total Price – Is the percentage to be paid to the DBE, work they perform, as compared to the total bid price

T. Recipient - An agency, person or political subdivision which has been awarded or received financial assistance by the Trust or MassDEP.

U. Small business, small business concern or small business enterprise (SBE) - A concern, including its affiliates, that is independently owned and operated, not dominant in the field of operation in which it is bidding, and qualified as a small business under the criteria and size standards in 13 CFR part 121.

V. Small business in a rural area (SBRA) - A small business operating in an area identified as a rural county with a code 6-9 in the Rural-Urban continuum Classification Code developed by the United States Department of Agriculture in 1980.

W. SDO – The Supplier Diversity Office.

X. Subcontractor – A company, firm, joint venture, or individual who enters into an agreement with a contractor to provide services pursuant to an award of financial assistance.

Y. Total Contract Price – The total amount of compensation to be paid for all materials, work or services rendered in the performance of the contract

Z. Trust – The Massachusetts Clean Water Trust established by M.G.L. c.29.

## III. REQUIREMENTS FOR CONTRACT AWARD

DBE packages must be submitted by the two lowest bidders on the project. Following bid opening, the LGU shall notify the two lowest bidders to submit DBE packages to the LGU or the LGUs consultant, as directed. By the close of business on the third business day after notification, the two lowest bidders, including a bidder who is a MBE, WBE or DBE, shall submit the following information:

A. A Schedule of Participation (Form EEO-DEP-190). The Schedule of Participation shall list those certified DBEs the bidder intends to use in fulfilling the contract obligations, the nature of the work to be performed by each certified DBE subcontractor and the total price they are to be paid.

1. A listing of bona-fide services such as a professional, technical, consultant or managerial services, assistance in the procurement of essential personnel, facilities, equipment, materials, or supplies required for performance of the contract, and reasonable fees or commissions charged.

2. A listing of haulers, truckers, or delivery services, not the contractors, including reasonable fees for delivery of said materials or supplies to be included on the project.

B. A Letter of Intent (Form EEO-DEP-191) for each DBE the bidder intends to use on the project. The Letter of Intent shall include, among other things, a reasonable description of the work the certified DBE is proposing to perform and the prices the certified DBE proposes to charge for the work. A Letter of Intent shall be jointly signed by the certified DBE and the General Contractor who proposes to use them in the performance of the Contract.

C. Each DBE must also sign and return the DBE Certification of United States Citizenship form to verify that the firm is owned or controlled by a United States citizen.

D. The SDO "DBE Certification" as prepared by each certified DBE.

E. A completed Request for Waiver form and backup documentation should the goals not be achieved (See IV below).

## IV. REQUIREMENTS FOR MODIFICATION OR WAIVERS.

The bidder shall make every possible effort to meet the minimum requirements of certified DBE participation. If the percentage of DBE participation submitted by the bidder on its Schedule of Participation (EEO-DEP-190) does not meet the minimum requirements, the bid may be rejected by the Awarding Authority and found not to be eligible for award of the contract.

In the event that the bidder is unable to meet the minimum requirements of DBE participation, the bidder shall submit with his/her submittal required in Section III. Requirement of Contract Award a Request for Waiver form (EEO-DEP-490). The Awarding Authority shall review the waiver request to determine if the request should proceed. If approved by the Awarding Authority, the Awarding Authority shall submit the waiver request and supporting documentation, with a recommendation to MassDEP within five days of receipt of the Request for Waiver. MassDEP in conjunction with the project manager, Compliance Unit, will determine whether the waiver will be granted.

The waiver request shall include detailed information as specified below to establish that the bidder has made a good faith effort to comply with the minimum requirements of DBE participation specified in Part I. In addition, the bidder must show that such efforts were undertaken well in advance of the time set for opening of bids to allow adequate response. A waiver request shall include the following:

A. A detailed record of the effort made to contact and negotiate with the certified DBE, including, but not limited to:

   1. names, addresses and telephone numbers of all such companies contacted;

   2. copies of written notices(s) which were sent to certified DBE potential subcontractors, prior to bid opening;

   3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

   4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price;

   5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/ women-focused media detailing the opportunities for participation.

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after MassDEP receives all required information and documentation, it shall make a decision in writing, whether the waiver is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing. If the waiver request is denied, the bid shall be rejected by the Awarding Authority, or the contract will be determined ineligible for SRF funding.

   If a Request for Waiver is denied by MassDEP and the bid is rejected by the Awarding Authority, the Awarding Authority may then move to the second bidder on the project. At the Awarding Authority's discretion, it may collect a DBE package from the third bidder on the project.

## V. DISADVANTAGED BUSINESS ENTERPRISES PARTICIPATION

A. Reporting Requirements

1. The Contractor's utilization of certified DBEs will be documented based upon submittal of the LGU's monthly Payment Requisitions as reported on Form-2000. The Form-2000 form will show all certified DBEs performing work on the project regardless of any billing activity for that month. For auditing and accounting purposes, the Contractor periodically may be required to submit copies of canceled checks verifying that payments have been made to the certified DBE as listed on the schedule. The Contractor may also be required to submit current schedules on utilization of all DBEs to indicate when their services will commence and be billed for.

2. During the life of the Contract, the Contractor's fulfillment of the percentage requirements in Part I shall be determined with reference to the Contract price as follows:

   A. If the price in the Contract executed exceeds the base bid price (e.g., because an alternate was selected or because unit prices were used in awarding the Contract), the Contractor shall submit for approval by MassDEP a revised Schedule of Participation by certified DBEs satisfying the percentage requirements and such other information concerning additional DBE participation as may be requested by MassDEP.

   B. If the Contract price increases after execution due to change orders or other adjustments, MassDEP may require the Contractor to subcontract additional work or to purchase additional goods and services from certified DBEs up to the percentages stated in Part I.

## VI. COMPLIANCE

A. If the Schedule or any of the Letters of Intent are materially incomplete or not submitted in a timely manner, the LGU may rescind its vote of award; treat the bid informal as to substance and reject the bid. If the bid is incomplete in any other respect than the Schedule the LGU with the approval of MassDEP may waive the informalities upon satisfactory completion of the required information by the Contractor and the certified DBE as applicable.

B. If the LGU finds that the percentage of certified DBE participation submitted by the contractor on its Schedule does not meet the percentage requirement in Part I, it shall rescind its vote of award and find such contractor not to be eligible for award of the contract.

C. The Contractor shall not perform with its own organization, or subcontract to any other primary or subcontractor any work designated for the named certified DBEs on the schedule submitted by the Contractor under Part III without the approval of MassDEP.

D. A Contractor's compliance with the percentage requirement in Part I shall continue to be determined by reference to the required percentage of the total contract price as stated in Section I even though the total of actual contract payments may be greater or less than the bid price.

E. If the Contractor for reasons beyond its control cannot comply with Part III in accordance with the Schedule submitted under Part III, Section B, the contractor must submit to MassDEP as soon as they are aware of the deficiency, the reason for its inability to comply. Proposed revisions to the Schedule stating how the contractor intends to meet its obligations under these conditions must be submitted within ten (10) working days of notification.

F. If the Contractor is becomes aware by any means that that DBE is no longer certified, the Contractor shall immediately notify MassDEP. The Contractor shall use good faith efforts to retain a substitute certified DBE.

G. If a certified DBE listed by the bidder in its Schedule of M/WBE contractors fails to obtain a performance or payment bond requested by the bidder, said failure shall not entitle the bidder to avoid the requirements of Part III (A). After a bidder has been awarded the contract, he shall not change the certified DBE listed in its Schedule at the time of the award or make any other such substitutions without the written approval of MassDEP.

## VII. SANCTIONS

A. If the Contractor does not comply with the terms of these Special Provisions, the Awarding Authority may (1) suspend any payment for the work that should have been performed by a certified DBE pursuant to the schedule, or (2) require specific performance of the Contractor's obligation by requiring the Contractor to subcontract with a DBE for any contract or specialty item at the contract price established for that item in the proposal submitted by the Contractor.

B. To the extent that the Contractor has not complied with the terms of these Special Provisions, the Awarding Authority may retain in connection with Estimates and Payments an amount determined by multiplying the bid price of this contract by the percentage in Section I, less the amount paid to DBE's for work performed under the contract and any payments already suspended under VII A.

C. The Awarding Authority may suspend, terminate or cancel this contract, in whole or in part, or may call upon the Contractor's surety to perform all terms and conditions in the contract, unless the contractor is able to demonstrate his compliance with the terms

of these Special Provisions, and further deny to the Contractor, the right to participate in any future contracts awarded by the Awarding Authority for a period of up to three years.

D. In any proceeding involving the imposition of sanctions by the Awarding Authority, no sanctions shall be imposed if the Awarding Authority finds that the contractor has taken every possible measure to comply with these Special Provisions or that some other justifiable reason exists for waiving these Special Provisions in whole or in part.

E. The contract shall provide such information as is necessary in the judgment of the Awarding Authority to ascertain its compliance with the terms of these Special Provisions.

F. A contractor shall have the right to request suspension of any sanctions imposed under this section upon demonstrating that he is in compliance with these Special Provisions.

## DBE CERTIFICATION OF UNITED STATES CITIZENSHIP

For the SRF program, under the EPA Disadvantage Business Enterprise (DBE) Rule, a DBE must be owned or controlled by a socially and economically disadvantaged person that is also a **citizen of the United States** (*See* 40 CFR 33.202). "Ownership" is defined at 13 CFR 124.105 and "control" is defined at 13 CFR 124.106.

DBEs are certified for the SRF program through the Supplier Diversity Office using the federal Department of Transportation (DOT) DBE rules. EPA allows the use of DBEs certified under the DOT rules as long as they are also United States citizens. To ensure compliance with the EPA rule, MassDEP must verify United States citizenship through the completion of the following form for each DBE used on the project.

SRF Project Number _____

Contract Number _____

Contract Title _____

DBE Subcontractor _____

The undersigned, on behalf of the above named DBE subcontractor, hereby certifies that the DBE firm is either owned or controlled by a person or persons that are citizens of the United States.

**REQUEST FOR WAIVER FOR SRF CONSTRUCTION**

Upon exhausting all known sources and making every possible effort to meet the minimum requirements for DBE participation, the Bidder may seek relief either partially or entirely from these requirements by submitting a completed waiver package by the close of business on the third business day after notification by the LGU. Failure to comply with this process shall be cause to reject the bid thereby rendering the Bidder not eligible for award of the contract.

General Information

Project Title: _____ Project Location: _____

Bid Opening (time/date) _____

Bidder: _____

Mailing Address: _____

Contact Person: _____ Telephone No. (  ) _____ Ext. _____

Minimum Requirements

The bidder must demonstrate that good faith efforts were undertaken to comply with the percentage goals as specified. The firm seeking relief must show that such efforts were taken appropriately in advance of the time set for opening bid proposals to allow adequate time for response(s) by submitting the following:

A. A detailed record of the effort made to contact and negotiate with disadvantaged minority and/or woman owned businesses, including:

1. names, addresses, telephone numbers and contact dates of all such companies contacted;

2. copies of written notice(s) which were sent to DBE potential subcontractors prior to bid opening;

3. a detailed statement as to why each subcontractor contacted (i) was not willing to do the job or (ii) was not qualified to perform the work as solicited; and

4. in the case(s) where a negotiated price could not be reached the bidder should detail what efforts were made to reach an agreement on a competitive price.

5. copies of advertisements, dated not less than ten (10) days prior to bid opening, as appearing in general publications, trade-oriented publications, and applicable minority/women-focused media detailing the opportunities for participation;

B. MassDEP may require the bidder to produce such additional information as it deems appropriate.

C. No later than fifteen (15) days after submission of all required information and documentation, MassDEP shall make a determination, in writing, whether the waiver request is granted and shall provide that determination to the bidder and Awarding Authority. If the waiver request is denied, the facts upon which a denial is based will be set forth in writing.

CERTIFICATION

The undersigned herewith certifies that the above information and appropriate attachments are true and accurate to the best of my knowledge and that I have been authorized to act on behalf of the bidder in this matter.

I. The undersigned hereby certifies that it is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work that all employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and who shall furnish documentation of successful completion of said course with the first certified payroll report for each employee and that it will comply fully with all laws and regulations applicable to awards of Subcontracts subject to M.G.L. c.149, s44F, as amended.

The undersigned further certifies under the penalties of perjury that this Subbid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word "person" shall mean any natural person, joint venture, partnership, corporation or other business or legal entity.

The undersigned further certifies under penalties of perjury that the said undersigned is not presently debarred from doing public construction work in the Commonwealth under the provisions of M.G.L. c29, s29F, or any other applicable debarment provisions of any other chapter of the General Laws or any rule or regulation promulgated thereunder.

J. All Subcontractors on this Project in categories subject to the pre-qualification procedures of MGL c. 149 §44 D3/4 shall be required to assume the cost of Payment and Performance Bonds and are directed to incorporate the costs of those bonds in their Bid prices. This requirement applies to all categories subject to pre-qualification. General Contractors should not include said costs for Subcontractor bonds in their Bid prices for those Subcontractors required to provide bonds pursuant to MGL c. 149 §44D3/4.

**SECTION 00520**

**AGREEMENT**

Made in triplicate this the _____ day of _____, 20____ between the Town of Orleans, MA

AND

hereafter the "Contractor".

**WITNESSETH:** That for and in consideration of the following mutual covenants contained herein the parties agree with each other as follows:

**ARTICLE I:** The Contractor agrees to sell and/or deliver to the Town of Orleans, MA materials and/or services in accordance with the following: DOWNTOWN AREA WWTF AND EFFLUENT DISPOSAL, Contract No. 2019-01 and SRF No. 4486:

Exhibit 1. Quote/bid dated

Exhibit 2. Certificate of Non-Collusion

Exhibit 3. Statement of State Tax Compliance

Exhibit 4. Acknowledgement of Principal

Exhibit 5. Certificate of Insurance

Exhibit 6. Certification of OSHA 10-Hour Training

**ARTICLE II:** The Town of Orleans, MA agrees to process the bills for payment to the Contractor upon the execution of the contract, satisfactory completion of the services as outlined in the specifications and approval by the appropriate Department Manager, Town Administrator and Town Accountant in the amount of _____-- and 00/100 ($____.00) Dollars.

**ARTICLE III**

1. The Contractor agrees that it will fully comply with Subpart C of 2 CFR Part 180 and 2 CFR Part1532, entitled Responsibilities of Participants Regarding Transactions (Doing Business with Other Persons). The Contractor shall not award any subcontracts or purchase any materials from suppliers that appear on the Excluded Parties List System.

   The Contractor shall include this requirement in each subcontract and require it to be included in all subcontracts regardless of tier. The Contractor shall maintain reasonable records to demonstrate compliance with these requirements.

2. The fair share goals for disadvantaged business enterprise (DBE) participation for this contract are a minimum of 4.2 percent Disadvantaged Minority Business Enterprise (D/MBE) participation and 4.5 percent Disadvantaged Women Business Enterprise(D/WBE) participation, applicable to the total dollar amount paid for the construction contract. The Contractor shall take all affirmative steps necessary to achieve this goal, and shall provide reports documenting the portion of contract and subcontract dollars paid to DBEs, and its efforts to achieve the goals, with each invoice submitted or at such greater intervals as specified by the (municipality). The contractor shall require similar reports from its subcontractors.

3. Equal Employment Opportunity/Affirmative Action (EEO/AA) Requirements - During the performance of this contract, the contractor agrees as follows:

   A. The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the contracting officer setting forth the provisions of this nondiscrimination clause.

   B. The contractor will, in all solicitations or advancements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

C. The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the agency contracting officer, advising the labor union or workers' representative of the contractor's commitments under Section 202 of Executive Order No. 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

D. The contractor will comply with all provisions of Executive Order No. 11246 of Sept. 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

E. The contractor will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders. Comp., p. 684, EO 12086 of Oct. 5, 1978, 43 FR 46501, 3 CFR, 1978 Comp., p. 230

F. In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of such rules, regulations, or orders, this contract may be cancelled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order No. 11246 of Sept. 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No. 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

G. The contractor will include the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order No. 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions including sanctions for noncompliance: Provided, however, that in the event the contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction, the contractor may request the United States to enter into such litigation to protect the interests of the United States." [Sec. 202 amended by EO 11375 of Oct. 13, 1967, 32 FR 14303, 3 CFR, 1966- 1970”

4. The contractor shall not participate in or cooperate with an international boycott, as defined in Section 999 (b)(3) and (4) of the Internal Revenue code 1986, as amended, or engage in conduct declared to be unlawful by Section 2 of Chapter 151E of the Massachusetts General Laws.

5. The Bidder hereby agrees that if selected as the Contractor it will commence work under this contract on or before a date to be fixed in the written “Notice to Proceed” given by the Owner to the Contractor and to fully complete the project within 654 calendar days, using not more than 411 working days split into four phases.

6. The Bidder further agrees to pay as liquidated damages the sum of $6,700 for each consecutive calendar day and/or working day thereafter during which the work as not been fully completed, as provided in the “Liquidated Damages” provisions of SECTION 00800, SUPPLEMENTARY CONDITIONS.

7. As per MassDEP’s Policy Memorandum #10 – the agreed upon DIRECT LABOR MARKUP (percentage) for Change Orders on this project shall be ___ percent.

8. American Iron and Steel (AIS) Requirements - The Contractor acknowledges to and for the benefit of the Town of Orleans (“Purchaser”) and the Commonwealth of Massachusetts (the “State”) that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as “American Iron and Steel;” that requires all of the iron and steel products used in the project to be produced in the United States (“American Iron and Steel Requirement”) including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a)the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation

attorney's fees)incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

9. All contracts for water and sewer projects awarded as a result of a proposal or invitation for bids under MGL Chapter 30 section 39M shall include a price adjustment clause for fuel, both diesel and gasoline; liquid asphalt; and Portland cement contained in cast-in-place concrete. A base price for each material shall be set by the awarding authority or agency and shall be included in the bid documents at the time the project is advertised. The awarding authority or agency shall also identify in the bid documents the price index to be used for each material. The price adjustment clause shall provide for a contract adjustment to be made on a monthly basis when the monthly cost change exceeds plus or minus 5 percent.

10. All construction contracts are subject to the Davis Bacon wage rate requirements.

11. The Contractor agrees that it will fully comply with Subpart C of 2 CFR Part 180 and 2 CFR Part 1532, entitled Responsibilities of Participants Regarding Transactions (Doing Business with Other Persons). The Contractor shall not award any subcontracts or purchase any materials from suppliers that appear on the Excluded Parties List System. The Contractor shall include this requirement in each subcontract and require it to be included in all subcontracts regardless of tier. The Contractor shall maintain reasonable records to demonstrate compliance with these requirements.

**DOWNTOWN AREA WWTF AND EFFLUENT DISPOSAL**

**Contract No. 2019-01 and SRF No. 4486**

NOW, THEREFORE, if the Principal shall well, truly and faithfully perform its duties, all the undertakings, covenants, terms, conditions, and agreements of the Construction Contract during the original term thereof, and any extensions thereof which may be granted by the Owner, with or without notice to the Surety, and if he shall satisfy all claims and demands incurred under the Construction Contract, and shall fully indemnify and save harmless the Owner from all costs and damages which it may suffer by reason of failure to do so, and shall reimburse and repay the Owner all outlay and expense which the Owner may incur in making good any default, then this obligation shall be void; otherwise, this obligation shall remain in full force and effect.

PROVIDED, FURTHER, that the Surety's obligation under this Bond shall arise after (1) the Owner has declared the Principal in default of the Construction Contract or any provision thereof, or (2) has declared that the Principal has failed, or is otherwise unable or unwilling, to execute the work consistent with, and in conformance to, the Construction Contract (collectively referred to as a "Contractor Default"). The determination of a Contractor Default shall be made solely by the Owner. The Owner need not terminate the Construction Contract to declare a Contractor Default or to invoke its rights under this Bond, and Contractor hereby agrees not to assert any claims against Surety under any indemnity or similar agreements on the grounds that Surety has interfered with the Construction Contract by fulfilling its obligations hereunder in the absence of a termination of said contract.

