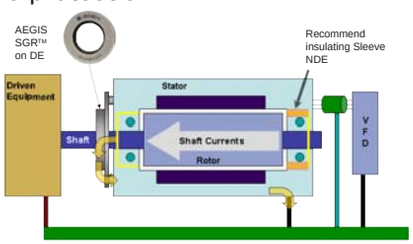
- Non-Drive End: Bearing journal should be insulated or Insulated/ Ceramic Bearing installed to disrupt circulating currents
- Install AEGIS SGR™ Bearing Protection Ring™ on opposite end of insulation and Insulated/Ceramic Bearing (usually DE)
- Protects bearings in attached equipment (gear box, pillow block, encoder etc.)



★ Recommend Colloidal Silver Shaft Coating PN CS015

BEARING PROTECTION FACTS:

Bearing protection for motors and attached equipment: Only AEGIS SGR™ will protect both motor bearings and the bearings in attached equipment. VFD induced currents on the shaft can discharge through motor bearings or coupled equipment like gear boxes, pumps, fan bearings, pillow blocks, encoders, brake motors, etc. AEGIS SGR™ addresses the root of the problem and channels harmful currents to ground.

Maintenance free bearing protection for life: Hundreds of thousands of conductive micro fibers have virtually zero wear during operation, even at high RPM and high surface rates. Unlike carbon block brushes, there is no spring pressure on fibers. AEGIS SGR™ Bearing Protection Ring™ will last for the service life of the motor.

AEGIS SGR™ is effective in grease, oil, dirt or dust: Lab and field tested. The conductive micro fibers "sweep" away contaminants from the shaft surface and maintain a conductive path even when oil, grease, dirt or dust get on the shaft.

Operation in harsh environments where fibers are exposed to excessive debris: To prevent particles from damaging the fibers, install a slinger or O-ring against the AEGIS SGR™.

★ COLLOIDAL SILVER SHAFT COATING: NEW TECHNOLOGY

Improving the conductivity of the steel shaft surface enhances the shaft voltage discharge capability in AEGIS shaft grounding applications. Maintaining a highly conductive shaft surface is especially important in critical applications or in applications where the conductive shaft surface of steel could become compromised. Environmental elements could create a potential for decreased conductivity on the shaft of the motor.

Apply AEGIS CS015 Colloidal Silver Shaft Coating to any VFD driven motor shaft prior to installing AEGIS Bearing Protection Ring™.

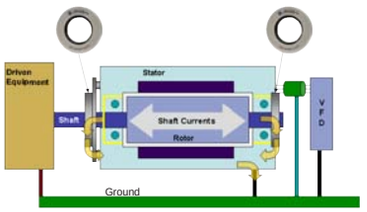
BEARING PROTECTION FACTS:

AEGIS SGR™ Bearing Protection Ring™ current handling capability: AEGIS SGR™ is rated to discharge high frequency current. Variable frequency drives (VFD) induce high frequency EDM currents of up to 2 amps in 50 billionths of a second. AEGIS SGR™ protects the bearing by safely channeling the energy away from the motor bearings to ground.

AEGIS Bearing Protection Ring™ - the most reliable bearing protection: Production up-time and reliability improve when AEGIS SGR™ is installed. The patented ring of hundreds of thousands of conductive micro fibers provide protection for the service life of the motor. The fibers will always surround the shaft with a conductive path for destructive shaft currents while the motor is running.

Vertical Motors: Insulate top bearing or shaft with non conductive coating. For bottom bearing, coat shaft with Colloidal Silver Shaft Coating and install AEGIS Bearing Protection Ring.

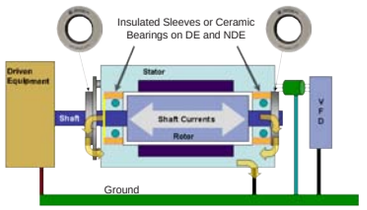
If insulation is not possible, the next best protection is to install AEGIS SGR™ on both ends of the motor



- Motor frame must be well grounded
- Install AEGIS SGR™ Bearing Protection Ring™ on drive and non-drive end to provide path of least resistance for circulating currents and to channel VFD currents to ground.
- Protects bearings in attached equipment
- **NOT SUITABLE FOR CYLINDRICAL ROLLER BEARING**

★ Coat shaft with Colloidal Silver Shaft Coating

Critical Applications: Insulate both ends and add AEGIS SGR™ Bearing Protection Ring™ on both ends



- Motor frame must be well grounded
- Drive and Non-Drive end: Bearing journals should be insulated or Insulated/Ceramic Bearing installed to disrupt circulating currents
- Install AEGIS SGR™ Bearing Protection Ring™ on drive and non-drive end to provide path of least resistance for shaft voltages and to channel VFD induced currents to ground.
- AEGIS SGR™ required to protect bearings in attached equipment (gear box, pillow block, encoder, etc.)

★ Coat shaft with Colloidal Silver Shaft Coating

Medium Voltage Motors
Large Motors and Generators over 1000 HP (750 kW)
Power Generators over 750kW

AEGIS iPRO™ Bearing Protection Ring™

Large motors and generators often have much higher induced shaft voltages and bearing currents which require a high current capable Bearing Protection Ring™. High frequency circulating currents induced by variable frequency drives (VFD) will cause bearing fluting and catastrophic failure in these motors. Generators experience current surges which can cause electrical arcing in bearings and equipment.

AEGIS iPRO™ High Current Bearing Protection Ring™

- One end of the motor should be insulated. Install AEGIS iPRO™ on opposite end of insulation to protect the non-insulated bearing.
- Install AEGIS iPRO™ on both ends of motor or generator if bearing cannot be insulated.

★ Coat shaft with Colloidal Silver Shaft Coating

MOTORS WITH CERAMIC BEARINGS

Insulating both bearing journals or using ceramic coated bearings in the motor **does not prevent VFD induced currents** from discharging through the bearings on attached equipment and may present a voltage hazard.

Whenever ceramic bearings are used in a motor, *AEGIS SGR™ is required* to protect attached equipment and reduce potentially dangerous shaft voltages.

Purpose of Application Notes: Application notes are intended as general guidance to assist with proper application of AEGIS SGR™ Bearing Protection Ring™ to protect motor bearings. All statements and technical information contained in the application notes are rendered in good faith. User must assume responsibility to determine suitability of the product for its intended use.

AEGIS SVP™ Shaft Voltage Probe

Conductive Microfiber Probe for use with Fluke 199C ScopeMeter

Measuring VFD Induced Shaft Voltages

For the first time you can easily and more accurately measure the voltage on a rotating shaft. The AEGIS SVP™ Shaft Voltage Probe's unique design of high density conductive microfibers ensures continuous contact with the rotating shaft. Used with the Fluke 199C ScopeMeter, you can determine if your motor is subject to potentially damaging bearing currents.

Catalog Number	Includes:
SVP-KIT-F199C	3 SVP tips, probe holder with two piece extension rod (fits 3/8" magnetic base)
SVP-TIP-F199C	3 SVP tips

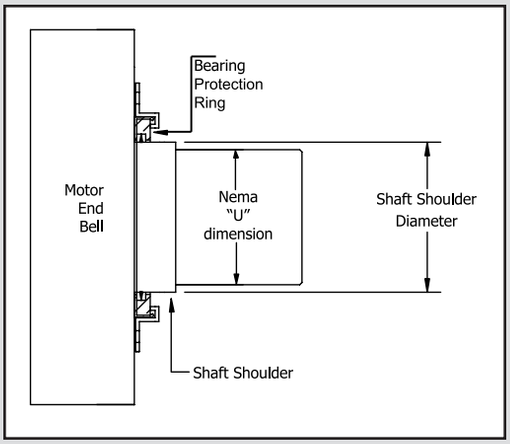
Selecting The Right Size Bearing Protection Ring For Your Motor

Front View

Side View

Back View

Mounting Options shown on page 8

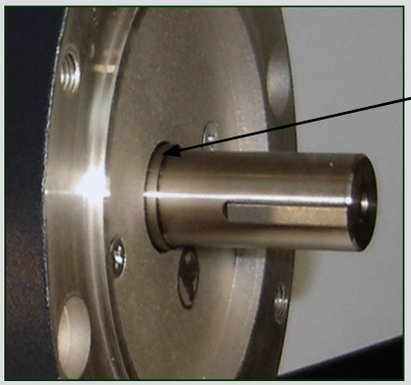


1. Measure shaft diameter at a point 0.125" from motor end bell.
2. Refer to the part lists to locate the correct SGR part number.

Note: If you have a slinger or a shaft shoulder that is less than 0.375", you will need the NEMA/IEC kit. See page 13 for more information.

Example shaft measurement
0.425"

Catalog Number	Min.shaft diameter	Max.shaft diameter	Outside diameter	Thickness Max
SGR-6.9-1	0.311	0.355	1.60	0.295
SGR-8.0-1	0.356	0.395	1.60	0.295
SGR-9.0-1	0.396	0.435	1.60	0.295
SGR-10.1-1	0.436	0.480	1.60	0.295
SGR-11.2-1	0.481	0.520	1.60	0.295



Shaft shoulder: The SGR can be mounted to the shaft shoulder but the shoulder should be at least 0.375" in length so that all of the fibers are in contact with the rotating shaft. Measure the diameter of the shaft shoulder then locate the correct SGR on the part lists.

AEGIS SGR™ Bearing Protection Ring™ Options

pg. 9

NEW PRODUCT!

Conductive Epoxy Mounting
Shaft diameters: 0.311" to 6.02"
Solid and Split Ring
Quick and easy installation to metal motor frame
Conductive Epoxy Included

pg.10-11

Standard Mounting Brackets
Shaft diameters: 0.311" to 6.02"
Ships with mounting brackets, 6-32 screws and washers
Quick and easy installation to most surfaces

pg. 10-11

Split Ring
Shaft diameter: 0.311" to 6.02"
4 to 6 mounting brackets, M3 screws and washers
Installs without decoupling motor

pg. 10-11

Bolt Through Mounting
Shaft diameters: 0.311" to 6.02"
M3 x 14 socket head cap screws and lock washers
2 mounting holes up to shaft size 3.895"
4 mounting holes for larger sizes

pg. 12

Press Fit Mounting
Shaft diameters: 0.311" to 6.02"
Clean dry 0.004" press fit
Custom sizes available

pg. 13

NEMA-IEC Mounting Kits
Shaft diameter: see chart for standard kits
Custom kits available for other shaft diameters
Clears any slinger, shaft shoulder or protrusion

pg. 14

WTG
Long term reliable performance
Maintenance free system
Solid and Split Ring configurations

pg. 14

iPRO
Long term reliable performance
Maintenance free system
Solid and Split Ring configurations
Available in sizes up to 30" shaft diameter

Standard SGR™ - Conductive Epoxy Mounting

Bearing Protection Ring Kit for NEMA & IEC Motors

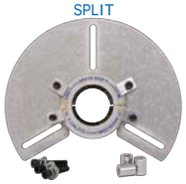
Kits include AEGIS SGR™ Bearing Protection Ring and all mounting hardware

NEMA/IEC Bearing Protection Ring™ Kit

SOLID

1 AEGIS SGR™
1 mounting plate
3 screws (inches or metric)
3 washers
3 lock washers
3 spacers*

SPLIT



1 AEGIS Split Ring SGR™
1 split mounting plate
3 screws (inches or metric)
3 washers
3 lock washers
3 spacers*

* each kit includes 3 spacer lengths: 1/4", 1/2", and 1" for NEMA kits and 7mm, 17mm, and 27mm for IEC kits.

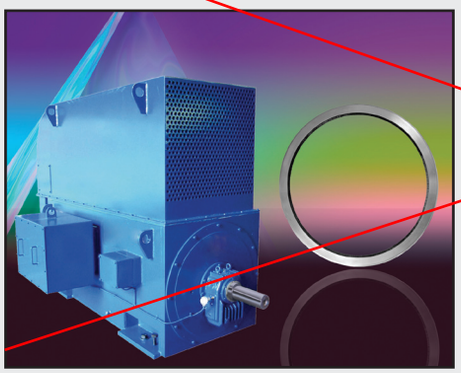
Custom Kits available for shaft diameters not shown above

- Easy to order and install for any NEMA or IEC frame size
- Clears any slinger, shaft shoulder or protrusion
- Adjustable slots adapt to most end bells
- Rigid mounting plate ensures alignment
- Split Ring kit allows for installation without decoupling equipment

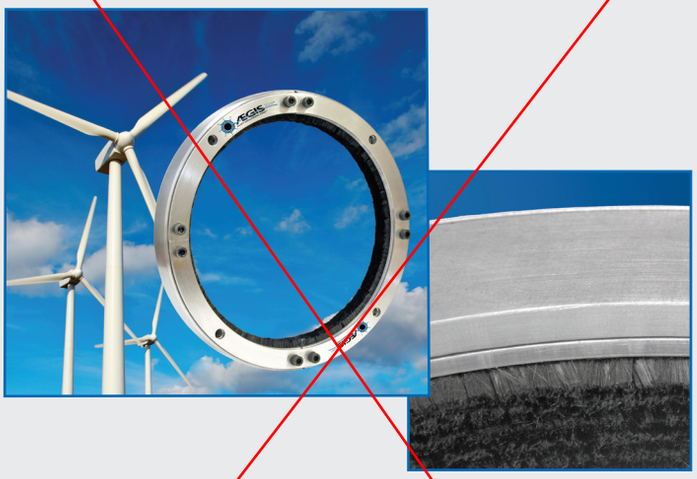
Custom Applications



AEGIS SGR™ Bearing Protection Ring™ for Large Shaft Diameters

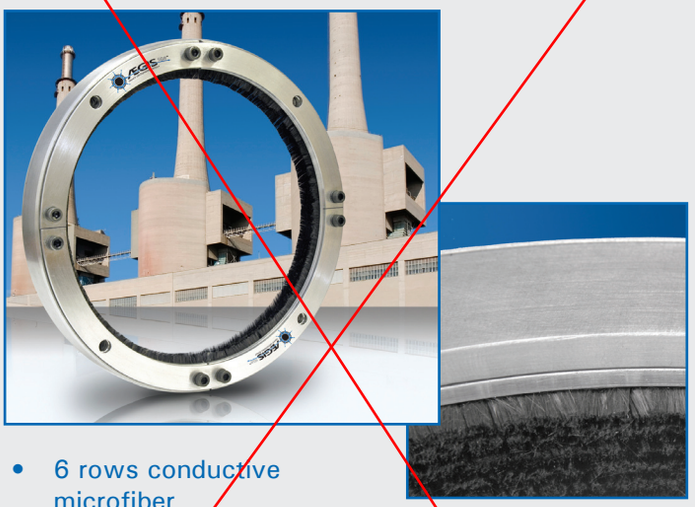
- For shaft diameters greater than 6" (152.4mm)
- Long term reliable performance
- Maintenance free system
- Available in solid or split ring design

AEGIS WTG™ Wind Turbine Bearing Protection



- 6 rows conductive microfiber
- High current capable
- AEGIS WTG™ shaft current monitoring compatible
- Long term reliable performance
- Maintenance free system
- Up-tower retrofit capable split ring configuration

AEGIS iPRO™ High Current Bearing Protection for Large Motors and Generators



- 6 rows conductive microfiber
- High current capable
- AEGIS iPRO shaft current monitoring compatible
- Long term reliable performance
- Maintenance free system
- Available in sizes up to 30" (762mm) shaft diameter

WARRANTY: Units are guaranteed for one year from date of purchase against defective materials and workmanship. Replacement will be made except for defects caused by abnormal use or mishandling. All statements and technical information contained herein, or presented by the manufacturer or his representative are rendered in good faith. User must assume responsibility to determine suitability of the product for intended use. The manufacturer shall not be liable for any injury, loss or damage, direct or consequential arising out of the use, or attempt to use the product.

Patent Numbers: 7,136,271: 7,193,836: and other patents pending

Engineering Specification:

All motors driven by a variable frequency PWM drive shall include a maintenance free, circumferential, conductive micro fiber shaft grounding ring (AEGIS SGR) to discharge shaft currents to ground.
Recommended part: AEGIS SGR™ Bearing Protection Ring

Electrically insulated bearings from SKF

Virtually eliminate the dama

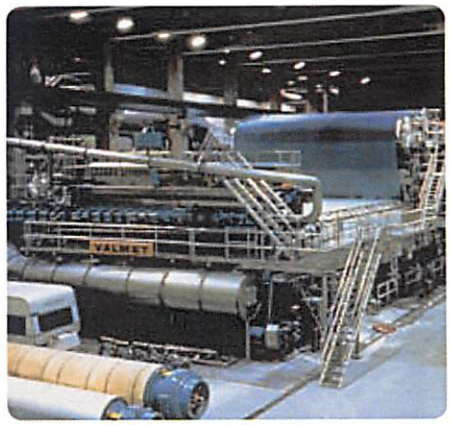
The problem of stray electric current bearing damage

When a stray current in an electric motor uses a bearing as its path to ground, bearing damage can occur. The most common causes of stray electric currents are: asymmetry in the motor's magnetic circuit, unshielded power cables, and fast switching pulse width modulated (PWM) frequency converters used in modern variable frequency drives (VFDs). The increasing popularity of VFDs is directly linked to the increase in electric current related bearing damage.

When an electric current passes through the bearing it can cause micro-cratering in the raceways of inner and outer rings and on the rolling element surfaces (→ **fig. 1**). The heat, which is generated by the discharges, causes local melting that creates small craters and changes in the structure of the metal. As a result of this initial damage, a "washboard pattern" may be found on the raceways and rolling elements (for roller bearings) (→ **fig. 2**). This secondary damage is wear caused by the dynamic effect of the rolling elements when they roll over the smaller craters. Current discharges also cause the lubricant in the bearing to change its composition, degrade rapidly and fail prematurely (→ **fig. 3**).

Once bearing damage from electric erosion has begun, increased noise levels, reduced effectiveness of the lubricant, increased heat and finally excessive vibration, all contribute to drastically decrease bearing service life.

Stray electric currents can occur almost anywhere from windmills to papermills



ging effects of stray electric currents

A cost-effective solution

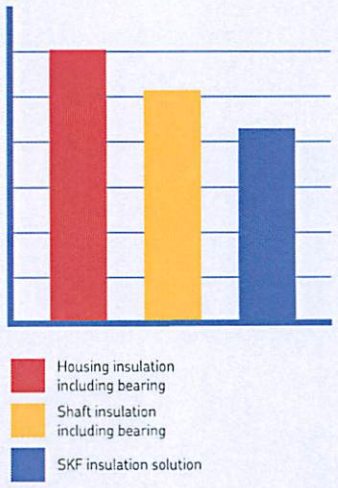
To overcome this problem, SKF has developed two electrically insulating rolling bearing solutions: SKF® hybrid bearings and INSOCOAT® bearings. The solution one chooses depends on the severity and cause of the stray electric current and size of the bearing. In either case, SKF hybrid bearings and INSOCOAT bearings provide a number of benefits

- two functions in one solution:
  - a bearing function
  - electrical insulation
- virtually eliminates premature bearing failures caused by stray electric currents
- increases machine uptime
- reduces maintenance costs
- provides an economical solution when compared with other insulation solutions
- global availability.

Recommended range

SKF has defined a recommended range of INSOCOAT and hybrid bearings specifically for electric motors and generators. This range enables fast and secure delivery around the globe.

Total cost of SKF insulated bearing solution relative to other insulation approaches



Micro-cratering
Micro-cratering is the result of electric current passage in bearings. The damaged surface appears dull and is characterized by small craters of a few microns in diameter.

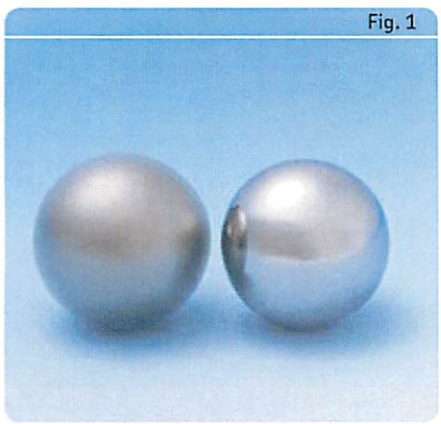


Fig. 1

Fluting or washboard pattern
A pattern of lines (fluting) across the raceways can be a sign that current has passed through the bearing. Fluting is not primary damage resulting from stray electric currents but is secondary damage that becomes visible over time.

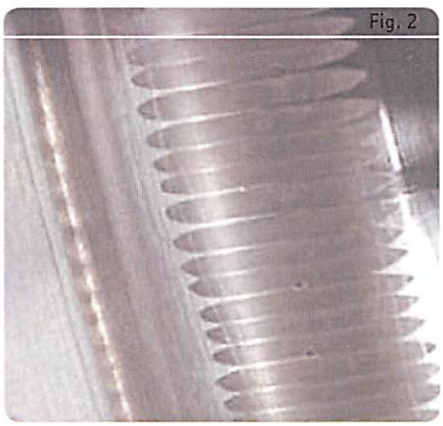

Fig. 2

Grease-blackening
Electric discharges cause the base oil in the lubricant to burn and harden to create a poor lubrication condition.

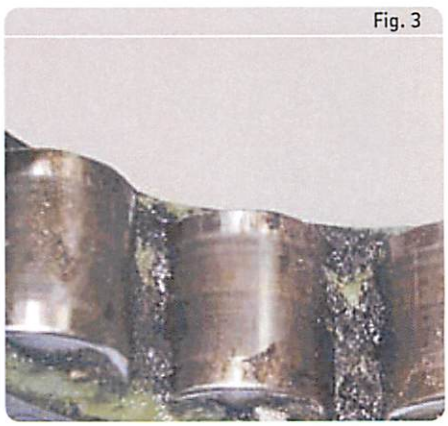

Fig. 3

SKF 6215/C3

INSOCOAT

An INSOCOAT bearing is a very economical solution when compared with other insulation methods that protect a bearing against electric current passage. By integrating the electrical insulation function into the bearing, SKF has been able to increase reliability and machine uptime by virtually eliminating the damaging effects of stray electric currents.

INSOCOAT bearing designs

The standard range of INSOCOAT bearings in the most frequently used sizes and variants are available from stock as

- single row deep groove ball bearings
- single row cylindrical roller bearings.

The performance data as well as the dimensional and running accuracy of INSOCOAT bearings are identical to standard non-insulated bearings.

INSOCOAT bearings with coated outer ring

Bearings with an electrically insulating coating on the external surfaces of the outer ring are the most common INSOCOAT bearings. They are identified by the suffix VL0241.

Outer ring coated INSOCOAT bearings are recommended for medium size motors, that use 6215, 6313 size bearings and larger. For applications where smaller bearings are used, SKF recommends hybrid deep groove ball bearings.

INSOCOAT bearings with coated inner ring

Bearings with an electrically insulating coating on the external surfaces of the inner ring provide enhanced protection against electric current damage. The enhanced protection results from the increased impedance due to the smaller coated surface area. Bearings with a coated inner ring are identified by the suffix VL2071 and are recommended for larger size motors (typically from bearing sizes 6226, 6324 sizes and larger), or other applications where the bearings risk being subjected to high shaft voltages.

Technical features and benefits

- The coating is applied using a plasma-spray technique. Sophisticated pre- and post- application processes yield an outstanding coating quality.
- INSOCOAT bearings are treated with a unique sealant to guard against humidity and water from penetrating the coating and reducing its effectiveness.
- Due to the quality of the application and finishing processes, INSOCOAT bearings provide reliable and consistent insulation, that is virtually insensitive to heat, moisture and chemicals.
- SKF can supply values for relevant electric parameters for the bearings (capacitance, impedance) to optimize the insulating solution for any application.
- INSOCOAT bearings are environmentally friendly.
- INSOCOAT bearings with an outer ring coating are suitable for all types of housings. No additional mounting precautions are necessary.

Dimensions

The boundary dimensions of INSOCOAT deep groove ball bearings and cylindrical roller bearings are in accordance with ISO 15:1998.

Tolerances and fits

INSOCOAT bearings are produced to Normal tolerances. Some deep groove ball bearings are also available with higher accuracy to tolerance class P5.

The aluminium-oxide layer applied either to the external outer ring surfaces or the external inner ring surfaces does not influence running accuracy.

INSOCOAT bearings can be mounted with the same fit as a standard bearing in an electric motor or generator, without risk of damaging the coating. Fits up to and including p6 for inner ring coated variants and P6 for outer ring coated variants can be applied.

Internal clearance

Standard INSOCOAT deep groove ball bearings and cylindrical roller bearings are manufactured with the radial internal clearance to the class shown in the bearing designation. Before ordering, check the availability of bearings with clearances other than standard.

Cages

Depending on the bearing type and size, INSOCOAT bearings are equipped with one of the following cages

- a riveted cage of pressed steel, no designation suffix, or
- a two-piece machined brass cage, rolling element centred, designation suffix M.

Electrical properties

INSOCOAT bearings provide effective protection against AC and DC currents. The specifications for different variants are:

VL0241 Electrical resistance: min. 50 MΩ, breakdown voltage: max. operating voltage 1 000 V DC.

VL0246 Electrical resistance: > 150 MΩ, breakdown voltage: max. operating voltage 3 000 V DC.

VL2071 Electrical resistance: min. 50 MΩ, breakdown voltage: max. operating voltage 1 000 V DC.

VL2074 Electrical resistance: > 150 MΩ, breakdown voltage: max. operating voltage 2 000 V DC.

Design of associated components

To maximize the effects of the insulating properties of INSOCOAT bearings, SKF recommends the following:

- For bearings with a coated outer ring designation suffix VL0241, the housing shoulder or spacer sleeve should not have a diameter smaller than the abutment dimension D_a min listed in the assortment tables. For VL0246 abutment dimensions, contact SKF.
- For bearings with a coated inner ring designation suffix VL2071, the shaft shoulder or spacer sleeve should not have a diameter larger than the abutment dimension d_a max listed in the assortment tables. For VL2074 abutment dimensions, contact SKF.

The coating can be applied to either the outer or inner ring to provide protection against electric current damage in bearings. Designation suffix VL0241 or VL2071 respectively.

E-BEARING

Hybrid bearings – more than an insulator

Hybrid bearings have rings made of bearing steel and rolling elements made of bearing grade silicon nitride (Si_3N_4). Because silicon nitride is such an excellent insulator, hybrid bearings can be used effectively to insulate the housing from the shaft in both AC and DC motors, as well as in generators.

In addition to being an excellent insulator, hybrid bearings have higher speed capabilities and will provide longer bearing service life under the same operating conditions than a similarly sized all-steel bearing.

Features and benefits

Lower density

The density of a bearing grade silicon nitride rolling element is 60 % lower than a similarly sized rolling element made from bearing steel. Less weight means lower inertia – and that translates into superior behaviour during rapid starts and stops as well as higher speeds.

Lower friction

The lower density of a silicon nitride rolling element combined with its low coefficient of friction, significantly reduces bearing temperatures at high speeds. Cooler running increases the service life of both the bearing and the lubricant.

High hardness and high modulus of elasticity

The high degree of hardness of a silicon nitride rolling element means high wear-resistance, increased bearing stiffness and longer bearing service life in contaminated environments.

Low coefficient of thermal expansion

A silicon nitride rolling element has a lower coefficient of thermal expansion than a similarly sized rolling element made from bearing steel. This means less sensitivity to temperature gradients at high temperatures for better, more accurate preload control.

Runs faster, lasts longer

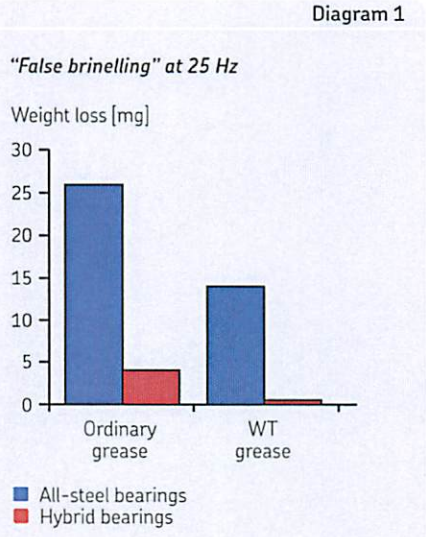
Combine the lower density of silicon nitride with its lower coefficient of friction, high hardness and the fact that silicon nitride will not smear the raceways under poor lubrication conditions, and the result is a bearing that will run faster and longer even under the most difficult operating conditions.

Resists false brinelling

If a stationary bearing is subjected to vibrations there is a risk that "false brinelling" will occur. False brinelling is the formation of small indentations in the raceways that will eventually lead to spalling and premature bearing failure. In cases where steel balls were replaced by ceramic balls the bearings were found to be much less susceptible to false brinelling.

Hybrid bearings supplied with SKF wide temperature grease (WT) were found to sustain less false brinelling damage than bearings containing other types of greases (→ **diagram 1**).

Diagram 1



Cages

Depending on their size, standard SKF hybrid deep groove ball bearings are fitted with

- an injection moulded snap-type cage of glass fibre reinforced polyamide 6,6 or
- a riveted pressed steel cage.

Hybrid bearings with a polyamide 6,6 cage can be operated at temperatures up to + 120 °C (+250 °F).

Polyetheretherketone (PEEK)

The use of glass fibre reinforced PEEK cages is becoming more common for applications where there are high speeds or high temperatures. PEEK provides a superior combination of strength and flexibility and does not show signs of ageing due to high temperatures or oil additives. The maximum temperature for high-speed use is limited to +150 °C (+300 °F) as this is the softening temperature of the polymer. For additional information about PEEK cages, contact the SKF application engineering service.

Seals

The SKF standard range of hybrid bearings for electric motors consists primarily of single row deep groove ball bearings. Sealed and greased-for-life SKF hybrid deep groove ball bearings are protected on both sides by

- a low-friction RSL seal, fitted to bearings with an outside diameter ≤ 52 mm, designation suffix 2RSL
- a low-friction RZ seal, fitted to bearings with an outside diameter > 52 mm, designation suffix 2RZ
- an RS1 contact seal, fitted to bearings with an outside diameter ≥ 90 mm, designation suffix 2RS1.

All seals are made of acrylonitrile-butadiene rubber (NBR) with sheet steel reinforcement. The permissible operating temperature range for these seals is –40 to +100 °C (–40 to +210 °F) and up to +120 °C (+250 °F) for brief periods. For operating temperatures up to +180 °C (+355 °F), seals made from fluoro rubber are available. For additional information about these seals, contact the SKF application engineering service.

Lubrication

The standard sealed hybrid bearing is filled with a premium quality synthetic ester oil based grease, containing a polyurea thickener (designation suffix WT). This grease, which has an operating temperature range from about +70 to +120 °C (+160 to +250 °F), has excellent lubrication properties and provides extremely long service life.

Hybrid bearings perform extremely well under vibrating or oscillating conditions. It is therefore not usually necessary to use special greases for these conditions.

Comparison of the material properties of bearing steel and bearing grade silicon nitride

Material properties	Bearing steel	Bearing grade silicon nitride
Mechanical properties		
Density (g/cm^3)	7,9	3,2
Hardness, HV 10 (kg/mm^2)	700	1 600
Modulus of elasticity (GPa)	210	310
Thermal expansion ($10^{-6}/K$)	12	3
Electrical properties (at 1 MHz)		
Electrical resistivity (Ωm)	$0,4 \times 10^{-6}$ (conductor)	10^{12} (insulator)
Dielectric strength (kV/mm)	–	15
Relative dielectric constant	–	8

Grease life in hybrid bearings

Tests have shown that when used with sealed hybrid bearings, the wide temperature grease (WT) from SKF has a very long service life even at high speeds and high temperatures. One example (→ **diagram 2**) shows where the life of WT grease in hybrid bearings was four times longer than in all-steel bearings. The shaft diameter was 20 mm, the speed 20 000 r/min and the operating temperature +120 °C (+250 °F).

Most SKF hybrid deep groove ball bearings are sealed and greased-for-life.

SKF recommends relubrication of open bearings with SKF grease LGHP 2. In general, the relubrication interval is 3 to 5 times longer than for an all-steel bearing.

For very high-speed applications at temperatures below +70 °C (+160 °F) the use of either SKF grease LGLC 2 or SKF grease LGLT 2 is recommended.

The recommended bearing operating temperature range for maximum grease life is +70 to +120 °C (+160 to +250 °F).

Equivalent bearing loads

The equivalent dynamic and static bearing loads of hybrid deep groove ball bearings are calculated using the equations for all-steel deep groove ball bearings.

Typical hybrid bearing designations suffixes

The designation suffixes used to identify certain features of SKF hybrid deep groove ball bearings are explained in the following.

C3	Radial internal clearance greater than Normal
HC5	Rolling elements of silicon nitride
TNH	Injection moulded snap-type cage of polyetheretherketone (PEEK)
TN9	Injection moulded snap-type cage of glass fibre reinforced polyamide 6,6
WT	Grease with a polyurea thickener of consistency 2–3 to the NLGI Scale for a temperature range –40 to +160 °C (–40 to +320 °F) (normal filling grade)
2RS1	Sheet steel reinforced contact seal of acrylonitrile-butadiene rubber (NBR) on both sides of the bearing
2RSH2	Sheet steel reinforced contact seal of fluoro rubber (FKM) on both sides of the bearing
2RSL	Sheet steel reinforced low-friction seal of acrylonitrile-butadiene rubber (NBR) on both sides of the bearing
2RZ	Sheet steel reinforced low-friction seal of acrylonitrile-butadiene rubber (NBR) on both sides of the bearing

Dimensions, tolerances, internal clearance

Standard SKF hybrid deep groove ball bearings are manufactured as standard with

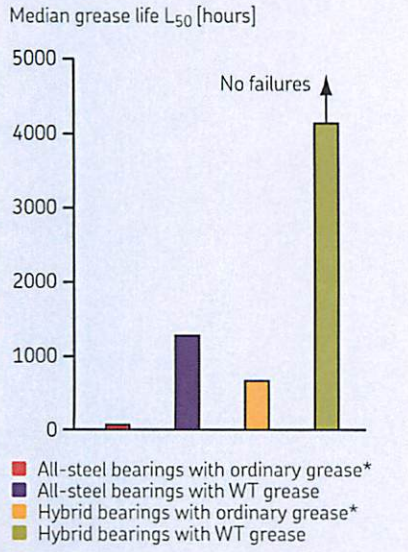
- boundary dimensions to ISO 15:1998
- Normal tolerances to ISO 492:2002
- C3 radial internal clearance to ISO 5753:1991.

Recommendations for installation

Hybrid bearings should be handled and mounted in the same manner as conventional all-steel bearings. Always use the right tools and correct methods for mounting and dismounting.

Diagram 2

Long grease life with WT grease in hybrid bearings



* At +120 °C (max temperature for ordinary grease)

Grease alternatives offering long service life in hybrid bearings

SKF grease	Temperature range*
WT	– 40 to +160 °C – 40 to +320 °F
LGHP 2	– 40 to +150 °C – 40 to +300 °F

BEST PRACTICES FOR VARIABLE FREQUENCY DRIVE (VFD) APPLICATIONS

VFD-induced shaft voltage can exist in every VFD driven motor application. It is not specific to the air movement industry, nor is it specific to any particular manufacturer's motors, drives or equipment. However, shaft voltage only becomes a problem when it leads to bearing current and consequential damage to the motor bearings.

NOTICE!

Risk of serious machine damage!
Appropriate measures must be implemented by the installation contractor to limit the shaft induced voltage to 1V – 2V as per IEEE 112.

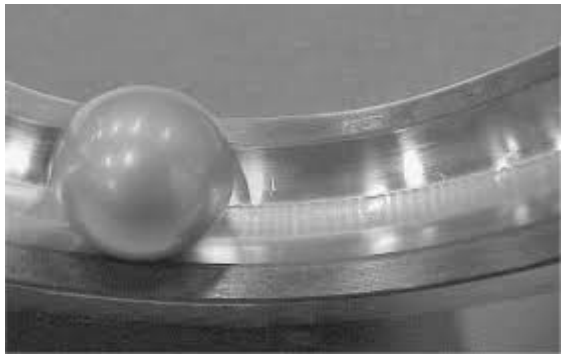

Figure 1 Bearing damage caused by EDM

Frequency converters (also known as variable frequency drives or VFD's) can induce a voltage on the shafts of drive motors and stages due to the high switching frequencies used in these drives. Shaft voltage can become a problem when it reaches a high enough level to discharge across the bearings, causing electrical discharge machining (EDM) and creating small grooves called fluting which can lead to premature bearing failure. The potential for this induced shaft voltage exists in every VFD driven motor application and must be addressed on an installation specific basis.

VFD induced voltage is a phenomenon that is somewhat rare and unpredictable. As additional protection, Aerzen USA offers options for mitigating induced shaft currents such as grounding rings and isolated motor non drive end bearings. Even with these options installed, there is no guarantee that this phenomenon will be entirely eliminated. Damage to the motor bearings from shaft / bearing currents is not covered by warranty from Aerzen, the motor manufacturer or VFD manufacturer.

GENERAL RECOMMENDATIONS:

Motors up to and including 100HP (75kW) – Low Voltage

For induction motors either foot mounted, c-face or d-flange mounted motors with single row radial ball bearings on both ends of the motors

- Install one AEGIS SGR Bearing Protection Ring on either the drive end or the non-drive end of the motor to discharge capacitive induced shaft voltage.

Motors Greater than 100HP (75kW)

For horizontally mounted motors with single row radial ball bearings on both ends of the motor:

- Non-Drive End (Opposite Drive End): Bearing housing must be isolated with insulated sleeve or coating or use insulated ceramic or hybrid bearing to disrupt circulating currents.
- Drive End: Install one AEGIS Bearing Protection Ring.

Motors in Hazardous Areas

Grounding rings are not permitted. Consult Aerzen USA or your motor supplier for specific recommendations.

17-Mar-21	-

REFERENCE INFORMATION

Document No. BC-6-0239 rev "O"

Sales Order No.	SO-20-00311	Equip. No.	MIX.BLW-1, 2	VFD Manufacturer	-
Wiring Diagram	-	Machine	GM35S	VFD Model No.	-

GENERAL DESIGN REQUIREMENTS

1. Parameter Settings and Nos. will be included only in the case of the VFD being provided by AERZEN USA, otherwise this area can be used by customer for reference information regarding settings & parameter nos.
2. The highest voltage increase rate is 1200 V / micro second.
3. Install filter, output reactor if e.g. the cabling exceeds i.e. >200', etc.
4. Minimum Frequency is set to protect the blower from insufficient gear lubrication. Additional safety features (i.e. motor over-temp. or high discharge temp.) may trigger a shutdown before minimum speed is reached.
5. When starting VFD, motor speed must reach Min. Frequency with in 3-5 seconds
6. Rate Ramp (Acceleration Time) between Min Frequency and Max. Frequency should be set to 1 Hz/s. Also, the Deceleration Time between Max. and Min. should be set to 1 Hz/s
7. When the a stop command is supplied, the Motor should be set to "Coast-to-Stop", and must not restart until the motor has come to a completed stop. A stop command could also be an emergency stop, fault, or power failure.
8. VFD should be set to a Constant Torque Mode (Note: All motors have a 1.0 service factor when used with a VFD)

PROJECT SPECIFIC PARAMETERS	SETTING	PARAMETER No.[1]

GENERAL DESIGN REQUIREMENTS

1. Parameter Settings and Nos. will be included only in the case of the VFD being provided by AERZEN USA, otherwise this area can be used by customer for reference information regarding settings & parameter nos.
2. The highest voltage increase rate is 1200 V / micro second.
3. Install filter, output reactor if e.g. the cabling exceeds i.e. >200', etc.
4. Minimum Frequency is set to protect the blower from insufficient gear lubrication. Additional safety features (i.e. motor over-temp. or high discharge temp.) may trigger a shutdown before minimum speed is reached.
5. When starting VFD, motor speed must reach Min. Frequency with in 3-5 seconds
6. Rate Ramp (Acceleration Time) between Min Frequency and Max. Frequency should be set to 1 Hz/s. Also, the Deceleration Time between Max. and Min. should be set to 1 Hz/s
7. When the a stop command is supplied, the Motor should be set to "Coast-to-Stop", and must not restart until the motor has come to a completed stop. A stop command could also be an emergency stop, fault, or power failure.
8. VFD should be set to a Constant Torque Mode (Note: All motors have a 1.0 service factor when used with a VFD)

PROJECT SPECIFIC PARAMETERS	SETTING	PARAMETER No.[1]
Horsepower (kilowatt)	50 HP (37 kW)	
Voltage	460	
Full Load Amps (Motor Over Current)	59.2	
Maximum Frequency	60	
Minimum Frequency	24	
Time to Minimum Speed	3 - 5 sec.	
Ramp Rate	1 Hz / sec.

Component Breakdown

Component	Material	Protection Method (Standard)	Quality Document (Standard)	Protection Method (Upgrade)	Quality Document (Upgrade)
Base/Silencer*	Carbon Steel	Painted Externally (Solvent Based)	QH-00408	SikaCor Zinc R	QH-00510
Belt Guard	Galvanized Sheet Metal	N/A	N/A	N/A	N/A
Belt Guard Supports	Galvanized Carbon Steel	N/A	N/A	N/A	N/A
Blower Stage	Cast Carbon Steel	Painted Externally (Water Based)	QH-00408	SikaCor Zinc R	QH-00510
Connecting Housing (DN50)	Cast Aluminum	N/A	N/A	N/A	N/A
Connecting Housing (DN80 - DN250)	Cast Iron	Powder Coated	QH-00552	SikaCor Zinc R	QH-00510
Fasteners - Bolts, Studs, Nuts	Carbon Steel	Zinc Coated	N/A	N/A	N/A
Flex Connector	Silicone	N/A	N/A	N/A	N/A
Hose Clamps	Carbon Steel	Zinc Coated	N/A	N/A	N/A
Inlet Filter/ Silencer Housing	Carbon Steel	Powder Coated	QH-00552	SikaCor Zinc R	A-6-450
Inlet Hose	Reinforced Rubber	N/A	N/A	N/A	N/A
Inlet Silencer	Carbon Steel	Powder Coated	QH-00552	SikaCor Zinc R	A-6-450
Motor Mounting Hardware	Galvanized Carbon Steel	N/A	N/A	N/A	N/A
Piping (Galvanized)	Galvanized Carbon Steel	N/A	N/A	N/A	N/A
Piping (Painted)	Carbon Steel	Painted Externally	QH-00408	SikaCor Zinc R	A-6-450
Pressure Safety/Vacuum Breaker Valves	Carbon Steel (Flange)	Painted Flange	QH-00408	N/A	N/A
Sound Enclosure - Base	Carbon Steel	Powder Coated	QH-00552	SikaCor Zinc R	QH-00510
Sound Enclosure	Galvanized Sheet Metal	Powder Coated	QH-00419	SikaCor Zinc R	QH-00510
Vent Silencer	Carbon Steel	Powder Coated	QH-00552	SikaCor Zinc R	A-6-450

*If made in the USA, Protection Method goes from Painted Externally to Powder Coated (A-6-450)

General Painting Information

The machine castings are fettled, cleaned and primed; the primer used is specially developed for machinery parts and is particularly notable for its excellent bonding characteristic and elasticity. Its base is a quick drying synthetic resin binder possessing a high degree of water resistance. The proportion of pigment to binder is such to ensure the best protection for the machines.
Total dry Film Thickness: 70 µm (2.75 mil)

Surface Preparation	Sand blasting, mechanical cleaning to near white surfaces per SA 2,5 acc. to DIN ISO 8501 or SSPC10	
Primer	Alkyd Resin: RAL 6006	Manufacturer: Relius Coatings
Final Coat	Alkyd Resin: RAL 5001 (Blue)	Manufacturer: Relius Coatings (BASF) or Dr. Demuth GmbH

General Powder Coating Information

SP Polyester Powder Paint, RAL 5001, structure, glossy
Relius No.: I536-5401
Total dry film thickness: 80 - 110µm

General Upgraded Protection Information

Surface Preparation	Sa 2 ½
Priming Coat	SikaCorEG4 (80µm max)
Intermediate Coat	SikaCorEG1 (80µm max)
Finishing Coat	SikaCorEG5 (80µm max)

Pre-Commissioning Checklist

	Document #	A-7-0288 rev "4"

The purpose of this pre-commissioning checklist is to ensure readiness to successfully commission your Aerzen packages. We will need some information from you in order to better prepare for the commissioning. We ask that your on-site representative complete and return this checklist to Aerzen USA at your earliest convenience.

We will also need to know if you have a target date in mind for our service technician to be on-site, and if the plant maintenance personnel will be on-site at that time to receive maintenance training. This training is normally hands-on in nature and should not take more than 1-2 hours. In addition to the pre-commissioning checklist, we will need an on-site contact and phone number for our service technician.

We will make every effort to meet your target date for commissioning. Please keep in mind that our start-up/commissioning schedule can run three to five weeks out. The earlier we know your target date the better chance we have of reserving your request on our schedule.

Please be aware that should the commissioning prerequisites not be completed prior to our arrival, Aerzen USA reserves the right to charge any and all responsible parties for additional time and travel expenses required to complete the commissioning service.

Below is a checklist of items requiring attention prior to our arrival. Please verify your understanding and completion of the prerequisites by initialing the check the boxes corresponding to each requirement. Please send this checklist to the Aerzen Service Coordinator once all the prerequisites have been verified

1	The Aerzen package has not been damaged during shipping and/or while on-site	☐
2	The Aerzen package is installed in permanent position, is level, properly grounded and anchored.	☐
3	The process pipework for the Aerzen package inlet and discharge is connected in its final position and independently supported (temporary supports are not acceptable	☐
4	Electrical connections have been completed for the motor using flexible conduit to allow the motor to be raised into its operational position.	☐
4A	The package safety switches (if applicable) are wired to the PLC or MCC (as applicable).	☐
4B	The Aerzen control panel (if applicable) is wired to the PLC or MCC (as applicable).	☐
4C	The correct voltage is fed to the control panel. Refer to the project specific wiring diagram for the voltage required	☐
4D	If there is a VFD or Soft-Starter and supplied by others, it has been configured with the following motor settings:	☐
4D-1	Horsepower (kilowatt)	☐
4D-2	Voltage	☐
4D-3	Maximum Frequency	☐

4D Continued

	4D-4	Minimum Frequency - based on minimum speed of the blower or compressor in conjunction with the sheave combination	☐
	4D-5	Full Load Amps	☐
	4D-6	Time to Minimum Speed (3-5 seconds)	☐
	4D-7	Coast to Stop (do not brake)	☐
	4D-8	**CONSTANT TORQUE (VERY IMPORTANT!!!)**	☐
	4D-9	Restart - only when the machine has come to a complete stop.	☐
5		Belts or coupling bolts removed for rotation test	☐
6		Verification that machine is filled to proper oil level with correct oil (if delivered without oil)	☐
7		Required personnel scheduled to attend startup (electrician, operators, maintenance personnel, etc)	☐
8		Proper paperwork completed to allow Aerzen technician on site	☐
9		If required, on-site safety training requirements for Aerzen personnel must be scheduled in advance. Please advise type, length and place of training).	☐

GENERAL INSTALLATION NOTES:

1. PLEASE REVIEW ALL INDIVIDUAL INSTALLATION DRAWINGS FOR ACTUAL DETAILS. REFER TO ASSEMBLY INSTRUCTIONS IN THE OPERATION AND MAINTENANCE MANUAL PRIOR TO INSTALLING THE EQUIPMENT.
2. ALL THREADED FASTENERS MUST BE SECURED WITH A FULL NUT AND A JAM NUT.
3. ANTI-SEIZE LUBRICANT (ITEM #10) IS REQUIRED ON ALL STAINLESS STEEL FASTENERS UNLESS OTHERWISE SPECIFIED.
4. ALL LOCAL ELECTRICAL DISCONNECTS / JUNCTION BOXES HAVE BEEN SHOWN FOR REFERENCE ONLY AND ARE TO BE SUPPLIED AND LOCATED BY OTHERS.
5. ALL INFLUENT, EFFLUENT DECANT, AND SLUDGE WASTE PIPING HAS BEEN SHOWN FOR REFERENCE ONLY AND SHALL BE SUPPLIED AND INSTALLED BY OTHERS.
6. ALL WALKWAYS / PLATFORMS HAVE BEEN SHOWN FOR REFERENCE ONLY AND ARE TO BE SUPPLIED AND INSTALLED BY OTHERS.
7. ANY VALVE VAULTS, ELECTRICAL JUNCTION BOXES, OR PIPING ILLUSTRATED ON THESE DRAWINGS ARE SHOWN FOR REFERENCE ONLY. THESE ITEMS ARE NORMALLY SUPPLIED AND INSTALLED BY OTHERS, UNLESS SPECIFIED OTHERWISE.
8. VALVE AND LINE SIZES ARE TO BE VERIFIED BY THE ENGINEER BASED ON ACTUAL LINE LOSSES.
9. OVERFLOWS ARE RECOMMENDED WITHIN ALL BASINS.
10. IF FREEZING IS A CONCERN, ANY NECESSARY PROTECTION, INCLUDING BUT NOT LIMITED TO HEAT TRACING AND INSULATION OF PUMPS, VALVES, AND PIPING AS WELL AS PROTECTION AGAINST INTERNAL TANK EQUIPMENT FREEZING SHALL BE SUPPLIED AND INSTALLED BY THE INSTALLING CONTRACTOR.
11. SBR CONTROL PANEL (ITEM #19) TO BE LOCATED AND INSTALLED BY OTHERS.

GENERAL PROJECT NOTES

A. VERIFICATION OF ALL DIMENSIONS GIVEN AND WATER LEVELS DETAILED ON THESE DRAWINGS TO ENSURE ACCURATE FABRICATION OF EQUIPMENT IS BY OTHERS.

B. UNLESS IDENTIFIED ON A DRAWING BILL OF MATERIAL, ALL PIPING, SUPPORTS, GASKETS, HARDWARE, ELECTRICAL WIRING AND SUPPLY POWER BEYOND AQUA-AEROBIC SYSTEMS, INC. EQUIPMENT TERMINATIONS ILLUSTRATED ON THESE DRAWINGS IS SHOWN FOR REFERENCE ONLY. SIZING, LOCATION AND SUPPLY ARE TO BE DETERMINED BY OTHERS.

C. SOME GASKETS SUPPLIED WITH THIS EQUIPMENT MAY BE MADE OF STYRENE BUTADIENE / "RED RUBBER", URETHANE, OR EPDM. VERIFICATION THAT THESE MATERIALS ARE COMPATIBLE WITH THE CHEMICALS THAT WILL BE PRESENT IN THIS APPLICATION ARE BY OTHERS.

D. MOUNTING HARDWARE FOR THE CONTROL PANEL WILL BE PROVIDED BY OTHERS. FIELD INSTALLATION OF FLOOR AND/OR WALL MOUNTED CONTROL PANELS IS THE RESPONSIBILITY OF OTHERS.

E. DIMENSIONS ON THESE DRAWINGS ARE FINAL UNLESS CHANGED IN WRITING BY OTHERS. SPECIFIC NOTATION MUST BE SHOWN IN RED INK TO CHANGE ANY DIMENSIONS, COMPONENT PARTS, OR EQUIPMENT DETAILS. UNLESS CHANGES ARE SHOWN HEREON, AQUA-AEROBIC SYSTEMS, INC. SHALL NOT BE RESPONSIBLE FOR COSTS REQUIRED TO MODIFY OR CHANGE ITEMS AS A RESULT OF UNMARKED CHANGES OR CHANGES AFTER REVIEW. MANUFACTURED PRODUCTS WILL BE SHIPPED AS DIMENSIONED AND DESCRIBED WITHIN THIS MANUAL.

F. AQUA-AEROBIC SYSTEMS, INC. DOES NOT ASSUME THE RESPONSIBILITY OF COORDINATING THE CIVIL, MECHANICAL, OR DESIGN ENGINEERING THAT MAY BE REQUIRED.

G. IF FREEZING IS A CONCERN, ANY NECESSARY PROTECTION, INCLUDING BUT NOT LIMITED TO HEAT TRACING AND INSULATION OF PUMPS, VALVES, AND PIPING AS WELL AS PROTECTION AGAINST INTERNAL TANK EQUIPMENT FREEZING SHALL BE SUPPLIED AND INSTALLED BY OTHERS.

H. REFER TO SECTION 1 OF THE OPERATION & MAINTENANCE MANUAL FOR A COMPLETE LIST OF RECOMMENDED SPARE PARTS OR THOSE PROVIDED FOR THIS PROJECT.

I. NO SPECIAL TOOLS ARE REQUIRED FOR NORMAL INSTALLATION OR ROUTINE MAINTENANCE OF EQUIPMENT TO BE FURNISHED.

J. COMPLETE FACTORY ASSEMBLY AND INSTALLATION DRAWINGS WITH PARTS LIST WILL BE PROVIDED WITHIN EACH OPERATION & MAINTENANCE MANUAL. OPERATION & MAINTENANCE MANUALS WILL BE MAILED PRIOR TO SHIPMENT OF EQUIPMENT. REVIEW ALL FACTORY ASSEMBLY AND INSTALLATION DRAWINGS PRIOR TO COMMENCING FINAL ASSEMBLY.

K. WHEN RECEIVING EQUIPMENT AND CRATES, THE SHIPMENT SHOULD BE COMPLETELY CHECKED TO VERIFY THAT NO TRANSIT DAMAGE HAS OCCURRED. ALL EQUIPMENT AND ACCESSORIES (IF ANY) MUST BE VERIFIED AGAINST THE PACKING LIST AND BILL OF LADING TO ASSURE PROPER CONTENTS.

L. UNLESS OTHERWISE SPECIFIED, ALL WALKWAYS, PLATFORMS, STAIRWAYS, HANDRAILING, ETC. HAVE BEEN SHOWN FOR REFERENCE ONLY AND ARE TO BE SUPPLIED AND INSTALLED BY OTHERS. AQUA-AEROBIC SYSTEMS, INC. IS NOT RESPONSIBLE FOR VERIFYING CLEARANCE WITH EQUIPMENT SUPPLIED BY OTHERS.

M. ADHESIVE ANCHORS ARE PROVIDED FOR ANCHORING EQUIPMENT TO THE BASIN FLOOR AND/OR WALLS. ANCHOR INSTALLATION AND FIELD ATTACHMENT OF EQUIPMENT TO THE BASIN IS THE RESPONSIBILITY OF OTHERS.

N. ANTI-SEIZE LUBRICANT IS REQUIRED ON ALL STAINLESS STEEL FASTENERS.

SBR PROJECT NOTES

A. AN OPENING IN THE HANDRAILING MUST BE PROVIDED FOR CLEARANCE OF THE DIFFUSER TRACK BEAM. ANY OBSTRUCTION SUCH AS LIGHT POLES, DISCONNECT BOXES, ETC. MUST BE OUTSIDE OF THE DIFFUSER RACK PIVOT RADIUS.

B. MOORING / SUPPORT POSTS PROVIDED BY AQUA-AEROBIC SYSTEMS, INC. MUST BE FILLED WITH CONCRETE BY OTHERS.

C. IF BASINS WITH SLOPED FLOORS ARE UTILIZED, SUPPLY OF MINIMUM 4000 PSI TYPE GROUT PADS BENEATH THE PROPOSED EQUIPMENT (SUCH AS BASE PLATES, BRACKETS, MOORING POSTS, DIFFUSER SUPPORTS / RACKS, ETC.) ARE REQUIRED TO PROVIDE FOR A LEVEL INSTALLATION ELEVATION FOR THE EQUIPMENT. GROUT PADS ARE TO BE PROVIDED BY OTHERS.

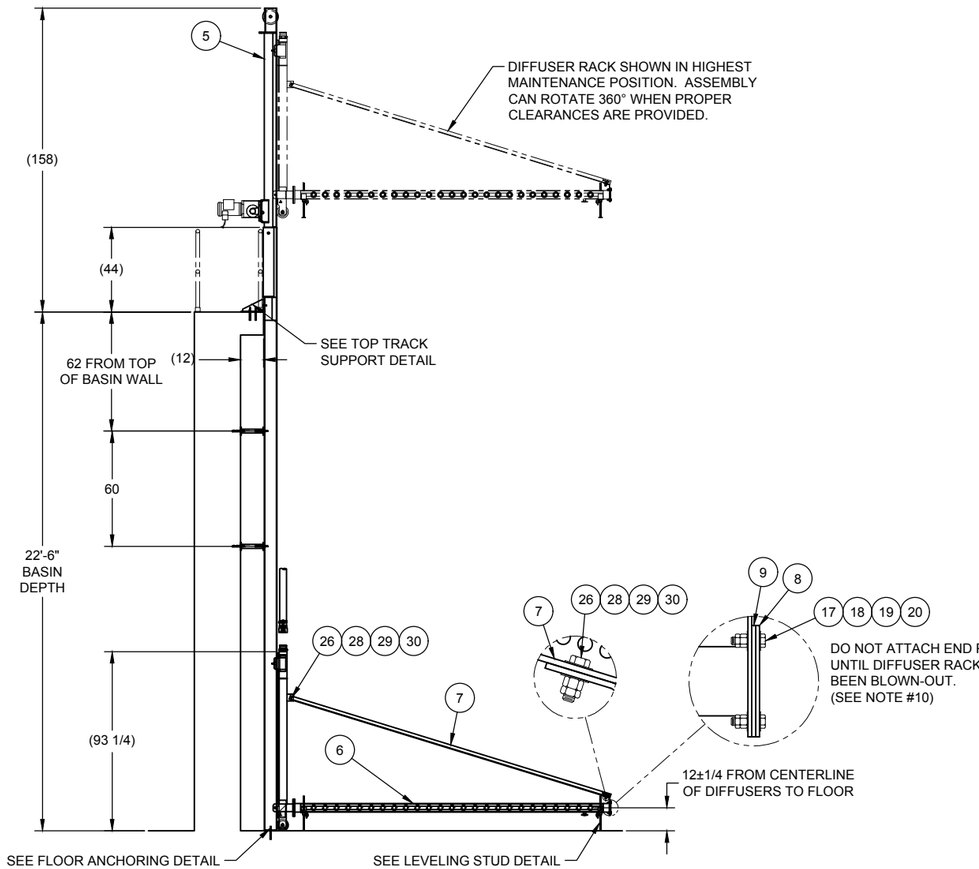
RETRIEVABLE DIFFUSER COMPONENTS

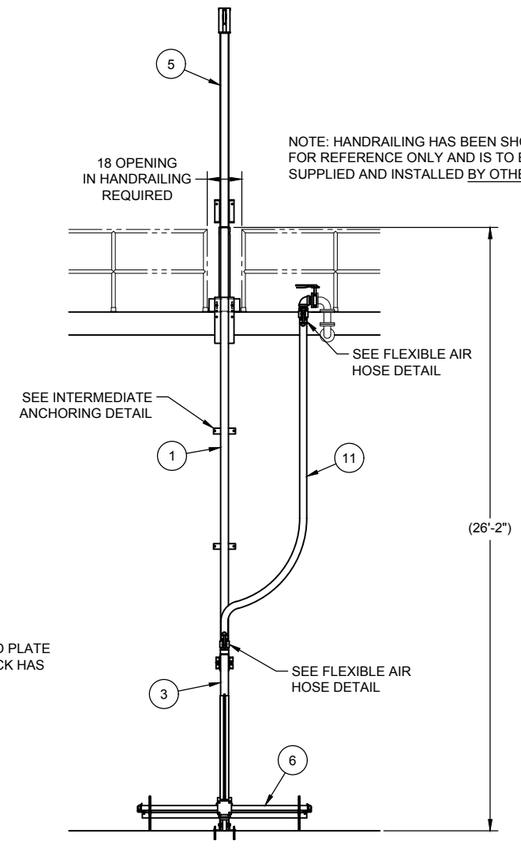
NOTE: THE RETRIEVABLE DIFFUSER INSTALLATION IS SUPPLIED AS FOUR (4) MAJOR COMPONENTS FOR FIELD ASSEMBLY/INSTALLATION BY OTHERS. SMALL COMPONENTS SUCH AS THE DIFFUSERS, LEVELING STUDS, BRACE ANGLES, AND MISCELLANEOUS HARDWARE ARE SHIPPED IN BOXES.

1. LIFTING MECHANISM ASSEMBLY 280 LBS.
2. VERTICAL AIR COLUMN ASSEMBLY 130 LBS.
3. VERTICAL SUPPORT BEAM WELDMENT 408 LBS.
4. DIFFUSER RACK ASSEMBLY 418 LBS.
5. MISCELLANEOUS ITEMS 140 LBS.
   (BRACE ANGLES AND MISCELLANEOUS HARDWARE)

RETRIEVABLE FINE BUBBLE DIFFUSER INSTALLATION NOTES:

1. PLEASE REVIEW ALL INSTALLATION AND ASSEMBLY INSTRUCTIONS IN THE OPERATION AND MAINTENANCE MANUAL PRIOR TO INSTALLING THE EQUIPMENT.
2. IT IS RECOMMENDED THAT ALL THREADED FASTENERS USED BE STAINLESS STEEL AND SECURED WITH A FULL NUT AND A JAM NUT.
3. ANTI-SEIZE LUBRICANT IS RECOMMENDED ON ALL STAINLESS STEEL FASTENERS.
4. SET EACH VERTICAL SUPPORT BEAM INTO POSITION AND ATTACH TO BASIN WALL. THE VERTICAL SUPPORT BEAM MUST BE HELD VERTICAL AND PLUMB ± 1/4". ASSEMBLE THE LIFTING CABLE FROM THE VERTICAL AIR COLUMN OVER THE TOP SHEAVE OF THE LIFTING MECHANISM ASSEMBLY, THROUGH THE CABLE GUIDE, AND ATTACH TO DRUM OF WINCH. WITH A CRANE, LIFT AND SLIDE THE VERTICAL AIR COLUMN BEHIND THE FRONT FLANGE ON THE TRACK BEAM. CAUTION MUST BE OBSERVED TO PREVENT KINKING THE LIFTING CABLE. SLIDE THE VERTICAL AIR COLUMN DOWN THE TRACK BEAM UNTIL THE GUIDE WHEEL RESTS ON THE BASIN FLOOR. COIL THE REMAINING CABLE TOGETHER AND ATTACH TO THE WINCH BRACKET ON THE LIFTING MECHANISM ASSEMBLY.
5. ASSEMBLE THE DIFFUSER RACK ON THE BASIN FLOOR PER THE DIFFUSER RACK INSTALLATION DRAWING (ITEM #6) PROVIDED IN THE OPERATION AND MAINTENANCE MANUAL. ATTACH THE DIFFUSER RACK TO THE VERTICAL AIR COLUMN USING GASKETS, HARDWARE, AND BRACE ANGLES PROVIDED.
6. ALL DIFFUSER RACKS IN THE BASIN MUST BE HELD LEVEL TO EACH OTHER WITHIN ± 1/4" TO MAINTAIN UNIFORM AIR DISTRIBUTION.
7. ALL PIPING AND HARDWARE BEYOND THE ISOLATION VALVE (ITEM #10) IS SHOWN FOR REFERENCE ONLY AND IS TO SUPPLIED AND INSTALLED BY OTHERS.
8. REFER TO THE GENERAL LIST FOR DIFFUSER RACK LOCATIONS.
9. THE FINE BUBBLE DIFFUSER BLOW-OFF TUBE INSTALLATION IS LOCATED ON THE GENERAL LIST DRAWING. INSTALL IT AT THE LOCATION INDICATED ON THE GENERAL LIST, WHICH WILL BE ON THE RACK FARTHEST FROM THE DECANTER.
10. THE ENTIRE BASIN AIR MANIFOLD AND DIFFUSER RACK MUST HAVE ALL DEBRIS BLOWN OUT OF THE LINES PRIOR TO ATTACHING THE DIFFUSER HOSE ASSEMBLY. CAUTION MUST BE OBSERVED TO PREVENT DEBRIS FROM ENTERING INTO THE DIFFUSER RACK AND DIFFUSER TUBES. ONCE THE MANIFOLD PIPING HAS BEEN BLOWN OUT / CLEANED, ATTACH THE AIR HOSE TO THE VERTICAL AIR COLUMN AND REPEAT THIS OPERATION TO BLOW-OUT THE REMAINING DIFFUSER BANKS. ONCE COMPLETED THROUGHOUT THE ENTIRE BASIN, ATTACH THE END PLATE (ITEM #8) AND GASKET (ITEM #9) TO THE END OF THE DIFFUSER RACK. THIS OPERATION MUST BE DOCUMENTED AND / OR WITNESSED PRIOR TO START-UP OR LEAK TESTING OF THE DIFFUSER RACKS.





NOTE: ITEM #2 IS A SURPLUS SPARE, IF NEEDED, FOR CONSTRUCTION PURPOSES.

NOTE: THE RETRIEVABLE DIFFUSER INSTALLATION IS SUPPLIED AS FOUR (4) MAJOR COMPONENTS FOR FIELD ASSEMBLY/INSTALLATION BY OTHERS. SMALL COMPONENTS SUCH AS THE DIFFUSERS, LEVELING STUDS, BRACE ANGLES, AND MISCELLANEOUS HARDWARE ARE SHIPPED IN BOXES.

(ONLY VERTICAL SUPPORT BEAM SUPPLIED AT THIS TIME)

1. VERTICAL SUPPORT BEAM WELDMENT 408 LBS.

RETRIEVABLE FINE BUBBLE DIFFUSER INSTALLATION NOTES:

1. PLEASE REVIEW ALL INSTALLATION AND ASSEMBLY INSTRUCTIONS IN THE OPERATION AND MAINTENANCE MANUAL PRIOR TO INSTALLING THE EQUIPMENT.
2. IT IS RECOMMENDED THAT ALL THREADED FASTENERS USED BE STAINLESS STEEL AND SECURED WITH A FULL NUT AND A JAM NUT.
3. ANTI-SEIZE LUBRICANT IS RECOMMENDED ON ALL STAINLESS STEEL FASTENERS.
4. SET EACH VERTICAL SUPPORT BEAM INTO POSITION AND ATTACH TO BASIN WALL. THE VERTICAL SUPPORT BEAM MUST BE HELD VERTICAL AND PLUMB ± 1/4".
5. ALL PIPING AND HARDWARE BEYOND THE ISOLATION VALVE (ITEM #10) IS SHOWN FOR REFERENCE ONLY AND IS TO SUPPLIED AND INSTALLED BY OTHERS.
6. REFER TO THE GENERAL LIST FOR DIFFUSER RACK LOCATIONS.
7. THE FINE BUBBLE DIFFUSER BLOW-OFF TUBE INSTALLATION IS LOCATED ON THE GENERAL LIST DRAWING. INSTALL IT AT THE LOCATION INDICATED ON THE GENERAL LIST, WHICH WILL BE ON THE RACK FARTHEST FROM THE DECANTER.

NOTE: EMPTY SPACES IN THE BILL OF MATERIAL WILL BE FILLED WHEN THE DIFFUSER INSTALLATION IS COMPLETE.

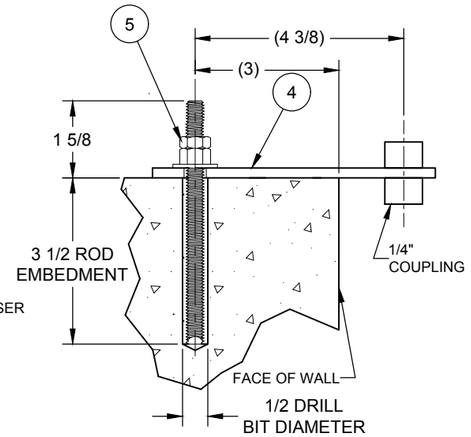
AIR TUBE TIE DOWN DETAIL



3/8" ADHESIVE ANCHOR DETAIL

REFER TO INSTALLATION INSTRUCTIONS DETAILED ON ADHESIVE ANCHOR KIT DRAWING

FIELD ASSEMBLE THE TOP SUPPORT BRACKET OVER THE ANCHOR ROD AND THEN INSTALL THE WASHER, FULL NUT AND JAM NUT AS SHOWN.
(TYPICAL INSTALLATION FOR ALL ADHESIVE TYPE ANCHORS)

INSTALLATION NOTES:

1. FIELD DRILL AND TAP A 1/4"-18 NPT PIPE THREAD, INTO THE TOP CENTERLINE OF 3" BRANCH AIR LINE. TAP MUST BE UPSTREAM OF ISOLATION VALVE AS DETAILED. REMOVE SHAVINGS.
2. SEAL THREADS OF MALE ELBOW AND THREAD INTO TAP, POSITIONING ELBOW FOR EASY INSTALLATION OF 1/4" AIR LINE. INSTALL AIR LINE ALONG TOP OF BASIN WALL AND OVER TO SIDE OF THE VERTICAL SUPPORT BEAM.
3. FIELD ANCHOR TOP SUPPORT BRACKET AS DETAILED. SEAL THREADS OF 90° MALE ELBOW AND INSTALL WITHIN COUPLING. CUT TUBING TO LENGTH REQUIRED AND SECURE TO MALE ELBOW.
4. FIELD ATTACH BOTTOM BRACKET ONTO THE 1/2" ANCHOR BOLT OF THE VERTICAL SUPPORT BEAM MOUNTING PLATE AS DETAILED. TIGHTEN AND SECURE BOTH 1/2" FULL NUT AND JAM NUT SO MOUNTING HOLE OF BOTTOM BRACKET IS LEVEL AND ALIGNED WITH COUPLING OF TOP SUPPORT. SLIP 1/4" BLOW-OFF PIPE THROUGH HOLE OF BOTTOM BRACKET AND THREAD INTO BOTTOM OF SUPPORT BRACKET COUPLING .
5. MARK A CUTTING LINE ON THE 1/4" PIPE AS DIMENSIONED (3" BELOW MIN. WATER DEPTH) THEN DIS-ASSEMBLE AND CUT OFF EXCESS PIPE AS MARKED. SLIP BLOW-OFF PIPE BACK THROUGH HOLE OF BOTTOM BRACKET AND RE-ASSEMBLE INTO TOP SUPPORT BRACKET .

Electrical Department

PROJECT:	Orleans, MA Downtown Area WWTF and Effluent Disposal	PROJECT NUMBER:	60587515
CLIENT CONTRACT:	2019-01	DATE:	09/29/2021
SUBMITTAL NO:	304 (16260-001-4)	REVIEWER:	A. Abraham
SUBJECT:	Variable Frequency Drives	SPECIFICATION:	16260

(1)-No Exception Taken (2)-Make Corrections Noted (3)-Amend and Resubmit (4)-Rejected-See Remarks (5)-For Information Only (6)-Not Required for Review

Engineer's review is for general conformance with the design concept and Contract Documents. Markings or comments shall not be construed as relieving the Contractor from compliance with the Project Drawings and Specifications nor departure there from. The Contractor remains responsible for details and accuracy, for confirming and correlating all quantities and dimensions, for selecting fabrication processes, for techniques of assembly, and for performing his work in a safe manner.

ITEM NUMBER	REFERENCE	CODE	COMMENT
1.	MIX.BLW-4 Remote ESTOPs	1	~~Provide terminals within the VFD enclosure to land and extend the remote ESTOP auxiliary contact to the SBR-CP. Show ESTOP terminations on drawing R1USE01851-0001. (Typical for all VFDs with remote ESTOPs).~~ Response: Comply AECOM Response: No exceptions taken.
2.	MIX.BLW-4	1	~~It's noted the main circuit breaker on the VFD is rated 100A. The upstream circuit breaker feeding the VFD is rated 90A. Can the VFD main circuit breaker be reduced to 90A to better coordinate with the upstream breaker? Considering the drive input amps are 61.7A, it appears a 90A circuit breaker would be acceptable.~~ Response: Comply. Breaker changed to 90A. AECOM Response: No exceptions taken.
3.	MIX.BLW-1, -2	1	~~It's noted that the main circuit breaker on the VFD is rated 125A. The upstream circuit breaker feeding the VFD is rated 110A. Can the VFD main circuit breaker be reduced to 110A to better coordinate with the upstream breaker? Considering the drive input amps are 74.1A, it appears a 110A circuit breaker would be acceptable.~~ Response: Comply. Breaker changed to 110A. AECOM Response: No exceptions taken.
4.	Heavy Duty	1	~~It's noted the VFDs are indicated as "Heavy Duty". Confirm "Heavy Duty" is rated for constant torque applications.~~ Response: Confirmed. AECOM Response: No exceptions taken.
5.	Main Circuit Breakers	1	~~Provide TCC plots for each main circuit breaker.~~ Response: Trip curves provided for the new 90A and 110A breaker.

ITEM NUMBER	REFERENCE	CODE	COMMENT
			AECOM Response: No exceptions taken.
6.	Harmonic Analysis	2	(04/29/2021): ~~The harmonic analysis is based on a 1500kVA transformer with an unlimited utility fault. Obtain information on the actual transformer installed (size/impedance) along with the available short circuit fault current from the utility and revise the study.~~ ~~Response: VFD's will be coordinated when the study is complete.~~ ~~AECOM Response: Obtain available short circuit fault current from the utility. Revise study as indicated.~~ ~~Response: Coordination study submitted 7/13/21~~ ~~AECOM Response (07/29/2021): It is noted that this comment response incorrectly references the electrical system study submitted under Specification 16359, and not the Harmonic Analysis submitted under this submittal 16260. Unclear why the electrical system study is being referenced under this comment response.~~ ~~These are (2) different required documents with different specifications. It is noted that no changes have been made to the Harmonic Analysis included in this submittal. Provide Harmonic Analysis report as specified and as noted in comment dated April 2021.~~ Response: The harmonic analysis has been provided herein. AECOM Response: It is noted that the harmonic analysis has been submitted. Please see comment (9) included below regarding study.
7.	Harmonic Analysis	2	(04/29/2021): ~~Provide a harmonic analysis for the electrical system when powered from the standby generator as specified in section 16260-2.02-D.~~ ~~Response: VFD's will be coordinated when the study is complete.~~ ~~AECOM Response (06/14/2021): It is noted that only the utility power scenario has been provided in the harmonic analysis. Provide study that includes system powered from the standby generator as indicated.~~ ~~Response: Coordination study submitted 7/13/21~~ ~~AECOM Response (07/29/2021): It is noted that this comment response incorrectly references the electrical system study submitted under Specification 16359, and not the Harmonic Analysis submitted under this submittal 16260. Unclear why the electrical system study is being referenced under this comment response.~~

ITEM NUMBER	REFERENCE	CODE	COMMENT
			~~These are (2) different required documents with different specifications. It is noted that no changes have been made to the Harmonic Analysis included in this submittal. Provide Harmonic Analysis report as specified and as noted in comment dated April 2021.~~ Response: The harmonic analysis has been provided herein. AECOM Response: It is noted that the harmonic analysis has been submitted. Please see comment (9) included below regarding study.
8.	Harmonic Analysis	2	(04/29/2021): ~~Confirm the harmonic study is performed in accordance with 16260, Attachment A.~~ ~~Response: VFD's will be coordinated when the study is complete.~~ ~~AECOM Response (06/14/2021): Confirm the harmonic study is performed in accordance with 16260, Attachment A.~~ ~~Response: Coordination study submitted 7/13/21~~ ~~AECOM Response (07/29/2021): It is noted that this comment response incorrectly references the electrical system study submitted under Specification 16359, and not the Harmonic Analysis submitted under this submittal 16260. Unclear why the electrical system study is being referenced under this comment response.~~ Response: The harmonic analysis has been provided herein. AECOM Response: It is noted that the harmonic analysis has been submitted. Please see comment (9) included below regarding study.
9.		2	Submitted harmonic analysis includes HP's that are not consistent with the HP's indicated for VFD driven loads in the submittal. In example, submitted harmonic analysis single line includes a 30 HP motor for SBR.BLW-1,2,3 while the submittal bill of materials indicates qty.(3) 40 HP blower VFD's are being supplied. As a result, the SBR.BLW-1/2/3 are indicated in the study as having 18-pulse VFD's. However, these are 40 HP motors provided with 6-pulse VFD's per the submittal. Similarly, the MIX.BLW VFD types are not accurate. See attached redlines/comments to some of the submittal references that need to be updated. Please revise the harmonic analysis to reflect the HP/FLA for VFD's included in the submittal including type (18-pulse versus 6-pulse) as well as HP ratings for associated motors.
10.		3	Confirm that under Case 1 – Normal Utility power the total harmonic current distortion does not exceed the IEEE 519 limit of 8% when using correct VFD/motor HP's and VFD types (6-pulse versus 18-pulse) as noted. It is

ITEM NUMBER	REFERENCE	CODE	COMMENT
			noted that current HP's for all SBR and Mixing Blower VFD's are not accurate and the submitted total harmonic current distortion is 7.42%.
11.	10 E-005	3	Confirm the 100A harmonic filters per Contract single lines and submittal 16920-001-2 are reflected in the harmonic analysis. It is noted that there are references to 42 amps AHF included in the submittal.