When the Surety's obligation under this Bond arises, the Surety, at its sole expense and at the consent and election of the Owner, shall promptly take one of following steps: (1) arrange for the Principal to perform and complete the work of the Construction Contract; (2) arrange for a contractor other than the Principal to perform and complete the work of the Construction Contract;
(3) reimburse the Owner, in a manner and at such time as the Owner shall reasonably decide, for all costs and expenses incurred by the Owner in performing and completing the work of the Construction Contract. Surety will keep Owner reasonably informed of the progress, status and results of any investigation of any claim of the Owner.

If the Surety does not proceed as provided in this Bond with due diligence and all deliberate speed, the Surety shall be deemed to be in default of this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner.

After the Surety's obligation under this Bond arises, the Surety is obligated, to the limit of the amounts of this Bond, for (1) the correction of defective work and completion of the Construction Contract; (2) additional design, professional services, and legal costs, including attorney's fees, resulting from the Contractor Default or from the default of the Surety under this Bond; (3) any additional work beyond the Construction Contract made necessary by the Contractor Default or default of the Surety under this Bond; (4) indemnification obligations of the Principal, if any, as provided in the Construction Contract; and (5) liquidated damages as provided in the Construction Contract, or if no such damages are specified, actual damages and consequential damages resulting from the Contractor Default or any default of the Surety under this Bond.

Any proceeding, legal or equitable, under this Bond shall be instituted in any court of competent jurisdiction in the Commonwealth of Massachusetts.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Construction Contract or to the work to be performed thereunder or the specifications accompanying the same shall in any way affect its obligation on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Construction Contract or to the work or to the specifications.

The Surety providing the Bond shall have a rating of A or better within Best's Key Rating Guide.

IN WITNESS WHEREOF, this instrument is executed in three (3) counterparts, each one of which shall be deemed an original, this _____ day of _____, 20____.

**SECTION 00615**

**PAYMENT BOND**

KNOW ALL MEN BY THESE PRESENTS: That we _____
(Name of Contractor)

a _____ hereinafter called "Principal" and
(Corporation, Partnership, Joint Venture, LLC or Individual)

_____ of _____, State of _____
(Surety) (City)

hereinafter called the "Surety" and licensed by the State Division of Insurance to do business under the laws of the Commonwealth of Massachusetts, are held and firmly bound to the Town of Orleans, MA, Orleans, Massachusetts, hereinafter called "Owner", in the penal sum of _____Dollars and _____Cents ($) in lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators and successors, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION is such that whereas the Principal has entered into a certain contract with the Owner (the "Construction Contract"), dated the _____ day of _____, 20____, for the construction described as follows:

**DOWNTOWN AREA WWTF AND EFFLUENT DISPOSAL**

**CONTRACT NO. 2019-01 AND SRF NO. 4486**

NOW, THEREFORE, if the Principal shall promptly make payment to all persons, firms, subcontractors, and corporations furnishing materials for or performing labor in the prosecution of the work provided for in such contract, and any authorized extension or modification thereof, including all amounts due for materials, lubricants, oil, gasoline, repairs on machinery, equipment and tools, consumed or used in connection with the construction of such work, and all insurance premiums on said work, and for all labor, performed in such work whether by subcontractor or otherwise, then this obligation shall be void; otherwise to remain in full force and effect.

PROVIDED, FURTHER, that the said Surety, for value received hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the contract or to the work to be performed thereunder or the specifications accompanying the same shall in any way affect its obligation on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of this contract or to the work or to the specifications. The Surety Company providing the bond shall have a rating of A or better within the Best Key Rating Guide.

PROVIDED, FURTHER, that no final settlement between the Owner and the Contractor shall abridge the right of any beneficiary hereunder, whose claim may be unsatisfied.

IN WITNESS WHEREOF, this instrument is executed in _____ ( ) counterparts, each one of which shall be deemed an original, this the _____ day of _____, 20__.

# GENERAL CONDITIONS

ARTICLE 1 - DEFINITIONS AND TERMINOLOGY

*1.01* Defined Terms

A. Wherever used in the Contract Documents and printed with initial or all capital letters, the terms listed below will have the meanings indicated which are applicable to both the singular and plural thereof.

1. *Addenda*--Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the Contract Documents.

2. *Agreement*--The written instrument which is evidence of the agreement between OWNER and CONTRACTOR covering the Work.

3. *Application for Payment*--The form acceptable to ENGINEER which is to be used by CON- TRACTOR during the course of the Work in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Asbestos*--Any material that contains more than one percent asbestos and is friable or is releasing asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

5. *Bid*--The offer or proposal of a bidder submit- ted on the prescribed form setting forth the prices for the Work to be performed.

6. *Bidding Documents*--The Bidding Requirements and the proposed Contract Documents (including all Addenda issued prior to receipt of Bids).

7. *Bidding Requirements*--The Advertisement or Invitation to Bid, Instructions to Bidders, Bid security form, if any, and the Bid form with any supplements.

8. *Bonds*--Performance and payment bonds and other instruments of security.

9. *Change Order*--A document recommended by ENGINEER which is signed by CONTRACTOR and OWNER and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Agreement.

10. *Claim*--A demand or assertion by OWNER or CONTRACTOR seeking an adjustment of Contract Price or Contract Times, or both, or other relief with respect to the terms of the Contract. A demand for money or services by a third party is not a Claim.

11. *Contract*--The entire and integrated written agreement between the OWNER and CONTRACTOR concerning the Work. The Contract supersedes prior negotiations, representations, or agreements, whether written or oral.

*****12. *Contract Documents*--The Contract Documents establish the rights and obligations of the parties and include the Agreement, Addenda (which pertain to the Con- tract Documents), CONTRACTOR's Bid (including documentation accompanying the Bid and any post Bid documentation submitted prior to the Notice of Award) when attached as an exhibit to the Agreement, the Notice to Proceed, the Bonds, these General Conditions, the Supplementary Conditions, the Specifications and the Drawings as the same are more specifically identified in the Agreement, together with all Written Amendments, Change Orders, Work Change Directives, Field Orders, and ENGINEER's written interpretations and clarifications issued on or after the Effective Date of the Agreement. Approved Shop Drawings and the reports and drawings of subsurface and physical conditions are not Contract Documents. Only printed or hard copies of the items listed in this paragraph are Contract Documents. Files in electronic media format of text, data, graphics, and the like that may be furnished by OWNER to CONTRACTOR are not Contract Documents.

13. *Contract Price*--The moneys payable by OWNER to CONTRACTOR for completion of the Work in accordance with the Contract Documents as stated in the Agreement (subject to the provisions of paragraph 11.03 in the case of Unit Price Work).

14. *Contract Times*--The number of days or the dates stated in the Agreement to: (i) achieve Substantial Completion; and (ii) complete the Work so that it is ready for final payment as evidenced by ENGINEER's written recommendation of final payment.

15. *CONTRACTOR*--The individual or entity with whom OWNER has entered into the Agreement.

16. *Cost of the Work*--See paragraph 11.01.A for definition.

17. *Drawings*--That part of the Contract Documents prepared or approved by ENGINEER which graphically shows the scope, extent, and character of the Work to be performed by CONTRACTOR. Shop Drawings and other CONTRACTOR submittals are not Drawings as so defined.

18. *Effective Date of the Agreement*--The date indicated in the Agreement on which it becomes effective, but if no such date is indicated, it means the date on which the Agreement is signed and delivered by the last of the two parties to sign and deliver.

*****19. *ENGINEER*--The individual or entity named as such in the Agreement.

*****20. *ENGINEER's Consultant*--An individual or entity having a contract with ENGINEER to furnish services as ENGINEER's independent professional associate or consultant with respect to the Project and who is identified as such in the Supplementary Conditions.

21. *Field Order*--A written order issued by ENGINEER which requires minor changes in the Work but which does not involve a change in the Contract Price or the Contract Times.

22. General Requirements--Sections of Division 1 of the Specifications. The General Requirements pertain to all sections of the Specifications.

23. *Hazardous Environmental Condition*--The presence at the Site of Asbestos, PCBs, Petroleum, Hazardous Waste, or Radioactive Material in such quantities or circumstances that may present a substantial danger to persons or property exposed thereto in connection with the Work.

24. *Hazardous Waste*--The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.

25. *Laws and Regulations; Laws or Regulations*-- Any and all applicable laws, rules, regulations, ordinances, codes, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

26. *Liens*--Charges, security interests, or encumbrances upon Project funds, real property, or personal property.

27. *Milestone*--A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

28. *Notice of Award*--The written notice by OWNER to the apparent successful bidder stating that upon timely compliance by the apparent successful bidder with the conditions precedent listed therein, OWNER will sign and deliver the Agreement.

29. *Notice to Proceed*--A written notice given by OWNER to CONTRACTOR fixing the date on which the Contract Times will commence to run and on which CONTRACTOR shall start to perform the Work under the Contract Documents.

**30. *OWNER*--The individual, entity, public body, or authority with whom CONTRACTOR has entered into the Agreement and for whom the Work is to be performed.

31. *Partial Utilization*--Use by OWNER of a substantially completed part of the Work for the purpose for which it is intended (or a related purpose) prior to Substantial Completion of all the Work.

32. *PCBs*--Polychlorinated *biphenyls.*

33. *Petroleum*--Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Waste and crude oils.

34. *Project*--The total construction of which the Work to be performed under the Contract Documents may be the whole, or a part as may be indicated elsewhere in the Contract Documents.

35. *Project Manual*--The bound documentary information prepared for bidding and constructing the Work. A listing of the contents of the Project Manual, which may be bound in one or more volumes, is contained in the table(s) of contents.

36. *Radioactive Material*--Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.

37. *Resident Project Representative*--The authorized representative of ENGINEER who may be assigned to the Site or any part thereof.

38. *Samples*--Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

39. *Shop Drawings*--All drawings, diagrams, illustrations, schedules, and other data or information which are specifically prepared or assembled by or for CONTRACTOR and submitted by CONTRACTOR to illustrate some portion of the Work.

40. *Site*--Lands or areas indicated in the Contract Documents as being furnished by OWNER upon which the Work is to be performed, including rights-of-way and easements for access thereto, and such other lands furnished by OWNER which are designated for the use of CONTRACTOR.

*41. *Specifications*~~--That part of the Contract Documents consisting of written technical descriptions of materials, equipment, systems, standards, and workmanship as applied to the Work and certain administrative details applicable thereto.~~

42. *Subcontractor*--An individual or entity having a direct contract with CONTRACTOR or with any other Subcontractor for the performance of a part of the Work at the Site.

**43. *Substantial Completion*--The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of ENGINEER, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

44. *Supplementary Conditions*--That part of the Contract Documents which amends or supplements these General Conditions.

45. *Supplier*--A manufacturer, fabricator, supplier, distributor, material-man, or vendor having a direct contract with CONTRACTOR or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by CONTRACTOR or any Subcontractor.

46. *Underground Facilities*--All underground pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or attachments, and any encasements containing such facilities, including those that convey electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.

47. *Unit Price Work*--Work to be paid for on the basis of unit prices.

48. *Work*--The entire completed construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction, and furnishing, installing, and incorporating all materials and equipment into such construction, all as required by the Contract Documents.

49. *Work Change Directive*--A written statement to CONTRACTOR issued on or after the Effective Date of the Agreement and signed by OWNER and recommended by ENGINEER ordering an addition, deletion, or revision in the Work, or responding to differing or unforeseen subsurface or physical conditions under which the Work is to be performed or to emergencies. A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the change ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times.

50. *Written Amendment*--A written statement modifying the Contract Documents, signed by OWNER and CONTRACTOR on or after the Effective Date of the Agreement and normally dealing with the non-engineering or nontechnical rather than strictly construction-related aspects of the Contract Documents.

*1.02 Terminology*

A. Intent of Certain Terms or Adjectives

1. Whenever in the Contract Documents the terms "as allowed," "as approved," or terms of like effect or import are used, or the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of ENGINEER as to the Work, it is intended that such action or determination will be solely to evaluate, in general, the completed Work for compliance with the requirements of and information in the Contract Documents and conformance with the design concept of the completed Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise).

The use of any such term or adjective shall not be effective to assign to ENGINEER any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility contrary to the provisions of paragraph 9.10 or any other provision of the Contract Documents.

B. Day

1. The word "day" shall constitute a calendar day of 24 hours measured from midnight to the next midnight.

C. Defective

1. The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it does not conform to the Contract Documents or does not meet the requirements of any inspection, reference standard, test, or approval referred to in the Contract Documents, or has been damaged prior to ENGINEER's recommendation of final payment (unless responsibility for the protection thereof has been assumed by OWNER at Substantial Completion in accordance with paragraph 14.04 or 14.05).

D. Furnish, Install, Perform, Provide

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. When "furnish," "install," "perform," or "provide" is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of CONTRACTOR, "provide" is implied.

E. Unless stated otherwise in the Contract Documents, words or phrases which have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 - PRELIMINARY MATTERS

*2.01 Delivery of Bonds*

A. When CONTRACTOR delivers the executed Agreements to OWNER, CONTRACTOR shall also deliver to OWNER such Bonds as CONTRACTOR may be required to furnish.

*2.02 Copies of Documents*

A. OWNER shall furnish to CONTRACTOR up to ten copies of the Contract Documents. Additional copies will be furnished upon request at the cost of reproduction.

*2.03 Commencement of Contract Times; Notice to* Proceed *

A. The Contract Times will commence to run on the thirtieth day after the Effective Date of the Agreement or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Agreement. In no event will the Contract Times commence to run later than the sixtieth day after the day of Bid opening or the thirtieth day after the Effective Date of the Agreement, whichever date is earlier.

*2.04 Starting the Work*

A. CONTRACTOR shall start to perform the Work on the date when the Contract Times commence to run. No Work shall be done at the Site prior to the date on which the Contract Times commence to run.

*2.05 Before Starting Construction*

A. *CONTRACTOR's Review of Contract Documents:* Before undertaking each part of the Work, CONTRACTOR shall carefully study and compare the Contract Documents and check and verify pertinent figures therein and all applicable field measurements. CONTRACTOR shall promptly report in writing to ENGINEER any conflict, error, ambiguity, or discrepancy which CONTRACTOR may discover and shall obtain a written interpretation or clarification from ENGINEER before proceeding with any Work affected thereby; however, CONTRACTOR shall not be liable to OWNER or ENGINEER for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless CONTRACTOR knew or reasonably should have known thereof.

B. *Preliminary Schedules:* Within ten days after the Effective Date of the Agreement (unless otherwise specified in the General Requirements), CONTRACTOR shall submit to ENGINEER for its timely review:

1. a preliminary progress schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract Documents;
2. a preliminary schedule of Shop Drawing and Sample submittals which will list each required submittal and the times for submitting, reviewing, and processing such submittal; and
3. a preliminary schedule of values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

*****C. *Evidence of Insurance*~~: Before any Work at the Site is started, CONTRACTOR and OWNER shall each deliver to the other, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance which either of them or any additional insured may reasonably request) which CONTRACTOR and OWNER respectively are required to purchase and maintain in accordance with Article 5.~~

*2.06 Preconstruction Conference*

A. Within 20 days after the Contract Times start to run, but before any Work at the Site is started, a conference attended by CONTRACTOR, ENGINEER, and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in paragraph 2.05.B, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, and maintaining required records.

*2.07 Initial Acceptance of Schedules*

A. Unless otherwise provided in the Contract Documents, at least ten days before submission of the first Application for Payment a conference attended by CON- TRACTOR, ENGINEER, and others as appropriate will be held to review for acceptability to ENGINEER as provided below the schedules submitted in accordance with paragraph 2.05.B. CONTRACTOR shall have an additional ten days to make corrections and adjustments and to complete and resubmit the schedules. No progress payment shall be made to CONTRACTOR until acceptable schedules are submitted to ENGINEER.

1. The progress schedule will be acceptable to ENGINEER if it provides an orderly progression of the Work to completion within any specified Mile- stones and the Contract Times. Such acceptance will not impose on ENGINEER responsibility for the progress schedule, for sequencing, scheduling, or progress of the Work nor interfere with or relieve CONTRACTOR from CONTRACTOR's full responsibility therefor.
2. CONTRACTOR's schedule of Shop Drawing and Sample submittals will be acceptable to ENGINEER if it provides a workable arrangement for reviewing and processing the required submittals.
3. CONTRACTOR's schedule of values will be acceptable to ENGINEER as to form and substance if it provides a reasonable allocation of the Contract Price to component parts of the Work.

ARTICLE 3 - CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE

*3.01 Intent*

*****A. The Contract Documents are complementary; what is called for by one is as binding as if called for by all.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents. Any labor, documentation, services, materials, or equipment that may reasonably be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the intended result will be provided whether or not specifically called for at no additional cost to OWNER.

C. Clarifications and interpretations of the Contract Documents shall be issued by ENGINEER as provided in Article 9.

*3.02 Reference Standards*

A. Standards, Specifications, Codes, Laws, and Regulations

1. Reference to standards, specifications, manuals, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the standard, specification, manual, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Agreement if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

2. No provision of any such standard, specification, manual or code, or any instruction of a Supplier shall be effective to change the duties or responsibilities of OWNER, CONTRACTOR, or ENGINEER, or any of their subcontractors, consultants, agents, or employees from those set forth in the Contract Documents, nor shall any such provision or instruction be effective to assign to OWNER, ENGINEER, or any of ENGINEER's Consultants, agents, or employees any duty or authority to supervise or direct the performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

*3.03 Reporting and Resolving Discrepancies*

A. Reporting Discrepancies

1. If, during the performance of the Work, CONTRACTOR discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents or between the Contract Documents and any provision of any Law or Regulation applicable to the performance of the Work or of any standard, specification, manual or code, or of any instruction of any Supplier, CONTRACTOR shall report it to ENGINEER in writing at once. CONTRACTOR shall not proceed with the Work affected thereby (except in an emergency as required by paragraph 6.16.A) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in paragraph 3.04; provided, however, that CONTRACTOR shall not be liable to OWNER or ENGINEER for failure to report any such conflict, error, ambiguity, or discrepancy unless CONTRACTOR knew or reasonably should have known thereof.

B. Resolving Discrepancies

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:

a. the provisions of any standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Contract Documents); or

b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

*3.04 Amending and Supplementing Contract Documents*

A. The Contract Documents may be amended to provide for additions, deletions, and revisions in the Work or to modify the terms and conditions thereof in one or more of the following ways: (i) a Written Amendment; (ii) a Change Order; or (iii) a Work Change Directive.

B. The requirements of the Contract Documents may be supplemented, and minor variations and deviations in the Work may be authorized, by one or more of the following ways: (i) a Field Order; (ii) ENGINEER's approval of a Shop Drawing or Sample; or (iii) ENGINEER's written interpretation or clarification.

*3.05 Reuse of Documents*

A. CONTRACTOR and any Subcontractor or Supplier or other individual or entity performing or furnishing any of the Work under a direct or indirect contract with OWNER: (i) shall not have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of ENGINEER or ENGINEER's Consultant, including electronic media editions; and (ii) shall not reuse any of such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of OWNER and ENGINEER and specific written verification or adaption by ENGINEER. This prohibition will survive final payment, completion, and acceptance of the Work, or termination or completion of the Contract. Nothing herein shall preclude CONTRACTOR from retaining copies of the Contract Documents for record purposes.

ARTICLE 4 – AVAILABILITY OF LANDS, SUBSURFACE AND PHYSICAL CONDITIONS, REFERENCE POINTS REFERENCE POINTS

*4.01 Availability of Lands*

A. OWNER shall furnish the Site. OWNER shall notify CONTRACTOR of any encumbrances or restrictions not of general application but specifically related to use of the Site with which CONTRACTOR must comply in performing the Work. OWNER will obtain in a timely manner and pay for easements for permanent structures or permanent changes in existing facilities. If CONTRACTOR and OWNER are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, as a result of any delay in OWNER's furnishing the Site, CONTRACTOR may make a Claim therefor as provided in paragraph 10.05.

B. Upon reasonable written request, OWNER shall furnish CONTRACTOR with a current statement of record legal title and legal description of the lands upon which the Work is to be performed and OWNER's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. CONTRACTOR shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

*4.02 Subsurface and Physical Conditions*

* A. Reports and Drawings: The Supplementary Conditions identify:

1. those reports of explorations and tests of subsurface conditions at or contiguous to the Site that ENGINEER has used in preparing the Contract Documents; and

2. those drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site (except Underground Facilities) that ENGINEER has used in preparing the Contract Documents.