ITEM	QTY	DESCRIPTION

30 **3** **PF753 40HP HD (6 Pulse) NEMA 12** **SBR.BLW-1,-2,-3 VFD**

One NEMA 12 Rittal Enclosure, approximately 87"H X 39"W X 24"D, with the following features:

- Qty. 1- PowerFlex 753 AC Drive, with Embedded I/O, Air Cooled, DC Input with Precharge, Open Type, 77 Amps, 50HP HD, 480 VAC, 3 PH, Frame 5, Filtered, CM Jumper Installed, DB Transistor
- Qty. 1- PF750-115V I/O Module-2AI,2AO,6DI,2RO
- Qty. 1- Door-Mounted Full Function HIM
- Qty. 1- Input Circuit Breaker Disconnect w/ Thru Door Operator, 65 KAIC (Input Thermal Magnetic breaker, 65KAIC, note does not necessarily reflect panel SCCR rating)
- * Qty. 1- Input Line Reactor, 5%
- Qty. 1- Control Power Transformer, Fused Primary/Secondary
- Qty. 1- Door-Mounted Hand/Off/Auto Selector Switch (800H Style)
- Qty. 1- In AUTO " contact on HOA
- Qty. 1- Elapsed Time Meter, 115V Control
- Qty. 1- Elapsed Time Meter, 115V Control
- Qty. 1- Run Relay
- Qty. 1- Fault Relay
- Qty. 1- Door-Mounted Run Pilot Light (Green 800H LED style)
- Qty. 1- Door-Mounted OFF Pilot Light (Red 800H LED style)
- Qty. 1- Door-Mounted Fault Pilot Light (Amber 800H LED style)
- Qty. 1- Motor overtemp pilot light , relay with contacts and reset •

Qty. 1- High pressure pilot light, relay with contact and reset

- Enclosure Fan & Filter Kit
- Qty. 1- Output dV/dt Filter

31 **2** **PF753 60HP HD (18 Pulse) NEMA 12** **MIX.BLW-1,-2 VFD**

One NEMA 12 Rittal Enclosure, approximately 87"H X 39"W X 24"D, with the following features:

- Qty. 1- PowerFlex 753 AC Drive, with Embedded I/O, Air Cooled, DC Input with Precharge, Open Type, 77 Amps, 50HP HD, 480 VAC, 3 PH, Frame 5, Filtered, CM Jumper Installed, DB Transistor
- Qty. 1- PF750-115V I/O Module-2AI,2AO,6DI,2RO
- Qty. 1- Door-Mounted Full Function HIM
- Qty. 1- Input Circuit Breaker Disconnect w/ Thru Door Operator, 65 KAIC (Input Thermal Magnetic breaker, 65KAIC, note does not necessarily reflect panel SCCR rating)
- Qty. 1- 18-Pulse Auto Transformer
- Qty. 1- 18-Pulse Bridge Assembly, Parallel Diode
- Qty. 1- Control Power Transformer, Fused Primary/Secondary
- Qty. 1- Door-Mounted Hand/Off/Auto Selector Switch (800H Style)
- Qty. 1- In AUTO " contact on HOA
- Qty. 1- Elapsed Time Meter, 115V Control
- Qty. 1- Run Relay
- Qty. 1- Fault Relay
- Qty. 1- Door-Mounted Run Pilot Light (Green 800H LED style)
- Qty. 1- Door-Mounted OFF Pilot Light (Red 800H LED style)
- Qty. 1- Door-Mounted Fault Pilot Light (Amber 800H LED style)
- Qty. 1- Motor overtemp pilot light , relay with contacts and reset
- Qty. 1- High pressure pilot light, relay with contact and reset
- Enclosure Fan & Filter Kit
- Qty. 1- Output dV/dt Filter

32 **1** **PF753 40HP HD (6 Pulse) NEMA 12** **MIX.BLW-3 VFD**

One NEMA 12 Enclosure, approximately 59"H x 37"W x 16"D, with the following features:

- Qty. 1- PowerFlex 753 Drive w/ Embedded I/O, 480 VAC, 3 Phase, 52 Amps, 30 HP Heavy Duty, 6 Pulse, w/DC Terminals, With Filtering/Jumper Installed, With Internal Transistor, w/o Internal Resistor
- Qty. 1- PF750-115V I/O Module-2AI,2AO,6DI,2RO
- Qty. 1- Door-Mounted Full Function HIM
- Qty. 1- Input Circuit Breaker Disconnect w/ Thru Door Operator, 65 KAIC (Input Thermal Magnetic breaker, 65KAIC, note does not necessarily reflect panel SCCR rating)
- Qty. 1- Input Line Reactor, 5%
- Qty. 1- Control Power Transformer, Fused Primary/Secondary
- Qty. 1- Door-Mounted Hand/Off/Auto Selector Switch (800H style)
- Qty. 1- In AUTO " contact on HOA
- Qty. 1- Elapsed Time Meter, 115V Control
- Qty. 1- Run Relay
- Qty. 1- Fault Relay
- Qty. 1- Door-Mounted Run Pilot Light (Green 800H LED style)
- Qty. 1- Door-Mounted OFF Pilot Light (Red 800H LED style)
- Qty. 1- Door-Mounted Fault Pilot Light (Amber 800H LED style)
- Qty. 1- Motor overtemp pilot light , relay with contacts and reset
- Qty. 1- High pressure pilot light, relay with contact and reset
- Enclosure Fan & Filter Kit
- Qty. 1- Output dV/dt Filter

33 **1** **PF753 50HP HD (18 Pulse) NEMA 12** **MIX.BLW-4 VFD**

One NEMA 12 Enclosure, approximately 59"H x 37"W x 16"D, with the following features:

- Qty. 1- PowerFlex 753 Drive w/ Embedded I/O, 480 VAC, 3 Phase, 65 Amps, 40 HP Heavy Duty, 6 Pulse, w/DC Terminals, With Filtering/Jumper Installed, With Internal Transistor, w/o Internal Resistor
- Qty. 1- PF750-115V I/O Module-2AI,2AO,6DI,2RO
- Qty. 1- Door-Mounted Full Function HIM
- Qty. 1- Input Circuit Breaker Disconnect w/ Thru Door Operator, 65 KAIC (Input Thermal Magnetic breaker, 65KAIC, note does not necessarily reflect panel SCCR rating)

* Qty. 1- 18-Pulse Auto Transformer
* Qty. 1- 18-Pulse Bridge Assembly, Parallel Diode

- Qty. 1- Control Power Transformer, Fused Primary/Secondary
- Qty. 1- Door-Mounted Hand/Off/Auto Selector Switch (800H style)
- Qty. 1- In AUTO " contact on HOA
- Qty. 1- Elapsed Time Meter, 115V Control
- Qty. 1- Run Relay
- Qty. 1- Fault Relay
- Qty. 1- Door-Mounted Run Pilot Light (Green 800H LED style)
- Qty. 1- Door-Mounted OFF Pilot Light (Red 800H LED style)
- Qty. 1- Door-Mounted Fault Pilot Light (Amber 800H LED style)
- Qty. 1- Motor overtemp pilot light , relay with contacts and reset •

Qty. 1- High pressure pilot light, relay with contact and reset

- Enclosure Fan & Filter Kit
- Qty. 1- Output dV/dt Filter

   NO - INDICATES NORMALLY OPEN CONTACTS
   NC - INDICATES NORMALLY CLOSED CONTACTS

   OFF-PAGE CROSS REFERENCING - NUMBERS ADJACENT TO SOURCE AND DESTINATION SYMBOLS INDICATE SHEET AND LINE NUMBERS.
   FROM 1-24 ▼ TO 1-24 ▲ 1-24 ← -INDICATES LINE NO. 24. ← -INDICATES SHEET NO. 1.

REV DATE: 5-18-2017

8. WIRE # GENERATION
   11242
   - 1 - INDICATES WIRE NUMBER.
   - 2 - INDICATES SEQUENCE (1,2,, 3 . . . etc.).
   - 4 - INDICATES LINE NUMBER 24.
   - 11 - INDICATES SHEET NUMBER 11.

   INTERNAL WIRE NUMBERS MAY BE 'FIXED' WITH A LINE AND SEQUENCE, BUT MAY SCHEMATICALLY SHOW A PREFIX.
9. TYPICAL DUAL VOLTAGE MOTOR FIELD CONNECTIONS ARE SHOWN BELOW. CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.

10. DC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CCW ROTATION FACING COMMUTATOR END:
    A1 IS POSITIVE
    F1 IS POSITIVE
    FOR CW ROTATION FACING COMMUTATOR END:
    A2 IS POSITIVE
    F1 IS POSITIVE
    FOR CCW ROTATION WITH SERIES FIELD:

    FOR CW ROTATION WITH SERIES FIELD:

    FOR CCW ROTATION WITHOUT SERIES FIELD:

    FOR CW ROTATION WITHOUT SERIES FIELD:

11. AC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T2 (EUROPEAN MARKING V1)
    W2 TO T3 (EUROPEAN MARKING W1)
    FOR CCW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T3 (EUROPEAN MARKING W1)
    W2 TO T2 (EUROPEAN MARKING V1)

    NOTE: NOT ALL AC MOTOR SUPPLIERS COMPLY WITH THE ABOVE CONVENTIONS.

COMBINATION MOTOR CONTROLLER WITH MOTOR CIRCUIT PROTECTOR

DANGER: To maintain overcurrent, short circuit and ground fault protection, the manufacturer's instructions for selecting current elements and setting the instantaneous-trip circuit breaker must be followed.

AVERTISSEMENTPour assurer une protection continue contre les surintensités, les court-circuits et une mise à la terre accidentelle, il est essentiel de choisir les ?el?ements thermiques et de régler le disjoncteur à déclenchement instantané selon la notice technique du fabricant.

Determine motor full load current and motor design type identifier from motor nameplate.

For Design B, C an D motors adjust motor circuit protector to operate at a current setting between ten (10) and thirteen (13) times the full load current. For Design E and N motors adjust motor circuit protector to operate at a current setting between thirteen (13) and seventeen (17) times the full load current.

NOTE: Motor circuit protector is set at minimum current setting when shipped from factory.

DANGER: Tripping of the instantaneous-trip circuit breaker is an indication that a fault current has been interrupted. Current carrying components of the magnetic motor controller should be examined and replaced if damaged, to provide continued protection against a risk of fire or electric shock. If burnout of the current element of an overload relay occurs, the complete overload relay must be replaced. (Refer to NEMA Standards Publication No. ICS 2.2 titled: 'Maintenance of Motor Controllers After a Fault Condition' Ñ also published as NEMA Standard Publication No. ICS 2, Part ICS 2-302.)

AVERTISSEMENTL'ouverture du disjoncteur à déclenchement instantané indique qu'un courant de défaut a été interrompu. Les composants conducteurs de la commande magnétique du moteur doivent être inspectés et remplacés s'ils ont subi des dommages, afin d'assurer une protection continue contre le risque d'incendie et de choc électrique. En cas de défaillance de l'élément thermique d'un relais de surcharge, celui-ci doit être remplacé dans sa totalité.

REV DATE: 04-19-2019

FIELD WIRING INSIDE ROCKWELL ENCLOSURE:

1. CONNECTIONS WILL BE ONLY TO TERMINALS PROVIDED.
2. WIRE LENGTH FROM ENTRY POINT TO TERMINAL BOARD TO BE AS SHORT AS POSSIBLE.
3. SIGNAL WIRE MUST NOT BE LACED OR RUN WITH NON-SIGNAL WIRE AFTER ENTRY INTO THE ENCLOSURE.
4. INCOMING WIRE MUST NOT BE ROUTED IN WIRE CHANNELS OR THROUGH AREAS OF POWER AND CONTROL COMPONENTS AND WIRING.
5. USE LASHING BARS WHEN PROVIDED FOR CUSTOMER CONVENIENCE.

FIELD INSTALLATION GROUNDING GUIDELINES

1. FOR DRIVES INSTALLATION, REFER TO 'WIRING AND 'GROUNDING GUIDELINES', PUBLICATION DRIVES-IN001
2. FOR POWERFLEX SAR INSTALLATION, REFER TO 'POWERFLEX DC 'STANDALONE REGULATOR AND GATE AMPLIFIER USER MANUAL', PUBLICATION 23P-UM001_-EN-P
3. FOR PLC AND I/O INSTALLATION, REFER TO 'INDUSTRIAL AUTOMATION WIRING AND GROUNDING GUIDELINES', PUBLICATION 1770-4.1
4. NEC ARTICLE 250, GROUNDING AND BONDING
5. LOCAL CODE REQUIREMENTS

DATE	BY	APPROVAL
		DESIGN REVIEW
		FOR MANUFACTURING
		AS SHIPPED
		AS COMMISSIONED

GENERAL NOTES:

1. STEEL CONDUIT IS RECOMMENDED FOR LEVELS 1 AND 2. FOR AC MOTOR CABLES, SEE NOTE 5.
   ALL CONDUITS CONNECTED TO THE CABINETS SHOULD BE PROPERLY SEALED TO MINIMIZE AIR OR WATER ENTRY INTO THE CABINETS. IF ALUMINUM CONDUIT IS USED.
   A. IT REQUIRES THE SAME MINIMUM SPACING IS USED AS THAT SHOWN FOR CABLE TRAYS.
   OR
   B. INDIVIDUAL STEEL JACKETED (STEEL MESH) CABLES ARE TO BE USED IF THE CONDUIT SPACINGS NEED BE THE SAME AS STEEL CONDUIT.
2. SPACING SHOWN BETWEEN LEVELS IS THE MINIMUM REQUIRED FOR PARALLEL RUNS ≤ 400 FEET. GREATER SPACINGS SHOULD BE USED WHERE POSSIBLE.
3. SHIELDS FOR SHIELDED CABLES MUST BE CONNECTED AT ONE END ONLY. THE OTHER END SHOULD BE CUT BACK AND INSULATED. SHIELDS FOR CABLES FROM A CABINET TO AN EXTERNAL DEVICE MUST BE CONNECTED AT CABINET END. SHIELDS FOR CABLES FROM ONE CABINET TO ANOTHER MUST BE CONNECTED AT THE SOURCE END CABINET. SPLICING OF SHIELDED CABLES, IF ABSOLUTELY NECESSARY, SHOULD BE DONE SUCH THAT SHIELD(S) REMAIN CONTINUOUS AND INSULATED FROM GROUND.
4. NO. 16 AWG WIRE IS THE MINIMUM RECOMMENDED SIZE FOR CONTROL (LEVEL 3). POWER WIRE IS SELECTED BY LOAD, USING 75 DEG C WIRE RATING (LEVELS 4 AND 4S).
5. ARMORED CABLE WITH A PVC OUTER JACKET IS REQUIRED TO PROVIDE THE NECESSARY ELECTRICAL SHIELDING FOR AC MOTOR CABLES CONNECTED TO A PWM INVERTER.
   RECOMMENDATIONS:
   METALLIC ARMOR:
   BEST PERFORMANCE: SHIELDED BELDEN CABLE PER TABLE BELOW, OR CONTINUOUS CORRUGATED ALUMINUM
   ACCEPTABLE PERFORMANCE: INTERLOCKED ALUMINUM, OR INTERLOCKED STEEL
   CONDUCTORS:
   BEST PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 3
   ACCEPTABLE PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 1
   THE CABLE CONNECTOR SELECTED MUST PROVIDE A GOOD ELECTRICAL CONNECTION BETWEEN THE ARMOR AND THE PE GROUND PLANE AT EACH END OF THE CABLE.
   SHIELDED CABLE RECOMMENDATIONS:

BELDEN	29500	#16 AWG
BELDEN	29501	#14 AWG
BELDEN	29502	#12 AWG
BELDEN	29503	#10 AWG
BELDEN	29504	#8 AWG
BELDEN	29505	#6 AWG
BELDEN	29506	#4 AWG
BELDEN	29507	#2 AWG

   DESCRIPTION - 4 CONDUCTOR TINNED COPPER, XLPE INSULATION, 600VRMS MAX, SPECIFICALLY DESIGNED FOR IGBT DRIVE APPLICATIONS. THE SHIELD SHOULD BE CONNECTED TO THE PE GROUND PLANE
6. SEE A-B PUBLICATION AG2.2 FOR ADDITIONAL CONTROLNET COAX CABLE RECOMMENDATIONS.

SPACING NOTES:

1. BOTH OUTGOING & RETURN CURRENT CARRYING CONDUCTORS ARE TO BE PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN CABLE TRAY.
2. ROUTE CABLES OF THE FOLLOWING LEVELS AS INDICATED:
   A. LEVELS MUST BE RUN IN SEPARATE CONDUITS OR TRAYS.
   B. INTERMIXING OF LEVELS IS NOT ALLOWED.
   C. SPECIAL LEVELS 4S AND 3S MAY EXIST THAT REQUIRE SPECIFIC WIRES TO BE GROUPED FOR SPECIAL HANDLING.
   NOTE: FOR LEVELS 3 AND 4, THE AMPACITY RATINGS OF CONDUCTORS IN A BUNDLE MAY NOT EXCEED THE DERATING GUIDELINES OF NEC 310.15(2), AND TABLE 310.15(B)(2)a.
   D. LEVELS 1 AND 2 MAY HAVE THEIR RESPECTIVE CIRCUITS (WITHIN A GIVEN LEVEL) PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN THE SAME CABLE TRAY.
   NOTE: THE RESPECTIVE CIRCUITS IN A GIVEN BUNDLE MAY EXPERIENCE SOME AMOUNT OF EMI COUPLING. SOME CIRCUIT APPLICATIONS MAY DICTATE SEPARATE SPACING.
3. CONDUCTORS OF LEVELS 1 AND 2 MUST BE SHIELDED WHERE INDICATED PER THE RECOMMENDATIONS OR EQUIVALENT.
4. IN CABLE TRAYS, STEEL SEPARATORS ARE ADVISABLE BETWEEN THE LEVELS.
5. IF CONDUIT IS USED IT IS REQUIRED THAT IT BE CONTINUOUS AND COMPOSED OF MAGNETIC STEEL. (SEE GENERAL NOTE 1 ABOVE)
6. FOR FURTHER INFORMATION ON SPACING OF PLC COMMUNICATION CABLES TO LEVEL 4, SEE R-A PLC INSTALLATION MANUAL.
7. PER NEC ARTICLE 300-3(C)(2) , CONDUCTORS OF CIRCUITS RATED OVER 1000V, NOMINAL, SHALL NOT OCCUPY THE SAME WIRING ENCLOSURE, CABLE, OR RACEWAY WITH CONDUCTORS 1000V NOMINAL OR LESS UNLESS PERMITTED BY NEC 300.3(C)(2)(a) THROUGH 300.3(C)(2)(D).

COIL AND SOLENOID SUPPRESSION:

BEFORE UTILIZING THE CONTROL CIRCUIT POWER AVAILABLE FOR OPERATION OF CUSTOMER SUPPLIED DEVICES, THE COILS OR SOLENOIDS OF SUCH DEVICES MUST BE SUPPRESSED. THE EXTERNAL CONTROL CIRCUIT WIRING MUST BE RUN IN A SEPARATE CONDUIT THAT DOES NOT HAVE VARIABLE SIGNAL VOLTAGES OR POWER CIRCUIT VOLTAGES PRESENT. ELECTRICAL TRANSIENTS MAY CAUSE OCCASIONAL DRIVE MALFUNCTIONING.

DRAWING STANDARDS:

SYMBOLS:

- ⌊ REFERS TO NOTE GIVEN BELOW
- ▲ LOW POWER CONTACT
- ARROW INDICATES FUNCTION INCREASE (ALWAYS CLOCKWISE)

4⌋ **DANGER** – THIS EQUIPMENT MAY BE AT LINE VOLTAGE EVEN WHEN NOT IN OPERATION. TO AVOID ELECTRIC SHOCK, DISCONNECT.

5⌋ **CAUTION** – NEVER REMOVE OR INSERT ANY MODULE OR CARD WHILE THE POWER IS ON.

9⌋ REMOVE JUMPER IF ADDITIONAL INTERLOCK IS ADDED.

13⌋ SEPARATELY MOUNTED, SUPPLIED BY OTHERS

14⌋ SEPARATELY MOUNTED, SUPPLIED BY ROCKWELL AUTOMATION

32⌋ MOTOR STABILIZING FIELD, S1 AND S2, IS NOT REQUIRED FOR NORMAL OPERATION. TAPE S1 AND S2 SEPARATELY AND DO NOT USE.

33⌋ DRIVE MOTOR CONNECTIONS AS SHOWN ARE FOR INDICATED ROTATION FACING COMMUTATOR END. FOR OPPOSITE ROTATION, INTERCHANGE A1 AND A2 CONNECTIONS IN MOTOR CONDUIT BOX.

34⌋ TACHOMETER LEADS MUST BE CONNECTED TO GIVE THE INDICATED POLARITY.

35⌋ IF OPPOSITE ROTATION IS DESIRED, CHANGE POLARITY OF THE COSINE SIGNAL BY INTERCHANGING THE COSINE INPUT LEADS.

36⌋ USE TWISTED TWO - CONDUCTOR CABLE. THIS CABLE MUST BE IN A SEPARATE SIGNAL CONDUIT. IT CANNOT BE RUN WITH OTHER CONDUCTORS OR CABLES. USE RELIANCE PART NUMBER 417900-76EAD OR EQUIVALENT. REFER TO FIELD INSTALLATION AND WIRING TABLE ON NEXT SHEET FOR WIRE SPECIFICATIONS.

38⌋ SIGNAL WIRE CABLES WITH THIS NOTE NUMBER CAN BE IN THE SAME SIGNAL CONDUIT. THEY CANNOT BE RUN WITH NON-SIGNAL WIRES. REFER TO FIELD INSTALLATION AND WIRING TABLE ON NEXT SHEET FOR WIRE SPECIFICATIONS.

38-1⌋ REFER TO NOTE 38. THE NUMBER FOLLOWING THE NOTE 38 IDENTIFIES THE CABLES THAT MAY BE GROUPED TOGETHER IN THE SAME SIGNAL CONDUIT. FOR EXAMPLE, CABLES REFERENCED WITH NOTE 38-1 CANNOT BE RUN IN THE SAME SIGNAL CONDUIT WITH NOTE 38-2 CABLES.

40⌋ COAXIAL CABLES WITH THIS NOTE CAN BE IN THE SAME SEPARATE SIGNAL CONDUIT. THEY CANNOT BE RUN WITH OTHER CONDUCTORS OR CABLES. FOR RECOMMENDED CABLE TYPE, REFER TO PRODUCT'S NETWORK MANUAL.

TYPE	CABLE P/N (BELDEN P/N)	CONNECTOR P/N (AMPHENOL P/N)
RG59	417900-148A (9259)	405504-74A (31-212-1005)
RG11	417900-149A (8238)	612293-B (6775)

TERMINATOR 75 OHM
RELIANCE P/N 707204-20A
AMPHENOL P/N 46650-75

41⌋ **DANGER** – DO NOT OPEN DISCONNECT SWITCH WHILE THE MOTOR IS ENERGIZED.

47⌋ RESOLVER WIRES: LOW LEVEL SIGNAL WIRING. MUST BE RUN IN SEPARATE SIGNAL CONDUIT OR TRAY.

BELDEN P/N	NO. OF TWISTED PAIRS		AWG #	RECOMMENDED MAXIMUM DIST. FOR EACH RESOLVER TYPE a> X1	a> X2	a> X5
9730	3		24	1000 FT.	1000 FT.	600 FT.

a> DISTANCES BEYOND THOSE RECOMMENDED MAY REQUIRE ADDITIONAL TUNING. USE RELIANCE CUSTOM PANEL 0-58801

b> MAY ONLY BE RUN IN CONDUIT, PER NEC

c> NOTE: CONNECT CABLE SHIELD TO GROUND AT CABINET ONLY

48⌋ FIBER-OPTIC CABLES WITH THIS NOTE MAY BE RUN WITH ANY LEVEL 1 SIGNAL WIRING. IF NECESSARY THESE CABLES MAY BE RUN WITH ANY LEVEL WIRING. SEE INSTALLATION MANUAL FOR RESTRICTIONS.

52⌋ REFER TO TRANSFORMER NAMEPLATE FOR CONNECTIONS OF PRIMARY LEADS.

53⌋ **DANGER** – TRANSFORMER IS CONNECTED TO LINE VOLTAGE EVEN WHEN THE A-C DISCONNECT IS OPEN.

   PE - POWER EQUIPMENT GROUND
   ⏚ - PANEL (CHASSIS) GROUND
3. THE INTERNAL WIRING SELECTED MEETS OR EXCEEDS NEC, UL, AND CSA. INTERNAL POWER AND CONTROL WIRE HAS INSULATION RATED AT 105°C OR HIGHER.
4. * -INDICATES COMPONENTS SUPPLIED BY OTHERS.
5. (4) INDICATES FIELD INSTALLED WIRES AS WELL AS THE WIRING LEVEL.
   WHEN ACCOMPANIED WITH THE DESIGNATION (FWC) THE WIRES/CABLE ARE PRE-SUPPLIED AT THE SOURCE CONNECTION BY ROCKWELL FOR CUSTOMER INSTALLATION AT SITE. (FWC) INDICATES FURNISHED WITH CABINET.
6. —○— -INDICATES OUTGOING TERMINAL.
   —□— -INDICATES TERMINAL ON ELECTRONIC ASSEMBLY PRINTED CIRCUIT BOARD (1EA) ETC.
   CR —⊗— -INDICATES RELAY OR CONTACTOR WITH SUPPRESSOR.
7. COIL AND CONTACT CROSS REFERENCING - NUMBERS ADJACENT TO COIL AND UNDER CONTACT INDICATE SHEET AND LINE NUMBERS.
   101-03 —| |— —◯— NO 101-03 ← -INDICATES LINE NO. 03.
   NC ← -INDICATES SHEET NO. 101.
   NO - INDICATES NORMALLY OPEN CONTACTS
   NC - INDICATES NORMALLY CLOSED CONTACTS

   OFF-PAGE CROSS REFERENCING - NUMBERS ADJACENT TO SOURCE AND DESTINATION SYMBOLS INDICATE SHEET AND LINE NUMBERS.
   FROM 1-24 ← 1-24 ← -INDICATES LINE NO. 24.
   TO 1-24 ← -INDICATES SHEET NO. 1.

REV DATE: 5-18-2017

8. WIRE # GENERATION
   11242
   - 1 - INDICATES WIRE NUMBER.
   - 2 - INDICATES SEQUENCE (1,2,, 3 . . . etc.).
   - 4 - INDICATES LINE NUMBER 24.
   - 11 - INDICATES SHEET NUMBER 11.

   INTERNAL WIRE NUMBERS MAY BE 'FIXED' WITH A LINE AND SEQUENCE, BUT MAY SCHEMATICALLY SHOW A PREFIX.
9. TYPICAL DUAL VOLTAGE MOTOR FIELD CONNECTIONS ARE SHOWN BELOW. CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.

10. DC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CCW ROTATION FACING COMMUTATOR END:
    A1 IS POSITIVE
    F1 IS POSITIVE
    FOR CW ROTATION FACING COMMUTATOR END:
    A2 IS POSITIVE
    F1 IS POSITIVE
    FOR CCW ROTATION WITH SERIES FIELD:

    FOR CW ROTATION WITH SERIES FIELD:

    FOR CCW ROTATION WITHOUT SERIES FIELD:

    FOR CW ROTATION WITHOUT SERIES FIELD:

11. AC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T2 (EUROPEAN MARKING V1)
    W2 TO T3 (EUROPEAN MARKING W1)
    FOR CCW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T3 (EUROPEAN MARKING W1)
    W2 TO T2 (EUROPEAN MARKING V1)

    NOTE: NOT ALL AC MOTOR SUPPLIERS COMPLY WITH THE ABOVE CONVENTIONS.

COMBINATION MOTOR CONTROLLER WITH MOTOR CIRCUIT PROTECTOR

DANGER: To maintain overcurrent, short circuit and ground fault protection, the manufacturer's instructions for selecting current elements and setting the instantaneous-trip circuit breaker must be followed.

AVERTISSEMENTPour assurer une protection continue contre les surintensités, les court-circuits et une mise à la terre accidentelle, il est essentiel de choisir les ?el?ements thermiques et de régler le disjoncteur à déclenchement instantané selon la notice technique du fabricant.

Determine motor full load current and motor design type identifier from motor nameplate.

For Design B, C an D motors adjust motor circuit protector to operate at a current setting between ten (10) and thirteen (13) times the full load current. For Design E and N motors adjust motor circuit protector to operate at a current setting between thirteen (13) and seventeen (17) times the full load current.

NOTE: Motor circuit protector is set at minimum current setting when shipped from factory.

DANGER: Tripping of the instantaneous-trip circuit breaker is an indication that a fault current has been interrupted. Current carrying components of the magnetic motor controller should be examined and replaced if damaged, to provide continued protection against a risk of fire or electric shock. If burnout of the current element of an overload relay occurs, the complete overload relay must be replaced. (Refer to NEMA Standards Publication No. ICS 2.2 titled: 'Maintenance of Motor Controllers After a Fault Condition' Ñ also published as NEMA Standard Publication No. ICS 2, Part ICS 2-302.)

AVERTISSEMENTL'ouverture du disjoncteur à déclenchement instantané indique qu'un courant de défaut a été interrompu. Les composants conducteurs de la commande magnétique du moteur doivent être inspectés et remplacés s'ils ont subi des dommages, afin d'assurer une protection continue contre le risque d'incendie et de choc électrique. En cas de défaillance de l'élément thermique d'un relais de surcharge, celui-ci doit être remplacé dans sa totalité.

FIELD WIRING INSIDE ROCKWELL ENCLOSURE:

1. CONNECTIONS WILL BE ONLY TO TERMINALS PROVIDED.
2. WIRE LENGTH FROM ENTRY POINT TO TERMINAL BOARD TO BE AS SHORT AS POSSIBLE.
3. SIGNAL WIRE MUST NOT BE LACED OR RUN WITH NON-SIGNAL WIRE AFTER ENTRY INTO THE ENCLOSURE.
4. INCOMING WIRE MUST NOT BE ROUTED IN WIRE CHANNELS OR THROUGH AREAS OF POWER AND CONTROL COMPONENTS AND WIRING.
5. USE LASHING BARS WHEN PROVIDED FOR CUSTOMER CONVENIENCE.

FIELD INSTALLATION GROUNDING GUIDELINES

1. FOR DRIVES INSTALLATION, REFER TO 'WIRING AND 'GROUNDING GUIDELINES', PUBLICATION DRIVES-IN001
2. FOR POWERFLEX SAR INSTALLATION, REFER TO 'POWERFLEX DC 'STANDALONE REGULATOR AND GATE AMPLIFIER USER MANUAL', PUBLICATION 23P-UM001_-EN-P
3. FOR PLC AND I/O INSTALLATION, REFER TO 'INDUSTRIAL AUTOMATION WIRING AND GROUNDING GUIDELINES', PUBLICATION 1770-4.1
4. NEC ARTICLE 250, GROUNDING AND BONDING
5. LOCAL CODE REQUIREMENTS

GENERAL NOTES:

1. STEEL CONDUIT IS RECOMMENDED FOR LEVELS 1 AND 2. FOR AC MOTOR CABLES, SEE NOTE 5.
   ALL CONDUITS CONNECTED TO THE CABINETS SHOULD BE PROPERLY SEALED TO MINIMIZE AIR OR WATER ENTRY INTO THE CABINETS. IF ALUMINUM CONDUIT IS USED.
   A. IT REQUIRES THE SAME MINIMUM SPACING IS USED AS THAT SHOWN FOR CABLE TRAYS.
   OR
   B. INDIVIDUAL STEEL JACKETED (STEEL MESH) CABLES ARE TO BE USED IF THE CONDUIT SPACINGS NEED BE THE SAME AS STEEL CONDUIT.
2. SPACING SHOWN BETWEEN LEVELS IS THE MINIMUM REQUIRED FOR PARALLEL RUNS ≤ 400 FEET. GREATER SPACINGS SHOULD BE USED WHERE POSSIBLE.
3. SHIELDS FOR SHIELDED CABLES MUST BE CONNECTED AT ONE END ONLY. THE OTHER END SHOULD BE CUT BACK AND INSULATED. SHIELDS FOR CABLES FROM A CABINET TO AN EXTERNAL DEVICE MUST BE CONNECTED AT CABINET END. SHIELDS FOR CABLES FROM ONE CABINET TO ANOTHER MUST BE CONNECTED AT THE SOURCE END CABINET. SPLICING OF SHIELDED CABLES, IF ABSOLUTELY NECESSARY, SHOULD BE DONE SUCH THAT SHIELD(S) REMAIN CONTINUOUS AND INSULATED FROM GROUND.
4. NO. 16 AWG WIRE IS THE MINIMUM RECOMMENDED SIZE FOR CONTROL (LEVEL 3). POWER WIRE IS SELECTED BY LOAD, USING 75 DEG C WIRE RATING (LEVELS 4 AND 4S).
5. ARMORED CABLE WITH A PVC OUTER JACKET IS REQUIRED TO PROVIDE THE NECESSARY ELECTRICAL SHIELDING FOR AC MOTOR CABLES CONNECTED TO A PWM INVERTER.
   RECOMMENDATIONS:
   METALLIC ARMOR:
   BEST PERFORMANCE: SHIELDED BELDEN CABLE PER TABLE BELOW, OR CONTINUOUS CORRUGATED ALUMINUM
   ACCEPTABLE PERFORMANCE: INTERLOCKED ALUMINUM, OR INTERLOCKED STEEL
   CONDUCTORS:
   BEST PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 3
   ACCEPTABLE PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 1
   THE CABLE CONNECTOR SELECTED MUST PROVIDE A GOOD ELECTRICAL CONNECTION BETWEEN THE ARMOR AND THE PE GROUND PLANE AT EACH END OF THE CABLE.
   SHIELDED CABLE RECOMMENDATIONS:

BELDEN	29500	#16 AWG
BELDEN	29501	#14 AWG
BELDEN	29502	#12 AWG
BELDEN	29503	#10 AWG
BELDEN	29504	#8 AWG
BELDEN	29505	#6 AWG
BELDEN	29506	#4 AWG
BELDEN	29507	#2 AWG

   DESCRIPTION - 4 CONDUCTOR TINNED COPPER, XLPE INSULATION, 600VRMS MAX, SPECIFICALLY DESIGNED FOR IGBT DRIVE APPLICATIONS. THE SHIELD SHOULD BE CONNECTED TO THE PE GROUND PLANE
6. SEE A-B PUBLICATION AG2.2 FOR ADDITIONAL CONTROLNET COAX CABLE RECOMMENDATIONS.

SPACING NOTES:

1. BOTH OUTGOING & RETURN CURRENT CARRYING CONDUCTORS ARE TO BE PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN CABLE TRAY.
2. ROUTE CABLES OF THE FOLLOWING LEVELS AS INDICATED:
   A. LEVELS MUST BE RUN IN SEPARATE CONDUITS OR TRAYS.
   B. INTERMIXING OF LEVELS IS NOT ALLOWED.
   C. SPECIAL LEVELS 4S AND 3S MAY EXIST THAT REQUIRE SPECIFIC WIRES TO BE GROUPED FOR SPECIAL HANDLING.
   NOTE: FOR LEVELS 3 AND 4, THE AMPACITY RATINGS OF CONDUCTORS IN A BUNDLE MAY NOT EXCEED THE DERATING GUIDELINES OF NEC 310.15(2), AND TABLE 310.15(B)(2)a.
   D. LEVELS 1 AND 2 MAY HAVE THEIR RESPECTIVE CIRCUITS (WITHIN A GIVEN LEVEL) PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN THE SAME CABLE TRAY.
   NOTE: THE RESPECTIVE CIRCUITS IN A GIVEN BUNDLE MAY EXPERIENCE SOME AMOUNT OF EMI COUPLING. SOME CIRCUIT APPLICATIONS MAY DICTATE SEPARATE SPACING.
3. CONDUCTORS OF LEVELS 1 AND 2 MUST BE SHIELDED WHERE INDICATED PER THE RECOMMENDATIONS OR EQUIVALENT.
4. IN CABLE TRAYS, STEEL SEPARATORS ARE ADVISABLE BETWEEN THE LEVELS.
5. IF CONDUIT IS USED IT IS REQUIRED THAT IT BE CONTINUOUS AND COMPOSED OF MAGNETIC STEEL. (SEE GENERAL NOTE 1 ABOVE)
6. FOR FURTHER INFORMATION ON SPACING OF PLC COMMUNICATION CABLES TO LEVEL 4, SEE R-A PLC INSTALLATION MANUAL.
7. PER NEC ARTICLE 300-3(C)(2) , CONDUCTORS OF CIRCUITS RATED OVER 1000V, NOMINAL, SHALL NOT OCCUPY THE SAME WIRING ENCLOSURE, CABLE, OR RACEWAY WITH CONDUCTORS 1000V NOMINAL OR LESS UNLESS PERMITTED BY NEC 300.3(C)(2)(a) THROUGH 300.3(C)(2)(D).

COIL AND SOLENOID SUPPRESSION:

BEFORE UTILIZING THE CONTROL CIRCUIT POWER AVAILABLE FOR OPERATION OF CUSTOMER SUPPLIED DEVICES, THE COILS OR SOLENOIDS OF SUCH DEVICES MUST BE SUPPRESSED. THE EXTERNAL CONTROL CIRCUIT WIRING MUST BE RUN IN A SEPARATE CONDUIT THAT DOES NOT HAVE VARIABLE SIGNAL VOLTAGES OR POWER CIRCUIT VOLTAGES PRESENT. ELECTRICAL TRANSIENTS MAY CAUSE OCCASIONAL DRIVE MALFUNCTIONING.

Sheet N2 Of Next Sh N3

Size D | R1USE01851-0003 | Ver 01

DRAWING STANDARDS:

SYMBOLS:

- REFERS TO NOTE GIVEN BELOW
- ▲ LOW POWER CONTACT
- ARROW INDICATES FUNCTION INCREASE (ALWAYS CLOCKWISE)

4 **DANGER** – THIS EQUIPMENT MAY BE AT LINE VOLTAGE EVEN WHEN NOT IN OPERATION. TO AVOID ELECTRIC SHOCK, DISCONNECT.

5 **CAUTION** – NEVER REMOVE OR INSERT ANY MODULE OR CARD WHILE THE POWER IS ON.

9 REMOVE JUMPER IF ADDITIONAL INTERLOCK IS ADDED.

13 SEPARATELY MOUNTED, SUPPLIED BY OTHERS

14 SEPARATELY MOUNTED, SUPPLIED BY ROCKWELL AUTOMATION

32 MOTOR STABILIZING FIELD, S1 AND S2, IS NOT REQUIRED FOR NORMAL OPERATION. TAPE S1 AND S2 SEPARATELY AND DO NOT USE.

33 DRIVE MOTOR CONNECTIONS AS SHOWN ARE FOR INDICATED ROTATION FACING COMMUTATOR END. FOR OPPOSITE ROTATION, INTERCHANGE A1 AND A2 CONNECTIONS IN MOTOR CONDUIT BOX.

34 TACHOMETER LEADS MUST BE CONNECTED TO GIVE THE INDICATED POLARITY.

35 IF OPPOSITE ROTATION IS DESIRED, CHANGE POLARITY OF THE COSINE SIGNAL BY INTERCHANGING THE COSINE INPUT LEADS.

36 USE TWISTED TWO - CONDUCTOR CABLE. THIS CABLE MUST BE IN A SEPARATE SIGNAL CONDUIT. IT CANNOT BE RUN WITH OTHER CONDUCTORS OR CABLES. USE RELIANCE PART NUMBER 417900-76EAD OR EQUIVALENT. REFER TO FIELD INSTALLATION AND WIRING TABLE ON NEXT SHEET FOR WIRE SPECIFICATIONS.

38 SIGNAL WIRE CABLES WITH THIS NOTE NUMBER CAN BE IN THE SAME SIGNAL CONDUIT. THEY CANNOT BE RUN WITH NON-SIGNAL WIRES. REFER TO FIELD INSTALLATION AND WIRING TABLE ON NEXT SHEET FOR WIRE SPECIFICATIONS.

38-1 REFER TO NOTE 38. THE NUMBER FOLLOWING THE NOTE 38 IDENTIFIES THE CABLES THAT MAY BE GROUPED TOGETHER IN THE SAME SIGNAL CONDUIT. FOR EXAMPLE, CABLES REFERENCED WITH NOTE 38-1 CANNOT BE RUN IN THE SAME SIGNAL CONDUIT WITH NOTE 38-2 CABLES.

40 COAXIAL CABLES WITH THIS NOTE CAN BE IN THE SAME SEPARATE SIGNAL CONDUIT. THEY CANNOT BE RUN WITH OTHER CONDUCTORS OR CABLES. FOR RECOMMENDED CABLE TYPE, REFER TO PRODUCT'S NETWORK MANUAL.

TYPE	CABLE P/N (BELDEN P/N)	CONNECTOR P/N (AMPHENOL P/N)
RG59	417900-148A (9259)	405504-74A (31-212-1005)
RG11	417900-149A (8238)	612293-B (6775)

TERMINATOR 75 OHM
RELIANCE P/N 707204-20A
AMPHENOL P/N 46650-75

41 **DANGER** – DO NOT OPEN DISCONNECT SWITCH WHILE THE MOTOR IS ENERGIZED.

47 RESOLVER WIRES: LOW LEVEL SIGNAL WIRING. MUST BE RUN IN SEPARATE SIGNAL CONDUIT OR TRAY.

BELDEN P/N	NO. OF TWISTED PAIRS		AWG #	RECOMMENDED MAXIMUM DIST. FOR EACH RESOLVER TYPE a> X1	a> X2	a> X5
9730	3		24	1000 FT.	1000 FT.	600 FT.

a> DISTANCES BEYOND THOSE RECOMMENDED MAY REQUIRE ADDITIONAL TUNING. USE RELIANCE CUSTOM PANEL 0-58801

b> MAY ONLY BE RUN IN CONDUIT, PER NEC

c> NOTE: CONNECT CABLE SHIELD TO GROUND AT CABINET ONLY

48 FIBER-OPTIC CABLES WITH THIS NOTE MAY BE RUN WITH ANY LEVEL 1 SIGNAL WIRING. IF NECESSARY THESE CABLES MAY BE RUN WITH ANY LEVEL WIRING. SEE INSTALLATION MANUAL FOR RESTRICTIONS.

52 REFER TO TRANSFORMER NAMEPLATE FOR CONNECTIONS OF PRIMARY LEADS.

53 **DANGER** – TRANSFORMER IS CONNECTED TO LINE VOLTAGE EVEN WHEN THE A-C DISCONNECT IS OPEN.

DATE	BY	APPROVAL
04/14/21	JSP	DESIGN REVIEW
		FOR MANUFACTURING

GENERAL NOTES:

1. FOR FURTHER DRIVE INFORMATION ON INSTRUCTION MANUALS, SEE RESPECTIVE SCHEMATIC SECTIONS.
2. – BUILDING GROUND TO BE GROUNDED BY CUSTOMER.
   – SYSTEM ZERO POTENTIAL NODE (TE)
   – POWER EQUIPMENT GROUND (PE)
   – PANEL (CHASSIS) GROUND
3. THE INTERNAL WIRING SELECTED MEETS OR EXCEEDS NEC, UL, AND CSA. INTERNAL POWER AND CONTROL WIRE HAS INSULATION RATED AT 105°C OR HIGHER.
4. * -INDICATES COMPONENTS SUPPLIED BY OTHERS.
5. (4) INDICATES FIELD INSTALLED WIRES AS WELL AS THE WIRING LEVEL. WHEN ACCOMPANIED WITH THE DESIGNATION (FWC) THE WIRES/CABLE ARE PRE-SUPPLIED AT THE SOURCE CONNECTION BY ROCKWELL FOR CUSTOMER INSTALLATION AT SITE. (FWC) INDICATES FURNISHED WITH CABINET.
6. -INDICATES OUTGOING TERMINAL.
   -INDICATES TERMINAL ON ELECTRONIC ASSEMBLY PRINTED CIRCUIT BOARD (IEA) ETC.
   CR -INDICATES RELAY OR CONTACTOR WITH SUPPRESSOR.
7. COIL AND CONTACT CROSS REFERENCING - NUMBERS ADJACENT TO COIL AND UNDER CONTACT INDICATE SHEET AND LINE NUMBERS.

OFF-PAGE CROSS REFERENCING - NUMBERS ADJACENT TO SOURCE AND DESTINATION SYMBOLS INDICATE SHEET AND LINE NUMBERS.

REV DATE: 5-18-2017

8. WIRE # GENERATION
   11242
   - INDICATES WIRE NUMBER.
   - INDICATES SEQUENCE (1,2,, 3 . . . etc.).
   - INDICATES LINE NUMBER 24.
   - INDICATES SHEET NUMBER 11.
   INTERNAL WIRE NUMBERS MAY BE "FIXED" WITH A LINE AND SEQUENCE, BUT MAY SCHEMATICALLY SHOW A PREFIX.
9. TYPICAL DUAL VOLTAGE MOTOR FIELD CONNECTIONS ARE SHOWN BELOW. CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.

10. DC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CCW ROTATION FACING COMMUTATOR END:
    A1 IS POSITIVE
    F1 IS POSITIVE
    FOR CW ROTATION FACING COMMUTATOR END:
    A2 IS POSITIVE
    F1 IS POSITIVE
    FOR CCW ROTATION WITH SERIES FIELD:

    FOR CW ROTATION WITH SERIES FIELD:

    FOR CCW ROTATION WITHOUT SERIES FIELD:

    FOR CW ROTATION WITHOUT SERIES FIELD:

11. AC MOTOR ROTATION - CONSULT THE MOTOR MANUFACTURER'S INSTRUCTIONS FOR CORRECT CONNECTIONS.
    FOR CW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T2 (EUROPEAN MARKING V1)
    W2 TO T3 (EUROPEAN MARKING W1)
    FOR CCW ROTATION VIEWED FROM MOTOR SHAFT:
    INVERTER OUTPUT U2 TO T1 (EUROPEAN MARKING U1)
    V2 TO T3 (EUROPEAN MARKING W1)
    W2 TO T2 (EUROPEAN MARKING V1)

NOTE: NOT ALL AC MOTOR SUPPLIERS COMPLY WITH THE ABOVE CONVENTIONS.

COMBINATION MOTOR CONTROLLER WITH MOTOR CIRCUIT PROTECTOR

DANGER: To maintain overcurrent, short circuit and ground fault protection, the manufacturer's instructions for selecting current elements and setting the instantaneous-trip circuit breaker must be followed.

AVERTISSEMENTPour assurer une protection continue contre les surintensités, les court-circuits et une mise à la terre accidentelle, Il est essentiel de choisir les ?el?ements thermiques et de régler le disjoncteur à déclenchement instantané selon la notice technique du fabricant.

Determine motor full load current and motor design type identifier from motor nameplate.

For Design B, C an D motors adjust motor circuit protector to operate at a current setting between ten (10) and thirteen (13) times the full load current. For Design E and N motors adjust motor circuit protector to operate at a current setting between thirteen (13) and seventeen (17) times the full load current.

NOTE: Motor circuit protector is set at minimum current setting when shipped from factory.

DANGER: Tripping of the instantaneous-trip circuit breaker is an indication that a fault current has been interrupted. Current carrying components of the magnetic motor controller should be examined and replaced if damaged, to provide continued protection against a risk of fire or electric shock. If burnout of the current element of an overload relay occurs, the complete overload relay must be replaced. (Refer to NEMA Standards Publication No. ICS 2.2 titled: 'Maintenance of Motor Controllers After a Fault Condition' Ñ also published as NEMA Standard Publication No. ICS 2, Part ICS 2-302.)

AVERTISSEMENTL'ouverture du disjoncteur à déclenchement instantané indique qu'un courant de défaut a été interrompu. Les composants conducteurs de la commande magnétique du moteur doivent être inspectés et remplacés s'ils ont subi des dommages, afin d'assurer une protection continue contre le risque d'incendie et de choc électrique. En cas de défaillance de l'élément thermique d'un relais de surcharge, celui-ci doit être remplacé dans sa totalité.

EXAMPLE: SPACING RELATIONSHIP BETWEEN 480VAC INCOMING LEADS
a. 480VAC LEADS ARE LEVEL 4.
b. 24VDC LEADS ARE LEVEL 3.
c. FOR SEPARATE STEEL CONDUITS, THE CONDUITS ARE TO BE 3 INCHES APART.
d. IN A CABLE TRAY THE TWO GROUPS OF LEADS ARE TO BE 6 INCHES APART.

SHIELDED CABLES RECOMMENDATIONS:

BELDEN	8770	18 AWG - 3 CONDUCTOR SHIELDED
BELDEN	8760	18 AWG - 2 CONDUCTOR SHIELDED
BELDEN	9418	18 AWG - 4 CONDUCTOR SHIELDED
BELDEN	9728	24 AWG - 4 SHIELDED PAIRS (8 COND.)
BELDEN	9729	24 AWG - 2 SHIELDED PAIRS (4 COND.)
BELDEN	9730	24 AWG - 3 SHIELDED PAIRS (6 COND.)
BELDEN	9892	20 AWG - 4 SHIELDED PAIRS (8 COND.)
BELDEN	9773	18 AWG - 3 SHIELDED PAIRS (6 COND.)
BELDEN	9463	75 OHM - TWINAXIAL (2 COND.)

		FOR MANUFACTURING
		AS SHIPPED
		AS COMMISSIONED

FIELD WIRING INSIDE ROCKWELL ENCLOSURE:

1. CONNECTIONS WILL BE ONLY TO TERMINALS PROVIDED.
2. WIRE LENGTH FROM ENTRY POINT TO TERMINAL BOARD TO BE AS SHORT AS POSSIBLE.
3. SIGNAL WIRE MUST NOT BE LACED OR RUN WITH NON-SIGNAL WIRE AFTER ENTRY INTO THE ENCLOSURE.
4. INCOMING WIRE MUST NOT BE ROUTED IN WIRE CHANNELS OR THROUGH AREAS OF POWER AND CONTROL COMPONENTS AND WIRING.
5. USE LASHING BARS WHEN PROVIDED FOR CUSTOMER CONVENIENCE.

FIELD INSTALLATION GROUNDING GUIDELINES

1. FOR DRIVES INSTALLATION, REFER TO 'WIRING AND 'GROUNDING GUIDELINES', PUBLICATION DRIVES-IN001
2. FOR POWERFLEX SAR INSTALLATION, REFER TO 'POWERFLEX DC 'STANDALONE REGULATOR AND GATE AMPLIFIER USER MANUAL', PUBLICATION 23P-UM001_-EN-P
3. FOR PLC AND I/O INSTALLATION, REFER TO 'INDUSTRIAL AUTOMATION WIRING AND GROUNDING GUIDELINES', PUBLICATION 1770-4.1
4. NEC ARTICLE 250, GROUNDING AND BONDING
5. LOCAL CODE REQUIREMENTS

GENERAL NOTES:

1. STEEL CONDUIT IS RECOMMENDED FOR LEVELS 1 AND 2. FOR AC MOTOR CABLES, SEE NOTE 5.
   ALL CONDUITS CONNECTED TO THE CABINETS SHOULD BE PROPERLY SEALED TO MINIMIZE AIR OR WATER ENTRY INTO THE CABINETS. IF ALUMINUM CONDUIT IS USED.
   A. IT REQUIRES THE SAME MINIMUM SPACING IS USED AS THAT SHOWN FOR CABLE TRAYS.
   OR
   B. INDIVIDUAL STEEL JACKETED (STEEL MESH) CABLES ARE TO BE USED IF THE CONDUIT SPACINGS NEED BE THE SAME AS STEEL CONDUIT.
2. SPACING SHOWN BETWEEN LEVELS IS THE MINIMUM REQUIRED FOR PARALLEL RUNS ≤ 400 FEET. GREATER SPACINGS SHOULD BE USED WHERE POSSIBLE.
3. SHIELDS FOR SHIELDED CABLES MUST BE CONNECTED AT ONE END ONLY. THE OTHER END SHOULD BE CUT BACK AND INSULATED. SHIELDS FOR CABLES FROM A CABINET TO AN EXTERNAL DEVICE MUST BE CONNECTED AT CABINET END. SHIELDS FOR CABLES FROM ONE CABINET TO ANOTHER MUST BE CONNECTED AT THE SOURCE END CABINET. SPLICING OF SHIELDED CABLES, IF ABSOLUTELY NECESSARY, SHOULD BE DONE SUCH THAT SHIELD(S) REMAIN CONTINUOUS AND INSULATED FROM GROUND.
4. NO. 16 AWG WIRE IS THE MINIMUM RECOMMENDED SIZE FOR CONTROL (LEVEL 3). POWER WIRE IS SELECTED BY LOAD, USING 75 DEG C WIRE RATING (LEVELS 4 AND 4S).
5. ARMORED CABLE WITH A PVC OUTER JACKET IS REQUIRED TO PROVIDE THE NECESSARY ELECTRICAL SHIELDING FOR AC MOTOR CABLES CONNECTED TO A PWM INVERTER.
   RECOMMENDATIONS:
   METALLIC ARMOR:
   BEST PERFORMANCE: SHIELDED BELDEN CABLE PER TABLE BELOW, OR CONTINUOUS CORRUGATED ALUMINUM
   ACCEPTABLE PERFORMANCE: INTERLOCKED ALUMINUM, OR INTERLOCKED STEEL
   CONDUCTORS:
   BEST PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 3
   ACCEPTABLE PERFORMANCE: PHASE CONDUCTORS - 3, GROUND CONDUCTORS - 1
   THE CABLE CONNECTOR SELECTED MUST PROVIDE A GOOD ELECTRICAL CONNECTION BETWEEN THE ARMOR AND THE PE GROUND PLANE AT EACH END OF THE CABLE.
   SHIELDED CABLE RECOMMENDATIONS:

BELDEN	29500	#16 AWG
BELDEN	29501	#14 AWG
BELDEN	29502	#12 AWG
BELDEN	29503	#10 AWG
BELDEN	29504	#8 AWG
BELDEN	29505	#6 AWG
BELDEN	29506	#4 AWG
BELDEN	29507	#2 AWG

   DESCRIPTION - 4 CONDUCTOR TINNED COPPER, XLPE INSULATION, 600VRMS MAX, SPECIFICALLY DESIGNED FOR IGBT DRIVE APPLICATIONS. THE SHIELD SHOULD BE CONNECTED TO THE PE GROUND PLANE
6. SEE A-B PUBLICATION AG2.2 FOR ADDITIONAL CONTROLNET COAX CABLE RECOMMENDATIONS.

SPACING NOTES:

1. BOTH OUTGOING & RETURN CURRENT CARRYING CONDUCTORS ARE TO BE PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN CABLE TRAY.
2. ROUTE CABLES OF THE FOLLOWING LEVELS AS INDICATED:
   A. LEVELS MUST BE RUN IN SEPARATE CONDUITS OR TRAYS.
   B. INTERMIXING OF LEVELS IS NOT ALLOWED.
   C. SPECIAL LEVELS 4S AND 3S MAY EXIST THAT REQUIRE SPECIFIC WIRES TO BE GROUPED FOR SPECIAL HANDLING.
   NOTE: FOR LEVELS 3 AND 4, THE AMPACITY RATINGS OF CONDUCTORS IN A BUNDLE MAY NOT EXCEED THE DERATING GUIDELINES OF NEC 310.15(2), AND TABLE 310.15(B)(2)a.
   D. LEVELS 1 AND 2 MAY HAVE THEIR RESPECTIVE CIRCUITS (WITHIN A GIVEN LEVEL) PULLED IN THE SAME CONDUIT OR LAYERED ADJACENT IN THE SAME CABLE TRAY.
   NOTE: THE RESPECTIVE CIRCUITS IN A GIVEN BUNDLE MAY EXPERIENCE SOME AMOUNT OF EMI COUPLING. SOME CIRCUIT APPLICATIONS MAY DICTATE SEPARATE SPACING.
3. CONDUCTORS OF LEVELS 1 AND 2 MUST BE SHIELDED WHERE INDICATED PER THE RECOMMENDATIONS OR EQUIVALENT.
4. IN CABLE TRAYS, STEEL SEPARATORS ARE ADVISABLE BETWEEN THE LEVELS.
5. IF CONDUIT IS USED IT IS REQUIRED THAT IT BE CONTINUOUS AND COMPOSED OF MAGNETIC STEEL. (SEE GENERAL NOTE 1 ABOVE)
6. FOR FURTHER INFORMATION ON SPACING OF PLC COMMUNICATION CABLES TO LEVEL 4, SEE R-A PLC INSTALLATION MANUAL.
7. PER NEC ARTICLE 300-3(C)(2) , CONDUCTORS OF CIRCUITS RATED OVER 1000V, NOMINAL, SHALL NOT OCCUPY THE SAME WIRING ENCLOSURE, CABLE, OR RACEWAY WITH CONDUCTORS 1000V NOMINAL OR LESS UNLESS PERMITTED BY NEC 300.3(C)(2)(a) THROUGH 300.3(C)(2)(D).

COIL AND SOLENOID SUPPRESSION:

BEFORE UTILIZING THE CONTROL CIRCUIT POWER AVAILABLE FOR OPERATION OF CUSTOMER SUPPLIED DEVICES, THE COILS OR SOLENOIDS OF SUCH DEVICES MUST BE SUPPRESSED. THE EXTERNAL CONTROL CIRCUIT WIRING MUST BE RUN IN A SEPARATE CONDUIT THAT DOES NOT HAVE VARIABLE SIGNAL VOLTAGES OR POWER CIRCUIT VOLTAGES PRESENT. ELECTRICAL TRANSIENTS MAY CAUSE OCCASIONAL DRIVE MALFUNCTIONING.

Product Overview

The PowerFlex 750-Series is a robust family of AC drives that provide ease of use, flexibility, and performance for various industrial applications. PowerFlex 753 drives provide general-purpose control for applications up to 400 Hp and 270 kW. PowerFlex 755 drives provide maximum flexibility and performance up to 2000 Hp and 1500 kW.

Maximize your productivity by taking advantage of these key features that are offered in the PowerFlex 750-Series drives:

- **DeviceLogix**™ – Embedded control technology that supports the manipulation of discrete outputs and drive control functions, while using discrete inputs and drive status information onboard the drive.
- **Predictive Diagnostics** – Tracks information that affects the life of the drive cooling fans and relay outputs. The drive can also be programmed to monitor the runtime hours for machine or motor bearings.
- **Option Cards** – Each drive has a slot-based architecture. Supported hardware control options are available for both products, to help reduce your inventory and spare parts requirements.
- **Safe Torque Off**, **Safe Speed Monitor**, **Integrated Safety - Safe Torque Off**, and **Integrated Safety Functions Option** – Provides a choice for safety levels depending on your application requirements.
- **Communication** – The PowerFlex 755 drives come with a built-in Ethernet port. Ethernet can easily be added to the PowerFlex 753 drives with a communication module.
- **I/O** – Option cards are available for additional analog and digital I/O. The PowerFlex 753 drives come with built-in I/O that can also be expanded with option cards.
- **Packaging** – Factory and field-installable enclosure options are available to meet most environmental requirements. Options include Open Type and flange mount to support cabinet mount requirements, extra protection wall-mount for harsh environments, and debris hoods and conduit plate kits.
- **Standard Power Structure** – A common power structure is shared to provide the same physical size and power range.

PowerFlex 750-Series Drive Family

This section provides a brief introduction to the different PowerFlex 750-Series drives.

Wall Mount Frames 1…7
IP00/IP20, NEMA/UL Type Open Drive
Includes a DC link choke on all Frames and internal brake transistor, standard on Frames 1…5, and optional on Frames 6 and 7.

Floor Mount Frames 8…10
IP20, NEMA/UL Type 1 Drive (2500 MCC style cabinet)
Includes a DC link choke, integrated AC line fuses, and roll-out design.
Hood that is shown on top of cabinets is optional. To order the hood, see page 199 for information.

Floor Mount Frames 8…10
IP20, NEMA/UL Type 1 Drive with Options (2500 MCC style cabinet)
Includes a DC link choke, integrated AC line fuses, roll-out design, and option bay for control/protection devices.

Roll-out Design
(Frame 8 shown)
A roll-out cart is required for Frames 8…10 drives and Frame 9…10 option bay chassis. The roll-out cart has an adjustable curb height of 0…182 mm (0…7.2 in.) and curb offset/reach of 0…114 mm (0…4.5 in.).
See page 200 for information to order the roll-out cart.

MIX.BLW-3

MIX.BLW-4

MIX.BLW-1,-2

(1) Frames 1…5 are IP20, NEMA/UL Type Open. Frames 6…7 are IP00, NEMA/UL Type Open. Frames 1…7 can be converted to IP20, NEMA/UL Type 1 with optional kit (20-750-NEMA1-Fx), where x is the frame size.

(2) The 5th character determines Input Type; "1" = AC input with precharge and DC terminals, and "A" = AC input with precharge and no DC terminals. For DC input drives, see DRIVES-SG001, the PowerFlex Common Bus Configuration Selection Guide.

(3) The 11th character determines default Filtering and Common Mode Cap jumper configuration; "J" = Installed, and "A" = Removed.

(4) The 12th character determines whether an internal dynamic braking IGBT is included; "A" = Internal dynamic braking transistor installed, and "N" = No internal dynamic braking transistor.

Certifications and Specifications

This section provides information for certifications and specifications.

Certifications

Certification	Description
ABS	American Bureau of Shipping Certificate 11-HS743429
c-UL-us	Listed to UL508C and CSA22.2 No. 14 (does not apply to 21G drives with enclosure code P or W).
CE	In conformity with these European Directives EMC Directive EN 61800-3 Low Voltage Directive EN 61800-5-1 ATEX Directive (94/9/EC and 2014/34/EU) EC-Type-Examination Certificate Number TÜV 12 ATEX 7328 X EN 50495
SEMI F47	Certified compliant with the following standards SEMI F47 IEC 61000-4-34
EAC	Low Voltage TP TC 004/2011 EMC TP TC 020/2011
Functional Safety	TÜV Rheinland – Certification applies to 20-750-S, 20-750-S1, 20-750-S3, and 20-750-S4 Safety Options when installed in drive. Standards applied EN 61800-3, EN 61508 PARTS 1-7 EN 61800-5-1, EN 62061 EN 61800-5-2, EN 60204-1 EN ISO 13849-1
KCC	KCC-REM-RAA-20F-A, KCC-REM-RAA-20G-A, MSIP-REM-RAA-20F-C KCC-REM-RAA-20F-B, KCC-REM-RAA-20G-B, MSIP-REM-RAA-20F-D KCC-REM-RAA-20G-C, MSIP-REM-RAA-20G-D MSIP-REM-RAA-20F-E, MSIP-REM-RAA-20G-E See the certificate of registration for specific drive catalog numbers that have this certification.(1)
Lloyd's Register	Lloyd's Register Type Approval Certificate 11/60008 (For drives manufactured before 6/28/2016)
RCM	Australian Communications and Media Authority In conformity with the following items Radiocommunications Act: 1992 Radiocommunications Standard: 2008 Radiocommunications Labeling Notice: 2008 Standards applied EN 61800-3
RINA	RINA Certificate ELE349811CS

(1) See the product certifications website, http://www.rockwellautomation.com/global/certification/overview.page, for declarations of conformity, certificates, and other certification details.

	Drive overcurrent trip Software overcurrent trip Instantaneous current limit Hardware overcurrent trip	200% of drive rated 100% of 3 s rating (158…210%) 143% of 3 s rating (215…287%)					
	Line transients	Up to 6000V peak per IEEE C62.41-1991					
	Control logic noise immunity	Showering arc transients up to 1500V peak					
	Power ride-through	15 ms at full load					
	Logic control ride-through	0.5 s min, 2 s typical					
	Ground fault trip	Phase-to-ground on drive output					
	Short circuit trip	Phase-to-phase on drive output					

Technical Specifications (Continued)

Category	Specification			
Electrical	AC input voltage tolerance	See Input Voltage Tolerance on page 57 for full power and operating range.		
	Frequency tolerance	47…63 Hz		
	Input phases	Three-phase input provides full rating for all drives. For Frames 1…7 (output current up to 456 A), single-phase operation provides up to 50% of rated current at 25 °C (77 °F) surrounding temperature. Single-phase operation is not recommended for Frames 8 and larger.		
	DC input voltage tolerance	±10% of nominal bus voltage (see Nominal bus voltage (full load) on page 54)		
	Displacement power factor	0.98 across entire speed range		
	DC link impedance	≤ 4%		
	Efficiency	97.5% at rated amps, nominal line volts		
	Maximum short circuit rating	200,000 A RMS symmetrical (20F and 20G drives only)		
	Actual short circuit rating	Determined by AIC rating of installed fuse/circuit breaker. See page 116 for 21G drives.		
	Drive to motor power ratio Min Max	 Recommended not less than 1:2 ratio Recommended not greater than 2:1 ratio		
	Brake IGBT rating	100% of motor-rated torque		
	Control POD current draw	5 A		
	Digital inputs Nominal Maximum High state Low state	DC 24V DC 30V DC 20…24V DC 0…5V DC	AC 120V AC 132V AC 100…132V AC 0…30V AC	
	PTC inputs Standard Trip resistance Nominal resistance Reset resistance Short circuit trip resistance	PowerFlex 753 MCB N/A (1) 3.1 kΩ 1.8 kΩ 2.2 kΩ N/A (2)	22-Series I/O option module DIN 44082 3.1 kΩ 1.8 kΩ 2.2 kΩ 80 Ω	ATEX option module for 11-Series I/O option module IEC 6094-8 3.2 kΩ 1.6 kΩ N/A (3) 100 Ω
	Battery	User-installed CR1220 lithium coin cell battery provides power to the real-time clock (optional, not supplied). Preserves the clock setting in the event power to the drive is lost or cycled. Approximate life is 4.5 years with drive unpowered, or lifetime if drive is powered.		

(1) Not designed to a standard.
(2) No short circuit fault.
(3) No hysteresis, fault is latched.

Technical Specifications (Continued)

Category	Specification	
Control	Method	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives.
	Carrier frequency	Default settings Frames 1…3 4 kHz Frames 4…10 2 kHz Settings Frames 1…6 2, 4, 8, 12 kHz (1) (2) Frame 7 2, 4, 8 kHz (1) Frames 8…10 2, 4 kHz
	Output voltage range	0 to rated motor voltage
	Output frequency range	0…325 Hz at 2 kHz carrier 0…590 Hz at 4 kHz carrier
	Frequency accuracy Digital input Analog input	 Within ±0.01% of set output frequency Within ±0.4% of maximum output frequency
	Frequency control	Speed regulation – with slip compensation (V/Hz and Sensorless Vector modes) 0.5% of base speed across 40:1 speed range, 40:1 operating range
	Speed control	Without feedback (Flux Vector mode), 0.1% of base speed across 100:1 speed range, 120:1 operating range, 50 rad/s bandwidth
		With feedback (Flux Vector mode), 0.001% of base speed across 100:1 speed range, 1000:1 operating range, 190 rad/s bandwidth
	Torque regulation	Without feedback (Flux Vector mode), ±5%, 600 rad/s bandwidth
		With feedback (Flux Vector mode), ±2%, 2500 rad/s bandwidth
	Selectable motor control	• Standard V/Hz with full custom capability • Sensorless Vector mode with full tuning • Flux Vector mode with and without a feedback device • Induction motor control • Surface-mount permanent magnet motor control with encoder feedback (Frames 1…10)(3) • Surface-mount permanent magnet motor control without encoder feedback (Frames 1…7)(3) • Internal permanent-magnet motor control with encoder feedback (Frames 1…10) • Internal permanent-magnet motor control without encoder feedback (Frames 1…7)
	Stop modes	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Hold, Fast Braking, and Current Limit Stop.
	Accel/Decel	Two independently programmable accel and decel times. Each time can be programmed from 0…3600 seconds in 0.1 second increments (0 to motor nameplate speed).
	S-curve time	Adjustable from 0…100% of ramp time (normal duty rating)
	Intermittent overload Light duty (only Frames 8…10)	 110% overload capability for up to 1 min out of 10 mins
	Normal duty	110% overload capability for up to 1 min out of 10 mins 150% overload capability for up to 3 s out of 60 s
	Heavy duty	150% overload capability for up to 1 min out of 10 mins 180% overload capability for up to 3 s out of 60 s
	Current limit capability	Proactive current limit programmable from 20…160% of rated output current. Independently programmable proportional and integral gain.
	Electronic motor overload protection	Class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A)(2). UL 508C File E59272.

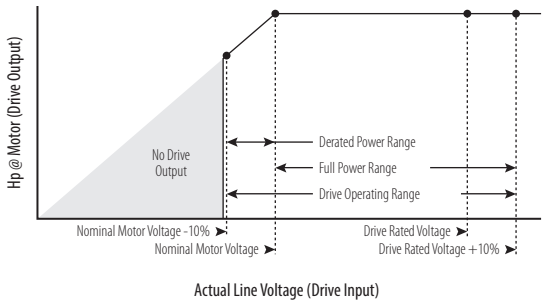
(1) Frames 6 and 7 600/690V AC input drives can be set to 2 kHz or 4 kHz.
(2) Frames 3…5 600/690V AC input drives can be set to 2, 4, or 8 kHz.
(3) Only PowerFlex 755 drives.

Design Considerations

This section provides information for design considerations.

Input Voltage Tolerance

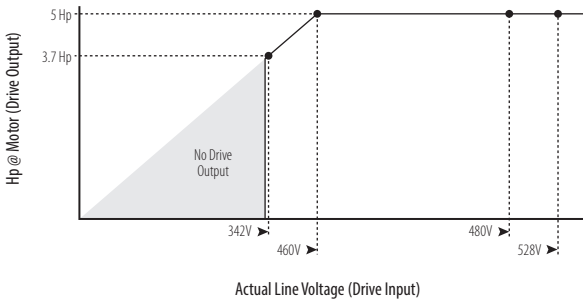
Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200…240	200	200	200…264	180…264
	208	208	208…264	
	240	230	230…264	
380…480	380	380	380…528	342…528
	400	400	400…528	
	480	460	460…528	
600…690	600	575	575…759	517…759
	690	660	660…759	
Drive full power range =	Nominal motor voltage to drive-rated voltage + 10%. Rated current is available across the entire drive full-power range.			
Drive operating range =	Lowest nominal motor voltage - 10% to drive-rated voltage + 10%. Drive output is linearly derated when actual line voltage is less than the nominal motor voltage			



EXAMPLE Calculate the maximum power of a 5.0 Hp, 460V motor connected to a 480V-rated drive supplied with 342V actual line voltage input.

- Actual line voltage/nominal motor voltage = 74.3%
- 74.3% x 5.0 Hp = 3.7 Hp
- 74.3% x 60 Hz = 44.6 Hz

At 342V actual line voltage, the maximum power the 5.0 Hp, 460V motor can produce is 3.7 Hp at 44.6 Hz.



IMPORTANT For maximum protection of the drive and its internal components, we recommend the use of semiconductor fuses to other methods of circuit protection. Semiconductor fuses reduce the risk of drive damage from power quality events and improves machine and process utilization.

Watts Loss for 400/480V Drives

(1) Select the watts loss based on the catalog number.

(2) Frames 8…10, enclosure codes B, J, L, P, and W.

(3) Frame 1 watts loss in parentheses.

Fuse and Circuit Breaker Ratings

The tables in this section provide recommended AC line input fuse and circuit breaker information. See Fusing on page 96 and Circuit Breakers on page 96 for UL and IEC requirements. The size recommendations are based on 40 °C (104 °F) and the U.S. NEC. Other country, state, or local codes can require different ratings. DC link fuse recommendations for DC input drives are also provided. In addition, Frame 8 and larger drives include AC line fuses (with blown fuse indicators) to provide drive short circuit protection.

Input Device Requirements

Frames	Enclosure Catalog Code	Enclosure Type	Installation Type	UL Certification Required	UL Certification Not Required
1	R	IP20 NEMA/UL Open Type	Installed in a ventilated or non-ventilated cabinet.	All devices that are listed on pages 97, 99, 101 and 105 are acceptable. When installed in a ventilated cabinet, time delay fuses, circuit breakers, and 140M combination motor controllers must meet or exceed the listed minimum enclosure volume on pages 101 and 105.	All devices that are listed on pages 97 through 113 are acceptable.
			Installed outside of cabinet by using NEMA Type 1 kit or in a ventilated cabinet.	Only non-time delay fuses that are listed on pages 97, 99, 101 and 105, excluding maximum value, are acceptable.	
2…5	N	IP20 NEMA/UL Open Type	Installed in a ventilated or non-ventilated cabinet. Heat sink is inside or outside of cabinet.	All devices that are listed on pages 97, 99, 101, 105, and 109 are acceptable. When installed in a ventilated cabinet, time delay fuses, circuit breakers, and 140M combination motor controllers must meet or exceed the listed minimum enclosure volume on pages 97, 99, 101, 105, and 109.	
	F	Flange			
	N	IP20 NEMA/UL Open Type	Installed outside of cabinet by using NEMA Type 1 kit or in a ventilated cabinet.	208V AC/281V DC or 240V AC/324V DC drives. Only non-time delay fuses that are listed on pages 97 and 99, excluding maximum value, are acceptable. 400V AC/540V DC or 480V AC/650V DC drives. Only non-time delay fuses that are listed on pages 101 and 105, excluding maximum value, are acceptable. 600V AC/810V DC drives. Only non-time delay fuses that are listed on page 109 are acceptable, with maximum value of 40 A (Frame 3), 60 A (Frame 4), and 100 A (Frame 5).	
	F	Flange			
	G	IP54 NEMA/UL Type 12	Installed inside or outside of any cabinet.	All devices that are listed on pages 97, 99, 101, 105, and 109 are acceptable.	
6 and 7	N	IP00 NEMA/UL Open Type	Installed in any cabinet. Heat sink is inside or outside of cabinet.	208V AC/281V DC or 240V AC/324V DC drives. Only non-time delay fuses that are listed on pages 97 and 99, excluding maximum value, are acceptable. 400V AC/540V DC or 480V AC/650V DC drives. All devices that are listed on pages 101 and 105 are acceptable. 600V AC/810V DC drives. Only time delay and non-time delay fuses that are listed on page 109 are acceptable.	
			Installed outside of cabinet by using NEMA Type 1 kit.		
	G	IP54 NEMA/UL Type 12	Installed inside or outside of any cabinet.	All devices that are listed on pages 97, 99, 101, 105, and 109 are acceptable.	
8…10	B, L, P, W	IP20 NEMA/UL Type 1	Installed inside of any cabinet.	All devices that are listed on pages 103, 107, and 111 are acceptable.	
	J, K, Y	IP54 NEMA 12	Installed inside or outside of any cabinet.	All devices that are listed on pages 103, 107, and 111 are acceptable.	

IMPORTANT For maximum protection of the drive and its internal components, we recommend the use of semiconductor fuses to other methods of circuit protection. Semiconductor fuses reduce the risk of drive damage from power quality events and improves machine and process utilization.

Fusing

The recommended fuse types are listed here. If available current ratings do not match the ratings that are listed in these tables, choose the next higher fuse rating.

- IEC – BS88 (British Standard) Parts 1 & 2, EN60269-1, Parts 1 & 2[(1)], type gG or equivalent must be used.
- UL – UL Class CC, T, RK1, J, or L must be used.

Circuit Breakers

The non-fuse listings in the following tables include inverse time circuit breakers, instantaneous trip circuit breakers (motor circuit protectors), and 140M self-protected combination motor controllers. If one of these methods are chosen for protection, the following requirements apply:

- IEC – Both types of circuit breakers and 140M self-protected combination motor controllers are acceptable for IEC installations.
- UL - Only inverse time circuit breakers and the specified 140M self-protected combination motor controllers are acceptable for UL installations.

(1) Typical designations include, but is not limited to the following; Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

Cable Considerations

This section provides information for cable types and routing.

Power Cable Types Acceptable for 200…600 Volt Installations

Various cable types are acceptable for drive installations. For an in-depth discussion of cable types, including a table of maximum motor cable lengths, see the Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives, publication DRIVES-IN001.

Recommended Cable Design

Rating/Type	Description
600V 75 °C (167 °F)	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.

Wiring Considerations

This section provides information for power, signal, and I/O wiring.

Type		Wire Types	Description	Min Insulation Rating
Power (1) (2)	Standard	–	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.	600V, 75 °C (167 °F)
Signal (1) (3) (4)	Standard analog I/O	–	0.750 mm^2 (18 AWG), twisted pair, 100% shield with drain.	300V, 75…90 °C (167…194 °F)
	Remote pot	–	0.750 mm^2 (18 AWG), 3 conductor, shielded.	
	Encoder/ Pulse I/O < 30 m (100 ft)	Combined	0.196 mm^2 (24 AWG) individually shielded pairs.	
	Encoder/ Pulse I/O 30...152 m (100...500 ft)	Signal	0.196 mm^2 (24 AWG) individually shielded pairs.	
		Power	0.750 mm^2 (18 AWG) individually shielded pairs	
		Combined	0.330 mm^2 (22 AWG), power is 0.500 mm^2 (20 AWG) individually shielded pairs.	
	Encoder/ Pulse I/O 152...259 m (500...850 ft)	Signal	0.196 mm^2 (24 AWG) individually shielded pairs.	
		Power	0.750 mm^2 (18 AWG) individually shielded pairs.	
		Combined	0.750 mm^2 (18 AWG) individually shielded pairs.	
Digital I/O **Safety inputs** **Homing inputs** (1) (3) (4)	Unshielded	–	Per US NEC or applicable national or local code.	300V, 60 °C (140 °F)
	Shielded	Multi-conductor shielded cable	0.750 mm^2 (18 AWG), 3 conductor, shielded.	

(1) Separate control and signal wires from power wires by at least 0.3 m (1 ft).

(2) The use of shielded wire for AC input power is not always necessary, but is recommended.

(3) If the wires are short and contained within a cabinet that has no sensitive circuits, the use of shielded wire is not always necessary, but is recommended.

(4) I/O terminals that are labeled (–) or common are not referenced to earth ground and are designed to reduce common mode interference. Grounding these terminals can cause signal noise. For CE installations, 115V I/O must use shielded cable or have a cable length less than 30 m (98 ft).

Dimensions and Weights

This section provides Frame and rating cross-references.

(2) For Frames 6 and 7, a user-installed flange kit (catalog number 20-750-FLNG4-Fx) is available to convert a code N drive that provides a NEMA/UL Type 4X/12 back.

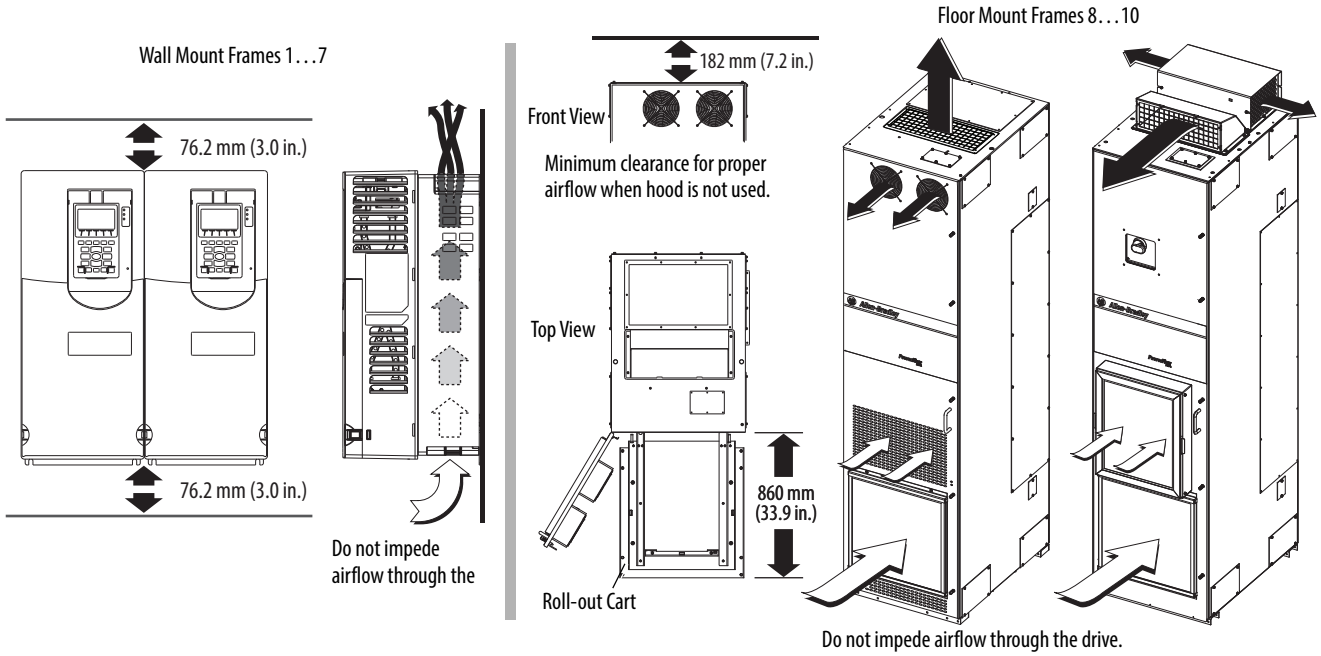
Minimum Mounting Clearances

Specified vertical clearance requirements are intended to be from the drive to the closest object that can restrict airflow through the drive heat sink and chassis. The drive must be mounted in a vertical orientation as shown and must make full contact with the mounting surface. Do not use standoffs or spacers. In addition, inlet air temperature must not exceed the product specification.



Approximate Weights

Drive		Frame Size	Drive Rating		Enclosure Code/Weight, kg (lb)			
			kW (208V[1], 400V, 690V)	Hp (240V[1], 480V, 600V)	F	G	N	R

Drive Options

This section provides information for the drive options.

Human Interface Modules

This section provides information for the human interface modules.

Blank Plate

20-HIM-A6

20-HIM-C6S

Cat. No.	Description
20-HIM-A0	No HIM (blank plate)
20-HIM-A6	Enhanced, LCD, full numeric, handheld/local, NEMA Type 1
20-HIM-C6S	Enhanced, LCD, full numeric, IP66 NEMA Type 4X/12 (for indoor use only) (1)

(1) Includes a 3 m (9.8 ft) catalog number 1202-C30 interface cable for connection to drive.

Human Interface Modules Specifications

Attribute	20-HIM-A6 (1)	20-HIM-C6S (1)
Drive Protocol Data rates	 Drive Peripheral Interface (DPI™) 125 Kbps or 500 Kbps	
Consumption Drive (DPI)	 140 mA at 12V DC supplied by the host drive	
Dimensions, H x W x D 20-HIM-A6 20-HIM-C6S	 116 x 70 x 16 mm (4.57 x 2.75 x 0.63 in.) 180 x 93 x 25 mm (7.08 x 3.66 x 0.98 in.)	
Weight	91 g (3.2 oz)	173 g (5.7 oz)
Temperature Operating Storage	 0…50 °C (32…122 °F) -40…+85 °C (-40…+185 °F)	
Relative humidity	5…95% noncondensing	
Atmosphere	**IMPORTANT:** Do not install the module in an area where the ambient atmosphere contains volatile or corrosive gas, vapors, or dust. If the module is not going to be installed right away, store the module in an area where it is not exposed to a corrosive atmosphere.	
UV radiation	The HIM is not UV rated.	
Vibration Operating Nonoperating	 2.5 G at 5…2000 Hz 5 G at 5…2000 Hz	
Shock Operating Nonoperating	 30 G peak acceleration, 11 (±1) ms pulse width 50 G peak acceleration, 11 (±1) ms pulse width	
UL c-UL CE C-Tick FCC ID IC	UL508C CAN / CSA C22.2 No. 14 EN61800-3 EN61800-3 – –	

(1) **IMPORTANT**: These HIMs are a product of category C2 according to IEC 61800-3. In a domestic environment, this product can cause radio interference in which case supplementary mitigation measures can be required.

Human Interface Module Accessories

Cat. No.	Description
20-HIM-B1	Bezel kit for LCD HIMs, NEMA Type 1 (1)
20-HIM-H10	PowerFlex HIM interface cable, 1 m (39 in.) (2)
	Comm option cable kit (male-male)
1202-C03	0.33 m (1.1 ft)
1202-C10	1 m (3.3 ft)
1202-C30	3 m (9.8 ft)
1202-C90	9 m (29.5 ft)
	Cable kit (male-female) (3)
1202-H03	0.33 m (1.1 ft)
1202-H10	1 m (3.3 ft)
1202-H30	3 m (9.8 ft)
1202-H90	9 m (29.5 ft)
1202-CBL-KIT-100M	DPI cable kit with connectors, tools, and 100 m (328 ft) cable
1202-TB-KIT-SET	DPI cable connector kit
1203-S03	DPI/SCANport™ one-to-two-port splitter cable

(1) Includes a 3 m (9.8 ft) catalog number 1202-C30 interface cable for connection to drive.
(2) Required only when HIM is used as hand-held or remote.
(3) Required with catalog number 20-HIM-H10 for distances up to a total maximum of 10 m (32.8 ft).

Communication Option Kits and Accessories

This section provides information for communication option kits and accessories.

Communication Option Kits and Accessories

Cat. No.	Description (see page 192 for specifications)
20-750-BNETIP	BACnet/IP option module
20-750-CNETC	Coaxial ControlNet option module
20-COMM-C (1)	ControlNet communication adapter (coax)
20-750-DNET	DeviceNet option module
20-COMM-D (1)	DeviceNet communication adapter
20-750-ENETR	Dual-port EtherNet/IP option module
20-COMM-E (1)	EtherNet/IP communication adapter
20-COMM-H (1)	HVAC communication adapter (only Modbus RTU can be used)
20-COMM-K (1)	CANopen communication adapter
20-COMM-L (1)	LonWorks communication adapter
20-COMM-M (1)	Modbus/TCP communication adapter
20-750-PBUS	PROFIBUS DPV1 option module
20-750-PNET	Single-port Profinet I/O option module
20-750-PNET2P	Dual-port Profinet I/O option module
20-COMM-P (1)	PROFIBUS DP communication adapter
20-COMM-Q (1)	ControlNet communication adapter (fiber)
20-COMM-R (1) (2)	Remote I/O communication adapter
20-COMM-S (1)	RS-485 DF1 communication adapter
20-XCOMM-AC-PS1	External communication kit power supply

Communication Option Kits and Accessories (Continued)

Cat. No.	Description (see page 192 for specifications)
20-XCOMM-DC-BASE	DPI external communication kit (3)
20-XCOMM-IO-OPT1	External DPI I/O option board(4)
1769-SM1	Compact I/O™ module (3-channel)
1203-SNM	Serial null modem adapter
1203-SSS	Smart Self-powered serial converter (RS-232) includes 1203-SFC and 1202-C10 cables
1203-USB	Universal serial bus (USB) converter includes 2 m (6.6 ft) USB, 20-HIM-H10, and 22-HIM-H10 cables
1786-TPS	ControlNet T-tap straight
20-750-20COMM-F1	Communication carrier card for PowerFlex 750-Series Frame 1 drives
20-750-20COMM	Communication carrier card for PowerFlex 750-Series Frame 2 or higher drives

(1) Requires a communication carrier card (catalog number 20-750-20COMM or 20-750-COMM-F1). See page 190 for compatibility details.
(2) This product is discontinued.
(3) Only compatible with the following communication options: catalog number 20-COMM-E EtherNet/IP; 20-COMM-C ControlNet (coax); 20-COMM-Q ControlNet (fiber); 20-COMM-D DeviceNet (Series B or later); and 20-COMM-M Modbus/TCP.
(4) For use only with DPI external communications kit, catalog number 20-XCOMM-DC-BASE.

PowerFlex 755 System Resource Allocation

Some drive configurations that use certain communication options can exceed the available resources of the processor on the main control board. This issue is a consideration for PowerFlex 755 drives with firmware revision 2.000 (or later). See the PowerFlex 750-Series Programming Manual, publication 750-PM001, for details.

PowerFlex 750-Series Legacy Communication Options

Most legacy communication adapters (20-COMM) can be used with the PowerFlex 755 drives (with these restrictions):

- **Frame 1** - We recommend that you install catalog number 20-750-20COMM-F1 communication carrier card in port 4. Port 5 is not accessible when this module is installed.
- **Frames 2 and larger** - We recommend that you install catalog number 20-750-20COMM communication carrier card in port 6. If you use port 4 or 5, the adjacent left port is inaccessible to other option modules and can interfere with network cable connections. For details, contact Rockwell Automation technical support.

Adapter		Accesses Ports 0…6 for I/O Connections (implicit and Explicit Messaging)	Accesses Ports 7 and Higher (I/O, Explicit Messaging)	Supports Drive Add-on Profiles	Supports Asian Languages [6]
Cat. No.	Type				
20-COMM-B	BACnet MS/TP	Not compatible			
20-COMM-C	ControlNet (Coax)	Revision 3.001 [4]	Revision 3.001 [4]	See footnote [5]	Revision 3.001 [4]
20-COMM-D	DeviceNet	See footnote [2]	Not compatible		
20-COMM-E	EtherNet/IP	Revision 4.001 [4]	Revision 4.001 [4]	See footnote [5]	Revision 4.001 [4]
20-COMM-H	RS-485 HVAC	Revision 2.009 [3] [4]	Not compatible		
20-COMM-K	CANopen	Revision 1.001 [4]			
20-COMM-L	LonWorks	Revision 1.007 [4]			
20-COMM-M	Modbus/TCP	Revision 2.001 [4]	Revision 2.001 [4]	Not compatible	Revision 2.001 [4]
20-COMM-P	PROFIBUS DP	Revision 1.006 [4]	Revision 1.006 [4]		Not compatible
20-COMM-Q	ControlNet (Fiber)	Revision 3.001 [4]	Revision 3.001 [4]	See footnote [5]	Revision 3.001 [4]
20-COMM-R [1]	Remote I/O	See footnote	Not compatible		
20-COMM-S	RS-485 DF1	See footnote			

(1) This product is discontinued.
(2) Controller must be able to read/write 32-bit floating point (REAL) values.
(3) Supports all three modes of operation (RTU, P1, and N2).
(4) Requires this adapter firmware revision or higher.
(5) Requires firmware revision 1.05 or later of the drive Add-on Profiles for Studio 5000 Logix Designer application.
(6) Chinese, Japanese, and Korean languages are supported at the time of publication.

Environmental Specifications – Communication Modules

Attribute	Description
Temperature Operating Storage	 -10…+50 °C (14…122 °F) -40…+85 °C (-40…+185 °F)
Relative humidity	5…95% noncondensing
Atmosphere	**IMPORTANT:** Do not install the module in an area where the ambient atmosphere contains volatile or corrosive gas, vapors, or dust. If the module is not going to be installed right away, store the module in an area where it is not exposed to a corrosive atmosphere.

(1) The communication kit is powered by a nominal 24V DC. The current consumption that is listed in this table differs from the value that is shown on the label of the communication adapter. The label of the communication adapter is based on the adapter being powered by 5V DC from the drive.

(2) The I/O board is not designed for fast I/O response times. Do not use with input devices that transition (OFF-ON-OFF) faster than the response time. Potential inputs include auxiliary contact inputs from relays or overload, push buttons, and so on.

(3) The I/O board is not designed for fast I/O response times. Do not use with output devices that must transition (OFF-ON-OFF) faster than the response time. Potential output devices include pilot lights or a contact closure reset to another hardware device.

I/O Option Kits

This section provides information for the I/O option kits.

Cat. No.	Description[1]
20-750-ATEX	ATEX option module with 1 thermosensor input connection (requires 11-Series I/O module)
20-750-1132C-2R	24V DC 11-Series I/O module with 1 analog in, 1 analog out, 3 digital in and 2 relay outputs
20-750-1133C-1R2T	24V DC 11-Series I/O module with 1 analog In, 1 analog out, 3 digital in, 1 relay and 2 transistor outputs
20-750-1132D-2R	115V AC 11-Series I/O module with 1 analog In, 1 analog out, 3 digital in and 2 relay outputs
20-750-2262C-2R	24V DC 22-Series I/O module with 2 analog In, 2 analog out, 6 digital in and 2 relay outputs
20-750-2262D-2R	115V AC 22-Series I/O module with 2 analog In, 2 analog out, 6 digital in and 2 relay outputs
20-750-2263C-1R2T	24V DC 22-Series I/O module with 2 analog In, 2 analog out, 6 digital in, 3 digital out, 1 relay, and 2 transistor outputs

(1) I/O option kits are not allowed in Integrated Motion on the EtherNet/IP Network mode.

Safety Options

Four safety options are available for the PowerFlex 750-Series drives:

- Safe Torque Off
- Safe Speed Monitor
- Integrated Safety - Safe Torque Off
- Integrated Safety Functions

Safe Torque Off is ideal for safety-related applications that require the removal of rotational power to the motor without shutting down the drive. Safe Torque Off functionality offers the benefit of quick start-up after a demand on the safety system. Safe Torque Off helps reduce wear from repetitive start-up, and provides safety ratings up to and including SIL CL3, PLe, and category 3.

Safe Speed Monitor is ideal for applications where the speed is controlled and monitored. The Safe Speed Monitor option combines Safe Torque Off capability with integrated safety relay functionality and the Safe Speed control technology in one hardware option. The Safe Speed Monitor option provides safety ratings up to and including SIL CL3, PLe, and category 4.

With the Safe Speed Monitor option, you can safely monitor and control the speed of your application, which allows operators to perform process or maintenance work without stopping the machine.

The Integrated Safety - Safe Torque Off (STO) option module provides either a hardwired or a networked STO function via an Ethernet/IP network.

Input and Output Reactors

This section provides information for input and output reactors.

200…240V, 60 Hz, Three-phase, 3% Impedance

Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Resource	Description
PowerFlex 750-Series Drive Installation Instructions, publication 750-IN001	Provides detailed information on how to install PowerFlex® 750-Series AC drives.
PowerFlex 750-Series Programming Manual, publication 750-PM001	Provides detailed information on I/O, control, and feedback options; parameters and programming; faults, alarms, and troubleshooting.
PowerFlex 20-HIM-A6 and 20-HIM-C6S HIM (Human Interface Module) User Manual, publication 20HIM-UM001	Provides detailed information on HIM components, operation, and features.
PowerFlex 755 Integrated Safety - Safe Torque Off Option Module User Manual, publication 750-UM004	Provides detailed information on how to install and use the Integrated Safety - Safe Torque Off option module.
PowerFlex 750-Series Safe Torque Off User Manual, publication 750-UM002	Provides detailed information on how to install and use the Safe Torque Off option module.
Safe Speed Monitor Option Module for PowerFlex 750-Series AC Drives Safety Reference Manual, publication 750-RM001	Provides detailed information on how to install and use the Safe Speed Monitor option module.
PowerFlex 7-Class Network Communication Adapter User Manuals, publication 750COM-UM	These publications provide detailed information on to configure, use, and troubleshoot PowerFlex 750-Series communication option modules and adapters. To display a list of the available adapters, enter 750com-um in the search field.
PowerFlex Dynamic Braking Resistor Calculator Application Technique, publication PFLEX-AT001	Provides information to help you understand dynamic braking and how to apply dynamic braking to drive systems.
Wiring and Grounding Guidelines for PWM AC Drives, publication DRIVES-IN001	Provides basic information to properly wire and ground PWM AC drives.
Preventive Maintenance of Industrial Control and Drive System Equipment Service Bulletin, publication DRIVES-TD001	Provides information for preventative maintenance and periodic inspection of drive systems.
Safety Guidelines for the Application, Installation, and Maintenance of Solid-State Control, publication SGI-1.1	Provides general guidelines for the application, installation, and maintenance of solid-state control.
Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1	Provides general guidelines for installing a Rockwell Automation industrial system.
PowerFlex 750-Series Service Cart Frames 8...10 Conversion Kit, publication 750-IN017	Provides information on installing the frames 8...10 conversion kit to the PowerFlex 750-Series Service Cart.
PowerFlex 750-Series Service Cart and DCPC Lift Renewal Parts, publication 750-PC106	Provides additional information to acquire spare parts for the PowerFlex 750-Series.
PowerFlex 750-Series Service Cart and DCPC Module Lift Installation Instructions, publication 750-IN105	Provides instructions to setup and use the PowerFlex 750-Series Service Cart and DCPC Lift. Includes spare parts for the service cart and for the high power conversion kit.
PowerFlex 750-Series Spare Parts Installation Instructions, publication 750-IN013	Provides additional information to acquire spare parts for the PowerFlex 750-Series.
Product Certifications website rok.auto/certifications	Provides declarations of conformity, certificates, and other certification details.
EtherNet/IP Network Devices User Manual, ENET-UM006	Describes how to configure and use EtherNet/IP devices to communicate on the EtherNet/IP network.
Ethernet Reference Manual, ENET-RM002	Describes basic Ethernet concepts, infrastructure components, and infrastructure features.
System Security Design Guidelines Reference Manual, SECURE-RM001	Provides guidance on how to conduct security assessments, implement Rockwell Automation products in a secure system, harden the control system, manage user access, and dispose of equipment.
Industrial Components Preventive Maintenance, Enclosures, and Contact Ratings Specifications, publication IC-TD002	Provides a quick reference tool for Allen-Bradley industrial automation controls and assemblies.
Safety Guidelines for the Application, Installation, and Maintenance of Solid-State Control, publication SGI-1.1	Designed to harmonize with NEMA Standards Publication No. ICS 1.1-1987 and provides general guidelines for the application, installation, and maintenance of solid-state control in the form of individual devices or packaged assemblies incorporating solid-state components.
Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, rok.auto/certifications.	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at rok.auto/literature.

Rockwell Automation Support

Use these resources to access support information.

Technical Support Center	Find help with how-to videos, FAQs, chat, user forums, and product notification updates.	rok.auto/support
Knowledgebase	Access Knowledgebase articles.	rok.auto/knowledgebase
Local Technical Support Phone Numbers	Locate the telephone number for your country.	rok.auto/phonesupport
Literature Library	Find installation instructions, manuals, brochures, and technical data publications.	rok.auto/literature
Product Compatibility and Download Center (PCDC)	Get help determining how products interact, check features and capabilities, and find associated firmware.	rok.auto/pcdc

Subject: RE: Help with a basic harmonic analysis
Attachments: Report - MCC10-1 Bus A.rtf; Report - MCC10-1 Bus B.rtf; Report - MCC10-2 Bus A.rtf; Report - MCC10-2 Bus B.rtf

Importance: High

Andy,

I took a look at what you sent me. I also did a harmonic analysis calculation report for MCC 10-1 and MCC 10-2 for both Bus A and B on each. A few things I want to alert you to about my calculations and approach…

- The active harmonic filters are located to deal with the harmonics generated by the loads on MCC10-1. They are not there to deal with the entire system. If that is the intent, they would have to be relocated to be on the main bus system (on drawing 10 E-005.
- The size of the main transformer feeding the system is not listed on the prints but I am assuming 1,500 KVA and based calculations on that. The main bus is rated for 2,000 amps which would be approx. 1,662 KVA but we both know that according to the NEC, the conductor has to be oversized so I am maxing things out at 1,500 KVA.
- I also assumed that all VFDs had an internal DC link choke of 4% impedance (except of VFDs one HP and below which I assumed had none).

So here's what I found out….

- On BUS A of MCC 10-1, you would need a **50-amp active harmonic filter** (agrees with your note). Report is attached for reference. To be honest, I played things safe because on the print, there is a note that says a certain drive has a 5% line reactor. The print also shows line reactors on each VFD but since the note only is pointing to one VFD, I assumed the other VFDs had 3% line reactors. No impact on the filter sizing. Using a 50-amp active harmonic filter will certainly cover the 45.8 amps of corrective current needed and will let you end up with a 4.0% iTDD (goal was to be under 5.0%).
- On BUS B of MCC 10-1, my calculations show you need a **100-amp active harmonic filter** to deal with the 90.1 amps of corrective current needed. Report is attached for reference. The same assumptions were made on BUS B as were on BUS A when it came to the line reactors. Even if I had changed all the line reactors to 5%, it still would require a 100-amp filter as the corrective current needed would be around 84 amps. What is killing you is that on BUS B you have three 30 HP drives with no line reactors (listed as plant water pumps). Even if you added 5% reactors to these three VFDs, you would still need a 100-amp filter as you would need 65.1 amps of coercive current.

Now for MCC 10-2

- BUS A – Assuming all VFDs had 5% line reactors on them, you would end up with an iTDD of 27.2% and only needing 5.1 amps of corrective current. Since the impact is so low, it should not impact your system to any noticeable degree. Report is attached for reference.
- BUS B – With the same assumptions, you would end up with an iTDD of 28.2% and only need 7.3 amps of corrective current. Again, it should not impact your system to any noticeable degree. Report is attached for reference.

Hope this helps.

Terry

Subject: Help with a basic harmonic analysis
Importance: High

Terry:

I have this job and I just submitted on the MCC's.
Rockwell Automation Sales Order# 6505025406.

- All of the packaged drives on Drawing 10E-005 are either 18-pulse or have passive harmonic filters.
- MCC.10-1 on Drawing 10E-006 has a bunch of 6-pulse drives with 5% reactors, but we also have [2] TCI HGA ALC50A00H400 active filters ([2] because that lineup is double-ended M-T-M)
- MCC.10-2 on Drawing 10E-007 has a few small HP drives with 5% reactors and no other harmonic mitigation.

Full submittal can be downloaded if you'd like to see it:

https://www.dropbox.com/t/4CEGMG6efSqGL84a

I struggle with the new harmonics analysis tool. It would be great if you could bang something out so I can send along with the submittal (harmonics analysis is required for the MCC and VFD submittals).

ALSO, even though I sent the attached "*Pages from HGA-Manual*" to Rockwell and included the subtraction CT's in my workup, it would appear the factory ignored me and didn't include them.
I believe those subtraction CT's are required on a main-tie-main (or MLO-tie-MLO which is what I have here). Please confirm.

Allen-Bradley Molded Case Circuit Breakers

The Bulletin 140G family of Molded Case Circuit Breakers (MCCBs) offers a wide range of features include thermal/magnetic and electronic protection devices, high interrupting/breaking capacities and complete line of factory and field installed accessories. The Bulletin 140G MCCBs are ideal for use in line protection of control panels.

Molded case circuit breakers have the following features:

- 10…3000 A current range
- 3- and 4-pole devices
- Space-saving dimensions
- End cap/bolt-on terminals are standard
- Thermal/Magnetic protection: 15…800 A
- Electronic protection: 10…3000 A
- Approved for global application: UL, CSA, CCC, and IEC performance interrupting/breaking capacity
- Wide range of mounting options
- Extensive range of factory- or field-installed accessories

125 A, H-Frame Molded Case Circuit Breakers

Catalog Number Explanation

Complete Circuit Breaker Assemblies — 125 A, H-Frame

Examples given in this section are not intended to be used for product selection. Use ProposalWorks to configure the molded case circuit breaker. These configurations are for selection of all factory-installed options for shunt trips, undervoltage release units, auxiliary contacts, trip units, and alarm contacts. Use the codes from Table g to add on to the molded case circuit breaker cat. no. selected on the following pages to form a complete cat. no. with factory-installed options. ProposalWorks is available from http://www.rockwellautomation.com/global/e-tools/overview.page. Note: Terminal lugs are not supplied and can be ordered separately. See page 85 for available lugs.

b	
Frame/Rating	
Code	Description
H	125 A

c	
Interrupting Rating/Breaking Capacity (based on I_c at 480V)	
Code	Description
2	25 kA
3	35 kA
6	65 kA
0	100 kA
15	150 kA
T	Trip unit

d	
Protection Type	
Code	Description
C	Fixed thermal/fixed magnetic
F	Adjust thermal/ adjust magnetic
H	Electronic LSI- long, short, instant
I	Electronic LSIG -Long, short instant, and ground fault
X	Breaker frame
S	Molded case switch (isolator)

e	
No. of Poles	
Code	Description
3	3 poles
4	4 poles

f	
Current Range	
Code	Description
C	e.g., C30 = 30 A
D	e.g., D16 = 160 A
Blank	Frame only

g			
Factory-Installed Internal Options[1]			
Shunt Trip and Undervoltage Release Units		Auxiliary and Alarm Contacts, Trip Units	
Code	Description	Code	Description
SJ	Shunt Trip, 24…30V AC/DC	KA	1 Aux. Contact, 250V
SK	Shunt Trip, 48…60V AC/DC	AA	1 Aux., 1 Alarm Contact, 250V
SD	Shunt Trip, 110…127V AC; 110…125V DC	BA	2 Aux., 1 Alarm Contact, 250V
SA	Shunt Trip, 220…240V AC; 220…250V DC	DA	1 Trip Unit Alarm Contact, 250V
SB	Shunt Trip, 380…440V AC	FB	2 Aux. Contacts, 400V
SC	Shunt Trip, 480…525V AC	AB	1 Aux., 1 Alarm Contact, 400V
UJ	Undervoltage Release, 24…30V AC/DC	KJ	1 Aux. Contact, 24V
UR	Undervoltage Release, 48V AC/DC	AJ	1 Aux., 1 Alarm Contact, 24V
UD	Undervoltage Release, 110…127V AC; 110… 125V DC	DJ	1 Trip Unit Alarm Contact, 24V
UA	Undervoltage Release, 220…240V AC; 220… 250V DC		
UB	Undervoltage Release, 380…440V AC		
UC	Undervoltage Release, 480…525V AC		
No Digit	No Selection		

(1) Select up to two internal options: 1 for left side mounting (shunt trip or undervoltage release), 1 for right (auxiliary or alarm contact).

Breaker Frames and Trip Units

Frame Trip Unit MCCB

Table 9 - Breaker Frames, 125 A Rated Current

Interrupting Rating (50/60 Hz), UL 489/ CSA 22.2, No. 5 [kA](1)			Breaking Capacity (50/60 Hz), IEC 60947-2								Breaking Capacity (DC), IEC 60947-2 (1)				Cat. No.

250 A, J-Frame Molded Case Circuit Breakers

Catalog Number Explanation

Complete Circuit Breaker Assemblies — 250 A, J-Frame

Examples given in this section are not intended to be used for product selection. Use ProposalWorks to configure the molded case circuit breaker. These configurations are for selection of all factory-installed options for shunt trips, undervoltage release units, auxiliary contacts, trip units, and alarm contacts. Use the codes from Table g to add on to the molded case circuit breaker cat. no. selected on the following pages to form a complete cat. no. with factory-installed options. ProposalWorks is available from http://www.rockwellautomation.com/global/e-tools/overview.page. Note: Terminal lugs are not supplied and can be ordered separately. See page 85 for available lugs.

Mechanical Accessories

Terminal Lugs

You can use mechanical terminal lugs to terminate line and load wiring to the MCCB. The 140G product line includes, as standard, the capability to terminate wiring using customer furnished "crimp-on" ring lug (ring tongue) or forked lug termination.

For customers who prefer terminating wiring to Mechanical Terminal Lugs, the 140G line offers a variety of mechanical terminals lugs to match the frame and application wiring.

Multiple tap terminal lugs are available for those customers terminating multiple wires to a MCCB pole, either to line or load connection. Use of a multi-tap connection can save on panel space, making wiring easier due to using (multiple) smaller diameter wire. For applications following the UL guidelines for panel short-circuit current rating (SCCR), the use of multiple wire termination on the load size permits the termination to be rated at the SCCR level of the circuit breaker, which may allow a higher SCCR than may be available using a separate power distribution block.

Description	Conductor Type	No. of Conductors	Wire Size		Frame Size	Cat. No. (Pkg. Qty. 3)	Cat. No. (Pkg. Qty. 4)

(1) Molded case circuit breaker only

(2) Motor circuit protector only.

(3) Includes the High Terminal cover. Multiple cable logs for use with load side connectors only.

(4) Includes screw for customer supplied connection for voltage tap.

Phase Barriers

Phase barriers allow you to increase the insulation characteristics between the phases at the connections. Phase barriers provide additional electrical clearance between each phase when special connections extend past the circuit breaker housing. They are mounted from the front, even with the circuit breaker already installed.

Description	Frame Size	Length	3-Pole Cat. No. (Pkg. Qty. 4)	4-Pole Cat. No. (Pkg. Qty. 6)
• Provides additional clearance when special connections that extend beyond the frame of the MCCB are used. • Frames G, H, I, J, and K are supplied with 25 mm barriers as standard.	G, I	1 in. (25 mm)	140G-G-PB3M	140G-G-PB4M
		4 in. (100 mm)	140G-G-PB3L	140G-G-PB4L

MIX.BLW-3, MIX.BLW-4

MIX.BLW-1,-2
SBR.BLW-1,-2,-3

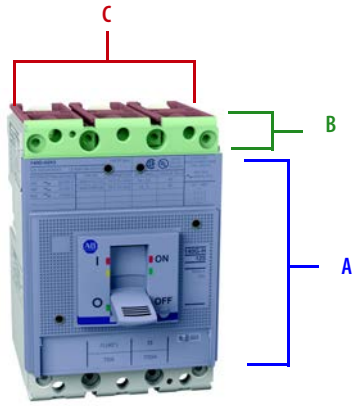
Description	Frame Size	Cat. No. (Pkg. Qty. 2)
• Terminal Cover seal kit provides protection against tampering with installed terminal cover. • Supplied with two (2) screws and two (2) seals. • Sealing wire and lead to be supplied by the customer. • Quantity one required for Line cover, one required for Load cover.	G, H, I, J	140G-G-TS
	K	140G-K-TS
	M, N, NS	140G-M-TS

Ingress Protection

The table indicates the degrees of protection against intrusion and accidental contact according to IEC 60529.

Location	Without Terminal Covers	With High Terminal Covers[1]
A	IP40[2]	—
B	IP20[3]	IP40[2]
C	—	IP40[4]

(1) High terminal covers have a height of 60 mm and are designated with a suffix "H" in the catalog number (140G-G-TC3H)
(2) Also with direct or variable depth rotary operator.
(3) G through M frames.
(4) After installation.



Variable Depth Rotary Operating Kits

When you install MCCBs as the main or feeder circuit breaker in an industrial control panel and you use a non-flanged enclosure, a common method of operating the circuit breaker using a rotary operator mechanism. The use of a rotary operator converts a rotary motion to a vertical motion that "toggles" the MCCB. In this situation, the rotary operator kit consists of:

- External operating handle
- Operating shaft
- Circuit breaker-mounted rotary operating mechanism

Using these kits allows external operation of the circuit breaker with the capability of turning the circuit breaker on/off, or resetting it without having to open the enclosure. Traditionally, these kits are sold with an operating shaft that allows you to use the kit with enclosures of various depths. The operating handles will also provide status indication when the circuit breakers trip.

NFPA 79 Operators

A NFPA 79-compliant Internal Rotary Operating Handle Kit for Bulletin 140G MCCBs, and Bulletin 140MG MCPs and MPCBs is available to address current requirements of the NFPA 79 standard. The NFPA 79 kits are available for G-, H-, I-, J-, K-, M-, and N-Frame Circuit Breaker product lines.

Compliance with the current NFPA 79 standard enables you to maintain control of the main disconnecting means when the door is open; an issue for rotary-operated through-the-door disconnect switches and circuit breakers.

This standard requires that the rotary main disconnecting means be operable without the use of accessory tools or devices (independent of door position) and restates the requirement for an interlocking provision to prevent the closing of the disconnecting means while the enclosure door is open, unless the interlock is operated by a deliberate action. Without this requirement, rotary-operated devices may have a shaft protruding from the panel when the door is open. If the panel is powered and it is necessary to turn power off, it is difficult to de-energize the panel with the operating shaft alone. This standard is to reduce the possibility of personnel not being able to turn an energized panel off with the door opened.

Why is This Relatively Simple Product Important to You?

The trend in the market is moving toward building smaller and less-expensive control panels. To achieve this, many panel builders and OEMs have started using rotary operators because they are easier to install and the non-flanged enclosure is

significantly less expensive. With the introduction of this internal handle, customers can now comply with the NFPA 79 requirement and use the less-expensive, non-flanged enclosure with circuit breakers.

Applications Where NFPA 79 Compliance is Required as an Upgrade

From an installation perspective, the internal handle replaces the existing operating shaft. Externally, the same 140G handle is used. In the case of an existing 140G installation, installing the kit can be as simple as removing the existing operating shaft, measuring it, and then cutting the new internal operating handle shaft to the same length. It is then installed in place of the existing operating shaft.

Easy to Use, No-Tools-Required Internal Handle Operation

When the door is open, the kit provides an internal handle with a positive grip, allowing users to operate the breaker. If the enclosure were opened using the defeater on the external handle with the circuit breaker on, the user could then turn the breaker off using the internal handle, rather than using a tool to rotate the operating shaft.

Compliance with "Deliberate Action Required"

Finally, the handle complies with the NFPA 79 requirement to: "Prevent closing of the disconnecting means while the enclosure door is open, unless an interlock is operated by deliberate action." The internal handle must be pulled out before it can be turned, otherwise the handle itself will just ratchet on the shaft.

Rotary Variable Depth Operators

	Description	Frame Size	Handle Color	Shaft Length	Cat. No.

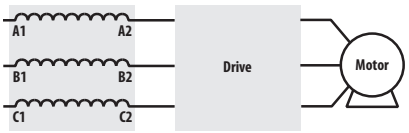
Product Overview

Allen-Bradley reactors help keep equipment running longer by absorbing many of the power line disturbances which can shut down your drive. Allen-Bradley isolation transformers can provide both voltage change and isolation for your variable speed drive. These designs are harmonic compensated and IGBT protected to assure optimum performance in the presence of harmonics.

1321-3R and 3RA Series Line Reactors

Applying Allen-Bradley Line Reactors

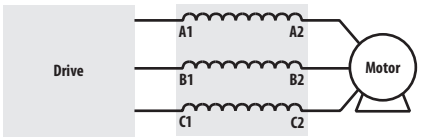
At the Input of the Drive



At the input of a drive, line reactors help protect against surges or spikes on the incoming power lines and help reduce harmonic distortion.

- Eliminate Nuisance Tripping
- Extend Semiconductor Life
- Reduce Harmonic Distortion
- Improve True Power Factor
- Reduce Voltage Notching
- Meet IEEE-519 or EN-61800

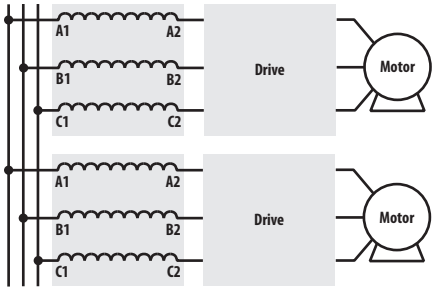
At the Output of the Drive



In long motor lead applications, Allen-Bradley load reactors located between the drive and motor help reduce dv/dt and motor terminal peak voltages. The use of a load reactor also helps protect the drive from surge currents caused by rapid changes in the load.

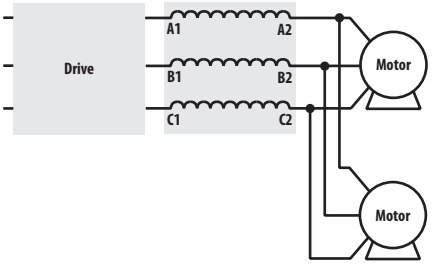
- Protect Motors from Long Lead Effects
- Reduce Output Voltage dv/dt
- Extend Semiconductor Life
- Reduce Surge Currents
- Reduce Motor Temperature
- Reduce Audible Motor Noise

With Multiple Drives



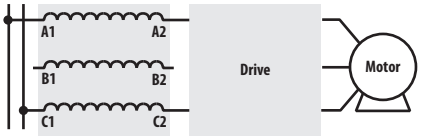
Multiple drives on a common power line should each have their own line reactor. Individual line reactors provide filtering between each drive to help reduce any crosstalk while providing optimum surge protection for each drive.

With Multiple Motors



When more than one motor is controlled by a single drive, a single line reactor can typically be used between the drive and all the motors. Size the line reactor based on the total motor/load horsepower.

With Single-Phase Input



A three-phase reactor can be used for single-phase applications by routing each of the two input power conductors to the outside two coils, and leaving the center coil disconnected. The sum of the inductance of the two coils is the total inductance applied to the circuit. Contact Rockwell Automation Technical Support for assistance in specifying the proper reactor.

Selecting the Correct Impedance Rating

Why is the Right Impedance Rating Important?

Selecting the correct impedance rating is critical for your job. An impedance value too low may not limit peak current. Too high of an impedance may reduce input voltage. Allen-Bradley line reactors offer two impedance ratings.

3% Impedance Rated Reactors to Reduce Nuisance Trips

Allen-Bradley line reactors rated at 3% are typically sufficient to absorb line spikes and motor current surges and will help prevent nuisance tripping of drive and circuit breakers in most applications.

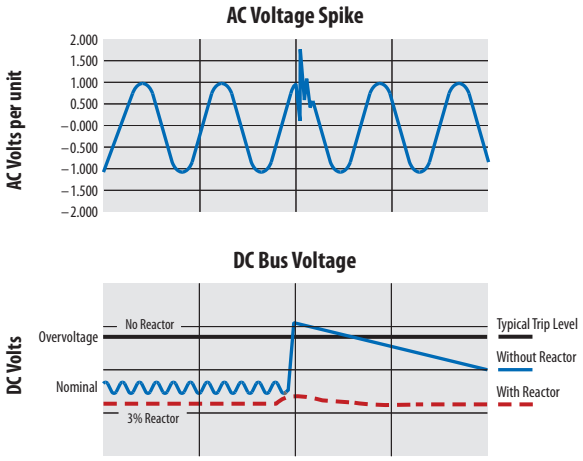
5% Impedance Rated Reactors to Reduce Harmonic Content

Allen-Bradley reactors rated at 5% are best for reducing harmonic current and frequencies. These line reactors help comply with IEEE-519 (not normally used as load reactors).

Voltage Spike Protection

Voltage spikes on AC power lines can cause elevation of the DC bus voltage which may cause the drive to trip on an overvoltage condition.

3% impedance reactors are very effective at protecting drives against voltage spikes and nuisance tripping. Allen-Bradley line reactors absorb these line spikes protecting the drive from nuisance tripping and damage.



Motor Protection

Allen-Bradley load reactors can help protect motors from high peak voltages.

For IGBT drive applications with long drive-to-motor lead lengths, Allen-Bradley load reactors can help protect against fast dv/dt rise times.

Inductance Rating	
Code	**Description**
A	Each reactor current rating has four inductance ratings also available. See the IP00 dimension table.
B	
C	
D	

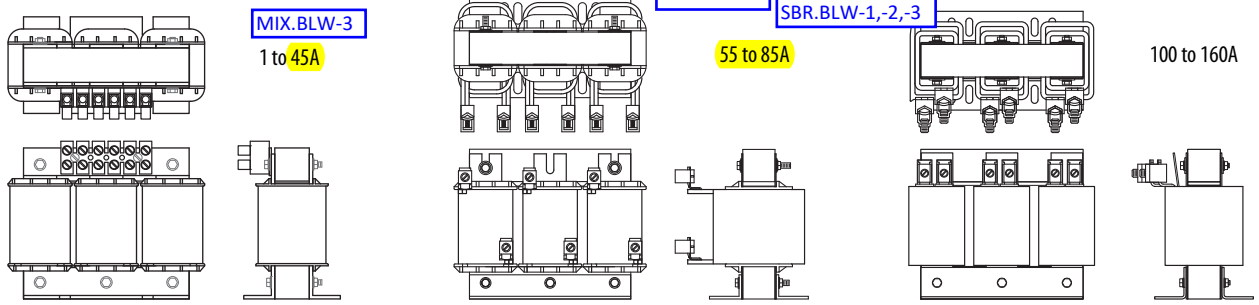
Common Specifications

Specification		Rating
Material	Enclosures	IP11 (NEMA/UL Type 1) — Sheet steel in accordance with UL, NEMA requirements
		IP00 (Open) or IP20 (Open - with finger safe terminals)
	Terminations	1-45 Amp (fundamental) Ratings – Finger guard IP20 terminal block
		80-160 Amp (fundamental) Ratings – Solid copper box lugs
		200-400 Amp (fundamental) Ratings – Copper tab terminals
		401 Amps and Above – Copper tab terminals
Harmonic Compensation	All line reactors are compensated for the additional currents and high frequencies caused by the presence of harmonics	
General Protection	Impedance	3% or 5% based on the fundamental current ratings
	Overload Rating	200% of fundamental current for 30 minutes 300% of fundamental current for 1 minute
	dv/dt Protection	Meets NEMA MG-1, part 31
Electrical	Max. Rated Voltage	600V AC (units with terminal blocks) 690V AC (units with box lugs or tab terminals)
	Max. Switching Freq.	20 kHz
	Fundamental Frequency	Line/Load - 50/60 Hz
	Temperature Rise	135 degrees C average
	Dielectric Strength	3,000 Volts rms (4,243 volts peak)
	Inductance Curve (Typical)	100% at 100% current 100% at 150% current 50% at 350% current (minimum)
	Inductance Tolerance	±10%
	Insulation System	Class N (200 degrees C)
	Impregnation	High bond strength solventless epoxy, 200 degrees C, UL94HB recognized
Environmental	Ambient Temperature	45 degrees C (maximum)
	Altitude	1000 meters (3280 feet)
Agency Approvals	UL-508	File E180243 Component Listed (1-2400 amps) File E180243 UL Listed NEMA Type 1 units (1-2400 amps) Note: Short Circuit rating not required under Exception No.1 of UL508A SB4.2.1 effective 4/25/06
	CSA C22.2, Class N, 200 °C	File LR29753-13 CSA Certified (1 amp - 2400 amps) File E66214, Type 200-18, UL Recognized Insulation System
	CE	TUV certified to EN61558-2-20:2000

Termination

Allen-Bradley reactors rated 45 Amps (fundamental) and below are supplied with an integral mounted terminal block. Reactors rated from 55 to 160 Amps (fundamental) are supplied with box lugs. Reactors rated 200 to 400 Amps (fundamental) will be supplied with front facing copper tabs. Above 400 Amps (fundamental), side facing copper tabs are used. The “3R” and “3RA” designations for the 1321 line reactors indicate the following: 3R = Open Enclosure Line Reactor and 3RA = NEMA 1 Enclosure Line Reactor.

Typical Termination Types and Specifications

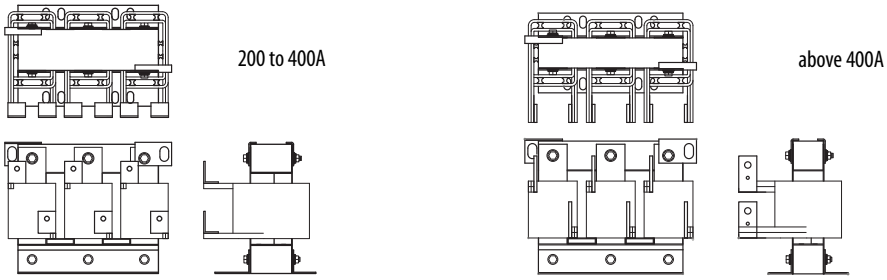


Terminal Blocks

SLU-125 Box Lugs

SLU-225 Box Lugs

Reactor Catalog Number		Termination	Max./Min. Wire Size	Max. Torque
IP00 (Open) or IP20	IP11 (NEMA/UL Type 1)	Type	mm^2 (AWG)	Nm (lb.-in.)
1321-3R1-A to 1321-3R8-D	1321-3RA1-A to 1321-3RA8-D	20A Terminal Block	2.1/0.3 (14/22)	0.51 (4.5)
1321-3R12-A to 1321-3R35-B	1321-3RA12-A to 1321-3RA35-B	65A Terminal Block	16.0/0.3 (5/22)	1.81 (16)
1321-3R35-C to 1321-3R45-C	1321-3RA35-C to 1321-3RA45-C	85A Terminal Block	21.2/0.8 (4/18)	2.26 (20)
1321-3R55-A to 1321-3R80-C	1321-3RA55-A to 1321-3RA80-C	SLU-125 Box Lug	50.0/10.0 (0/6)	5.09 (45)
-A to	1321-3RA100-A to 1321-3RA160-C	SLU-225 Box Lug	120.0-27.0 (0000/2)	16.95 (150)

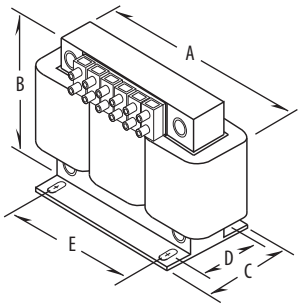


Front Facing Copper Tabs

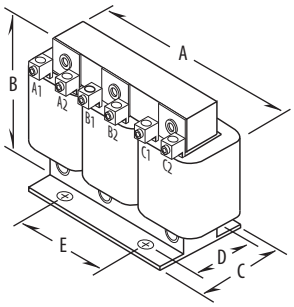
Side Facing Copper Tabs

Reactor Catalog Number		Termination	Contact Surface (H x W)	Hole Diameter	Thickness
IP00 (Open) or IP20	IP11 (NEMA/UL Type 1)	Type	mm (in.)	mm (in.)	mm (in.)
1321-3R200-A to 1321-3R200-C	1321-3RA200-A to 1321-3RA200-C	Front Facing Copper Tab	41.3 x 25.4 (1.63 x 1.0)	10.36 (0.408)	3.18 (0.125)
1321-3R250-B to 1321-3RB250-C	1321-3RAB250-A to 1321-3RAB250-C	Front Facing Copper Tab	57.2 x 19.1 (2.25 x 0.75)	10.31 (0.406)	4.75 (0.187)
1321-3RB320-A to 1321-3R400-A	1321-3RAB320-A to 1321-3RA400-A	Front Facing Copper Tab	44.5 x 38.1 (1.75 x 1.5)	10.31 (0.406)	3.18 (0.125)
1321-3R500-A	1321-3RA500-A	Side Facing Copper Tab	44.5 x 38.1 (1.75 x 1.5)	10.31 (0.406)	3.18 (0.125)
1321-3R500-B to 1321-3R500-C	–	Front Facing Copper Tab	76.2 x 38.1 (3.00 x 1.5)	13.49 & 6.35 (0.531 & 0.25)	6.35 (0.25)
–	1321-3RA500-B	Side Facing Copper Tab	44.5 x 38.1 (1.75 x 1.5)	10.31 (0.406)	3.18 (0.125)

IP00/Open



IP00 /Open, 45 Amps (fundamental) and Below



IP00/Open, 80 Amps (fundamental) and Above

Sizing Guidelines

Fundamental amps are used for sizing the reactor to be equal to or slightly higher than the total motor FLA. Sizing reactors to drive ampere ratings alone may result in mis-sizing the reactor.

Catalog Number	Fundamental Amps	Inductance - mH (Based on Fundamental Amps)	Watts Loss	Dimensions in mm (in.) and Weight in kg (lbs.)					
				A	B	C	D[1]	E	Weight

Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication RA-DU002, available at http://www.rockwellautomation.com/literature/.

Typical Problems, Superior Solutions with V1k

As Pulse Width Modulated (PWM) Drives are incorporated into various applications and processes, the increased energy savings and decreased maintenance on Drives can be offset by increases in Motor failures.

The KLC-Series V1k product family has been designed as an engineered solution for motor failures due to the reflected wave phenomenon.

Reflective Wave Phenomenon

Voltage wave reflection is a function of the voltage rise time (dv/dt) and the length of the motor cables.

The impedance on either end of the cable run does not match, causing voltage pulses to be reflected back in the direction from which it arrived. As these reflected waves encounter other waves, their values add, causing higher peak voltage.

As wire length or carrier frequency increases, the overshoot peak voltage also increases.

Peak Voltages on a 460V system can reach 1200 to 1600V, causing rapid breakdown of motor insulation, leading to motor failure. On 575V systems, the peak voltages can easily reach 2100V. If this is left uncontrolled, insulation failure may occur.

Mitigate Reflective Wave

By combining a patented dampening circuit with a low pass filter, V1k filters:

- Increase the voltage rise time (dt out of dv/dt)
- Prevent voltage spikes from exceeding 1,000 V
- Slow pulse transitions, reduce dv/dt by a factor of 3 or more
- Protect motor and cable insulation

Reduces Common Mode Motor and Bearing Currents

Common Mode current, which lead to shaft voltages, bearing pitting, and bearing fluting is reduced by a minimum of 30%. V1k filters:

- Slow down the pulse dv/dt by a factor of 3, reducing the harmful common mode currents
- Increase bearing life and up-time
- Reduce common mode noise and currents

The V1K prevents voltage spikes from exceeding 1,000 V up to 2,000 feet and limits dv/dt to less than 1,000 V/ μs. The product has been used successfully in applications up to 3,000 feet depending on cable and VFD sizes.

THE dv/dt GUARANTEE

Properly sized and applied, TCI guarantees that the V1k will limit motor terminal peak input voltage to 150% of the bus voltage with a wire lead length of 1,000 feet and a carrier frequency of 4 kHz. Maximum lead length and carrier frequency can vary depending on wire lead type.

If a properly selected, installed and loaded V1k filter fails to meet the guaranteed performance levels, TCI will provide the necessary components or replacement filter at no additional charge.

TCI does not take responsibility for additional installation or removal costs to include but not limited to replacement of third party equipment. Please see TCI web site for minimum system requirements.

Product Specifications

- Ratings: 2 - 750 amps; 480 Volt; 7.5 - 600 HP
- Carrier Frequency: 1 - 12 kHz
- Fundamental Frequency: 0 - 60 Hz (consult factory for applications over 8 kHz and/or 60 - 120 Hz fundamental if the cable lengths exceed 400 feet)
- Efficiency: > 98%
- Insulation Rating: 600V Class
- Insulation Class:
  Class H (180°C) or Class R (220°C)
- Ambient Temperature: 40° C
- Maximum Altitude: 2,000 meters (6,000 feet)
  Derating necessary above 2,000 meters
- Agency Approvals: cUL, UL
- Enclosures: Open, UL Type 1, UL Type 3R
- Lead Length: Specific applications can reach 3,000 feet (consult factory for applications above 1,500 feet)
- SCCR Version Available

Reliable // Advanced Power Quality

V1k Typical Applications:

- Oil and Gas Pumps
- Irrigation Fields, Farms
- Water, Wastewater
- HVAC
- Pulp, Paper

Additional Power Quality Solutions:

KDR Line Reactor
- Prevents nuisance tripping
- Protects the source by lowering current distortion created by the drive

H5 Active Harmonic Filter
- Helps meet IEEE-519
- Reduces harmonic distortion to less than 5% TDD at full load
- Actively monitors the load current while returning the power factor to near unity

HG7 Passive Harmonic Filter
- Helps meet IEEE-519
- Reduces harmonic distortion to less than 7% TDD at full load
- Improves power factor

KRF EMC Filter
- Filter EMI/RFI noise caused by power switching devices
- Meet FCC regulation 15, subpart 3
- Prevents interference with automated lighting circuits, security cameras, and other critical electronics

KMG Motor Protection Output Filter
- Protects the motor by converting the PWM waveform into a near sinusoidal wave
- Prevents voltage overshoots that cause early degradation of insulation systems in motors, transformers, and cables
- Extends motor life by reducing operating temperature

∗ When the primary voltage code **BA** is selected and a 120V AC secondary is desired, the secondary voltage code **SX** should be selected.
❄ VA rating codes **G**, **H**, or **J** with primary voltage over 500V have only cULus approval.
‡ Not available for use with primary voltage code **BA**.
§ VA rating codes **H**…**M** are only available with no fuse block option (**0**).

Selecting a Control Circuit Transformer

For proper transformer selection, three characteristics of the load circuit must be determined in addition to the minimum voltage required to operate the circuit. These are total steady-state (sealed) VA, total inrush VA, and inrush load power factor.

- Total steady-state (sealed) VA is the volt-amperes that the transformer must deliver to the load circuit for an extended period of time — the amount of current required to hold the contact in the circuit.
- Total inrush VA is the volt amperes that the transformer must deliver upon initial energization of the control circuit. Energization of electromagnetic devices takes 30…50 milliseconds. During this inrush period, the electromagnetic control devices draw many times normal current — 3…10 times normal is typical.
- Inrush load power factor is difficult to determine without detailed vector analysis of all the load components. Such an analysis is generally not feasible. Therefore, a safe assumption is 40% power factor.

Selection Process

1. Determine the total inrush VA of the control circuits from the table below. Do not neglect the current requirements of indicating lights and other devices that do not have an inrush VA but are re-energized at the same time as the other components in the circuit. Their total VA should be added to the total inrush VA.
2. Refer to the table below, *Regulation Data — Inrush VA*. If the supply circuit voltage (Step 1) is reasonably stable and fluctuates not more than ± 5%, refer to the 90% secondary voltage column. If it fluctuates as much as ± 10%, refer to the 95% secondary voltage column. Go down the column selected until at the inrush VA closest to, but not less than, the inrush VA of the control circuit.
3. Read to the far left side of the chart. The transformer's continuous nominal VA rating is now selected. The secondary voltage that will be delivered under inrush conditions will be either 85%, 90%, or 95% of the rated secondary voltage, depending on the column selected from the table below, *Regulation Data — Inrush VA*. The total sealed VA of the control circuit must not exceed the nominal VA rating of the transformer selected from the table below, *Typical Magnetic Motor Starter and Contactor Data 60 Hz, 120 Volt, 3-Pole*.
4. Refer to the specification tables on the following pages to select a transformer according to the required continuous nominal VA, and primary and secondary voltage combinations.

Regulation Data — Inrush VA

Inrush VA at 40% Power Factor				Power Factor Adjustments	
Nominal VA Rating	85%	90%	95%	Power Factor	Multiply By
63	347	289	216	100%	0.64

Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication RA-DU002, available at http://www.rockwellautomation.com/literature/.

Allen-Bradley • Rockwell Software

Rockwell Automation

Breadth of Product. Ease of Selection.

World-class Allen-Bradley relays and timing relays by Rockwell Automation are designed, manufactured, and tested to meet your standard and most critical demands. We want you to focus your core activities, not parts. We offer a broad product selection that provides flexibility and industry-proven reliability.

Ideal Applications

- Reduced PLC outputs to meet energy consumption goals
- Provides longer life for PLC, saving money and increasing efficiency
- Switching currents or voltage too high for PLC outputs to handle
- Interfacing two or more system voltages – for example, 24V to 120V
- Controlling multiple loads from safety and interlock commands
- Logic for manual control
- Reduced PLC outputs by using relays to turn many devices on and off simultaneously
- Provides isolation from solid-state output leakage current

LONG LIFE + LOWER POWER CONSUMPTION + PLC COMPATIBILITY = SAVINGS FOR YOU

General Purpose Relays

Features

700-HA

- Pin-style terminals
- Bifurcated contacts with gold plating for low-energy

Control Relays

700-HB

- Blade-style quick connect terminals
- Color-coded voltage type for quick installation

700-HD

- Blade-style quick connect terminals
- Mounts directly to a panel – no DIN Rail required

700-HF

- Plug-in quick connect terminals
- Clear cover to allow visual inspection of contacts

700-HA

700-HB

Solid-State Relays

Features

700-SH

- High continuous load currents are achievable with heat sinks
- LED indicator for Input/Logic ON/OFF status monitoring

700-SH

700-SK

- High-response speed model
- Input and output modules allow flexibility

700-SK

Interposing Relays

Features

700-HL

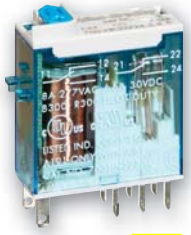
- Screw terminals or cage clamp terminals are available
- Leakage current suppression versions are available to address concerns of nuisance coil turn-on or non-dropout current when converting to PLCs with overage current

700-HL

700-HK

Interposing Relays

- Plug-in blade-style terminals
- Jumper system reduces wearing costs



700-HK

700-HC

- Blade-style terminals
- Same sockets can be used for DPDT or 4PDT versions which improves flexibility and reduces inventory

700-HP

- Plug-in pin style (PCB) terminals
- Economical PCB style design

Specialty Relays

Features

700-HG

- Auxiliary snap action switch versions
- Popular 3V HVAC applications

700-HG

700-HHF

- Blade-style quick connect terminals
- Pilot light available for visual identification of power to the coil

Latching 700-HJ

- Magnetic latching relay for energy savings
- Dual coil version available

Alternating 700-HTA

- Alternating feature allows users to select the primary or secondary load or alternate between the two

700-HJ

General Purpose Timing Relays

Features

700-HR

- Pin-style terminals
- Multiple voltage inputs to address a wide range of applications

700-HR

700-HNC

- Blade-style terminals
- Four different timing functions available

700-HT

- Pin-style terminals
- Higher contact rating for larger loads

700-HT

700-HX

- Pin-style terminals
- LCD display to make setting easier
- Environmentally friendly with flash memory, no battery

700-HX

700-HLF

- Compact size, only 6.2 mm wide when space is critical
- Gold contacts available for low voltage applications

700-FE

- Versions available with 1 N.O. contact
- Small (17.5 mm), effective economy timer

700-FS

- Space-saving 22.5 mm design
- State-of-the-art automatic voltage switching capability available

700-FE

General Purpose Relays

Allen-Bradley relays and timers offer compatible and versatile solutions for control applications – from programmable controllers and motor starters to push buttons and terminal blocks. General purpose relays feature an excellent flexible design and industry-proven reliability. Each relay is tested during manufacturing – before it is used in your demanding application – and carries international approvals that assure you the relay will stand the test of time anywhere in the world.

Allen-Bradley • Rockwell Software

Rockwell Automation

Imitated, But Never Duplicated

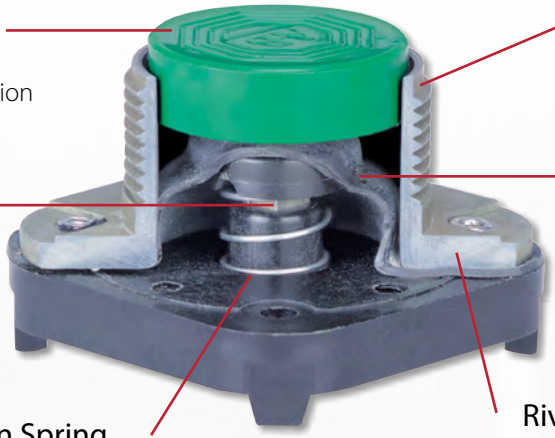
The Allen-Bradley Bulletin 800T and 800H push button product lines are in a class by themselves. They are designed and constructed to perform in the most demanding industrial environments. Bold yet functional, rugged yet attractive, Allen-Bradley's 30 mm push buttons represent the world's most innovative and unique offering.

Solid-Color Button Cap

Thermoplastic polyester resin delivers excellent resistance to corrosive agents/color identification is never lost (no insert to lose).

Actuator Shaft

Rugged, dependable performance assured by zinc alloy casting.



Operator Bushing

Die cast zinc alloy gives strength and stability in installation.

Diaphragm Seal

Provides a complete blanket of protection from liquids, particles and corrosive agents.

Return Spring

Stainless steel formed wire delivers consistent operation and long life.

Riveted Construction

Operator bushing, diaphragm seal and base plate are secured together by four steel rivets, providing durability and tamper resistance.

Fast, Easy Installation

Operator with factory installed contact blocks

Gaskets provide type 4/13 ingress protection

Legend plate

Thrust washer with anti-turn tab

Mounting ring

Worldwide Solutions

- Designed to worldwide standards

Switching Safety

Selector Switches

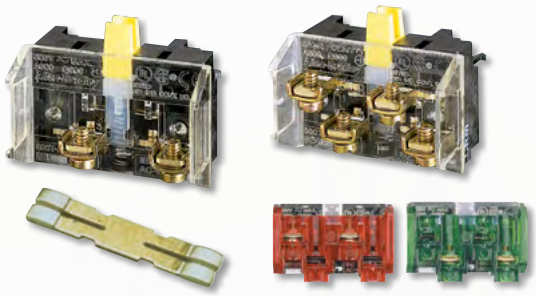
- Positive detent – prevents the switch from hanging up between positions
- Constant energy – minimizes accidental switching to an unwanted change in contact state

Advanced Switching Functionality

Allen-Bradley's wide range of contact blocks, offering features and capabilities found no where else in the industry, can address more applications and environments.

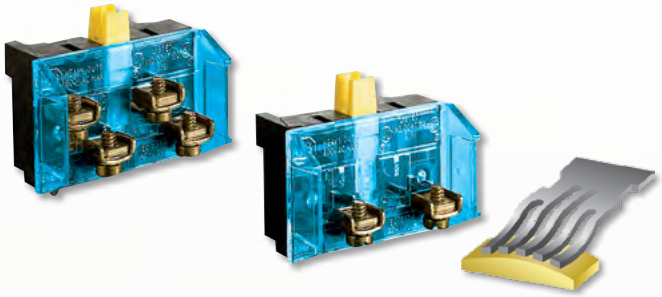
Standard Contact Blocks

- 10 A max., A600 rated – for general purpose use
- Flexible bifurcated spanner provides increased contact reliability
- Pure fine silver contacts resist corrosion
- Self-lifting saddle clamps simplify wiring
- Clear side plates allow easy inspection of contacts
- Optional color-coded finger safe (IP2X) versions



PenTUFF™ Contact Blocks

- 2.5 A max., C300 rated
- Low voltage switching reliability to 5V DC, 1 mA – ideal for interfacing with programmable logic controller input circuits
- Direct drive pentafurcated contact design
- Spanner made from corrosion resistant inert precious metals
- Optional finger-safe (IP2X) versions



Explosion-Protected Contact Blocks

- Class I Div. 2 (Groups A, B, C and D) certified
- 1-NO, 1-NC, A600 rated (10 A max)
- Positive opening NC contact, conformance to global E-stop standards
- Rugged construction ideal for applications with high shock and vibration
- Stackable design allows maximum circuit flexibility

Self-Monitoring™ Contact Blocks

- Ensures that the normally closed contacts will open when the E-stop is actuated
- 10 A max., A600 rated
- Bifurcated spanner with pure fine silver contacts
- Color-coded yellow for easy identification
- IP2X finger safe protection standard

INTRODUCTION

A harmonic study has been prepared as called for in the specification for the subject facility. The study is based on the guidelines in IEEE standard 519-2014 (IEEE Recommended Practice and Requirements for Harmonic Control in Electric Power Systems).

The use of non-linear loads has become very common in most electric power systems. One of the most widely used non-linear loads are static power converters, such as those used for adjustable (variable) speed drives, which can convert ac to dc, dc to ac, etc.

Non-Linear loads change the sinusoidal nature of the ac power current, thereby resulting in the flow of harmonic currents in the ac power system. These harmonic currents can cause interference with communication circuits; excessive heating, pulsating and reduced torque in motors and generators; increased heating and voltage stress in capacitors; and mis-operation in electronics, switchgear and relaying.

A harmonic analysis is used to simulate steady state harmonic distortion and resonance in the electric power system due to the presence of non-linear loads. The results of this simulation can be used as a basis for determining ways to mitigate the adverse effects of harmonics on the system.

We previously performed a short circuit study, protective device coordination study, and an arc flash and shock hazard analysis for the subject facility. The previous study data is being used as the starting point for the harmonic analysis.

The system reviewed by this study is shown on the following one line diagram.

CONCLUSION

Under the operating conditions defined in this study, and according to specification section 16260 and the loads defined under Attachment A of those specifications, **the harmonic limits specified are met** by the equipment proposed for this system.

HARMONIC ANALYSIS

Harmonic calculations were performed on the system as called for in the specifications for the subject facility and defined on the one line diagram and the accompanying computer printout.

IEEE-519 defines the voltage and current harmonic distortion allowed at the utility point of common coupling (PCC). For this system, the PCC (per IEEE-519) is at the 22,860V primary service. However the harmonic distortion at the 480V main switchboard SWBD.10-1 was reviewed instead, as called for in the specifications.

Utility Source: On 5/10/2021, Brian Mello of Eversource indicated the utility available fault current at this 480V service is 38,234A, based on a 1000kVA (1203FLA@480V) transformer being installed at this service. This value was therefore used as the starting point of the calculations.

Generator Source: The Kohler generator submittal indicates a 900kW generator is being provided for this project as called for on contract drawing 10 E-005. However, the alternator data sheet from the Kohler submittal provides per unit reactance values based on a 912kW alternator rating. Therefore, the calculations are based on the 912kW alternator rating (with the associated per unit reactances).

Source Transfers: The main and tie circuit breakers in the 480V main switchboard (SWBD.10-1) are electrically interlocked to prevent the utility and generator sources from being connected in parallel.

System Loads: The calculations in this analysis were based on the harmonic (ie. VFD controlled / non-linear) loads indicated in Attachment A of Specification 16260, as called for the in the specifications. The loads that are out of service (per Attachment A) are shown out of service on the one line diagram in this report.

Total Loads - Normal Source: The above loads yield about 602A of non-linear loads (~50% of the 1000kVA utility transformer capacity) and 362A of linear loads (~30% of transformer capacity), for a total load of 964A (~80% of transformer capacity).

Total Loads - Generator Source: In terms of the generator, the non-linear loads are about 45% of the 90kW generator capacity, and the linear loads are about 25% of generator capacity, with the total load being about 70% of the generator capacity.

VFDs: The AB/Rockwell shop drawings for the VFDs indicate the 50Hp motors will be operated through 18-pulse VFDs, as specified. By design, the 18-pulse VFDs limit the harmonic distortion to less than 5%. Therefore a typical harmonic model with 4.6% I_THD was used for these 50Hp non-linear loads in the calculations.

The AB/Rockwell shop drawings for the VFDs and the MCCs indicate the motors smaller than 50Hp are operated through 6-pulse VFDs (PowerFlex 753) with 5% line reactors. Published AB information indicate these VFDs are equipped with a 5% DC choke (ie. buffered). A 5% reactance generally corresponds to approximately 35% I_THD. Whereas a review of the Rockwell harmonic estimator for 6 pulse buffered drives yields only about 33% I_THD. The addition of the 5% line reactors brings the equivalent total reactance to around 8%, which equates to about 28% I_THD. Therefore a typical harmonic model with 28% I_THD was used in the calculations for all non-linear loads smaller than 50Hp.

Active Harmonic Filters: The AB/Rockwell shop drawings for the MCCs indicate two 50A active harmonic filters are proposed at MCC.10-1A and MCC.10-1B. Based the attached harmonic distortion calculator spreadsheet these filters are more than adequate to address the harmonic distortion expected from the non-linear loads in this system. One 50A filter is adequate when the system is fed by the utility (stronger) source, and two 50A filters are adequate when the system is fed by the generator (weaker) source. This is confirmed by the attached SKM HiWave harmonic distortion calculations (Case 1-ALT and Case 2-ALT).

Calculations: The following cases were analyzed as called for in the specifications:

Case 1 (normal):	SWBD.10-1 is switched the normal (utility) source. The active harmonic filters are off line.
Case 1 - ALT:	Same as Case 1, except for the following: The harmonic sources were removed from the 4-30Hp motors being fed from MCC.10-1A and MCC.10-1B. One of the 50A active harmonic filters is more than enough to account for the harmonic sources from these motors.
Case 2 (emergency):	SWBD.10-1 is switched to the emergency (generator) source. The active harmonic filters are off line.
Case 2 - ALT:	Same as Case 2, except for the following: The harmonic sources were removed from the 4-30Hp, 3-25Hp, and 1-20Hp motors fed from MCC.10-1A and MCC.10-1B. The two 50A active harmonic filters are more than enough to account for the harmonic sources from these motors.

The calculations were performed using the PowerTools for Windows (PTW) HI_WAVE computer program which was developed by SKM Systems Analysis, Inc. The program calculates percent Total Voltage Distortion (V_THD) at each node in the system and the percent Total Current Distortion (I_THD) across each conductor or transformer in the system.

The Harmonic calculation results are shown on the following printouts, and also summarized below. Pages 3 and 4 of each printout provide the harmonic source parameters used in the calculations. Pages 8-11 provide the percent Total Voltage Distortion (V_THD) at each piece of equipment. Pages 12-21 provide the percent Total Current Distortion (I_THD) across each conductor or transformer. Pages 22 and 23 detail the harmonic voltage and current distortion respectively by individual harmonics at SWBD.10.1.

The calculations in this report provide an estimate of harmonic distortion in this system based on the information and assumptions noted in this report. The calculation results may differ from actual system performance due to site and application variables, operating conditions, component tolerances and/or other unanticipated conditions. There is no guarantee associated with the calculations included in this report.

Summary of Results:

CASE 1 (normal)	Calculated Distortion V_THD	I_THD	IEEE 519 Limit V_THD	I_THD	Pass? V_THD	I_THD
Case 1 (normal) - no AHF	1.89%	11.158%	5%	8%	Yes	No
Case 1 (normal) - with AHF	1.30%	7.42%	5%	8%	Yes	Yes
Case 2 (emergency) - no AHF	5.82%	10.61%	8%	5%	Yes	No
Case 2 (emergency) - with AHF	2.39%	4.08%	8%	5%	Yes	Yes

Conclusions: Under the operating conditions defined in this study, the system is in compliance with the IEEE standard 519-2014 recommended limits for total harmonic voltage distortion (with or without the active harmonic filters) and for total harmonic current distortion (with the active harmonic filters).

Any increase in linear loads (pure motors or resistive loads) will further reduce the percentage of harmonic current distortion, but will not significantly impact the voltage distortion.

Whether these results are acceptable, based on the expected actual loading of this system, and/or whether any additional harmonic mitigating equipment is desired/required for this system should be reviewed by the engineer responsible for this facility.

THD-I	THD-V
YES	YES

42 Amps Correction Required

Apply Active Filter Solution

ACTIVE FILTER SOLUTION APPLIED

Project Name: _____
GE-SE: _____
Date: _____
Application Engineer: _____

NOTES: Distortion calculations are based on 0% background distortion, balanced input line voltage (+/-1%) and source impedance of 1.5% to 6%, and all non-linear and linear loads operating simultaneously at full load. Matrix Filters cannot operate linear loads (by pass) Actual distortion may change (increase) under other system conditions. Motor FLA=4 Pole NEC ratings. Filter selections are based on GE AF-300 P11 drives . PCC is defined as Buss (where drive connects to plant power). Filters are rated for GE AF-300 G11 & GE AF-300 P11 drives. THD-V per IEEE519-1992 is defined as 5% for most applications except for critical applications like Hospitals that are defined as 3%.
FOR ESTIMATION PURPOSES ONLY! ALL SOLUTIONS BASED ON GE PRODUCT!
Contact Mark Ritter - Fort Edward for multi drive Matrix Filter applications.

STUDY CRITERIA

Studies Selected To Run:	
Load Flow:	Yes
Frequency Scan:	Yes
Harmonic Distortion:	Yes
Load Flow Study Setup Options	
Utility Impedance:	Yes
Transformer Phase Shift:	Yes
Solution Method:	Exact
Load Specification:	Connected Load
Generation Acceleration Factor:	1.00
Load Acceleration Factor:	1.00
Bus Voltage Drop:	5.00
Branch Voltage Drop:	3.00
HI_WAVE Study Setup Options	
Fundamental Frequency:	60 Hz
Max. Harmonic Order:	50
Include Triplet Harmonics Path (Static Load):	No
Include Triplet Harmonics Path (Ind. Motor):	No
Modify Motor Z by Load Factor (Ind. Motor):	No
Modify Load Z by Load Factor (Static Load):	No
HI_WAVE Study Setup Options for Frequency Scan	
Scan Impedance Option:	Scan Self Impedance
Use Positive Sequence Network:	Yes
Use Negative Sequence Network:	Yes
Use Zero Sequence Network:	No
Model Transformer Tap:	Yes
Model Transformer Phase Shift:	Yes
Report Bus Equivalent Impedance:	No
Number of Scan Steps Per Order:	1
HI_WAVE Study Setup Options for Distortion	
Use Positive Sequence Network:	Yes
Use Negative Sequence Network:	Yes
Use Zero Sequence Network:	Yes
Model Transformer Tap:	Yes
Model Transformer Phase Shift:	Yes
Fundamental Solution:	Use Load Flow Result
Report Option:	All Distortions and Violations
Current Limits:	IEEE 519-2014 Std, Current Distortion Limit Table 3 & 4, Selected buses as PCC

(without active harmonic filters)

S T U D Y C R I T E R I A

Studies Selected To Run:	
Load Flow:	Yes
Frequency Scan:	Yes
Harmonic Distortion:	Yes
Load Flow Study Setup Options	
Utility Impedance:	Yes
Transformer Phase Shift:	Yes
Solution Method:	Exact
Load Specification:	Connected Load
Generation Acceleration Factor:	1.00
Load Acceleration Factor:	1.00
Bus Voltage Drop:	5.00
Branch Voltage Drop:	3.00
HI_WAVE Study Setup Options	
Fundamental Frequency:	60 Hz
Max. Harmonic Order:	50
Include Triplet Harmonics Path (Static Load):	No
Include Triplet Harmonics Path (Ind. Motor):	No
Modify Motor Z by Load Factor (Ind. Motor):	No
Modify Load Z by Load Factor (Static Load):	No
HI_WAVE Study Setup Options for Frequency Scan	
Scan Impedance Option:	Scan Self Impedance
Use Positive Sequence Network:	Yes
Use Negative Sequence Network:	Yes
Use Zero Sequence Network:	No
Model Transformer Tap:	Yes
Model Transformer Phase Shift:	Yes
Report Bus Equivalent Impedance:	No
Number of Scan Steps Per Order:	1
HI_WAVE Study Setup Options for Distortion	
Use Positive Sequence Network:	Yes
Use Negative Sequence Network:	Yes
Use Zero Sequence Network:	Yes
Model Transformer Tap:	Yes
Model Transformer Phase Shift:	Yes
Fundamental Solution:	Use Load Flow Result
Report Option:	All Distortions and Violations
Current Limits:	IEEE 519-2014 Std, Current Distortion Limit Table 3 & 4, Selected buses as PCC

18,283 I_{sc} Amps

XFMR I_{sc} Calculation:	52,296 Amps
XFMR I_{sc} Calculation:	3,007 Amps
I_{load} Calculation:	1,125 Amps
I_{sc} / I_{load} Calculation:	16.25 Per IEEE 519

Project Name: _____

GE-SE: _____

Date: _____

Application Engineer: _____

Service KVA	2500
Service Z%	5.75
Primary Voltage	12,000
Secondary Voltage	480

THD-I Estimation:	5.0 %
THD-I Required:	5.0 %
THD-V Estimation:	0.8 %
THD-V Required:	5.0 %

System IEEE519 Compliant?