B. *Limited Reliance by CONTRACTOR on Technical Data Authorized:* CONTRACTOR may rely upon the general accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," CONTRACTOR may not rely upon or make any Claim against OWNER, ENGINEER, or any of ENGINEER's Consultants with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by CONTRACTOR, and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any CONTRACTOR interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions, or information.

*4.03 Differing Subsurface or Physical Conditions*

A. *Notice:* If CONTRACTOR believes that any subsurface or physical condition at or contiguous to the Site that is uncovered or revealed either:

1. is of such a nature as to establish that any "technical data" on which CONTRACTOR is entitled to rely as provided in paragraph 4.02 is materially inaccurate; or

2. is of such a nature as to require a change in the Contract Documents; or

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents; then CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by paragraph 6.16.A), notify OWNER and ENGINEER in writing about such condition. CONTRACTOR shall not further disturb such condition or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

** B. *ENGINEER's Review:* After receipt of written notice as required by paragraph 4.03.A, ENGINEER will promptly review the pertinent condition, determine the necessity of OWNER's obtaining additional exploration or tests with respect thereto, and advise OWNER in writing (with a copy to CONTRACTOR) of ENGINEER's findings and conclusions.

C. Possible Price and Times Adjustments

1. The Contract Price or the Contract Times, or both, will be equitably adjusted to the extent that the existence of such differing subsurface or physical condition causes an increase or decrease in CONTRACTOR's cost of, or time required for, performance of the Work; subject, however, to the following:

a. such condition must meet any one or more of the categories described in paragraph 4.03.A; and

b. with respect to Work that is paid for on a Unit Price Basis, any adjustment in Contract Price will be subject to the provisions of para- graphs 9.08 and 11.03.

2. CONTRACTOR shall not be entitled to any adjustment in the Contract Price or Contract Times if:

a. CONTRACTOR knew of the existence of such conditions at the time CONTRACTOR made a final commitment to OWNER in respect of Contract

Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract; or

b. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for CONTRACTOR prior to CONTRACTOR's making such final commitment; or

c. CONTRACTOR failed to give the written notice within the time and as required by paragraph 4.03.A.

3. If OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, a Claim may be made therefor as provided in paragraph 10.05. However, OWNER, ENGINEER, and ENGINEER's Consultants shall not be liable to CONTRACTOR for any claims, costs, losses, or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

*4.04 Underground Facilities*

A. *Shown or Indicated:* The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the Site is based on information and data furnished to OWNER or ENGINEER by the owners of such Underground Facilities, including OWNER, or by others. Unless it is otherwise expressly provided in the Supplementary Conditions:

1. OWNER and ENGINEER shall not be responsible for the accuracy or completeness of any such information or data; and

2. the cost of all of the following will be included in the Contract Price, and CONTRACTOR shall have full responsibility for:

a. reviewing and checking all such information and data,

b. locating all Underground Facilities shown or indicated in the Contract Documents,

c. coordination of the Work with the owners of such Underground Facilities, including OWNER, during construction, and

d. the safety and protection of all such Underground Facilities and repairing any damage thereto resulting from the Work.

B. Not Shown or Indicated

1. If an Underground Facility is uncovered or revealed at or contiguous to the Site which was not shown or indicated, or not shown or indicated with reasonable accuracy in the Contract Documents, CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by paragraph 6.16.A), identify the owner of such Underground Facility and give written notice to that owner and to OWNER and ENGINEER. ENGINEER will promptly review the Underground Facility and determine the extent, if any, to which a change is required in the Contract Documents to reflect and document the consequences of the existence or location of the Underground Facility. During such time, CONTRACTOR shall be responsible for the safety and protection of such Underground Facility.

2. If ENGINEER concludes that a change in the Contract Documents is required, a Work Change Directive or a Change Order will be issued to reflect and document such consequences. An equitable *adjustment shall be made i n the Contract Price or Contract Times, or both, to the extent that they are attributable to the existence or location of any Underground Facility that was not shown or *indicated or not shown or indicated with reasonable accuracy in the Contract Documents and that CONTRACTOR did not know of and could not reasonably have been expected to be aware of or to have anticipated. If OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment in Contract Price or Contract Times, OWNER or CONTRACTOR may make a Claim therefor as provided in paragraph 10.05.

*4.05 Reference Points*

A. OWNER shall provide engineering surveys to establish reference points for construction which in ENGINEER's judgment are necessary to enable CONTRACTOR to proceed with the Work. CONTRACTOR shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of OWNER. CONTRACTOR shall report to ENGINEER whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.**

*4.06 Hazardous Environmental Condition at Site*

A. *Reports and Drawings:* Reference is made to the Supplementary Conditions for the identification of those** reports and drawings relating to a Hazardous Environmental Condition identified at the Site, if any, that have been utilized by the ENGINEER in the preparation of the Contract Documents. *

B. *Limited Reliance by CONTRACTOR on Technical Data Authorized:* CONTRACTOR may rely upon the general accuracy of the "technical data" contained in such reports and drawings, but such reports and drawings are not Contract Documents. Such "technical data" is identified in the Supplementary Conditions. Except for such reliance on such "technical data," CONTRACTOR may not rely upon or make

any Claim against OWNER, ENGINEER or any of ENGINEER's Consultants with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by CONTRACTOR and safety precautions and programs incident thereto; or
2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or
3. any CONTRACTOR interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions or information.

C. CONTRACTOR shall not be responsible for any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work. CONTRACTOR shall be responsible for a Hazardous Environmental Condition created with any materials brought to the Site by CONTRACTOR, Subcontractors, Suppliers, or anyone else for whom CONTRACTOR is responsible.

D. If CONTRACTOR encounters a Hazardous Environmental Condition or if CONTRACTOR or anyone for whom CONTRACTOR is responsible creates a Hazardous Environmental Condition, CONTRACTOR shall immediately: (i) secure or otherwise isolate such condition; (ii) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by paragraph 6.16); and (iii) notify OWNER and ENGINEER (and promptly thereafter confirm such notice in writing). OWNER shall promptly consult with ENGINEER concerning the necessity for OWNER to retain a qualified expert to evaluate such condition or take corrective action, if any.

E. CONTRACTOR shall not be required to resume Work in connection with such condition or in any affected area until after OWNER has obtained any required permits related thereto and delivered to CONTRACTOR written notice: (i) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work; or (ii) specifying any special conditions under which such Work may be resumed safely. If OWNER and CONTRACTOR cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, or both, as a result of such Work stop- page or such special conditions under which Work is agreed to be resumed by CONTRACTOR, either party may make a Claim therefor as provided in paragraph 10.05.

F. If after receipt of such written notice CONTRACTOR does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then OWNER may order the portion of the Work that is in the area affected by such condition to be deleted from the Work. If OWNER and CONTRACTOR cannot agree as to entitlement to or on the amount or extent, if any, of an adjustment in Contract Price or Contract Times as a result of deleting such portion of the Work, then either party may make a Claim therefor as provided in paragraph 10.05. OWNER may have such deleted portion of the Work performed by OWNER's own forces or others in accordance with Article 7.

G. To the fullest extent permitted by Laws and Regulations, OWNER shall indemnify and hold harmless CONTRACTOR, Subcontractors, ENGINEER, ENGINEER's Consultants and the officers, directors, partners, employees, agents, other consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition: (i) was not shown or indicated in the Drawings or Specifications or identified in the Contract Documents to be included within the scope of the Work, and (ii) was not created by CONTRACTOR or by anyone for whom CONTRACTOR is responsible. Nothing in this paragraph 4.06.E shall obligate OWNER to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

H. To the fullest extent permitted by Laws and Regulations, CONTRACTOR shall indemnify and hold harmless OWNER, ENGINEER, ENGINEER's Consultants, and the officers, directors, partners, employees, agents, other consultants, and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition created by CONTRACTOR or by anyone for whom CONTRACTOR is responsible. Nothing in this paragraph 4.06.F shall obligate CONTRACTOR to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

I. The provisions of paragraphs 4.02, 4.03, and 4.04 are not intended to apply to a Hazardous Environmental Condition uncovered or revealed at the Site.

~~any other additional insured) which OWNER is required to purchase and maintain.~~

ARTICLE 5 - BONDS AND INSURANCE

*5.01 Performance, Payment, and Other Bonds*

A. CONTRACTOR shall furnish performance and payment Bonds, each in an amount at least equal to the Contract Price as security for the faithful performance and payment of all CONTRACTOR's obligations under the Contract Documents. These Bonds shall remain in effect at least until one year after the date when final payment becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents. CONTRACTOR shall also furnish such other Bonds as are required by the Contract Documents.*

B. All Bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations, and shall be executed by such sureties as are named in the current list of "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Circular 570 (amended) by the Financial Management Service, Surety Bond Branch, U.S. Department of the Treasury. All Bonds signed by an agent must be accompanied by a certified copy of such agent's authority to act.

C. If the surety on any Bond furnished by CON- TRACTOR is declared bankrupt or becomes insolvent or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirements of paragraph 5.01.B, CONTRACTOR shall within 20 days thereafter substitute another Bond and surety, both of which shall comply with the requirements of paragraphs 5.01.B and 5.02.

*5.02 Licensed Sureties and Insurers*

A. All Bonds and insurance required by the Contract Documents to be purchased and maintained by OWNER or CONTRACTOR shall be obtained from surety or insurance companies that are duly licensed or authorized in the jurisdiction in which the Project is located to issue Bonds or insurance policies for the limits and coverages so required. Such surety and insurance companies shall also meet such additional requirements and qualifications as may be provided in the Supplementary Conditions.

*5.03 Certificates of Insurance*

A. CONTRACTOR shall deliver to OWNER, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by OWNER or any other additional insured) which CONTRACTOR is required to *****purchase and maintain. ~~OWNER shall deliver to CONTRACTOR, with copies to each additional insured identified in the Supplementary Conditions, certificates of insurance (and other evidence of insurance requested by CONTRACTOR or~~

*5.04 CONTRACTOR's Liability Insurance*

*****A. CONTRACTOR shall purchase and maintain such liability and other insurance as is appropriate for the Work being performed and as will provide protection from claims set forth below which may arise out of or result from CONTRACTOR's performance of the Work and CONTRACTOR's other obligations under the Contract Documents, whether it is to be performed by CONTRACTOR, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits, and other similar employee benefit acts;
2. claims for damages because of bodily injury, occupational sickness or disease, or death of CONTRACTOR's employees;
3. claims for damages because of bodily injury, sickness or disease, or death of any person other than CONTRACTOR's employees;
4. claims for damages insured by reasonably available personal injury liability coverage which are sustained: (i) by any person as a result of an offense directly or indirectly related to the employment of such person by CONTRACTOR, or (ii) by any other person for any other reason;
5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefrom; and
6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

B. The policies of insurance so required by this paragraph 5.04 to be purchased and maintained shall:

*1. with respect to insurance required by para- graphs 5.04.A.3 through 5.04.A.6 inclusive, include as additional insureds (subject to any customary exclusion in respect of professional liability) OWNER, ENGINEER, ENGINEER's Consultants, and any other individuals or entities identified in the Supplementary Conditions, all of whom shall be listed as additional insureds, and include coverage for the respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby;

2. include at least the specific coverages and be written for not less than the limits of liability provided in the Supplementary Conditions or required by Laws or Regulations, whichever is greater;

3. include completed operations insurance;

4. include contractual liability insurance covering CONTRACTOR's indemnity obligations under paragraphs 6.07, 6.11, and 6.20;

5. contain a provision or endorsement that the coverage afforded will not be canceled, materially changed or renewal refused until at least thirty days prior written notice has been given to OWNER and CONTRACTOR and to each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued (and the certificates of insurance furnished by the CONTRACTOR pursuant to paragraph 5.03 will so provide);

6. remain in effect at least until final payment and at all times thereafter when CONTRACTOR may be correcting, removing, or replacing defective Work in accordance with paragraph 13.07; and

7. with respect to completed operations insurance, and any insurance coverage written on a claims-made basis, remain in effect for at least two years after final payment (and CONTRACTOR shall furnish OWNER and each other additional insured identified in the Supplementary Conditions, to whom a certificate of insurance has been issued, evidence satisfactory to OWNER and any such additional insured of continuation of such insurance at final payment and one year thereafter).*

~~*5.05 OWNER's Liability Insurance*~~

~~*****A. In addition to the insurance required to be provided by CONTRACTOR under paragraph 5.04, OWNER, at OWNER's option, may purchase and maintain at OWNER's expense OWNER's own liability insurance as will protect OWNER against claims which may arise from operations under the Contract Documents.~~

~~*5.06 Property Insurance*~~

~~***** A. Unless otherwise provided in the Supplementary Conditions, OWNER shall purchase and maintain property insurance upon the Work at the Site in the amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). This insurance shall:~~

~~1. include the interests of OWNER, CON- TRACTOR, Subcontractors, ENGINEER, ENGINEER's Consultants, and any other individuals or entities identified in the Supplementary Conditions, and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them, each of whom is deemed to have an insurable interest and shall be listed as an additional insured;~~

~~2. be written on a Builder's Risk "all-risk" or open-peril or special causes of loss policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, false work, and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire, lightning, extended coverage, theft, vandalism and malicious mischief, earthquake, collapse, debris removal, demolition occasioned by enforcement of Laws and Regulations, water dam- age, and such other perils or causes of loss as may be specifically required by the Supplementary Conditions;~~

~~3. include expenses incurred in the repair or replacement of any insured property (including but not limited to fees and charges of engineers and architects);~~

~~4. cover materials and equipment stored at the Site or at another location that was agreed to in writing by OWNER prior to being incorporated in the Work, provided that such materials and equipment have been included in an Application for Payment recommended by ENGINEER;~~

~~5. allow for partial utilization of the Work by OWNER;~~

~~6. include testing and startup; and~~

~~7. be maintained in effect until final payment is made unless otherwise agreed to in writing by OWNER, CONTRACTOR, and ENGINEER with 30 days written notice to each other additional insured to whom a certificate of insurance has been issued.~~

~~*****B. OWNER shall purchase and maintain such boiler and machinery insurance or additional property insurance as may be required by the Supplementary Conditions or Laws and Regulations which will include the interests of OWNER, CONTRACTOR, Subcontractors, ENGINEER, ENGINEER's Consultants, and any other individuals or entities identified in the Supplementary Conditions, each of whom is deemed to have an insurable interest and shall be listed as an insured or additional insured.~~

~~***** C. All the policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained in accordance with paragraph 5.06 will contain a provision or endorsement that the coverage afforded will not be canceled or materially changed or renewal refused until at least 30 days prior written notice has been given to OWNER and CONTRACTOR and to each other additional insured to whom a certificate of insurance has been issued and will contain waiver provisions in accordance with paragraph *5.07*.~~

~~*D. OWNER shall not be responsible for purchasing and maintaining any property insurance specified in this paragraph 5.06 to protect the interests of CONTRACTOR, Subcontractors, or others in the Work to the extent of any deductible amounts that are identified in the Supplementary~~

~~Conditions. The risk of loss within such identified deductible amount will be borne by CONTRACTOR, Subcontractors, or others suffering any such loss, and if any of them wishes property insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.~~

~~*E. If CONTRACTOR requests in writing that other special insurance be included in the property insurance policies provided under paragraph 5.06, OWNER shall, if possible, include such insurance, and the cost thereof will be charged to CONTRACTOR by appropriate Change Order or Written Amendment. Prior to commencement of the Work at the Site, OWNER shall in writing advise CONTRACTOR whether or not such other insurance has been procured by OWNER.~~

*5.07 Waiver of Rights*

*****A. OWNER and CONTRACTOR intend that all policies purchased in accordance with paragraph 5.06 will protect OWNER, CONTRACTOR, Subcontractors, ENGINEER, ENGINEER's Consultants, and all other individuals or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds (and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them) in such policies and will provide primary coverage for all losses and damages caused by the perils or causes of loss covered thereby. All such policies shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any of the insureds or additional insureds thereunder. OWNER and CONTRACTOR waive all rights against each other and their respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them for all losses and damages caused by, arising out of or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Subcontractors, ENGINEER, ENGINEER's Consultants, and all other individuals or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds (and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them) under such policies for losses and damages so caused. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance * ~~held by OWNER as trustee or~~ otherwise payable under any policy so issued.

B. OWNER waives all rights against CONTRACTOR, Subcontractors, ENGINEER, ENGINEER's Consultants, and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them for:

1. loss due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to OWNER's property or the Work caused by, arising out of, or resulting from fire or other peril whether or not insured by OWNER; and

2. loss or damage to the completed Project or part thereof caused by, arising out of, or resulting from fire or other insured peril or cause of loss covered by any property insurance maintained on the completed Project or part thereof by OWNER during partial utilization pursuant to paragraph 14.05, after Substantial Completion pursuant to paragraph 14.04, or after final payment pursuant to paragraph 14.07.

C. Any insurance policy maintained by OWNER covering any loss, damage or consequential loss referred to in paragraph 5.07.B shall contain provisions to the effect that in the event of payment of any such loss, damage, or consequential loss, the insurers will have no rights of recovery against CONTRACTOR, Subcontractors, ENGINEER, or ENGINEER's Consultants and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them.

*5.08 Receipt and Application of Insurance Proceeds*

~~*****A. Any insured loss under the policies of insurance required by paragraph 5.06 will be adjusted with OWNER and made payable to OWNER as fiduciary for the insureds, as their interests may appear, subject to the requirements of any applicable mortgage clause and of paragraph 5.08.B. OWNER shall deposit in a separate account any money so received and shall distribute it in accordance with such agreement as the parties in interest may reach. If no other special agreement is reached, the damaged Work shall be repaired or replaced, the moneys so received applied on account thereof, and the Work and the cost thereof covered by an appropriate Change Order or Written Amendment.~~

~~*****B. OWNER as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object in writing within 15 days after the occurrence of loss to OWNER's exercise of this power. If such objection be made, OWNER as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, OWNER as fiduciary shall adjust and settle the loss with the insurers and, if required in writing by any party in interest, OWNER as fiduciary shall give bond for the proper performance of such duties.~~

*5.09 Acceptance of Bonds and Insurance; Option to Replace*

~~*****A. If either OWNER or CONTRACTOR has any objection to the coverage afforded by or other provisions of the Bonds or insurance required to be purchased and maintained by the other party in accordance with Article 5 on the basis of non-conformance with the Contract Documents, the objecting party shall so notify the other party in writing within 10 days after receipt of the certificates (or other evidence requested) required by paragraph 2.05.C. OWNER and CONTRACTOR shall each provide to the other such additional information in respect of insurance provided as the other may reasonably request. If either party does not purchase or maintain all of the Bonds and insurance required of such party by the Contract Documents, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage. Without prejudice to any other right or remedy, the other party may elect to obtain equivalent Bonds or insurance to protect such~~

~~other party's interests at the expense of the party who was required to provide such coverage, and a Change Order shall be issued to adjust the Contract Price accordingly.~~

*5.10 Partial Utilization, Acknowledgment of Property Insurer*

A. If OWNER finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work as provided in paragraph 14.05, no such use or occupancy shall commence before the insurers providing the property insurance pursuant to paragraph 5.06 have acknowledged notice thereof and in writing effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 - CONTRACTOR'S RESPONSIBILITIES

*6.01 Supervision and Superintendence*

A. CONTRACTOR shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. CONTRACTOR shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction, but CONTRACTOR shall not be responsible for the negligence of OWNER or ENGINEER in the design or specification of a specific means, method, technique, sequence, or procedure of construction which is shown or indicated in and expressly required by the Contract Documents. CONTRACTOR shall be responsible to see that the completed Work complies accurately with the Contract Documents.

~~*B. At all times during the progress of the Work, CONTRACTOR shall assign a competent resident superintendent thereto who shall not be replaced without written notice to OWNER and ENGINEER except under extraordinary circumstances. The superintendent will be CONTRACTOR's representative at the Site and shall have authority to act on behalf of CONTRACTOR. All communications given to or received from the superintendent shall be binding on CONTRACTOR.~~

*6.02 Labor; Working Hours*

A. CONTRACTOR shall provide competent, suitably qualified personnel to survey, lay out, and construct the Work as required by the Contract Documents. CONTRACTOR shall at all times maintain good discipline and order at the Site.

B. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site shall be performed during regular working hours, and CONTRACTOR will not permit overtime work or the performance of Work on Saturday, Sunday, or any legal holiday without OWNER's written consent (which will not be unreasonably withheld) given after prior written notice to ENGINEER.

*6.03 Services, Materials, and Equipment*

A. Unless otherwise specified in the General Requirements, CONTRACTOR shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start-up, and completion of the Work.

B. All materials and equipment incorporated into the Work shall be as specified or, if not specified, shall be of good quality and new, except as otherwise provided in the Contract Documents. All warranties and guarantees specifically called for by the Specifications shall expressly run to the benefit of OWNER. If required by ENGINEER, CONTRACTOR shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment. All materials and equipment shall be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

*6.04 Progress Schedule*

A. CONTRACTOR shall adhere to the progress schedule established in accordance with paragraph 2.07 as it may be adjusted from time to time as provided below.

1. CONTRACTOR shall submit to ENGINEER for acceptance (to the extent indicated in paragraph 2.07) proposed adjustments in the progress schedule that will not result in changing the Contract Times (or Milestones). Such adjustments will conform generally to the progress schedule then in effect and additionally will comply with any provisions of the General Requirements applicable thereto.

2. Proposed adjustments in the progress schedule that will change the Contract Times (or Milestones) shall be submitted in accordance with the requirements of Article 12. Such adjustments may only be made by a Change Order or Written Amendment in accordance with Article 12.

**6.05 Substitutes and "Or-Equals"*

A. Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or-equal" item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may

be submitted to ENGINEER for review under the circumstances described below.

1. "Or-Equal" Items: If in ENGINEER's sole discretion an item of material or equipment proposed by CONTRACTOR is functionally equal to that named and sufficiently similar so that no change in related Work will be required, it may be considered by ENGINEER as an "or-equal" item, in which case review and approval of the proposed item may, in ENGINEER's sole discretion, be accomplished without compliance with some or all of the requirements for approval of proposed substitute items. For the purposes of this paragraph 6.05.A.1, a proposed item of material or equipment will be considered functionally equal to an item so named if:

    a. in the exercise of reasonable judgment ENGINEER determines that: (i) it is at least equal in quality, durability, appearance, strength, and design characteristics; (ii) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole, and;

    b. CONTRACTOR certifies that: (i) there is no increase in cost to the OWNER; and (ii) it will conform substantially, even with deviations, to the detailed requirements of the item named in the Contract Documents.

2. Substitute Items

    a. If in ENGINEER's sole discretion an item of material or equipment proposed by CONTRACTOR does not qualify as an "or-equal" item under paragraph 6.05.A.1, it will be considered a proposed substitute item.

    b. CONTRACTOR shall submit sufficient information as provided below to allow ENGINEER to determine that the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefor. Requests for review of proposed substitute items of material or equipment will not be accepted by ENGINEER from anyone other than CON- TRACTOR.

    c. The procedure for review by ENGINEER will be as set forth in paragraph 6.05.A.2.d, as supplemented in the General Requirements and as ENGINEER may decide is appropriate under the circumstances.

    d. CONTRACTOR shall first make written application to ENGINEER for review of a proposed substitute item of material or equipment that CONTRACTOR seeks to furnish or use. The application shall certify that the proposed substitute item will perform adequately the functions and achieve the results called for by the general design, be similar in substance to that specified, and be suited to the same use as that specified. The application will state the extent, if any, to which the use of the proposed substitute item will prejudice CONTRACTOR's achievement of Substantial Completion on time, whether or not use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with OWNER for work on the Project) to adapt the design to the proposed substitute item and whether or not incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty. All variations of the proposed substitute item from that specified will be identified in the application, and available engineering, sales, maintenance, repair, and replacement services will be indicated. The application will also contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including costs of redesign and claims of other contractors affected by any resulting change, all of which will be considered by ENGINEER in evaluating the proposed substitute item. ENGINEER may require CONTRACTOR to furnish additional data about the proposed substitute item.

B. Substitute Construction Methods or Procedures: If a specific means, method, technique, sequence, or procedure of construction is shown or indicated in and expressly required by the Contract Documents, CON- TRACTOR may furnish or utilize a substitute means, meth- od, technique, sequence, or procedure of construction approved by ENGINEER. CONTRACTOR shall submit sufficient information to allow ENGINEER, in ENGINEER's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents. The procedure for review by ENGINEER will be similar to that provided in subparagraph 6.05.A.2.

C. *Engineer's Evaluation:* ENGINEER will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to paragraphs 6.05.A and 6.05.B. ENGINEER will be the sole judge of accept- ability. No "or-equal" or substitute will be ordered, installed or utilized until ENGINEER's review is complete, which will be evidenced by either a Change Order for a substitute or an approved Shop Drawing for an "or equal." ENGINEER will advise CONTRACTOR in writing of any negative determination.

D. *Special Guarantee:* OWNER may require CON- TRACTOR to furnish at CONTRACTOR's expense a special performance guarantee or other surety with respect to any substitute.

E. *ENGINEER's Cost Reimbursement:* ENGINEER will record time required by ENGINEER and ENGINEER's Consultants in evaluating substitute proposed or submitted by CONTRACTOR pursuant to paragraphs 6.05.A.2 and 6.05.B and in making changes in the Contract Documents (or in the provisions of any other direct contract with

OWNER for work on the Project) occasioned thereby. Whether or not ENGINEER approves a substitute item so proposed or submitted by CONTRACTOR, CONTRACTOR shall reimburse OWNER for the charges of ENGINEER and ENGINEER's Consultants for evaluating each such proposed substitute.

F. *CONTRACTOR's Expense:* CONTRACTOR shall provide all data in support of any proposed substitute or "or-equal" at CONTRACTOR's expense.

*6.06 Concerning Subcontractors, Suppliers, and Others*

A. CONTRACTOR shall not employ any Subcontractor, Supplier, or other individual or entity (including those acceptable to OWNER as indicated in paragraph 6.06.B), whether initially or as a replacement, against whom OWNER may have reasonable objection. CONTRACTOR shall not be required to employ any Subcontractor, Supplier, or other individual or entity to furnish or perform any of the Work against whom CONTRACTOR has reasonable objection.

B. If the Supplementary Conditions require the identity of certain Subcontractors, Suppliers, or other individuals or entities to be submitted to OWNER in advance for acceptance by OWNER by a specified date prior to the Effective Date of the Agreement, and if CONTRACTOR has submitted a list thereof in accordance with the Supplementary Conditions, OWNER's acceptance (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the Bidding Documents or the Contract Documents) of any such Subcontractor, Supplier, or other individual or entity so identified may be revoked on the basis of reasonable objection after due investigation.

CONTRACTOR shall submit an acceptable replacement for the rejected Subcontractor, Supplier, or other individual or entity, and the Contract Price will be adjusted by the difference in the cost occasioned by such replacement, and an appropriate Change Order will be issued or Written Amendment signed. No acceptance by OWNER of any such Subcontractor, Supplier, or other individual or entity, whether initially or as a replacement, shall constitute a waiver of any right of OWNER or ENGINEER to reject defective Work.

C. CONTRACTOR shall be fully responsible to OWNER and ENGINEER for all acts and omissions of the Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work just as CONTRACTOR is responsible for CONTRACTOR's own acts and omissions. Nothing in the Contract Documents shall create for the benefit of any such Subcontractor, Supplier, or other individual or entity any contractual relationship between OWNER or ENGINEER and any such Subcontractor, Supplier or other individual or entity, nor shall it create any obligation on the part of OWNER or ENGINEER to pay or to see to the payment of any moneys due any such Subcontractor, Supplier, or other individual or entity except as may otherwise be required by Laws and Regulations.

D. CONTRACTOR shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers, and other individuals or entities performing or furnishing any of the Work under a direct or indirect contract with CONTRACTOR.

E. CONTRACTOR shall require all Subcontractors, Suppliers, and such other individuals or entities performing or furnishing any of the Work to communicate with ENGINEER through CONTRACTOR.

**F. The divisions and sections of the Specifications and the identifications of any Drawings shall not control CONTRACTOR in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

G. All Work performed for CONTRACTOR by a Subcontractor or Supplier will be pursuant to an appropriate agreement between CONTRACTOR and the Subcontractor or Supplier which specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of OWNER and ENGINEER. Whenever any such agreement is with a Subcontractor or Supplier who is listed as an additional insured on the property insurance provided in paragraph 5.06, the agreement between the CONTRACTOR and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against OWNER, CONTRACTOR, ENGINEER, ENGINEER's Consultants, and all other individuals or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds (and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them) for all losses and damages caused by, arising out of, relating to, or resulting from any of the perils or causes of loss covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, CONTRACTOR will obtain the same.

*6.07 Patent Fees and Royalties*

A. CONTRACTOR shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if to the actual knowledge of OWNER or ENGINEER its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by OWNER in the Contract Documents. To the fullest extent permitted by Laws and Regulations, CONTRACTOR shall indemnify and hold harmless OWNER, ENGINEER, ENGINEER's Consultants, and the officers, directors, partners, employees or agents, and other consultants of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any

invention, design, process, product, or device not specified in the Contract Documents.

*6.08 Permits*

******A. Unless otherwise provided in the Supplementary Conditions, CONTRACTOR shall obtain and pay for all construction permits and licenses. OWNER shall assist CONTRACTOR, when necessary, in obtaining such permits and licenses. CONTRACTOR shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Agreement. CONTRACTOR shall pay all charges of utility owners for connections to the Work, and OWNER shall pay all charges of such utility owners for capital costs related thereto, such as plant investment fees.

*6.09 Laws and Regulations*

A. CONTRACTOR shall give all notices and comply with all Laws and Regulations applicable to the performance of the Work. Except where otherwise expressly required by applicable Laws and Regulations, neither OWNER nor ENGINEER shall be responsible for monitoring CONTRACTOR's compliance with any Laws or Regulations.

B. If CONTRACTOR performs any Work knowing or having reason to know that it is contrary to Laws or Regulations, CONTRACTOR shall bear all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work; however, it shall not be CONTRACTOR's primary responsibility to make certain that the Specifications and Drawings are in accordance with Laws and Regulations, but this shall not relieve CONTRACTOR of CONTRACTOR's obligations under paragraph 3.03.

C. Changes in Laws or Regulations not known at the time of opening of Bids (or, on the Effective Date of the Agreement if there were no Bids) having an effect on the cost or time of performance of the Work may be the subject of an adjustment in Contract Price or Contract Times. If OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any such adjustment, a Claim may be made therefor as provided in paragraph 10.05.

*6.10 Taxes ***

**A.** CONTRACTOR shall pay all sales, consumer, use, and other similar taxes required to be paid by CONTRACTOR in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

*6.11 Use of Site and Other Areas ***

A Limitation on Use of Site and Other Areas

1. CONTRACTOR shall confine construction equipment, the storage of materials and equipment, and the operations of workers to the Site and other areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and other areas with construction equipment or other materials or equipment. CONTRACTOR shall assume full responsibility for any damage to any such land or area, or to the owner or occupant thereof, or of any adjacent land or areas resulting from the performance of the Work.

2. Should any claim be made by any such owner or occupant because of the performance of the Work, CONTRACTOR shall promptly settle with such other party by negotiation or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law.

3. To the fullest extent permitted by Laws and Regulations, CONTRACTOR shall indemnify and hold harmless OWNER, ENGINEER, ENGINEER's Consultant, and the officers, directors, partners, employees, agents, and other consultants of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against OWNER, ENGINEER, or any other party indemnified hereunder to the extent caused by or based upon CONTRACTOR's performance of the Work.

B. *Removal of Debris During Performance of the Work:* During the progress of the Work CONTRACTOR shall keep the Site and other areas free from accumulations of waste materials, rubbish, and other debris. Removal and Disposal of such waste materials, rubbish, and other debris shall conform to applicable Laws and Regulations.

C. *Cleaning:* Prior to Substantial Completion of the Work CONTRACTOR shall clean the Site and make it ready for

utilization by OWNER. At the completion of the Work CONTRACTOR shall remove from the Site all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading Structures:* CONTRACTOR shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall CONTRACTOR subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

*6.12 Record Documents*

A. CONTRACTOR shall maintain in a safe place at the Site one record copy of all Drawings, Specifications, Addenda, Written Amendments, Change Orders, Work Change Directives, Field Orders, and written interpretations and clarifications in good order and annotated to show changes made during construction. These record documents together with all approved Samples and a counterpart of all approved Shop Drawings will be available to ENGINEER for reference. Upon completion of the Work, these record documents, Samples, and Shop Drawings will be delivered to ENGINEER for OWNER.

*6.13 Safety and Protection*

A. CONTRACTOR shall be solely responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. CONTRACTOR shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:

1. all persons on the Site or who may be affected by the Work;
2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and
3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities, and Under- ground Facilities not designated for removal, relocation, or replacement in the course of construction.

B. CONTRACTOR shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection. CONTRACTOR shall notify owners of adjacent property and of Underground Facilities and other utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property. All damage, injury, or loss to any property referred to in paragraph 6.13.A.2 or 6.13.A.3 caused, directly or indirectly, in whole or in part, by CONTRACTOR, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by CONTRACTOR (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of OWNER or ENGINEER or ENGINEER's Consultant, or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of CONTRACTOR or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

CONTRACTOR's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and ENGINEER has issued a notice to OWNER and CONTRACTOR in accordance with paragraph 14.07.B that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion).

*6.14 Safety Representative*

A. CONTRACTOR shall designate a qualified and experienced safety representative at the Site whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs.

*6.15 Hazard Communication Programs*

A. CONTRACTOR shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

*6.16 Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, CONTRACTOR is obligated to act to prevent threatened damage, injury, or loss. CONTRACTOR shall give ENGINEER prompt written notice if CONTRACTOR believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If ENGINEER determines that a change in the Contract Documents is required because of the action taken by CONTRACTOR in response to such an emergency, a Work Change Directive or Change Order will be issued.

*6.17 Shop Drawings and Samples*

A. CONTRACTOR shall submit Shop Drawings to ENGINEER for review and approval in accordance with the acceptable schedule of Shop Drawings and Sample submittals. All submittals will be identified as ENGINEER may require and in the number of copies specified in the General Requirements. The data shown on the Shop

Drawings will be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show ENGINEER the services, materials, and equipment CONTRACTOR proposes to provide and to enable ENGINEER to review the information for the limited purposes required by paragraph 6.17.E.

B. CONTRACTOR shall also submit Samples to ENGINEER for review and approval in accordance with the acceptable schedule of Shop Drawings and Sample submittals. Each Sample will be identified clearly as to material, Supplier, pertinent data such as catalog numbers, and the use for which intended and otherwise as ENGINEER may require to enable ENGINEER to review the submittal for the limited purposes required by paragraph 6.17.E. The numbers of each Sample to be submitted will be as specified in the Specifications.

C. Where a Shop Drawing or Sample is required by the Contract Documents or the schedule of Shop Drawings and Sample submittals acceptable to ENGINEER as required by paragraph 2.07, any related Work performed prior to ENGINEER's review and approval of the pertinent submittal will be at the sole expense and responsibility of CONTRACTOR.

D. Submittal Procedures

1. Before submitting each Shop Drawing or Sample, CONTRACTOR shall have determined and verified:

a. all field measurements, quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers, and similar information with respect thereto;

b. all materials with respect to intended use, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work;

c. all information relative to means, methods, techniques, sequences, and procedures of construction and safety precautions and programs incident thereto; and

d. CONTRACTOR shall also have reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents.

2. Each submittal shall bear a stamp or specific written indication that CONTRACTOR has satisfied CONTRACTOR's obligations under the Contract Documents with respect to CONTRACTOR's review and approval of that submittal.

3. At the time of each submittal, CONTRAC- TOR shall give ENGINEER specific written notice of such variations, if any, that the Shop Drawing or Sample submitted may have from the requirements of the Contract Documents, such notice to be in a written communication separate from the submittal; and, in addition, shall cause a specific notation to be made on each Shop Drawing and Sample submitted to ENGINEER for review and approval of each such variation.

E. ENGINEER's Review

*1. ENGINEER will ~~timely~~ review and approve Shop Drawings and Samples in accordance with the schedule of Shop Drawings and Sample submittals acceptable to ENGINEER. ENGINEER's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation in the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. ENGINEER's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction (except where a particular means, method, technique, sequence, or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

3. ENGINEER's review and approval of Shop Drawings or Samples shall not relieve CONTRACTOR from responsibility for any variation from the requirements of the Contract Documents unless CONTRACTOR has in writing called ENGINEER's attention to each such variation at the time of each submittal as required by paragraph 6.17.D.3 and ENGINEER has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample approval; nor will any approval by ENGINEER relieve CONTRACTOR from responsibility for complying with the requirements of paragraph 6.17.D.1.

F. Resubmittal Procedures

1. CONTRACTOR shall make corrections required by ENGINEER and shall return the required number of corrected copies of Shop Drawings and submit as required new Samples for review and approval. CONTRACTOR shall direct specific attention in writing to revisions other than the corrections called for by ENGINEER on previous submittals.

*6.18 Continuing the Work*

A. CONTRACTOR shall carry on the Work and adhere to the progress schedule during all disputes or disagreements with OWNER. No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by paragraph 15.04 or as OWNER and CONTRACTOR may otherwise agree in writing.

*6.19 CONTRACTOR's General Warranty and Guarantee*

A. CONTRACTOR warrants and guarantees to OWNER, ENGINEER, and ENGINEER's Consultants that all Work

will be in accordance with the Contract Documents and will not be defective. CONTRACTOR's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification, or improper maintenance or operation by persons other than CONTRACTOR, Subcontractors, Suppliers, or any other individual or entity for whom CONTRACTOR is responsible; or

2. normal wear and tear under normal usage. B. CONTRACTOR's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of CONTRACTOR's obligation to perform the Work in accordance with the Contract Documents:

   a. observations by ENGINEER;
   b. recommendation by ENGINEER or payment by OWNER of any progress or final payment;
   c. the issuance of a certificate of Substantial Completion by ENGINEER or any payment related thereto by OWNER;
   d. use or occupancy of the Work or any part thereof by OWNER;
   e. any acceptance by OWNER or any failure to do so;
   f. any review and approval of a Shop Drawing or Sample submittal or the issuance of a notice of acceptability by ENGINEER;
   g. any inspection, test, or approval by others; or
   h. any correction of defective Work by OWNER.

*6.20 Indemnification*

~~*A. To the fullest extent permitted by Laws and Regulations, CONTRACTOR shall indemnify and hold harmless OWNER, ENGINEER, ENGINEER's Consultants, and the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the performance of the Work, provided that any such claim, cost, loss, or damage:~~

~~1. is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom; and~~

~~2. is caused in whole or in part by any negligent act or omission of CONTRACTOR, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work or anyone for whose acts any of them may be liable, regardless of whether or not caused in part by any negligence or omission of an individual or entity indemnified hereunder or whether liability is imposed upon such indemnified party by Laws and Regulations regardless of the negligence of any such individual or entity.~~

B. In any and all claims against OWNER or ENGINEER or any of their respective consultants, agents, officers, directors, partners, or employees by any employee (or the survivor or personal representative of such employee) of CONTRACTOR, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under paragraph 6.20.A shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for CONTRACTOR or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

~~*C. The indemnification obligations of CONTRACTOR under paragraph 6.20.A shall not extend to the liability of ENGINEER and ENGINEER's Consultants or to the officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of them arising out of:~~

~~1. the preparation or approval of, or the failure to prepare or approve, maps, Drawings, opinions, reports, surveys, Change Orders, designs, or~~ Specifications~~; or~~

~~2. giving directions or instructions, or failing to give them, if that is the primary cause of the~~ injury ~~or damage.~~

ARTICLE 7 - OTHER WORK

*7.01 Related Work at Site*

A. OWNER may perform other work related to the Project at the Site by OWNER's employees, or let other direct contracts therefor, or have other work performed by utility owners. If such other work is not noted in the Contract Documents, then:

   1. written notice thereof will be given to CONTRACTOR prior to starting any such other work; and

   2. if OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times that should be allowed as a result of such other work, a Claim may be made therefor as provided in paragraph 10.05.