THD-I	THD-V
YES	YES

73 Amps Correction Required

Apply Active Filter Solution

ACTIVE FILTER SOLUTION APPLIED

NOTES: Distortion calculations are based on 0% background distortion, balanced input line voltage (+/-1%) and source impedance of 1.5% to 6%, and all non-linear and linear loads operating simultaneously at full load. Matrix Filters cannot operate linear loads (by pass) Actual distortion may change (increase) under other system conditions. Motor FLA=4 Pole NEC ratings. Filter selections are based on GE AF-300 P11 drives . PCC is defined as Buss (where drive connects to plant power). Filters are rated for GE AF-300 G11 & GE AF-300 P11 drives. THD-V per IEEE519-1992 is defined as 5% for most applications except for critical applications like Hospitals that are defined as 3%. FOR ESTIMATION PURPOSES ONLY! ALL SOLUTIONS BASED ON GE PRODUCT! Contact Mark Ritter - Fort Edward for multi drive Matrix Filter applications.

First Step - ENTER Service Data!

Second Step
ENTER ALL LOADS!!

Third Step
Evaluate Harmonic Mitigation Methods!!

Non- Linear Loads

Linear Loads

Misc. Load in Amps: 362

WARRANTY

It is the intent of Coordinated Power Systems, Inc. to provide a study which is accurate and based on sound professional judgment. If it is found that any portion of this study does not satisfy this goal, Coordinated Power Systems, Inc. will correct that portion of the study at no charge providing we are notified in writing within one year of submission of the study. The warranty does not include modifications to the study resulting from design changes to the system after the study has been initiated.

LIMITATION OF LIABILITY

The foregoing warranty represents the sole responsibility of the company. Coordinated Power Systems, Inc. shall not be liable for any consequential damages. It does not assume responsibility or liability for loss, injury or damage to equipment that may result from the failure of equipment or the system to operate in accordance of the predictions or recommendations of the study.

O&M Manual Layout Requirements

- Follow the requirements specified in 01030 SPECIAL REQUIREMENTS Section 1.28
  - Submit Operation and Maintenance Manual Review checklist with O&M Manual (referenced in Specification 01030 SPECIAL REQUIREMENTS Section 1.28 C)
- The front cover shall be used in three (3) places.
  - It shall be inserted in the clear pocket of the exterior front of the binder
  - It shall be the first page when you open the binder
  - A properly sized version of the front cover shall be inserted in the clear pocket of the exterior spine of the binder.
- The front cover shall include: *United's cover sheet for each equipment section in this submittal
  - Name of manufacturer
  - Name of equipment included, along with model number(s)
  - State the words "Operation & Maintenance Manual"
  - State the project title
    "Town of Orleans, Massachusetts
    Contract No. 2019-02 – Downtown Area Collection System and Pumping Stations"
  - State the project number "AECOM Project No. 60587515"
- The next page shall begin the Table of Contents for the Binder. The TOC shall be organized by sections and list out all subjects under each section.
- The sections shall be separated by tabs that clearly label the section name and number.
- The binder shall make use of a header throughout that includes the name of the manufacturer, equipment and section name.
- The binder shall make use of a footer throughout that includes the project number, the section name and "page *number* of *number*" for the section the page falls under.
- Three (3) hard copies and an electronic copy in PDF format shall be provided to the Contractor.

AASHTO H20-44 ALUMINUM FLOOR ACCESS DOORS

MATERIAL DATA SHEET

1. Door leaf shall be ¼-in. thick mill finish type 5052 aluminum diamond pattern plate, reinforced with a ¼-in. aluminum flat bar to achieve an AASHTO H-20-44 wheel load rating.

2. Frame members shall be ¼-in. thick 6063-T5 mill finish aluminum extrusion.

3. The following items shall be Type 316 Stainless Steel: hinges, hold-open arm and all attaching hardware.

4. Units shall carry a Ten (10) year Guarantee against defects in material and/or workmanship.

***5052 has excellent resistance to corrosion--especially in a marine environment, good workability, weld ability, and good finishing characteristics.**

Type THS & THD

AASHTO H20-44 ALUMINUM FLOOR ACCESS DOORS

SPECIFICATION

The floor access door shall be Model THS (single leaf) or THD (double leaf) as manufactured by U.S.F. Fabrication, Inc. with the size being specified on the plans.

Door leaf shall 1/4-inch thick aluminum diamond plate reinforced to an AASHTO H20-44 live wheel load. (The floor access door is designed for off-street locations that may occasionally receive AASHTO H-20-44 wheel loads).

The drainable frame shall be minimum 1/4" in. thick extruded aluminum with an integral anchor flange and door seat on all four sides.

The floor access door shall be equipped with a flush lifting handle that does not protrude above the cover, and a 316 stainless steel hold open arm with a secondary latching mechanism/release handle that secures the cover in its full upright, open position.

The door shall have 316 stainless steel hinges with 316 stainless steel tamper resistant bolts/locknuts.

The door shall have stainless steel open horizontal springs to assist in opening the cover and reducing the force during closing.

The door shall be equipped with a 316 stainless steel watertight slamlock with threaded plug, removable outside key and fixed inside handle. The slam lock latches onto a 316 stainless steel striker plate that is bolted to the frame.

All parts of the frame in contact with the concrete shall have a coating of bituminous paint.

An adhesive backed vinyl material that protects the product during shipping and installation shall cover the entire top of the frame and cover.

Installation shall be in accordance with the manufacturer's attached instructions. The door shall be manufactured and assembled in the United States.

Manufacturer shall guarantee the door against defects in materials and workmanship for a period of ten (10) years.

Type THS & THD

AASHTO H20-44 ALUMINUM FLOOR ACCESS DOORS

STORAGE, HANDLING, INSTALLATION and MAINTENANCE

STORAGE:

Prior to installation floor access doors should be stored in a dry area that is free of dirt and debris. Floor access doors should be stored on the original shipping pallets.

HANDLING:

Standard practice precautions should be taken whenever handling or moving palletized floor access doors by forklift.

INSTALLATION:

For proper installation, U.S.F. Fabrication, Inc. recommends the following:

1. Formwork must be flush to the inside of frame.

2. Secure unit to formwork using standard construction practices.

3. When pouring concrete, cover should be in the closed position.

4. Concrete to finish flush with top of unit framework.

5. Unit shall be left in framework for not less than 24 hours.

6. Clean all excess concrete from frame, cover seat; and in the case of a trough type frame, the drainage coupling.

Copyright © 2013 Eagle Manufacturing Group. All rights reserved.

MAINTENANCE:

Since all components of the floor access doors manufactured by U.S.F. Fabrication, Inc. are manufactured of aluminum or stainless steel, they require minimal maintenance. For optimum product life the manufacturer recommends the following procedures be performed annually:

1. **Apply graphite to the interior of all locking devices.**
2. **Apply a light coating of machine oil to all hinges and hardware.**
3. **Remove all debris from the cover seat and around hinges.**
4. **Check and tighten any loose hardware.**
5. **In the case of a trough frame model, remove loose debris from the trough.**

Copyright © 2013 Eagle Manufacturing Group. All rights reserved.

QP1090-1 LIMITED WARRANTY

USF Fabrication Inc. warrants the following products against defects in material or workmanship from the time of delivery:

- **Steel Hatches and Access Doors- 5 years**
- **Aluminum Hatches and Access Doors- 10 years**
- **Miscellaneous Fabrication- 1 year**

USF Fabrication Inc. will pay labor and standard freight costs for warranty service for the product warranty period from the time of delivery.

USF Fabrication Inc. sole obligation under said warranty is to repair, or at its option, replace the defective part. The buyer shall have no other remedy. All special, incidental and consequential damages are excluded.

The warranty shall be voided by alterations of equipment except by USF Fabrication Inc., or tampering with, improper installation or maintenance, accident or misuse. This warranty expressly excludes all damage to these products resulting from careless or neglectful transportation.

USF Fabrication Inc. will not be responsible for any warranty work done without first obtaining USF Fabrication's written consent.

Except as provided herein, USF Fabrication Inc. shall have no LIABILITY OR RESPONSIBILITY to customer or any other person or entity with respect of liability, loss or damage, or alleged to be caused directly or indirectly by our products.

For Warranty service, customers must contact USF Fabrication Inc. - Customer Service Department Toll free at 1-800-258-6873.

This warranty gives you - the Consumer specific legal rights, and you may also have other rights which vary from state to state.

TABLE OF CONTENTS PAGE

General Information	2
Installation Instructions	2-3
Operation Instructions	4-5
Maintenance	6
Troubleshooting	7
Parts Information	8-9

⚠ WARNING:

1. Read all applicable directions and instructions prior to any maintenance, troubleshooting or installation.

2. Personnel involved in the installation or maintenance of valves should be constantly alert to potential emission of pipeline material and take appropriate safety precautions. Always wear suitable protection when dealing with hazardous pipeline materials.

3. Order parts from your local Pratt sales representative or directly from Henry Pratt Company. When ordering parts, please include the serial number located on the valve tag.

NOTE: "WARNING" and "CAUTION" messages (flagged with an exclamation symbol) indicate procedures that must be followed exactly to avoid equipment damage, physical injury, or death.

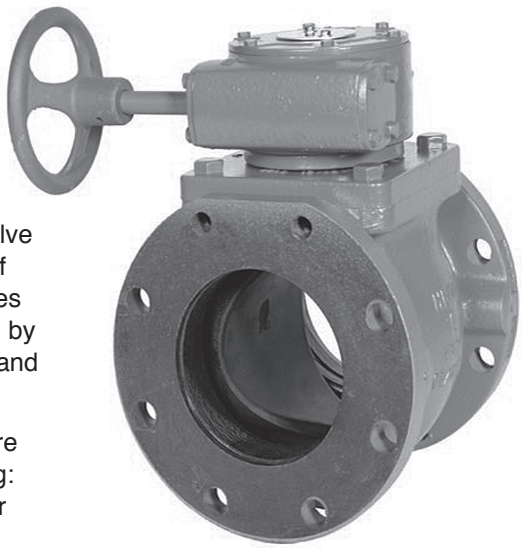
FUNCTIONAL DESCRIPTION

Plug valves are designed with eccentric rubber disc seating surfaces. The plug rotates 1/4 turn to provide shutoff in pipes. The eccentric seating action provides for tighter shutoff as the actuator is adjusted to provide for more rotation. The valve can be adjusted to a maximum of 10 degrees over travel. The valves can be used to regulate flow rate by positioning the plug between 15 and 90 degrees open.



Manually operated plug valves are powered with one of the following: 2" direct nut, lever handle or gear actuators, which convert multiple handwheel, chainwheel, or nut input turns into 1/4 turn valve operation. The travel of the valve plug is limited by physical stops in the torque collar for wrench operated valves.

⚠CAUTION: Forcing the handwheel, chainwheel or nut against the stops will not provide tighter shutoff of the valve and may damage the actuator. Only actuator adjustments will affect valve shutoff.

Motor Operated Valve

Motor operated valves are powered with gear actuators, which convert multiple motor input turns into 1/4 turn valve operation. The travel of the valve plug is limited by limit switches in the motor housing and physical stop in the actuator housing. Valve shutoff is affected by limit switch and physical stop settings.

⚠CAUTION: Improperly set limit switches and/or physical stops may damage the motor and/or actuator.

Hydraulically operated valves are powered with a gear box and double acting cylinder. The linear stroke of the cylinder is converted to 1/4 turns operation by the gear box. Auxiliary controls are provided to direct hydraulic power to the cylinder and to control the operating speed of the cylinder.

INSTALLATION

When installing the plug valves, the seat end should be noted. The seat end of the valve is cast in raised letters on the appropriate flange of the valve. Generally, straightway valves should be installed with the highest pressure applied from the opposite end from the seat. This will tend to push the plug into the seat On pump discharge installations the seat end should be towards the pump.

In cases where shut-off is required in both directions, the valve should be installed so that the highest differential pressure at shut-off is opposite the seat end.

When the service is of a clogging type, with suspended solids likely to build up in the valve body, it is recommended that the valve be installed with the media entering the seat end first. In extreme cases, the valve should be installed with the plug horizontal and rotating upward into the top portion of the valve body cavity to open. See Page 6 for recommended installation options.

Class 125 flanged end valves have ANSI B16.1 flat faced 125/150 flanges. Standard ANSI B16.21 flanges and gaskets should be used to install the valves in the pipeline.

Certain size valves utilize tapped holes on the top and bottom of the flange where a backing nut is not possible. Please check specific drawings for detailed information on sizes and quantities of hexagon head screws required on these valves.

Prior to installing valves, they should be cycled open and closed several times to ensure they are in good working order and have not been damaged during shipment or storage.

INSTALLATION OPTIONS

The type of materials carried in the pipeline and the location of the valve determine the correct installation orientation.

Liquids Without Suspended Solids

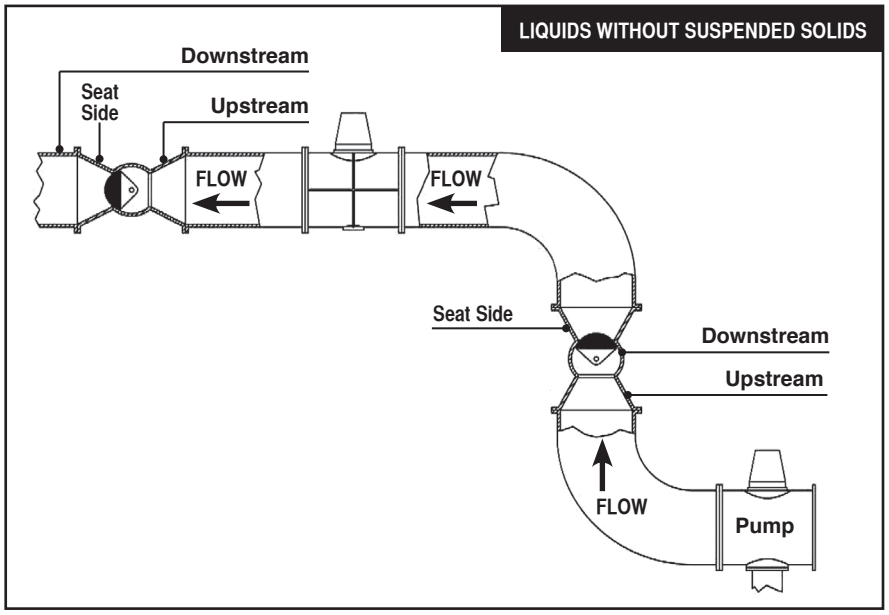
Valve may be installed with plug shaft vertical or horizontal. For vertical pipe installations, install valve with seat facing downstream.

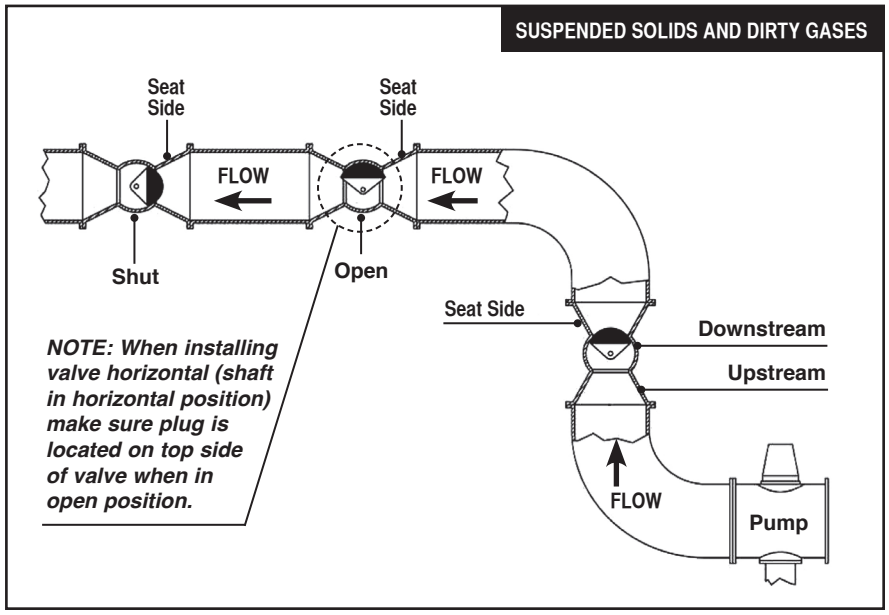
Before installation, blow out pipeline to remove all foreign materials.

Suspended Solids and Dirty Gases

Install valve with plug facing upstream. Ensure plug rotates up to the fully open position thus preventing plug from sweeping through settled debris.

NOTE: For pump isolation service install the discharge valve with the seat downstream from the pump and with the plug rotating to the top of the pipeline in the open position.





WRENCH OPERATED PLUG VALVES

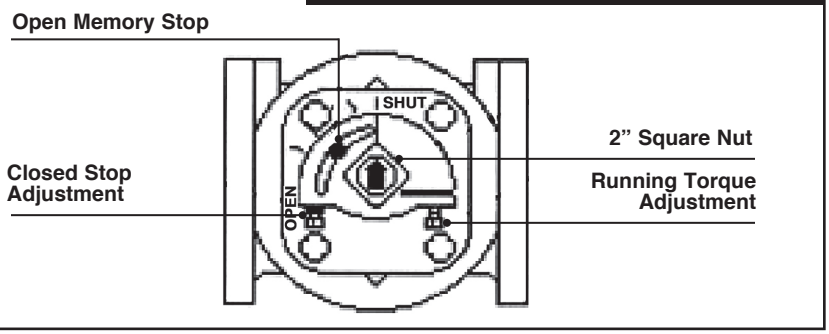
Do not permit use and operation of a Wrench operated eccentric plug valves close by turning the valve 90 degrees clockwise. All wrench operated eccentric valves are equipped with a multifunction device referred to here as a torque collar. This device serves as:

1. Wrench Adapter – 2" Square
2. Position Indicator
3. Open Memory Stop
4. Closed Memory Stop
5. Running Torque Adjustment

Position Indicator: The top of the plug has an indicator plate to show the approximate plug position. Cast onto the torque collar is an indicator mark which corresponds to a graduated scale cast on the bonnet of the valve. This scale is divided into 15 degree lines and indicates the exact valve opening from full open to full closed.

Open Memory Stop: The torque collar also incorporates an open memory stop feature. The plug can be set by tightening the open memory stop adjustment bolt after the correct flow is achieved. The valve can then be closed for maintenance and reopened to the proper position without resetting the flow.

WRENCH OPERATED VALVE WITH TORQUE COLLAR



Closed Memory Stop: The closed memory stop is provided to allow for adjustment to compensate for wear of either the plug coating or the seat. The closed stop is pre-set at the factory and should not require readjustment unless wear occurs.

To adjust the plug for excess plug or seat wear simply rotate the closed stop two turns counter-clockwise then rotate the plug (clockwise) further into the seat and check the flow. Should this movement fail to shut off the flow repeat the above step. Afterward re-set the lock nut to prevent the position from being altered.

Running Torque Adjustment: The nature of eccentric plug valves "camming" action eliminates the majority of the torque prior to seating. To prevent the plug from creeping open or slamming closed, the torque collar maintains a constant drag on the shoulder of the valve bonnet. This component is factory adjusted. However, once the valve has been installed, it is recommended that the torque adjustment nut be further tightened to assure proper friction exists to prevent unwanted closure.

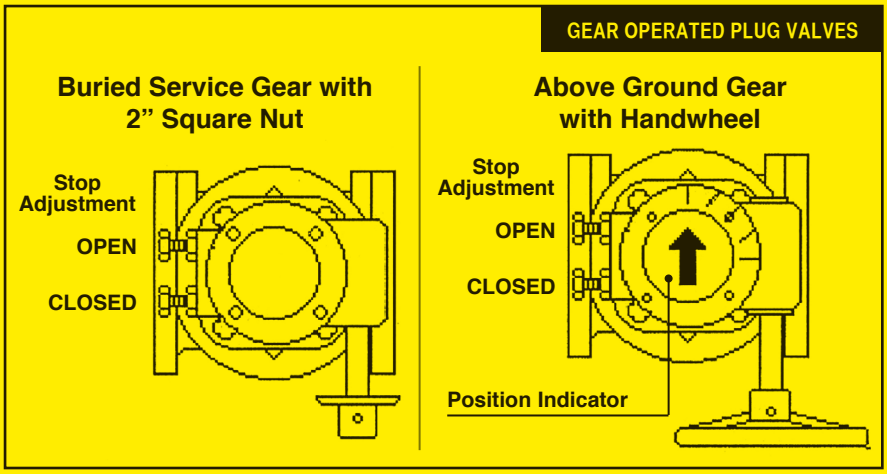
To prevent the plug from unnecessary movement, rotate the hex head bolt clockwise until there is a substantial drag on the plug but not so much as to prevent the movement of the plug with the supplied wrench.

GEAR OPERATED PLUG VALVES

Gear operated eccentric valves close by turning the gear input shaft clockwise until closed.

Position Indicator (above ground units only): The top of the gear operator has an indicator plate to show the plug position. This scale, cast onto the gear housing, is divided into 15 degree lines and indicates the exact valve opening from full open to full closed. Buried service units are totally enclosed and sealed for use below grade.

Open and Closed Memory Stops: The closed memory stop is provided to allow for adjustment to compensate for wear of either the plug coating or the seat. The closed stop is pre-set at the factory and should not require readjustment unless wear occurs.



To adjust the plug for excess plug or seat wear simply rotate the closed stop two turns counterclockwise then rotate the handwheel or nut (clockwise) to move the plug further into the seat and check the flow.

Should movement fail to shut off the flow repeat the above step. Afterward re-set the lock nut to prevent the position from being altered.

~~ACTUATED PLUG VALVES~~

Described below are the operating instructions for an eccentric plug valve equipped with an electric motor actuator. General arrangement drawings are provided in conjunction with this manual to illustrate the fitup and installation of the valve and wiring of the motor. Specific wiring details are contained in the electric motor actuator manual. As with any plug valve, the actuator will cause the valve plug to rotate through 1/4 turn to open or close the valve.

The output motion of the actuator is limited to about 100 degrees of output rotation by mechanical stops in the gearing. These are factory set and should not need adjustment. The actual positioning of the valve plug will be done by limit switches in the motor actuator.

The switches are also set at the factory, but adjustment is sometimes required if the motor unit is installed on a separate mounting base or floor stand. Detailed procedures are given in the motor manual if adjustment is needed for the mechanical stops or the limit switches. The wiring and power requirements are noted on the wiring diagrams included with this instruction manual.

MAINTENANCE

The eccentric valve is designed and manufactured to be a long life valve under normal circumstances. It does not require any routine maintenance. Cycling the valve from full open to full closed on an annual basis will increase the life of the valve and operator components. However, if maintenance is required due to unusual wear or service conditions, the following procedure should be followed:

⚠CAUTION: Valve should be depressurized for all maintenance activities

Disassembly Procedure

Body: The plug valve is a top entry valve; therefore the body can remain in line during this operation.

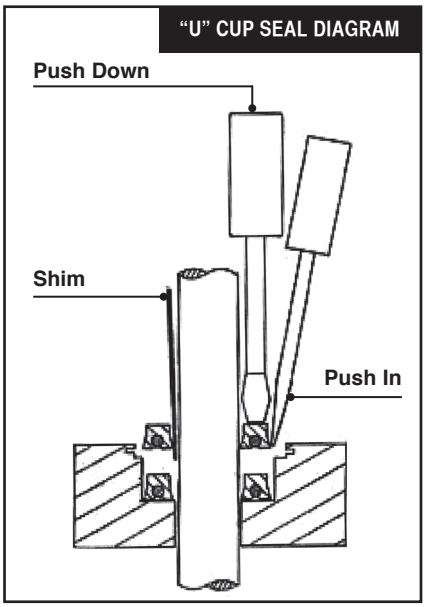
Gear Operated Valves: Remove the bolts holding the gear operator housing cover in place. Remove the housing cover and the internal bolts holding the gear operator to the valve body. Remove the gear operator and set aside.

Wrench Operated Valves: Remove the star washer fastening the torque collar to the plug stem. Remove the torque collar and set aside. With the valve de-pressurized, remove the hexagonal head cap screws that hold the bonnet to the valve body. Remove the bonnet, leaving the plug in the body. At this point, the plug, PTFE thrust washers, journal bearings and bonnet stem seals are accessible and can be removed and replaced.

Reverse the above process for reassembling the valve only. For stem seal replacement follow procedure below.

Stem Seals: With the valve de-pressurized, using internal snap ring pliers, remove the snap ring and thrust washer. The “U” cup seals can now be pried out of the seal cavity. To replace, reverse the above process.

“U” Cup Seals: To replace “U” cup seals on actuated eccentric plug valves, depressurize the valve, remove the actuator, and remove internal bolts fastening the actuator to the valve body. Remove the actuator and set aside. Remove the internal snap ring using snap ring pliers. Remove thrust washer. The “U” cup seals are now visible. Using a screwdriver, pry out the old seals. Apply a small amount of silicone or grease to the new “U” cup seals. This will help them slide in the packing cavity. Put a piece of shim stock into the cavity and put the “U” cup over it. Slide the “U” cup over the stem with shim stock against the stem. This will let any trapped air out of the packing cavity. Now, using two screwdrivers, coax the outer lip of the “U” cup into the cavity while pressing down on the top of the “U” cup with the other screwdriver (see above diagram). Continue to do this all the way around until the “U” cup is at the bottom of the packing cavity.



Repeat the procedure with the second “U” cup, and replace the thrust washer and snap ring. Now you can remount the actuator on the valve.

TROUBLESHOOTING

Wrench Operated Plug Valve

PROBLEM	CAUSE	SOLUTION
Valve will not open	• broken or misadjusted torque collar • obstruction in line • excessive line pressure • elastomer damage	• adjust or replace torque collar • remove obstruction • reduce pressure • replace plug
Valve will not close	• broken or misadjusted torque collar • obstruction in line • excessive line pressure • elastomer damage	• adjust or replace torque collar • remove obstruction • reduce pressure • replace plug
Valve will not shutoff flow	• improper stop adjustment • obstruction in line • excessive line pressure • elastomer damage	• adjust closed stop • remove obstruction • reduce pressure • replace plug
Valve leaks at plug stem	• damaged “U” cup seal	• replace “U” cups

Gear Operated Plug Valve

PROBLEM	CAUSE	SOLUTION
Valve will not open	• bent input shaft • obstruction in line • excessive line pressure • elastomer damage	• replace worn shaft • remove obstruction • reduce pressure • replace plug
Valve will not close	• bent input shaft • obstruction in line • excessive line pressure • elastomer damage	• replace worn shaft • remove obstruction • reduce pressure • replace plug
Valve will not shut off flow	• improper stop adjustment • obstruction in line • excessive line pressure • elastomer damage	• adjust closed stop • remove obstruction • reduce pressure • replace plug
Valve leaks at plug stem	• damaged “U” cup seal	• replace “U” cups

Actuated Plug Valve

PROBLEM	CAUSE	SOLUTION
Valve will not close/open	• no power source • improper signal • burned out or impaired component	• check incoming power source and/or replace fuses • check actuating signal sequence • check and repair or replace motor or relay devices
Valve will not shut off flow	• improper stop adjustment • actuator torques out	• re-set limit switch • check for obstructions in valve

VAL-MATIC'S CAM-CENTRIC PLUG VALVE OPERATION, MAINTENANCE AND INSTALLATION

INTRODUCTION

The Cam-Centric® Plug Valve has been designed to give years of trouble-free operation. This manual will provide you with the information to properly install and maintain the valve to ensure a long service life. The valve is an eccentric, resilient seated, quarter-turn plug valve capable of handling many types of fluids including fluids with suspended solids. The Size, Cold Working Pressure (CWP), Actuator Rating, and Model No. are stamped on the nameplate for reference.

CAUTION

Do not use valve for line testing at pressures higher than nameplate rating or leakage and damage to valve may occur.

The "Cold Working Pressure" is the non-shock pressure rating of the valve at 150ºF. The valve is not intended as a block valve for line testing above the valve rating. The “Actuator Rating” is the pressure that was used to size the actuator for operating conditions and may be less than the “Cold Working Pressure”. Because the valve is eccentric, the valve may have a different actuator rating for reverse and direct pressure. If the valve is operated at pressures higher than the actuator ratings, the valve may be difficult to operate or leak.

RECEIVING AND STORAGE

Inspect valves upon receipt for damage in shipment. Unload all valves carefully to the ground without dropping. Do not lift valves with slings or chains around the actuator or through the seat area.

Valves should remain crated, clean and dry until installed to prevent weather-related damage. For long term storage greater than six months, the valve must remain open and the rubber surfaces of the plug coated with a thin film of FDA approved grease such as Dow Corning # 7. Do not expose plug to sunlight or ozone for any extended period.

DESCRIPTION OF OPERATION

As shown in Figure 2, the valve consists of a body and quarter-turn plug that is offset from the seat centerline.

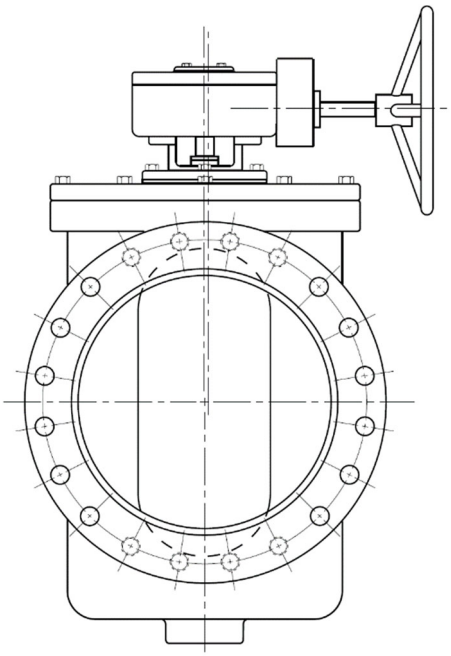

FIGURE 1. PLUG VALVE WITH GEAR ACTUATOR

The eccentric offset causes the plug to lift and rotate off the seat simultaneously to reduce seat friction and wear during operation. Direct Pressure pushes the plug into the seat and Reverse Pressure pushes the plug away from the seat. The valve can be operated with a direct nut, lever, or gear actuator. The gear actuator as shown in Figure 1 requires multi-turn input on a 2” square nut, handwheel, or chainwheel. The valve can also be automated with power actuators such as an electric motor or hydraulic cylinder.

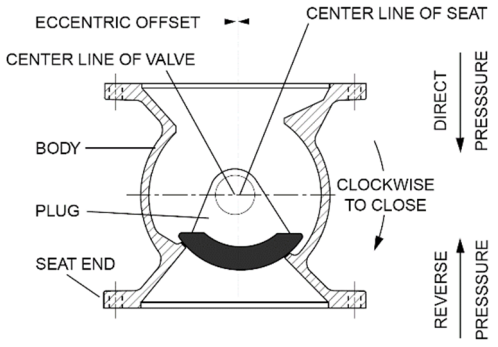

FIGURE 2. PLUG VALVE TERMS

VALVE CONSTRUCTION

The standard Cam-Centric® Plug Valve is constructed of rugged cast iron with a welded nickel seat and permanently lubricated bearings. See the specific Materials List submitted for the order if other than standard cast iron construction. The details of construction are illustrated in Figure 3.

The body (1) is available with flanged or mechanical joint ends for connection to the pipeline. The valve is designed to be serviced in-line by removing the cast cover (2). The quarter-turn plug (3) is guided by sleeve bearings (6) located in the cover and lower boss in the body. Grit-Guard seals (21) are located at the bottom of the bearings (6) to prevent abrasive material from wearing the bearing. Leak-tight closure is made when the rubber-coated plug (3) is rotated into the nickel seat on the "SEAT END" of the body.

Table 1. Standard Plug Valve Parts List

Item	Description	Material
1	Body	Cast Iron with Overlay Welded Nickel Seat
2	Cover	Cast Iron
3	Plug*	Cast Iron with Resilient Facing
4	Key	Carbon Steel

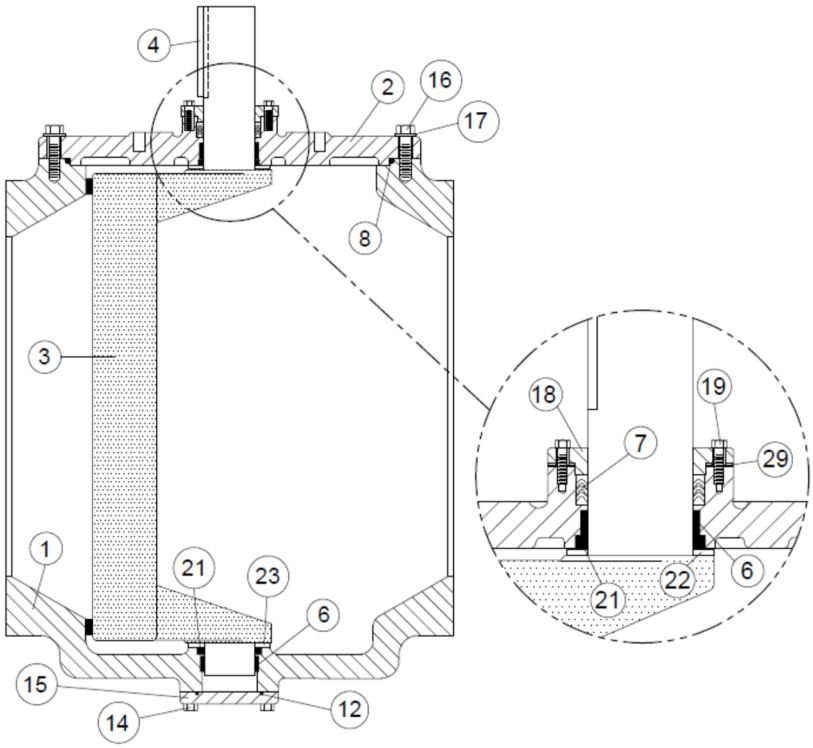

FIGURE 3. STANDARD PLUG VALVE CONSTRUCTION

INSTALLATION

The installation of the valve is important for its proper operation. The valve is capable of flow in either direction but the maximum operating pressure can vary with the location of the seat end (Figure 4). The words “SEAT END” are marked on the valve flange. Actuators are available for pressures up to the full rating in both direct and reverse pressure orientations. Actuator ratings will be indicated on the nameplate. Higher operating pressures may require adjustment of the closed position stop or a larger actuator; consult the factory.

SUSPENDED SOLIDS SERVICE: For fluids containing suspended solids, special orientations are needed to prevent debris from collecting in the valve. For horizontal installations (Figure 5), the valve should be installed with the flow entering the seat end of the valve and the shaft in a horizontal position with the plug up when open. For vertical installations (Figure 6), the valve must be installed with the seat end up regardless of flow direction.

CLEAN SERVICE: For both horizontal and vertical installations, install in the direct pressure orientation (pressure opposite the seat end).

AIR AND GAS SERVICE: Install valve in the direct pressure orientation (pressure opposite the seat end). Lubricate plug face with FDA approved silicone grease such as Dow Corning #7 before installation. Gear actuators are required for gas service applications.

PUMP DISCHARGE SERVICE: On all horizontal pump discharge applications (Figure 7), the seat end should be towards the pump.

BURIED SERVICE: Gear actuators are recommended for buried valves to hold the valve in position and provide multi-turn closure to prevent water hammer. The valve should be installed with the shaft horizontal and the actuator nut directed upwards. The valve box or extension pipe should be installed so that the actuator nut and extension stem turn freely.

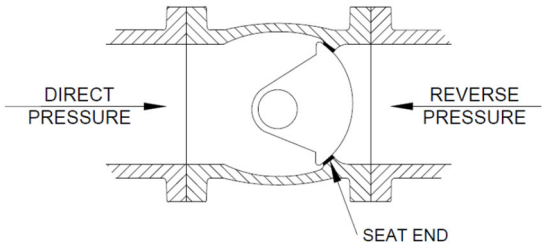

FIGURE 4. INSTALLATION ORIENTATION

NOTE: Adjust and test valve prior to backfill.

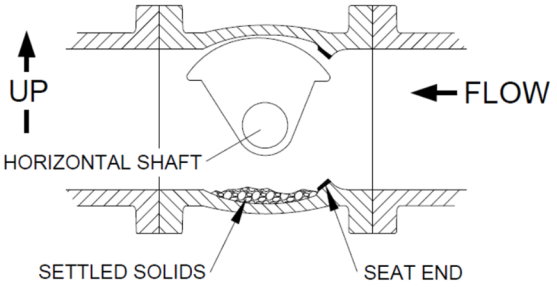

FIGURE 5. HORIZONTAL PIPE WITH SOLIDS

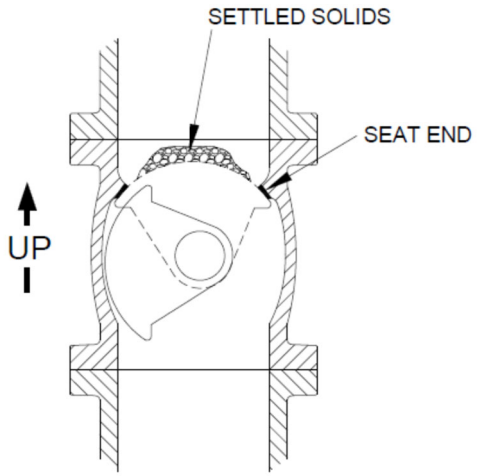

FIGURE 6. VERTICAL PIPE WITH SOLIDS

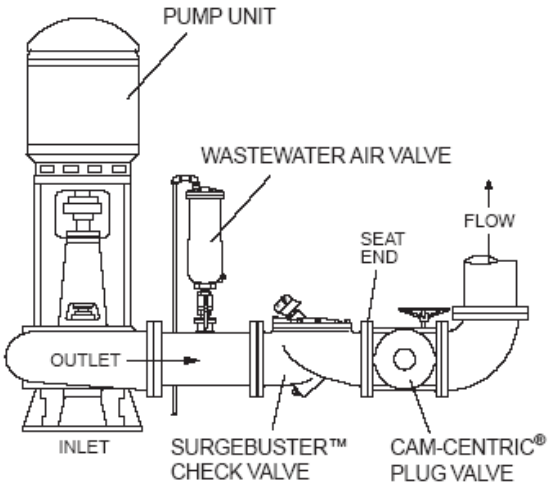

FIGURE 7. PUMP DISCHARGE SERVICE

FLANGED ENDS: Flanged valves should be mated with flat-faced pipe flanges equipped with resilient gaskets. When ring gaskets are used, the bolt material should be ASTM A307 Grade B of SAE Grade 2 Carbon Steel. Higher strength bolts may only be used with full-face gaskets.

The valve and adjacent piping must be supported and aligned to prevent cantilevered stress on the valve. Lower valve into line using slings or chains around the valve body. Lubricate the flange bolts or studs and insert them around the flange. Lightly turn bolts until gaps are eliminated.

The torquing of the bolts should then be done in graduated steps using the cross-over tightening method. Recommended lubricated torques for use with resilient gaskets (75 durometer) are given in Table 2. If leakage occurs, allow gaskets to absorb fluid and check torque and leakage after 24 hours. Do not exceed bolt rating or crush gasket more than 50 percent of its thickness.

Table 2. Flange Bolt Torques

Valve Size (in)	Bolt Dia (in)	Recom Torque (ft-lbs)	Max Torque (ft-lbs)
3	5/8	25	100
4	5/8	25	100
6	3/4	30	150
8	3/4	40	150
10	7/8	45	200
12	7/8	65	200
14	1	80	300
16	1	90	300
18	1 1/8	100	425
20	1 1/8	120	425
24	1 ¼	150	600
30	1 ¼	175	600
36	1 ½	175	1000
42	1 ½	200	1000
48	1 ½	250	1000
54	1 ¾	300	1500
60	1 ¾	350	1500
66	1 ¾	400	1500
72	1 ¾	400	1500

CAUTION
The use of raised-face flanges or excessive bolt torque may damage valve flanges.

MECHANICAL JOINT ENDS: Clean ends of mating pipe and valve sockets with soapy water (Figure 8). Place lubricated gasket and retainer gland over pipe end prior to installing valve. Install valve socket over pipe. Press gland and gasket toward valve until gasket is evenly set into valve socket.

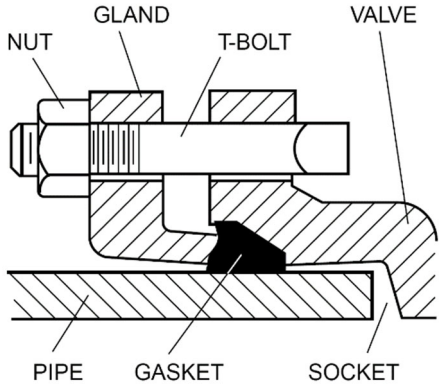

FIGURE 8. MECHANICAL JOINT INSTALLATION

Insert T-bolts in valve flange and hand tighten nuts. Torque nuts in four graduated steps using the cross-over tightening method without exceeding the torque listed in Table 3. Maintain an equal gap between the gland and the face of the valve at all points around the socket.

If a tight connection is not achieved, then the joint should be disassembled, thoroughly cleaned, and reassembled. Over-tightening may cause damage to the valve or gland.

Table 3. Mechanical Joint Nut Torques

Valve Size (in)	T-Bolt Dia (in)	Recom Torque (ft-lbs)	Max Torque (ft-lbs)
3	5/8	45	60
4	3/4	75	90
6	3/4	75	90
8	3/4	75	90
10	3/4	75	90
12	3/4	75	90
14	3/4	75	90
16	3/4	75	90
18	3/4	75	90
20	3/4	75	90
24	3/4	75	90
30	1	75	120
36	1	75	120
42	1 ¼	75	150
48	1 ¼	75	150

DIRECT NUT OPERATED VALVES: 8” and smaller valves may be equipped with a top-mounted nut for direct quarter-turn operation. The nut is 2” square to fit most valve wrenches and is mounted directly to the valve plug. To open the valve, slowly rotate the nut 90 degrees in the counter-clockwise (CCW) direction. The closed position is adjusted with a set screw and lock nut, see Figure 9. The open position can be adjusted by moving the bolt along the curved slot.

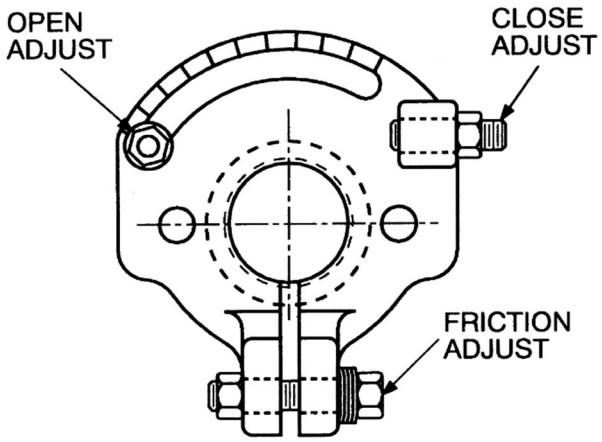

FIGURE 9. DIRECT NUT ADJUSTMENTS

DIRECT NUT FRICTION ADJUSTMENT: As shown in Figure 10, valves with direct nut actuators have a flanged packing follower (18) above the packing (7) to hold the valve in the open or closed position. If the valve is difficult to operate or does not maintain its set position, adjust the clamp bolt (17) to provide sufficient friction to hold the valve in position. If the valve is equipped with a hand lever, the setting should allow the valve to be operated with about 80 pounds of force on the end of the pipe handle.

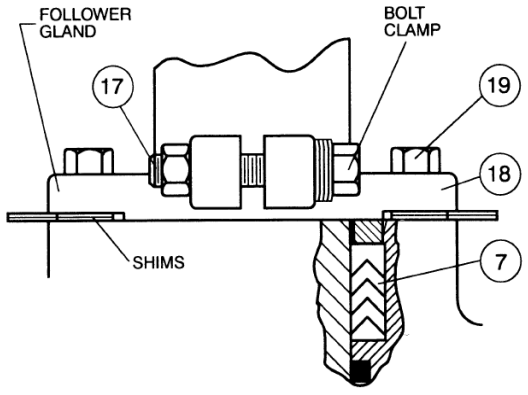

FIGURE 10. FRICTION ADJUSTMENT

LEVER OPERATED VALVES: A wrench head and lever (Figure 11) are available for use over the 2” nut for direct quarter-turn operation. Various lever lengths are available for specific direct and reverse pressure conditions as shown in Table 4.

Table 4. Application of Levers

Wrench Length, (Inches)				
Valve Size	Direct Pressure		Reverse Pressure	
	100 psi	175 psi	50 psi	175 psi
2 ½	22	22	22	22
3	22	22	22	22
4	22	22	22	22
6	44	*	44	*
8	44	*	44	*
* Worm gear recommended due to operating torque				

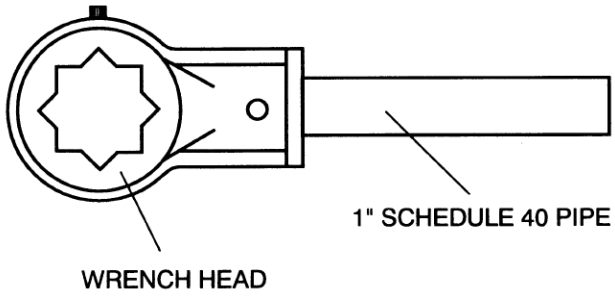

FIGURE 11. HANDLEVER

The wrench head is placed over the nut and can be secured with the set screw provided. To open the valve, rotate the lever 90 degrees in the CCW direction. The closed position is adjustable with a set screw and lock nut mounted below the nut, see Figure 9.

CAUTION
Open and close the valve slowly to prevent water hammer.

GEAR OPERATED VALVES: 4” and larger plug valves are available with a multi-turn manual gear actuator. The gear unit has a self-locking worm gear which multiplies the turning force on the handwheel or nut so that the valve can be operated with ease. A clamp-on chainwheel kit can also be used for installations high above the floor. An indicator on the top of the actuator housing indicates the position of the valve plug. The handwheel or nut must be rotated through 12-80 turns (depending on model) to open or close the plug valve. The direction of rotation to open the valve is indicated on the 2” square actuator nut.

GEAR ACTUATOR ADJUSTMENT: The standard gear actuator is provided with factory-set open and closed position stops. If the valve does not shut off tight, the stop bolt can be adjusted allowing the plug to rotate further into the seat. Loosen the locknut and turn the closed stop bolt CCW 1 turn at a time (Figure 12). If the valve continues to leak after all the adjustment is taken verify the orientation of the valve during installation. If a tight shut-off cannot be achieved, a larger gear actuator may be required for the system operating pressure; consult the factory.

CAUTION

Adjust closed stop bolt for tight shut-off only. Over adjustment may cause high operating torques and damage to the plug.

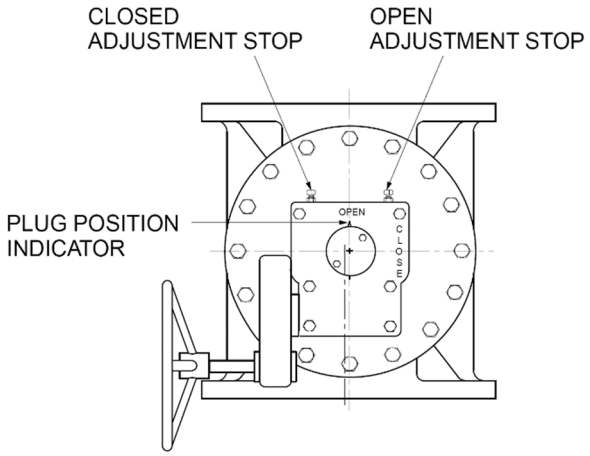

FIGURE 12. GEAR ACTUATOR ADJUSTMENT

MAINTENANCE

The Cam Centric® Plug Valve requires no scheduled lubrication or maintenance other than regular exercising and occasional inspection of the plug. The exercising is achieved by fully opening and closing the valve to verify smooth operation. If operation is difficult, it may be necessary to flush sediment from the valve by opening and closing the valve several times under flowing conditions.

CAUTION

Open and close the valve slowly to prevent water hammer.

The recommended interval for exercising is every six months or annually if the valve is regularly operated. Over the life of the valve, inspection and some regular adjustments may be needed as given below.

For valves in air service, apply a thin film of FDA silicone grease such as Dow Corning #7 to the exposed rubber surface once per year.

CLOSED POSITION ADJUSTMENT: The standard valve is factory-set to seal at the “Actuator Pressure Ratings” shown on the nameplate for direct and reverse pressure directions (see Figure 2). Higher pressure applications may require adjustment of the closed position stop or a larger actuator; consult the factory.

If the valve is found to leak in the closed position due to wear, the plug can be adjusted by loosening the closed position stop on the actuator and rotating the plug further into the seat. Because of the eccentric action of the valve, further rotation will provide additional interference between the rubber plug surface and the body seat. Valves that have been in service for several years may require inspection of the plug for damage or wear. See the Disassembly Instructions of this manual.

PACKING ADJUSTMENT: V-type packing is pressure sensitive and therefore self-adjusting in nature. Over tightening will destroy both the pressure sensitive nature of the packing as well as its sealing capabilities. The packing configuration used in Cam-Centric Plug Valves follows the guidelines and recommendations of V-packing manufacturers.

Additional adjustment can be achieved by removing one or more shims found under the packing follower (18). If a leak develops, remove one shim (29) from the underside of the follower (18). An equal number of shims must be removed from both the left- and right-hand sides. Re-tighten the follower bolts (19) and check for leakage. If the leakage continues, remove additional shims or replace the packing.

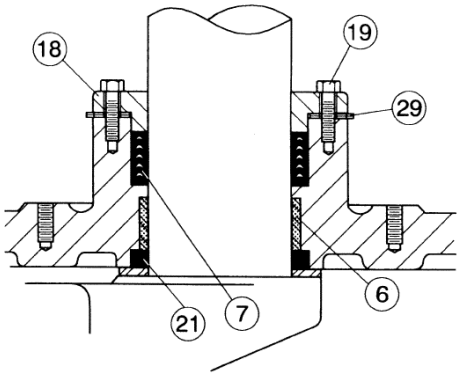

FIGURE 13. PACKING ASSEMBLY

PACKING REPLACEMENT: To replace the packing (7), it is recommended that the line be drained and the actuator removed. The valve can remain in the line. To replace the packing, first open the valve and drain the line. Close the valve to hold it in position. For power actuators, turn off and lock out electrical and hydraulic supplies before proceeding.

CAUTION

Drain line and close valve before removing actuator or valve may rotate suddenly. Take precautions against exposure to toxic or hazardous fluids in the line.

Remove the small round cover on actuator to expose shaft and key. Remove actuator mounting bolts and lift actuator from valve taking care not to lose square key. See Figure 13 and remove gland bolts (19) and lift follower (18) from the valve shaft. Remove old packing (7) with packing hook. Lubricate new packing with FDA grease and set in place one ring at a time taking care not to bend over the lips of the packing rings. Reinstall follower with 2 shims (29) per bolt (3 shims for 12" and larger valves). With valve in the closed position, place the actuator over valve and reinsert key (24). Finally, reinstall cover on actuator indicating "Closed".

CAUTION

If packing assembly contains clamp style follower as shown in Figure 9 do not lubricate shaft or sleeve.

PACKING REPLACEMENT WITH ACTUATOR: The above procedure with removal of the actuator will result in the most reliable shaft seal. But if the actuator cannot be removed, the following alternate procedure can be followed. To prevent the possibility of leakage during this procedure, open valve and drain the line.

CAUTION

Take precautions against exposure to toxic or hazardous fluids in the line.

Referring to Figure 13, remove follower bolts (19) and side follower (18) up to actuator. Remove packing adapters and rings (7) with packing hook. Cut rings with knife to remove. New packing rings should be cut at a 45-degree slope to allow insertion around the shaft and provide some overlap. Install rings one at a time with the tips down toward the valve. Stagger all joints 180 degrees around the shaft. Pull down follower (18) and reinsert bolts (19) with 2 shims (29) under follower (18). V-packing is pressure assisted and only requires light compression.

GEAR ACTUATOR MAINTENANCE: A typical gear actuator is shown in Figure 14 and consists of a worm (3) mounted on an input shaft (9). The worm engages a worm wheel (2). When the worm is turned, it drives the wheel through 90° of rotation. The rotation of the valve plug is displayed by the top indicator (5). The open and closed positions of the segment gear are controlled by an end position stop bolts (20). The stops can be adjusted by loosening the lock nut (21) and rotating the bolts. The gears are lubricated with EP2 grease in a cast iron housing (1). Other parts are listed in Table 5.

The gear box is factory lubricated and sealed. No regular maintenance is required. If difficult operation is observed, the cover (4) can be removed and the unit inspected for wear. All moving parts should be coated with grease. The grease should have an even and smooth consistency. If needed, coat all moving parts with a lithium-based EP-2 grease such as Shell Alvania #2 or equal. Buried units should be packed 90% with grease.

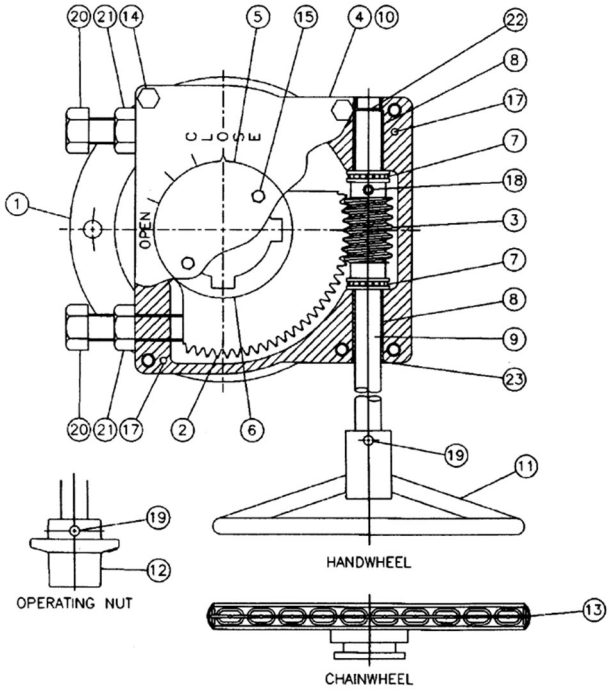

FIGURE 14. GEAR ACTUATOR CONSTRUCTION

TROUBLESHOOTING

Several problems and solutions are presented below to assist you in troubleshooting the valve assembly in an efficient manner.

- Leakage at Valve Shaft: Adjust or replace packing.
- Leakage at Flanges: Tighten flange bolts, replace gasket.
- Valve Leaks when Closed: Pressure should be in the direction of pushing the plug into the seat. Adjust plug position by rotating the handwheel. Inspect plug for damage and replace.
- Hard to Open: Flush debris from valve. Check interior of valve for grit buildup or debris. On buried valves, check alignment of operating stem.
- Leaking Oil: Tighten actuator cover bolts. If leak persists, remove actuator cover, inspect grease, and replace actuator gasket.
- Noisy Operation: Flow noise is normal. Loud flow noise similar to hammering may be cavitation from dropping high pressures across valve, review application of valve. For gear actuator noise, inspect grease; add new grease if there are uncoated moving parts or grease has broken down into oil.

DISASSEMBLY

Disassembly may be required to inspect the plug for wear or remove debris and deposits from the valve. Work on the valve should be performed by a skilled mechanic with proper tools and a power hoist for large valves. The valve can be disassembled without removing the valve from the pipeline. Refer to Figure 15 for valve construction and parts.

WARNING

Open valve and drain line before removing cover bolts or pressure may be released causing injury. Place plug in lowest position before removing actuator or plug may rotate suddenly and jam or damage plug surface.

1. Open valve and drain the pipeline. Close valve until plug just touches the seat. Remove the small cover on the actuator to expose the shaft key (4).
2. Remove the actuator mounting bolts and lift actuator from valve taking care not to lose key (4).
3. Remove cover bolts (16). Matchmark cover (2) and body (1). Screw eyebolts into actuators mounting holes and use hoist to lift cover (2) and plug assembly (3) from valve. Use caution to prevent plug from dropping while lifting cover. To remove plug from valve, use sling around top portion of plug.
4. Remove bottom cover bolts (14). Remove bottom cover (15) and seal (12) (42” and larger).
5. Inspection of the bearings (6) is done by measuring diameter of shaft and inside diameter of bearing. Check for a normal running clearance of .005". Bearings are permanently lubricated.
6. Remove packing gland hex bolts (19). Remove packing set (7) and packing gland (18).

REASSEMBLY

All parts must be cleaned and gasket surfaces should be cleaned with a stiff wire brush in the direction of the serrations or machine marks. Worn parts, gaskets and seals should be replaced during reassembly. Parts 12, 14, and 15 only appear on valves 42” and larger.

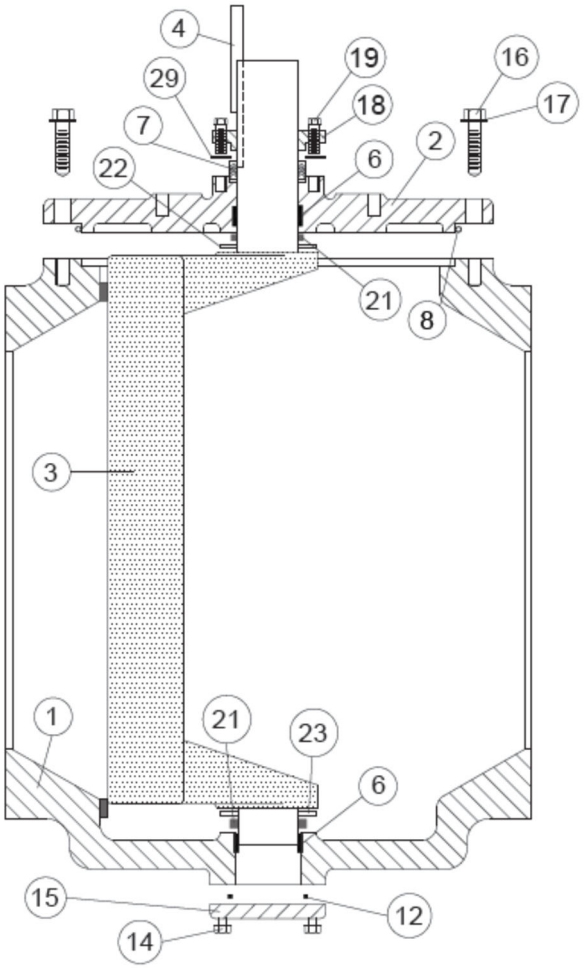

FIGURE 15. PLUG VALVE PARTS

1. Press new bearings (6) into cover and body with round, flat bar 1/4" below inside surfaces of body (1) and cover (2).

2. Install new cover seal (8) over cover lip (42” and larger) and new bottom cover seal (12) in bottom cover (15) groove.

3. Apply thin film of FDA silicone grease such as Dow Corning #7 to plug rubber surface. Place stainless steel thrust bearing (23) over lower shaft of plug, Teflon bearing (22) over the upper shaft. Install grit seals (21) over the shafts of the plug.

4. Carefully place plug into the body (1) and insert lower plug shaft into bottom bearing (6). Plug (3) should be in the open position. Install cover (2) over plug shaft and into recess in body. Align match marks between body and cover (2). Torque cover bolts (14 & 16) per Table 6 in 3-4 increments using the cross-over tightening method. Repeat for bottom cover.

Table 6. Tightening Torques	
Size	**Torque (ft-lbs)**
½” - 13	45-75
5/8” - 11	100-150
¾” – 10	150-250
7/8” – 9	200-350
1” – 8	300-500
1 1/8” - 7	450-700
1 ¼” - 7	650-1000
1 ½” - 6	750-1100
1 ¾” – 5	1650-2350
2”-4-1/2	2350-3350

5. Lubricate ID and OD of new packing set (7) with FDA grease and install in packing bore one ring at a time taking care to keep lips pointing down toward plug. Reinstall follower (18), gland bolts (19), and 2 shims per bolt (29).

   NOTE: If valve has friction assembly with direct nut actuator, follow “Friction Adjustment” procedure on page 6.

6. Insert key (4) into shaft and place actuator over valve. Reinstall actuator mounting bolts and torque per Table 6. Install cover on actuator.

7. Apply power to actuator and cycle valve. Apply pressure to valve and check for cover and shaft leakage. Tighten bolts as necessary. Adjust packing if necessary.

8. If valve does not shut off tight, adjust the closed position stop as described on page 6 under “Closed Position Adjustment.”

PARTS AND SERVICE

Parts and service are available from your local representative or the factory. Make note of the valve Size, Series No, and Serial No. located on the valve nameplate and contact:

Val-Matic Valve and Mfg. Corp.
905 Riverside Drive
Elmhurst, IL 60126
Phone: (630) 941-7600
Fax: (630) 941-8042
www.valmatic.com

A sales representative will quote prices for parts or arrange for service as needed.

LIMITED WARRANTY

All products are warranted to be free of defects in material and workmanship for a period of one year from the date of shipment, subject to the limitations below.

If the purchaser believes a product is defective, the purchaser shall: (a) Notify the manufacturer, state the alleged defect and request permission to return the product; (b) if permission is given, return the product with transportation prepaid. If the product is accepted for return and found to be defective, the manufacturer will, at his discretion, either repair or replace the product, f.o.b. factory, within 60 days of receipt, or refund the purchase price. Other than to repair, replace or refund as described above, purchaser agrees that manufacturer shall not be liable for any loss, costs, expenses or damages of any kind arising out of the product, its use, installation or replacement, labeling, instructions, information or technical data of any kind, description of product use, sample or model, warnings or lack of any of the foregoing. NO OTHER WARRANTIES, WRITTEN OR ORAL, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE AND MERCHANTABILITY, ARE MADE OR AUTHORIZED. NO AFFIRMATION OF FACT, PROMISE, DESCRIPTION OF PRODUCT OF USE OR SAMPLE OR MODEL SHALL CREATE ANY WARRANTY FROM MANUFACTURER, UNLESS SIGNED BY THE PRESIDENT OF THE MANUFACTURER. These products are not manufactured, sold or intended for personal, family or household purposes.

VAL-MATIC'S SWING-FLEX® CHECK VALVE OPERATION, MAINTENANCE AND INSTALLATION

INTRODUCTION

The Swing-Flex® Check Valve has been designed to give years of trouble-free operation. This manual will provide you with the information needed to properly install and maintain the valve and to ensure a long service life. The valve is opened by the fluid flow in one direction and closes automatically to prevent flow in the reverse direction.

An optional backflow actuator may be mounted on the bottom of the valve to allow manual backflow through the valve in the reverse direction.

Optional Mechanical Indicators and Limit Switches may be mounted on the valve cover to provide local and remote position indication.

An oil dashpot may be mounted on the bottom of 6" and larger valves to provide slow closure over the last 10% of travel.

The valve is of the swing check type utilizing an angled seat and fully encapsulated, resilient disc. It is capable of handling a wide range of fluids including flows containing suspended solids. The Size, Flow Direction, Maximum Working Pressure, and Series No. are stamped on the nameplate for reference.

CAUTION

Do not use valve for line testing at pressures higher than nameplate rating or damage to valve may occur

The "Maximum Working Pressure" is the non-shock pressure rating of the valve at 150°F. The valve is not intended as an isolation valve for line testing above the valve rating.

RECEIVING AND STORAGE

Inspect valves upon receipt for damage in shipment. Unload all valves carefully to the ground without dropping. Do not allow lifting slings or chains to come in contact with the seat area; use eyebolts or rods through the flange holes on large valves.

WARNING

Do not use threaded holes in cover for lifting the valve. Serious injury may result.

Valves should remain crated, clean and dry until installed to prevent weather related damage. For long term storage greater than six months, the rubber surfaces of the disc should be coated with a thin film of FDA approved grease. Do not expose disc to sunlight or ozone for any extended period.

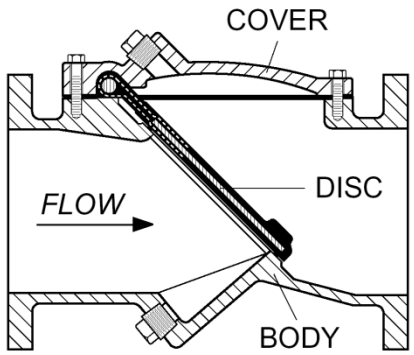

FIGURE 1. SWING FLEX® CHECK VALVE

DESCRIPTION OF VALVE OPERATION

The valve is designed to prevent reverse flow automatically. During system flow conditions, the movement of the fluid forces the disc to the open position allowing 100% un-restricted flow area through the valve. Under reverse flow conditions, the disc automatically returns to the closed position to prevent reverse flow.

Several optional features are a backflow actuator, mechanical indicator, limit switch and bottom oil dashpot. All of these options ship loose of the valve and require field installation.

INSTALLATION

Correct installation of the Swing-Flex® is important for proper operation. It may be installed in either horizontal or vertical flow-up applications. However, when horizontal, the valve must be installed with the nameplate facing up and the cover level. In all installations, the flow arrow cast in the valve cover must be pointed in the direction of flow during normal system operation.

WARNING

Do not use threaded holes in cover for lifting the valve. Serious injury may result.

FLANGED ENDS: Flanged valves should only be mated with flat-faced pipe flanges equipped with full-face resilient gaskets. The valve and adjacent piping must be supported and aligned to prevent cantilevered stress on the valve. Once the flange bolts or studs are lubricated and inserted around the flange, tighten them uniformly hand tight. The tightening of the bolts should then be done in graduated steps using the **crossover tightening** method. Recommended lubricated torque values for use with resilient gaskets (75 durometer) are given in Table 1. If leakage occurs, allow gaskets to absorb fluid and check torque and leakage after 24 hours. Do not exceed bolt rating or extrude gasket.

CAUTION

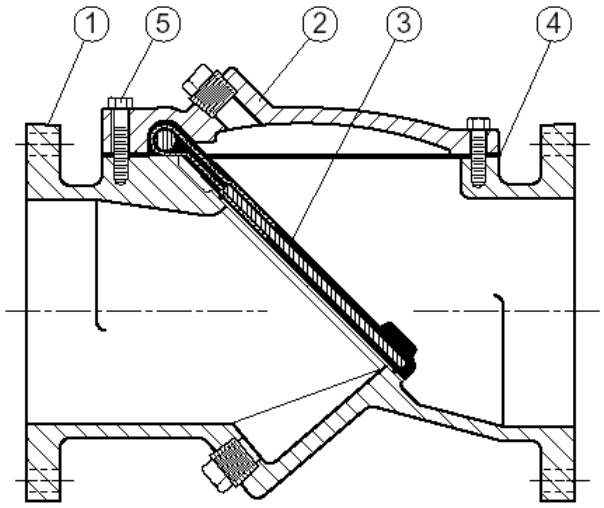
The use of ring gaskets or excessive bolt torque may damage valve flanges.

Table 1. Flange Bolts Torques

Valve Size (in)	Bolt Dia (in)	Recom. Torque (ft-lbs)	Max Torque (ft-lbs)
3	5/8	25	90
4	5/8	25	90
6	3/4	30	150
8	3/4	40	150
10	7/8	45	205
12	7/8	65	205
14	1	80	300
16	1	80	300
18	1 1/8	100	425
20	1 1/8	100	425
24	1 1/4	150	600
30	1 1/4	160	600
36	1 1/2	300	900
42	1 1/2	300	900
48	1 1/2	300	1000

VALVE CONSTRUCTION

The standard Swing-Flex® Check Valve is constructed of rugged cast iron with a rubber encapsulated disc. See the specific Materials List submitted for the order if other than standard cast iron construction. The disc is the only moving part assuring long life with minimal maintenance. The general details of construction are illustrated in Figure 2. The body (1) is flanged for connection to the pipeline with an open top sealed with a cast cover (2). The disc (3) is retained by the cover.



Item	Description	Material
1	Body	Ductile Iron – 250 psi Cast Iron – 150 psi
2	Cover	Ductile Iron – 250 psi Cast Iron – 150 psi
3	Disc*	Steel with Buna-N Facing
4	Cover Seal*	Buna-N or Non-Asbestos
5	Cover Bolt	Alloy Steel
*Recommended Spare Part		

FIGURE 2. CHECK VALVE CONSTRUCTION

MAINTENANCE

The Swing Flex® Check Valve requires no scheduled lubrication or maintenance. For service or inspection, the valve can be serviced without removal from the line.

VALVE INSPECTION: If inspection of the valve is required, follow the Disassembly Instructions given on page 3.

TROUBLESHOOTING

Several problems and solutions are presented below to assist you in troubleshooting the valve assembly in an efficient manner.

- Leakage at Bottom Actuator: Remove line pressure and exercise actuator. If leak persists, replace seals in actuator; see the Backflow Actuator Seal Replacement Procedure on page 4.

- Leakage at Cover or Flanges: Tighten bolts, replace cover seal.

- Valve Leaks when Closed: Inspect disc for damage and replace. Inspect metal seating surface and clean if necessary.

- Valve Does not Open: Check for obstruction in valve or pipeline; see Disassembly procedure on page 4. Operating pressure may be less than cracking pressure. If less than 0.5 psig, review application with factory.

DISASSEMBLY

The valve can be disassembled without removing it from the pipeline. Or for convenience, the valve can be removed from the line. All work on the valve should be performed by a skilled mechanic with proper tools and a power hoist for larger valves. Disassembly may be required to inspect the disc for wear or the valve for deposits.

WARNING

The line must be drained before removing the cover or pressure may be released causing bodily harm.

1. Relieve pressure and drain the pipeline. Refer to Figure 2 on page 2. Remove the cover bolts (5) on the top cover.

2. Pry cover (2) loose and lift off valve body. 12" and larger valves have tapped holes in cover for lifting eyes.

3. Remove disc (3) and inspect for cracks, tears or damage in rubber sealing surface.

4. Clean and inspect parts. Replace worn parts as necessary and lubricate parts with FDA grease.

RE-ASSEMBLY

All parts must be cleaned. Gasket surfaces should be cleaned with a stiff wire brush in the direction of the serrations or machine marks. Worn parts, gaskets and seals should be replaced during reassembly.

1. Wipe clean and dry the seating surface on the body (1). Apply a coating of compatible (food grade) grease to the sealing bead on the disc (3). Lay disc (3) over seat with beaded seating surface directed down.

2. Lay cover gasket (4) and cover (2) over bolt holes and disc hinge. Where o-ring seal is provided, place o-ring into body groove. O-ring may be held in place with compatible grease for re-assembly. Food grade grease should be used for standard Buna-N o-rings. For EPDM o-rings, silicone grease should be used.

3. Insert lubricated bolts (5) noting that the bolts in the hinge area are longer than the other cover bolts.

4. Cover bolts should be tightened to the following specifications during assembly.

Table 2. Valve Cover Bolt Torque

Valve	Size	Torque (ft-lbs)
2"-2.5"	1/2"	75
3"	7/16"	50
4"	1/2"	75
6"	5/8"	150
8"	5/8"	150
10"	7/8"	400
12-20"	7/8"	400
24"	1"	500
30"	1 1/8"	600
36"	1 1/4"	900
42"	1 1/2"	1400
48"	1 1/2"	1400

BACKFLOW ACTUATOR FIELD INSTALLATION AND MAINTENANCE (OPTIONAL)

BACKFLOW ACTUATOR OPERATION:
An optional **backflow actuator** assembly is available which can be easily installed in the field. The actuator is not designed to operate at the valve's Maximum Working Pressure rating. Therefore, prior to using the actuator, close the pump isolation valve and bleed off line pressure. To operate, turn the handle clockwise. This will open the valve disc allowing backflow through the valve. The handle should turn easily. When the actuator is fully extended into the valve, the disc will be partially open. Upon completion of the back flushing operation, turn the handle counter-clockwise and the valve will automatically return to the closed position. Lock the actuator in the closed position with the jam nut provided. The system is again ready for normal operation.

WARNING
Relive line pressure before using backflow actuator or damage may occur.

BACKFLOW ACTUATOR FIELD INSTALLATION:
The backflow actuator is supplied as an optional assembly from the factory, which is shipped loose with the valve.

1. Depressurize and drain the pipeline.

WARNING
Remove of the bottom plug while under pressure may cause bodily harm.

2. Score the coating around and remove the pipe plug in the bottom boss of the valve. Valve must be restrained. Removal torque requires a 2-ft long socket wrench or ½"-sq. drive impact wrench at minimum. Pipe plugs on 8" and larger valves may require the use of a cheater bar in order to remove. Heating the pipe plug can loosen thread sealant and reduce torque. Valves can be provided with corrosion resistant plugs for lower removal torques on request.

3. Inspect the backflow rod and place in the non-extended position. (The rod should extend about 1" past the end of the brass bushing.) Apply Teflon thread sealant to brass threads.

4. Insert the threaded end of the assembly into the valve boss. Slowly turn the assembly into the boss taking care not to cross-thread the bushing. Continue turning the assembly into the valve for a tight fit.

BACKFLOW ACTUATOR SEAL REPLACEMENT:
There are two parts (8 & 9) on the backflow actuator that are subject to wear. To replace the seals, the pipeline must first be depressurized and drained. Next, remove the backflow assembly from the valve by turning the brass bushing (6) counter-clockwise. Disassemble the actuator as follows:

1. Remove one of the vinyl caps (12).
2. Remove the T-Handle (10) and jam nut (11) from the rod (7).
3. Remove the rod (7) from the bushing (6) by screwing in the rod fully clockwise and pull the rod through the valve end of the bushing (6).
4. Lubricate new seals with FDA approved grease and install in the bushing end grooves.
5. Clean, lubricate, and reinstall rod in bushing.
6. Re-install jam nut (11) and T-Handle (10).
7. Place vinyl cap (12) on handle (10).
8. Apply Teflon thread sealant to bushing and carefully thread into valve taking care not to cross-thread the bushing.

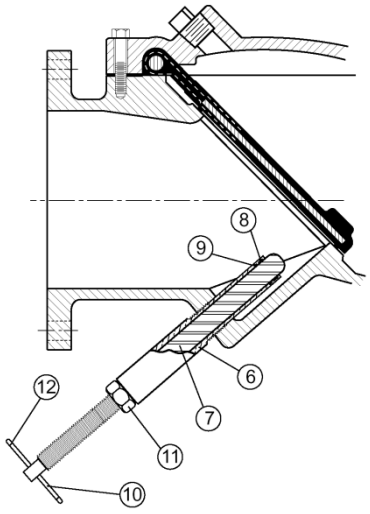


FIGURE 3. BACKFLOW ACTUATOR ASSEMBLY

Backflow Actuator Parts List		
Item	**Description**	**Material**
6	Bushing	Lead-Free Brass
7	Rod	Stainless Steel
8	Rod Wiper*	Molythane
9	O-Ring	Buna-N
10	Handle	Stainless Steel
11	Jam Nut	Brass
12	Cap*	Vinyl
*Recommended Spare Part		

MECHANICAL INDICATOR (OPTIONAL)

The mechanical indicator is an option that fits into the cover and can easily be installed in the field by going through the following steps. The mechanical indicator is used to visually indicate when the valve is opened or closed.

1. Remove line pressure and drain valve.

> **WARNING**
> **Removal of the pipe plug while under pressure may cause bodily harm.**

2. Score the coating around and remove the pipe plug from the cover. Valve must be restrained. Removal torque requires a 2-ft long socket wrench or ½"-sq. drive impact wrench at minimum. Valves can be provided with corrosion resistant plugs for lower removal torques on request.
3. Apply pipe joint compound to indicator body (21) threads.
4. Insert the indicator body (21), without the indicator plate (27), into the valve cover and tighten. Make sure that two of the tapped holes in the indicator body (21) are aligned with the valve and pipeline. This will ensure proper orientation of the indicator plate.
5. Remove the two socket head screws (31) from the indicator body (21).
6. Slide the indicator plate (27) over the indicator rod (23) and spring (28).
7. Align the indicator plate (27) as shown on the back of this card and secure with the 5mm socket head screws (31).
8. Connect the spring (28) to the indicator plate (27) notch.

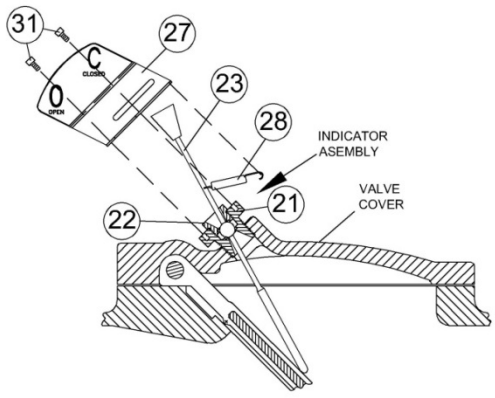

FIG. 4. MECHANICAL INDICATOR ASSEMBLY

Mechanical Indicator Parts List		
Item	**Description**	**Material**
21	Body	Brass
22	Bushing	Brass
23	Rod	Stainless Steel T316
27	Plate	Stainless Steel T316
28	Spring	Stainless Steel T302
32	Screws	Stainless Steel T316

LIMIT SWITCH (OPTIONAL)

The limit switch is used in conjunction with the Mechanical Indicator. The standard limit switch is Allen Bradley #802B-CSACXSXC3. The limit switch is SCADA (Supervisory Control and Data Acquisition) compatible for applications requiring open/close indication.

NEMA Ratings: 1, 2, 4, 6, 6P, 12, 13
UL Ratings: 5 AMPS, 1/10 HP, 125 or 250 VAC, SPDT

Installation:

1. Attach limit switch assembly to indicator using the supplied screws (34) and bracket (32).
2. Position the assembly so that the switch trips when the valve is closed. The switch needs to be engaged approx. 15 degrees to trip.
3. Connect wiring to either the normally open or normally closed contact as shown in the schematic diagram.

FIGURE 5. LIMIT SWITCH ASSEMBLY

BOTTOM MOUNTED OIL DASHPOT FIELD INSTALLATION AND MAINTENANCE (OPTIONAL)

DASHPOT FIELD INSTALLATION: The bottom dashpot is supplied as an optional assembly from the factory. This unit provides control of the disc's final 10% travel to the closed position to reduce valve slam and water hammer. The 10% travel time is adjustable between 1 and 5 seconds.

1. Depressurize and drain the valve and pipeline.

> **WARNING**
> **Removal of the bottom plug in the valve while under pressure may cause bodily harm.**

2. Score the coating around and remove the pipe plug in the bottom boss of the valve. Valve must be restrained. Removal torque requires a 2-ft long socket wrench or ½"-sq. drive impact wrench at minimum. Pipe plugs on 8" and larger valves may require the use of a cheater bar in order to remove. Heating the pipe plug can loosen thread sealant and reduce torque. Valves can be provided with corrosion resistant plugs for lower removal torques on request.
3. Apply Teflon thread sealant or tape to brass threads on the dashpot.Insert the threaded end of the assembly into the valve boss. Slowly turn the assembly into the boss taking care not to cross-thread the bushing. Continue turning the assembly into the valve for a tight fit and so that the tank is upright.
4. Adjust the air pressure in the tank to be a minimum of 50 psi over the line pressure. Set the flow control valve in the mid position (i.e. 1 turn open). The dashpot rod should be extended and hold the disc open about 1 inch. The water line pressure will close the disc.

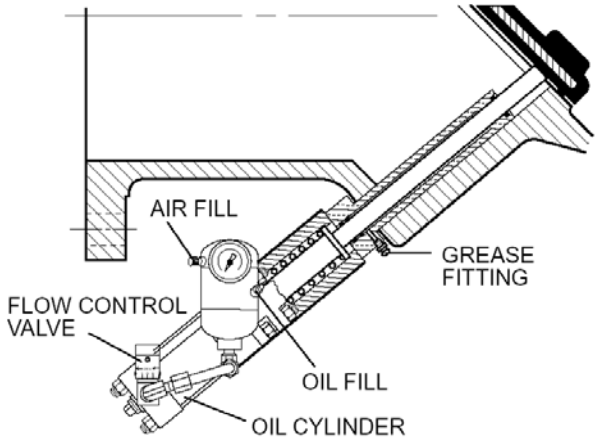

FIGURE 6. BOTTOM MOUNTED OIL DASHPOT

CHECKING OIL AND GREASE LEVELS:

1. The check valve should be closed.
2. The air in the oil reservoir must be bled from the reservoir, using the air fill valve mounted on the reservoir.
3. Remove the pipe plug from the oil reservoir fill port.
4. Add hydraulic fluid equal to Mobil #DTE 24 until fluid is up to level indicated on the reservoir. Replace pipe plug.
5. Recharge the reservoir with air pressure to a minimum of 10 psi over the water line pressure.
6. The grease level cannot be checked but it is recommended that the grease fitting be charged with grease twice a year. Use a cartridge grease gun and pump grease into the fitting using two full strokes. An FDA approved grease should be used.

DASHPOT SEAL REPLACEMENT: There are several seals in the unit that may require replacement.

1. Depressurize and drain the valve and pipeline.
2. Unscrew the dashpot from the valve and remove the 4 bolts holding the dashpot spacer.
3. Replace the (2) rod wipers and o-ring seal.
4. If the oil cylinder is leaking oil, tighten the tie rod nuts. The cylinder should be returned to the factory for rebuilding.
5. Reinstall the unit as listed above for a new unit.

PARTS AND SERVICE

Parts and service are available from your local representative or the factory. Make note of the valve Model No and Working Pressure located on the valve nameplate and contact:

Val-Matic Valve and Mfg. Corp.
905 Riverside Drive
Elmhurst, IL 60126
Phone: (630) 941-7600
Fax: (630) 941-8042
www.valmatic.com

A sales representative will quote prices for parts or arrange for service as needed.

LIMITED WARRANTY

All products are warranted to be free of defects in material and workmanship for a period of one year from the date of shipment, subject to the limitations below.

If the purchaser believes a product is defective, the purchaser shall: (a) Notify the manufacturer, state the alleged defect and request permission to return the product; (b) if permission is given, return the product with transportation prepaid. If the product is accepted for return and found to be defective, the manufacturer will, at his discretion, either repair or replace the product, f.o.b. factory, within 60 days of receipt, or refund the purchase price. Other than to repair, replace or refund as described above, purchaser agrees that manufacturer shall not be liable for any loss, costs, expenses or damages of any kind arising out of the product, its use, installation or replacement, labeling, instructions, information or technical data of any kind, description of product use, sample or model, warnings or lack of any of the foregoing. NO OTHER WARRANTIES, WRITTEN OR ORAL, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE AND MERCHANTABILITY, ARE MADE OR AUTHORIZED. NO AFFIRMATION OF FACT, PROMISE, DESCRIPTION OF PRODUCT OF USE OR SAMPLE OR MODEL SHALL CREATE ANY WARRANTY FROM MANUFACTURER, UNLESS SIGNED BY THE PRESIDENT OF THE MANUFACTURER. These products are not manufactured, sold or intended for personal, family or household purposes.

UCP Project No: **27087**

1. ENTIRE AGREEMENT.

(A) Each party agrees that all sales of goods ("Goods") by Tyler Union, a division of McWane, Inc. ("Seller") to Buyer are governed by these Terms and Conditions of Sale ("Terms and Conditions of Sale") which supersede any other terms of Buyer or Seller. Each party agrees that the Terms and Conditions of Sale will also govern all sales of Goods to Buyer by any McWane, Inc. subsidiary, affiliate, or division, in which case such subsidiary, affiliate, or division will be the "Seller" under this Agreement (unless otherwise agreed in writing by such subsidiary, affiliate, or division). Buyer acknowledges that these Terms and Conditions of Sale are subject to change from time to time and the parties agree that each sale of Goods will be governed by the version of Terms and Conditions of Sale available online at www.tylerunion.com at the time of acceptance by Seller of an order for such Goods. The Terms and Conditions of Sale and the order for Goods from Buyer and agreed by Seller ("Order) or other contract documents to which they apply constitute the entire agreement between the parties with respect to Goods ("Agreement"). All references by Seller to Buyer's specifications and similar requirements are only to describe Goods and work covered hereby and no warranties or other terms will have any force or effect. No other terms of Buyer, no modification, amendment, or waiver to this Agreement, and no cancellation, change, or return of any Order under this Agreement will be binding on either party until agreed in writing by such party's authorized representative. Buyer may not rely on any representation, promise, or term not set forth herein and Seller expressly objects to and rejects all terms not contained in this Agreement. Seller's acceptance of Orders, whether oral or written, and/or its delivery of Goods to Buyer is based on the express condition that Buyer agrees to all these Terms and Conditions of Sale.

(B) In addition to but not in lieu of the foregoing, Seller expressly rejects any provision that requires compliance with Presidential Executive Order 14042 or any related guidance regarding COVID safety protocols for federal contractors (the "Vaccination Mandate"). Seller makes no representation, certification, or warranty as to the vaccination status of its employees or Seller's or its employees' compliance with the Vaccination Mandate. Buyer understands and agrees that no provision related to the Vaccination Mandate may become a part of this Agreement or any other contract between Seller and Buyer except pursuant to a writing signed by the President of McWane, Inc. No other employee or officer of Seller has any authority, express, implied, or apparent, to agree to a provision related to the Vaccination Mandate on behalf of Seller.

2. QUOTATIONS. Where this Agreement is used by Seller to place a bid or provide a quote, Seller's quotation is for prompt acceptance and Seller may change and/or withdraw without notice. Buyer's prompt acceptance of the quotation is a material term of the bid and any subsequent agreement. In cases where freight allowance is included in the quotation, Buyer is liable for any rate increase and/or additional expense over the calculated allowance resulting from compliance with Buyer's shipping instructions.

3. DELIVERY. Delivery terms (per Incoterms® 2020) are stated on each Order. All Orders must include Buyer's or forwarder's address and are assumed to authorize immediate release upon ready-to-ship status unless otherwise specified in writing. All shipping dates are approximate; production will not begin until receipt by Seller of complete manufacturing, shipping, and credit information. Tender of delivery is deemed to occur at the earliest of (A) acceptance of shipment by designated shipper, (B) allocation of Goods to Buyer at location other than Seller's location, (C) delivery to Buyer's representative or designee, or (D) mailing of an invoice to Buyer. Buyer agrees to provide Seller with defined shipping instructions within seven (7) business days following receipt of packing list provided by Seller. Title to Goods will pass to Buyer on tender of delivery, subject to Seller's right to stop Goods in transit and to any interest of Seller reserved to secure Buyer's payment or performance to Seller, even if freight is included or prepaid. If Seller holds Goods at Buyer's instruction or because Buyer has failed to supply shipping instructions or because Seller, in its sole discretion, determines that any part of Goods should be held for Buyer's account, Seller may invoice Buyer for the Goods, as well as for storage. Storage fees will be at Seller's standard rates. Goods invoiced and held at any location for whatever reason will be at Buyer's risk and Seller may charge for (but is not obligated to carry) insurance. If Buyer fails to provide shipping instructions, Seller may, at its option, ship the Goods to Buyer at the address specified in the applicable Order and invoice Buyer for the Goods. Buyer agrees to make payment of such invoice when due under this Agreement. Buyer will accept and pay for partial deliveries at the Agreement prices and terms. If Buyer declares or indicates an intention to not accept delivery, Seller may, at its option, give written notice to Buyer that Seller is ready and willing to deliver, and such notice will constitute a valid tender of delivery. Buyer must report any shortages in shipments within three (3) calendar days of receipt of the initial shipment. Buyer may not make any deduction from any payment due because of loss or damage to Goods in transit. If Buyer makes a written request, Seller, in its sole discretion, may agree as a service to Buyer to process Buyer's claim against the freight vendor for any loss or damage in transit, so long as Seller receives the claim within five (5) calendar days of delivery of the Goods. All claims will be waived unless accompanied by a delivery receipt, signed by freight vendor's agent at time of delivery, on which receipt the loss or damage has been noted.

4. PRICES; PAYMENT. Prices and payment terms are stated on the Order or invoice document. Seller may make partial shipments and payment for that portion will be due as indicated on the Order or invoice document based on time of shipment. Seller's prices do not include sales, use, excise, or other similar taxes and Buyer agrees to pay the amount of any present or future such tax in addition to the price specified in each Order, unless Buyer, at the time of sale, provides Seller with all tax-exemption certificates required by taxing authorities. If Seller has any cause to question Buyer's ability to perform, Seller may demand such assurances of Buyer's performance as Seller deems necessary in its discretion, including payment in advance for all shipments. If (A) Buyer fails to provide Seller with such assurance within ten (10) calendar days of Seller's demand, or (B) Buyer is declared bankrupt or insolvent or any

proceeding is brought against Buyer, voluntarily or involuntarily, under any bankruptcy or insolvency laws, or (C) Buyer fails to make payment for Goods when due, Seller may suspend its performance, cancel any Order then outstanding, receive reimbursement for its reasonable and proper cancellation charges and collect any sums due and owing, its reasonable cancellation charges and all damages resulting from Buyer's default. Additionally, if Buyer fails to make payment for Goods when due, Buyer's account will be deemed delinquent and Buyer will be liable to Seller for a service charge of eighteen percent (18%) per annum or the maximum allowed by law, whichever is greater, on any unpaid amount. Buyer will be liable to Seller for all costs and expenses of collection, including court costs and reasonable attorneys' fees.

5. CANCELLATION, CHANGES AND RETURNS. If Buyer properly requests a cancellation, change, or return, Seller may, at its option: (A) charge Buyer for any costs Seller incurred prior to or because of such cancellation, change, or return; (B) revise its prices and delivery dates to reflect such change; and/or (C) accept returned Goods for credit if, in Seller's sole discretion, it finds such Goods to be standard stock and in good condition. The credit will be, in Seller's sole discretion, either the invoice price less a percentage to be determined by Seller or the scrap value of the Goods, along with shipping and handling charges to be determined by Seller. All returned Goods must be securely packed by Buyer to ensure that returned material is not damaged during shipment.

6. FORCE MAJEURE; DEFERRED DELIVERY. Seller will not be liable for any expense, loss, or damage resulting from delay in delivery or prevention of performance caused by any event beyond Seller's reasonable control ("Force Majeure"), including but not limited to: fire; flood; storm; act of God; strike, labor dispute or labor shortage; lack of or inability to obtain materials, fuels, supplies, or equipment; civil unrest or riot; pandemic; accident; transportation delay or shortage; act or failure to act of Buyer or any government; or any other cause whatsoever, provided that such cause is beyond Seller's reasonable control. Seller will have such additional time for performance as reasonably necessary under the circumstances and may adjust the price to reflect increases caused by Force Majeure. Buyer's acceptance of any Goods will constitute Buyer's waiver of any claim for damages for delay in delivery of such Goods. If delivery is delayed or interrupted by Force Majeure, Seller may store the Goods at Buyer's expense and risk and charge Buyer a reasonable storage rate. If Seller is delayed because it is awaiting Buyer's approval or acceptance of designs, drawings, prints, or engineering or technical data, or is awaiting Buyer's approval or acceptance of Goods, Seller will be entitled to a price adjustment equal to increase in Seller's production costs and all other losses and expenses incurred by Seller because of such delays. If Buyer requests and Seller approves in writing a deferred delivery on any Order, Seller may charge Buyer for the completed portion of the Order and warehouse all completed Goods at Buyer's expense and risk of loss. As to any uncompleted portion of the Order, Seller may, at its option, cancel the uncompleted portion under Section 5 above or revise its prices and delivery schedules on the uncompleted portion to reflect its increased costs and expenses attributable to the delay.

7. WARRANTY; PATENTS.

(A) Seller warrants that Goods will be of the kind described in this Agreement and free from defects in material and workmanship under conditions of normal use. Seller reserves the right to make any modifications required by production conditions to information set forth in Seller's catalogues and advertising literature. Seller will not be liable or responsible for (A) any defects attributed to normal wear and tear, erosion or corrosion, improper storage, use, or maintenance, or use of Goods with incompatible products, or (B) defects in any part of Goods manufactured by others. If (B) above is applicable, Seller will, as an accommodation to Buyer, assign to Buyer any warranties given to it by any such other manufacturers; provided, however, that the foregoing will not extend Seller's warranty to any accessory products unless Seller specifically agrees in writing. All warranties are void if Goods are modified or used in conjunction with products or accessories not manufactured or approved by Seller or which are incompatible with Goods. This warranty does not cover failure of any part manufactured by others, failure of any part from external forces, including but not limited to corrosive soils, earthquake, installation, vandalism, vehicular or other impact, application of excessive torque to the operating mechanism, frost heave, or other Force Majeure. Any claim by Buyer with reference to Goods for any cause will be deemed waived by Buyer unless submitted to Seller in writing within ten (10) calendar days from the date Buyer discovered, or should have discovered, any claimed breach. Buyer will give Seller an opportunity to investigate. If Buyer furnishes prompt notice to Seller of any defect and an opportunity to inspect the alleged defect as provided above, Seller will, in its sole discretion, either: (i) repair the defective or nonconforming Goods; (ii) replace nonconforming Goods, or part thereof, which are sent to Seller by Buyer within sixty (60) calendar days after receipt of the Goods at Buyer's plant or storage facilities; or (iii) if Seller is unable or chooses not to repair or replace, return the purchase price paid and cancel any obligation to pay unpaid portions of the purchase price of nonconforming Goods. In no event will any obligation to pay or refund exceed the purchase price paid. Repair and/or replacement as provided above will be shipped EXW (Ex-Works) Seller's facility (Incoterms® 2020) unless otherwise agreed in writing by Seller. Buyer will prepay all transportation charges for return of all or part of Goods to Seller, unless otherwise agreed in writing by Seller. Seller will not be responsible for any labor, removal, or installation charges that may result from repair and/or replacement of any Goods.

(B) Specifically for RieberLok gaskets only, the warranty and remedies stated above are modified as follows: if the RieberLok gasket is properly installed in PVC pipe or fittings manufactured to AWWA C900 specifications and originally fitted with a Rieber gasket, the RieberLok gasket is warranted against failure from either leaking or joint separation up to the rated pressure of the pipe or fitting provided. If a RiberLok gasket fails to meet the above-stated performance criteria, Seller will provide a replacement RieberLok gasket and pay the reasonable cost of the PVC pipe directly attached to the defective gasket. The warranty period for RieberLok gaskets is twelve (12) months from the date of delivery.

(C) Buyer's exclusive remedy and Seller's sole liability for any loss, damage, injury, or expense of any kind arising from manufacture, delivery, sale, installation, use, or shipment of Goods will be, at Seller's option, the remedies described above, whether based on contract, warranty, tort, or any other basis of recovery.

(D) If any claim is made against Buyer based on a claim that any Goods constitute an infringement of any U.S. Letter Patent, Buyer will notify Seller immediately. Seller may, with Buyer's assistance, if required, but at Seller's expense, conduct settlement negotiations or defense of any litigation. If any Goods are held to infringe any U.S. Letter Patent, and their use is enjoined, or, if as a result of a settlement, Seller deems their continued use unadvisable and provided that Buyer has given Seller the immediate notice required above and has used Goods only in accordance with the provisions of this Agreement and has not altered or changed them in any material way, Seller will, at its option and expense, procure for Buyer the right to continue using Goods, modify Goods so that they become non-infringing, replace Goods with non-infringing Goods of substantially equal quality, or replace Goods and refund the purchase price, less reasonable depreciation. The above is intended as a complete allocation of risks between the parties, including without limitation liability for patent infringement. Buyer understands that it will not be able to recover consequential damages even though it may suffer such damages in substantial amounts. Because this Agreement and the price paid reflect such allocation, this limitation will not have failed of its essential purpose even if it operates to bar recovery for such consequential damages.

8. LIMITATION OF LIABILITY. THE WARRANTIES IN SECTION 7 ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED BY LAW OR STATUTE OR ARISING FROM TRADE USAGE OR COURSE OF DEALING. THERE IS NO IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT, WHETHER AS A RESULT OF BREACH OF CONTRACT, WARRANTY, TORT (INCLUDING NEGLIGENCE), OR STRICT LIABILITY, WILL SELLER BE LIABLE FOR ANY PUNITIVE, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO LOSS OF PROFIT, LOSS OF USE OF GOODS OR OTHER PROPERTY OR EQUIPMENT, DAMAGE TO OTHER PROPERTY, COST OF CAPITAL, COST OF SUBSTITUTE GOODS, DOWNTIME, OR CLAIMS OF BUYER'S CUSTOMERS FOR ANY OF THE AFORESAID DAMAGES, EVEN IF BUYER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SELLER WILL NOT BE LIABLE, AND BUYER AGREES TO INDEMNIFY SELLER, FOR ALL PERSONAL INJURY, PROPERTY DAMAGE, AND OTHER LIABILITY RESULTING IN WHOLE OR PART FROM BUYER'S NEGLIGENCE OR WILLFUL MISCONDUCT. NO CLAIMS OF ANY KIND, WHETHER BASED ON CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE, MAY BE BROUGHT AGAINST SELLER MORE THAN TWENTY-FOUR (24) MONTHS AFTER DELIVERY OF GOODS TO BUYER. In any contract by Buyer for resale of Goods, Buyer will effectively disclaim, as against Seller, any implied warranty of merchantability and all liability for property damage or personal injury resulting from handling, possession, or use of Goods, and will exclude, as against Seller, any liability for special or consequential damages.

9. CONTROLLING LAW; CONSENT TO VENUE; DISPUTE RESOLUTION. This Agreement and all rights and obligations hereunder will be governed by, and construed in accordance with, the laws of the State of Delaware, without regard to its conflicts of law provisions. The United Nations Convention on Contracts for the International Sale of Goods will not apply to this Agreement. All disputes, claims, and controversies ("Dispute") between the parties arising out of or relating to this Agreement, including but not limited to Disputes based on or arising from an alleged tort, will be resolved by binding arbitration in accordance with the Delaware Rapid Arbitration Act ("DRAA"). Disputes will be arbitrated in Wilmington, Delaware. The parties will select arbitrators in accordance with the DRAA. The parties may mutually agree on the rules governing such arbitration, provided that such rules, and any additional or different rules, are consistent with the DRAA. Defenses based on statutes of limitation and similar doctrines will be applicable in any such proceeding, and commencement of an arbitration proceeding under this Agreement will be deemed commencement of an action for such purposes. No Dispute will be arbitrated as a class action, representative or general public action, collective action, private attorney-general action, or otherwise be joined with claims of any other person ("Collective Proceedings"). If (A) this limitation on Collective Proceedings is held by an arbitrator or court of competent jurisdiction to be unenforceable or interpreted to not prevent a Collective Proceeding, and/or (B) any arbitrator or court renders a decision regarding the question of arbitrability under the DRAA such that the Dispute is not arbitrated in accordance with the DRAA, then such Dispute will proceed in a court of law as provided below and not arbitration. Notwithstanding the foregoing, Seller reserves the right to resolve or bring any Dispute in a court of competent jurisdiction in the state or federal courts of Delaware and the parties agree that, except when the Dispute is arbitrated, the exclusive venue for all Disputes between the parties will be the state and federal courts of Delaware, to which jurisdiction each party hereby irrevocably submits. Each party waives any objection or defense that it is not personally subject to jurisdiction of the state and federal courts of Delaware; that venue of the action is improper; and that the action, suit, or proceeding is brought in an inconvenient forum. In

addition to any other mode of service of process authorized by law, each party consents to service of process by registered or certified mail. EACH PARTY EXPRESSLY WAIVES ALL RIGHTS IT MAY HAVE TO A TRIAL BY JURY.

10. COMPLIANCE WITH LAWS. Each party represents and warrants, in connection with transactions contemplated by this Agreement, and any other agreement contemplated by or entered into pursuant to this Agreement, that it will comply with all applicable federal, state and local laws, codes, regulations, orders, and ordinances, including but not limited to all applicable: (A) laws and regulations regarding export controls, economic sanctions, trade embargoes, anti-boycott restrictions, and anti-corruption laws, including but not limited to the U.S. Foreign Corrupt Practices Act (as amended), and the United Kingdom Bribery Act ("Applicable International Trade and Anti-Corruption Laws"); (B) equal employment opportunity laws, regulations, and requirements, and laws and regulations prohibiting discrimination against any person because of veteran status, disability, race, creed, color, national origin, religion, age, or sex in any term or condition of employment; and (C) laws and regulations addressing human trafficking and slavery. Each party acknowledges and confirms that it and its officers, directors, employees, agents, contractors, designees, and/or any other party acting on its behalf ("Related Parties") are familiar with the provisions of Applicable International Trade and Anti-Corruption Laws. Each party agrees to indemnify, defend, and hold harmless the other party and its employees from and against all claims, demands, costs, penalties, and fines arising in connection with any alleged breach by the indemnifying party or any of its Related Parties of this Section. Seller may terminate this Agreement entirely, without liability to Buyer, if Seller believes in good faith that Buyer or any of its Related Parties has violated or intends to violate this Section.

11. MISCELLANEOUS.

(A) No waiver of any provision, right or remedy contained in this Agreement, including the terms of this Section 11(A), is binding on or effective against a party unless expressly stated in writing and signed by such party's authorized representative. Each party agrees that no right or remedy provided for in this Agreement can be waived through course of dealing, course of performance or trade usage and that reliance on any waiver without the other party's written consent is unreasonable. Waiver of any breach will be limited to the specific breach so waived and will not be construed as a waiver of any subsequent breach. A party's approval or consent to any action proposed by the other will not be considered an agreement to the propriety, fitness, or usefulness of the proposed action, and will not affect the proposing party's obligation to strictly comply with this Agreement and all related Orders.

(B) Buyer may not assign this Agreement or any rights or obligations hereunder without Seller's prior written consent. Any attempted assignment in violation of this Section is void; however, this Agreement and the Terms and Conditions of Sale contained herein are enforceable against Buyer's successors and permitted assigns.

(C) Seller's remedies in this Agreement are cumulative and in addition to any other remedies available to Seller, whether at law, equity, or otherwise.

(D) If any provision or part of a provision contained in this Agreement is held by a court of competent jurisdiction to be contrary to law or public policy, the remaining provisions of the Agreement will remain in full force and effect.

(E) Each party is an independent contractor with respect to this Agreement and not an agent or employee of the other party.

(F) Any notice, request, demand, or other communication from one party to the other required or permitted to be given under this Agreement will be sent to the address for each party indicated on the applicable Order and (i) delivered in person; (ii) sent by overnight service (signature required); or (iii) sent via email with confirmation of delivery. All notices will be effect on the date of receipt. Parties may change such notice addresses upon written notice to the other party. In the case of notice to Seller, please also send a copy to:

McWane, Inc.
2900 Hwy 280 S Suite 250
Birmingham, AL 35223
Attn: General Counsel
Email: jim.proctor@mcwane.com

(G) No provision of this Agreement may be construed against either party as the drafting party. The English language version of this Agreement will govern over any translations.

42	1142	536.0	1°	250
48	1148	653.0	1°	250

NOTE: For applications or pressures other than those shown please contact EBAA for assistance.

Features and Applications:

- Sizes 3 inch through 48 inch
- Constructed of ASTM A536 Ductile Iron
- Torque Limiting Twist-Off Nuts
- MEGA-BOND®
  Restraint Coating System
  For more information on MEGA-BOND, refer to www.ebaa.com
- The Mechanical Joint Follower Gland is incorporated into the restraint
- Heavy Duty thick wall design
- Support Products Available:
  Split repair style available 3 inch through 48 inch.
  EBAA Series 1100SD

  Solid restraint harness available for push-on pipe bells.
  EBAA Series 1700

  Split restraint harness available for existing push-on bells.
  EBAA Series 1100HD
- All MEGALUG and related restraint products can be furnished as packaged accessories complete with appropriate restraint, gasket, lubrication, and bolting hardware
- For use on water or wastewater pipelines subject to hydrostatic pressure and tested in accordance with either AWWA C600 or ASTM D2774

Made In The USA

Mechanical Joint Restraint Sample Specifications

(The text of the specifications below can be copied pasted from www.ebaa.com/download/1100Spec.DOC)

Restraint devices for mechanical joint fittings and appurtenances conforming to either ANSI/AWWA C111/A21.11 or ANSI/AWWA C153/A21.53, shall conform to the following:

Design
Restraint devices for nominal pipe sizes 3 inch through 48 inch shall consist of multiple gripping wedges incorporated into a follower gland meeting the applicable requirements of ANSI/AWWA C110/A21.10.

The devices shall have a working pressure rating of 350 psi for 3-16 inch and 250 psi for 18-48 inch. Ratings are for water pressure and must include a minimum safety factor of 2 to 1 in all sizes.

Material
Gland body, wedges and wedge actuating components shall be cast from grade 65-45-12 ductile iron material in accordance with ASTM A536.

For applications requiring restraint 30 inch and greater, an alternate grade of iron meeting the material requirements of ASTM A536 is acceptable, providing the device meets all end product performance requirements.

Ductile iron gripping wedges shall be heat treated within a range of 370 to 470 BHN.

Three (3) test bars shall be incrementally poured per production shift as per Underwriter's Laboratory (U.L.) Specifications and ASTM A536. Testing for tensile, yield and elongation shall be done in accordance with ASTM E8.

Chemical and nodularity tests shall be performed as recommended by the Ductile Iron Society, on a per ladle basis.

Traceability
An identification number consisting of year, day, plant and shift (YYDDD)(plant designation)(Shift number), shall be cast into each gland body.

All physical and chemical test results shall be recorded such that they can be accessed via the identification number on the casting. These Material Traceability Records (MTR's) are to be made available, in hard copy, to the purchaser that requests such documentation and submits his gland body identification number.

Production pieces that are too small to accommodate individual numbering, such as fasteners and wedges, shall be controlled in segregate inventory until such time as all quality control tests are passed. These component parts may then be released to a general inventory for final assembly and packaging.

All components shall be manufactured and assembled in the United States. The purchaser shall, with reasonable notice, have the right to plant visitation at his/her expense.

Installation
Mechanical joint restraint shall require conventional tools and installation procedures per AWWA C600, while retaining full mechanical joint deflection during assembly as well as allowing joint deflection after assembly.

Proper actuation of the gripping wedges shall be ensured with torque limiting twist off nuts.

Approvals
Restraint devices shall be Listed by Underwriters Laboratories (3" through 24" inch size) and Approved by Factory Mutual (3" through 12" inch size).

Mechanical joint restraint for ductile Iron pipe shall be Megalug Series 1100 produced by EBAA Iron Inc. or approved equal.

MEGA-BOND® Restraint Coating System
All wedge assemblies and related parts shall be processed through a phosphate wash, rinse and drying operation prior to coating application. The coating shall consist of a minimum of two coats of liquid thermoset epoxy coating with heat cure to follow each coat.

All casting bodies shall be surface pretreated with a phosphate wash, rinse and sealer before drying. The coating shall be electrostatically applied and heat cured. The coating shall be a polyester based powder to provide corrosion, impact and UV resistance.

The coating system shall be MEGA-BOND by EBAA Iron, Inc. or approved equal. Requests for approved equal must submit coating material and process details for review prior to bid.

For more information regarding MEGA-BOND, refer to the MEGA-BOND brochure or visit www.ebaa.com.

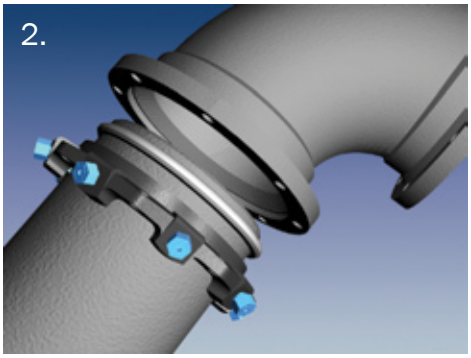
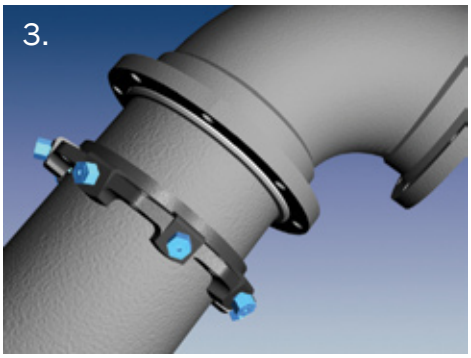
* With Twist-Off Nuts twisted off.

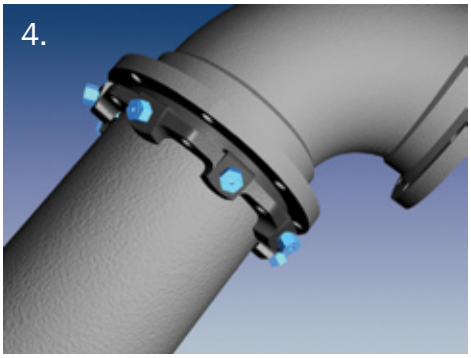
NOTE: Dimensions are in inches and are subject to change without notice.

Important Notes

- The Series 1100 MEGALUG should not be used on plain end fittings.
- If encased in concrete, polyethylene wrap must be used to prevent concrete intrusion into the wedge pocket.
- For test pressures above the rated pressures shown, contact EBAA for recommendations, such as tandem restraint for high pressure applications.
- If you experience the need to install the Series 1100 MEGALUG in an unconventional manner please consult our engineering department.
- EBAA-Seal™ Mechanical Joint Gaskets are provided with 30 inch through 48 inch MEGALUG restraints. These are required on the above referenced sizes to accommodate the pressure ratings and safety factors shown.
- Extra length T-bolts are provided with the 42 inch and 48 inch sizes to facilitate easier assembly of the mechanical joint.
- All Series 1100 MEGALUG components are made of ductile iron conforming to ASTM A536. The wedges are heat treated to a hardness range of 370 to 470 BHN.
- LISTINGS AND APPROVALS: Sizes 3 inch through 24 inch are listed by Underwriters Laboratories, Inc. Category HJKF "Fittings, Retainer Type" with a deflection angle of 5 degrees (3 inch through 12 inch) and 2½ degrees (14 inch through 24 inch). The listing file number is EX2836, Sizes 3 inch through 12 inch are Factory Mutual approved.
- The Series 1100 MEGALUG is intended for use on ductile iron pipe. The restraint can be used on grey iron pipe if the pipe is not severely corroded and is in sound condition and has an outside diameter that can be accommodated. For more information on the use of the MEGALUG restraint on grey iron pipe ask for Connections Bulletin DI-1.







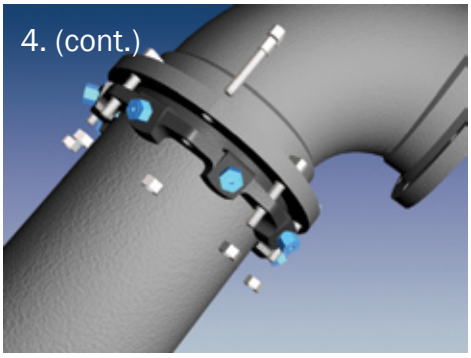
1. The Series 1100 MEGALUG joint restraint is designed for use on ductile iron pipe conforming to ANSI/AWWA C151/A21.51 (all thickness classes) when restraining mechanical joint pipe fittings.

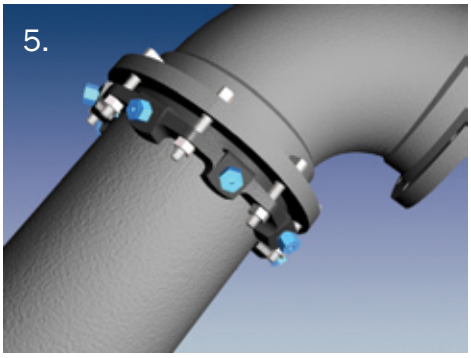
2.* Clean the socket and the plain end. Lubrication and additional cleaning should be provided by brushing both the gasket and the plain end with soapy water or an approved pipe lubrication meeting the requirement of ANSI/AWWA C111/A21.11, just prior to slipping the gasket onto the plain end for joint assembly. Place the gland on the plain end with lip extension toward the plain end, followed by the gasket.

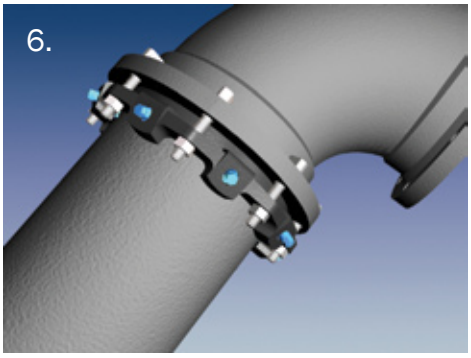
NOTE: In cold weather it is preferable to warm the gasket to facilitate assembly of the joint.

3.* Insert the pipe into the socket and press the gasket firmly and evenly into the gasket recess. Keep the joint straight during assembly.

4.* Push the gland toward the socket and center it around the pipe with the gland lip against the gasket. Insert bolts and hand tighten nuts. Make deflection after joint assembly but before tightening bolts.







5.* Tighten the bolts to the normal range of torque as indicated [3 inch 45-60 ft-lbs., 4-24 inch 75-90 ft-lbs., 30-36 inch 100-120 ft-lbs., and 42-48 inch 120-150 ft-lbs.] While at all times maintaining approximately the same distance between the gland and the face of the flange at all points around the socket. This can be accomplished by partially tightening the bottom bolt first, then top bolt, next the bolts at either side, finally the remaining bolts. Repeat the process until all bolts are within the appropriate range of torque. In large sizes (30-48 inch), five or more repetitions may be required. The use of a torque-indicating wrench will facilitate this procedure.

6. Tighten the torque limiting twist-off nuts in a clockwise direction (direction indicated by arrow on top of nut) until all wedges are in firm contact with the pipe surface. Continue tightening in an alternating manner until all of the nuts have been twisted off.

7. If removal is necessary, utilize the ⅝ inch hex heads provided. If reassembly is required, assemble the joint in the same manner as above, by tightening the wedge bolts to 90 ft-lbs. If the series 1100 restraint is removed from the pipe, be sure that all the collar bolts and wedges are in place before the restraint is reassembled.

* These steps are requirements of AWWA. AWWA Standard C600

For More Information

For more information about MEGALUG restraints call EBAA today and request "EBAA Connections Bulletin DI-1" concerning use of the MEGALUG restraint on grey iron pipe, or "EBAA Connections Bulletin DI-2" covering the background and operation of the MEGALUG system of restraint.

"Restraint Length Calculation" Software is available for PC/Windows applications. Support documentation about the software can be found in "EBAA Connections Bulletin PD-1 through PD-5".

RFCA
RESTRAINED FLANGE COUPLING ADAPTER FOR STEEL AND DI PIPE 3 – 12 INCH

SUBMITTAL INFORMATION

USE

The Restrained Flanged Coupling Adapter is used to connect plain end IPS sizes steel pipe (minimum thickness STD weight class pipe) or ductile iron pipe to a flanged pipe or fitting. It provides flexibility before and after installation, and a RomaGrip wedge style restrainer provides restraint for the plain end pipe. Not for use on plain end mechanical joint fittings. The RomaGrip may be used on cast iron pipe as long as it has the same OD as ductile iron pipe.

NOTE: Some initial axial movement may occur in lug style restraints as the lugs seat. Movement is directly related to the size of the piping system and the system pressure. In general terms movement of approximately 0.25 can be expected in restraints under 16". For larger sizes, movement of approximately 0.40 may be seen. If this is critical to your application please contact Romac Engineering for additional information.

MATERIALS

GLAND AND FLANGE BODY
Ductile (nodular) iron, meeting or exceeding ASTM A 536, Grade 65-45-12.

GASKETS
Gasket is made from virgin Styrene Butadiene Rubber (SBR) compounded for water and sewer service in accordance with ASTM D 2000 MBA 710. Flange gasket is O ring style and is made of Nitrile Butadiene Rubber (NBR) in accordance with ASTM D 2000. Other compounds available for petroleum, chemical, or high temperature service on request.

RESTRAINING BOLT
7/8 –9 roll thread, Ductile (nodular) iron, meeting or exceeding ASTM A 536.

RESTRAINING LUGS
Ductile (nodular) iron, meeting or exceeding ASTM A 536. Heat treated using a proprietary process.

LUG LOCATORS
Polyurethane, a thermal plastic.

T-BOLTS AND NUTS
High strength low alloy steel T-head bolt. National coarse rolled thread and heavy hex nut. Steel meets AWWA C111 composition specifications. Stainless steel bolts and nuts available on request.

COATINGS
Shop coat applied to cast parts for corrosion protection in transit. Fusion bonded epoxy, RomaGrip Romabond polyester available on request.

FLANGE
Compatible with ANSI Class 125 and 150 bolt circles.

STANDARD

Romac couplings meet the specifications set forth in the AWWA Standard C219 coupling spec.

FM APPROVED

FM approved for cast iron and ductile iron pipe.

SIZES & RANGES

See Catalog.

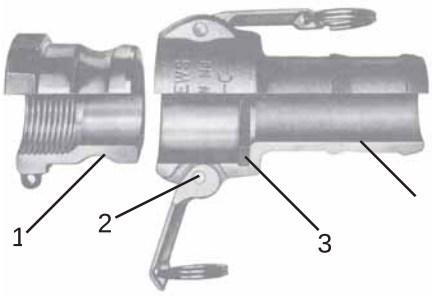
2 Cam and Groove Information

"ANDREWS"



1. Precision machined to rigid tolerances.
2. Durable stainless steel cam arm pins will not rust or bind, for greater strength and safety.
3. Recess holds gasket firmly in place - assures proper placement.
4. Long shank design allows proper banding thus eliminating the major cause of hose damage.

ANDREWS ORDERING SYSTEM

200 - A - AL - *

- Gasket
- Material Code
- Style Code
- Size of coupler or adapter and hose or pipe end; i.e. = 2 inch size.

If coupling is a reducing size, the coupler or adapter is the first size (i.e. 4030-C is 4 inch coupler to 3 inch hose shank.)

Operation of Cam and Groove

1. To make connection, simply slide the adapter into the coupler and with normal hand pressure, press the cam levers down.
2. Uncoupling is as quick and simple as coupling. Just lift the cam arms and remove the adapter.

"BOSS-LOCK"

"Boss-Lock" Cam & Groove provides a unique patented safety feature.

The Cast-in lugs allow safety clips to be attached once the lugs are passed through slots in the special cam lever arms. These clips prevent the coupler from being unlocked until they are removed, providing a positive locking action.

Pull Ring Safety Clips

Dixon has developed the Pull Ring Safety Clip to simplify the locking action on "Boss-Lock" couplers. No more inserting clips or dangling lanyards, just a twist and it's locked, giving you a low profile positive locking action.
The Pull Ring Safety Clip will be phased into stock on all "Boss-Lock" couplers as inventory is replaced.

Buy with Confidence
"Boss-Lock" Investment Stainless Steel Cam Arms are Guaranteed!!!
Should you ever break a "Boss-Lock" Investment Stainless Steel Cam Arm, simply return it to the nearest warehouse for a free replacement.

SPECIFICATIONS ON OUR CAM AND GROOVE

Specifications: "Andrews", "Boss-Lock" and "EZ Boss-Lock" Cam and Groove couplers and adapters are produced to interchange with all product produced to *MIl-C-27487F*.
No standard exists for the 1/2" and 8" fittings, and generally these sizes do not interchange with other manufacturers.
Dust Caps and Dust Plugs are NOT to be used in Pressure Applications for safety and environmental reasons.

Pressure Ratings: Designed for use with Liquids, consult Dixon for specific recommendations.

SAFETY ALERT

Recommendations based on the use of mating Dixon fittings at ambient temperature (70° F) with standard Buna-N Seal installed. For use at elevated temperature or other unusual operating conditions, consult the factory.

"Andrews", "Boss-Lock" and "EZ Boss-Lock" Couplers and Adapters Maximum Working Pressure

Cam and Groove Information

"EZ BOSS-LOCK"

No more fumbling with clamps, wire, clips or pins . . .
Just close the handles and the locking mechanism is engaged.

Unlike other safety couplings . . .

- The EZ Boss-Lock is extremely EASY TO OPEN!!! *The release lever is under your thumb when you want to open the fitting.* ERGONOMIC.
- The EZ Boss-Lock is resistant to accidental disconnection when being dragged. *The release lever opens in the direction opposite to the cam arm, so movements that tend to open the release lever also tend to close the cam arm!!!*
- The EZ Boss-Lock alerts you if it is not properly engaged. *If the rotating lever is not flush with the handle, it is not properly engaged.*
- The EZ Boss-Lock has no sliding pins to jam. *The EZ Boss-Lock's rotating action helps keep the locking device free of debris.*
- The EZ Boss-Lock has no sliding pins to pop open. *The EZ Boss-Lock is designed to protect critical parts from impact and to withstand rugged use.*
- The EZ Boss-Lock can be supplied with special shanks custom suited to your needs. *The EZ Boss-Lock is available with Swaged and PF shank designs, for hard to couple chemical hoses.*
- The EZ Boss-Lock cam arm assemblies are made of investment cast Stainless Steel with plated Carbon Steel pull rings.
- The EZ Boss-Lock is easier to insert into the hose tubes on Tank Trucks, and easier to use in restricted spaces. *This is due to the smaller maximum O.D. and a more snag free exterior.*
- The EZ Boss-Lock Cam Arm assemblies can be retrofitted onto Undamaged Stainless Steel Boss-Lock. *This allows you to protect your investment in Stainless Steel Boss-Lock couplings while you upgrade.*
- The EZ Boss-Lock is Made in the USA.

All measurements in this brochure are for reference only and are subject to change. Where dimensions are critical, please consult the factory. For products not shown or special application questions, please consult the factory.

MULTI-PURPOSE EPOXY

PART A	B67-235	SERIES COLORS
PART B	B67V235	HARDENER

Revised 6/11

PRODUCT INFORMATION

4.67

PRODUCT DESCRIPTION

Dura-Plate 235 Multi-Purpose Epoxy is a modified epoxy phenalkamine, formulated specifically for immersion and atmospheric service in marine and industrial environments. Dura-Plate 235 provides exceptional performance in corrosive environment, and can be applied at temperatures as low as 0°F (-18°C).

- Self-priming
- Low temperature application, 0°F (-18°C)
- Surface tolerant - damp surfaces
- Provides salt water and fresh water immersion resistance
- Approved as a primer per MIL-PRF-23236, Type V, Class 7, Grade C
- Outstanding application properties

PRODUCT CHARACTERISTICS

Finish:	Semi-Gloss
Color:	Wide range of colors available
Volume Solids:	68% ± 2%, mixed
Weight Solids:	79% ± 2%, mixed
VOC (EPA Method 24):	Unreduced: <280 g/L; 2.33 lb/gal Reduced 10%: <327 g/L; 2.72 lb/gal
Mix Ratio:	4:1 by volume

Recommended Spreading Rate per coat:

	Minimum	Maximum
Wet mils (microns)	**6.0** (150)	**12.0** (300)
Dry mils (microns)	**4.0*** (100)	**8.0*** (200)
~Coverage sq ft/gal (m^2/L)	**136** (3.3)	**272** (6.6)
Theoretical coverage **sq ft/gal** (m^2/L) @ 1 mil / 25 microns dft	**1088** (26.6)	

*See Performance Tips section

NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.

Drying Schedule @ 6.0 mils wet (150 microns):

	@ 0°F/-18°C	@ 40°F/4.5°C	@ 77°F/25°C *50% RH*	@ 120°F/49°C
To touch:	18 hours	3.5 hours	2 hours	20 minutes
To handle:	36 hours	12 hours	3.5 hours	40 minutes
To recoat:				
minimum:	36 hours	12 hours	3.5 hours	40 minutes
maximum:	6 months	6 months	6 months	6 months
Cure to service:	30 days	14 days	7 days	3 days

If maximum recoat time is exceeded, abrade surface before recoating.

Drying time is temperature, humidity, and film thickness dependent.

Pot Life:	16 hours	8 hours	4 hours	1 hour
Sweat-in-time:	1 hour	30 minutes	15 minutes	5 minutes

Shelf Life:	Part A: 36 months, unopened Part B: 24 months, unopened Store indoors at 40°F (4.5°C) to 100°F (38°C).
Flash Point:	116°F (47°C) PMCC, mixed
Reducer/Clean Up:	Reducer R7K104

RECOMMENDED USES

For use over prepared steel and masonry surfaces.
- Salt water and fresh water immersion resistance
- Ballast tanks, offshore and marine structures
- Bilges and wet void areas
- Above- and below- water hull areas
- Decks and superstructures
- Water and waste water tanks
- Acceptable for use with cathodic protection systems.
- Dura-Plate 235 Black meets or exceeds the performance criteria of C-200; SSPC Paint 16; and Mil-P-23236B(SH) Type I or IV Class 2
- Suitable for use in USDA inspected facilities
- Conforms to MPI # 101

PERFORMANCE CHARACTERISTICS

Substrate*: Steel

Surface Preparation*: SSPC-SP10/NACE 2

System Tested*:

2 cts. Dura-Plate 235 @ 5.0 mils (125 microns) dft/ct

*unless otherwise noted below

Test Name	Test Method	Results
Abrasion Resistance	ASTM D4060 CS17 wheel, 1000 cycles, 1 kg load	65 mg loss
Adhesion	ASTM D4541	850 psi
Direct Impact Resistance	ASTM D2794	10 in lb
Dry Heat Resistance	ASTM D2485	250°F (121°C)
Moisture Condensation Resistance	ASTM D4585, 100°F (38°C), 2000 hours	Rating 10 per ASTM D610 for rusting; Rating 10 per ASTM D714 for blistering
Pencil Hardness	ASTM D3363	H

IMMERSION
(Ambient temperature)
- Salt Water.....Recommended
- Fresh Water.....Recommended
- Ballast Tank Mix .....Recommended

Epoxy coatings may darken or yellow following application and curing.

DISCLAIMER

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

SURFACE PREPARATION

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Refer to product Application Bulletin for detailed surface preparation information.

Minimum recommended surface preparation:
Iron & Steel:
- Atmospheric: SSPC-SP2 or SSPC-SP12/NACE 5 , WJ-4
- Immersion: SSPC-SP10, 2 mil (50 micron) profile or SSPC-SP-12/NACE 5, WJ-2

Concrete & Masonry:
- Atmospheric: SSPC-SP13/NACE 6, or ICRI No. 310.2, CSP 1-3
- Immersion: SSPC-SP13/NACE 6-4.3.1 or 4.3.2, or ICRI No. 310.2, CSP1-3

Galvanized, atmospheric: SSPC-SP1

TINTING

Tint Part A with Maxitoners only. Mill White tints at 150%. Ultradeep Base tints at 100%. Five minutes minimum mixing on a mechanical shaker is required for complete mixing of color.

APPLICATION CONDITIONS

Temperature: 0°F (-18°C) minimum, 120°F (49°C) maximum (air and surface)
At least 5°F (2.8°C) above dew point
Material should be at least 40°F (4.5°C) for optimal performance.
Relative humidity: 85% maximum

Refer to product Application Bulletin for detailed application information.

ORDERING INFORMATION

Packaging:
- Part A: 1 gallon (3.78L) and 4 gallons (15.1L) in a 5 gallon (18.9L) container
- Part B: 1 quart (0.94L) and 1 gallon (3.78L)

Weight: 11.3 ± 0.2 lb/gal ; 1.35 Kg/L, mixed may vary with color

SAFETY PRECAUTIONS

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

WARRANTY

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

PART B	B67V235	HARDENER

Revised 6/11

APPLICATION BULLETIN

4.67

SURFACE PREPARATIONS

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Iron & Steel, Immersion Service:
Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2 or SSPC-SP12/NACE 5. For SSPC-SP10/NACE 2, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils / 50 microns). For SSPC-SP12/NACE No. 5, all surfaces to be coated shall be cleaned in accordance with WJ-2. Pre-existing profile should be approximately 2 mils (50 microns). Light rust bloom is allowed. Remove all weld spatter and round all sharp edges by grinding. Prime any bare steel the same day as it is cleaned.

Iron & Steel, Atmospheric Service:
Minimum surface preparation is Hand Tool Clean per SSPC-SP2 or SSPC-SP12/NACE 5. For surfaces prepared by SSPC-SP2, first remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6/NACE 3, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). For surfaces prepared by SSPC-SP12/NACE No. 5, all surfaces shall be cleaned in accordance with WJ-4. Pre-existing profile should be approximately 2 mils (50 microns). Prime any bare steel the same day as it is cleaned.

Galvanized Steel
Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1 (recommended solvent is VM&P Naphtha). When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP7 is necessary to remove these treatments. Rusty galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2, prime the area the same day as cleaned.

Concrete and Masonry
For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI No. 310.2, CSP 1-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F (24°C). Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with Steel-Seam FT910.

Concrete, Immersion Service:
For surface preparation, refer to SSPC-SP13/NACE 6, Section 4.3.1 or 1.3.2 or ICRI No. 310.2, CSP 1-3.

Follow the standard methods listed below when applicable:
ASTM D4258 Standard Practice for Cleaning Concrete.
ASTM D4259 Standard Practice for Abrading Concrete.
ASTM D4260 Standard Practice for Etching Concrete.
ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete.
SSPC-SP 13/Nace 6 Surface Preparation of Concrete.
ICRI No. 310.2 Concrete Surface Preparation.

	Pitted & Rusted	D St 3	D St 3	SP 3	-

APPLICATION CONDITIONS

Temperature: 0°F (-18°C) minimum, 120°F (49°C) maximum (air and surface)
At least 5°F (2.8°C) above dew point

Material should be at least 40°F (4.5°C) for optimal performance.

Relative humidity: 85% maximum

APPLICATION EQUIPMENT

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.

Reducer/Clean Up ..... Reducer R7K104

Airless Spray
Unit.....30:1 Pump
Pressure.....2400 - 2800 psi
Hose.....1/4" - 3/8" ID
Tip .....015" - .019"
Filter.....60 mesh
Reduction.....As needed, up to 10% by volume

Conventional Spray
Gun .....DeVilbiss MBC-510
Fluid Tip .....E
Air Nozzle.....704
Atomization Pressure.....60-65 psi
Fluid Pressure.....5-15 psi
Reduction.....As needed, up to 10% by volume

Brush
Brush.....Natural Bristle
Reduction.....Not recommended

Roller
Cover .....3/8" woven with solvent resistant core
Reduction.....Not recommended

If specific application equipment is not listed above, equivalent equipment may be substituted.

Protective & Marine Coatings

DURA-PLATE® 235
MULTI-PURPOSE EPOXY

PART A	B67-235	SERIES COLORS
PART B	B67V235	HARDENER

APPLICATION BULLETIN

4.67

APPLICATION PROCEDURES

Surface preparation must be completed as indicated.

Mix contents of each component thoroughly using low speed power agitation. Make certain no pigment remains on the bottom of the can. Then combine 4 parts by volume of Part A with 1 part by volume of Part B. Thoroughly agitate the mixture with power agitation. Allow the material to sweat-in as indicated prior to application. Re-stir before using.

If reducer solvent is used, add only after both components have been thoroughly mixed, after sweat-in.

Apply paint at the recommended film thickness and spreading rate as indicated below:

Recommended Spreading Rate per coat:

	Minimum	Maximum
Wet mils (microns)	**6.0** (150)	**12.0** (300)
Dry mils (microns)	**4.0*** (100)	**8.0*** (200)
~Coverage sq ft/gal (m^2/L)	**136** (3.3)	**272** (6.6)
Theoretical coverage **sq ft/gal** (m^2/L) @ 1 mil / 25 microns dft	**1088** (26.6)	

*See Performance Tips section

NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.

Drying Schedule @ 6.0 mils wet (150 microns):

	@ 0°F/-18°C	@ 40°F/4.5°C	@ 77°F/25°C *50% RH*	@ 120°F/49°C
To touch:	18 hours	3.5 hours	2 hours	20 minutes
To handle:	36 hours	12 hours	3.5 hours	40 minutes
To recoat:				
minimum:	36 hours	12 hours	3.5 hours	40 minutes
maximum:	6 months	6 months	6 months	6 months
Cure to service:	30 days	14 days	7 days	3 days

If maximum recoat time is exceeded, abrade surface before recoating.

Drying time is temperature, humidity, and film thickness dependent.

Pot Life:	16 hours	8 hours	4 hours	1 hour
Sweat-in-time:	1 hour	30 minutes	15 minutes	5 minutes

Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

CLEAN UP INSTRUCTIONS

Clean spills and spatters immediately with Reducer R7K104. Clean tools immediately after use with Reducer R7K104. Follow manufacturer's safety recommendations when using any solvent.

DISCLAIMER

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.

PERFORMANCE TIPS

Stripe coat crevices, welds, and sharp angles to prevent early failure in these areas.

When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle

Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.

Excessive reduction of material can affect film build, appearance, and adhesion.

Insufficient ventilation, incomplete mixing, miscatalyzation, and external heaters may cause premature yellowing.

Excessive film build, poor ventilation, and cool temperatures may cause solvent entrapment and premature coating failure.

For Immersion Service: (if required) Holiday test in accordance with ASTM D5162 for steel, or ASTM D4787 for concrete.

Do not mix previously catalyzed material with new.

Do not apply the material beyond recommended pot life.

In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Reducer R7K104.

Please contact your Sherwin-Williams Representative for recommendations for immersion service of tinted material.

When coating over aluminum and galvanizing, recommended dft is 2-4 mils (50-100 microns).

Refer to Product Information sheet for additional performance characteristics and properties.

SAFETY PRECAUTIONS

Refer to the MSDS sheet before use.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

WARRANTY

The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. -Spare Parts – None provided at this time
-Pumpsafe A motor protection relay - mounted in local monitoring panel

Two(2) – **Raw Wastewater Pumps PS2.P-1,2** - KSB Model KRT F80-252/224XEG1-S submersible pump in cast iron construction fitted with open recessed type impeller in hardened duplex stainless steel CD4MCu material, 30 HP 3/60/460 VAC 1762 RPM motor, and with the following options / accessories. Pumps are rated for 552 GPM @ 86 ft TDH.

-50 Ft. of power cable
-30 Ft. of 1/4" 316 SS lifting chain
-3" base elbow in cast iron construction - See note 2
-316 SS upper guide rail – 2" sch 40 rails by others
-316 SS intermediate guide rail support bracket for 6" riser pipe
-Grip slide lifting device – fig 1 size
-5 year standard pump warranty
-HI certified non-witnessed factory performance tests 14.6 Level 1U
-HI Variable speed tests
-HI certified non-witnessed hydro tests. Test psi = 75 psi
-Spare Parts – None provided at this time
-Pumpsafe A motor protection relay - mounted in local monitoring panel

Two(2) – **Raw Wastewater Pumps PS3.P-1,2** - KSB Model KRT F80-252/154XEG1-S submersible pump in cast iron construction fitted with open recessed type impeller in hardened duplex stainless steel CD4MCu material, 20 HP 3/60/460 VAC 1763 RPM motor, and with the following options / accessories. Pumps are rated for 305 GPM @ 71 ft TDH.

-50 Ft. of power cable
-30 Ft. of 1/4" 316 SS lifting chain
-3" base elbow in cast iron construction - See note 2
-316 SS upper guide rail – 2" sch 40 rails by others
-316 SS intermediate guide rail support bracket for 6" riser pipe
-Grip slide lifting device – fig 1 size
-5 year standard pump warranty
-HI certified non-witnessed factory performance tests 14.6 Level 1U
-HI Variable speed tests
-HI certified non-witnessed hydro tests. Test psi = 75 psi
-Spare Parts – None provided at this time
-Pumpsafe A motor protection relay - mounted in local monitoring panel

Seven(7) – Local monitoring panel / junction box mounted in wall mount Nema 4X 316 stainless steel outdoor enclosure (12"H x 12"W x 8" D) complete with motor power connection terminals, fault lights, KSB pump motor protection relay Pumpsafe A mounted and wired.

Spare Parts

Description	PN
Five(5) – Oring and gasket kit	TBD
Two(2) – Oring and gasket kit (PS3 pumps)	TBD
One(1) – Propeller removal bolt (special tool - fits all pumps)	11197784

Data sheet

Pump type **KRT F 80-252/224XEG1-S**

Shaft seal

Type of seal	Double mechanical seal
Arrangement:	Tandem
Seal on medium side	with elastomer bellows
Mechanical seal. pump-side	Silicon carbide / Silicon carbide
Mechanical seal. bearing-side	Carbon / Silicon carbide

Monitoring

Thermal winding protection	By temperature sensitive switches
Explosion proof protection	By PTC (Explosion proof models only)
Motor housing monitoring	By conductive moisture sensor electrode
Mechanical seal leakage detection	---
Bearing temperature monitoring	---

Coating

Preparatory treatment	SSPC near white SP 10
Blasting method	Steel grit blasting
Primer	Zinc phosphate or Zinc dust
Dry film thickness primer	> 1 1/2 mils (35 microns)
Top coat	2-component epoxy resin
Solids content	> 82 %
Dry film thickness top coat	> 6 mils (150 microns)
Color	Ultramarine Blue (RAL 5002 to DIN 6174)

Installation

INSTALLATION	
Type of installation: automatic connection to a permanently installed discharge elbow	Wet well installation designed for
Discharge elbow size (DN2/DN3):	3 inch / 4 inch
Flange to suit:	ASME/ANSI B16.1, CLASS 125
Claw:	Bolted to the pump
Guide system:	Double guide bars, by contractor
Guide bar dimension:	2" diameter pipes
Installation depth:	15 ft (4.5 m)
Lifting device:	stainless steel lifting chain
Length of lifting device:	33 ft (10 m)
Lifting loops:	Every 8 ft (2.5 m)
Installation accessories: fasteners, claw, bracket, lifting chain, but without guide bars	Discharge elbow, 3 inch / 4 inch
Materials:	
Discharge elbow:	Grey cast iron EN-GJL-250 (A 48 Class 35B)
Claw:	Grey cast iron EN-GJL-250 (A 48 Class 35B)
Bracket:	Stainless steel EN-1.4571 (A 276 Type 316 Ti)
Lifting device:	Stainless steel EN-1.4404 (A 276 Type 316L)

INSTALLATION

Glossary

Back pull-out unit

Pump without pump casing; partly completed machinery

Certificate of decontamination

If a product is to be returned to the manufacturer, the customer declares in a certificate of decontamination that the product has been properly drained to eliminate any environmental and health hazards arising from components in contact with the fluid handled.

Close-coupled design

Motor directly fitted to the pump via a flange or a drive lantern

Discharge line

The pipeline which is connected to the discharge nozzle

Hydraulic system

The part of the pump in which the kinetic energy is converted into pressure energy

Noise characteristics

The noise characteristics are indicated as surface sound pressure level in dB(A).

Pump set

Complete pump set consisting of pump, drive, additional components and accessories

Suction lift line/suction head line

The pipeline which is connected to the suction nozzle

1 General

1.1 Principles

This operating manual is valid for the type series and variants indicated on the front cover (for details, refer to the table below).

Table 1: Variants covered by this manual

Size	Impeller type	Material variant						
		Gray cast iron				Industrial materials		
		G	G1	G2	GH	H	C1	C2
40-252	F, K, S	F, K, S	F, K	F, K	F, K	F, K	F, K	F, K
50-215	F	F	F	F	F	F	F	F
50-216	F, S	F, S	F	F	F	F	F	F
65-215	F	F	F	F	F	F	F	F
65-216	E	E	-	-	-	-	-	-
65-217	F	F	F	F	F	-	-	-
80-216	E, F	E, F	F	F	F	F	F	F
80-217	F	F	F	F	F	-	-	-

		G	G1	G2	GH	H	C1	C2
300-400	D, K	D, K	D, K	K	K	K	K	K
300-401	K	K	K	K	K	K	K	K
300-403	K	K	K	K	K	K	K	K

The manual describes the proper and safe use of this equipment in all phases of operation.

The name plate indicates the type series and size, the main operating data, the order number and the order item number. The order number and order item number clearly identify the pump set and serve as identification for all further business processes.

In the event of damage, immediately contact your nearest KSB Service center to maintain the right to claim under warranty.

Observe the noise characteristics, indicated as surface sound pressure level.
(⇨ Section 4.7, Page 22)

1.2 Installation of partly completed machinery

To install partly completed machinery supplied by KSB refer to the sub-sections under Servicing/Maintenance.

1.3 Target group

This operating manual is aimed at the target group of trained and qualified specialist technical personnel. (⇨ Section 2.4, Page 12)

1.4 Other applicable documents

Table 2: Overview of other applicable documents

Document	Contents
Data sheet	Technical data of the pump set
General arrangement drawing/ outline drawing	Mating dimensions, installation dimensions and weights of the pump set
Hydraulic characteristic curve	Characteristic curves showing head, flow rate, efficiency and power input
General assembly drawing[1)]	Sectional drawing of the pump set with part numbers
Sub-supplier product literature[1)]	Operating manuals and other product literature describing accessories and integrated machinery components
Spare parts lists[1)]	Description of spare parts
Supplementary operating manual[1)]	E.g. for special accessories

For accessories and/or integrated machinery components observe the product literature of the corresponding manufacturer.

1.5 Symbols

Table 3: Symbols used in this manual

Symbol	Description
✓	Conditions which need to be fulfilled before proceeding with the step-by-step instructions
▷	Safety instructions
⇨	Result of an action

1) If agreed to be included in the scope of supply

Symbol	Description
⇨	Cross-references
1. 2.	Step-by-step instructions
	Note Recommendations and important information on how to handle the product

2 Safety

DANGER

All the information contained in this section refers to hazardous situations.

In addition to the present general safety information the action-related safety information given in the other sections must be observed.

2.1 Key to safety symbols/markings

Table 4: Definition of safety symbols/markings

Symbol	Description
DANGER	**DANGER** This signal word indicates a high-risk hazard which, if not avoided, will result in death or serious injury.
WARNING	**WARNING** This signal word indicates a medium-risk hazard which, if not avoided, could result in death or serious injury.
CAUTION	**CAUTION** This signal word indicates a hazard which, if not avoided, could result in damage to the machine and its functions.
	General hazard In conjunction with one of the signal words this symbol indicates a hazard which will or could result in death or serious injury.
	Electrical hazard In conjunction with one of the signal words this symbol indicates a hazard involving electrical voltage and identifies information about protection against electrical voltage.
	Machine damage In conjunction with the signal word CAUTION this symbol indicates a hazard for the machine and its functions.

2.2 General

This operating manual contains general installation, operating and maintenance instructions that must be observed to ensure safe operation of the system and prevent personal injury and damage to property.

The safety information in all sections of this manual must be complied with.

The operating manual must be read and understood by the responsible specialist personnel/operators prior to installation and commissioning.

The contents of this operating manual must be available to the specialist personnel at the site at all times.

Information attached directly to the product must always be complied with and kept in a perfectly legible condition at all times. This applies to, for example:

- Arrow indicating the direction of rotation
- Markings for connections
- Name plate

The operator is responsible for ensuring compliance with all local regulations which are not taken into account.

2.3 Intended use

- The pump (set) must only be operated within the operating limits which are described in the other applicable documents.
- Only operate pump sets which are in perfect technical condition.
- Do not operate partially assembled pump sets.
- Only use the pump (set) to handle the fluids described in the data sheet or product literature of the pump variant.
- Never operate the pump set without the fluid to be handled.

- Observe the limits for continuous duty specified in the data sheet or product literature (Q_{min} and Q_{max}) (to prevent damage such as shaft fracture, bearing failure, mechanical seal damage, etc).
- When untreated waste water is handled, the duty points in continuous operation lie within 0.7 to 1.2 × $Q_{opt}$to minimize the risk of clogging/hardening.
- Avoid duty points for continuous operation at very low speeds and small flow rates (< 0.7 x Q_{opt}).
- Observe the minimum flow rates and maximum flow rates indicated in the data sheet or product literature (to prevent overheating, mechanical seal damage, cavitation damage, bearing damage, etc).
- Do not throttle the flow rate on the suction side of the pump set (to prevent cavitation damage).
- Consult the manufacturer about any use or mode of operation not described in the data sheet or product literature.
- Only use the respective impeller types in combination with the fluids described below.

	Impeller with cutter (impeller type S/S-max)
	Free-flow impeller (impeller type F/F-max)
	Closed single-channel impeller (impeller type E/E-max)
	Open, diagonal single-vane impeller (impeller type D)
	Closed multi-channel impeller (impeller type K/K-max)

- Use in the Amajet system
  See Amajet installation/operating manual for installation types.
  The following sizes are approved for use in the Amajet system:
  - F 100-254
  - D 100-253
  - F 150-315
  - D 100-316
  - D 150-253
  - D 150-315

Prevention of foreseeable misuse

- Observe the minimum flow velocities required to fully open the swing check valves to prevent the reduction of pressure and risk of clogging.
  (Contact the manufacturer for the required minimum flow velocities/loss coefficients.)
- Never exceed the permissible operating limits (pressure, temperature, etc.) specified in the data sheet or product literature.
- Observe all safety information and instructions in this manual.

2.4 Personnel qualification and personnel training

All personnel involved must be fully qualified to transport, install, operate, maintain and inspect the machinery this manual refers to.

The responsibilities, competence and supervision of all personnel involved in transport, installation, operation, maintenance and inspection must be clearly defined by the operator.

Deficits in knowledge must be rectified by sufficiently trained specialist personnel training and instructing the personnel who will carry out the respective tasks. If required, the operator can commission the manufacturer/supplier to train the personnel.

Training on the pump (set) must always be supervised by technical specialist personnel.

2.5 Consequences and risks caused by non-compliance with these operating instructions

- Non-compliance with these operating instructions will lead to forfeiture of warranty cover and of any and all rights to claims for damages.
- Non-compliance can, for example, have the following consequences:
  - Hazards to persons due to electrical, thermal, mechanical and chemical effects and explosions
  - Failure of important product functions
  - Failure of prescribed maintenance and servicing practices
  - Hazard to the environment due to leakage of hazardous substances

2.6 Safety awareness

In addition to the safety information contained in this manual and the intended use, the following safety regulations shall be complied with:

- Accident prevention, health regulations and safety regulations
- Explosion protection regulations
- Safety regulations for handling hazardous substances
- Applicable standards, directives and laws

2.7 Safety information for the operator/user

- Fit protective equipment (e.g. contact guards) supplied by the operator for hot, cold or moving parts, and check that the equipment functions properly.
- Do not remove any protective equipment (e.g. contact guards) during operation.
- Provide the personnel with protective equipment and make sure it is used.
- Contain leakages (e.g at the shaft seal) of hazardous fluids handled (e.g. explosive, toxic, hot) so as to avoid any danger to persons and the environment. Adhere to all relevant laws.
- Eliminate all electrical hazards. (In this respect refer to the applicable national safety regulations and/or regulations issued by the local energy supply companies.)
- If shutting down the pump does not increase potential risk, fit an emergency stop control device in the immediate vicinity of the pump (set) during pump set installation.

2.8 Safety information for maintenance, inspection and installation

- Modifications or alterations of the pump are only permitted with the manufacturer's prior consent.
- Use only original spare parts or parts authorized by the manufacturer. The use of other parts can invalidate any liability of the manufacturer for resulting damage.
- The operator ensures that maintenance, inspection and installation is performed by authorized, qualified specialist personnel who are thoroughly familiar with the manual.
- Only carry out work on the pump (set) during standstill of the pump.
- Only perform work on the pump set when it has been disconnected from the power supply (de-energized).
- The pump casing must have cooled down to ambient temperature.
- Pump pressure must have been released and the pump must have been drained.
- When taking the pump set out of service always adhere to the procedure described in the manual. (⇨ Section 6.3, Page 56)
- Decontaminate pumps which handle fluids posing a health hazard.
- As soon as the work has been completed, re-install and re-activate any safety-relevant devices and protective devices. Before returning the product to service, observe all instructions on commissioning. (⇨ Section 6.1, Page 50)

2.9 Unauthorized modes of operation

Never operate the pump (set) outside the limits stated in the data sheet and in this manual.

The warranty relating to the operating reliability and safety of the pump (set) supplied is only valid if the equipment is used in accordance with its intended use.

2.10 Explosion protection

Special conditions apply to the operation of explosion-proof pumps.

- The explosion-proof status of the pump set is only assured if the pump set is used in accordance with its intended use.
- The limits stated in the data sheet and on the name plate must not be exceeded under any circumstances.
- Correct monitoring of the motor temperature is imperative to ensure explosion protection.
- Observe the wiring diagrams.
- Never operate an explosion-proof pump set without temperature monitoring.
- Modifications or alteration of the pump set could affect explosion protection and are only permitted after consultation with the manufacturer.
- Only original spare parts and accessories authorized by the manufacturer must be used for explosion-proof pumps.

3 Transport/Temporary Storage/Disposal

3.1 Checking the condition upon delivery

1. On transfer of goods, check each packaging unit for damage.
2. In the event of in-transit damage, assess the exact damage, document it and notify KSB or the distributor and the insurance company about the damage in writing immediately.

3.2 Transport

DANGER

Improper transport

Danger to life from falling parts!

Damage to the pump set!

- Use the attachment point provided for attaching the lifting accessory.
- Never suspend the pump set by its power cable.
- Use the lifting chain/rope included in the scope of supply exclusively for lowering or lifting the pump set into/out of the pump sump.
- Securely attach the lifting chain/rope to the pump and crane.
- Use tested, marked and approved lifting accessories only.
- Observe the regional transport regulations.
- Observe the documentation of the lifting accessory manufacturer.
- The load-carrying capacity of the lifting accessories must exceed the weight indicated on the name plate of the pump set to be lifted. Take into account any additional system components to be lifted.

To transport the pump set suspend it from the lifting tackle as shown.

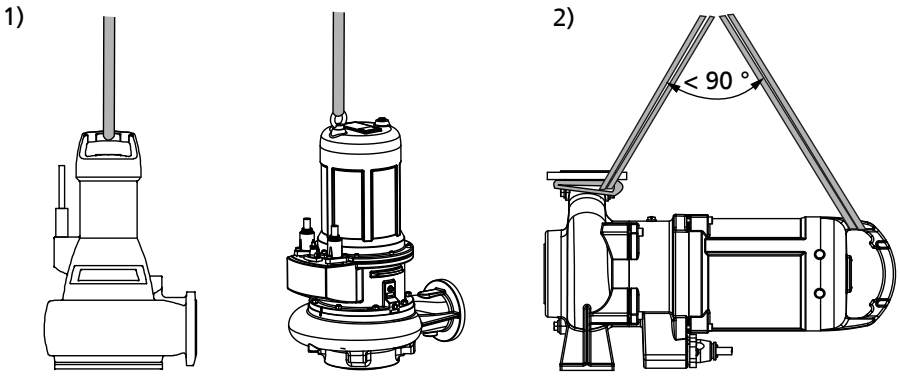

Fig. 1: Transporting the pump set 1) vertical installation 2) horizontal installation

Placing down the pump set

WARNING

Incorrect positioning/placing down

Personal injury and damage to property!

- Position the pump set vertically with the motor on top.
- Use appropriate means to secure the pump set against tilting and tipping over.
- Refer to the weights given in the data sheet/on the name plate.

⚠ WARNING

Improper placing of pump sets in a vertical/horizontal position

Personal injury and damage to property!

- Use appropriate means to secure the pump set against tilting or tipping over.
- Use two sets of lifting equipment when handling large pump sets if possible (using the attachment point provided on the motor and the discharge nozzle).
- Secure power cables against falling down.
- Use additional supports for the transport holder to secure it against tilting.
- Maintain adequate safety distance during lifting operations.

⚠ WARNING

Improper lifting/moving of heavy assemblies or components

Personal injury and damage to property!

- Use suitable transport devices, lifting equipment and lifting tackle to move heavy assemblies or components.

⚠ WARNING

Placing the pump set on unsecured and uneven surfaces

Personal injury and damage to property!

- Always place the pump set on a solid and level surface with the pump set in a vertical position and the motor on top.
- Only place the pump set on a surface of sufficient load-carrying capacity.
- Use appropriate means to secure the pump set against tilting or tipping over.

It may be necessary to place the pump set down in a horizontal position during maintenance or installation.

3.3 Storage/Preservation

If commissioning is to take place some time after delivery, we recommend that the following measures be taken:

CAUTION

Improper storage

Damage to the power cables!

- Support the power cables at the cable entry to prevent permanent deformation.
- Only remove the protective caps from the power cables at the time of installation.

CAUTION

Damage during storage due to humidity, dirt or vermin

Corrosion/contamination of the pump (set)!

- For outdoor storage cover the pump (set) or the packaged pump (set) and accessories with waterproof material.

CAUTION

Wet, contaminated or damaged openings and connections

Leakage or damage to the pump!

▷ Clean and cover pump openings and connections as required prior to putting the pump into storage.

Table 5: Ambient conditions for storage

Ambient conditions	Value
Relative humidity	5 % to 85 % (non-condensing)
Ambient temperature	-4 °F to 158 °F [- 20 °C to + 70 °C]

- Store the pump set under dry and vibration-free conditions, if possible in its original packaging.

1. Spray-coat the inside wall of the pump casing, and in particular the impeller clearance areas, with a preservative.
2. Spray the preservative through the suction and discharge nozzles.
   It is advisable to then close the pump nozzles (e.g. with plastic caps or similar).

NOTE

Observe the manufacturer's instructions for application/removal of the preservative.

3.4 Return to supplier

1. Drain the pump as per operating instructions. (⇨ Section 7.3, Page 68)
2. Flush and clean the pump, particularly if it has been used for handling noxious, explosive, hot or other hazardous fluids.
3. If the pump has handled fluids whose residues could lead to corrosion damage in the presence of atmospheric humidity or could ignite upon contact with oxygen, the pump must also be neutralized, and anhydrous inert gas must be blown through the pump to ensure drying.
4. Always complete and enclose a certificate of decontamination when returning the pump.
   Always indicate any safety measures and decontamination measures taken.
   (⇨ Section 10, Page 118)

NOTE

If required, a blank certificate of decontamination can be downloaded from the KSB web site at: www.ksb.com/certificate_of_decontamination

3.5 Disposal

⚠ WARNING

Fluids handled, consumables and operating supplies which are hot or pose a health hazard

Hazard to persons and the environment!

- ▷ Collect and properly dispose of the flushing fluid and of any residues of the fluid handled.
- ▷ Wear safety clothing and a protective mask if required.
- ▷ Observe all legal regulations on the disposal of fluids posing a health hazard.

1. Dismantle the pump (set).
   Collect greases and other lubricants during dismantling.
2. Separate and sort the pump materials, e.g. by:
   - Metals
   - Plastics
   - Electronic waste
   - Greases and other lubricants
3. Dispose of materials in accordance with local regulations or in another controlled manner.

4 Description of the Pump (Set)

4.1 General description

Pump for handling untreated waste water containing long fibers and solid substances, liquids containing air/gas, and raw sludge, activated sludge and digested sludge.