B. CONTRACTOR shall afford each other contractor who is a party to such a direct contract and each utility owner (and OWNER, if OWNER is performing the other work with OWNER's employees) proper and safe access to the Site and a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work and shall properly coordinate the Work with theirs. Unless otherwise provided in the Contract Documents, CONTRACTOR shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. CONTRACTOR shall not endanger any work of others by cutting, excavating, or otherwise altering their work and will only cut or alter their

work with the written consent of ENGINEER and the others whose work will be affected. The duties and responsibilities of CONTRACTOR under this paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of CONTRACTOR in said direct contracts between OWNER and such utility owners and other contractors.

C. If the proper execution or results of any part of CONTRACTOR's Work depends upon work performed by others under this Article 7, CONTRACTOR shall inspect such other work and promptly report to ENGINEER in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of CONTRACTOR's Work. CONTRACTOR's failure to so report will constitute an acceptance of such other work as fit and proper for integration with CONTRACTOR's Work except for latent defects and deficiencies in such other work.

*7.02 Coordination*

A. If OWNER intends to contract with others for the performance of other work on the Project at the Site, the following will be set forth in Supplementary Conditions:

1. the individual or entity who will have authority and responsibility for coordination of the activities among the various contractors will be identified;

2. the specific matters to be covered by such authority and responsibility will be itemized; and

3. the extent of such authority and responsibilities will be provided.

B. Unless otherwise provided in the Supplementary Conditions, OWNER shall have sole authority and responsibility for such coordination.

ARTICLE 8 - OWNER'S RESPONSIBILITIES

*8.01 Communications to Contractor*

A. Except as otherwise provided in these General Conditions, OWNER shall issue all communications to CONTRACTOR through ENGINEER.

*8.02 Replacement of ENGINEER*

A. In case of termination of the employment of ENGINEER, OWNER shall appoint an engineer to whom CONTRACTOR makes no reasonable objection, whose status under the Contract Documents shall be that of the former ENGINEER.

*8.03 Furnish Data*

A. OWNER shall promptly furnish the data required of OWNER under the Contract Documents.

*8.04 Pay Promptly When Due*

A. OWNER shall make payments to CONTRACTOR promptly when they are due as provided in paragraphs 14.02.C and 14.07.C.

*8.05 Lands and Easements; Reports and Tests*

A. OWNER's duties in respect of providing lands and easements and providing engineering surveys to establish reference points are set forth in paragraphs 4.01 and 4.05. Paragraph 4.02 refers to OWNER's identifying and making available to CONTRACTOR copies of reports of explorations and tests of subsurface conditions and drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site that have been utilized by ENGINEER in preparing the Contract Documents.

*8.06 Insurance*

~~*A. OWNER's responsibilities, if any, in respect to purchasing and maintaining liability and property insurance are set forth in Article 5.~~

*8.07 Change Orders*

A. OWNER is obligated to execute Change Orders as indicated in paragraph 10.03.

*8.08 Inspections, Tests, and Approvals*

A. OWNER's responsibility in respect to certain inspections, tests, and approvals is set forth in paragraph 13.03.B.

*8.09 Limitations on OWNER's Responsibilities*

A. The OWNER shall not supervise, direct, or have control or authority over, nor be responsible for, CONTRACTOR's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws and Regulations applicable to the performance of the Work. OWNER will not be responsible for CONTRACTOR's failure to perform the Work in accordance with the Contract Documents.

*8.10 Undisclosed Hazardous Environmental Condition*

A. OWNER's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in paragraph 4.06.

*8.11 Evidence of Financial Arrangements*

A. If and to the extent OWNER has agreed to furnish CONTRACTOR reasonable evidence that financial arrangements have been made to satisfy OWNER's obligations under the Contract Documents, OWNER's responsibility in respect thereof will be as set forth in the Supplementary Conditions.

ARTICLE 9 - ENGINEER'S STATUS DURING CONSTRUCTION

*9.01 OWNER'S Representative*

A. ENGINEER will be OWNER's representative during the construction period. The duties and responsibilities and the limitations of authority of ENGINEER as OWNER's representative during construction are set forth in the Contract Documents and will not be changed without written consent of OWNER and ENGINEER.

**9.02 Visits to Site*

A. ENGINEER will make visits to the Site at intervals appropriate to the various stages of construction as

ENGINEER deems necessary in order to observe as an experienced and qualified design professional the progress that has been made and the quality of the various aspects of CONTRACTOR's executed Work. Based on information obtained during such visits and observations, ENGINEER, for the benefit of OWNER, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. ENGINEER will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. ENGINEER's efforts will be directed toward providing for OWNER a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and observations, ENGINEER will keep OWNER informed of the progress of the Work and will endeavor to guard OWNER against defective Work.

B. ENGINEER's visits and observations are subject to all the limitations on ENGINEER's authority and responsibility set forth in paragraph 9.10, and particularly, but without limitation, during or as a result of ENGINEER's visits or observations of CONTRACTOR's Work ENGINEER will not supervise, direct, control, or have authority over or be responsible for CONTRACTOR's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws and Regulations applicable to the performance of the Work.

*9.03 Project Representative*

A. If OWNER and ENGINEER agree, ENGINEER will furnish a Resident Project Representative to assist ENGINEER in providing more extensive observation of the Work. The responsibilities and authority and limitations thereon of any such Resident Project Representative and assistants will be as provided in paragraph 9.10 and in the Supplementary Conditions. If OWNER designates another representative or agent to represent OWNER at the Site who is not ENGINEER's Consultant, agent or employee, the responsibilities and authority and limitations thereon of such other individual or entity will be as provided in the Supplementary Conditions.

*9.04 Clarifications and Interpretations*

A. ENGINEER will issue with reasonable promptness such written clarifications or interpretations of the requirements of the Contract Documents as ENGINEER may deter- mine necessary, which shall be consistent with the intent of and reasonably inferable from the Contract Documents. Such written clarifications and interpretations will be binding on OWNER and CONTRACTOR. If OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, that should be allowed as a result of a written clarification or interpretation, a Claim may be made therefor as provided in paragraph 10.05.

***9.05 Authorized Variations in Work*

A. ENGINEER may authorize minor variations in the Work from the requirements of the Contract Documents which do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. These may be accomplished by a Field Order and will be binding on OWNER and also on CONTRACTOR, who shall perform the Work involved promptly. If OWNER and CONTRACTOR are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in the Contract Price or Contract Times, or both, as a result of a Field Order, a Claim may be made therefor as provided in paragraph 10.05.

*9.06 Rejecting Defective Work*

A. ENGINEER will have authority to disapprove or reject Work which ENGINEER believes to be defective, or that ENGINEER believes will not produce a completed Project that conforms to the Contract Documents or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. ENGINEER will also have authority to require special inspection or testing of the Work as provided in paragraph 13.04, whether or not the Work is fabricated, installed, or completed.

*9.07 Shop Drawings, Change Orders and Payments*

A. In connection with ENGINEER's authority as to Shop Drawings and Samples, see paragraph 6.17.

B. In connection with ENGINEER's authority as to Change Orders, see Articles 10, 11, and 12.

C. In connection with ENGINEER's authority as to Applications for Payment, see Article 14.

*9.08 Determinations for Unit Price Work*

A. ENGINEER will determine the actual quantities and classifications of Unit Price Work performed by CONTRACTOR. ENGINEER will review with CON- TRACTOR the ENGINEER's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). ENGINEER's written decision thereon will be final and binding (except as modified by ENGINEER to reflect changed factual conditions or more accurate data) upon OWNER and CONTRACTOR, subject to the provisions of paragraph 10.05.

*9.09 Decisions on Requirements of Contract Documents and Acceptability of Work*

A. ENGINEER will be the initial interpreter of the requirements of the Contract Documents and judge of the acceptability of the Work thereunder. Claims, disputes and other matters

relating to the acceptability of the Work, the quantities and classifications of Unit Price Work, the interpretation of the requirements of the Contract Documents pertaining to the performance of the Work, and Claims seeking changes in the Contract Price or Contract Times will be referred initially to ENGINEER in writing, in accordance with the provisions of paragraph 10.05, with a request for a formal decision.

B. When functioning as interpreter and judge under this paragraph 9.09, ENGINEER will not show partiality to OWNER or CONTRACTOR and will not be liable in connection with any interpretation or decision rendered in good faith in such capacity. The rendering of a decision by ENGINEER pursuant to this paragraph 9.09 with respect to any such Claim, dispute, or other matter (except any which have been waived by the making or acceptance of final payment as provided in paragraph 14.07) will be a condition precedent to any exercise by OWNER or CONTRACTOR of such rights or remedies as either may otherwise have under the Contract Documents or by Laws or Regulations in respect of any such Claim, dispute, or other matter.

*9.10 Limitations on ENGINEER's Authority and Responsibilities*

A. Neither ENGINEER's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by ENGINEER in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by ENGINEER shall create, impose, or give rise to any duty in contract, tort, or otherwise owed by ENGINEER to CONTRACTOR, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

B. ENGINEER will not supervise, direct, control, or have authority over or be responsible for CONTRACTOR's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws and Regulations applicable to the performance of the Work. ENGINEER will not be responsible for CONTRACTOR's failure to perform the Work in accordance with the Contract Documents.

C. ENGINEER will not be responsible for the acts or omissions of CONTRACTOR or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

D. ENGINEER's review of the final Application for Payment and accompanying documentation and all maintenance and operating instructions, schedules, guarantees, Bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by paragraph 14.07.A will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals that the results certified indicate compliance with, the Contract Documents.

E. The limitations upon authority and responsibility set forth in this paragraph 9.10 shall also apply to ENGINEER's Consultants, Resident Project Representative, and assistants.

ARTICLE 10 - CHANGES IN THE WORK; CLAIMS

*10.01 Authorized Changes in the Work*

A. Without invalidating the Agreement and without notice to any surety, OWNER may, at any time or from time to time, order additions, deletions, or revisions in the Work by a Written Amendment, a Change Order, or a Work Change Directive. Upon receipt of any such document, CONTRACTOR shall promptly proceed with the Work involved which will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).

B. If OWNER and CONTRACTOR are unable to agree on entitlement to, or on the amount or extent, if any, of an adjustment in the Contract Price or Contract Times, or both, that should be allowed as a result of a Work Change Directive, a Claim may be made therefor as provided in paragraph 10.05.

*10.02 Unauthorized Changes in the Work*

A. CONTRACTOR shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents as amended, modified, or supplemented as provided in paragraph 3.04, except in the case of an emergency as provided in paragraph 6.16 or in the case of uncovering Work as provided in paragraph 13.04.B.

*10.03 Execution of Change Orders*

A. OWNER and CONTRACTOR shall execute appropriate Change Orders recommended by ENGINEER (or Written Amendments) covering:

1. changes in the Work which are: (i) ordered by OWNER pursuant to paragraph 10.01.A, (ii) required because of acceptance of defective Work under paragraph 13.08.A or OWNER's correction of defective Work under paragraph 13.09, or (iii) agreed to by the parties;

2. changes in the Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive; and

3. changes in the Contract Price or Contract Times which embody the substance of any written decision rendered by ENGINEER pursuant to para- graph 10.05; provided that, in lieu of executing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws and Regulations, but during any such appeal, CONTRACTOR shall carry on the Work and adhere to the progress schedule as provided in paragraph 6.18.A.

*10.04 Notification to Surety*

A. If notice of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times) is required by the provisions of any Bond to be given to a surety, the giving of any such notice will be CONTRACTOR's responsibility. The amount of each applicable Bond will be adjusted to reflect the effect of any such change.

*10.05 Claims and Disputes*

A. *Notice:* Written notice stating the general nature of each Claim, dispute, or other matter shall be delivered by the claimant to ENGINEER and the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto. Notice of the amount or extent of the Claim, dispute, or other matter with supporting data shall be delivered to the ENGINEER and the other party to the Contract within 60 days after the start of such event (unless ENGINEER allows additional time for claimant to submit additional or more accurate data in support of such Claim, dispute, or other matter). A Claim for an adjustment in Contract Price shall be prepared in accordance with the provisions of paragraph 12.01.B. A Claim for an adjustment in Contract Time shall be prepared in accordance with the provisions of paragraph 12.02.B. Each Claim shall be accompanied by claimant's written statement that the adjustment claimed is the entire adjustment to which the claimant believes it is entitled as a result of said event. The opposing party shall submit any response to ENGINEER and the claimant within 30 days after receipt of the claimant's last submittal (unless ENGINEER allows additional time).

B. *ENGINEER's Decision:* ENGINEER will render a formal decision in writing within 30 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any. ENGINEER's written decision on such Claim, dispute, or other matter will be final and binding upon OWNER and CONTRACTOR unless:

1. an appeal from ENGINEER's decision is taken within the time limits and in accordance with the dispute resolution procedures set forth in Article 16; or

2. if no such dispute resolution procedures have been set forth in Article 16, a written notice of intention to appeal from ENGINEER's written decision is delivered by OWNER or CONTRACTOR to the other and to ENGINEER within 30 days after the date of such decision, and a formal proceeding is instituted by the appealing party in a forum of competent jurisdiction within 60 days after the date of such decision or within 60 days after Substantial Completion, whichever is later (unless otherwise agreed in writing by OWNER and CONTRACTOR), to exercise such rights or remedies as the appealing party may have with respect to such Claim, dispute, or other matter in accordance with applicable Laws and Regulations.

C. If ENGINEER does not render a formal decision in writing within the time stated in paragraph 10.05.B, a decision denying the Claim in its entirety shall be deemed to have been issued 31 days after receipt of the last submittal of the claimant or the last submittal of the opposing party, if any.

D. No Claim for an adjustment in Contract Price or Contract Times (or Milestones) will be valid if not submitted in accordance with this paragraph 10.05.

ARTICLE 11 - COST OF THE WORK; CASH ALLOWANCES; UNIT PRICE WORK

***11.01 Cost of the Work*

~~A. *Costs Included:* The term Cost of the Work means the sum of all costs necessarily incurred and paid by CONTRACTOR in the proper performance of the Work. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, the costs to be reimbursed to CONTRACTOR will be only those additional or incremental costs required because of the change in the Work or because of the event giving rise to the Claim. Except as otherwise may be agreed to in writing by OWNER, such costs shall be in amounts no higher than those prevailing in the locality of the Project, shall include only the following items, and shall not include any of the costs itemized in paragraph 11.01.B.~~

~~1. Payroll costs for employees in the direct employ of CONTRACTOR in the performance of the Work under schedules of job classifications agreed upon by OWNER and CONTRACTOR. Such employees shall include without limitation superintendents, foremen, and other personnel employed full time at the Site. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits, which shall include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on Saturday, Sunday, or legal holidays, shall be included in the above to the extent authorized by OWNER.~~

~~2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to CONTRACTOR unless OWNER deposits funds with CONTRACTOR with which to make payments, in which case the cash discounts shall accrue to OWNER. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to OWNER, and CONTRACTOR shall make provisions so that they may be obtained.~~

~~3. Payments made by CONTRACTOR to Subcontractors for Work performed by Subcontractors. If required by OWNER, CONTRACTOR shall obtain competitive bids from subcontractors acceptable to OWNER and~~

CON-TRACTOR and shall deliver such bids to OWNER, who will then determine, with the advice of ENGINEER, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as CONTRACTOR's Cost of the Work and fee as provided in this paragraph 11.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed for services specifically related to the Work.

5. Supplemental costs including the following:

   a. The proportion of necessary transportation, travel, and subsistence expenses of CONTRACTOR's employees incurred in discharge of duties connected with the Work.

   b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of CONTRACTOR.

   c. Rentals of all construction equipment and machinery, and the parts thereof whether rented from CONTRACTOR or others in accordance with rental agreements approved by OWNER with the advice of ENGINEER, and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs shall be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts shall cease when the use thereof is no longer necessary for the Work.

   d. Sales, consumer, use, and other similar taxes related to the Work, and for which CON-TRACTOR is liable, imposed by Laws and Regulations.

   e. Deposits lost for causes other than negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses within the deductible amounts of property insurance established in accordance with paragraph 5.06.D), provided such losses and damages have resulted from causes other than the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of OWNER. No such losses, damages, and expenses shall be included in the Cost of the Work for the purpose of determining CONTRACTOR's fee.

   f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by CONTRACTOR in connection with the performance of the Work (except losses and damages

   g. The cost of utilities, fuel, and sanitary facilities at the Site.

   h. Minor expenses such as telegrams, long distance telephone calls, telephone service at the Site, expressage, and similar petty cash items in connection with the Work.

   i. When the Cost of the Work is used to determine the value of a Change Order or of a Claim, the cost of premiums for additional Bonds and insurance required because of the changes in the Work or caused by the event giving rise to the Claim.

   j. When all the Work is performed on the basis of cost plus, the costs of premiums for all Bonds and insurance CONTRACTOR is required by the Contract Documents to purchase and maintain.

B. *Costs Excluded:* The term Cost of the Work shall not include any of the following items:

   1. Payroll costs and other compensation of CONTRACTOR's officers, executives, principals (of partnerships and sole proprietorships), general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by CONTRACTOR, whether at the Site or in CONTRACTOR's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in paragraph 11.01.A.1 or specifically covered by paragraph 11.01.A.4, all of which are to be considered administrative costs covered by the CONTRACTOR's fee.

   2. Expenses of CONTRACTOR's principal and branch offices other than CONTRACTOR's office at the Site.

   3. Any part of CONTRACTOR's capital expenses, including interest on CONTRACTOR's capital employed for the Work and charges against CONTRACTOR for delinquent payments.

   4. Costs due to the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, Disposal of materials or

equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in paragraphs 11.01.A and 11.01.B.

C. *CONTRACTOR's Fee:* When all the Work is performed on the basis of cost-plus, CONTRACTOR's fee shall be determined as set forth in the Agreement. When the value of any Work covered by a Change Order or when a Claim for an adjustment in Contract Price is determined on the basis of Cost of the Work, CONTRACTOR's fee shall be determined as set forth in paragraph 12.01.C.

D. *Documentation:* Whenever the Cost of the Work for any purpose is to be determined pursuant to paragraphs 11.01.A and 11.01.B, CONTRACTOR will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to ENGINEER an itemized cost breakdown together with supporting data.

*11.02 Cash Allowances*

A. It is understood that CONTRACTOR has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums as may be acceptable to OWNER and ENGINEER. CONTRACTOR agrees that:

1. the allowances include the cost to CON- TRACTOR (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

2. CONTRACTOR's costs for unloading and handling on the Site, labor, installation costs, over- head, profit, and other expenses contemplated for the allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

B. Prior to final payment, an appropriate Change Order will be issued as recommended by ENGINEER to reflect actual amounts due CONTRACTOR on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

*11.03 Unit Price Work*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by CONTRACTOR will be made by ENGINEER subject to the provisions of paragraph 9.08.

B. Each unit price will be deemed to include an amount considered by CONTRACTOR to be adequate to cover CONTRACTOR's overhead and profit for each separately identified item.

*C. OWNER or CONTRACTOR may make a Claim for an adjustment in the Contract Price in accordance with paragraph 10.05 if:

1. the quantity of any item of Unit Price Work performed by CONTRACTOR differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and

2. there is no corresponding adjustment with respect any other item of Work; and

3. if CONTRACTOR believes that CONTRACTOR is entitled to an increase in Contract Price as a result of having incurred additional expense or OWNER believes that OWNER is entitled to a decrease in Contract Price and the parties are unable to agree as to the amount of any such increase or decrease.

## ARTICLE 12 - CHANGE OF CONTRACT PRICE; CHANGE OF CONTRACT TIMES

*12.01 Change of Contract Price*

**A. The Contract Price may only be changed by a Change Order or by a Written Amendment. Any Claim for an adjustment in the Contract Price shall be based on written notice submitted by the party making the Claim to the ENGINEER and the other party to the Contract in accordance with the provisions of paragraph 10.05.