4.2 Designation

F80-252/224XEG1-S
F80-252/154XEG1-S (PS3)

Example: Amarex KRT F 50 - 215 / 32XEC1 - S IE3

Table 6: Designation key

Code	Description	
Amarex KRT	Type series	
F	Impeller type	
50	Nominal discharge nozzle diameter [mm]	
215	Maximum nominal impeller diameter [mm]	
3	Motor size	
2	Number of motor poles	
XE	Motor version	
	UE	Not explosion-proof, for fluid temperatures of up to 104 °F [40 °C]
	WE	Not explosion-proof, for fluid temperatures of up to 140 °F [60 °C]
	XE	Explosion-proof, for fluid temperatures of up to 104 °F [40 °C]
	ZE	Explosion-proof, for fluid temperatures of up to 140 °F [60 °C]
C1	Material variant	
	G	Standard design, gray cast iron
	G1	Like G with impeller made of duplex stainless steel
	G2	Like G with impeller made of white cast iron
	GH	Like G with impeller and discharge cover made of white cast iron
	H	Like G with impeller, discharge cover and pump casing made of white cast iron
	C1	Wetted components made of duplex stainless steel, mechanical seal with elastomer bellows, screws/bolts made of A4
	C2	Wetted components made of duplex stainless steel, mechanical seal with covered spring, screws/bolts made of 1.4462
S	Type of installation	
IE3	Motor efficiency classification[2)]	
	[3)]	No efficiency classification
	IE3	Premium Efficiency

2) IEC 60034-30 standard not binding for submersible motor pumps. Efficiencies calculated/determined according to the measurement method specified in IEC 60034-2. The marking is used for submersible motors that achieve efficiency levels similar to those of standardized motors acc. to the IEC 60034-30 standard.

3) Blank

4.3 Name plate

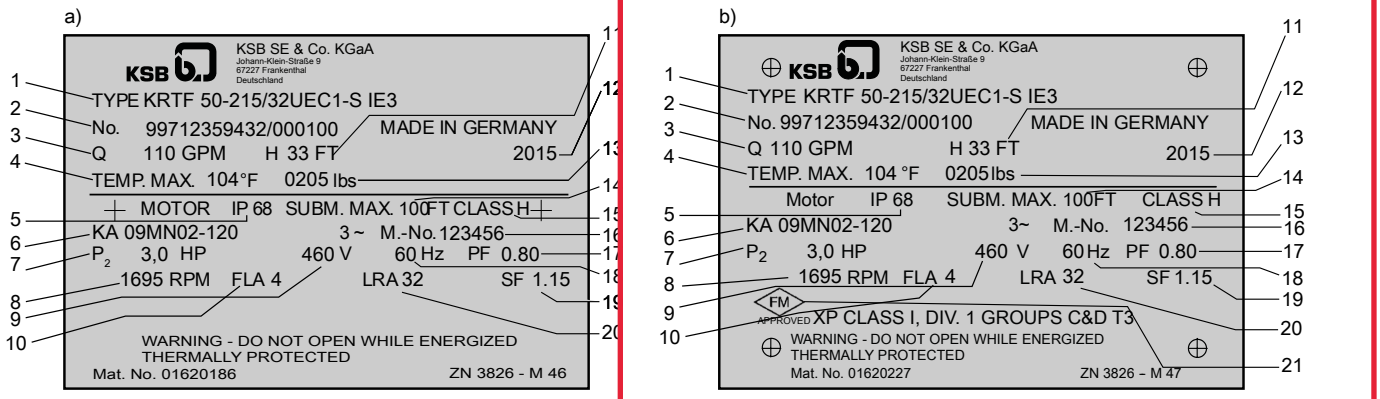

Fig. 2: Name plate (example) a) for non-explosionproof model, b) for explosion-proof model

1	Designation	2	KSB order number
3	Flow rate	4	Maximum fluid temperature and ambient temperature
5	Enclosure	6	Motor type
7	Rated power	8	Rated speed
9	Rated voltage	10	Rated current
11	Head	12	Year of construction
13	Total weight	14	Maximum submergence
15	Thermal class of winding insulation	16	Motor number
17	Power factor at rated operating point	18	Rated frequency
19	Service factor	20	Starting current
21	Explosion protection marking		

4.4 Design details

Design

- Fully floodable submersible motor pump
- Not self-priming
- Close-coupled design

Impeller type

- Various application-oriented impeller types

Shaft seal

Standard bearings:

- Two bi-directional mechanical seals in tandem arrangement, with leakage chamber

Reinforced bearings: (⇨ Section 9.2.7, Page 94)

- Two bi-directional mechanical seals in tandem arrangement, with leakage chamber

Bearings

Standard bearings:

- Grease-packed bearings sealed for life
- Maintenance-free

Reinforced bearings: (⇨ Section 9.2.7, Page 94)

Drive end:

- Grease-packed bearings sealed for life
- Maintenance-free

Pump end:

- Grease-packed bearings
- Can be re-lubricated

Drive

- Three-phase asynchronous squirrel-cage motor
- Motors integrated in explosion-proof pump sets are supplied in Explosionproof Class I Division 1, Groups C&D, T3.

4.5 Installation types

Fig. 3: Installation types

1	Installation type D: stationary dry installation, vertical (S1 duty)
2	Installation type H: stationary dry installation, horizontal (S1 duty)
3	Installation type K: wet installation (S1 duty with motor outside of the fluid possible) with guide rail arrangement Installation type S: stationary wet installation (S1 duty with submerged motor) with guide rail arrangement
4	~~Installation type K: stationary wet installation (S1 duty with motor outside of the fluid possible) with guide~~ cable arrangement Installation type S: stationary wet installation (S1 duty with submerged motor) with guide cable arrangement
5	Installation type P: wet installation of transportable model (S1 duty with submerged motor)

Pump sets of installation types D, H and K
are suitable for continuous operation with the motor outside the fluid. Cooling is effected by means of air convection.
Versions with a cooling jacket have an additional internal cooling circuit.

Pump sets of installation types P and S
are designed for continuously submerged operation. The motor is cooled by the fluid handled on the motor surface. Operation with the motor outside the fluid handled is possible for short periods.

4.6 Configuration and function

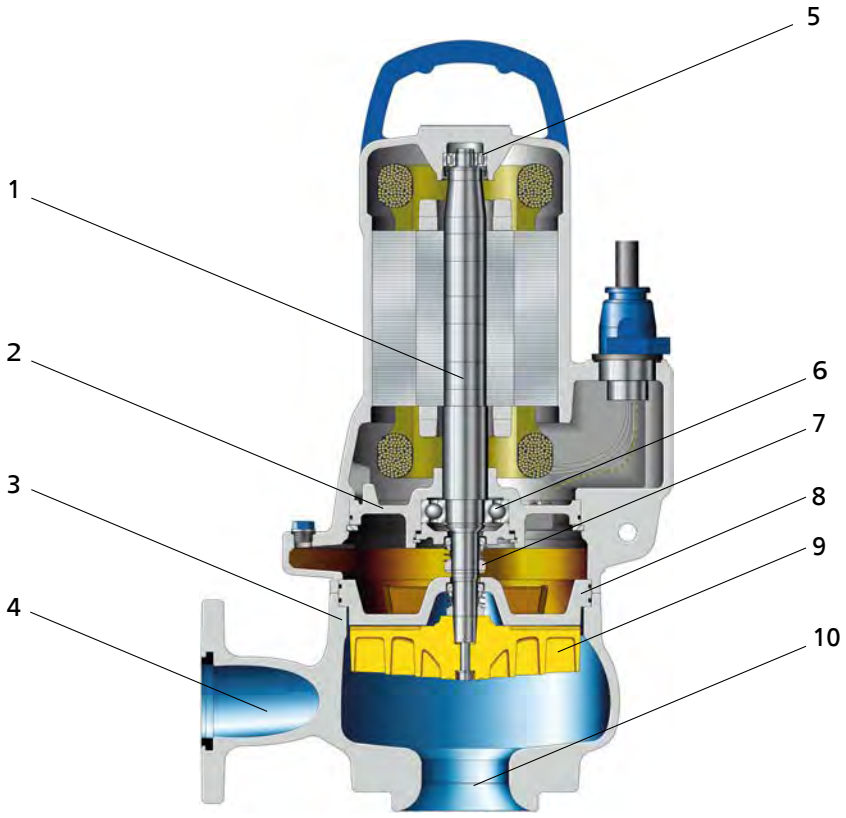

Fig. 4: Sectional drawing

1	Shaft	2	Bearing housing
3	Pump casing	4	Discharge nozzle
5	Bearing, motor end	6	Bearing, pump end
7	Shaft seal	8	Discharge cover
9	Impeller	10	Suction nozzle

Design The pump is designed with an axial fluid inlet and a radial outlet. The hydraulic system sits on the extended motor shaft. The shaft runs in common bearings.

Function The fluid enters the pump axially via a suction nozzle (10) and is accelerated outward in a cylindrical flow by the rotating impeller (9). In the flow passage of the pump casing the kinetic energy of the fluid is converted into pressure energy. The fluid is pumped to the discharge nozzle (4), where it leaves the pump. At the rear side of the impeller, the shaft (1) enters the hydraulic system via the discharge cover (8). The shaft passage through the discharge cover is sealed with a shaft seal (7). The shaft runs in rolling element bearings (5 and 6) which are supported by a bearing housing (2).

Sealing The pump is sealed by two bi-directional mechanical seals in tandem arrangement. A lubricant chamber in-between the seals ensures cooling and lubrication of the mechanical seals.

4.7 Noise characteristics

Table 7: Surface sound pressure level (L_{pA} [4) 5)]) depending on speed (n) and rated power (P_2)

P_2		L_{pA}		
		n = 3500 rpm	n = 1750 rpm	n = 1160 rpm
[kW]	[hp]	[dB]	[dB]	[dB]
2,2	3,0	-	58,5	57,5
3,7	5,0	68.5	62	59
5,5	7,4	70	63,5	63
6,5	8,7	71	-	63,5
7,5	10,0	71,5	65	-
8,5	11,4	72	66	-
10,0	13,4	72,5	67	-

4.8 Scope of supply

Depending on the model, the following items are included in the scope of supply:

Stationary model for wet installation (installation types S and K)

- Pump set complete with connection cables
- Claw with sealing and mounting elements
- Lifting rope / lifting chain
- Mounting bracket with mounting elements
- Base elbow and mounting elements
- Guide cable / guide rail
  (guide rails are not included in KSB's scope of supply)

A separate name plate is included in KSB's scope of supply. Attach this name plate in a clearly visible position outside the place of installation, e.g. at the control panel, pipeline or mounting bracket.

Transportable model for wet installation (installation type P)

- Pump set complete with connection cables
- Foot plate or pump stool with mounting elements
- Lifting rope / lifting chain

A separate name plate is included in KSB's scope of supply. Attach this name plate in a clearly visible position outside the place of installation, e.g. at the control panel, pipeline or mounting bracket.

Stationary model for dry installation (installation types D and H)

Depending on the model, the following items are included in the scope of supply:

- Pump set complete with connection cables
- Foundation rails (for horizontal installation)
- Suction-side flanged spacer with inspection hole[6)] (optional)
- Suction elbow (for vertical installation)

A separate name plate is included in KSB's scope of supply. Attach this name plate in a clearly visible position outside the place of installation, e.g. at the control panel, pipeline or mounting bracket.

4) Measured at a distance of 1 m from the pump outline (as per DIN 45635 Parts 1 and 24)
5) For installation types D and H only
6) For nominal discharge nozzle diameter ≥ DN100

4.9 Dimensions and weights

For dimensions and weights refer to the general arrangement drawing/outline drawing or data sheet of the pump set.

5 Installation at Site

5.1 Safety regulations

DANGER

Improper installation

Damage to the pump set!

- Observe the information given in the data sheet and on the name plate of the pump set.

DANGER

Risk of falling when working at great heights

Danger to life by falling from great heights!

- Do not step onto the pump (set) during installation work or dismantling work.
- Pay attention to safety equipment, such as railings, covers, barriers, etc.
- Observe the applicable local occupational safety regulations and accident prevention regulations.

DANGER

Persons in the tank during pump operation

Electric shock!

Risk of personal injury!

Danger of death from drowning!

- Never start up the pump set when there are persons in the tank.

WARNING

Hands, other body parts or foreign objects in the impeller or intake area

Risk of personal injury! Damage to the submersible motor pump!

- Never insert your hands, other body parts or foreign objects into the impeller and/or impeller intake area.
- Check that the impeller can rotate freely.

WARNING

Impermissible solid objects (tools, screws/bolts or similar) in the pump sump/inlet tank during pump start-up

Personal injury and damage to property!

- Check the pump sump/inlet tank for impermissible solid objects before flooding, and remove, if necessary.

5.2 Checks to be carried out prior to installation

5.2.1 Checking the operating data

Before installing the pump set, verify that the name plate data matches the data given in the purchase order and the system data.

5.2.2 Preparing the place of installation

Place of installation for stationary models

	⚠ WARNING **Installation on mounting surfaces which are unsecured and cannot support the load** Personal injury and damage to property! ▷ Observe the required compressive strength class C25/30 of the concrete in exposure class XC1 as per EN 206-1. ▷ The mounting surface must have set and must be completely horizontal and even. ▷ Observe the weights indicated.

Resonances

Any resonances at the usual excitation frequencies (1x and 2x rotational frequency, rotational noise) must be prevented both in the foundation and in the connected piping, as such frequencies may cause extreme vibrations.

1. Check the structural requirements.
   All structural work required must have been prepared in accordance with the dimensions stated in the outline drawing/general arrangement drawing.

Place of installation for transportable models

	⚠ WARNING **Incorrect positioning/placing down** Personal injury and damage to property! ▷ Position the pump set vertically with the motor on top. ▷ Use appropriate means to secure the pump set against tilting and tipping over. ▷ Refer to the weights given in the data sheet/on the name plate.

Resonances

Any resonances at the usual excitation frequencies (1x and 2x rotational frequency, rotational noise) must be prevented both in the foundation and in the connected piping, as such frequencies may cause extreme vibrations.

1. Check the structural requirements.
   All structural work required must have been prepared in accordance with the dimensions stated in the outline drawing/general arrangement drawing.

5.2.3 Checking the lubricant level

The lubricant chambers have been filled with an environmentally-friendly, non-toxic lubricant at the factory.

Visual inspection for signs of oil leakage

1. If no oil leakage is visible in the area of the pump casing, impeller and transport holder, the lubricant chamber is filled properly.
2. If oil leakage is visible in the area of the pump casing, impeller and transport holder, top up the lubricant chamber.

Filling in the lubricant

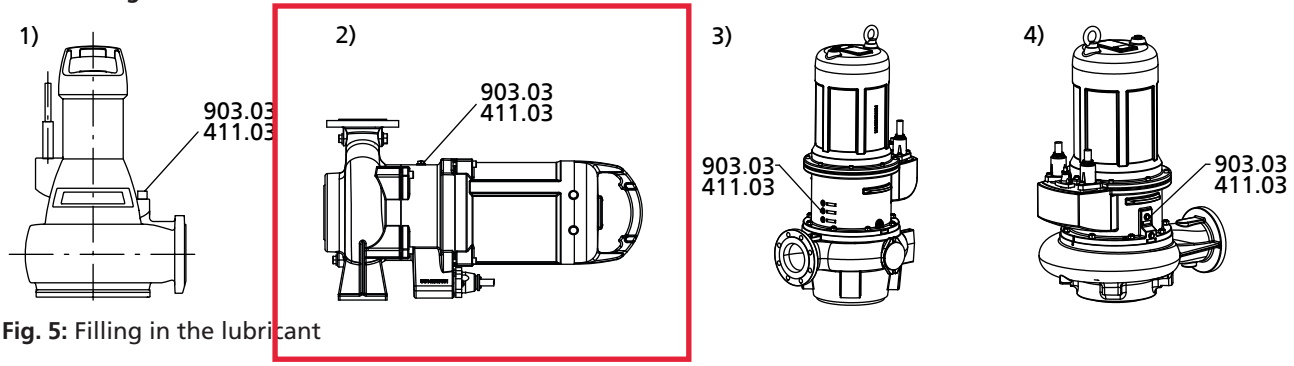

Fig. 5: Filling in the lubricant

Table 8: Filling in the lubricant

Motor	Impeller type	Variant			
		1	2	3	4
3 2.E - 7 2.E	E, F, K, S	✗	-	-	-
11 2.E - 26 2.E	E, F, K, S	-	✗	-	-
55 2.E - 75 2.E	D	-	-	✗	-
2 4.E - 5 4.E	E, F, K, S	✗	-	-	-
7 4.E - 37 4.E	D, E, F, K, S	-	✗	-	-
45 4.E - 75 4.E	D	-	-	✗	-
45 4.E - 75 4.E	E, F, K	-	-	-	✗
7 6.E - 30 6.E	D, E, F, K, S	-	✗	-	-
31 6.E - 55 6.E	D	-	-	✗	-
31 6.E - 55 6.E	E, F, K	-	-	-	✗
11 8.E - 22 8.E	D, E, F, K	-	✗	-	-
30 8.E - 45 8.E	D	-	-	✗	-
30 8.E - 45 8.E	E, F, K	-	-	-	✗

1. Position the pump set as shown.
2. Undo and remove screw plug 903.03 and joint ring 411.03.
3. Fill lubricant through the lubricant filler opening until the lubricant level reaches the opening.
4. Fit screw plug 903.03 together with a new joint ring 411.03.

5.2.4 Checking the direction of rotation

DANGER

Pump set running dry

Explosion hazard!

- ▷ Check the direction or rotation of explosion-proof pump sets outside potentially explosive atmospheres.

WARNING

Hands and/or foreign objects in the pump casing

Risk of injuries, damage to the pump!

- ▷ Never insert your hands or any other objects into the pump.
- ▷ Check that the inside of the pump is free from any foreign objects.
- ▷ Take suitable precautions (e.g. wear safety goggles).

WARNING

Improper positioning of pump set when checking the direction of rotation

Personal injury and damage to property!

- ▷ Use appropriate means to secure the pump set against tilting or tipping over.

	CAUTION **Pump set running dry** Increased vibrations! Damage to mechanical seals and bearings! ▷ Never operate the pump set for more than 60 seconds outside the fluid to be handled.

✓ The pump set is connected to the power supply.

1. Start the pump set and stop it again immediately to determine the motor's direction of rotation.
2. Check the direction of rotation.
   Impeller rotation must be anti-clockwise (seen from the pump mouth end). On some pump casings, the direction of rotation is marked by an arrow.

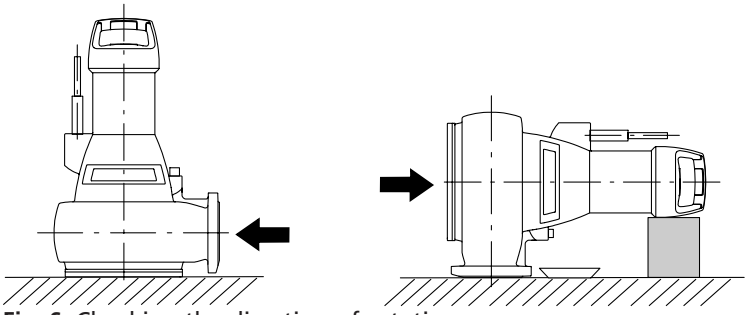

Fig. 6: Checking the direction of rotation

3. If the impeller is running in the wrong direction of rotation, check the electrical connection of the pump and the control system, if applicable.
4. Disconnect the pump set from the power supply and make sure it cannot be started unintentionally.

5.3 Installing the pump set

Always refer to and comply with the general arrangement drawing/outline drawing when installing the pump set.

5.3.1 Stationary wet installation

5.3.1.1 Fastening the flanged elbow

Fastening the flanged elbow with chemical anchors

Depending on the pump size, the flanged elbow is fastened with chemical anchors.

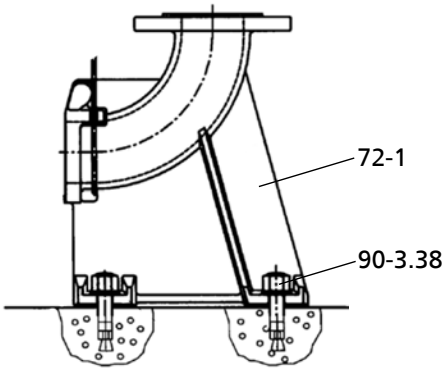

Fig. 7: Fastening the flanged elbow

1. Position base elbow 72-1 at the bottom of the tank/well.
2. Fit chemical anchors 90-3.38.
3. Bolt base elbow 72-1 to the floor using chemical anchors 90-3.38.

Chemical anchor dimensions

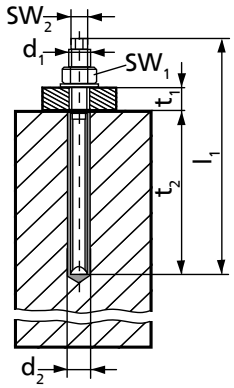

Fig. 8: Dimensions

Table 9: Chemical anchor dimensions [″]

Size ($d_1 \times l_1$)	d_2 [″]	t_1 [″]	t_2 [″]	SW_1 [7)] [″]	SW_2 [7)] [″]	M_{d1} [ft lb]

32 to 50	0 to +10	45
50 to 68	+10 to +20	20
> 68	> +20	10

7) SW = Width across flats

5.3.1.2 Connecting the piping

DANGER

Impermissible loads acting on the flange of the base elbow

Danger to life from leakage of hot, toxic, corrosive or flammable fluids!

- Do not use the pump as an anchorage point for the piping.
- Anchor the pipelines in close proximity to the pump and connect them without transmitting any stresses or strains.
- Observe the permissible flange loads.
- Take appropriate measures to compensate thermal expansion of the piping.

NOTE

When the pump set is used for draining low-level building areas, fit a swing check valve into the discharge line to avoid backflow from the sewer system.

CAUTION

Critical speed

Increased vibrations!

Damage to mechanical seals and bearings!

- In the case of longer riser pipes, fit a swing check valve to prevent the pump from excessively running in reverse after it is switched off.
  Choose the position of the swing check valve to allow proper venting.

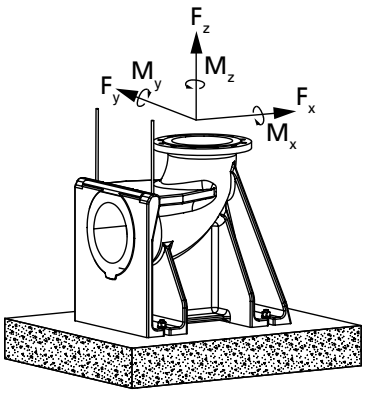

Fig. 9: Permissible flange loads

Table 12: Permissible flange loads

DN	Forces								Moments							
	F_y		F_z		F_x		ΣF		M_y		M_z		M_x		ΣM

5.3.1.3 Fitting the guide cable arrangement

The pump set is guided into the sump or tank along two parallel, tightly stretched guide cables made of stainless steel. It attaches itself automatically to the base elbow which has been fitted to the floor.

NOTE

Should site conditions/piping layout, etc. require the guide cable to run off the vertical, do not exceed a maximum angle of 5° to ensure reliable fitting and guiding of the pump set.

Fitting the mounting bracket

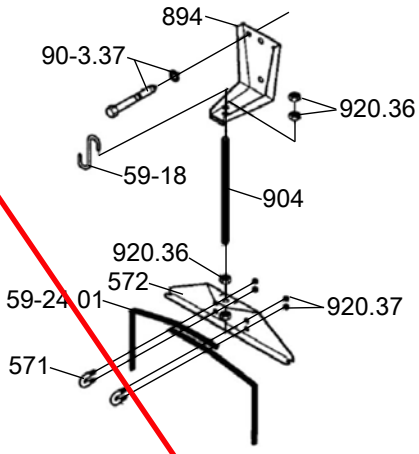

Fig. 10: Fitting the mounting bracket

1. Fasten mounting bracket 894 to the edge of the sump opening with steel anchor bolts 90-3.37 and tighten the anchor bolts to a tightening torque of 7.4 lbf ft [10 Nm].
2. Insert clamping pieces 571 through the holes of suspension bracket 572 and fasten with nuts 920.37.
3. Fasten fully threaded stud 904 with the pre-assembled clamping arrangement to the mounting bracket with nut 920.36.
   Tighten nut 920.36 allowing sufficient play for subsequently tensioning the guide cable.

Inserting the guide cable

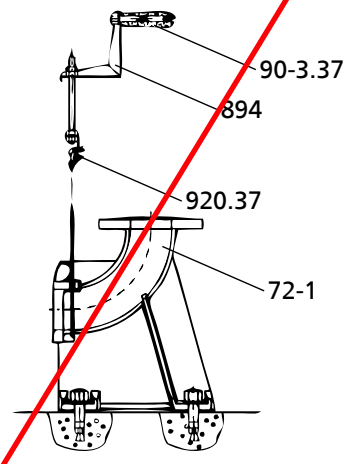

Fig. 11: Inserting the guide cable

1. Lift clamping piece 571 and insert one end of the guide cable.
2. Run cable 59-24.01 around base elbow 72-1 and back again to guide cable suspension bracket 572 and insert it into clamping piece 571.
3. Manually tension cable 59-24.01 and secure it by means of hexagon nuts 920.37.
4. Pull the cable taut by tightening hexagon nuts 920.36 on the upper side of the mounting bracket to a torque M_A=10.3 lbf ft [14 Nm] and a cable tensioning force P = 1349 lbf [6000 N].
5. Secure the nuts with a second hexagon nut.

6. The loose cable ends at guide cable suspension bracket 572 can either be twisted into a ring or the end can be cut off.
   After length adjustment tape the ends to avoid fraying.
7. Attach hook 59-18 to mounting bracket 894 for attaching the lifting chain / lifting rope at a later stage.

5.3.1.4 Fitting the guide rail arrangement

The pump set is guided into the sump or tank along two vertical guide rails. It attaches itself automatically to the base elbow which has been fitted to the floor.

NOTE

The guide rails are not included in KSB's scope of supply.
Select guide rail materials which are suitable for the fluid handled or as specified by the operator.

Observe the following dimensions for the guide rails:

Table 13: Guide rail dimensions

Size of hydraulic system	Outside diameter		Wall thickness[8)]			
			Min.		Max.	
	[inch]	[mm]	[inch]	[mm]	[inch]	[mm]
DN 40 to DN 150	2,36	60	0,079	2	0,197	5
DN 200 to DN 700	3,5	89	0,118	3	0,236	6

Fitting the mounting bracket

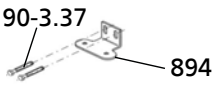

Fig. 12: Fitting the mounting bracket

1. Fasten mounting bracket 894 to the edge of the sump opening with steel anchor bolts 90-3.37 and tighten the anchor bolts to a tightening torque of 7.4 lbf ft [10 Nm].
   (See outline drawing.)

Fitting the guide rails

CAUTION

Improper installation of guide rails

Damage to the guide rail arrangement!

- ▷ Always adjust the guide rails so that they are in a perfectly vertical position.

8) To DIN 2440/2442/2462 or equivalent standards

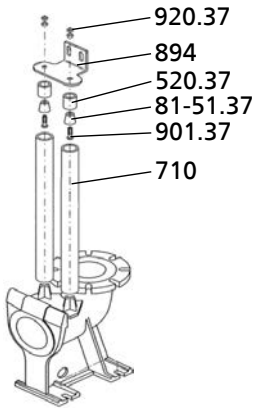

Fig. 13: Fitting the guide rails

1. Place rails 710 onto the conical bosses provided on base elbow 72-1 and position them vertically.
2. Mark the length of rails 710 (up to the lower edge of the mounting bracket), taking into account the adjusting range of the slotted holes in mounting bracket 894.
3. Shorten rails 710 with a 90° cut to the pipe axis. Debur the rails inside and outside.
4. Insert mounting bracket 894 with elastic sleeves 520.37 into guide rails 710 until the mounting bracket rests on the rail ends.
5. Tighten nuts 920.37.
   This pulls clamping sleeves 81-51.37 upwards and expands sleeves 520.37 against the inside pipe diameter.
6. Lock nuts 920.37 with a second nut each and secure them with Loctite 243.

NOTE

For installation depths of more than 19.7 ft [6 m], the scope of supply may include brackets as a middle support for the guide rails. The mounting brackets also serve as spacers between the two guide rails.

Fitting the middle support

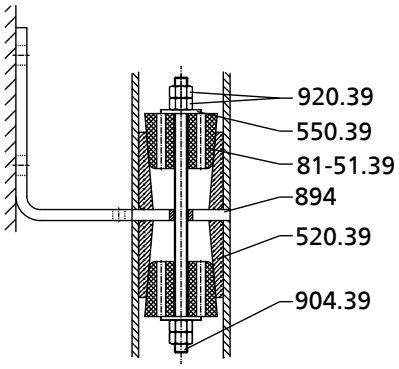

Fig. 14: Fitting the middle support

1. Measure the inside diameter of the guide rails.
2. Expand elastic sleeves 520.39 with clamping sleeves 81-51.39 to the inside diameter of the guide rails by tightening nuts 920.39.
3. Slide the guide rails onto the sleeves and check whether there is a tight fit between the guide rails and the sleeves.
4. Secure the screwed connection of the pipeline by tightening the locknuts.

5.3.1.5 Preparing the pump set

Fitting the claw

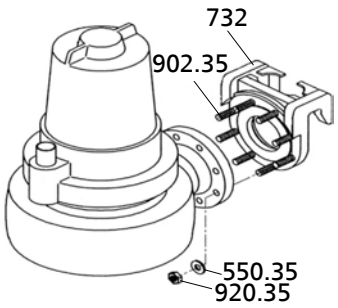

Fig. 15: Fitting the claw

1. Fasten claw 732 to the discharge flange with studs 902.35, discs 550.35 and nuts 920.35.
   Observe the tightening torques.
2. Fit profile joint 410 in the groove of the claw.
   This will seal the base elbow/pump connection.

Attaching the chain / lifting rope

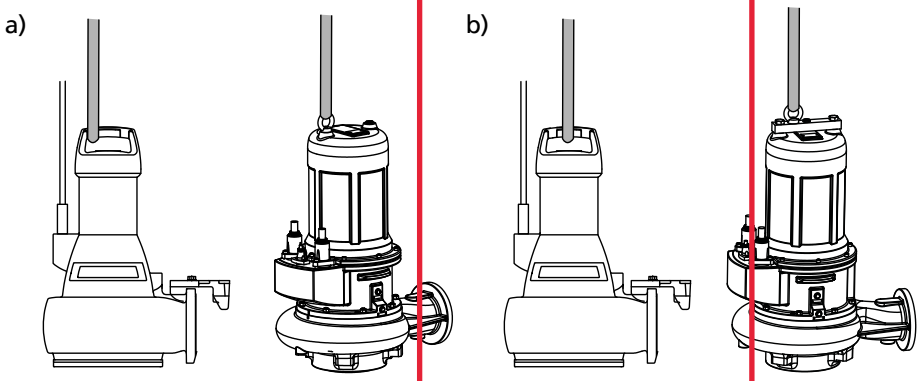

Fig. 16: Attaching the chain / lifting rope for stationary wet installation a) with guide cable arrangement b) with guide rail arrangement

1. Attach the chain or lifting rope to the pump set as illustrated.
   This attachment point achieves a forward inclination of the pump set towards the discharge nozzle, which allows the pump claw to hook onto the base elbow.

5.3.1.6 Installing the pump set

NOTE

Make sure the pump set with the pre-assembled claw can easily be guided over the mounting bracket, threaded onto the guide cables and lowered down. If required, alter the position of the crane during installation.

1. Guide the pump set over the suspension bracket/mounting bracket, thread it onto the guide cables/rails and slowly lower it down.
   The pump set attaches itself to base elbow 72-1.
2. Attach the lifting chain/rope to hook 59-18 at the mounting bracket.

5.3.2 Transportable model for wet installation

Attaching the chain / lifting rope

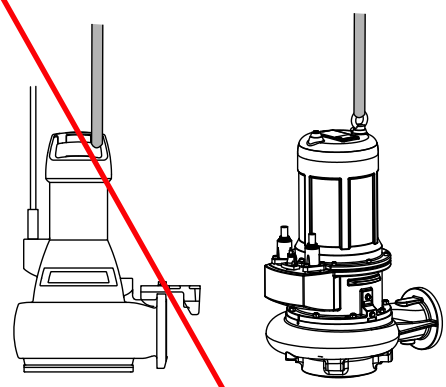

Fig. 17: Attaching the lifting chain/rope (transportable wet-installed model)

1. Attach the chain or lifting rope to the pump set on the opposite side of the discharge nozzle.

Fitting the foot plate or pump stool

Fit the foot plate or pump stool before installing the pump.
Tighten the screws/bolts as specified, observe the tightening torques
(⇨ Section 7.6, Page 82)

Connecting the piping

The DIN connection can be connected to rigid or flexible pipes.

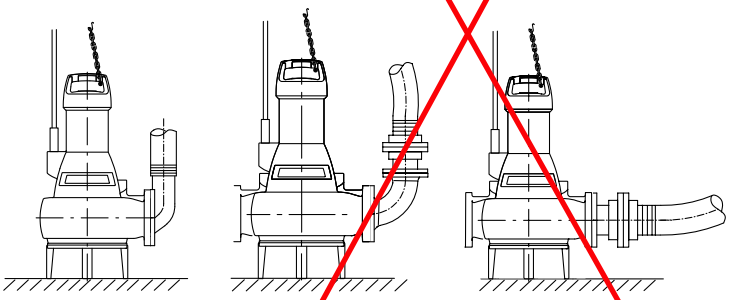

Fig. 18: Connection variants

5.3.3 Stationary dry installation

5.3.3.1 Preparing the foundation

Fastening

- Fasten the pump feet with or without foundation rails or the suction base elbow to a concrete foundation with chemical anchors.

✓ The foundation has the required strength and characteristics.

✓ The foundation has been prepared in accordance with the dimensions given in the outline drawing/general arrangement drawing.

1. Position the pump set on the foundation and level it with the help of a spirit level placed on the shaft and discharge nozzle.
   Permissible deviation: 0.2 mm/m.
2. Use shims for height compensation if necessary. Always fit shims immediately to the left and right of the chemical anchors between the foundation rails and the foundation.
   For a bolt-to-bolt distance (L) ≥ 800 mm fit additional shims halfway between the adjoining holes.
   All shims must lie perfectly flush.

3. Drill the holes as specified in the table "Chemical anchor dimensions". Then clean the holes.

⚠ WARNING

Improper handling of mortar cartridge

Skin sensitization and/or irritation!

▷ Wear suitable protective clothing.

4. Insert the mortar cartridges into the drilled holes.
   Observe the curing times of the mortar cartridges!
5. Insert threaded bolts into the corresponding drilled holes with an electric tool (e.g. impact drill, hammer drill).
6. After the curing time (see table), tighten the chemical anchors evenly and tightly.
7. Grout the baseplate using low-shrinkage concrete.

50 to 68	+10 to +20	20
> 68	> +20	10

5.3.3.2 Piping

5.3.3.2.1 Connecting the piping

DANGER

Impermissible loads acting on the pump nozzles

Danger to life from leakage of hot, toxic, corrosive or flammable fluids!

- ▷ Do not use the pump as an anchorage point for the piping.
- ▷ Anchor the pipelines in close proximity to the pump and connect them properly without transmitting any stresses or strains.
- ▷ Observe the permissible forces and moments at the pump nozzles.
- ▷ Take appropriate measures to compensate thermal expansion of the piping.

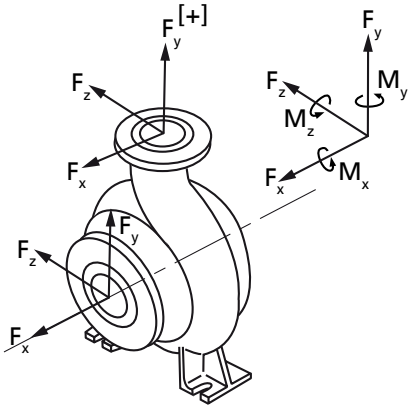
NOTE

Installing check and shut-off elements in the system is recommended, depending on the type of plant and pump. However, such elements must not obstruct proper drainage or hinder disassembly of the pump.

- ✓ Suction lift lines have been laid with a rising slope, suction head lines with a downward slope towards the pump.
- ✓ A flow stabilization section having a length equivalent to at least twice the diameter of the suction flange has been provided upstream of the suction flange.
- ✓ The nominal diameters of the pipelines are equal to or greater than the nominal diameters of the pump nozzles.
- ✓ Adapters to larger nominal diameters are designed with a diffuser angle of approx. 8° to avoid excessive pressure losses.
- ✓ The pipelines have been anchored in close proximity to the pump and connected without transmitting any stresses or strains.

1. Thoroughly clean, flush and blow through all vessels, pipes and connections (especially of new installations).
2. Before installing the pump in the piping, remove the flange covers on the suction and discharge nozzles of the pump.
3. Connect the pump nozzles to the piping.

5.3.3.2.2 Permissible forces and moments at the pump nozzles



The resulting permissible forces have been determined according to

$$F_{res\ D} \leq \sqrt{F_x^2 + F_z^2}$$

$$F_{res\ S} \leq \sqrt{F_y^2 + F_z^2}$$

Forces and moments at the pump nozzles

The data on forces and moments apply to static piping loads only. If the limits are exceeded, they must be checked and verified.
If a computerized strength analysis is required, please contact KSB.
The values are only applicable if the pump is installed on a completely grouted baseplate and bolted to a rigid and level foundation.

Table 17: Forces and moments at the pump nozzles

Size	Impeller type	Forces [daN]									Moments [daNm]					
		Suction nozzle				Discharge nozzle					Suction nozzle			Discharge nozzle		
		F_x	F_y	F_z	F_{res}	F_x	F_{yTens}	F_{yCompr}	F_z	F_{res}	M_x	M_y	M_z	M_x	M_y	M_z
		(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)	(+/-)
50-215	F	115	75	90	120	70	45	90	60	90	75	55	40	50	40	25

5.3.3.2.3 Vacuum balance line

NOTE

Where fluid has to be pumped out of a vessel under vacuum, installing a vacuum balance line is recommended.

The following rules apply to vacuum balance lines:

- Minimum nominal line diameter: 0.98 inch [25 mm].
- The line extends above the highest permissible fluid level in the tank.

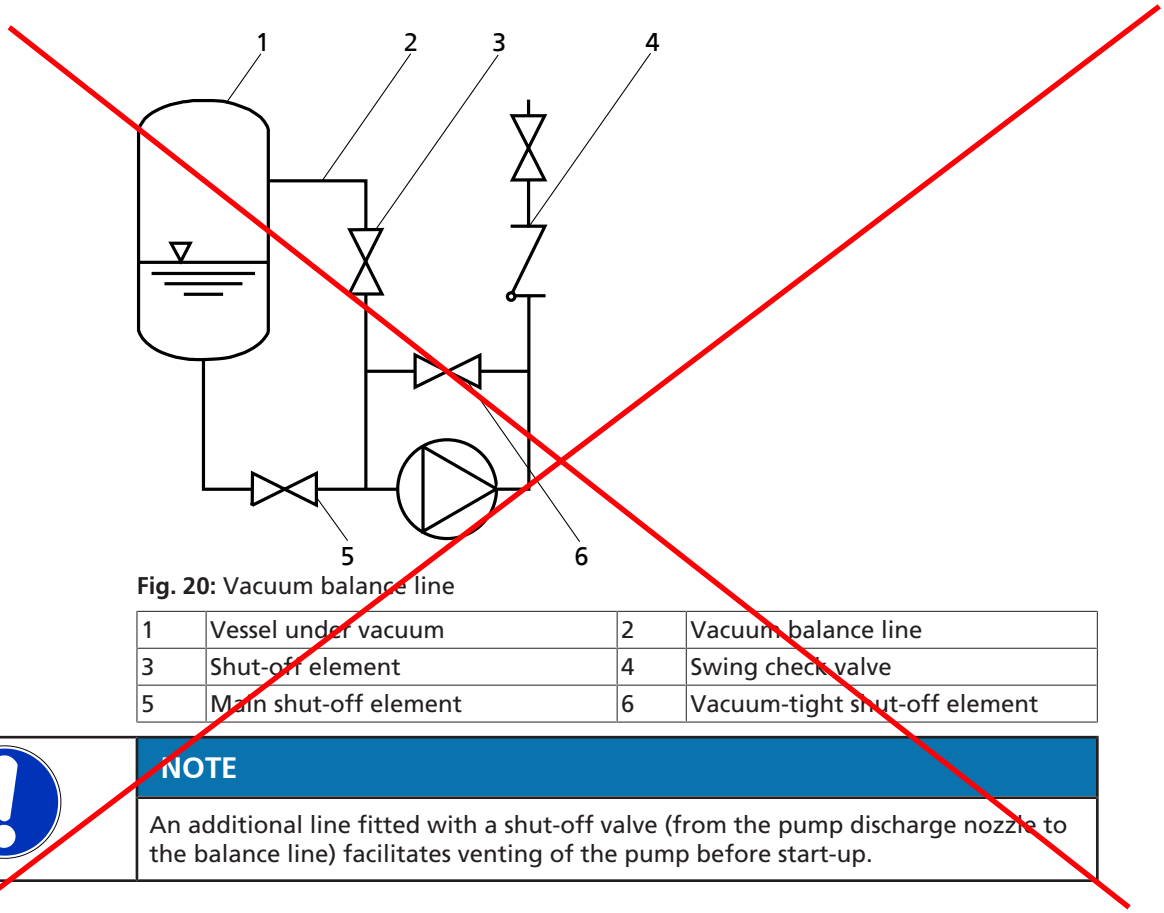

Fig. 20: Vacuum balance line

1	Vessel under vacuum	2	Vacuum balance line
3	Shut-off element	4	Swing check valve
5	Main shut-off element	6	Vacuum-tight shut-off element

NOTE

An additional line fitted with a shut-off valve (from the pump discharge nozzle to the balance line) facilitates venting of the pump before start-up.

5.3.3.3 Auxiliary connections

⚠ WARNING

Screw plugs subjected to pressure

Risk of injuries by parts flying off and escaping fluid!

- ▹ Never use screw plugs for releasing pressure from the pump casing.
- ▹ Always use a suitable venting device (e.g. vent valve).

The following auxiliary connections are available:

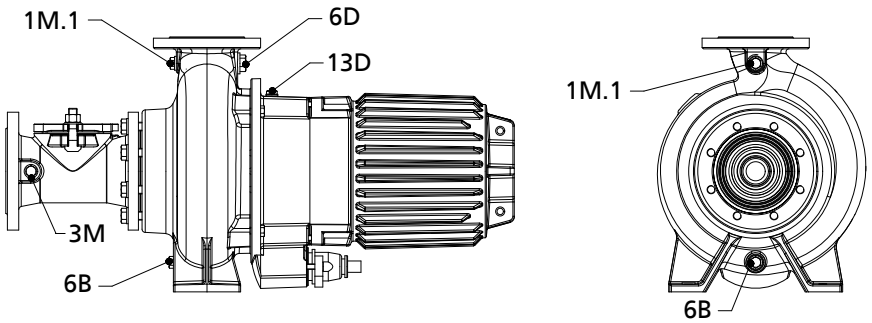

Fig. 21: Auxiliary connections

Table 19: Size of auxiliary connections

5.4 Electrical system

5.4.1 Information for planning the control system

For the electrical connection of the pump set observe the wiring diagrams.
(⇨ Section 9.3, Page 102)

NOTE

When laying a cable between the control system and the pump set's connection point, make sure the number of cores for the sensors is sufficient. A minimum cross-section of AWG 15 [1.5 mm²] is required.

The motors can be connected to electrical low-voltage grids with rated voltages and voltage tolerances to IEC 60038. The permissible tolerances must be observed.

5.4.1.1 Starting method

The pump set is wired for DOL starting. Star-delta starting is technically possible. This excludes:

- Pump sets with one power cable 8G1.5
- Pump sets with two power cables 4G16 and 8G1.5

For reducing the starting current autotransformers or soft starters can be used. For selecting suitable devices observe the rated current of the motor.
At least three times the rated current is required for reliable start-up. The run-up time must not exceed 4 seconds.

After start-up of the pump, a soft starter must always be bypassed.

5.4.1.2 Overload protection

1. Protect the pump set against overloading by a thermal time-lag overload protection device in accordance with IEC 60947 and local regulations.
2. Set the overload protection device to the rated current specified on the name plate.

5.4.1.3 Level control

DANGER

Pump set running dry

Explosion hazard!

▷ Never allow an explosion-proof pump set to run dry.

CAUTION

Fluid level below the specified minimum

Damage to the pump set by cavitation!

▷ Never allow the fluid level to drop below the specified minimum.

Automatic operation of the pump set in a tank requires the use of level control equipment.
Observe the minimum fluid level.

5.4.1.4 Operation on a frequency inverter

The pump set is suitable for operation on a frequency inverter as per IEC 60034-17.

DANGER

Operation outside the permitted frequency range

Explosion hazard!

▷ Never operate an explosion-proof pump set outside the specified range.

DANGER

Incorrect selection and setting of the frequency inverter

Explosion hazard!

▷ Observe the following information on selecting and setting a frequency inverter.

Selection

When selecting a frequency inverter, check the following details:

- Data provided by the manufacturer
- Electrical data of the pump set, particularly the rated current
- Only voltage intermediate-circuit inverters (VSI) with pulse width modulation (PWM) and carrier frequencies between 1 and 16 kHz are suitable.

Setting

Observe the following instructions for setting a frequency inverter:

- Set the current limit to max. 1.2 times the rated current. The rated current is indicated on the name plate.

Start-up

Observe the following instructions for starting up a frequency inverter:

- Ensure short start ramps (maximum 5 seconds).
- Only start speed-controlled operation after 2 minutes at the earliest.
  Pump start-up with long start ramps and low frequency may cause clogging.

Operation

Observe the following limits when operating the pump set on a frequency inverter:

- Only utilize up to 95 % of the motor rating P_2 indicated on the name plate.
- Frequency range 30 to 60 Hz

Electromagnetic compatibility

Operation on a frequency inverter produces interference emissions whose level varies depending on the inverter used (type, interference suppression, make). To prevent the drive system, consisting of a submersible motor and a frequency inverter, from exceeding any given limits always observe the EMC information provided by the inverter manufacturer. If the inverter manufacturer recommends a shielded power cable, make sure to use a submersible motor pump with shielded power cables.

Interference immunity

The submersible motor pump generally meets interference immunity requirements. For monitoring the sensors installed the operator must ensure sufficient interference immunity by appropriately selecting and laying the power cables in the plant. No modifications are required on the power/control cable of the submersible motor pump. Suitable analyzing devices must be selected. This applies in particular to the leakage sensor inside the motor.

5.4.1.5 Sensors

DANGER

Operating an incompletely connected pump set

Explosion hazard!

Damage to the pump set!

▷ Never start up a pump set with incompletely connected power cables or non-operational monitoring devices.

CAUTION

Incorrect connection

Damage to the sensors!

- ▷ Observe the limits stated in the following sections of this manual when connecting the sensors.

The pump set features sensors that avoid hazards and damage to the pump set.

NOTE

Reliable and safe operation of the pump within the scope of our warranty is only possible if the sensor signals are properly analyzed as stipulated in this manual.

All sensors are located inside the pump set and are connected to the power cable. For information on wiring and core identification please refer to the wiring diagrams.
The individual sensors and the limit values to be set are described in the following sections.

5.4.1.5.1 Motor temperature

Pump sets of installation types P or S with 8-core power cable

DANGER

Insufficient cooling

Explosion hazard!

Winding damage!

- ▷ Never operate a pump set without operational temperature monitoring equipment.

The pump set features double monitoring of the winding temperature. The temperature switches for motor temperature 1 (terminals 20 and 21, max. 250 V~/2 A) serve as temperature control devices which open when the winding temperature is too high. Tripping must result in the pump set cutting out. Automatic re-starting is permitted.

If the temperature switches at terminals 21 and 22 are not used, the conductor for terminal 22 must be insulated or connected to a dummy terminal.

WARNING

Incorrect electrical installation

Electric shock!

- ▷ Adequately insulate conductor 22.

For an explosion-proof pump set (motor version XE or ZE) use the temperature switches for motor temperature 2 (terminals 21 and 22, maximum 250 V~/2 A) in addition to the above. Tripping must result in the pump set cutting out. After the pump set has been tripped by these temperature switches, it must not re-start automatically.

Pump sets of installation types P or S with 12-core power cable or several power cables

DANGER

Insufficient cooling

Explosion hazard!

Winding damage!

- Never operate a pump set without operational temperature monitoring.
- For explosion-proof pump sets use a thermistor tripping unit with manual reset.

CAUTION

Incorrect wiring

Winding damage!

- Never rely on the PTC thermistors alone for temperature monitoring.

The pump set features double monitoring of the winding temperature.
Two bimetal switches (terminals 21 and 22, max. 250 V AC/2 A) serve as temperature control devices which open when the winding temperature is too high. Opening of the contacts must result in the pump set cutting out. Automatic re-starting is permitted.
For explosion-proof pump sets, the three additional, series-connected PTC thermistors with terminals 10 and 11 must be used. Use a thermistor tripping unit with manual reset for this purpose.

Pump sets of installation types D, H or K

DANGER

Insufficient cooling

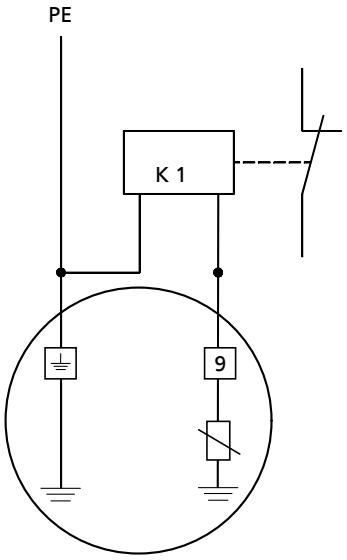
Explosion hazard!

Winding damage!

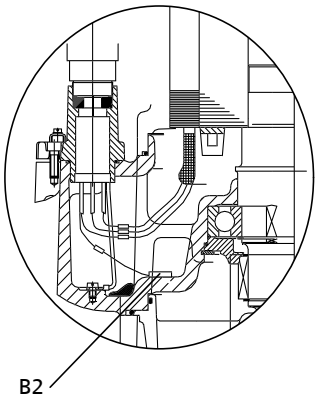
- Never operate a pump set without operational temperature monitoring.
- For explosion-proof pump sets use a thermistor tripping unit with manual reset.

The motor is monitored by three series-connected PTC thermistors with terminals 10 and 11. Tripping must result in the pump set cutting out. Automatic re-start is not permitted.
On explosion-proof pump sets, the thermistors must be connected to a thermistor tripping unit with manual reset.

5.4.1.5.2 Leakage inside the motor



Wiring of the electrode relay



Position of the electrode in the motor housing

An electrode fitted inside the motor monitors the winding space (B2) for leakage. This electrode must be connected to an electrode relay (core marked 9). Tripping of the electrode relay must result in the pump set cutting out.

The electrode relay (K1) must meet the following requirements:

- Sensor circuit 10 to 30 V AC
- Tripping current 0.5 to 3 mA
  (equivalent to a tripping resistance of 3 to 60 kΩ)

5.4.1.5.3 Bearing temperature

As an option, the pump set can be supplied with temperature monitoring in the area of the lower bearing assembly.
Check in the data sheet whether the pump set is equipped with bearing temperature monitoring.

The bearing temperature sensor is a Pt100 resistance thermometer. It has to be connected to a temperature control device with a Pt100 input and 2 separate outputs for two different switching points (sensor circuit maximum 6 V/2 mA).

Set the following limits:

- Alert at 230 °F [110 °C]
- Cut-out of the pump set at 266 °F [130 °C]

5.4.2 Electrical connection

DANGER

Electrical connection work by unqualified personnel

Danger of death from electric shock!

- ▷ Always have the electrical connections installed by a trained electrician.
- ▷ Observe IEC 60364 regulations as well as any locally applicable regulations.

WARNING

Incorrect connection to the mains

Damage to the mains network, short circuit!

- ▷ Observe the technical specifications of the local energy supply companies.

CAUTION

Improper routing of power cables

Damage to the power cables!

- Never move the power cables at temperatures below -13 °F [-25 °C].
- Never kink or crush the power cables.
- Never lift the pump set by the power cables.
- Adjust the length of the power cables to the site requirements.

CAUTION

Motor overload

Damage to the motor!

- Protect the motor by a thermal time-lag overload protection device in accordance with IEC 60947 and local regulations.

For the electrical connection of the pump set observe the wiring diagrams (⇨ Section 9.3, Page 102) in the Annex and the information for planning the control system .

The pump set is supplied complete with connection cables. Always use all cables provided and connect all marked cores of the control cable.

DANGER

Incorrect connection

Explosion hazard!

- The connection point of the cable ends must be located outside hazardous areas or in an area approved for electrical equipment.

DANGER

Operating an incompletely connected pump set

Explosion hazard!

Damage to the pump set!

- Never start up a pump set with an incompletely connected power cable or non-operational monitoring devices.

DANGER

Connection of damaged power cables

Danger of death from electric shock!

- Check the power cables for damage before connecting them.
- Never connect damaged power cables.
- Replace damaged power cables.

CAUTION

Flow-induced motion

Damage to the power cable!

- Run the power cable upwards without slack.

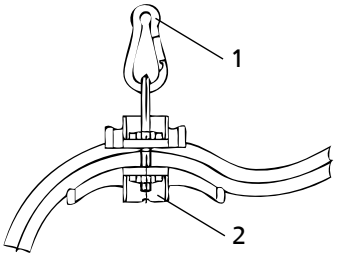


Fig. 22: Fastening the power cables

1. Run the power cables directly upwards without slack, and fasten them.
2. Only remove the protective caps from the power cables immediately before connecting the cables.
3. If necessary, adjust the length of the power cables to the site requirements.
4. After shortening the cables, correctly re-affix the markings of the individual cores at the cable ends.

5.4.2.1 Potential equalization

Wet installation (installation types K, P, S)

The pump set does not have an external PE connection (risk of corrosion).

	DANGER **Incorrect connection** Explosion hazard! ▷ Explosion-proof pump sets installed in a tank must never be retrofitted with an external potential equalization connection!

	DANGER **Touching the pump set during operation** Electric shock! ▷ Make sure that the pump set cannot be touched during operation.

Dry installation (installation types D and H)

Pump sets for dry installation are provided with an external potential equalization connection. Potential equalization shall be provided for in compliance with IEC 60204.

Connecting the potential equalization conductor

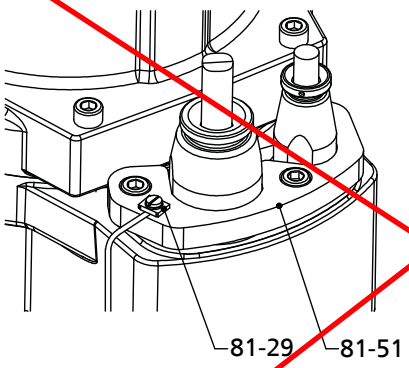

Fig. 23: Connecting the potential equalization conductor

81-29	Connection terminal
81-51	Clamping element

1. Connect the potential equalization conductor to terminal 81-29 provided on clamping element 81-51.

6 Commissioning/Start-up/Shutdown

6.1 Commissioning/start-up

6.1.1 Prerequisites for commissioning/start-up

Before commissioning/starting up the pump set, make sure that the following conditions are met:

- The pump set has been properly connected to the electric power supply and is equipped with all protection devices.
- The pump has been primed with the fluid to be handled. The pump has been vented.
- The direction of rotation has been checked.
- All auxiliary connections required are connected and operational.
- The lubricant has been checked.
- After prolonged shutdown of the pump (set), the activities required for returning the pump (set) to service have been carried out. (⇨ Section 6.4, Page 56)

DANGER

Persons in the tank during pump operation

Electric shock!

Risk of personal injury!

Danger of death from drowning!

▷ Never start up the pump set when there are persons in the tank.

DANGER

Exceeding the operating limits

Pump casing could burst/leak!

Pressurized hot or toxic fluid could escape!

Flying parts!

▷ Maintain an adequate safety distance from pump sets which are in operation.

6.1.2 Priming and venting the pump set (dry installation only - installation types D and H)

DANGER

Shaft seal failure caused by insufficient lubrication

Hot or toxic fluid could escape!

Damage to the pump!

▷ Before starting up the pump set, vent the pump and suction line and prime both with the fluid to be handled.

1. Vent the pump and suction line and prime both with the fluid to be handled.
2. Fully open the shut-off element in the suction line.
3. Fully open all auxiliary connections (barrier fluid, flushing liquid, etc).

6.1.3 Commissioning/start-up

Wet installation (installation types K, P, S)

CAUTION

Re-starting while motor is still running down

Damage to the pump set!

- ▷ Do not re-start the pump set before it has come to a standstill.
- ▷ Never start the pump set while the pump is running in reverse.

✓ The fluid level is sufficiently high.

CAUTION

Start-up against a closed shut-off element

Increased vibrations!

Damage to mechanical seals and bearings!

- ▷ Never start up the pump set against a closed shut-off element.

1. Fully open the discharge line shut-off element, if any.
2. Start up the pump set.

Dry installation (installation types D and H)

⚠ DANGER

Non-compliance with the permissible pressure and temperature limits if the pump is operated with the suction and discharge lines closed.

Leakage of hot or toxic fluids!

- ▷ Never operate the pump with the shut-off elements in the suction line and/or discharge line closed.
- ▷ Only start up the pump set with the discharge side gate valve slightly or fully open.

⚠ DANGER

Excessive temperatures due to insufficient lubrication of shaft seal or excessive gas content in the fluid handled

Damage to the pump set!

- ▷ Never operate the pump set without liquid fill.
- ▷ Prime the pump as per operating instructions.
- ▷ Always operate the pump within the permissible operating range.

⚠ WARNING

Hot surface

Risk of burns

- ▷ Never touch a pump set which is in operation.

⚠ WARNING

Very high noise emission during operation

Personal injury!

- ▷ Minimize exposure in the vicinity of the pump set.
- ▷ For required work near running pump sets use appropriate ear protection.

⚠ WARNING

Abnormal noises, vibrations, temperatures or leakage

Damage to the pump!

Risk of personal injury!

- ▷ Switch off the pump (set) immediately.
- ▷ Eliminate the causes before returning the pump set to service.

✓ Pump, suction line and inlet tank (if fitted) have been vented and primed with the fluid to be handled.

✓ The priming lines and venting lines have been closed.

CAUTION

Start-up against open discharge line

Motor overload!

- ▷ Make sure the motor has sufficient power reserves.
- ▷ Use a soft starter.
- ▷ Use speed control.

1. Fully open the shut-off element in the suction head/suction lift line.
2. Slightly open the shut-off element in the discharge line.
3. Start up the motor.
4. Immediately after the pump has reached full rotational speed, slowly open the shut-off element in the discharge line and adjust it to comply with the duty point.

6.1.4 Shutdown (dry installation only – installation types D and H)

✓ The shut-off element in the suction line is and remains open.

1. Switch off the motor.
2. Immediately after having switched off the motor, close the shut-off element in the discharge line.

NOTE

If the discharge line is equipped with a non-return or check valve, the shut-off element may remain open provided that the system conditions and system regulations are considered and observed.

For prolonged shutdown periods:

1. Close the shut-off element in the suction line.
2. Close any auxiliary lines.

CAUTION

Danger of freezing!

Damage to the pump set!

- ▷ Drain the pump set or protect it against freezing.

6.2 Operating limits

DANGER

Non-compliance with operating limits

Damage to the pump set!

- Comply with the operating data indicated in the data sheet.
- Avoid operation against a closed shut-off element.
- Never operate the pump set at ambient or fluid temperatures exceeding those specified in the data sheet or on the name plate.
- Never operate the pump set outside the limits specified below.

6.2.1 Frequency of starts

CAUTION

Excessive frequency of starts

Damage to the motor!

- Never exceed the specified frequency of starts.

To prevent high temperature increases in the motor and excessive loads on the motor, sealing elements and bearings, the switching frequency shall not exceed the following number of starts per hour.

Table 20: Frequency of starts

Motor rating		Maximum frequency of starts
[kW]	[hp]	[Starts/hour]
≤ 7,5	< 10,0	30
> 7,5	> 10,0	10

These values apply to mains start-up (DOL or with star-delta contactor, autotransformer, soft starter). These limits do not apply to operation on a frequency inverter.

6.2.2 Operation on the power supply mains

DANGER

Non-compliance with permissible supply voltage tolerances

Explosion hazard!

- Never operate an explosion-proof pump (set) outside the specified range.

The maximum permissible deviation in supply voltage is ±10 % of the rated voltage. The voltage difference between the individual phases must not exceed 1 %.

6.2.3 Operation on a frequency inverter

DANGER

Operation outside the permitted frequency range

Explosion hazard!

- Never operate an explosion-proof pump set outside the specified range.

CAUTION

Pumping solids-laden fluids at reduced speed

Increased wear and clogging!

- Never operate the pump set with flow velocities below approx. 25 $^{in.}/_{s}$ [0.7 $^{m}/_{s}$] in horizontal pipes and approx. 45 $^{in.}/_{s}$ [1.2 $^{m}/_{s}$] in vertical pipes.

Frequency inverter operation of the pump set is permitted in the frequency range from 30 to 60 Hz.

6.2.4 Fluid handled

6.2.4.1 Temperature of the fluid handled

The pump set is designed for transporting liquids. The pump set is not operational under freezing conditions.

CAUTION

Danger of freezing!

Damage to the pump set!

- Drain the pump set or protect it against freezing.

Refer to the maximum permissible fluid temperature and ambient temperature indicated on the name plate and/or in the data sheet.

6.2.4.2 Minimum level of fluid handled (for installation types K, P and S only)

DANGER

Pump set running dry

Explosion hazard!

- Never allow an explosion-proof pump set to run dry.

CAUTION

Fluid level below the specified minimum

Damage to the pump set by cavitation!

- Never allow the fluid level to drop below the specified minimum.

Installation types P and S

The pump set is designed for continuously **submerged** operation. This condition has to be fulfilled for the motor to be cooled sufficiently.

Ready for operation

The pump set is ready for operation as soon as the motor is fully submerged.

The pump can be operated at a lower fluid level for short periods.
If the motor is not sufficiently cooled, an internal temperature monitoring device will trip the pump set and automatically re-start it after the motor has cooled down. The fluid level must not drop below the specified minimum (dimension B). Exact dimensions see general arrangement drawing/outline drawing.
(⇨ Section 1.4, Page 8)

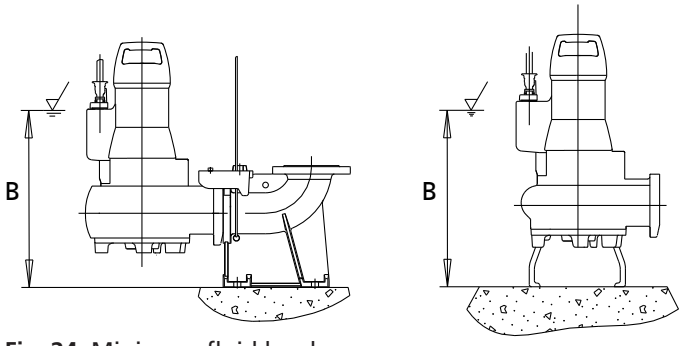

Fig. 24: Minimum fluid level

NOTE

Compliance with dimension B does not guarantee trouble-free operation of the pump set.
Depending on the pump's duty point, higher fluid levels may be required. Observe the NPSH values indicated in the characteristic curve (see hydraulic characteristic curves).

Installation type K

Pump sets of installation type K are suitable for continuous operation with the motor outside the fluid.

Ready for operation

The pump set is ready for operation when the minimum fluid level has been reached (dimension B). Exact dimensions see general arrangement drawing/outline drawing.

Use in the Amajet system

Slurp mode

For pumps with F impeller, slurp mode (partly involving air intake) is permissible for a period of up to 60 seconds.
For pumps with D impeller, slurp mode is impermissible! Make sure that the pump set switches off in time.

6.2.4.3 Density of the fluid handled

The power input of the pump changes in proportion to the density of the fluid handled.

CAUTION

Impermissibly high density of fluid handled.

Motor overload!

- ▷ Observe the information on fluid density in the data sheet.
- ▷ Make sure the motor has sufficient power reserves.

6.2.4.4 Abrasive fluids

Do not exceed the maximum permissible solids content specified in the data sheet. When the pump handles fluids containing abrasive substances, increased wear of the hydraulic system and the shaft seal is to be expected. In this case, halve the intervals commonly recommended for servicing and maintenance.

6.3 Shutdown/storage/preservation

6.3.1 Measures to be taken for shutdown

The pump set remains installed

⚠ WARNING

Unintentional starting of pump set

Risk of injury by moving components and shock currents!

- ▹ Make sure that the pump set cannot be started up unintentionally.
- ▹ Always make sure the electrical connections are disconnected before carrying out work on the pump set.

⚠ WARNING

Fluids handled, consumables and operating supplies which are hot or pose a health hazard

Risk of personal injury!

- ▹ Observe all relevant laws.
- ▹ When draining the fluid take appropriate measures to protect persons and the environment.
- ▹ Decontaminate pumps which handle fluids posing a health hazard.

CAUTION

Danger of frost/freezing

Damage to the pump set!

- ▹ If there is any danger of frost/freezing, remove the pump set from the fluid handled and clean, preserve and store it.

✓ Make sure sufficient fluid is available for the operation check run of the pump set.

1. For prolonged shutdown periods, start up the pump set regularly once every three months for approximately one minute.
   This will prevent the formation of deposits within the pump and the pump intake area.

The pump (set) is removed from the pipe and stored

✓ The pump has been properly drained

✓ The safety instructions for dismantling the pump have been observed.

1. Spray-coat the inside wall of the pump casing, and in particular the impeller clearance areas, with a preservative.
2. Spray the preservative through the suction nozzle and discharge nozzle.
   It is advisable to then close the pump nozzles (e.g. with plastic caps).
3. Oil or grease all exposed machined parts and surfaces of the pump (with silicone-free oil and grease, food-approved if required) to protect them against corrosion.
   Observe the additional instructions on preservation.

6.4 Returning to service

For returning the pump set to service, observe the items on commissioning/start-up. (⇨ Section 6.1, Page 50)

Refer to and comply with the operating limits. (⇨ Section 6.2, Page 53)

For returning the pump set to service after storage also follow the instructions for maintenance/inspection. (⇨ Section 7.2, Page 59)

⚠ WARNING

Failure to re-install or re-activate protective equipment/devices

Risk of personal injury from moving parts or escaping fluid!

- ▷ As soon as the work is completed, re-install and/or re-activate any safety-relevant devices and protective devices.

NOTE

On pumps/pump sets older than 5 years we recommend replacing all elastomer seals.

7 Servicing/Maintenance

7.1 Safety regulations

The operator ensures that all maintenance, all inspections and all installation work is performed by authorized, qualified specialist personnel who are thoroughly familiar with the manual.

DANGER

Sparks produced during maintenance work

Explosion hazard!

- Observe the safety regulations in force at the place of installation.
- Never open a pump set that is connected to the power supply.
- Always perform maintenance work on pump sets outside potentially explosive atmospheres.

DANGER

Risk of falling when working at great heights

Danger to life by falling from great heights!

- Do not step onto the pump (set) during installation work or dismantling work.
- Pay attention to safety equipment, such as railings, covers, barriers, etc.
- Observe the applicable local occupational safety regulations and accident prevention regulations.

WARNING

Unintentional starting of pump set

Risk of injury by moving components and shock currents!

- Make sure that the pump set cannot be started up unintentionally.
- Always make sure the electrical connections are disconnected before carrying out work on the pump set.

WARNING

Hands, other body parts or foreign objects in the impeller or intake area

Risk of personal injury! Damage to the submersible motor pump!

- Never insert your hands, other body parts or foreign objects into the impeller and/or impeller intake area.
- Check that the impeller can rotate freely.

WARNING

Fluids handled, consumables and operating supplies which are hot or pose a health hazard

Risk of personal injury!

- Observe all relevant laws.
- When draining the fluid take appropriate measures to protect persons and the environment.
- Decontaminate pumps which handle fluids posing a health hazard.

⚠ WARNING

Hot surface

Risk of personal injury!

- ▷ Allow the pump set to cool down to ambient temperature.

⚠ WARNING

Improper lifting/moving of heavy assemblies or components

Personal injury and damage to property!

- ▷ Use suitable transport devices, lifting equipment and lifting tackle to move heavy assemblies or components.

⚠ WARNING

Insufficient stability

Risk of crushing hands and feet!

- ▷ During assembly/dismantling, secure the pump (set)/pump parts against tilting or tipping over.

NOTE

Special regulations apply to repair work on explosion-proof pump sets. Modifications or alteration of the pump sets can affect explosion protection and are only permitted after consultation with the manufacturer.

A regular maintenance schedule will help avoid expensive repairs and contribute to trouble-free, reliable operation of the pump (set) with a minimum of maintenance expenditure and work.

NOTE

All maintenance work, service work and installation work can be carried out by KSB Service or authorized workshops. Find your contact in the attached "Addresses" booklet or on the Internet at "www.ksb.com/contact".

Never use force when dismantling and reassembling the pump set.

7.2 Maintenance/inspection

KSB recommends the following regular maintenance schedule:

Table 21: Overview of maintenance work

Maintenance interval	Maintenance work	For details see ...
Every 4000 operating hours[11)]	Measuring the insulation resistance	(⇨ Section 7.2.2.3, Page 61)
	Checking the power cables	(⇨ Section 7.2.2.2, Page 60)
	Visual inspection of the lifting chain/lifting rope	(⇨ Section 7.2.2.1, Page 60)
Every 10,000 operating hours[12)]	Checking the sensors	(⇨ Section 7.2.2.4, Page 61)
	Changing the lubricant	(⇨ Section 7.2.3.1.4, Page 65)
Every 5 years	General overhaul	-

11) At least once per year
12) At least every three years

7.2.1 Supervision of operation (for installation types D and H only)

DANGER

Formation of a potentially explosive atmosphere inside the pump

Explosion hazard!

- ▷ The pump internals in contact with the fluid handled, including the seal chamber and auxiliary systems, must be filled with the fluid handled at all times.
- ▷ Provide sufficient inlet pressure.
- ▷ Provide an appropriate monitoring system.

CAUTION

Increased wear due to dry running

Damage to the pump set!

- ▷ Never operate the pump set without liquid fill.
- ▷ Never close the shut-off element in the suction line and/or supply line during pump operation.

CAUTION

Impermissibly high temperature of fluid handled

Damage to the pump!

- ▷ Prolonged operation against a closed shut-off element is not permitted (heating up of the fluid).
- ▷ Observe the temperature limits in the data sheet and in the section on operating limits.

While the system is in operation, observe and check the following:

- The pump set must run quietly and free from vibrations at all times.
- Monitor the correct functioning of any auxiliary connections.
- Monitor the stand-by pump.
  To make sure that stand-by pumps are ready for operation, start them up once a week.

7.2.2 Inspection work

7.2.2.1 Checking the lifting chain/rope

✓ The pump set has been lifted out of the pump sump and cleaned.

1. Inspect the lifting chain/rope as well as their fasteners for any visible damage.
2. Replace any damaged components by original spare parts.

7.2.2.2 Checking the power cables

Visual inspection

✓ The pump set has been lifted out of the pump sump and cleaned.

1. Inspect the power cables for visible damage.
2. Replace any damaged components by original spare parts.

Checking the ground conductor

✓ The pump set has been lifted out of the pump sump and cleaned.

1. Measure the resistance between the ground conductor and chassis ground.
   The electrical resistance must be lower than 1 Ω.
2. Replace any damaged components by original spare parts.

DANGER

Defective ground conductor

Electric shock!

▹ Never switch on a pump set with a defective ground conductor.

7.2.2.3 Measuring the insulation resistance

Measure the insulation resistance of the motor winding during annual maintenance work.

✓ The pump set has been disconnected in the control cabinet.

✓ Use an insulation resistance measuring device.

✓ The maximum measuring voltage is 500 V (maximum permissible voltage 1000 V).

1. Measure the winding to chassis ground.
   To do so, connect all winding ends together.
2. Measure the winding temperature sensor to chassis ground.
   To do so, connect all core ends of the winding temperature sensors together and connect all winding ends to chassis ground.

⇨ The insulation resistance of the core ends to chassis ground must not be lower than 1 MΩ.
If the resistance measured is lower, power cable and motor resistance must be measured separately. Disconnect the power cable from the motor for this purpose.

NOTE

If the insulation resistance of the power cable is lower than 1 MΩ, the power cable is defective and must be replaced.

NOTE

If the insulation resistances measured on the motor are too low, the winding insulation is defective. The pump set must not be returned to service in this case.

7.2.2.4 Checking the sensors

CAUTION

Excessive test voltage

Damage to the sensors!

▹ Use a commercially available ohmmeter to measure the resistance.

The tests described below measure the resistance at the core ends of the power cable. The actual function of the sensors is not tested.

Temperature sensors in the motor winding

Table 22: Resistance measurement

Measurement between terminals ...	Resistance
	[Ω]
20 and 21[13)]	< 1
21 and 22	< 1
10 and 11[13)]	100-1000

13) If any

If the specified tolerances are exceeded, disconnect the connection cable at the pump set and repeat the check inside the motor.
If the tolerances are exceeded here, too, the motor part must be opened and overhauled. The temperature sensors are fitted in the stator winding and cannot be replaced.

Leakage sensor in the motor

Table 23: Resistance measurement of the leakage sensor in the motor

Measurement between terminals ...	Resistance
	[kΩ]
9 and ground conductor (PE)	> 60

Lower resistance values would suggest water ingress into the motor. In this case the motor section must be opened and serviced.

Bearing temperature sensor

Table 24: Resistance measurement of the bearing temperature sensors

Measurement between terminals ...	Resistance
	[Ω]
15 and 16	100 to 120

7.2.2.5 Visual inspection through the inspection hole (for inspection types D and H only and for pump sets with nominal diameters ≥100)

If there are problems with clogging, the inside of the casing and/or the impeller can be checked via the inspection hole.

⚠ WARNING

Fluids handled, consumables and operating supplies which are hot or pose a health hazard

Hazard to persons and the environment!

- ▹ Collect and properly dispose of the flushing fluid and of any residues of the fluid handled.
- ▹ Wear safety clothing and a protective mask if required.
- ▹ Observe all legal regulations on the disposal of fluids posing a health hazard.

⚠ WARNING

Hands and/or foreign objects in the pump casing

Risk of injuries, damage to the pump!

- ▹ Check that the inside of the pump is free from any foreign objects. Remove any foreign objects.
- ▹ Never insert your hands or any other objects into the pump, if the pump set has not been disconnected from the power supply and secured against unintentional start-up.

If a problem has occurred which requires visual inspection, observe the following instructions:

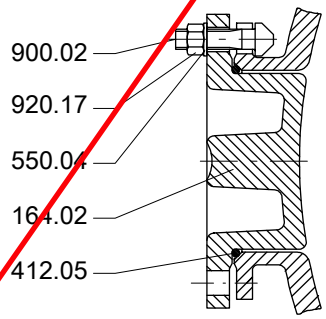

Fig. 25: Inspection hole in the casing

Opening the inspection hole

- Close the shut-off element on the suction side.
- Switch off the drive and make sure it cannot be re-started unintentionally.
- Close the shut-off element on the discharge side.
- Open the drain plug (auxiliary connection 6B).
- Collect and dispose of any liquid residues.
- Loosen nuts 920.17 at the inspection hole and remove inspection cover 164.02.
- Perform a visual inspection with a lamp or similar.

Closing the inspection hole

- Fit new O-ring 412.05.
- Fit inspection cover 164.02.
- Place discs 550.04 and nuts 920.17 on screws 900.02 and tighten.
- Observe the instructions on commissioning/start-up.

7.2.3 Lubrication and lubricant change

7.2.3.1 Lubricating the mechanical seal

The mechanical seal is supplied with lubricant from the lubricant chamber.

7.2.3.1.1 Intervals

Replace the lubricant every 10,000 operating hours but at least every 3 years.

7.2.3.1.2 Lubricant quality

The lubricant chamber is filled at the factory with environmentally friendly, non-toxic lubricant of medicinal quality (unless otherwise specified by the customer).
The following lubricants can be used to lubricate the mechanical seals:

Table 25: Lubricant quality

Description	Properties	
Paraffin oil or white oil. Alternative: motor oil grades SAE 10W to SAE 20W	Kinematic viscosity at 104 °F [40 °C]	< 0.065 ft/s² [< 20 mm/s²]
	Flash point (to Cleveland)	> 320 °F [> 160 °C]
	Solidification point (pour point)	< -5 °F [< -15 °C]

Recommended lubricants:

- Merkur WOP 40 PB, made by SASOL
- Merkur white oil Pharma 40, made by DEA
- Thin-bodied paraffin oil No. 7174, made by Merck
- Equivalent brands of medical quality, non-toxic
- Water-glycol mixture

⚠ WARNING

Contamination of fluid handled by lubricant

Hazard to persons and the environment!

▷ Using machine oil is only permitted if the oil is disposed of properly.

7.2.3.1.3 Lubricant quantity

7.2.3.1.4 Changing the lubricant

⚠ WARNING

Lubricants posing a health hazard and/or hot lubricants

Hazard to persons and the environment!

- ▷ When draining the lubricant take appropriate measures to protect persons and the environment.
- ▷ Wear safety clothing and a protective mask if required.
- ▷ Collect and dispose of any lubricants.
- ▷ Observe all legal regulations on the disposal of fluids posing a health hazard.

⚠ WARNING

Excess pressure in the lubricant chamber

Liquid spurting out when the lubricant chamber is opened at operating temperature!

- ▷ Open the screw plug of the lubricant chamber very carefully.

Draining the lubricant

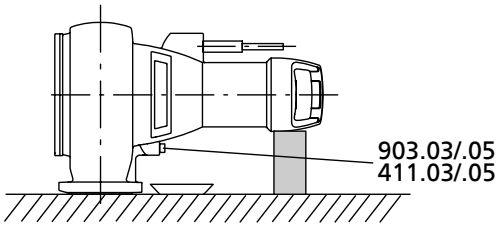

Fig. 26: Draining the lubricant

1. Position the pump set as shown.
2. Place a suitable container under the screw plug.
3. Undo screw plug 903.03/.05 with joint ring 411.03/.05 and drain off the lubricant.

Filling in the lubricant

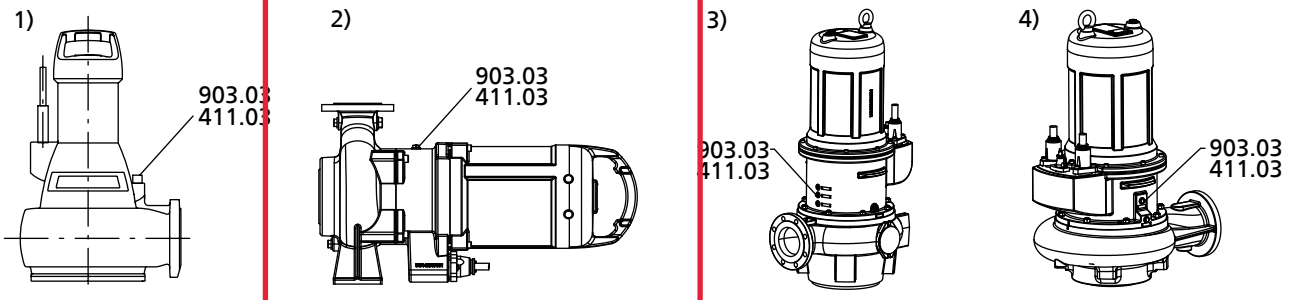

Fig. 27: Filling in the lubricant

Table 26: Filling in the lubricant

Motor	Impeller type	Variant			
		1	2	3	4
3 2.E - 7 2.E	E, F, K, S	✘	-	-	-
11 2.E - 26 2.E	E, F, K, S	-	✘	-	-
55 2.E - 75 2.E	D	-	-	✘	-
2 4.E - 5 4.E	E, F, K, S	✘	-	-	-
7 4.E - 37 4.E	D, E, F, K, S	-	✘	-	-
45 4.E - 75 4.E	D	-	-	✘	-
45 4.E - 75 4.E	E, F, K	-	-	-	✘
7 6.E - 30 6.E	D, E, F, K, S	-	✘	-	-
31 6.E - 55 6.E	D	-	-	✘	-
31 6.E - 55 6.E	E, F, K	-	-	-	✘
11 8.E - 22 8.E	D, E, F, K	-	✘	-	-
30 8.E - 45 8.E	D	-	-	✘	-
30 8.E - 45 8.E	E, F, K	-	-	-	✘

1. Position the pump set as shown.
2. Undo and remove screw plug 903.03 and joint ring 411.03.
3. Fill lubricant through the lubricant filler opening until the lubricant level reaches the opening.
4. Fit screw plug 903.03 together with a new joint ring 411.03.

7.2.3.2 Lubricating the rolling element bearings

The pump set is equipped with grease-lubricated, maintenance-free rolling element bearings.

7.2.3.3 Lubricating the rolling element bearings

The rolling element bearings of the pump set are grease-packed and maintenance-free, with the exception described below.

On pump sets with reinforced bearings the pump-end rolling element bearings can be relubricated; they must be relubricated as part of the maintenance work.

7.2.3.3.1 Grease quality

The following greases can be used to lubricate the rolling element bearings:

Grease quality

- Lithium soap grease suitable for high temperatures

Recommended commercially available brands

- ESSO UNIREX N3
- FAG ARCANOL L40
- TEXACO HYTEX EP3/DEA Pragon

7.2.3.3.2 Grease quantity

Use 60 g of grease to lubricate the rolling element bearings.

7.2.3.3.3 Re-lubrication

Pump sets with reinforced bearings

An encapsulated water-tight lubricating nipple allows re-lubrication of the angular contact ball bearings without opening the pump.

DANGER

Dry running

Explosion hazard!

▷ Re-lubricate explosion-proof pump sets outside potentially explosive atmospheres.

WARNING

Hands inside the pump casing

Risk of injuries, damage to the pump!

▷ Never insert your hands or any other objects into the pump if the pump has not been de-energized and secured against unintentional start-up.

CAUTION

Incomplete re-lubrication

Bearing damage!

▷ Always re-lubricate the bearings with the pump set in operation.

✓ The pump set has been positioned on a level surface.

✓ The pump set is secured against tipping over.

1. Remove screw plug 903.46 and joint ring 411.46.
2. Connect the pump set to the power supply.

CAUTION

Pump set running dry

Increased vibrations!

Damage to mechanical seals and bearings!

▷ Never operate the pump set for more than 60 seconds outside the fluid to be handled.

3. Start up the pump set.

4. Fill in grease via lubricating nipple 636.02.
5. Disconnect the pump set from the power supply again and make sure it cannot be started unintentionally.
6. Close screw plug 903.46 with joint ring 411.46 again.

7.3 Drainage/cleaning

⚠ WARNING

Fluids handled, consumables and operating supplies which are hot or pose a health hazard

Hazard to persons and the environment!

- ▹ Collect and properly dispose of the flushing fluid and of any residues of the fluid handled.
- ▹ Wear safety clothing and a protective mask if required.
- ▹ Observe all legal regulations on the disposal of fluids posing a health hazard.

1. Always flush the pump if it has been used for handling noxious, explosive, hot or other hazardous fluids.
2. Always flush and clean the pump before transporting it to the workshop. Always complete and enclose a certificate of decontamination when returning the pump set. (⇨ Section 10, Page 118)

7.4 Dismantling the pump set

7.4.1 General information/Safety regulations

⚠ WARNING

Unqualified personnel performing work on the pump (set)

Risk of personal injury!

- ▹ Always have repair work and maintenance work performed by specially trained, qualified personnel.

⚠ WARNING

Hot surface

Risk of personal injury!

- ▹ Allow the pump set to cool down to ambient temperature.

⚠ WARNING

Improper lifting/moving of heavy assemblies or components

Personal injury and damage to property!

- ▹ Use suitable transport devices, lifting equipment and lifting tackle to move heavy assemblies or components.

Observe the general safety instructions and information.

For dismantling and reassembly observe the general assembly drawing.

In the event of damage you can always contact our service staff.

DANGER

Insufficient preparation of work on the pump (set)

Risk of personal injury!

- ▷ Properly shut down the pump set.
- ▷ Close the shut-off elements in the suction line and discharge line.
- ▷ Drain the pump and release the pump pressure.
- ▷ Shut off any auxiliary feed lines.
- ▷ Allow the pump set to cool down to ambient temperature.

WARNING

Components with sharp edges

Risk of cutting or shearing injuries!

- ▷ Always use appropriate caution for installation and dismantling work.
- ▷ Wear work gloves.

7.4.2 Preparing the pump set

7.4.2.1 Preparing the pump set (for installation types K, P and S only)

- ✓ The pump set has been removed from the pump sump.
- ✓ The pump set has been cleaned. (⇨ Section 7.3, Page 68)
- ✓ The lubricant has been drained.

1. De-energize the pump set and secure it against unintentional start-up.
2. Drain the leakage chamber and leave it open for the duration of the disassembly.

7.4.2.2 Preparing the pump set (for installation types D and H only)

7.4.2.2.1 Separating the pump from the piping

- ✓ The pump set has been switched off properly.
- ✓ The shut-off elements in the suction line and discharge line have been closed.
- ✓ Any auxiliary connections have been closed.
- ✓ The pump has been drained and the pump pressure has been released.

1. Disconnect any auxiliary feed lines.
2. Remove the discharge nozzle and suction nozzle from the piping.

NOTE

After the pump set has been removed from the piping, the suction casing should be cleaned with water. Suitable protective clothing is recommended.

7.4.2.2.2 Removing the pump set from the piping

⚠ WARNING

Pump set tilting

Risk of squashing hands and feet!

▷ Suspend or support the pump set.

✓ The pump set has been disconnected from the piping.
(⇨ Section 7.4.2.2.1, Page 69)

1. Suspend the pump set as specified for transport.
2. Depending on the type of installation, loosen the fastening bolts at the pump foot or at the soleplate.
3. Place the pump set in a horizontal position.

7.4.2.2.3 Removing the back pull-out unit

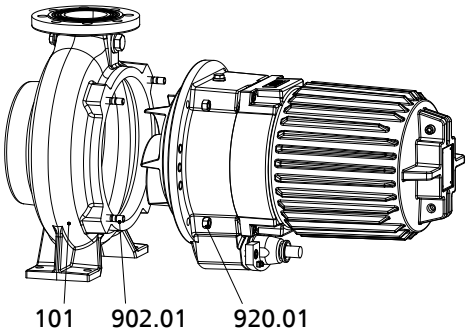

Fig. 28: Removing the back pull-out unit

1. Undo screwed connections 902.01 and 920.01 and pull the complete back pull-out unit out of pump casing 101.
2. Place the back pull-out unit in a safe and dry assembly area and secure it against tipping over or rolling off.

7.4.3 Dismantling the pump section

Dismantle the pump section in accordance with the relevant general assembly drawing.

7.4.3.1 Removing the impeller

1. Remove pump casing 101.
2. Undo and remove impeller fastening screw 914.10.
The impeller/shaft connection is a tapered fit.
3. For dismantling of the impeller, a jacking thread is provided at the impeller hub. Screw in the forcing screw and remove the impeller.

NOTE

The forcing screw is not included in the scope of supply. It can be ordered separately from KSB.

Table 27: Forcing screws for pulling off the impeller

Size	Impeller type	Forcing screw	
		Thread	Code
40-252	F, K, S	M16	ADS 8

7.4.3.2 Removing the mechanical seal

Remove the mechanical seal in accordance with the general arrangement drawings.

7.4.3.2.1 Removing the pump-end mechanical seal

✓ The back pull-out unit and the impeller have been removed as described above.

1. Pull the rotating assembly of mechanical seal 433.02 off shaft 210.
2. Remove discharge cover 163 from motor housing 811 or bearing bracket 350.
3. Press the stationary seat of mechanical seal 433.02 out of discharge cover 163.

7.4.3.2.2 Removing the drive-end mechanical seal

✓ The back pull-out unit and the impeller have been removed as described above.

1. Remove taper lock ring 515 or circlip 932.03.
2. Pull the rotating assembly of mechanical seal 433.01 off shaft 210.

7.4.3.2.3 Removing the double cartridge seal

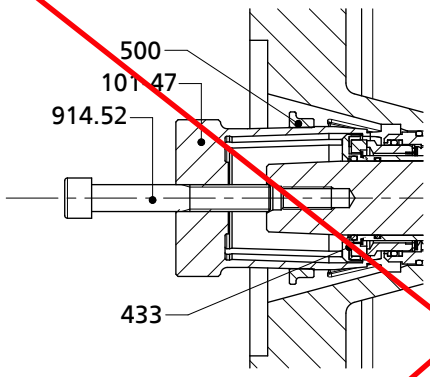

Fig. 29: Removing the double cartridge seal

✓ The back pull-out unit and impeller have been removed.

1. Fix discharge cover 163 to bearing housing 350 using suitable bolts/screws and washers.
2. Remove O-ring 412.58 from the shaft.
3. Slide puller 101-47 over the shoulder of mechanical seal 433 and lock with ring 500.
4. Press forcing screw 914.52 against shaft 210 and pull mechanical seal 433 out of discharge cover 163.

7.4.3.3 Removing the wear plate

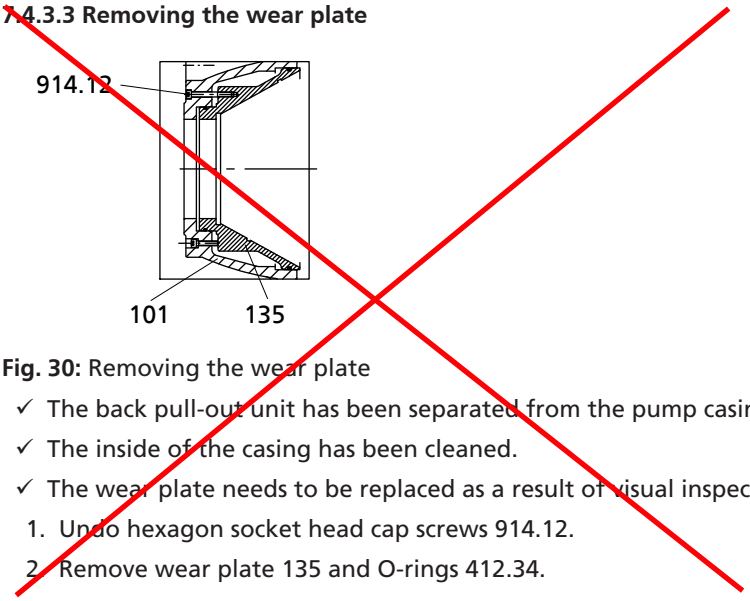

Fig. 30: Removing the wear plate

✓ The back pull-out unit has been separated from the pump casing.

✓ The inside of the casing has been cleaned.

✓ The wear plate needs to be replaced as a result of visual inspection.

1. Undo hexagon socket head cap screws 914.12.
2. Remove wear plate 135 and O-rings 412.34.

7.4.4 Dismantling the motor section

	NOTE Special regulations apply to repair work on explosion-proof pump sets. Modifications or alteration of the pump sets can affect explosion protection and are only permitted after consultation with the manufacturer.

	NOTE The motors of explosion-proof pump sets are supplied in "flameproof enclosure" type of protection. Any work on the motor section which could affect explosion protection, such as re-winding and repair work involving machining, must be inspected by an approved expert or performed by the motor manufacturer. No modifications must be made to the internal configuration of the motor space. Repair work at the flameproof joints must only be performed in accordance with the manufacturer's instructions.

When dismantling the motor section and the connection cable make sure that the cores/terminals are clearly marked for future reassembly.

7.5 Reassembling the pump set

7.5.1 General information/Safety regulations

	⚠ WARNING **Improper lifting/moving of heavy assemblies or components** Personal injury and damage to property! ▷ Use suitable transport devices, lifting equipment and lifting tackle to move heavy assemblies or components.

	⚠ WARNING **Components with sharp edges** Risk of cutting or shearing injuries! ▷ Always use appropriate caution for installation and dismantling work. ▷ Wear work gloves.

CAUTION

Improper reassembly

Damage to the pump!

- ▷ Reassemble the pump (set) in accordance with the general rules of sound engineering practice.
- ▷ Use original spare parts only.

NOTE

Before reassembling the motor section, check that all joints relevant to explosion protection (flamepaths) are undamaged. Any components with damaged flamepaths must be replaced. Refer to the flamepath positions specified in the Annex.

Sequence

Always reassemble the pump set in accordance with the corresponding general assembly drawing.

Sealing elements

- O-rings
  - Check O-rings for any damage and replace by new O-rings, if required.
  - Never use O-rings that have been made by cutting an O-ring cord to size and gluing the ends together.
- Assembly adhesives
  - Avoid the use of assembly adhesives, if possible.

Tightening torques

When reassembling the pump set, tighten all screws/bolts as indicated.
In addition, secure all screwed connections closing off the flameproof enclosure with a thread-locking agent (Loctite type 243).

7.5.2 Reassembling the pump section

7.5.2.1 Installing the mechanical seal

Observe the following to ensure trouble-free operation of the mechanical seal:

- Only remove the protective wrapping of the seal faces immediately before assembly takes place.
- Make sure the surface of the shaft is absolutely clean and undamaged.
- Immediately before installing the mechanical seal, wet the contact faces with a drop of oil.
- For easier installation of bellows-type mechanical seals, wet the inside diameter of the bellows with soapy water (not oil).
- To prevent any damage to the rubber bellows, place a thin foil (of approximately 0.1 to 0.3 mm thickness) around the free shaft stub.
  Slip the rotating assembly over the foil into its installation position.
  Then remove the foil.

✓ The shaft and rolling element bearings have been properly fitted in the motor.

1. Guide drive-end mechanical seal 433.01 onto shaft 210. Secure it with taper lock ring 515.
2. Insert O-rings 412.04 and 412.15 into discharge cover 163.
3. Guide discharge cover 163 into bearing housing 350 or motor housing 811 as far as it will go.
4. Guide the pump-end mechanical seal 433.02 onto shaft 210.

For special mechanical seals with covered spring, tighten the socket head cap screw at the rotating assembly before fitting the impeller. Observe installation dimension "A". (⇨ Section 9.5.2, Page 116)

300-401	K	48,3	1,902
300-403	K	48,3	1,902

NOTE

The puller/ mounting device for the KSB double cartridge seal is not included in the scope of supply. It can be ordered separately from KSB.

7.5.2.2 Installing the double cartridge seal

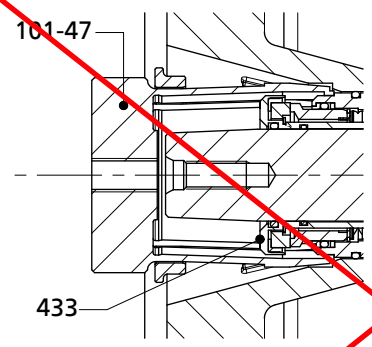

Fig. 31: Installing the double cartridge seal

✓ Install the mechanical seal as shown in the installation drawing.

✓ The back pull-out unit of the pump has been placed in a clean and level assembly area.

✓ The 4STQ double cartridge seal is fully assembled and undamaged.

1. Insert circlip 932.59 in the shaft groove and make sure that circlip 932.59 is positioned correctly in the shaft groove. When fitting the circlip take care to prevent damage to the shaft.

CAUTION

Use of grease or other permanent lubricants

Torque transmission impeded / overheating of and damage to the pump!

- ▷ Never use grease or other permanent lubricants for fitting the torque-transmitting elements of a mechanical seal.
- ▷ Use soft soap to reduce any friction caused by assembly.
- ▷ Do not coat the mechanical seal faces with grease or oil.

2. Prior to assembly, wet the external elastomers (O-rings and gasket) and the seats of the mechanical seal at the shaft, discharge cover 163 and seal housing with a suitable lubricant (e.g. soap suds).
3. Press mechanical seal 433 into discharge cover 163 by hand as far as possible.
4. Fit mechanical seal 433 using mounting device 101-47. Check the mechanical seal position against reference dimensions "K" (see table: Reference dimension "K") and correct the installation position if required.
5. Slide O-ring 412.58 onto the shaft until it abuts against the mechanical seal.

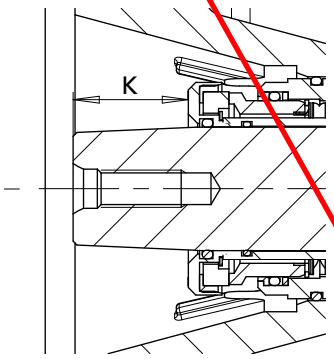

Fig. 32: Reference dimension "K" from shaft end to double cartridge seal

7.5.2.3 Fitting the impeller

NOTE

For bearing brackets with tapered fit make sure that the tapered fit of impeller and shaft is undamaged and assembled free from grease.

✓ The shaft and rolling element bearings have been properly installed.

✓ The mechanical seals have been properly installed.

1. Slide impeller 230 onto the shaft end.
2. Apply Loctite 243 as thread-locking agent to the thread of the impeller screw.
3. Screw in impeller screw 914.10 and disc 550.23, if any. Tighten with a torque wrench. Observe the tightening torques.

Table 30: Tightening torques for impeller screws

Size	Impeller type	Thread	Tightening torque	
			[Nm]	[ft lbf]
40-252	F, K, S	M16	150	110,6

300-403	K	M20	290	213,9

7.5.2.3.1 Fitting the cutter

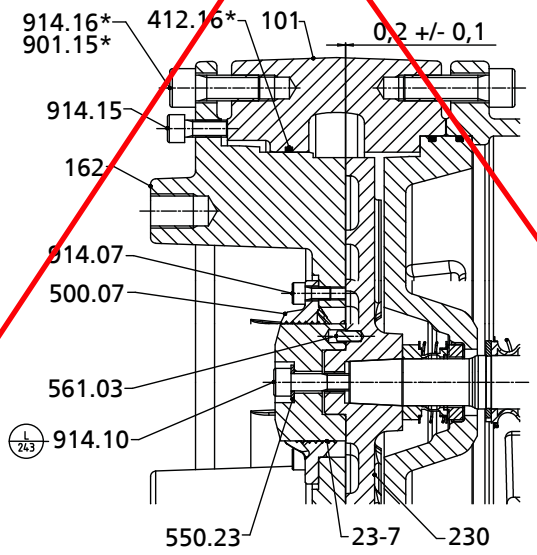

Fig. 33: Fitting the cutter

✓ Pump-end mechanical seal 433.02 has been installed.

1. Slide impeller 230 onto the tapered shaft end.
2. Insert grooved pin 561.03 into the impeller. Place impeller body 23-7 onto the centering hub.
3. Screw in hexagon socket head cap screw 914.10 and use a torque wrench to tighten the screw to a torque of 26 Nm.

4. Fasten the pump casing with hexagon socket head cap screw 914.74. Tighten the screw with a torque wrench.
5. Fasten ring 500.07 with hexagon socket head cap screw 914.07 in the suction cover.
6. Insert the suction cover into the pump casing, making sure the suction cover touches the impeller vanes.
7. Screw in hexagon socket head cap screw 914.16 to hold the suction cover in place. Do not tighten it yet.
8. Measure the distance between the impeller and the suction cover.
   Distance S should measure approximately 0.2 ± 0.1 mm.
9. If required, adjust the position of the suction cover in relation to the pump casing using hexagon socket head cap screw 914.15.
10. Tighten hexagon socket head cap screw 914.16.
11. Rotate the impeller body to check that the impeller turns smoothly.
    Make sure that the suction cover and impeller do not touch each other.

7.5.2.4 Installing the back pull-out unit

7.5.2.4.1 Design with axial clearance

NOTE

After casing wear rings with a radial clearance have been fitted in pump casing 101 they have the required inner diameter and do not need to be readjusted.

NOTE

The axial clearance must be adjusted quickly before the Loctite hardens.

1. Apply Loctite 2701 to the outside diameter of the casing wear ring.
2. Use a rubber mallet to insert casing wear ring 502 into pump casing 101 as far as it will go.
3. Insert the complete back pull-out unit into the pump casing.
4. Evenly tighten bolted/screwed connection 902.01 and 920.01 and/or 914.74 between pump casing and bearing housing.

CAUTION

Axial displacement of the rotor

Damage to shaft seal and bearings!

- ▷ Always adjust and check the axial clearance with the pump set in a vertical position.

5. Use a rubber mallet to insert casing wear ring 502 until it is close to impeller 230.

6. Suspend the pump set as illustrated.

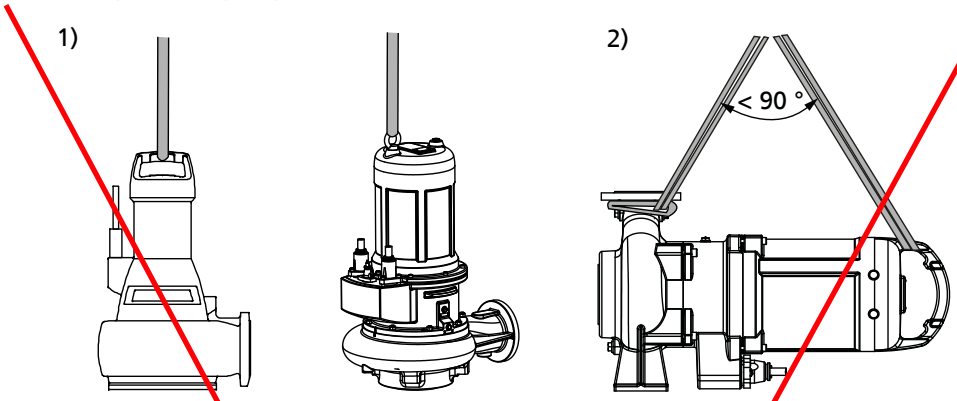

Fig. 34: Suspending the pump set 1) vertical installation 2) horizontal installation

7. Lift off the pump set and adjust the axial clearance to A = 0.3 ± 0.1 mm.

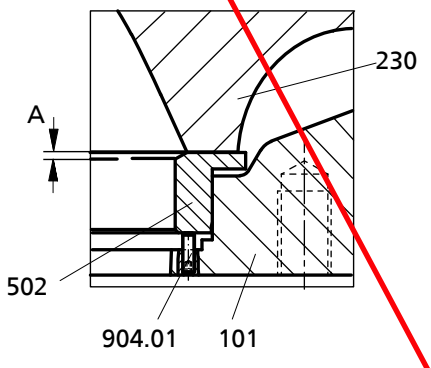

Fig. 35: Fitting the casing wear ring

7.5.2.4.2 Design with wear plate

✓ The shaft, rolling element bearings, mechanical seal and impeller have been assembled properly.

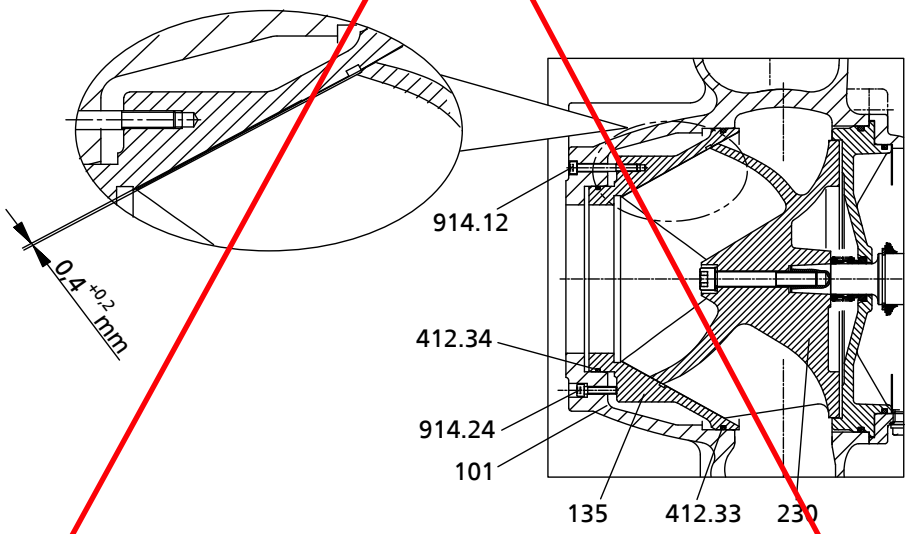

Fig. 36: Fitting the wear plate

1. Equip wear plate 135 with two new O-rings 412.33 and 412.34.
2. Insert wear plate 135 into pump casing 101.
3. Fasten wear plate 135 to pump casing 101 with hexagon socket head cap screws 914.12.

4. Adjust the clearance between impeller 230 and wear plate 135 by tightening and loosening screws 914.12 and 914.24.
   ⇨ Screw 914.24 presses the wear plate in the direction of the impeller.
   ⇨ The clearance equals 0.4 $^{+0.2}$ mm (measured on the suction side from the outer surface of the impeller vane to the wear plate).
5. Insert the complete back pull-out unit into the pump casing.
6. Evenly tighten bolted/screwed connection 920.01 and 902.01 and/or 914.74 between pump casing and bearing housing.

7.5.3 Reassembling the motor section

NOTE

Before reassembling the motor section, check that all joints relevant to explosion protection (flamepaths) are undamaged. Any components with damaged flamepaths must be replaced. Only use original spare parts made by KSB for explosion-proof pumps. Observe the flamepath positions specified in the Annex. Secure all screwed connections closing off the flameproof enclosure with a thread-locking agent (Loctite type 243).

DANGER

Wrong screws/bolts

Explosion hazard!

- Always use the original screws/bolts for assembling an explosion-proof pump set.
- Never use screws/bolts of different dimensions or of a lower property class.

7.5.4 Leak testing

After reassembly, the mechanical seal area/lubricant chamber must be tested for leakage. The leak test is performed at the lubricant filler opening.

Observe the following values for leak testing:

- **Test medium:** compressed air
- **Test pressure:** 11.6 psi [0.8 bar] maximum
- **Test duration:** 2 minutes

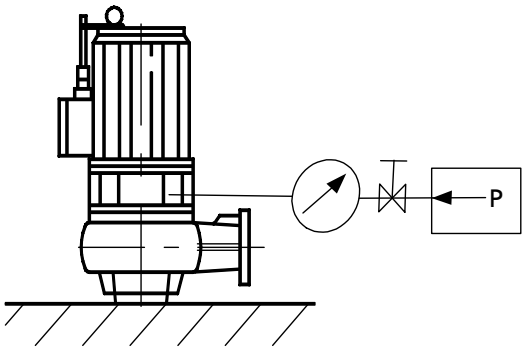

Fig. 37: Screwing in the testing device

1. Unscrew and remove the screw plug and joint ring of the lubricant chamber.
2. Screw the testing device tightly into the lubricant filler opening.
3. Carry out the leak test with the values specified above.
   The pressure must not drop during the test period.
   If the pressure does drop, check the seals and screwed connections.
   Repeat the leak test.
4. If the leak test has been successful, fill in the lubricant.

7.5.5 Checking the connection of motor/power supply

Check the power cables after reassembly. (⇨ Section 7.2.2, Page 60)

7.6 Tightening torques

Table 31: Tightening torques [lbf ft] depending on thread, material and property class

Thread	Material				
	A4-50	A4-70	A4-70	1.4462	8.8

7.7 Spare parts stock

7.7.1 Ordering spare parts

Always quote the following data when ordering replacement parts or spare parts:

- Order number
- Order item number
- Type series
- Size
- Year of construction
- Motor number

Refer to the name plate for all data.

Also supply the following data:

- Part No. and description (⇨ Section 9.1, Page 85)
- Quantity of spare parts
- Shipping address
- Mode of dispatch (freight, mail, express freight, air freight)

7.7.2 Recommended spare parts stock for 2 years' operation to DIN 24296

Table 33: Quantity of spare parts for recommended spare parts stock[14)]

Part No.	Description	Number of pump sets (including stand-by pump sets)						
		2	3	4	5	6 and 7	8 and 9	10 and more
230	Impeller	1	1	1	2	2	3	30 %
433.01	Mechanical seal, motor end	2	3	4	5	6	7	90 %

8 Trouble-shooting

A Pump is running but does not deliver

B Pump delivers insufficient flow rate

C Excessive current/power input

D Insufficient discharge head

E Vibrations and noise during pump operation

Table 34: Trouble-shooting

A	B	C	D	E	Possible cause	Remedy
-	✗	-	-	-	Pump delivers against an excessively high pressure.	Re-adjust to duty point.
-	✗	-	-	-	Gate valve in the discharge line is not fully open.	Fully open the gate valve.
-	-	✗	-	✗	Pump is running in off-design conditions (part load/overload).	Check the pump's operating data.
✗	-	-	-	-	Pump and/or piping are not vented.	Vent by lifting the pump off the base elbow and lowering it again.
✗	-	-	-	-	Pump intake clogged by deposits	Clean the intake, pump components and lift check valve.
-	✗	-	✗	✗	Inlet pipe or impeller clogged	Remove deposits in the pump and/or piping.
-	-	✗	-	✗	Dirt/fibers in the clearance between the casing wall and impeller; sluggish rotor.	Check whether the impeller can be easily rotated. Clean the impeller, if required.
-	✗	✗	✗	✗	Wear of internal parts	Replace worn parts by new ones.
✗	✗	-	✗	-	Defective riser (pipe and sealing elements)	Replace defective riser pipes. Replace sealing elements.
-	✗	-	✗	✗	Impermissible air or gas content in the fluid handled	Contact KSB.
-	-	-	-	✗	System-induced vibrations	Contact KSB.
-	✗	✗	✗	✗	Wrong direction of rotation	Check the electrical connection of the motor and the control system, if any.
-	-	✗	-	-	Wrong supply voltage	Check the mains power supply. Check the cable connections.
✗	-	-	-	-	Motor is not running because of lack of voltage.	Check the electrical installation. Contact the energy supplier.
✗	-	✗	-	-	Motor winding or power cable are defective.	Replace by new original KSB parts or contact KSB.
-	✗	-	✗	-	In case of star-delta configuration: motor running in star configuration only	Check star-delta contactor.
-	-		-	✗	Defective rolling element bearing(s)	Contact KSB.
-	✗	-	-	-	Water level lowered too much during operation	Check level control equipment.
✗	-	-	-	-	Temperature control device monitoring the winding has tripped the pump as a result of excessive winding temperatures.	The motor will restart automatically once it has cooled down.
✗	-	-	-	-	Temperature limiter (explosion protection) has tripped the pump as a result of the permissible winding temperature being exceeded.	Have cause determined and eliminated by qualified and trained personnel.
✗	-	-	-	-	Motor has been tripped by leakage monitor.	Have cause determined and eliminated by qualified and trained personnel.

Comments: .....

.....

The product/accessories have been carefully drained, cleaned and decontaminated inside and outside prior to dispatch/ placing at your disposal.

We herewith declare that this product is free from any hazardous chemicals as well as from biological and radioactive substances.

For mag-drive pumps, the inner rotor unit (impeller, casing cover, bearing ring carrier, plain bearing, inner rotor) has been removed from the pump and cleaned. In cases of containment shroud leakage, the outer rotor, bearing bracket lantern, leakage barrier and bearing bracket or intermediate piece have also been cleaned.

For canned motor pumps, the rotor and plain bearing have been removed from the pump for cleaning. In cases of leakage at the stator can, the stator space has been examined for fluid leakage; if fluid handled has penetrated the stator space, it has been removed.

☐ No special safety precautions are required for further handling.

☐ The following safety precautions are required for flushing fluids, fluid residues and disposal:

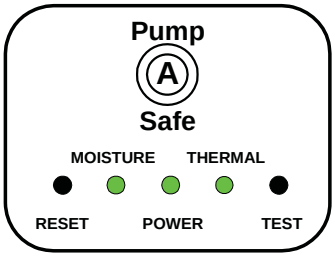
PumpSafe™

Monitoring Modules for KSB Submersible Pumps



Monitoring Module
O/A Size 3.75"H x 2.62"W x 2.25"D

Module Types
(by sensor types and pump leads)

A – Bi-Metal (21 & 22) *or* Thermistor (10 & 11)
& Moisture Probe (9 & Pump Ground)

~~**B** – Bi-Metal (21 & 22) *or* Thermistor (10 & 11)~~
~~& Float Switch (3 & 4)~~

~~**D** – Bearing RTD (15 & 16) & Float Switch (3 & 4)~~

Overview: KSB submersible pump motors have varying combinations of over-temperature and moisture intrusion protection. The alternatives employed by the KSB factory are motor specific. The alternatives include bi-metal or thermistors for winding thermal protection, an RTD for bearing temperature monitoring and either conductivity probe, a float switch or on some motors both sensor types. The appropriate module(s) should be specified accordingly.

PumpSafe™ Module 'A': Monitors both thermal winding sensor (bi-metal or thermistor) and the conductivity probe to detect moisture intrusion. This sensor combination is typical for low horsepower motors. Each type module monitors one thermal and one moisture function input (see above listing). Each module type likewise has one set of form C output contacts per alarm function to provide remote pump monitoring or to directly control the pump's operation.

Installation: The PumpSafe™ Module can be installed locally or in a MCC on the supplied 12 pin socket. Modules can be combined in a single Nema 4X local control panel for monitoring multiple pump installations.

Operation: Integrally the module indicates using bi-colored LEDs, one each for each fault type; **GREEN** being OK, **ORANGE** (Channel A) or **RED** (Channel B) a failure "ALARM" condition. In addition a power ON LED and a "TEST" and a "RESET" button are provided. A self correcting fault, either moisture or thermal, causes the respective LED to change from a steady (alarm) to a flashing signal. This LED continues to flash until locally cleared, providing the plant operator annunciation of a potential intermittent fault condition. Rev 1.7, 3/28/06

Module Specifications:
Power supply: 24-240VAC/1/60 or 50 cycle
Thermal circuit: <25 ma @ 12VDC
Moisture Sensor Circuit: <300uA @ 5 Volts VDC
Output Contact Rating: 5A @ 120 Volts AC
Power Consumption: 2.8 Watts Maximum

Pin Configuration & Function:
1 & 2 Motor Thermal Circuit – Input
3 & 4 Motor Moisture Circuit – Input
5 & 6 24-240 Volts AC – Input
7/8/9 Thermal NC/COM/NO Output Contacts
10/11/12 Moisture NC/COM/NO Output Contacts

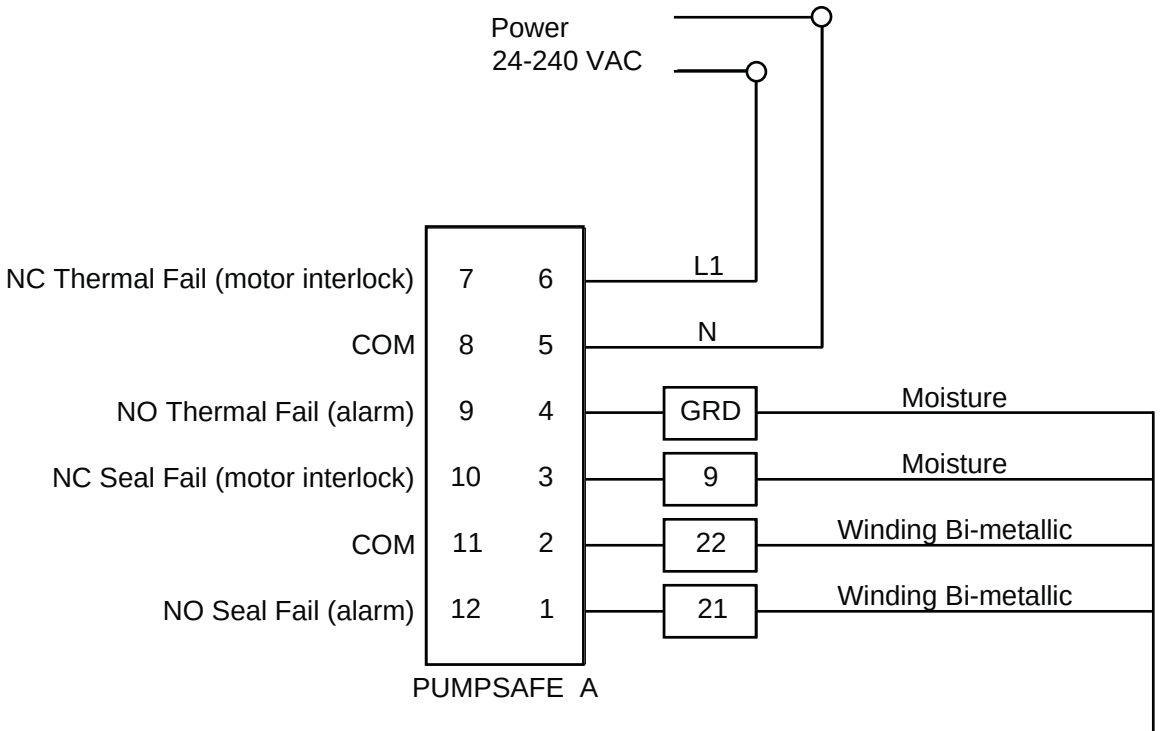
PumpSafe™ Wiring Diagram

KRT Submersible Pumps - Drawing # 1

JAB 8/05

PumpSafe™ Relays Required:
(1) Module A with form C outputs rated 5A @ 120VAC



Note: Relays are fail safe. Relays shown in the energized state. Contacts change state at loss of power. Therefore, pushbutton resets on the front of control panel should be used with timers. PumpSafe™ relays have built in reset button.

READ THIS FIRST!

IMPORTANT SETUP PROCEDURES

PumpSafe Model A – Moisture (seal failure) /Thermal (high temp) Relay

Upon application of power to the Model A relay, it immediately starts an internal test routine to verify correct operation. This test routine lasts for 15 seconds, after which the relay is ready to monitor the Chan A (Moisture) and Chan B (Thermal) inputs. (*The output relay contacts for each channel do not change state until after the test routine is completed and the input channels have been polled.)*

(*Pressing the Reset pushbutton will also initiate the internal test routine*.)

After the test routine is complete, the **Green** Power On LED and the Chan A and Chan B LED's will be illuminated. If there is no fault condition present on either input channel, both channel LED's will be Illuminated **Green.**

The Chan A and Chan B input channels have built in time delays to prevent false failure indications.

A Seal Failure condition will be indicated on Chan A if:
a resistance of 125k ohms or less exists for a **minimum of 15 seconds, 3 times in a 24-hour period**
OR
a resistance of 125k ohms or less exists for a **minimum of 45 seconds.**

If an alarm condition exists, the Chan A LED will illuminate **ORANGE.**
If/when the alarm condition clears, the Chan A LED will flash to indicate an alarm existed, but does not exist currently, until the Reset pushbutton is pressed.

A High Temperature condition will be indicated on Chan B if:
an open circuit exits for a **minimum of 2 seconds, 3 times in a 24-hour period**
OR
an open circuit exits for a **minimum of 7 seconds.**

If an alarm condition exists, the Chan B LED will illuminate **RED**.
If/when the alarm condition clears, the Chan B LED will flash to indicate an alarm existed, but does not exist currently, until the Reset pushbutton is pressed.

Once an alarm has occurred on either channel once in a 24-hour period, and cleared, any subsequent occurrence will not be restricted to the time delay. The circuit will indicate an alarm instantly upon recurrence of an alarm condition.

RE: FACTORY TEST REPORTS 11306 SUBMERSIBLE PUMPS

Number of pages including cover sheet: 1

We have received the KSB factory testing results. Please see attached and forward to AECOM for review and approval. Below are a few comments and clarifications to include with the submission.

1. Attached are Test Reports for the submersible pumps 11306. The pumps all tested out well and exceeded contract requirements.
2. Note that all pumps exceeded HI 1U tolerances as required by contract. The test reports state an acceptance class of 2B or ISO 9906, however results exceed HI 1U requirements.
3. For PS3 pumps, design point of 305 GPM @ 71 ft is achieved at 1675 RPM per approved submittal. Factory test requirements were based actual motor speed of 1762 RPM, which provides a point of 305 GPM @ 82 ft. Both pumps tested within HI 1U for this test point of 305 GPM @ 82 ft.
4. Spec 11306 requires pump temperature testing 2.11.B.3.e. The units are submerged, so temperature testing is through motor temperature PTC Thermistors. Reading after 4 hour operation is highlighted (red box) on each motor test report for clarity. Thermistor range is 150-300 ohms (cool) to 4000 ohm trip point. All readings were below 1000 ohms and acceptable.

I hope the above information is satisfactory. Please call if you have any questions.

Sincerely,

Dan Weaver

PS1 and PS2 Pumps

Five Year or 10,000 Hour KRT Pump Warranty And Ten Year Guide Cable Warranty for Permanent Municipal Installations

KSB, Inc. warrants to the Original End Purchaser that its Pump(s) will be free from defects in workmanship and materials covering parts and labor for a period of five (5) years or ten thousand (10,000) hours of operation, and that its Guide Cable will be free from defects in workmanship and materials covering parts and labor for a period of ten (10) years of operation when pumping abrasive-free, non-corrosive liquids used in Permanent Municipal Installations. This warranty commences on the date KSB, Inc ships the pump(s).

KSB Pump(s) are warranted for five (5) years for use in Sewage Collection systems or intermittent duty cycle pumping. KSB Pump(s) are warranted for 10,000 hours of operation for use in Sewage Treatment Processing or for continuous duty cycle pumping. For the purpose of this clause, continuous duty cycle is defined as twelve (12) hours per day average operation time, or greater.

In the event that defects in workmanship or materials appear during the term of the warranty, the Purchaser shall deliver written claim of Warranty to the Company within ninety (90) days of discovery. The obligation of KSB, Inc. under the warranty shall be limited to replacement of defective part(s) and/or labor whichever KSB, Inc., in its sole discretion, chooses to elect. The Original End Purchaser shall be entitled to this warranty provided that the terms of payment have been complied with and the pump(s) with cable(s) attached or faulty part(s) thereof have been returned freight prepaid to KSB, Inc. or to an authorized KSB Service Facility and the defect has been acknowledged in writing by KSB, Inc. to be caused by faulty workmanship or defective material. Normal wear and tear is specifically excluded from warranty coverage.

This warranty does not apply to KSB Grinder Pumps or pumps used in industrial or portable applications. The warranty shall be void if the pump(s) or its part(s) have not been used and maintained in accordance with the printed instructions of KSB, Inc., or have been damaged wholly or in part by misuse, accident, neglect, faulty electrical system, or any other cause beyond the control of KSB, Inc.

Unless otherwise specified by KSB, Inc., the warranty period shall be computed from the original shipping date to the date the pump(s) and/or part(s) are returned to KSB, Inc. or, if repairs are made on site, the warranty period shall be computed to the date notice of defects is received by KSB, Inc.

Pump(s) or part(s) repaired or replaced will be returned at the cost of the Original End Purchaser. Repairs or replacement parts are warranted free from defects in workmanship and materials for the longer of the un-expired term of this warranty or ninety (90) days from the date KSB, Inc. ships such repaired or replaced items, and all other terms and conditions of this warranty shall apply. The extent of the Original End Purchaser's share in the repair or replacement cost detailed below shall be paid prior to shipment by KSB, Inc.

Electrical system schematics (including bills of material) may be required to support any warranty claims at the request of KSB, Inc. This documentation will normally be required in the case of pumps or 20 horsepower and larger.

KSB, Inc. will bear the cost for such repair or replacement as follows:

Item	Categories	I	II	III
A. Pumps	Months after Shipment	0-18	19-39	40-60
	Hours of Operation	0-2,999	3,000-6,499	6,500-10,000
	KSB Share of Cost	100%	50%	25%
B. Guide Cables	Months after Shipment	0-120	-	-
	KSB Share of Cost	100%	-	-

KSB, INC. WILL NOT BE RESPONSIBLE FOR TRAVEL EXPENSES, RENTED EQUIPMENT, OUTSIDE CONTRACTORS' FEES, UNAUTHORIZED REPAIR, SHOP EXPENSES OR FOR PUMPS PURCHASED OR USED WITHOUT KSB SUPPLIED POWER CABLE(S).

THE WARRANTIES MADE HEREIN BY KSB, INC. ARE IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. KSB, INC. DISCLAIMS ANY AND ALL WARRANTIES FOR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. KSB, INC. ASSUMES NO LIABILITY FOR LOSS OF USE, LOSS OF PROFIT, OR ANY DIRECT, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY KIND.

No sales agent or sales representative or any other person is authorized to modify, extend, or enlarge this Warranty. Any modification, extension, or enlargement of this Warranty shall not bind KSB, Inc.

Revised 9/2014
Supersedes all previously published warranties

KPSI 700

- Submersible level transducer
- ±1.00% FS static accuracy
- Custom built in two days
- Two year warranty

The KPSI 700 is a submersible hydrostatic level transducer specifically designed to meet the rigorous environments encountered in liquid level measurement and control. It can be configured to perform to specifications under most adverse, reactive conditions.

Every KPSI Transducer utilizes a highly accurate pressure sensor assembly specifically designed for hostile fluids and gases. The assembly is integrated with supporting electronics in a durable waterproof housing constructed of 316 stainless steel or titanium. The attached electrical cable is custom manufactured and includes para-aramid synthetic fiber members to prevent errors due to cable elongation, and a unique water block feature that self-seals in the event of accidental cuts to the cable. Each vented reference transducer is shipped with a SuperDry Vent Filter that prevents moisture from entering the vent tube for at least one year without maintenance, even in the most humid environments.

Features

- Custom polyurethane or ETFE cable lengths
- Welded 316SS or titanium body
- Custom level ranges up to 700 ft. (210 m) H_2O
- Multiple analog output
- Multiple nose piece styles
- Optional lifetime lightning protection
- Long life vent filter or aneroid bellows
- Available molded cable seal

Applications

- Lift stations
- Pump control
- Level control
- Surface water monitoring
- Landfill leachate
- Well monitoring
- Groundwater monitoring

Specifications

PARAMETER		COMMENT
LEVEL RANGES		
Full Scale Level Ranges (Intermediate level ranges are available)	2.3 thru 700 ft. H_2O (0.70 thru 210 m H_2O)	Vented Gage Reference
	10 thru 700 ft. H_2O (3 thru 210 m H_2O)	Sealed Gage Reference
	35 thru 700 ft. H_2O (10 thru 210 m H_2O)	Absolute Gage Reference
Proof Pressure	1.5 x FS	
Burst Pressure	2.0 x FS	

STATIC PERFORMANCE		
Static Accuracy (combined effects of non-linearity, hysteresis and repeatability, best fit straight line method)	±1.00% FSO	BFSL method
Resolution	+0.0001% FS	
ENVIRONMENTAL		
Wetted Materials	316 SS or Titanium; POM; FKM; Polyurethane or ETFE	
Compensated Temp Range	0 to 50ºC	
Thermal Error (maximum allowable deviation from the Best Fit Straight Line due to a change in temperature)	±0.05% FSO/ºC ±0.1% FSO/ºC	Worse case over compensated temperature range for ranges < 12 ft. (4 m) H_2O
Operating Temp Range	-20 to 60 ºC	When attached to polyurethane cable
Protection Rating	IP 68, NEMA 6P	
ELECTRICAL		
Excitation	9-28V – VDC output 9-28V – mA output 15-28V – VDC output 10-28V – VDC output	0-5 V, 0-2.5 V, 0-4 V 4-20 0-10 V 1.5-7.5 V
Input Current	20 mA max., 3.5 mA max.	For mA output, for VDC output
Output	4-20 mA, 0-5 VDC, 0-2.5 VDC, 0-4 VDC, 0-10 VDC, 1.5-7.5 VDC	For ranges < 5 ft. (1.5m) H_2O, only 4-20mA output is available
Zero Offset	±0.25 mA for mA output < 0.25 VDC for VDC output	
Output Impedance	See loop diagram for mA output 20 ohm for VDC output	
Insulation Resistance	100 mega ohm at 50 VDC	
Circuit Protection	Polarity, surge/shorted output	
CERTIFICATIONS		
	CE compliant	EN 61326-1:2013 and 61326-2-3:2013
	UL, CUL and FM	Class I, II, III, Div. 1, Groups A,B,C,D,E,F&G
	WEEE/RoHS	Waste from Electrical and Electronic Equipment (WEEE) and Restrictions on the use of Hazardous Substances (RoHS)
PHYSICAL		
Approximate Weight	0.44 lbs. (198 g) transducer 0.05 lbs./ft. (79 g/m) cable	
Cable Jacket Material	Polyurethane (Standard), ETFE (Optional)	
Cable Pull Strength	200 lbs (90 kg)	Polyurethane
Cable Number of Conductors	4 max.

	B ft H_2O
	C m H_2O
7 0 0	

Notes:

1 The part number requires two level range limits, corresponding to the maximum and minimum analog outputs of the transducer, to be specified in **pounds per square inch (psi)** to three decimal places. The lower level range is typically 000.000 unless otherwise required. For reverse output requirements, enter the lower level range for the maximum output signal and the upper range for the minimum output. Use the following conversion factors: **Ft. H_2O / 2.3073 = psi // m H_2O / 0.703265 = psi**
Examples: 10 ft. H_2O / 2.3073 = 4.334 psi (Enter 004.334 in the part number), 10 m H_2O / 0.703265 = 14.219 psi (Enter 014.219 in the part number)
For sealed gage reference add local atmosphere when converting to psi. Contact PSI for assistance.
Example:10 ft. H_2O / 2.3073 +14.7 = 19.034 psi (Enter 019.034 in the part number)

ProtEX™ MAX

FM APPROVED

IECEx

- Explosion-Proof Process & Temperature Meter
- 4-20 mA, ± 10 V, TC & RTD Field Selectable Inputs
- Full 4-Digit Display, 1.20" (30.5 mm)
- SafeTouch Through-Glass Button Programming
- Display Mountable at 0°, 90°, 180°, & 270°
- Isolated 24 VDC @ 200 mA Transmitter Power Supply Option (AC powered meters only)
- 2 Relays + Isolated 4-20 mA Output Option
- Free PC-Based MeterView Programming & Monitoring Software
- Sunlight Readable Display
- Operating Temperature Range: -40 to 65°C (-40 to 149°F)
- FM Approved as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof
- CSA Certified as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof
- ATEX and IECEx Certified as Flame-Proof
- Input Power Options: 85-265 VAC / 90-265 VDC or 12-36 VDC / 12-24 VAC
- Duplex Pump Controller with Alternation Capability
- External Contacts for Remote Button Operation
- On-Board RS-485 Serial Communications
- Modbus® RTU Communication Protocol Standard
- Copy Meter Settings to Other PD8-765 Meters
- Password Protection
- Max/Min Display
- High & Low Alarms with Multiple Reset Actions
- Flanges for Wall or Pipe Mounting
- Explosion-Proof, IP68, NEMA 4X Die-Cast Aluminum Enclosure
- Four 3/4" NPT Threaded Conduit Openings (Two Plugs Installed)
- Pipe Mounting Kits
- Stainless Steel Tag Available
- 3-Year Warranty

Disclaimer

The information contained in this document is subject to change without notice. Precision Digital makes no representations or warranties with respect to the contents hereof and specifically disclaims any implied warranties of merchantability or fitness for a particular purpose. See Warranty Information and Terms & Conditions on www.predig.com for complete details.

⚠ CAUTION

- Read complete instructions prior to installation and operation of the meter.

⚠ WARNINGS

- Risk of electric shock or personal injury.
- This product is not recommended for life support applications or applications where malfunctioning could result in personal injury or property loss. Anyone using this product for such applications does so at his/her own risk. Precision Digital Corporation shall not be held liable for damages resulting from such improper use.
- Failure to follow installation guidelines could result in death or serious injury. Make sure only qualified personnel perform the installation.
- Never remove the meter cover in explosive environments when the circuit is live.
- Cover must be fully engaged to meet explosion-proof/dust-ignition-proof/flame-proof requirements.

FREE MeterView Programming Software

Note: PD8-765 meter is not powered from USB connection and requires external power to be programmed.

The PD8-765 is easily setup and programmed without removing the cover by using the four through-glass SafeTouch buttons or by removing the cover and using the front panel push buttons. The meter can also be programmed using a PC and Precision Digital's free MeterView software or "cloned" with the Copy function. Programming the PD8-765 with MeterView software requires removing the front cover and connecting to the electronics module to the PC via the PDA8006 Trident USB serial adapter.

MeterView programming software is intuitive, and most customers can get their meter programmed as they like without even looking in the manual.

Watch MeterView Software Video at
http://www.predig.com/meterview

In addition to programming, the software, with the use of additional devices, may be used for:

- Monitoring
- Datalogging using your PC
- Generating and saving programming files for later use

Once your meter is programmed the way you want it, you can wire it up for your application per the instructions in this manual and install it. If you find that you need to make adjustments to the programming after the meter is installed, you can use the programming buttons and the instructions in this manual to do so.

⚠ WARNING

- The meter should only be connected to a computer while it is located in a safe area.

Introduction

The ProtEX-MAX PD8-765 explosion-proof, large-display, process and temperature meter offers all the functionality of the PD765 Trident as a fully FM, CSA, ATEX, and IECEx approved explosion-proof product. PD8-765's huge 1.2" (30.5 mm) sunlight readable display is visible from over 30 feet away. This explosion-proof indicator can be field programmed to accept process voltage (0-5 V, 1-5 V, etc.) and current (4-20 mA) inputs, 100 Ohm RTDs, and the four most common thermocouples.

The intensity of the display can be adjusted to compensate for various lighting conditions, including direct sunlight. The meter can be programmed and operated without opening the housing by using the built-in SafeTouch through-glass buttons or the RS-485 serial communication port with free Modbus® protocol. Options for the PD8-765 process and temperature indicator include 2 relays, a 4-20 mA output, and a 24 V transmitter power supply.

SafeTouch Buttons

To make it possible to program and operate the ProtEX-MAX in a hazardous area, the programming buttons that are located behind the glass window can be operated without removing the cover by using the SafeTouch through-glass buttons. The operator puts their finger on the glass over the button and the button is actuated.

To learn more about SafeTouch buttons, see this video:

Accessories

Model	Description
PDA7420	PD8-765 Copy Cable, 7' (2.1 m)
PDA8006*	USB Serial Adapter for Programming Meter with MeterView Software
PDAPLUG75	3/4" Metal Conduit/Stopping Plug
PDA-SSTAG	Custom Stainless Steel Tag (see website for convenient ordering form)
PDA6848	2" U-Bolt Kit Zinc Plated Steel
PDA6848-SS	2" U-Bolt Kit Stainless Steel

*See Free 8006 to receive PDA8006 at no charge.

Notes:

1. 24 VDC transmitter supply available only on AC powered meters.
2. RS-485 Communications is standard on all products

Helpful Videos

There are several videos that will help you get a better understating of the features and functionality of the ProtEX-MAX products. Since the PD8-765 meters have the same general features and functionality of the PD765 Trident meters, appropriate videos for the PD765 Trident meter are also included.

Use ProtEX-MAX for Pump Control

Learn how to use the PD765 Trident (ProtEX-MAX) meter as an explosion-proof pump controller. See how two relays can be used to control two pumps with alternation capability.

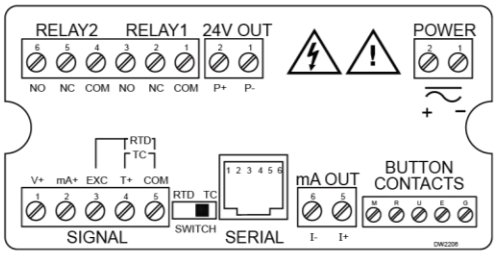
predig.com/videos/Pump_Controller_Key_Features

Key Features

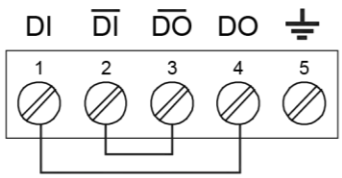
FRONT

CONNECTIONS

PD8-765-6X5-10



Two SPDT relays;
24 V transmitter power (AC powered units only);
TC, RTD, 4-20mA or 0-10 VDC inputs;
4-20 mA output; four external button contacts



The ProtEX-MAX PD8-765 has a 5-position terminal block for connecting RS-485 serial devices.

The Only Explosion-Proof Process & Temperature Meter You Will Ever Need

The PD8-765 ProtEX-MAX is an explosion-proof version of the popular PD765 Trident process and temperature meter. It can satisfy a wide variety of process applications. The PD8-765 can be field programmed to accept process voltage (0-5V, 1-5V, etc.) and current (4-20 mA) inputs, 100 Ohm RTDs, and the four most common thermocouples. It is housed in an IP68 NEMA 4X rated explosion-proof die cast aluminum enclosure and is a fully approved product carrying FM, CSA, ATEX, and IECEx approvals.

There are two power options for the ProtEX-MAX: 85 to 265 VAC or 12-36 VDC and the AC powered versions can provide 24 VDC to power the transmitter if needed. Programming and setup can be performed with the four SafeTouch through-glass buttons, free MeterView software, or using the Copy function.

The relays and isolated 4-20 mA output option increases the utility of the PD8-765. The relays can be used for alarm or control applications. The 4-20 mA output provides an isolated retransmission of the input signal; especially useful for temperature inputs like thermocouples and RTDs. Now you can have an explosion-proof temperature transmitter with a huge, bright display!

The PD8-765 ProtEX-MAX display height is an astounding 1.2" (30.5 mm). It can be read easily from distances of up to 30 feet away! The display intensity function allows the selection of eight levels of intensity for various lighting conditions, including direct sunlight.

Easy Programming Methods

The PD8-765 is easily setup and programmed without removing the cover by using the four through-glass SafeTouch buttons or by removing the cover and using the front panel push buttons. The meter can also be programmed using a PC and Precision Digital's free MeterView software or "cloned" with the Copy function. Programming the PD8-765 with MeterView software requires removing the front cover and connecting to the electronics module to the PC via the PDA8006 Trident USB serial adapter.

MeterView software allows all PD8-765 setup parameters to be programmed from a PC and to save the configuration settings to a file for reporting or programming other meters. For programming purposes, MeterView software connects to the PD8-765 meter via the low-cost PDA8006 USB serial adapter pictured above. We will even send you a PDA8006 USB adapter, normally sold for $43.00, at no cost if you register your meter at http://www.predig.com/free8006 (limit one per customer). You can program the PD8-765 you just bought with the front panel buttons and have the PDA8006 on hand for programming future meters.

Advanced Display Features

Super-Bright Display

The ProtEX-MAX comes standard with a super-bright display, with LEDs that are visible even in direct sunlight. The display also has up to eight levels of adjustable intensity for optimum visibility in any lighting condition.

Four Full Digits

The display on the PD8-765 is four full digits which means it can display numbers up to 9999. Many digital devices have displays of only 3½ digits which means they can display only to 1999. In practical terms, this means the PD8-765 can display type K thermocouples to 2300ºF and 4-20 mA signals up to 9,999.

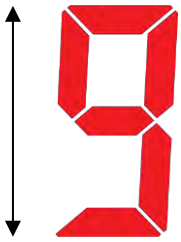
Front Panel LEDs

The meter is supplied with two alarm points that include front panel LEDs to indicate alarm conditions. This standard feature is particularly useful for alarm applications that require visual-only indication.

Large Display Size

The display height on the ProtEX-MAX PD8-765 is an astounding 1.2" (30.5 mm). It can be easily read from distances of up to 30 feet!

ProtEX-MAX PD8-765
Actual Size Digit
1.2"
(30.5 mm)



Meter Copy

The Copy function is used to copy (or clone) all the settings from one PD8-765 meter to other PD8-765 meters in less than 10 seconds. The Copy feature does not require a serial communication adapter, it only requires the optional cable assembly (PDA7420).

Note: The PD8-765 modules must be removed from the enclosures to connect the copy cable.

Display & Toggle Max / Min Reading

The main function of the front panel buttons during operation is to display the maximum and minimum readings reached by the process or temperature inputs. The PD8-765 allows you to toggle between the maximum and minimum readings of the process values. To display the maximum and minimum readings since the last reset/power-up, use the Up arrow/Max button.

Display & Toggle Maximum Value

Display & Toggle Minimum Value

Physical Features

The ProtEX-MAX is designed for ease-of-use in safe and hazardous applications. The ProtEX-MAX is housed in a rugged NEMA 4X explosion-proof enclosure, can operate over a wide temperature range, includes removable screw terminal connectors, has worldwide approvals for use in hazardous areas, and features through-glass buttons for easy meter operation without the need to remove the cover. All of these features are backed by a 3-year warranty.

Super-Bright LED Display

The ProtEX-MAX features a 4-digit display with super-bright LEDs, our brightest ever. These allow the display to be read in any lighting condition, even in direct sunlight.

SafeTouch Through-Glass Buttons

The ProtEX-MAX is equipped with four sensors that operate as through-glass buttons so that it can be programmed and operated without removing the cover (and exposing the electronics) in a hazardous area. These buttons can be disabled for security by selecting the DISABLE setting on the NO-CONTACT BUTTONS switch located on the back of the electronics module, inside the enclosure.

Rugged, Heavy-Duty Enclosure

The ProtEX-MAX is housed in a rugged NEMA 4X, 7, & 9, IP68 die-cast aluminum enclosure, designed to withstand harsh environments in safe and hazardous areas over a wide temperature range.

Wide Viewing Angle

Customers can't always look at the display from straight on, so the window and display module have been optimized to provide a wide viewing angle of approximately ± 40°; nearly twice that of the competition.

Built-In Mounting Flanges

The ProtEX-MAX is equipped with four slotted flanges for wall mounting or NPS 1½" to 2½" or DN 40 to 65 mm pipe mounting.

Flexible Mounting & Wiring

The ProtEX-MAX features four ¾" NPT threaded conduit openings so that wiring can be routed to the most convenient conduit connection(s). Two ¾" NPT metal conduit plugs with 12 mm hex key fitting come installed.

Rotatable Display

The ProtEX-MAX rotatable display, along with four available conduit connections, provide for numerous installation options. The display can be rotated in 90° increments. Rotate it 90° for horizontal mounting.

Vertical Mounting **Horizontal Mounting**

Perfect & Secure Fit Every Time

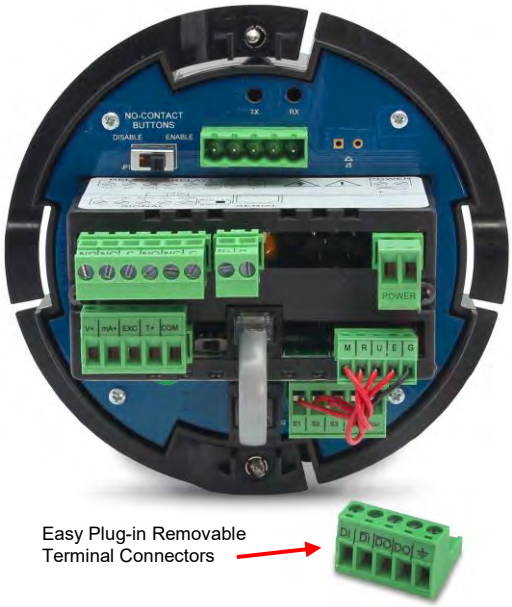
The internal cast rails ensure the ProtEX-MAX assembles together perfectly, quickly and securely; and everything lines up for optimal viewing every time. There are no standoffs to worry about breaking or getting out of alignment. Two spring-loaded, self-retaining, thumbscrews make the assembly a snap, while pressing the display as close to the glass as possible to improve wide angle viewing.

Stainless Steel Tags

PDA-SSTAG is a laser etched stainless steel tag accessory for any of your Precision Digital meters. The tag features custom text for equipment identification, instruction, or whatever else is needed in your facility. Each tag comes with a stainless steel wire and lead seal for easy mounting wherever you need it.

Removable Screw Terminals

Industrial applications require screw terminal connections for easy field wiring and the ProtEX-MAX goes one step further in convenience by also making them removable.



Note: The terminals on the External Contacts connector are wired to the connector on the electronics module to enable the SafeTouch buttons so the meter can be programmed without removing the cover.

Program Meter from USB Port

Hazardous Area Approvals

The ProtEX-MAX's approvals allow it to be used in hazardous areas around the world. These include: FM Approved as Explosion-Proof / Dust-Ignition-Proof / Flame-Proof, CSA Certified as Explosion-Proof / Dust-Ignition-Proof, and ATEX and IECEx Certified as Flame-Proof.

Wide Operating Temperature Range

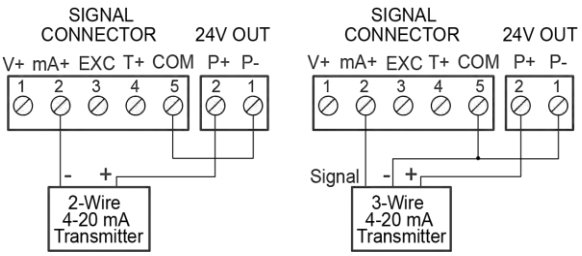
The ProtEX-MAX can operate from -40 to 60°C (-40 to 140°F) meaning it can be installed in a wide variety of indoor and outdoor industrial applications.

Transmitter Power Supplies

Meter Powers Transmitter

One of the most useful features of AC powered PD8-765s is their built-in, isolated, 24 V @ 200 mA power supply to power the transmitter. This feature saves money by eliminating an external power supply and also simplifies wiring.

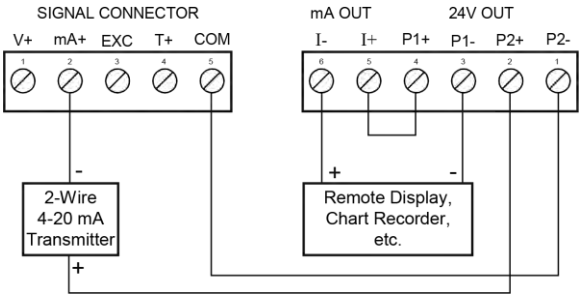
The following diagrams illustrate how to wire an AC powered PD8-765 so it will power the transmitter:



Connections for PD8-765-6X0-10 & PD8-765-6X5-10

Meter Powers 4-20 mA Output

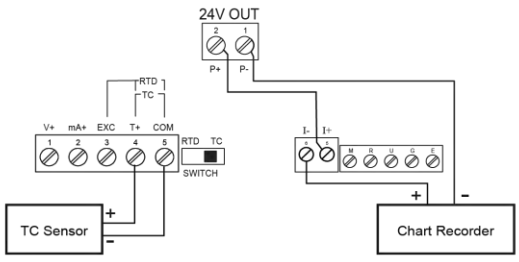
Not only can the AC powered PD8-765 power the 4-20 mA input signal, but an additional power supply of 24 V @ 40 mA is available to power the 4-20 mA output.



Connections for PD8-765-6X3-20

Isolated Transmitter Output

The PD8-765's isolated 4-20 mA output option converts the meter into a transmitter / loop isolator with a digital display; perfect for temperature applications!

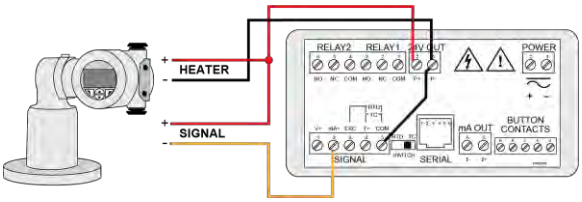


Fuse Prevents Current Overload

Another very useful aspect of the PD8-765 is that the current input is protected against current overload by a resettable fuse. The fuse limits the current to a safe level when it detects a fault condition, and automatically resets itself when the fault condition is removed.

Other Uses for Power Supplies

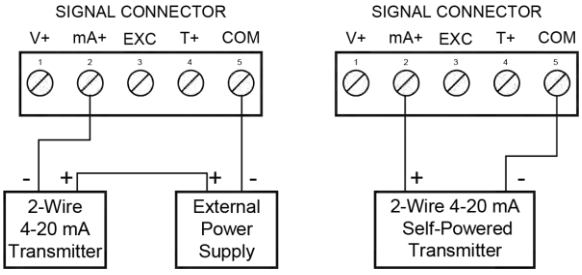
The most common use for these two power supplies is for the 200 mA transmitter power supply to power the field transmitter and 40 mA power supply to power the 4-20 mA output from the meter. However, these two power supplies can be used in other ways. For instance, some level transmitters require the use of a heated lens. The PD8-765's 200 mA power supply could be used to power both the heated lens and the 4-20 mA signal from the transmitter.



PD8-765-6X5-10 Powers Both the Heater and 4-20 mA Input Signal

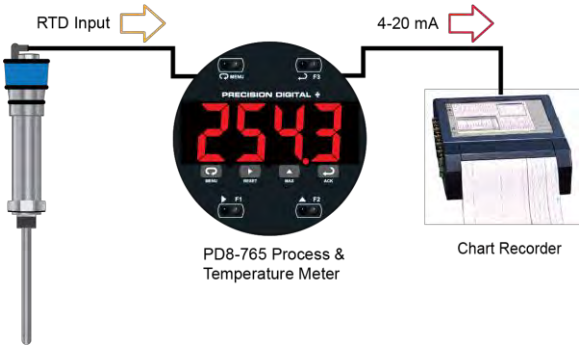
External Power Supply for Loop

For applications that require an external transmitter power supply, the same PD8-765 is used and merely wired in a different fashion as the following diagrams illustrate:



Exp-Proof Temperature Transmitter with Big Display

The PD8-765, with an optional 4-20 mA output, can be used as an isolated temperature transmitter with a big display by converting the thermocouple or RTD input into an isolated 4-20 mA output.

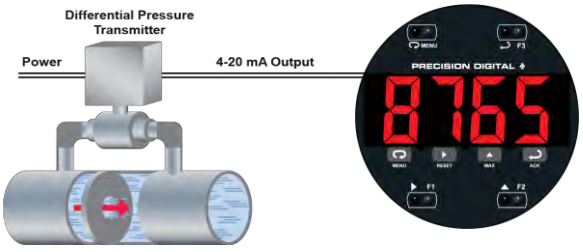


Input Signal Conditioning

To satisfy applications that require scaling in ways other than the usual 2-point linear method, the ProtEX-MAX can also be scaled for square root (DP flow).

Square Root Linearization

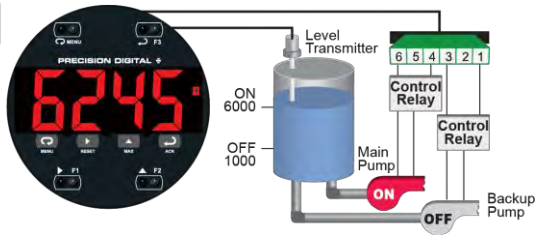
The square root function can be used to linearize the signal from a differential pressure transmitter and display flow rate in engineering units.



Exp-Proof Dual-Pump Alternation

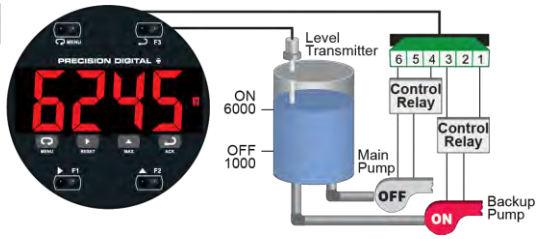
The ProtEX-MAX can be used as an explosion-proof pump controller when combined with a continuous level transmitter. The most common pump control application is shown below: controlling and alternating two pumps. In addition, the ProtEX-MAX provides the 24 V to power the transmitter.

1



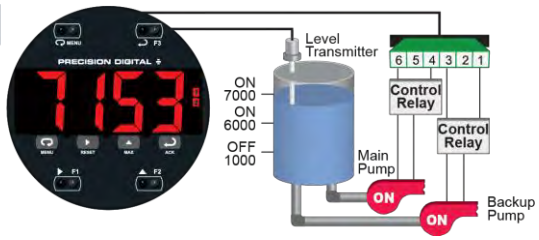
Relay #1 turns the main pump on at 6000 gallons and turns it off at 1000 gallons.

2



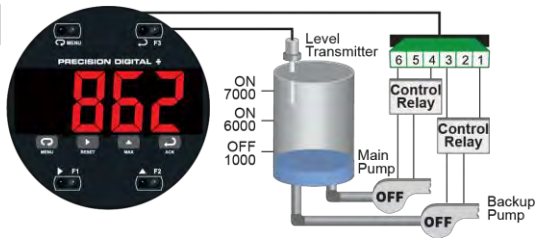
With the Pump Alternation feature activated, the next time the level reaches 6000 gallons, relay #2 starts the backup pump.

3



If the active pump is not able to keep up, and the level reaches 7000 gallons, the other relay will start the inactive pump as well.

4



When the level falls below 1000 gallons, both pumps will turn off.

Learn how to use the PD765 Trident (ProtEX-MAX) meter as an explosion-proof pump controller. See how the four relays can be used to alternate two pumps and provide high and low alarms.

predig.com/videos/PumpControl

Useful Tools

PD9501 Multi-Function Calibrator

This PD9501 Multi-Function Calibrator has a variety of signal measurement and output functions, including voltage, current, thermocouple, and RTD.

PD9502 Low-Cost Signal Generator

The PD9502 is a low-cost, compact, simple to use 4-20 mA or 0-10 VDC signal generator. It can easily be set for 0-20 mA, 4-20 mA, 0-10 V or 2-10 V ranges. Signal adjustment is made with a one-turn knob. A 15-27 VDC wall plug is provided with the instrument. Optional USB power bank is available.

Specifications

Except where noted all specifications apply to operation at +25°C.