B. The value of any Work covered by a Change Order or of any Claim for an adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by unit prices contained in the Contract Documents, by application of such unit prices to the quantities of the items involved (subject to the provisions of para- graph 11.03 ); or

2. where the Work involved is not covered by unit prices contained in the Contract Documents, by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with paragraph 12.01.C.2); or

3. where the Work involved is not covered by unit prices contained in the Contract Documents and agreement to a lump sum is not reached under para- graph 12.01.B.2, on the basis of the Cost of the Work (determined as provided in paragraph 11.01) plus a CONTRACTOR's fee for overhead and profit (determined as provided in paragraph 12.01.C).

C. *CONTRACTOR's Fee:* The CONTRACTOR's fee for overhead and profit shall be determined as follows:

1. mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under paragraphs 11.01.A.1 and 11.01.A.2, the CONTRACTOR's fee shall be 15 percent;

b. for costs incurred under paragraph 11.01.A.3, the CONTRACTOR's fee shall be five percent;

c. where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of paragraph 12.01.C.2.a is that the Subcontractor who actually performs the Work, at whatever tier, will be paid a fee of 15 percent of the costs incurred by such Subcontractor under paragraphs 11.01.A.1 and 11.01.A.2 and that any higher tier Subcontractor and CONTRACTOR will each be paid a fee of five percent of the amount paid to the next lower tier Subcontractor;

d. no fee shall be payable on the basis of costs itemized under paragraphs 11.01.A.4, 11.01.A.5, and 11.01.B;

e. the amount of credit to be allowed by CONTRACTOR to OWNER for any change which results in a net decrease in cost will be the amount of the actual net decrease in cost plus a deduction in CONTRACTOR's fee by an amount equal to five percent of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in CONTRACTOR's fee shall be computed on the basis of the net change in accordance with paragraphs 12.01.C.2.a through 12.01.C.2.e, inclusive.

*12.02 Change of Contract Times*

A. The Contract Times (or Milestones) may only be changed by a Change Order or by a Written Amendment. Any Claim for an adjustment in the Contract Times (or Milestones) shall be based on written notice submitted by the party making the claim to the ENGINEER and the other party to the Contract in accordance with the provisions of paragraph 10.05.

B. Any adjustment of the Contract Times (or Milestones) covered by a Change Order or of any Claim for an adjustment in the Contract Times (or Milestones) will be determined in accordance with the provisions of this Article 12.

*12.03 Delays Beyond CONTRACTOR's Control*

A. Where CONTRACTOR is prevented from completing any part of the Work within the Contract Times (or Milestones) due to delay beyond the control of CONTRACTOR, the Contract Times (or Milestones) will be extended in an amount equal to the time lost due to such delay if a Claim is made therefor as provided in paragraph 12.02.A. Delays beyond the control of CONTRACTOR shall include, but not be limited to, acts or neglect by OWNER, acts or neglect of utility owners or other contractors performing other work as contemplated by Article 7, fires, floods, epidemics, abnormal weather conditions, or acts of God.

*12.04 Delays Within CONTRACTOR's Control*

A. The Contract Times (or Milestones) will not be extended due to delays within the control of CONTRACTOR. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of CONTRACTOR.

*12.05 Delays Beyond OWNER's and CONTRACTOR's Control*

A. Where CONTRACTOR is prevented from completing any part of the Work within the Contract Times (or Milestones) due to delay beyond the control of both OWNER and CONTRACTOR, an extension of the Contract Times (or Milestones) in an amount equal to the time lost due to such delay shall be CONTRACTOR's sole and exclusive remedy for such delay.

*12.06 Delay Damages*

A. In no event shall OWNER or ENGINEER be liable to CONTRACTOR, any Subcontractor, any Supplier, or any other person or organization, or to any surety for or employee or agent of any of them, for damages arising out of or resulting from:

1. delays caused by or within the control of CONTRACTOR; or

2. delays beyond the control of both OWNER and CONTRACTOR including but not limited to fires, floods, epidemics, abnormal weather conditions, acts of God, or acts or neglect by utility owners or other contractors performing other work as contemplated by Article 7.

B. Nothing in this paragraph 12.06 bars a change in Contract Price pursuant to this Article 12 to compensate CONTRACTOR due to delay, interference, or disruption directly attributable to actions or inactions of OWNER or anyone for whom OWNER is responsible.

* ARTICLE 13 - TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

*13.01 Notice of Defects*

A. Prompt notice of all defective Work of which OWNER or ENGINEER has actual knowledge will be given to CONTRACTOR. All defective Work may be rejected, corrected, or accepted as provided in this Article 13.

*13.02 Access to Work*

A. OWNER, ENGINEER, ENGINEER's Consultants, other representatives and personnel of OWNER, independent testing laboratories, and governmental agencies with jurisdictional interests will have access to the Site and the Work at reasonable times for their observation, inspecting, and testing. CONTRACTOR shall provide them proper and

safe conditions for such access and advise them of CONTRACTOR's Site safety procedures and programs so that they may comply therewith as applicable.

*13.03 Tests and Inspections*

A. CONTRACTOR shall give ENGINEER timely notice of readiness of the Work for all required inspections, tests, or approvals and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.

B. OWNER shall employ and pay for the services of an independent testing laboratory to perform all inspections, tests, or approvals required by the Contract Documents except:

1. for inspections, tests, or approvals covered by paragraphs 13.03.C and 13.03.D below;

2. that costs incurred in connection with tests or inspections conducted pursuant to paragraph 13.04.B shall be paid as provided in said paragraph 13.04.B; and

3. as otherwise specifically provided in the Contract Documents.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, CONTRACTOR shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish ENGINEER the required certificates of inspection or approval.

D. CONTRACTOR shall be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests, or approvals required for OWNER's and ENGINEER's acceptance of materials or equipment to be incorporated in the Work; or acceptance of materials, mix designs, or equipment submitted for approval prior to CONTRACTOR's purchase thereof for incorporation in the Work. Such inspections, tests, or approvals shall be performed by organizations acceptable to OWNER and ENGINEER.

E. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by CONTRACTOR without written concurrence of ENGINEER, it must, if requested by ENGINEER, be uncovered for observation.

F. Uncovering Work as provided in paragraph 13.03.E shall be at CONTRACTOR's expense unless CON- TRACTOR has given ENGINEER timely notice of CONTRACTOR's intention to cover the same and ENGINEER has not acted with reasonable promptness in response to such notice.

*13.04 Uncovering Work*

A. If any Work is covered contrary to the written request of ENGINEER, it must, if requested by ENGINEER, be uncovered for ENGINEER's observation and replaced at CONTRACTOR's expense.

B. If ENGINEER considers it necessary or advisable that covered Work be observed by ENGINEER or inspected or tested by others, CONTRACTOR, at ENGINEER's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as ENGINEER may require, that portion of the Work in question, furnishing all necessary labor, material, and equipment. If it is found that such Work is defective, CONTRACTOR shall pay all Claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and OWNER shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, OWNER may make a Claim therefor as provided in paragraph 10.05. If, however, such Work is not found to be defective, CONTRACTOR shall be allowed an increase in the Contract Price or an extension of the Contract Times (or Milestones), or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, CONTRACTOR may make a Claim therefor as provided in paragraph 10.05.

*13.05 OWNER May Stop the Work*

A. If the Work is defective, or CONTRACTOR fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, OWNER may order CONTRACTOR to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of OWNER to stop the Work shall not give rise to any duty on the part of OWNER to exercise this right for the benefit of CONTRACTOR, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

*13.06 Correction or Removal of Defective Work*

A. CONTRACTOR shall correct all defective Work, whether or not fabricated, installed, or completed, or, if the Work has been rejected by ENGINEER, remove it from the Project and replace it with Work that is not defective. CONTRACTOR shall pay all Claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or removal (including but not limited to all costs of repair or replacement of work of others).

*13.07 Correction Period*

~~*A. If within one year after the date of Substantial Completion or such longer period of time as may be prescribed by Laws or Regulations or by the terms of any applicable special guarantee required by the Contract Documents or by any specific provision of the Contract Documents, any Work is found to be defective, or if the repair of any damages to the land or areas made available for CONTRACTOR's use by OWNER or permitted by Laws and Regulations as contemplated in paragraph 6.11.A is found to be defective, CONTRACTOR shall promptly, without cost to OWNER and in accordance with OWNER's written instructions: (i) repair such defective land or areas, or (ii) correct such defective Work or, if the defective Work has been rejected by OWNER, remove it from the Project and replace it with Work that is not defective, and (iii) satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others or other land or areas resulting therefrom. If CONTRACTOR does not promptly comply with the terms of such instructions, or in an emergency where delay would cause serious risk of loss or damage, OWNER may have the defective Work corrected or repaired or may have the rejected Work removed and replaced, and all Claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by CONTRACTOR.~~

B. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications or by Written Amendment.

C. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this paragraph 13.07, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

D. CONTRACTOR's obligations under this paragraph 13.07 are in addition to any other obligation or warranty. The provisions of this paragraph 13.07 shall not be construed as a substitute for or a waiver of the provisions of any applicable statute of limitation or repose.

*13.08 Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, OWNER (and, prior to ENGINEER's recommendation of final payment, ENGINEER) prefers to accept it, OWNER may do so. CONTRACTOR shall pay all Claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) attributable to OWNER's evaluation of and determination to accept such defective Work (such costs to be approved by ENGINEER as to reasonableness) and the diminished value of the Work to the extent not otherwise paid by CONTRACTOR pursuant to this sentence. If any such acceptance occurs prior to ENGINEER's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work, and OWNER shall be entitled to an appropriate decrease in the Contract Price, reflecting the diminished value of Work so accepted. If the parties are unable to agree as to the amount thereof, OWNER may make a Claim therefor as provided in paragraph 10.05. If the acceptance occurs after such recommendation, an appropriate amount will be paid by CONTRACTOR to OWNER.

*13.09 OWNER May Correct Defective Work*

*A. If CONTRACTOR fails within a reasonable time after written notice from ENGINEER to correct defective Work or to remove and replace rejected Work as required by ENGINEER in accordance with paragraph 13.06.A, or if CONTRACTOR fails to perform the Work in accordance with the Contract Documents, or if CONTRACTOR fails to comply with any other provision of the Contract Documents, OWNER may, after seven days written notice to CONTRACTOR, correct and remedy any such deficiency.

B. In exercising the rights and remedies under this paragraph, OWNER shall proceed expeditiously. In connection with such corrective and remedial action, OWNER may exclude CONTRACTOR from all or part of the Site, take possession of all or part of the Work and suspend CONTRACTOR's services related thereto, take possession of CONTRACTOR's tools, appliances, construction equipment and machinery at the Site, and incorporate in the Work all materials and equipment stored at the Site or for which OWNER has paid CONTRACTOR but which are stored elsewhere. CONTRACTOR shall allow OWNER, OWNER's representatives, agents and employees, OWNER's other contractors, and ENGINEER and ENGINEER's Consultants access to the Site to enable OWNER to exercise the rights and remedies under this paragraph.

C. All Claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred or sustained by OWNER in exercising the rights and remedies under this paragraph 13.09 will be charged against CON- TRACTOR, and a Change Order will be issued incorporating the necessary revisions in the Contract Documents with respect to the Work; and OWNER shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to

agree as to the amount of the adjustment, OWNER may make a Claim therefor as provided in paragraph 10.05. Such claims, costs, losses and damages will include but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of CONTRACTOR's defective Work.

D. CONTRACTOR shall not be allowed an extension of the Contract Times (or Milestones) because of any delay in the performance of the Work attributable to the exercise by OWNER of OWNER's rights and remedies under this paragraph 13.09.

ARTICLE 14 - PAYMENTS TO CONTRACTOR AND COMPLETION

*14.01 Schedule of Values*

A. The schedule of values established as provided in paragraph 2.07.A will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to ENGINEER. Progress payments on account of Unit Price Work will be based on the number of units completed.

*14.02* Progress Payments

A. Applications for Payments

1. At least 20 days before the date established for each progress payment (but not more often than once a month), CONTRACTOR shall submit to ENGINEER for review an Application for Payment filled out and signed by CONTRACTOR covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, invoice, or other documentation warranting that OWNER has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance or other arrangements to protect OWNER's interest therein, all of which must be satisfactory to OWNER.

2. Beginning with the second Application for Payment, each Application shall include an affidavit of CONTRACTOR stating that all previous progress payments received on account of the Work have been applied on account to discharge CONTRACTOR's legitimate obligations associated with prior Applications for Payment.

~~*3. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.~~

B. Review of Applications

~~**1. ENGINEER will, within 10 days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to OWNER or return the Application to CONTRACTOR indicating in writing ENGINEER's reasons for refusing to recommend payment. In the latter case, CONTRACTOR may make the necessary corrections and resubmit the Application.~~

2. ENGINEER's recommendation of any payment requested in an Application for Payment will constitute a representation by ENGINEER to OWN- ER, based on ENGINEER's observations on the Site of the executed Work as an experienced and qualified design professional and on ENGINEER's review of the Application for Payment and the accompanying data and schedules, that to the best of ENGINEER's knowledge, information and belief:

a. the Work has progressed to the point indicated;

b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, to the results of any subsequent tests called for in the Contract Documents, to a final determination of quantities and classifications for Unit Price Work under paragraph 9.08, and to any other qualifications stated in the recommendation); and

c. the conditions precedent to CONTRACTOR's being entitled to such payment appear to have been fulfilled in so far as it is ENGINEER's responsibility to observe the Work.

3. By recommending any such payment ENGINEER will not thereby be deemed to have represented that: (i) inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to ENGINEER in the Contract Documents; or (ii) that there may not be other matters or issues between the parties that might entitle CON- TRACTOR to be paid

additionally by OWNER or entitle OWNER to withhold payment to CONTRACTOR.

4. Neither ENGINEER's review of CONTRACTOR's Work for the purposes of recommending payments nor ENGINEER's recommendation of any payment, including final payment, will impose responsibility on ENGINEER to supervise, direct, or control the Work or for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for CONTRACTOR's failure to comply with Laws and Regulations applicable to CONTRACTOR's performance of the Work. Additionally, said review or recommendation will not impose responsibility on ENGINEER to make any examination to ascertain how or for what purposes CONTRACTOR has used the moneys paid on account of the Contract Price, or to determine that title to any of the Work, materials, or equipment has passed to OWNER free and clear of any Liens.

5. ENGINEER may refuse to recommend the whole or any part of any payment if, in ENGINEER's opinion, it would be incorrect to make the representations to OWNER referred to in paragraph 14.02.B.2. ENGINEER may also refuse to recommend any such payment or, because of subsequently discovered evidence or the results of subsequent inspections or tests, revise or revoke any such payment recommendation previously made, to such extent as may be necessary in ENGINEER's opinion to protect OWNER from loss because:

   a. the Work is defective, or completed Work has been damaged, requiring correction or replacement;

   b. the Contract Price has been reduced b Written Amendment or Change Orders;

   c. OWNER has been required to correct defective Work or complete Work in accordance with paragraph 13.09; or

   d. ENGINEER has actual knowledge of the occurrence of any of the events enumerated in paragraph 15.02.A.

C. Payment Becomes Due

*1. Ten days after presentation of the Application for Payment to OWNER with ENGINEER's recommendation, the amount recommended will (subject to the provisions of paragraph 14.02.D) become due, and when due will be paid by OWNER to CONTRACTOR.

**D. Reduction *in Payment*

1. OWNER may refuse to make payment of the full amount recommended by ENGINEER because:

   a. claims have been made against OWN- ER on account of CONTRACTOR's performance or furnishing of the Work;

   b. Liens have been filed in connection with the Work, except where CONTRACTOR has delivered a specific Bond satisfactory to OWNER to secure the satisfaction and discharge of such Liens;

   c. there are other items entitling OWNER to a set-off against the amount recommended; or

   d. OWNER has actual knowledge of the occurrence of any of the events enumerated in paragraphs 14.02.B.5.a through 14.02.B.5.c or paragraph 15.02.A.

2. If OWNER refuses to make payment of the full amount recommended by ENGINEER, OWNER must give CONTRACTOR immediate written notice (with a copy to ENGINEER) stating the reasons for such action and promptly pay CONTRACTOR any amount remaining after deduction of the amount so withheld. OWNER shall promptly pay CONTRACTOR the amount so withheld, or any adjustment thereto agreed to by OWNER and CONTRACTOR, when CONTRACTOR corrects to OWNER's satisfaction the reasons for such action.

3. If it is subsequently determined that OWNER's refusal of payment was not justified, the amount wrongfully withheld shall be treated as an amount due as determined by paragraph 14.02.C.1.

*14.03 CONTRACTOR's Warranty of Title*

* ~~A. CONTRACTOR warrants and guarantees that title to all Work, materials, and equipment covered by any Application for Payment, whether incorporated in the Project or not, will pass to OWNER no later than the time of payment free and clear of all Liens.~~

*14.04 Substantial Completion*

A. When CONTRACTOR considers the entire Work ready for its intended use CONTRACTOR shall notify OWNER and ENGINEER in writing that the entire Work is substantially complete (except for items specifically listed by CONTRACTOR as incomplete) and request that ENGINEER issue a certificate of Substantial Completion. Promptly thereafter, OWNER, CONTRACTOR, and ENGINEER shall make an inspection of the Work to determine the status of completion. If ENGINEER does not consider the Work substantially complete, ENGINEER will notify CONTRACTOR in writing giving the reasons therefor. If ENGINEER considers the Work substantially complete, ENGINEER will prepare and deliver to OWNER a tentative certificate of Substantial Completion which shall fix the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. OWNER shall have seven days after receipt of the tentative certificate during which to make written objection to ENGINEER as to any provisions of the certificate or attached list

If, after considering such objections, ENGINEER concludes that the Work is not substantially complete, ENGINEER will within 14 days after submission of the tentative certificate to OWNER notify CONTRACTOR in writing, stating the reasons therefor. If, after consideration of OWNER's objections, ENGINEER considers the Work substantially complete, ENGINEER will within said 14 days execute and deliver to OWNER and CONTRACTOR a definitive certificate of Substantial Completion (with a revised tentative list of items to be completed or corrected) reflecting such changes from the tentative certificate as ENGINEER believes justified after consideration of any objections from OWNER. At the time of delivery of the tentative certificate of Substantial Completion ENGINEER will deliver to OWNER and CONTRACTOR a written recommendation as to division of responsibilities pending final payment between OWNER and CONTRACTOR with respect to security, operation, safety, and protection of the Work, maintenance, heat, utilities, insurance, and warranties and guarantees. Unless OWNER and CONTRACTOR agree otherwise in writing and so inform ENGINEER in writing prior to ENGINEER's issuing the definitive certificate of Substantial Completion, ENGINEER's aforesaid recommendation will be binding on OWNER and CONTRACTOR until final payment.

B. OWNER shall have the right to exclude CONTRACTOR from the Site after the date of Substantial Completion, but OWNER shall allow CONTRACTOR reasonable access to complete or correct items on the tentative list.

*14.05 Partial Utilization*

A. Use by OWNER at OWNER's option of any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which OWNER, ENGINEER, and CONTRACTOR agree constitutes a separately functioning and usable part of the Work that can be used by OWNER for its intended purpose without significant interference with CONTRACTOR's performance of the remainder of the Work, may be accomplished prior to Substantial Completion of all the Work subject to the following conditions.

1. OWNER at any time may request CON- TRACTOR in writing to permit OWNER to use any such part of the Work which OWNER believes to be ready for its intended use and substantially complete. If CONTRACTOR agrees that such part of the Work is substantially complete, CONTRACTOR will certify to OWNER and ENGINEER that such part of the Work is substantially complete and request ENGINEER to issue a certificate of Substantial Completion for that part of the Work. CONTRACTOR at any time may notify OWNER and ENGINEER in writing that CONTRACTOR considers any such part of the Work ready for its intended use and substantially complete and request ENGINEER to issue a certificate of Substantial Completion for that part of the Work. Within a reasonable time after either such request, OWNER, CONTRACTOR, and ENGINEER shall make an inspection of that part of the Work to determine its status of completion. If ENGINEER does not consider that part of the Work to be substantially complete, ENGINEER will notify OWNER and CONTRACTOR in writing giving the reasons there- for. If ENGINEER considers that part of the Work to be substantially complete, the provisions of para- graph 14.04 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

2. No occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of paragraph 5.10 regarding property insurance.

*14.06 Final Inspection*

A. Upon written notice from CONTRACTOR that the entire Work or an agreed portion thereof is complete, ENGINEER will promptly make a final inspection with OWNER and CONTRACTOR and will notify CONTRACTOR in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. CONTRACTOR shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

*14.07 Final Payment*

A. Application for Payment

1. After CONTRACTOR has, in the opinion of ENGINEER, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, Bonds, certificates or other evidence of insurance certificates of inspection, marked-up record documents (as provided in paragraph 6.12), and other documents, CONTRACTOR may make application for final payment following the procedure for progress payments.

2. The final Application for Payment shall be accompanied (except as previously delivered) by: (i) all documentation called for in the Contract Documents, including but not limited to the evidence of insurance required by subparagraph 5.04.B.7; (ii) consent of the

surety, if any, to final payment; and (iii) complete and legally effective releases or waivers (satisfactory to OWNER) of all Lien rights arising out of or Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in paragraph 14.07.A.2 and as approved by OWNER, CONTRACTOR may furnish receipts or releases in full and an affidavit of CONTRACTOR that: (i) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (ii) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which OWNER or OWNER's property might in any way be responsible have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, CONTRACTOR may furnish a Bond or other collateral satisfactory to OWNER to indemnify OWNER against any Lien.

B. Review of Application and Acceptance

**~~1. If, on the basis of ENGINEER's observation of the Work during construction and final inspection, and ENGINEER's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, ENGINEER is satisfied that the Work has been completed and CONTRACTOR's other obligations under the Contract Documents have been fulfilled, ENGINEER will, within ten days after receipt of the final Application for Payment, indicate in writing ENGINEER's recommendation of payment and present the Application for Payment to OWNER for payment. At the same time ENGINEER will also give written notice to OWNER and CONTRACTOR that the Work is acceptable subject to the provisions of paragraph 14.09. Otherwise, ENGINEER will return the Application for Payment to CONTRACTOR, indicating in writing the reasons for refusing to recommend final payment, in which case CONTRACTOR shall make the necessary corrections and resubmit the Application for Payment.~~

C. Payment Becomes Due

1. Thirty days after the presentation to OWN- ER of the Application for Payment and accompanying documentation, the amount recommended by ENGINEER will become due and, when due, will be paid by OWNER to CONTRACTOR.

*14.08 Final Completion Delayed*

A. If, through no fault of CONTRACTOR, final completion of the Work is significantly delayed, and if ENGINEER so confirms, OWNER shall, upon receipt of CONTRACTOR's final Application for Payment and recommendation of ENGINEER, and without terminating the Agreement, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by OWNER for Work not fully completed or corrected is less than the retainage stipulated in the Agreement, and if Bonds have been furnished as required in paragraph 5.01, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by CONTRACTOR to ENGINEER with the Application for such payment. Such payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

*14.09 Waiver of Claims*

A. The making and acceptance of final payment will constitute:

1. a waiver of all Claims by OWNER against CONTRACTOR, except Claims arising from unsettled Liens, from defective Work appearing after final inspection pursuant to paragraph 14.06, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from CONTRACTOR's continuing obligations under the Contract Documents; and

2. a waiver of all Claims by CONTRACTOR against OWNER other than those previously made in writing which are still unsettled.

ARTICLE 15 - SUSPENSION OF WORK AND TERMINATION

*15.01 OWNER May Suspend Work*

**~~A. At any time and without cause, OWNER may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by notice in writing to CON- TRACTOR and ENGINEER which will fix the date on which Work will be resumed. CONTRACTOR shall resume the Work on the date so fixed. CONTRACTOR shall be allowed an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any such suspension if CONTRACTOR makes a Claim therefor as provided in paragraph 10.05.~~

*15.02 OWNER May Terminate for* Cause

A. The occurrence of any one or more of the following events will justify termination for cause:

1. CONTRACTOR's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the progress schedule established under paragraph 2.07 as adjusted from time to time pursuant to paragraph 6.04);

2. CONTRACTOR's disregard of Laws or Regulations of any public body having jurisdiction;

3. CONTRACTOR's disregard of the authority of ENGINEER; or

4. CONTRACTOR's violation in any substantial way of any provisions of the Contract Documents.

*B. If one or more of the events identified in paragraph 15.02.A occur, OWNER may, after giving CONTRACTOR (and the surety, if any) seven days written notice, terminate the services of CONTRACTOR, exclude CONTRACTOR from the Site, and take possession of the Work and of all CONTRACTOR's tools, appliances, construction equipment, and machinery at the Site, and use the same to the full extent they could be used by CONTRACTOR (without liability to CONTRACTOR for trespass or conversion), incorporate in the Work all materials and equipment stored at the Site or for which OWNER has paid CONTRACTOR but which are stored elsewhere, and finish the Work as OWNER may deem expedient. In such case, CONTRACTOR shall not be entitled to receive any further payment until the Work is finished. If the unpaid balance of the Contract Price exceeds all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by OWNER arising out of or relating to completing the Work, such excess will be paid to CONTRACTOR. If such claims, costs, losses, and damages exceed such unpaid balance, CONTRACTOR shall pay the difference to OWNER. Such claims, costs, losses, and damages incurred by OWNER will be reviewed by ENGINEER as to their reasonableness and, when so approved by ENGINEER, incorporated in a Change Order. When exercising any rights or remedies under this paragraph OWNER shall not be required to obtain the lowest price for the Work performed.

C. Where CONTRACTOR's services have been so terminated by OWNER, the termination will not affect any rights or remedies of OWNER against CONTRACTOR then existing or which may thereafter accrue. Any retention or payment of moneys due CONTRACTOR by OWNER will not release CONTRACTOR from liability.

*15.03 OWNER May Terminate For Convenience*

A. Upon seven days written notice to CON- TRACTOR and ENGINEER, OWNER may, without cause and without prejudice to any other right or remedy of OWNER, elect to terminate the Contract. In such case, CONTRACTOR shall be paid (without duplication of any items):

1. for completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. for expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;

3. for all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred in settlement of terminated contracts with Subcontractors, Suppliers, and others; and

4. for reasonable expenses directly attributable to termination.

B. CONTRACTOR shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

*15.04 CONTRACTOR May Stop Work or Terminate*

A. If, through no act or fault of CONTRACTOR, the Work is suspended for more than 90 consecutive days by OWNER or under an order of court or other public authority, or ENGINEER fails to act on any Application for Payment within 30 days after it is submitted, or OWNER fails for 30 days to pay CONTRACTOR any sum finally determined to be due, then CONTRACTOR may, upon seven days written notice to OWNER and ENGINEER, and provided OWNER or ENGINEER do not remedy such suspension or failure within that time, terminate the Contract and recover from OWNER payment on the same terms as provided in paragraph 15.03. In lieu of terminating the Contract and without prejudice to any other right or remedy, if ENGINEER has failed to act on an Application for Payment within 30 days after it is submitted, or OWNER has failed for 30 days to pay CONTRACTOR any sum finally determined to be due, CONTRACTOR may, seven days after written notice to OWNER and ENGINEER, stop the Work until payment is made of all such amounts due CONTRACTOR, including interest thereon. The provisions of this paragraph 15.04 are not intended to preclude CON- TRACTOR from making a Claim under paragraph 10.05 for an adjustment in Contract Price or Contract Times or other- wise for expenses or damage directly attributable to CONTRACTOR's stopping the Work as permitted by this paragraph.

ARTICLE 16 - DISPUTE RESOLUTION

*16.01 Methods and Procedures*

A. Dispute resolution methods and procedures, if any, shall be as set forth in the Supplementary Conditions. If no method and procedure has been set forth, and subject to the provisions of paragraphs 9.09 and 10.05, OWNER and CONTRACTOR may exercise such rights or remedies as either may otherwise have under the Contract Documents or by Laws or Regulations in respect of any dispute.

ARTICLE 17 - MISCELLANEOUS

*17.01 Giving Notice*

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be deemed to have been validly given if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice.

*17.02 Computation of Times*

A. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last day of such period. If the last day of any

such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

*17.03 Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract Documents, and the provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

*17.04 Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents, will survive final payment, completion, and acceptance of the Work or termination or completion of the Agreement.

*17.05 Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

**END OF SECTION**

This Page Intentionally Left Blank.

**SECTION 00800**

**SUPPLEMENTARY CONDITIONS**

These Supplementary Conditions amend or supplement the Standard General Conditions of the Construction Contract (No. 1910-8, 1996 edition) and other provisions of the Contract Documents as indicated below. All provisions which are not so amended or supplemented remain in full force and effect.

**ARTICLE 1. DEFINITIONS AND TERMINOLOGY**

Add the following language at the beginning of definition 1.01 A.12 entitled "Contract Documents" in the General Conditions: "The Advertisement for Bids, Instructions to Bidders, State Regulations,..."

Delete the words "The individual or entity named as such in the Agreement" in 1.01.A.19, “Engineer”, and insert the following in their place: "The individual or entity duly appointed by the Owner to undertake the duties and powers herein assigned to the Engineer, acting either directly or through duly appointed representatives."

Delete the words "and who is identified as such in the Supplementary Conditions" at the end of definition 1.01 A.20, entitled "ENGINEER'S Consultant."

Delete definition 1.01 A.41 entitled "Specifications" in the General Conditions in its entirety and insert the following in its place: "Sections included under Division 1 through Division 16 of the Contract Documents."

**ARTICLE 2. PRELIMINARY MATTERS SC-2.02**

Delete paragraph 2.02A of the General Conditions in its entirety.

SC-2.03

Add paragraph 2.03B:

Notwithstanding the time limitations provided in paragraph 2.03A, the OWNER may desire to commence the Contract Times later than the sixtieth day after the bid opening. The OWNER and CONTRACTOR, upon mutual agreement, may extend the commencement of the Contract Times to any date that they elect. OWNER must obtain CONTRACTOR's approval for extending the time beyond the dates/times stated in the Contract Documents.

SC-2.05

Delete paragraph 2.05C of the General Conditions in its entirety and insert the following in its place:

"C. Evidence of Insurance: CONTRACTOR shall deliver to OWNER, with a copy to the ENGINEER, Certificates of Insurance within 10 days after receipt of the notice of the acceptance of bid (and other evidence requested by OWNER) which CONTRACTOR is required to purchase and maintain in accordance with the requirements of Article 5."

**ARTICLE 3. CONTRACT DOCUMENTS: INTENT, AMENDING, REUSE SC-3.01**

Add the following sentence at the end of Paragraph 3.01A of the General Conditions:

"...by all. Each and every provision of law and clause required by law to be inserted in these Contract Documents shall be deemed to be inserted herein, and they shall be read and enforced as though it were included herein, and if through mistake or otherwise, any such provision is not inserted, or if not correctly inserted, then upon the application of either party, the Contract Documents shall forthwith be physically amended to make such insertion."

**ARTICLE 4. AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; REFERENCE POINTS**

SC-4.02

Delete the term "Supplementary Conditions" of paragraph 4.02 A of the General Conditions and replace it with "Contract Documents".

SC-4.04

Change "of" to "or" on line 6 of paragraph 4.04 B.2 of the General Conditions.

Delete the following words from lines 8 and 9 of paragraph 4.04 B.2 of the General Conditions: "...or not shown or indicated with reasonable accuracy..."

SC-4.05

Add a new paragraph immediately after paragraph 4.05A of the General Conditions which is to read as follows:

"B. ENGINEER may check the lines, elevations and reference marks set by CONTRACTOR, and CONTRACTOR shall correct any errors disclosed by such check. Such a check shall not be considered as approval of CONTRACTOR's work and shall not relieve CONTRACTOR of the responsibility for construction of the entire Work in accordance with the Contract Documents. CONTRACTOR shall furnish personnel to assist ENGINEER in checking lines and grades."

**ARTICLE 5. BONDS AND INSURANCE NOTICE TO CONTRACTOR:**

1. Proof of Insurance coverage shall be furnished to the OWNER in accordance with the schedule for submittal of Bonds and Agreements.

2. Additionally refer to Article 2. PRELIMINARY MATTERS, Paragraph SC-2.05.C

SC-5.01

Insert these sentences following SC-5.01.A:

"The Surety Company providing the bonds shall have a rating of A or better within the Best Key Rating Guide and be licensed by the Massachusetts Division of Insurance. The CONTRACTOR shall pay the premiums for such Bonds."

SC-5.03

Delete the second sentence in paragraph 5.03A of the General Conditions, which begins "OWNER shall deliver to...."

SC-5.04

The limits of liability for the insurance required by paragraph 5.04A of the General Conditions shall provide coverage for not less than the following amounts or greater where required by law:

5.04 A.1 and 5.04 A.2 Workers' Compensation.

(1) Worker's Compensation per Statutory Requirements

(2) Coverage B - Employer's Liability $100,000/$500,000/$100,000

5.04 A.3, 5.04 A.4 and 5.04 A.5 Commercial General Liability Limits shall include coverage for Independent Contractors (also known as Owners and Contractors Protective Liability), explosion, collapse and underground hazard coverage (XCU), broad form property damage, blanket contractual liability and products/completed operations. The general aggregate limits shall be endorsed so that they respond on a per project and per location basis.

Limits: $1,000,000 each occurrence

$2,000,000 general aggregate

$2,000,000 products/completed operations aggregate

5.04 A.6 Automobile Liability for owned, hired and non-owned vehicles:

| | | | |
|---|---|---|---|
| (1) | Bodily injury: | $1,000,000 | Combined single limit |
| (2) | Property damage | $1,000,000 | Combined single limit |

Revise the beginning of paragraph 5.04.B.1 to read as follows: "with respect to insurance required by paragraphs 5.04.A.3 through 5.04.A.5 inclusive and paragraph 5.04.C, include as additional insureds…"

Delete paragraph 5.04.B.5 in its entirety and insert the following in its place:

"5. Contains a provision that notice of cancellation of insurance be delivered in accordance with policy provisions. In addition, the CONTRACTOR and/or its insurance broker/agent shall immediately notify the OWNER and ENGINEER should any insurance coverage be cancelled. The CONTRACTOR shall immediately stop work on the Project and shall not resume work until the CONTRACTOR provides evidence, to the OWNER and ENGINEER, in the form of an acceptable insurance certificate, of new insurance coverage that replaces all cancelled coverage that is required for the Project."

Add two new paragraphs immediately after paragraph 5.04B of the General Conditions which are to read as follows:

"C. The CONTRACTOR shall also provide:

1. CONTRACTOR shall, as a minimum, purchase and maintain excess liability insurance in the umbrella form with a combined single limit of not less than $5,000,000 per occurrence and in the aggregate. Evidence of such excess liability shall be delivered to OWNER in accordance with paragraph 2.05C in the form of a certificate indicating the policy numbers and limits of liability of all underlying insurance.

2. General Liability, Workers' Compensation, Automobile Liability and Umbrella Liability Policies will contain waivers of subrogation in favor of the Engineer and Owner.

3. If the aggregate limits of liability indicated in CONTRACTOR' insurance provided in accordance with paragraphs 5.03 and 5.04 are not sufficient to cover all claims for damages arising from his operations under this Contract and from any other work performed by him or if the commercial general liability insurance policy of insurance does not provide that the general aggregate limits apply on a per project and per location basis, CONTRACTOR shall have the policy amended so that the aggregate limits of liability required by this Contract will be available to cover all claims for damages due to operations under this Contract."

The General Contractor shall carry the coverage by naming the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured at the limits specified herein. SECTION 05020, INSURANCE REQUIREMENTS FOR INCLUSION IN ALL SPECIFICATIONS AND CONTRACTS are separate from the Owners and Contractors Protective Liability and shall name the Town of Orleans, Tighe & Bond and AECOM Technical Services, Inc. as additionally insured.

SC-5.05

Delete paragraph 5.05 of the General Conditions in its entirety.

SC-5.06

Delete Paragraph 5.06A of the General Conditions in its entirety.

Delete paragraph 5.06B of the General Conditions in its entirety.

Delete Paragraph 5.06C of the General Conditions in its entirety.

Delete paragraph 5.06D of the General Conditions in its entirety.

Delete paragraph 5.06E of the General Conditions in its entirety.

SC-5.07

Amend the last sentence of paragraph 5.07A of the General Conditions by striking out the words "held by OWNER as trustee or." As so amended, paragraph 5.07A remains in effect.

SC-5.08

Delete paragraph 5.08A of the General Conditions in its entirety.

Delete paragraph 5.08B of the General Conditions in its entirety.

SC-5.09

Delete paragraph 5.09A of the General Conditions in its entirety and insert the following in its place:

"A. If OWNER has any objection to the coverage afforded by or other provisions of the insurance required to be purchased and maintained by CONTRACTOR in accordance with this Article 5 on the basis of its not complying with the Contract Documents, OWNER will notify CONTRACTOR in writing thereof within thirty days of the date of delivery of such certificates to OWNER in accordance with paragraph 2.05C. CONTRACTOR will provide such additional information in respect of insurance provided by him as OWNER may reasonably request."

**ARTICLE 6. CONTRACTOR'S RESPONSIBILITIES SC-6.01**

Delete paragraph 6.01B of the General Conditions in its entirety and replace with the following:

"B. At the site of the Work the CONTRACTOR shall employ a full-time construction superintendent or foreman who shall have full authority to act for the CONTRACTOR. It is understood that such representative shall be acceptable to the ENGINEER and shall be one who will be continued in the capacity for the particular job involved unless the representative ceases to be on the CONTRACTOR's payroll. If at any time during the Work the representative is deemed by the ENGINEER to be no longer acceptable, the representative shall be promptly replaced by the CONTRACTOR. All communications to the superintendent or foreman shall be as binding as if given to the CONTRACTOR."

SC-6.04

Add the following paragraph after paragraph 6.04A.2 of the General Conditions:

"B. The CONTRACTOR's resident superintendent shall attend monthly progress meetings at the site of the work with the ENGINEER and others as appropriate to review schedule status and such other pertinent subjects as may be listed on the agenda by the ENGINEER."

SC-6.05

Revise the second sentence of Paragraph A to read as follows:

"Unless the specification indicates that a proprietary item is called for, other items of material or equipment or material or equipment of other suppliers may be submitted to ENGINEER for review under the circumstances described below, and in accordance with MGL c.30, s.39M."

SC-6.17

In paragraph 6.17 E.1 of the General Conditions, delete the word "timely" from the first line.

SC-6.20

Delete paragraph 6.20A of the General Conditions in its entirety and replace with the following:

"A. To the fullest extent permitted by law, the CONTRACTOR shall indemnify and hold harmless the OWNER, the ENGINEER, ENGINEER's consultants, and any of their officers, directors, employees, agents, affiliates, subsidiaries and partners from and against all claims, damages, losses and expenses, including but not limited to attorney's fees, arising out of or resulting from the performance of the Work, provided that such claim, damage, loss or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself) including loss of use resulting therefrom, but only to the extent caused in whole or in part by acts or omissions of the CONTRACTOR, a subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss or expense is caused in part by a party indemnified hereunder. Such obligation shall apply to any such claims, damages, losses and expenses which arise and/or are incurred by any person or entity either during the performance of the Work and/or after completion of construction. Nothing in this paragraph shall be construed to negate, abridge, or reduce other rights or obligations of indemnity or contribution which would otherwise exist as to a party or person indemnified hereunder. CONTRACTOR hereby assumes the responsibility and liability for injury to or death of any and all persons, including the CONTRACTOR's employees, and for any and all damage to property caused by, resulting from, or arising out of any act, omission or neglect on the part of the CONTRACTOR, or of any Subcontractor or of anyone directly or indirectly employed by any of them or of anyone for whose acts, any of them may be liable. The Contractor hereby acknowledges its obligation under the foregoing paragraph to indemnify the Engineer and Owner against judgments suffered because of the contractor's work and to assume the cost of defending the Engineer and Owner against claims as described in the foregoing paragraph."

Delete paragraph 6.20C of the General Conditions in its entirety.

**ARTICLE 8. OWNER'S RESPONSIBILITIES**

SC-8.02

Delete the phrase "to whom the CONTRACTOR makes no reasonable objection."

SC-8.06

Delete paragraph 8.06A of the General Conditions in its entirety.

SC-8.09

Insert the following after the first sentence:

"However, the OWNER shall have the right to direct the CONTRACTOR to perform the Work according to any sequence schedule set forth in the Contract Documents or established pursuant thereto."

**ARTICLE 9. ENGINEER'S STATUS DURING CONSTRUCTION SC-9.01**

Add a new paragraph 9.01B after paragraph 9.01A of the General Conditions, which is to read as follows:

"B. Nothing contained in the Contract Documents shall be construed to create a contractual relationship of any kind (1) between the ENGINEER and CONTRACTOR, (2) between the OWNER and a Subcontractor or Subcontractors,

or (3) between any person or entities other than the OWNER and CONTRACTOR. The ENGINEER shall, however, be entitled to performance and enforcement of obligations under the CONTRACT DOCUMENTS intended to facilitate performance of the ENGINEER'S duties."

SC-9.10

Insert the following after the first sentence on paragraph 9.10B:

"However, the ENGINEER shall have the right to direct the CONTRACTOR to perform the Work according to any sequence schedule set forth in the Contract Documents or established pursuant thereto."

**ARTICLE 11. COST OF THE WORK; CASH ALLOWANCES; UNIT PRICE WORK**

Delete Article 11 of the General Conditions in its entirety and replace with the following:

"A. The unit price of an item of Unit Price work shall be subject to reevaluation and adjustment under the following conditions:

(1) If the total extended bid price [Estimated Quantity times the Bid Unit Price] of a particular item of Unit Price Work amounts to 5 percent or more of the Original Contract Price and the variation in the quantity of the particular item of Unit Price Work performed by CONTRACTOR differs by more than 15 percent from the estimated quantity of such item indicated in the Agreement; and

(2) If there is no corresponding adjustment with respect to any other item of work; and

(3) If CONTRACTOR believes that CONTRACTOR has incurred additional expense as a result thereof, CONTRACTOR may make a claim for an adjustment in the Contract Price in accordance with Article 11 if the parties are unable to agree as to the effect of any such variations in the quantity of Unit Price Work performed. If OWNER believes that the quantity variation entitles OWNER to an adjustment in the unit price, OWNER shall be entitled to an adjustment in the unit price in an amount determined by the ENGINEER. ENGINEER shall not be liable in connection with any determination relating to adjustments which is rendered in good faith."

**ARTICLE 12. CHANGE OF CONTRACT PRICE; CHANGE OF CONTRACT TIMES**

SC-12.01

Delete paragraph 12.01 in its entirety.

SC-12.06

Add the following new paragraphs after paragraph 12.06 of the General Conditions: "12.07 Liquidated Damages:

"A. If the CONTRACTOR shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the OWNER, then the CONTRACTOR does hereby agree, as a part consideration for the awarding of this Contract, to pay to the OWNER the amount specified in the Contract, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every calendar day that the Contract shall be in default after the time stipulated in the Contract for completing the work. Such damages may be retained from time to time by the OWNER from progress payments or any amounts owing to the CONTRACTOR, or otherwise collected.

B. The said amount is fixed and agreed upon by and between the CONTRACTOR and the OWNER because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the OWNER would in such event sustain, and said amount is agreed to be the amount of damages which the OWNER would sustain and said amount shall be retained from time to time by the OWNER from current periodical estimates.

C. It is further agreed that time is of the essence of each and every portion of this Contract and of the specifications wherein as definite and certain length of times if fixed for the performance of any act whatsoever; and where under the Contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this Contract. Provided that the CONTRACTOR shall not be charged with liquidated damages of any excess cost when the OWNER determines that the CONTRACTOR is without fault and the CONTRACTOR's reasons for the time extension are acceptable to the OWNER; Provided, further, that the CONTRACTOR shall not be charged with liquidated damages or any excess cost when the delay in completion of the work is due:

1) to any preference, priority or allocation order duly issued by the Government;

2) to unforeseeable cause beyond the control and without the fault or negligence of the CONTRACTOR, including, but not restricted to, acts of God, or of the public enemy, acts of the OWNER, acts of another CONTRACTOR in the performance of a contract with the OWNER, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

3) to any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections C (1) and C (2) above;

D. Provided, further, that the CONTRACTOR shall, within thirty (30) days from the beginning of such delay, unless the OWNER shall grant a further period of time prior to the date of final settlement of the Contract, notify the OWNER, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify the CONTRACTOR within a reasonable time of its decision in the matter."

**ARTICLE 13. TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK**

SC-13.07

Delete paragraph 13.07A of the General Conditions and insert the following in its place:

"A. If within one year after the date of Substantial Completion or such longer period of time as may be prescribed by Laws or Regulations or by the terms of any applicable special guarantee required by the Contract Documents or by any specific provision of the Contract Documents, any work is found to be defective, CONTRACTOR shall promptly, without cost to OWNER and in accordance with OWNER's written instructions: (i) correct such defective work, or, if it has been rejected by OWNER, remove it from the site and replace it with work that is not defective, and (ii) satisfactorily correct or remove and replace any damage to other work or the work of others therefrom. If CONTRACTOR does not begin the repairs within ten (10) days of receipt of written notification and promptly comply with the terms of OWNER's written instructions, or in an emergency where delay would cause serious risk, loss or damage, OWNER may have the defective work corrected or the rejected work removed and replaced, and all claims, costs, losses and damages caused by or resulting from such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by CONTRACTOR."

SC-13.09

Revise paragraph 13.09A of the General Conditions

"A. Delete the word "seven" and replace it with the word "ten" so that it reads "after ten days written notice to CONTRACTOR."

**ARTICLE 14. PAYMENTS TO CONTRACTOR AND COMPLETION**

SC-14.02

Delete paragraph 14.02A.3 and insert the following in its place:

"3. Retainage with respect to progress payments will be five percent or, if stipulated, the maximum allowed by law."

Add Paragraph 4. to read as follows:

"4. The CONTRACTOR shall submit Weekly Payroll Records Report and Statement of Compliance verifying compliance with the Minimum Prevailing Wage Law, MGL ch. 149, Sections 26-27H. These Statements of Compliance shall be submitted as a condition of payment for work performed during the period the reports apply."

SC-14.03

Delete paragraph 14.03A in its entirety and insert the following in its place:

"A. CONTRACTOR warrants and guarantees that title to all work, material and equipment covered by any Application for Payment, whether incorporated in the Project or not, will pass to OWNER no later than at the time of Application for Payment free and clear of all liens. CONTRACTOR shall provide written transfer of title and a certified paid invoice provided by the supplier."

**ARTICLE 15. SUSPENSION OF WORK AND TERMINATION**

SC-15.02

Add a new paragraph immediately after paragraph 15.02 A.4 of the General Conditions which is to read as follows:

"5. If the Work to be done under this Contract shall be abandoned, or if this Contract or any part thereof shall be sublet, without the previous written consent of OWNER, or if the contract or any claim thereunder shall be assigned by CONTRACTOR otherwise than as herein specified;"

**ARTICLE 17. MISCELLANEOUS**

SC-17.06, 17.07, 17.08, 17.09

Add the following new paragraphs after paragraph 17.05 of the General Conditions:

"17.06 Assignment:

The CONTRACTOR shall not assign the whole or any part of this Contract or any moneys due or to become due hereunder until thirty (30) days prior notice in writing has been given to the OWNER of the intention to assign, which notice shall state the identity and address of the prospective assignee. No assignment shall be made without the OWNER's prior written consent. Such consent shall not be unreasonably withheld. In case the CONTRACTOR assigns all or any part of the moneys due or to become due under this Contract, the instrument of assignment shall contain a clause substantially to the effect that it is agreed that the right of the assignee in and to any moneys due or to become due to the CONTRACTOR shall be subject to prior claims of all persons, firms and corporations of services rendered or materials supplied for the performance of the work called for in this Contract.

17.07 Liability

It is understood and agreed that members of the OWNER or the ENGINEER or any agent or employees of the OWNER signing this Agreement shall not be personally liable hereunder for any action incurred in connection with this Agreement.

17.08 State Statutes and Regulations

See Section 00830 for further modifications of the General Conditions due to state statutes and regulations.

17.09 Severability

If any provision of this Agreement shall be invalid or unenforceable to any extent or in any application, then the remainder of this Agreement and of such terms and conditions, except to such extent or in such application, shall not be affected thereby, and each and every term and condition of this Agreement shall be valid and enforced to the fullest extent and in the broadest application permitted by law."

ATTACHMENT A - Wage Rates

ATTACHMENT B - Excerpts from Chapter 30, Section 39F of the Massachusetts General Law

ATTACHMENT C - The Commonwealth of Massachusetts Supplemental Equal Employment Opportunity Anti-Discrimination and Affirmative Action Program.

ATTACHMENT D - Change Orders

## A. REVISIONS TO GENERAL CONDITIONS

### 1. Definitions

The term "AWARDING AUTHORITY," as used herein, shall be considered to be synonymous with the term "OWNER," described in definition 1.01 A.30.

Delete definition 1.01 A.43 entitled "Substantial Completion" in the General Conditions in its entirety and insert the following in its place:

"Substantial Completion shall be interpreted in accordance with Massachusetts General Law

Chapter 30, Section 39G or 39K as appropriate."

**2. Subsurface Conditions Found Different**

Add the following sentence to the end of paragraph 4.03A of the General Conditions:

"...to do so. Adjustments resulting from subsurface or latent physical conditions will be in accordance with Massachusetts General Law Chapter 30, Section 39N."

**3. Subcontracting**

Add the following language at the end of paragraph 6.06F of the General Conditions:

"Except as required otherwise by Massachusetts General Law Chapter 149, Section 44F, for

Work governed by Chapter 149, sections 44A through 44H.

**4. Permits**

Delete paragraph 6.08A of the General Conditions in its entirety and insert the following in its place:

"A. Unless otherwise provided for in Section 00890 PERMITS, the AWARDING AUTHORITY shall be responsible for identifying and obtaining all federal, state, and local permits required by the nature and location of construction, including but not limited to railroad permits, building construction permits, and permits for street and highway cuts and openings. CONTRACTOR shall be responsible for obtaining all permits required of its equipment, work force, or particular operations in the performance of the Work and not otherwise specified to be obtained by the AWARDING AUTHORITY. These permit fees shall be paid by CONTRACTOR. CONTRACTOR shall pay all governmental charges and inspection fees necessary for the prosecution of the Work, which are applicable at the time of opening of bids, or, if there are no Bids, on the Effective Date of the Agreement." Town of Orleans building permit fees are waived.

**5. Contractor Records**

Add a new paragraph immediately after paragraph 6.09C of the General Conditions, which is to read as follows:

"D. The CONTRACTOR shall comply with all applicable provisions Chapter 30, Section 39R of the Massachusetts General Laws regarding, CONTRACTOR's records."

**6. Massachusetts Sales and Use Tax**

Add the following paragraph after paragraph 6.10A of the General Conditions:

"B. The materials and supplies to be used by the CONTRACTOR in the Work of this Contract are exempt from the Sales and Use Tax of the Commonwealth of Massachusetts. The AWARDING AUTHORITY tax exemption certificate number will be furnished to the CONTRACTOR."

**7. Clarifications and Interpretations**

Add the following language at the end of paragraph 9.04A of the General Conditions:

"The ENGINEER'S interpretation will be made in accordance with the requirements of Massachusetts General Law Chapter 30, Section 39P."

**8. Change of Contract Price**

Delete paragraphs 11.01, 11.02 and 12.01 of the General Conditions, having to do with Change of Contract Price. Changes in contract price will be governed by the section called "Change Orders," in Attachment D, Section 00830 and Article 11 in the Supplementary Conditions.

9.Payments

Delete paragraph 14.02B.1 of the General Conditions in its entirety and insert the following in its place:

“1. Progress Payments will be made in accordance with Massachusetts General Law Chapter 30, Section 39G, or 39K, as applicable.”

Add the following new paragraph following paragraph 14.02C.1 of the General Conditions:

“2. The CONTRACTOR shall make payments to Subcontractors in accordance with the requirements of Massachusetts General Law Chapter 30, Section 39F.”

Delete paragraph 14.07B of the General Conditions in its entirety and insert the following in its place:

"1. If, on the basis of the ENGINEER's observation of the Work during construction and final inspection and, upon the ENGINEER's review of the final Application for Payment and accompanying documentation, the ENGINEER is satisfied that the Work has been completed and that the CONTRACTOR's other obligations under the Contract Documents have been fulfilled, the ENGINEER will indicate in writing its recommendation of payment and present the Application to the AWARDING AUTHORITY for payment. Thereupon the ENGINEER will give written notice to the AWARDING AUTHORITY and the CONTRACTOR that the Work is acceptable subject to the provisions of paragraph 14.15. Otherwise, the ENGINEER will return the Application to CONTRACTOR, indicating in writing the reasons for refusing to recommend final payment. In such case the CONTRACTOR shall make the necessary corrections and resubmit the Application. If the Application and accompanying documentation are appropriate as to form and substance, the AWARDING AUTHORITY shall in accordance with the applicable provisions of the Massachusetts General Laws, make payment to the CONTRACTOR."

**10. Suspension of Work and Termination**

Delete paragraph 15.01A of the General Conditions in its entirety and insert the following in its place:

"A. The AWARDING AUTHORITY may order, at any time and without cause, the CONTRACTOR to suspend or delay the Work in accordance with Massachusetts General Law Chapter 30, Section 39O."

**11. Labor Classifications and Minimum Wage Rates**

Add the following paragraphs under the heading "Wage Rates" after paragraph 17.09 of the

Supplementary Conditions: "17.11 Wage Rates

A. Minimum Wage Rates as determined by the Commissioner of the Division of Occupational Safety of the Executive Office of Labor and Workforce Development under the provisions of Massachusetts General Laws Chapter 149, Sections 26-27D apply to this project. A copy of the wage schedule is included in Attachment A of Section 00830. If, after the Notice of Award, it becomes necessary to employ any person in a trade or occupation not classified in the wage determinations, such person shall be paid at not less than such rates as shall be determined by the Commissioner. Such approved minimum rate shall be retroactive to the time of the initial employment of such person in such trade or occupation. The CONTRACTOR shall notify the AWARDING AUTHORITY of its intention to employ persons in trades or occupations not classified in the wage determinations as soon as possible in order to allow sufficient time for the AWARDING AUTHORITY to obtain approved rates for such trades or occupations.

B. The schedule of wages referred to above are minimum rates only, and the AWARDING AUTHORITY will not consider any claims for additional compensation made by CONTRACTOR because of payment by the CONTRACTOR of any wage rate in excess of the applicable rate contained in the Contract.

C. The said schedule of wages shall continue to be the minimum rates to be paid during the life of this Agreement, except in the case of the duration of this Agreement exceeding one year, when the Contractor will be responsible for requesting and obtaining updated minimum wage rates from the Owner before the one-year anniversary of the project's start date, and a legible copy of said schedule shall be kept posted in a conspicuous place at the site of the Work.

D. CONTRACTOR and subcontractors shall submit a copy of weekly payroll records to the AWARDING AUTHORITY and the AWARDING AUTHORITY shall retain the records for a minimum of three years."

**B. OTHER REGULATORY REQUIREMENTS:**

**1. Working Hours**

No laborer, workman, mechanic, foreman, or inspector, working within the Commonwealth, in the employ of the CONTRACTOR, subcontractor, or other person doing or contracting to do the whole or a part of the work contemplated by this contract, shall be required or permitted to work more than eight hours in any one day or more than forty-eight hours in any one week, or more than six days in any one week, except in cases of emergency or required for this Project.

**2. Commonwealth of Massachusetts Supplemental Equal Employment Opportunity, Non-Discrimination and Affirmative Action Program.**

The Contractor shall abide by the Commonwealth of Massachusetts Supplemental Equal Employment Opportunity, Non-Discrimination and Affirmative Action Program, which is attached in its entirety on pages 00830-C.

**3. MassDEP Community Sound Level Criteria**

The Community Sound Level Criteria as established by the Commonwealth of Massachusetts' Department of Environmental Protection (MassDEP) must be conformed to prior to the AWARDING AUTHORITY's acceptance of the structure. The following sound level criteria must be met at the construction site:

A. The increase in the broadband noise level shall not be in excess of ten (10) dB(A) above ambient at the station boundary. The ambient level is defined as the A-weighted noise level that is exceeded ninety (90) percent of the time measured during the period in question.

B. The primary noise source(s) shall not produce a puretone condition. Puretone is any given octave band center frequency that exceeds the two adjacent center frequencies by three (3) or more decibels.

**4. OSHA 10 Hour Certification Requirements**

All employees of the Contractor who work at the jobsite must have received OSHA 10 Hour safety training, and have proof, at the jobsite, of being certified by OSHA as having received the training. The Contractor must provide written proof (copy of OSHA card each employee is required to carry is preferred) of this certification for every employee with submission of the first certified payroll report for each employee.

## Prevailing Wage Rates

**As determined by the Director under the provisions of the Massachusetts General Laws, Chapter 149, Sections 26 to 27H**

ROSALIN ACOSTA
Secretary

WILLIAM D MCKINNEY
Director

**Awarding Authority:** Town of Orleans

**Contract Number:** 2091-01 **City/Town:** ORLEANS

**Description of Work:** Construction of a 0.35 mgd Sequence Batch Reactor WWTF located at 20 Overland Way and (b) effluent disposal via 5 Wicks located at 34 Lots Hollow Road.

**Job Location:** 20 Overland Way

Information about Prevailing Wage Schedules for Awarding Authorities and Contractors

- This wage schedule applies only to the specific project referenced at the top of this page and uniquely identified by the "Wage Request Number" on all pages of this schedule.
- An Awarding Authority must request an updated wage schedule from the Department of Labor Standards ("DLS") if it has not opened bids or selected a contractor within 90 days of the date of issuance of the wage schedule. For CM AT RISK projects (bid pursuant to G.L. c.149A), the earlier of: (a) the execution date of the GMP Amendment, or (b) the bid for the first construction scope of work must be within 90-days of the wage schedule issuance date.
- The wage schedule shall be incorporated in any advertisement or call for bids for the project as required by M.G.L. c. 149, § 27. The wage schedule shall be made a part of the contract awarded for the project. The wage schedule must be posted in a conspicuous place at the work site for the life of the project in accordance with M.G.L. c. 149 § 27. The wages listed on the wage schedule must be paid to employees performing construction work on the project whether they are employed by the prime contractor, a filed sub-bidder, or any sub-contractor.
- All apprentices working on the project are required to be registered with the Massachusetts Department of Labor Standards, Division of Apprentice Standards (DLS/DAS). Apprentice must keep his/her apprentice identification card on his/her person during all work hours on the project. An apprentice registered with DAS may be paid the lower apprentice wage rate at the applicable step as provided on the prevailing wage schedule. **Any apprentice not registered with DLS/DAS regardless of whether or not they are registered with any other federal, state, local, or private agency must be paid the journeyworker's rate for the trade.**
- The wage rates will remain in effect for the duration of the project, except in the case of multi-year public construction projects. For construction projects lasting longer than one year, awarding authorities must request an updated wage schedule. Awarding authorities are required to request these updates no later than two weeks before the anniversary of the date the contract was executed by the awarding authority and the general contractor. For multi-year CM AT RISK projects, awarding authority must request an annual update no later than two weeks before the anniversary date, determined as the earlier of: (a) the execution date of the GMP Amendment, or (b) the execution date of the first amendment to permit procurement of construction services. Contractors are required to obtain the wage schedules from awarding authorities, and to pay no less than these rates to covered workers. The annual update requirement is not applicable to 27F "rental of equipment" contracts.
- Every contractor or subcontractor which performs construction work on the project is required to submit weekly payroll reports and a Statement of Compliance directly to the awarding authority by mail or email and keep them on file for three years. Each weekly payroll report must contain: the employee's name, address, occupational classification, hours worked, and wages paid. Do not submit weekly payroll reports to DLS. A sample of a payroll reporting form may be obtained at http://www.mass.gov/dols/pw.
- Contractors with questions about the wage rates or classifications included on the wage schedule have an affirmative obligation to inquire with DLS at (617) 626-6953.
- Employees not receiving the prevailing wage rate set forth on the wage schedule may report the violation to the Fair Labor Division of the office of the Attorney General at (617) 727-3465.
- Failure of a contractor or subcontractor to pay the prevailing wage rates listed on the wage schedule to all employees who perform construction work on the project is a violation of the law and subjects the contractor or subcontractor to civil and