General

Display	1.20" (31 mm), red LED, Four digits (-1999 to 9999), automatic lead zero blanking.
Display Intensity	Eight user selectable intensity levels. Default intensity is six.
Display Update Rate	Process/RTD: 3.7-5/second Thermocouple: 1.8-2.5/second
LED Status Indicators	See ***LED Status Indicators*** on page *35* for details.
Overrange	Display flashes 9999
Underrange	Display flashes - 1999
Programming Methods	Four SafeTouch through-glass buttons when cover is installed. Mechanical buttons can be used with the cover removed. Cloning with Copy feature. Free PC-based USB MeterView programming software, and Modbus® registers.
Noise Filter	Programmable from 2 to 199 (0 will disable filter)
Filter Bypass	Programmable from 0.1 to 99.9% of calibrated span
Recalibration	All ranges are calibrated at the factory. Recalibration is recommended at least every 12 months.
Max/Min Display	Max/min readings reached by the process are stored until reset by the user or until power to the meter is turned off.
Password	Restricts modification of programmed settings
Non-Volatile Memory	All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost.
Power Options	85-265 VAC, 50/60 Hz; 90-265 VDC, 20 W max or 12-36 VDC; 12-24 VAC, 6 W max
Fuse	Required external fuse: UL Recognized, 5 A max, slow blow; up to 6 meters may share one 5 A fuse
Normal Mode Rejection	64 dB at 50/60 Hz
Isolation	4 kV input/output-to-power line 500 V input-to-output or output-to-P+ supply 6X5 models only: 100 V output-to-24 VDC supply
Overvoltage Category	Installation Overvoltage Category II: Local level with smaller transient overvoltages than Installation Overvoltage Category III
Environmental	T6 Class operating temperature range Ta = -40 to 60°C T5 Class operating temperature range Ta = -40 to 65°C Storage temperature range: -40 to 85°C (-40 to 185°F) Relative humidity: 0 to 90% non-condensing
Connections	Power, signal, relays, mA out: Removable screw terminal blocks accept 12 to 22 AWG wire RS-485: Removable screw terminal block accepts 16 to 30 AWG wire
Enclosure	Explosion-proof die cast aluminum with glass window, corrosion resistant epoxy coating, color: blue NEMA 4X, 7, & 9, IP68 Default conduit connections: Four ¾" NPT threaded conduit openings and two ¾" NPT metal conduit plugs with 12 mm hex key fitting installed. Additional conduit opening configurations may be available; verify quantity and sizes on specific device labeling during installation.
Mounting	Wall Mounting: Four (4) mounting holes provided for mounting meter to wall. See *Wall Mounting Instructions* on page *21* for additional details. Pipe Mounting: Optional pipe mounting kit (PDA6848) allows for pipe mounting. Sold separately. See *Pipe Mounting Instructions* on page *22* for additional details.
Tightening Torque	Screw terminal connectors: 5 lb-in (0.56 Nm)
Overall Dimensions	6.42" x 7.97" x 8.47" (W X H X D) (163 mm x 202 mm x 215 mm)
Weight	16.0 lbs (7.26 kg)
Warranty	3 years parts & labor. See Warranty Information and Terms & Conditions on www.predig.com for complete details.

Process Inputs

Inputs	0-20 mA, 4-20 mA, 1-5 V, ±10 V	
Transmitter Supply	Isolated, one or two transmitter supplies P1: 24 VDC ±10% @ 200 mA max (-10 option) P1 & P2: 24 VDC ±10% @ 200 mA & 40 mA max (-20 option)	
Accuracy	±0.05% FS ±1 count; ±0.1% FS ±2 counts for square root	
Function	Linear or square root	
Low-Flow Cutoff	0 to 9999 (0 disables cutoff function) Point below at which display always shows zero	
Decimal Point	Up to 3 decimals	
Calibration	Scale without signal or calibrate with signal source	
Calibration Range	User programmable over entire range of meter	
Input Impedance	Voltage range: greater than 1 MΩ, Current range: 50-100 Ω, varies with resettable fuse impedance	
Input Overload	Protected by automatically resettable fuse	
HART Transparency	The meter does not interfere with existing HART communications; it displays the 4-20 mA primary variable and it allows the HART communications to pass through without interruption. The meter is not affected if a HART communicator is connected to the loop. The meter does not display secondary HART variables.	
Temperature Drift	**0 to 65°C ambient**	**-40 to 0°C ambient**
	Current: ±0.20% FS (50 PPM/°C) **Voltage:** ±0.02% FS (1.7 PPM/°C)	**Current:** ±0.80% FS **Voltage:** ±0.06% FS

Temperature Inputs

Inputs	Factory calibrated, field selectable: type J, K, T, or E thermocouples and 100 Ω platinum RTD (0.00385 or 0.00392 curve)
Resolution	1°; type T TC & RTD: 1° or 0.1°
Cold Junction Reference	Automatic
Temperature Drift	±2°C maximum
Offset Adjustment	Programmable to ±19.9°. This parameter allows the user to apply an offset value to the temperature being displayed.
Input Impedance	Greater than 100 kΩ

Accuracy

Input Type	Range	Accuracy (0 - 65 C)	Accuracy (-40 - 0 C)	Resolution
J	-58 to 1382°F -50 to 750°C	±2°F ±1°C	±5°F ±3°C	1°
K	-58 to 2300°F -50 to 1260°C	±2°F ±1°C	±4°F ±2°C	1°
T	-292 to 700°F -180 to 371°C	±2°F ±1°C	±13°F ±7°C	1° or 0.1°
E	-58 to 1700ºF -50 to 927ºC	±2°F ±1°C	±11°F ±6°C	1°
RTD	-328 to 1382°F -200 to 750°C	±1°F ±1°C	±5°F ±3°C	1° or 0.1°

Relays Option

Rating	2 Form C (SPDT); rated 3 A @ 30 VDC or 3 A @ 250 VAC resistive load; 1/14 HP (≈ 50 watts) @ 125/250 VAC for inductive loads such as contactors, solenoids, etc.
Deadband	0-100% FS, user selectable
Electrical Noise Suppression	A snubber should be connected to each relay contact switching inductive loads to prevent disruption to the microprocessor's operation. Recommended snubber value: 0.01 µF/470 Ω, 250 VAC (PDX6901).
High or Low Alarm	User may program any alarm for high or low
Relay Operation	• Automatic (non-latching) and/or manual reset • Latching (requires manual acknowledge) with/without clear • Pump alternation control • Off (disable unused relays)
Relay Reset	Front panel button, terminal at back of meter or through serial communications
Time Delay	0 to 199 seconds, on and off delays; programmable
Sensor Break Relay Operation	The sensor break relay condition may be programmed for each relay as On (alarm) or Off (non-alarm). The relays will enter these states when a sensor break is detected for RTD or thermocouple inputs. These settings have no effect when current or voltage inputs are selected.
Fail-Safe Operation	Programmable, independent for each relay. Relay coils are energized in non-alarm condition. In case of power failure, relays will go to alarm state.
Auto Initialization	When power is applied to the meter, relays will reflect the state of the input to the meter.

External Button Contacts

Number	Four
Function	Remote operation of front-panel buttons: programming, reset relays or view/reset max/min readings
Open State	+5 VDC open contact on button input terminals
Closed State	Closed contact button input terminal to common/ground, active low 0 to 0.4 VDC

Isolated 4-20 mA Transmitter Output Option

Scaling Range	1.00 to 23.00 mA; reverse scaling allowed		
Calibration	Factory calibrated for 4-20 mA		
Accuracy	±0.1% FS ±0.004 mA		
Temperature Drift	50 PPM/°C ***Note:*** *Analog output drift is separate from input drift.*		
Isolation	500 V input-to-output or output-to-24 VDC supplies 4 kV output-to-power line For -6X5 models only: 100 V output-to-24 VDC supply		
External Power	35 VDC maximum		
Output Loop Resistance	Power supply	Minimum	Maximum
	24 VDC	10 Ω	700 Ω
	35 VDC (external)	100 Ω	1200 Ω

RS-485 Serial Communications

Compatibility	EIA-485
Connectors	Removable screw terminal connector
Max Distance	3,937' (1,200 m) max
Status Indication	Separate LEDs for Transmit (TX) and Receive (RX)

Modbus® RTU Serial Communications

Slave Id	1 – 247 (Meter address)
Baud Rate	300 – 19,200 bps
Transmit Time Delay	Programmable between 0 and 199 ms
Data	8 bit (1 start bit, 1 stop bit)
Parity	None (1 or 2 stop bits), even, or odd (Modbus® only; PDC protocol does not use parity)
Byte-To-Byte Timeout	0.01 – 2.54 second
Turn Around Delay	Less than 2 ms (fixed)

Note: *Refer to the ProtEX-MAX Modbus® Register Tables located at www.predig.com for details.*

Special Conditions for Safe Use:
Use suitably certified and dimensioned cable entry device and/or plug. The equipment shall be installed such that the supply cable is protected from mechanical damage. The cable shall not be subjected to tension or torque. If the cable is to be terminated within an explosive atmosphere, then appropriate protection of the free end of the cable shall be provided. Cable must be suitable for 90°C.

Year of Construction
This information is contained within the serial number with the first four digits representing the year and month in the YYMM format.

For European Community: The ProtEX-MAX must be installed in accordance with the ATEX directive 94/9/EC, and the product certificate Sira 12ATEX1182.

EU Declaration of Conformity

EU Declaration of Conformity is available in the Documentation CD provided with the product under the **EU DoC** menu.

Safety Information

⚠ CAUTION

- Read complete instructions prior to installation and operation of the meter.

⚠ WARNINGS

- Risk of electric shock or personal injury.
- Hazardous voltages exist within enclosure. Installation and service should be performed only by trained service personnel.

Installation

Install in accordance with applicable local and national regulations (e.g. NEC).

For Installation in USA
The ProtEX-MAX must be installed in accordance with the National Electrical Code (NEC) NFPA 70.

For Installation in Canada
The ProtEX-MAX must be installed in accordance with the Canadian Electrical Code CSA 22.1. All power supplies below 36 V and input circuits must be derived from a CSA Approved Class 2 source.

For European Community
The ProtEX-MAX must be installed in accordance with the ATEX directive 94/9/EC and the product certificate Sira 12ATEX1182.

⚠ WARNINGS

- Disconnect from supply before opening enclosure.
- Keep cover tight while circuits are live.
- Conduit seals must be installed within 18" (450mm) of the enclosure or within 2" (50mm) for Zone installations.

Wiring connectors are accessed by opening the enclosure. To access electrical connectors, remove the 2 captive screws and then remove the electronics module. Connectors are on the rear of the electronics module.

Unpacking

Remove the meter from box. Inspect the packaging and contents for damage. Report damages, if any, to the carrier.

If any part is missing or the meter malfunctions, please contact your supplier or the factory for assistance.

Pre-Installed Conduit Plugs

The ProtEX-MAX is supplied with two pre-installed conduit plugs for installations that do not require the use of all four conduit entries. The conduit/stopping plugs include an internal hexagonal socket recess for removal. The conduit plugs and their factory installation are included in all hazardous area approvals of this product.

⚠ WARNING

- In hazardous areas, conduit and conduit/stopping plugs require the application of non-setting (solvent free) thread sealant. It is critical that all relevant hazardous area guidelines be followed for the installation or replacement of conduit or plugs.

Cover Jam Screw

The cover jam screw should be properly installed once the meter has been wired and tested in a safe environment. The cover jam screw is intended to prevent the removal of the meter cover in a hazardous environment without the use of tools. Using a M2 hex wrench, turn the screw clockwise until the screw contacts the meter. Turn the screw an additional 1/4 to 1/2 turn to secure the cover.

⚠ CAUTION

- Excess torque may damage the threads and/or wrench.

Mounting

The ProtEX-MAX has four slotted mounting flanges that may be used for pipe mounting or wall mounting. Refer to *Figure 1* and *Figure 2* below.

⚠ WARNING

- Do not attempt to loosen or remove flange bolts while the meter is in service.

Mounting Dimensions

All units: inches (mm)

Wall Mounting Instructions

The meter can be mounted to any wall or flat surface using the four provided mounting holes located in the cast-in flanges. In addition, the internal electronic assembly can be rotated to allow the enclosure to be mounted in any position. To mount the meter to a wall, follow these instructions:

- Prepare a section of wall approximately 7" x 8.5" (178 mm x 216 mm) for meter mounting by marking with a pencil the mounting holes (shown in *Figure 1*) on the wall.
- Select the appropriate mounting screws for the mounting surface to be used. The mounting holes diameter is shown on *Figure 1*.
  Note: *Mounting screws are not included.*
- Using a drill bit slightly smaller than the girth of the mounting screws, pre-drill holes at the mounting locations previously marked.
- Insert mounting screws into the four mounting holes and screw them into the pre-drilled holes.

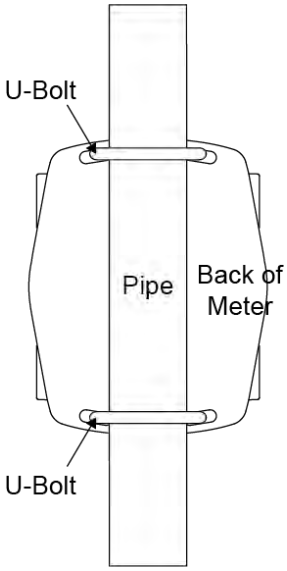
Pipe Mounting Instructions

The meter can also be mounted to a pipe using an optional U-Bolt kit. This kit includes two U-bolts, the necessary hardware, and is available in zinc plated steel (PDA6848) and 316 stainless steel (PDA6848-SS).

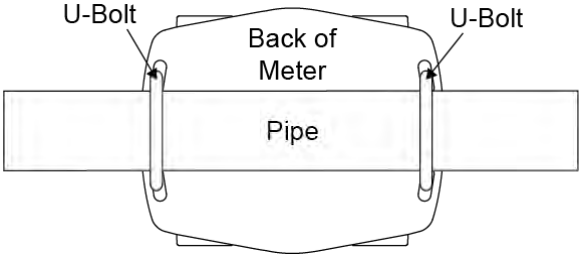
To mount the meter using a U-Bolt kit, follow these instructions:

- Orient the groove on the back of the instrument with the pipe and secure it to the pipe with the two U-bolts and hardware provided.

Vertical Pipe Mounting



Horizontal Pipe Mounting



MeterView Software

The easiest and quickest way to program your PD8-765 is to use the FREE MeterView software. We will even send you a PDA8006 USB adapter, normally sold for $43.00, at no cost if you register your meter at http://www.predig.com/free8006 (limit one per customer). You can program the PD8-765 you just bought with the front panel buttons and have the PDA8006 on hand for programming future meters.

Remote Programming

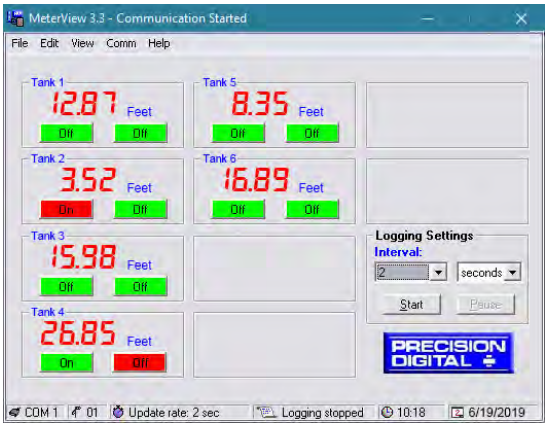
MeterView software allows all setup parameters to be programmed remotely from a PC and saved to a file for reporting or programming other meters.

Data Acquisition

MeterView software provides a convenient way to collect the data generated by the PD8-765 serial output. The user can select the logging time interval. Data can be written to a file, which can then be imported into a spreadsheet or other application.

Monitoring

MeterView software can be used to monitor up to 100 PD8-765s on a PC. The user can set a custom meter identification, such as Tank 1 to display on the screen as well as engineering units, such as feet. The screen shot below shows MeterView software monitoring level in six storage tanks:



Monitoring System Parts

The following table illustrates the parts needed to monitor 10 PD8-765s:

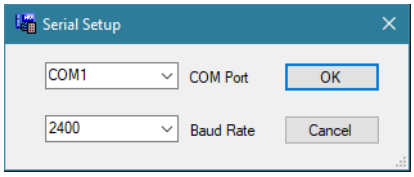
Quantity	Model	Description
10	PDA7422	Trident RS-485 Serial Adapter
1	PDA8485-I	USB to RS-485 Isolated Converter

MeterView Installation

1. Go to www.predig.com/meterview
2. Read instructions & copy serial # of desired MeterView version
3. Download Installation file to computer
4. Double-click installation file to open it
5. Double-click **Setup.exe** to begin installation
6. Follow on-screen instructions

Running MeterView the First Time

The first time MeterView is run it is necessary to set up the serial communication settings of the program. Select the communication port and the baud rate of the meter(s) connected.



Note: *The selected baud rate in MeterView and the meter(s) baud rate must be the same. Otherwise a communication error will occur.*

WARNINGS

- Only one meter may be connected at a time. Attaching multiple meters will cause a conflict with the meter software.
- The meter should only be connected to a computer while it is located in a safe area.
- DO NOT unplug the meter while the new installation files are being written to it. The meter will display ـدر ـEE during the process and you will receive an on-screen notification once the process is complete.

Enable Meter and Select Meter Address

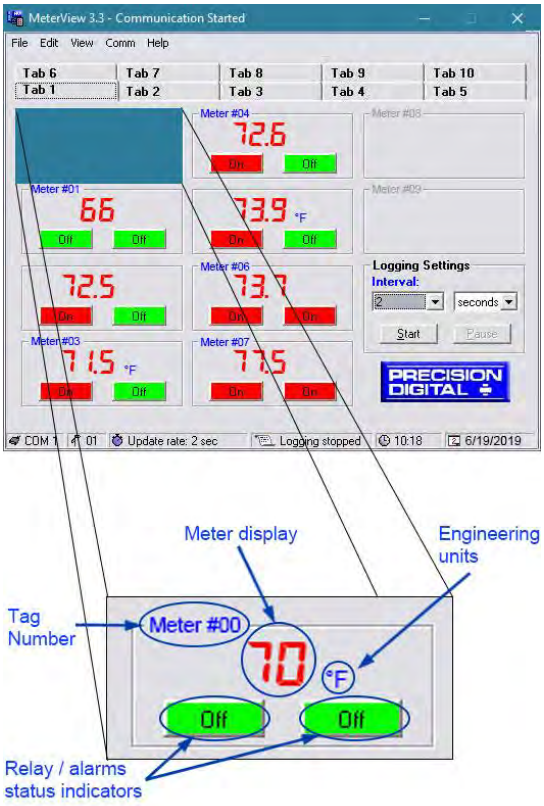
The actual meter address is set up at the meter using the front panel buttons. The location where a meter is displayed is selected on MeterView Main window.

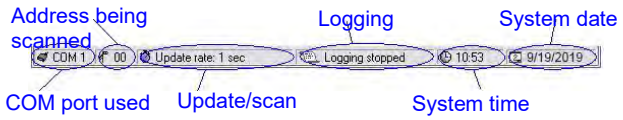
To enable or select a meter with a different serial address:

1. Right-click on the screen location of meter.
2. Click on **Enabled**, if meter is not yet enabled.
3. Click on **Change Address**.
4. Select meter address to display in this location.

MeterView Main Window

The main MeterView window shows the present reading(s), relays/alarm status, tag number(s) and selected engineering units, along with other information for each meter. The graphic below indicates the different parts of the main MeterView window.





Main Window Menus

The MeterView main window contains the following menus:

- File menu
- Edit menu
- View menu
- Comm Menu
- Help Menu

File Menu

The following options are available from this menu:

1. **Exit** to close the MeterView program.

Edit Menu

The following options are available from this menu:

1. **Serial Settings** to edit the serial communication settings.
2. **Number of Meters** to automatically populate the Main Window with a single meter, 10 meters, or 100 meters.

View Menu

The following options are available from this menu:

1. **Event Log** to view the MeterView event log window where all internal program events and errors are logged.
2. **Show Relay Alerts** select whether or not MeterView should alert the user of a change in the relay status (ON → OFF or vice versa) with a pop-up message.

Comm Menu

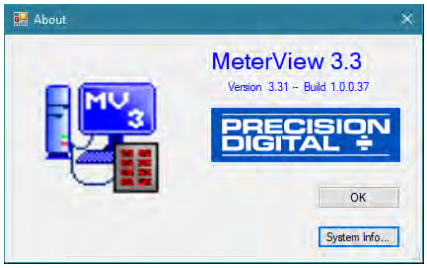
The following options are available from this menu:

1. **Stop** to halt the automatic meter scanning. This allows quicker access to menu items, functions, and windows.
2. **Start** to resume the automatic meter scanning.

Help Menu

The following options are available from this menu:

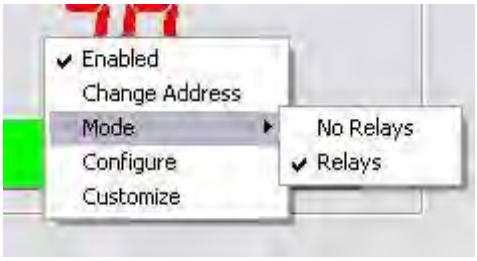
1. **Online Resources** links to Predig.com for help and product documentation.
2. **About Meterview 3.3** for version number and build information.



Right Click Menu

By right clicking on a meter on the screen a menu will appear with the following options:

Menu Item	Function/Submenus
Enabled	Enable or disable a meter on the screen
Change Address	Change a meter's serial address in MeterView
Mode	Show relays
Configure	Access the configuration window for a meter
Customize	Customize how a meter looks on the screen



Notes:

- *Accessing menus or other windows could disrupt communication with the meter(s).*
- *Use left mouse button or tab key on the keyboard to navigate within a window.*
- *Parameters not available within a window appear grayed-out.*
- *An arrow next to a box indicates a drop-down menu. Click on arrow to display the drop-down menu.*

Configuration Window

Click on **Configure** in the right click menu to open a meter's configuration window. The following settings can be programmed from this window:

1. Input type (4-20 mA, 0-10 V, RTD, or TC).
2. Decimal point for process inputs (dd.dd).
3. Units (F or C) and sensor type for temperature inputs.
4. Values for scaling process inputs, values for scaling analog output, Password, Adjust (temperature only), Filter, Bypass, Cutoff (process inputs only), Transmit Delay, Function type, and Cut-off.
5. Relay settings.
6. After the last change has been made, click the **Write to Meter** button or press Enter on the keyboard to send the new settings to the meter, or click on **Exit** to abandon changes. Before sending the new settings, MeterView will ask to confirm that the meter's current settings should be overwritten. Click **Yes** to overwrite the settings, or **No** to abort the operation and return to the configuration window.

The configuration window contains the following menus:

- File menu
- Tools menu
- Password menu

Note: *Accessing menus or other windows could disrupt communication with the other meter(s).*

File Menu

The following options are available from the File menu:

1. **Save Configuration** to save the present settings to a file.
2. **Load Configuration** to load settings from a file.
3. **Export to HTML** to save the present settings to a HTML file.
4. **Import from HTML** to load settings from a HTML file.
5. **Print Configuration**

Tools Menu

The following options are available from the Tools menu:

1. **Load Defaults** to load the factory default settings.

It is recommended to save a configuration file before changing any setting and before any calibration operation.

Password Menu

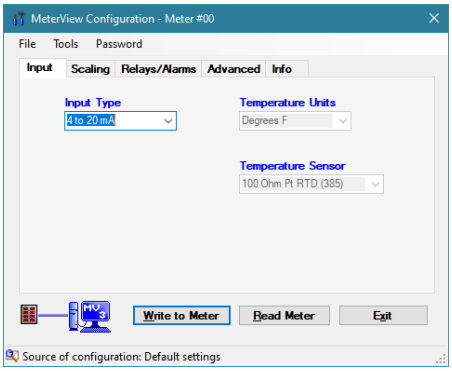
The following options are available from the Password menu:

1. **Lock Meter** to lock the meter and prevent unauthorized changes.
2. **Unlock Meter** to unlock the meter and allow changes to be made.
3. **Change Password** to change the unlock password of the meter.

The password must be a four-digit number; "0000" is the unlocked password setting.

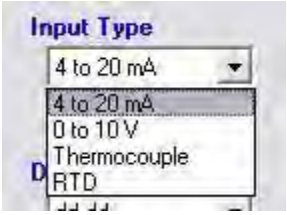
Input Tab

In the configuration window, click on the **Input** tab to view the input options.



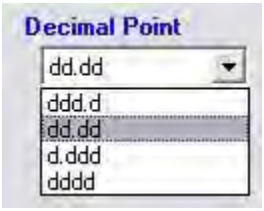
Set Up Input Type

Click on the arrow next to the *4 to 20 mA* box and then click on the desired input type.



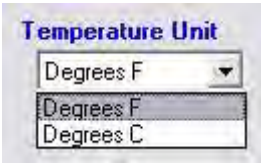
Set Up Decimal Point

Click on the arrow next to the *dd.dd* box and then click on the desired decimal point position. Decimal point selection is available for 4-20 mA and 0-10 V inputs only. The display scale and relay set/reset points are adjusted according to the decimal point selection.



Set Up Temperature Unit

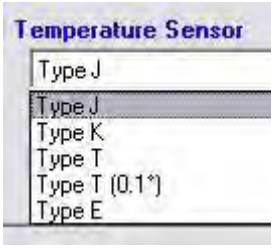
Click on the arrow next to the *Degrees F* box and then click on the desired temperature unit. Temperature unit selection is available for Thermocouple and RTD inputs only.



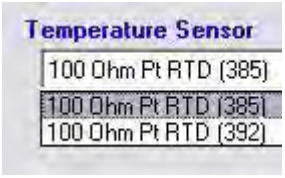
Set Up Temperature Sensor

Click on the arrow next to the *Type J* box and then click on the desired temperature sensor. Temperature sensor selection is available for Thermocouple and RTD inputs only.

Thermocouple Sensors

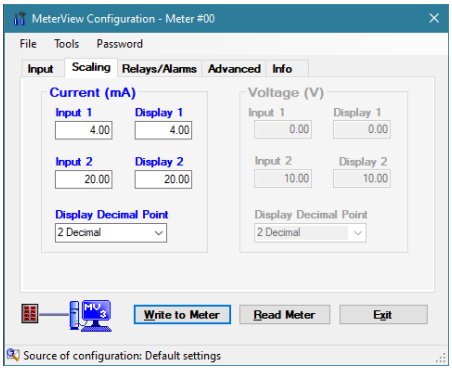


RTD Sensors



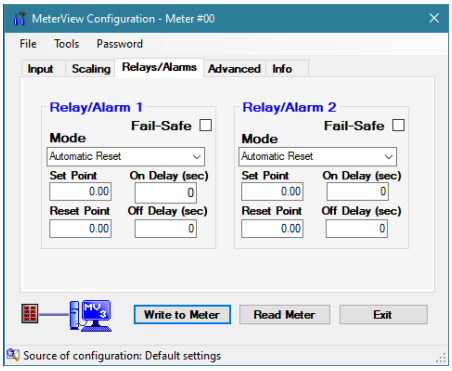
Scaling Tab

In the configuration window, click on the **Scaling** tab to view the scaling settings for process inputs (current and voltage).



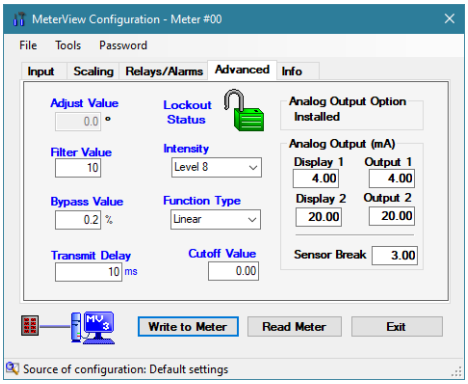
Relays/Alarms Tab

In the configuration window, click on the **Relays/Alarms** tab to view the settings for the relays/alarms.



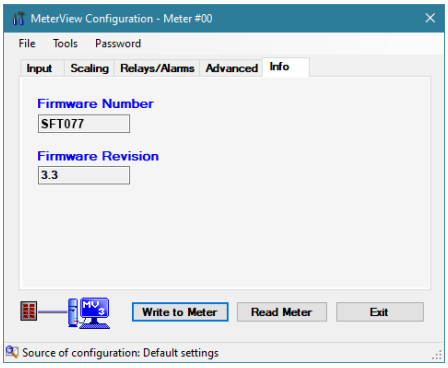
Advanced Tab

In the configuration window, click on the **Advanced** tab to view the advanced settings. Consult the meter manual for further details.



Info Tab

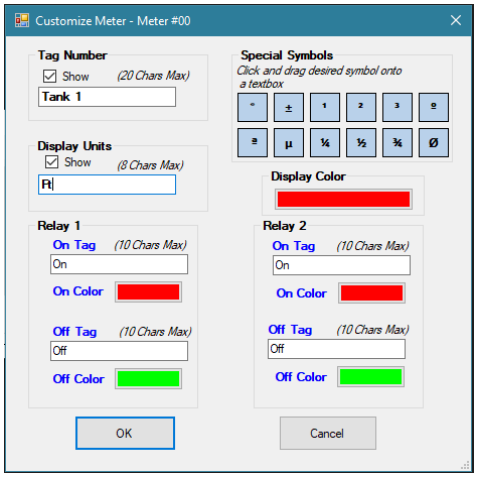
In the configuration window, click on the **info** tab to view the firmware number and version.



Customize Window

Click on **Customize** in the right click menu to open a meter's customize window. The following settings can be programmed from this window:

1. **Tag Number** to identify a meter and optionally display it on the meter. Pre-selected special characters may be used in this field by simply dragging the desired symbol into it.
2. **Display Units** to identify the engineering units of the value being read and optionally display it on the meter. Pre-selected special characters may be used in this field by simply dragging the desired symbol into it.
3. **Display Color** to change the color of the meter display on the screen.
4. **Relay Tag** to change the text label of the Relay Status indicator(s).
5. **Relay Color** to change the color of the Relay Status indicator(s).



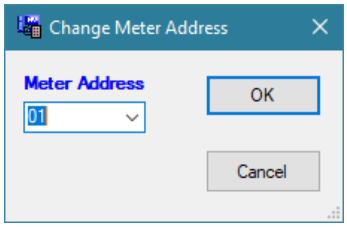
Note: *These settings are **NOT** saved to the meter.*

Serial Communication Setup

Addresses for PD8-765 and MeterView are set to 00 at the factory.

1. From the main window, click on **Edit** → **Serial Settings** menu to access the Serial Communication Setup.
2. Select correct communication port used for Serial Adapter.
3. If timeout error is received, try another serial port selection or check meter's address.

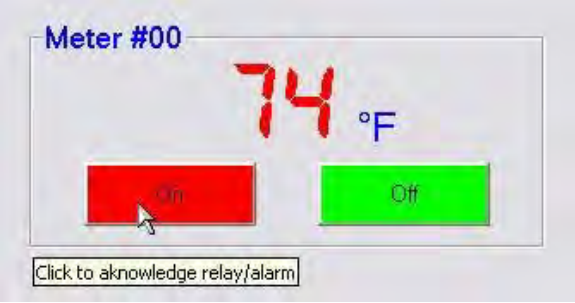
To change the serial address of a meter, simply click on **Change Address** in the right-click menu. This setting is on a per-meter basis.



Note: *Baud rate is set up for 2400 bps at the factory.*

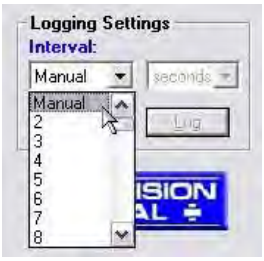
Relays/Alarms Status

Each meter enabled in the main MeterView window can display the current status of its relays/alarms (if the meter **Mode** in the right-click menu is set to **Relays**) and can allow the user to remotely acknowledge the relays/alarms (if applicable). The text labels and colors for the status indicators may be customized through the **Customize** window.



Logging Meter Data to File

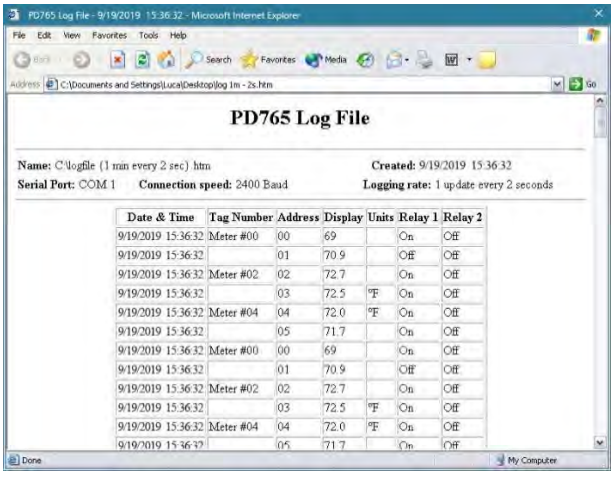
1. Click on the arrow next to the Interval box to select an interval from 2 to 60 or select manual to log the data only when the **Log** button is clicked (**Log** button is only visible when manual is selected).
2. Select seconds, minutes, or hours.
3. Click the **Start** button.
4. Select file location and enter a file name. Click **OK**. MeterView will begin logging data to the file.



Logging may be paused or stopped at any time. MeterView will indicate logging and paused status with corresponding message flashing in the main window status bar. When logging, all other MeterView functions and windows are not accessible.

Log File Sample

The HTML log file format contains pertinent information related to the meter and logging selections. Each log entry includes date and time, tag number, serial address, display value, units and relays/alarms status.



PD765 Log File

Name: C:\logfile (1 min every 2 sec).htm Created: 9/19/2019 15:36:32
Serial Port: COM 1 Connection speed: 2400 Baud Logging rate: 1 update every 2 seconds

Date & Time	Tag Number	Address	Display	Units	Relay 1	Relay 2

9/19/2019 15:36:32		05	71.7		On	Off

Connections

All connections are made to removable screw terminal connectors located at the rear of the meter.

⚠ CAUTION

- Use copper wire with 60°C or 60/75°C insulation for all line voltage connections. Observe all safety regulations. Electrical wiring should be performed in accordance with all applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.

⚠ WARNINGS

- Observe all safety regulations. Electrical wiring should be performed in accordance with all agency requirements and applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.
- Static electricity can damage sensitive components.
- Observe safe handling precautions for static-sensitive components.
- Use proper grounding procedures/codes.
- If the instrument is installed in a high voltage environment and a fault or installation error occurs, high voltage may be present on any lead or terminal.
- Follow all fusing and wiring precautions requirements for the instrument integrated to the PD8 Series model number being connected.

To access the connectors, remove the enclosure cover and unscrew the two captive screws that fasten the electronics module. Signal connections are made to de-pluggable connectors on the back of the electronics module.

Some connectors may be provided already connected. These connections are required for proper operation of the ProtEX-MAX and should not be removed unless instructed to by this manual.

Wires marked as being used for testing purposes should be removed.

Grounding connections are made to the two ground screws provided on the base – one internal and one external.

After all connections have been completed and verified, apply power to the unit.

Required & Factory Wired Connection

The ProtEX-MAX comes with a pre-wired connection. This connection is detailed below and must be maintained in order for the instrument to function properly.

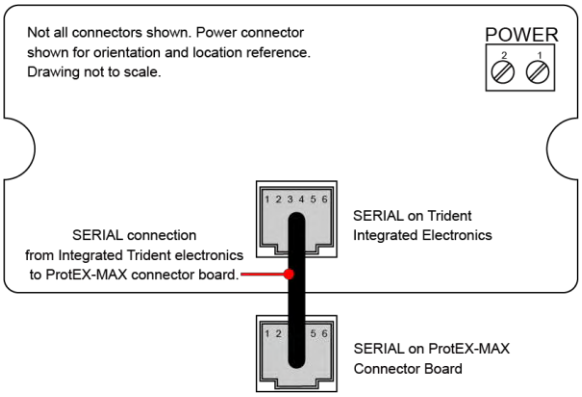

Figure 3: Integrated PD765 Trident Required Connections

PD765 Trident Electronics Module Layout for PD8-765-6X5-10*

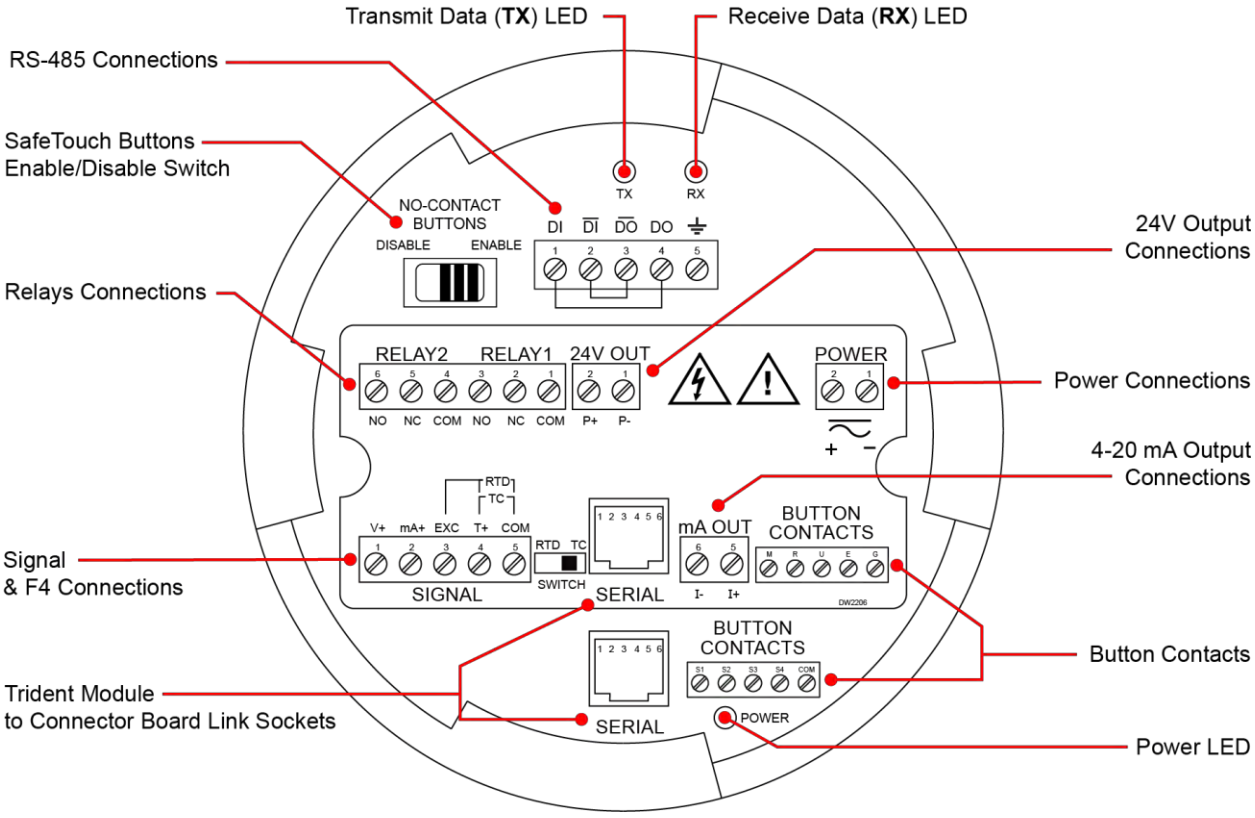

Figure 4. PD765 Trident Electronics Module Layout

Connector Labeling

The connectors label, affixed to the meter, shows the location of all connectors available with requested configuration. It also identifies the location of the RTD/TC selector switch. The images below (and one above) show all connector configurations for the PD8-765. Note that the connector in the upper left of the diagram has different configurations based on the model.

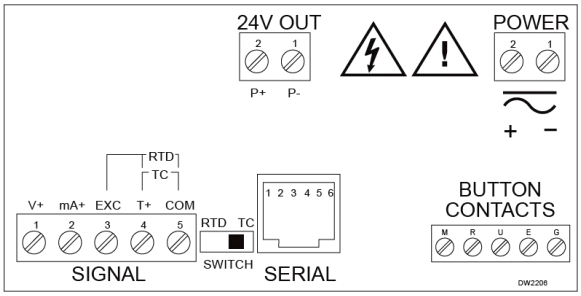

Figure 5. Connector Labeling for PD8-765-6X0-10

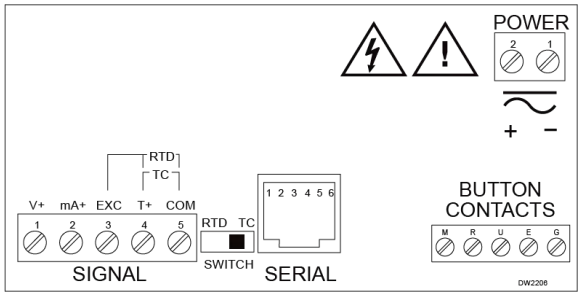

Figure 7. Connector Labeling for PD8-765-7X0-00

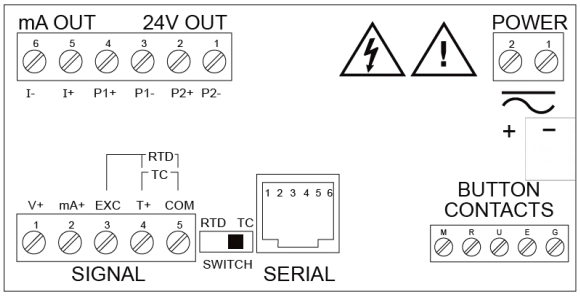

Figure 6. Connector Labeling for PD8-765-6X3-20

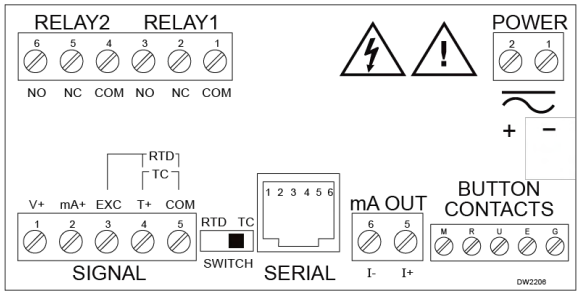

Figure 8. Connector Labeling for PD8-765-7X5-00

Power Connections

Power connections are made to a two-terminal connector labeled POWER on Figures 4-8. See *Connector Labeling* on page *30*. The meter operates regardless of DC polarity. The + and - symbols are only a suggested wiring convention.

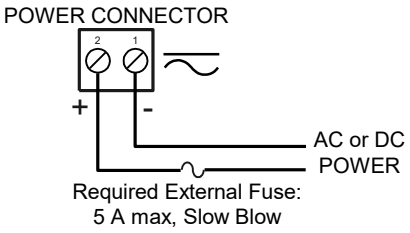

Figure 9. Power Connections

Signal Connections

Signal connections are made to a five-terminal connector labeled SIGNAL shown in Figures 4-8. See *Connector Labeling* on page *30*. The COM (common) terminal is the return for all types of inputs.

Current and Voltage Connections

The following figures show examples for current and voltage connections.
There are no switches or jumpers to set up for current and voltage inputs. Setup and programming is performed through the front panel buttons.

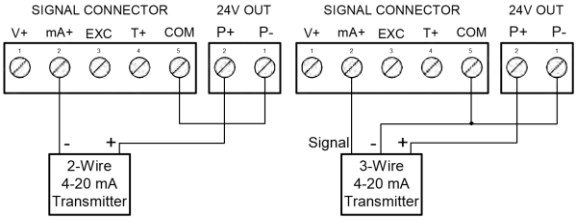

Figure 10. Transmitter Powered by Internal Supply (PD8-765-6X-10 and PD8-765-6X5-10)

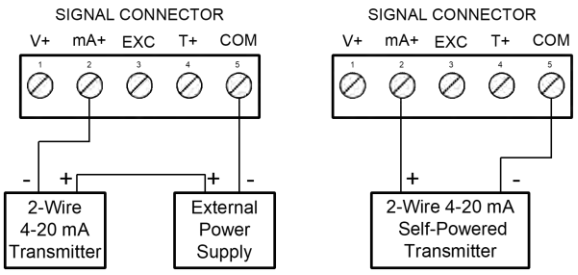

Figure 11. Transmitter Powered by External Supply or Self-Powered

The current input is protected against current overload by a resettable fuse. The display may or may not show a fault condition depending on the nature of the overload.
The fuse limits the current to a safe level when it detects a fault condition, and automatically resets itself when the fault condition is removed.

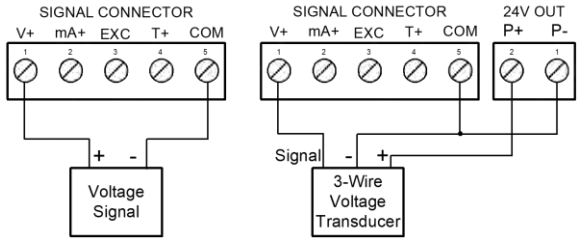

Figure 12. Voltage Input Connections

The meter is capable of accepting any voltage from -10 VDC to +10 VDC.

Thermocouple and RTD Connections

The following figures show examples for thermocouple and RTD connections.
The RTD/TC selector switch must be set to the proper position for the meter to accept the selected temperature input.
The input type is selected using the *Setup* menu.
The selected thermocouple input must correspond to the thermocouple sensor and wire type used.

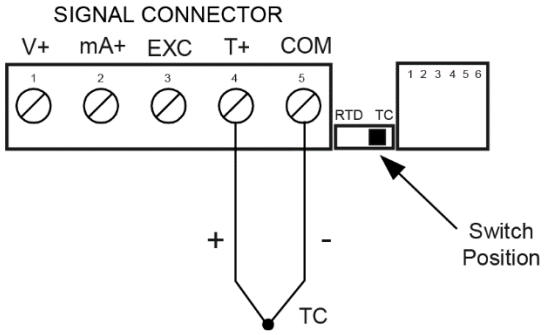

Figure 13. Thermocouple Input Connections

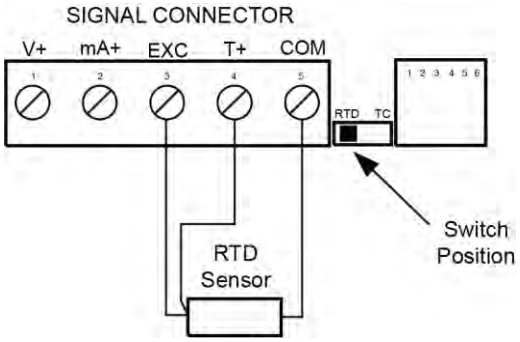

Figure 14. Three-Wire RTD Input Connections

The meter accepts two, three, or four-wire RTDs.
The three-wire RTD connection has built-in lead wire compensation.

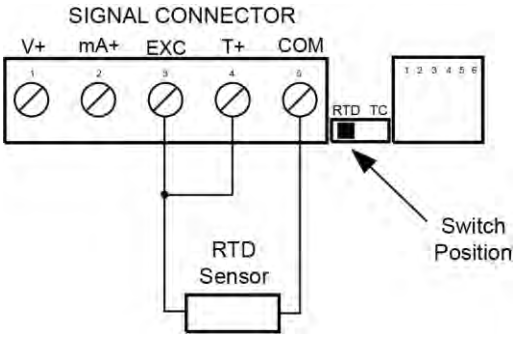

Figure 15. Two-Wire RTD Input Connections

Lead wire compensation for two-wire RTDs can be applied using the *Adjust* menu. *See Offset Adjustment (rtdJ)* on page *48*.

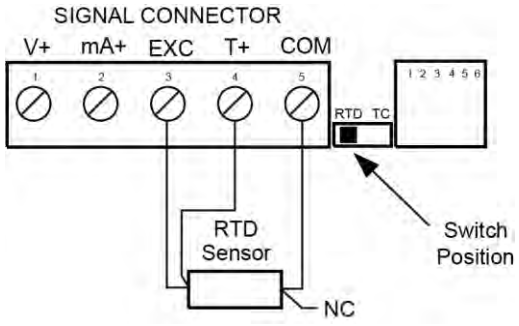

Figure 16. Four-Wire RTD Input Connections

The four-wire RTD connection is similar to the three-wire. One of the leads of a four-wire RTD is not connected and may be clipped off.

The three-wire connection provides sufficient lead wire compensation to provide accurate readings even with long leads.

RC Networks Available from Precision Digital

RC networks are available from Precision Digital and should be applied to each relay contact switching an inductive load. Part number: PDX6901.

Note: *Relays are de-rated to 1/14th HP (50 watts) with an inductive load.*

Relays and 24 V Output Connections

Relay connections are made to a six-terminal connector labeled RELAY1, RELAY2. See *Connector Labeling* on page *30*. The COM (common) terminals of the relays should not be confused with the COM (common) terminal of the SIGNAL connector. The 24 VDC output (available on AC powered units only) is available at the connector labeled 24V OUT, next to the relays connector.

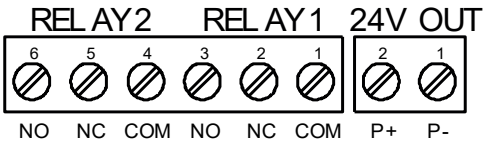

Figure 17. Relay & 24 V Output Connections

Switching Inductive Loads

The use of snubbers to suppress electrical noise is strongly recommended when switching inductive loads to prevent disrupting the microprocessor's operation. The snubbers also prolong the life of the relay contacts. Suppression can be obtained with resistor-capacitor (RC) networks assembled by the user or purchased as complete assemblies. Refer to the following circuits for RC network assembly and installation:

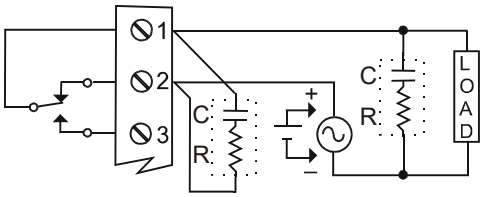

Figure 18. AC and DC Loads Protection

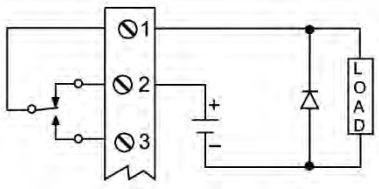
Choose R and C as follows:
R: 0.5 to 1 Ω for each volt across the contacts
C: 0.5 to 1 µF for each amp through closed contacts

Notes:

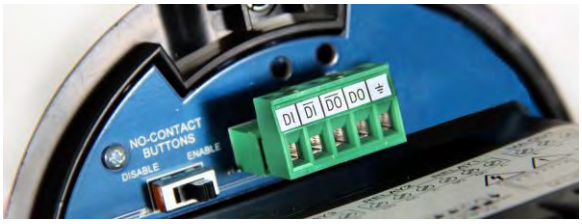
1. *Inductive relay rating is 1/14 HP (50 W) at 115/230 VAC*
2. *Use capacitors rated for 250 VAC.*
3. *RC networks may affect load release time of solenoid loads. Check to confirm proper operation.*
4. *Install the RC network at the meter's relay screw terminals. An RC network may also be installed across the load. Experiment for best results.*



Use a diode with a reverse breakdown voltage two to three times the circuit voltage and forward current at least as large as the load current.

Figure 19. Low Voltage DC Loads Protection

RS-485 Connections



The RS-485 connections are made to a five terminal connector used for Modbus® RTU serial communications. The RS-485 terminals include Transmit Data (DO) and (/DO), Receive Data (DI) and (/DI), and Signal Ground. See *Serial Communications (SErL)* on page *49* for more information.

There are two diagnostic LEDs: Transmit Data (TX), and Receive Data (RX) to show when the meter is transmitting and receiving data from other devices.

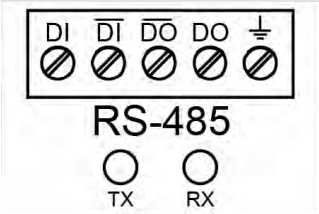


Figure 20. RS-485 Connections

RS-485 Multi-Drop Connection

When using more than one meter in a multi-drop mode, each meter must be provided with its own unique address. The meter address (Slave ID) can be programmed between 1 and 247. The transmit delay can be set between 0 and 199 ms. The parity can be set to even, odd, or none with 1 or 2 stop bits.

To change the meter address:

1. Press and hold the Menu button for three seconds to access Advanced Features menu of the meter.
2. Press Up arrow until Serial (SErL) menu is displayed and press Enter, Addr is displayed.
3. Press Enter to change meter address using Right and Up arrow buttons. Press Enter to accept.
4. Press Menu button to exit and return to Run Mode.

Three-Wire Connections

In order to wire the five pins for use as a three-wire half-duplex RS-485 connection, it is necessary to create a jumper connection between DI to DO and /DI to /DO- as shown below.

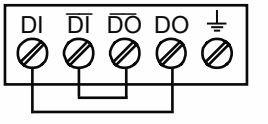

Figure 21. Three-Wire RS-485 Connections

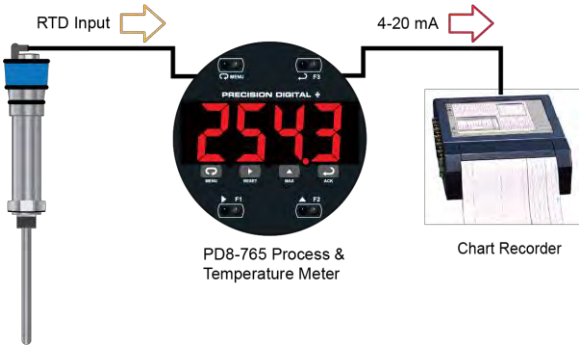
4-20 mA Output & Input Signal Connections

The PD8-765, with an optional 4-20 mA output, can be used as an isolated temperature transmitter with a big display by converting the thermocouple or RTD input into an isolated 4-20 mA output.



Connections for the 4-20 mA transmitter output are made to the connector terminals labeled "mA OUT: I-, I+". The 4-20 mA output may be powered from an internal power supply (optional) or from an external power supply.

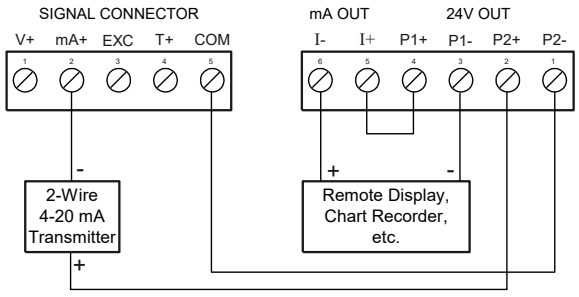


Figure 22. 4-20 mA Output & Input Signal Powered by PD8-765-6X3-20

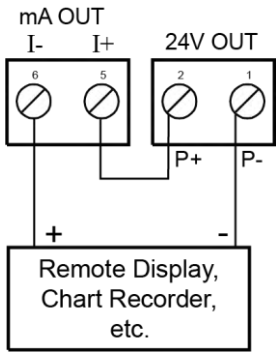

Figure 23. 4-20 mA Output Signal Powered by PD8-765-6X5-10

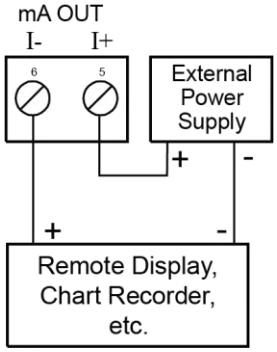

Figure 24. 4-20 mA Output Powered Externally

Models include PD8-765-6X3-00, PD8-765-7X3-00, PD8-765-7X5-00

Other Uses for Transmitter Power Supplies

The most common use for the PD8-765's two power supplies is for the 200 mA transmitter power supply to power the field transmitter and the other power supply to power the 4-20 mA output from the meter. However, the power supplies can be used in other ways. For instance, for level transmitters that require the use of a heated lens, the PD8-765's 200 mA power supply could be used to power both the heated lens and the 4-20 mA signal from the transmitter.

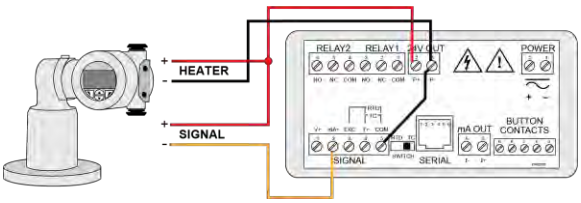

Figure 25. PD8-765-6X5-10 Powers Both the Heater and 4-20 mA Input Signal

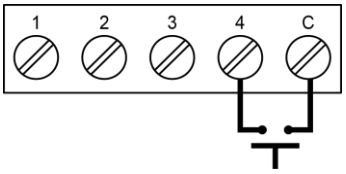
External Button Contacts

The PD8-765 is equipped with four external button contacts that can be used to remotely operate the PD8-765's front panel buttons. For instance, these button contacts can be used to program the meter and to remotely acknowledge/reset the relays:



Terminal	Programming	Operation
M	Menu	
R	Right Arrow	Reset Max/Min
U	Up Arrow	Display Max/Min
E	Enter	Acknowledge Relays

Setup and Programming

There is **no need to recalibrate** the meter when first received from the factory. The meter is **factory calibrated** prior to shipment for milliamps and volts with calibration equipment that is certified to NIST standards.

Overview

There are no jumpers involved in the setup process of the meter. The RTD/TC selector switch, located between the SIGNAL and SERIAL connectors, must be set accordingly for the meter to accept RTD or thermocouple inputs. See Figures under *Connector Labeling* on page *30*.

Setup and programming is done using MeterView or through the programming buttons.

After power and input signal connections have been completed and verified, apply power to the meter.

LED Status Indicators

LED	State	Indication
1	Steady	Alarm 1
2	Steady	Alarm 2

See *Quick Interface Reference Guide* on page *57*

Programming Buttons

Button Symbol	Description
	Press to enter or exit Programming Mode, view settings, or exit max/min readings
	Press to reset max/min readings or other parameter/function assigned through the *User* menu
	Press to display max/min readings or other parameter/function assigned through the *User* menu
	Press to acknowledge relays or other parameters/function assigned through the *User* menu

- Press the Menu button to enter or exit the Programming Mode at any time.
- Press the Right arrow button to move to the next digit during digit or decimal point programming.
- Press or hold the Up arrow button to scroll through the menus, decimal point, or to increment the value of a digit.
- Press the Enter/Ack button to access a menu or to accept a setting.
- Press and hold the Menu button for three seconds to access the advanced features of the meter.

SafeTouch Buttons

The ProtEX-MAX is equipped with four sensors that operate as through-glass buttons so that it can be programmed and operated without removing the cover (and exposing the electronics) in a hazardous area.

These buttons can be disabled for security by selecting DISABLE on the switch labeled NO-CONTACT BUTTONS located on the connector board.

To actuate a button, press one finger to the glass directly over the marked button area. Then retract finger more than three inches from the glass before pressing the next button. When the cover is removed, the four mechanical buttons located next to the sensors are used. The sensors are disabled when a mechanical button is pressed and will automatically be re-enabled after 60 seconds of inactivity.

The SafeTouch Buttons are designed to filter normal levels of ambient interference and to protect against false triggering, however, it is recommended that the SafeTouch Buttons be disabled (slide switch to DISABLE) if there is an infrared interference source in line-of-sight to the display.

The SafeTouch Buttons are configured by default to duplicate the function of the front panel mechanical pushbuttons associated with the integrated meter. The symbols by each SafeTouch button correspond to a mechanical button as shown in the above table.

SafeTouch Button Tips:

- To the extent possible, install the display facing away from sunlight, windows, reflective objects and any sources of infrared interference.
- Keep the glass window clean.
- Tighten the cover securely.
- Use a password to prevent tampering.

Display Functions and Messages

The meter displays various functions and messages during setup/programming and operation. The following table shows the displayed functions and messages with their action/setting description.

Display	Parameter	Action/Setting
SEtu	*Setup*	Enter *Setup* menu
inPt	*Input*	Enter *Input* menu
4-20	*4-20 mA*	Set meter for 4-20 mA input
0- 10	*0-10 VDC*	Set meter for ±10 VDC input
rtd	*RTD*	Set meter for RTD input
A385	*Alpha 385*	Set α = 0.00385 European curve 100Ω RTD
A392	*Alpha 392*	Set α = 0.00392 American curve 100Ω RTD
tC	*TC*	Set meter for TC input
0 J	*0 J*	Type J
1 K	*1 K*	Type K
2 t	*2 T*	Type T
3 t0	*3 T.0*	Type T, 0.1° resolution
4 E	*4 E*	Type E
F C	*°F or °C*	Set temperature scale
°F	*°F*	Set meter to Fahrenheit
°C	*°C*	Set meter to Celsius
dECP	*Decimal point*	Set decimal point
Prog	*Program*	Enter the *Program* menu
ScAL	*Scale*	Enter the *Scale* menu
CAL	*Calibrate*	Enter the *Calibrate* menu
inP 1	*Input 1*	Calibrate input 1 signal or program input 1 value
d isp 1	*Display 1*	Program display 1 value
inP2	*Input 2*	Calibrate input 2 signal or program input 2 value
d isp2	*Display 2*	Program display 2 value
Err	*Error*	Error, calibration not successful, check signal
rELY	*Relay*	Enter the *Relay* menu
rLY 1	*Relay 1*	Relay 1 setup
Act 1	*Action 1*	Set relay 1 action (automatic, latching, etc.)
Auto	*Automatic*	Set relay for automatic reset
A-mn	*Auto-manual*	Set relay for automatic + manual reset any time
LtCH	*Latching*	Set relay for latching operation
L-CL	*Latching-cleared*	Set relay for latching operation with manual reset only after alarm condition has cleared
ALtr	*Alternate*	Set relays for pump alternation control
oFF	*Off*	Disable relay and front panel status LEDs Disable relay's fail-safe operation
SEt 1	*Set 1*	Program set point 1
rSt 1	*Reset 1*	Program reset point 1
rLY2	*Relay 2*	Setup relay 2
Act2	*Action 2*	Set relay 2 action (automatic, latching, etc.)
SEt2	*Set 2*	Program set point 2
rSt2	*Reset 2*	Program reset point 2
FLSF	*Fail-safe*	Enter *Fail-safe* menu
FLS 1	*Fail-safe1*	Set relay 1 fail-safe operation
on	*On*	Enable fail-safe operation
oFF	*Off*	Disable fail-safe operation
FLS2	*Fail-safe2*	Set relay 2 fail-safe operation
dLAY	*Delay*	Enter *Time Delay* menu
dLY 1	*Delay 1*	Enter relay 1 time delay setup
On 1	*On 1*	Set relay 1 On time delay
OFF 1	*Off 1*	Set relay 1 Off time delay
dLY2	*Delay 2*	Enter relay 2 time delay setup
On2	*On 2*	Set relay 2 On time delay
OFF2	*Off 2*	Set relay 2 Off time delay

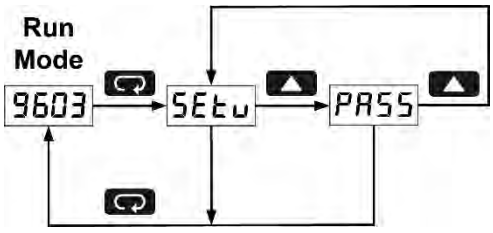
SEbr	*Sensor break*	Program TC or RTD sensor break value for analog out
PASS	*Password*	Enter the *Password* menu
unLC	*Unlocked*	Program password to lock meter
LoCd	*Locked*	Enter password to unlock meter
9999 - 1999 oPEn	*Flashing display*	Overrange condition Underrange condition Open TC or RTD sensor

Main Menu

The main menu consists of the most commonly used functions: *Setup* and *Password*.

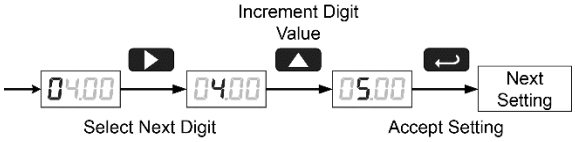
- Press **Menu** button to enter Programming Mode then press **Up** arrow button to scroll main menu.



- Press **Menu**, at any time, to exit and return to Run Mode. Changes made to settings prior to pressing **Enter/Ack** are not saved.
- Changes to the settings are saved to memory only after pressing **Enter/Ack**.
- The display moves to the next menu every time a setting is accepted by pressing **Enter/Ack**.

Setting Numeric Values

The numeric values are set using the **Right** and **Up** arrow buttons. Press **Right** arrow to select next digit and **Up** arrow to increment digit value.
The digit being changed is displayed brighter than the rest.
Press the **Enter/Ack** button, at any time, to accept a setting or **Menu** button to exit without saving changes.



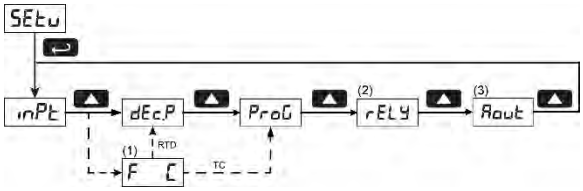
The decimal point is set using the **Up** arrow button in the *Setup-decimal point* menu.

Setting Up the Meter (SEtu)

The *Setup* menu is used to select:

1. Input signal the meter will accept
2. Decimal point position for process inputs
3. Units (°F or °C) for temperature inputs
4. Relay operation
5. 4-20 mA analog output setup

Press the **Enter/Ack** button to access any menu or press **Up** arrow button to scroll through choices.
Press the **Menu** button to exit at any time.

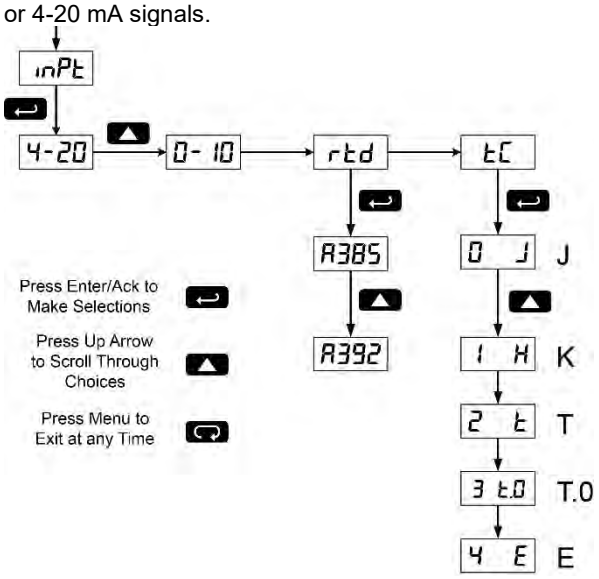


Notes:

1. *Selecting RTD or TC mode from the Input menu will include the Fahrenheit/Celsius menu in the setup menu structure. RTD will allow the selection of a decimal point location after this menu and TC has a fixed decimal point location and will not allow the selection of a decimal point location.*
2. *Relay menu is always available even if relays option is not installed. Visual alarm indication is available through front panel LEDs and MeterView software.*
3. *Analog Output menu is available if selected in the Advanced Features menu. 4-20 mA output option board is installed and set up at the factory.*

Setting the Input Signal (inPt)

Enter the *Input* menu to set up the meter to display current (4-20), voltage (0- 10), thermocouple (tC), or RTD (rtd) inputs.
The voltage input is capable of accepting any signal from -10 to +10 VDC. Select voltage input to accept 0-5, 1-5, 0-10, or ±10 VDC signals.
The current input is capable of accepting any signal from -20 to 20 mA. Select current input to accept 0-20 or 4-20 mA signals.

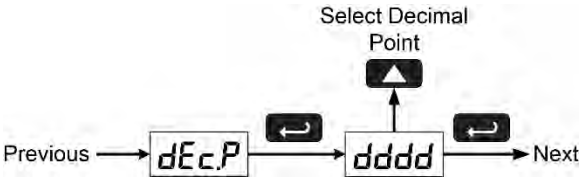


If RTD is selected, the display shows A385 or A392. Select the coefficient to match the RTD sensor, either 0.00385 (A385 European curve) or 0.00392 (A392 American curve). The display then shows the decimal point menu, dEcP. Select the decimal point resolution as shown on page *39*.
If TC is selected, scroll through the thermocouple types and select the type matching the TC sensor.
The input signal must be connected to the appropriate input terminals and the RTD/TC selector switch must be set, see *Figure 13. Thermocouple Input* on page *31*.

For thermocouple inputs, allow at least 30 minutes warm-up time for meter to reach specified accuracy.

Setting the Decimal Point (dcPt)

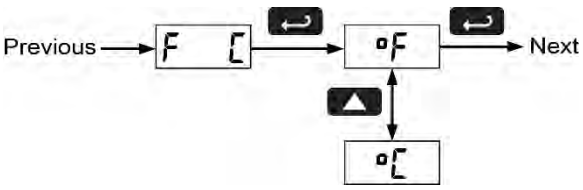
The decimal point for process inputs may be set with up to three decimal places or with no decimal point at all.
The decimal point for RTD inputs may be set with 1 decimal place or none.
The decimal point for thermocouple inputs is fixed per input selection.
Pressing the **Up** arrow moves the decimal point one place to the right until no decimal point is displayed, it then moves to the leftmost position.



Setting the Temperature Scale (F C)

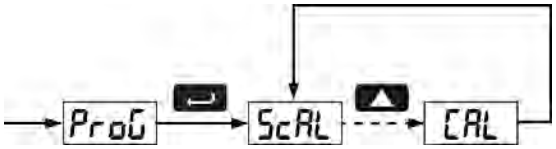
Meters with a thermocouple or RTD input can be set to display temperature in degrees Fahrenheit or Celsius.

Press **Up** arrow to change selection.
Press **Enter/Ack** to accept.



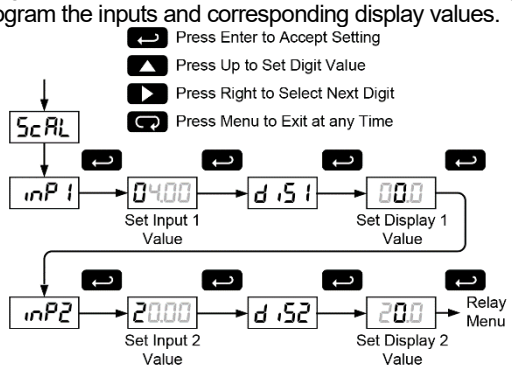
Programming the Meter (ProG)

The meter may either be scaled (ScAL) without applying an input or calibrated (CAL) by applying an input. The meter comes factory calibrated to NIST standards, so for initial setup, it is recommended to use the (ScAL) function.
The Program menu contains the Scale (ScAL) and the Calibrate (CAL) menus.
Process inputs may be scaled or calibrated to any display within the range of the meter.



Scaling the Meter (ScAL)

The process inputs (4-20 mA and ±10 VDC) can be scaled to display the process in engineering units.
A signal source is not needed to scale the meter; simply program the inputs and corresponding display values.



For instructions on how to program numeric values see *Setting Numeric Values*, page *38*.

Note: *The Scale menu is not available for temperature inputs.*

Error Message (Err)

An error message indicates that the calibration or scaling process was not successful.
After the error message is displayed, the meter reverts to input 1, allowing the appropriate input signals to be applied.
The error message might be caused by any of the following conditions:

1. Input signal is not connected to the proper terminals or it is connected backwards.
2. Wrong signal selection in *Setup* menu.
3. Minimum input span requirements not maintained.
4. Input 1 signal inadvertently applied to calibrate input 2.

⚠ IMPORTANT

- **Reverse Scaling**
  The meter can be scaled so that 4 mA represents the high end of the process value range being measured by the transmitter and 20 mA represents the low end of the process value range.

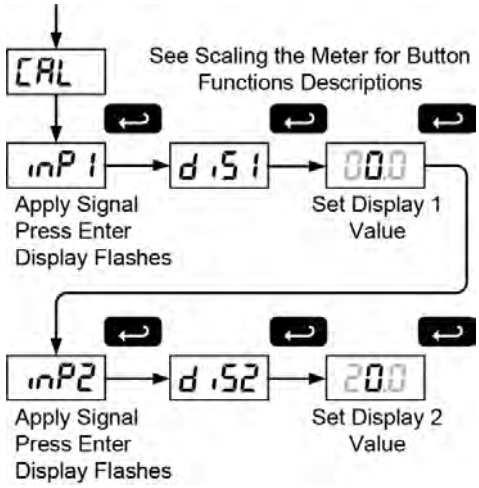
Minimum Input Span

The minimum input span is the minimum difference between input 1 and input 2 signals required to complete the calibration or scaling of the meter.

Input range	Input 1 & input 2 span
4-20 mA	0.40 mA
±10 VDC	0.20 VDC
TC	100°F (56°C)
RTD	50°F (28°C)

Calibrating the Meter (CAL)

The meter can be calibrated to display the process in engineering units by applying the appropriate input signals and following the calibration procedure.
The use of a calibrated signal source is required to calibrate the meter.



Recalibrating Temperature Inputs (CAL)

Remember, the meter is **calibrated** at the factory prior to shipment. Recalibration is recommended at least every twelve months.
The *Calibration* (CAL) menu is used to **recalibrate** the thermocouple and RTD inputs.

Allow at least 30 minutes warm-up time before performing recalibration procedure to ensure specified accuracy.

Recommended Calibration Points

To recalibrate the meter, it is recommended to use the Fahrenheit scale; this will give a greater degree of accuracy to the calibration. The scale can be changed to the Celsius scale after calibration is completed. The meter will display temperature accurately in any scale. The following table shows the recommended low and high calibration points for all types.

Type of input	Input 1 (Low)	Input 2 (High)	Check (Middle)
Type J T/C	32°F	1182°F	600°F
Type K T/C	32°F	1893°F	960°F
Type T T/C	32°F	693°F	360°F
Type T T/C	32.0°F	693.0°F	360.0°F
Type E T/C	32°F	1652°F	840°F
100 Ω RTD (0.00385)	32°F 100Ω	1148°F 320.12Ω	590°F 215.61Ω
100 Ω RTD (0.00392)	32°F 100Ω	1127°F 320.89Ω	580°F 215.87Ω

Recalibration Procedure for Temperature Inputs

1. Connect signal to the meter using the appropriate wire (e.g. type J thermocouple wire to recalibrate type J input), see page *31*.
2. Set up the meter to accept the selected input (e.g. type J T/C), see page *38*.
3. Set up the meter to display temperature in degrees Fahrenheit, see page *39*.
4. Apply signal corresponding to input 1 (32°F) and program display 1 to 32, see page *40*.
5. Apply signal corresponding to input 2 (1182°F for type J) and program display 2 accordingly, see page *40*.
6. After the meter accepts input 2, the display flashes the message CJr that indicates the meter is sensing the cold junction reference. This completes the recalibration procedure for the selected input.

Recalibrating Process Inputs (ICAL)

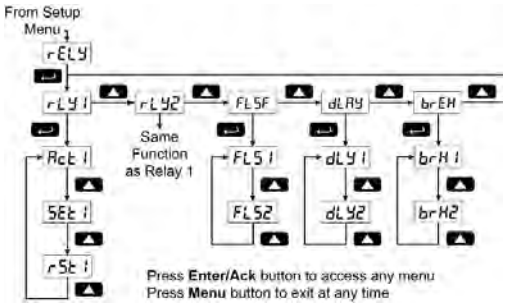
The *Internal Calibration* (ICAL) menu, located in the Advanced features menu, is used to recalibrate the current and voltage inputs. Recalibration is recommended at least every twelve months.
Refer to *Internal Calibration* (ICAL), page *51* for instructions.

Setting the Relay Operation (rELY)

This menu allows you to set up the operation of the relays:

1. Relay action (ACt)
   a. Automatic reset only (non-latching)
   b. Automatic + manual reset at any time (non-latching)
   c. Latching (manual reset only)
   d. Latching with Clear (manual reset only after alarm condition has cleared)
   e. Pump alternation control (automatic reset only)
   f. Off (relay and status LED disabled)
2. Set point
3. Reset point
4. Fail-safe operation
   a. On (enabled)
   b. Off (disabled)
5. Time delay
   a. On delay (0-199 seconds)
   b. Off delay (0-199 seconds)
6. Break Condition Behavior
   a. Off (non-alarm condition)
   b. On (alarm condition)

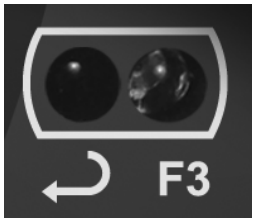
Refer to page *37* for a description of *Display Functions and Messages*



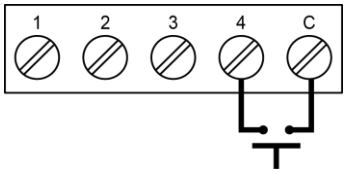
Acknowledging Relays

There are two ways to acknowledge relays programmed for manual reset:

1. Via ACK (F3) SafeTouch through-glass button.



2. Remotely via terminal at the back of the meter by a connector switch across terminals 4 and C.

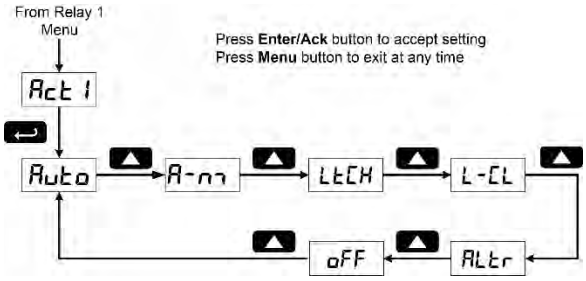


Setting the Relay Action

The relays' *Action* menu allows the user to set up the operation of the relays. The relays may be set up for any of the following modes of operation:

1. Automatic reset (non-latching)
2. Automatic + manual reset at any time (non-latching)
3. Latching (manual reset only, at any time)
4. Latching with Clear (manual reset only after alarm condition has cleared)
5. Pump alternation control (automatic reset only)
6. Off (relay and status LED disabled)

The following graphic shows relay 1 action setup; relay 2 is set up in a similar fashion.



Programming Set and Reset Points

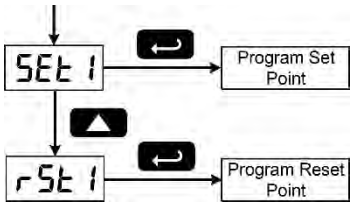
High alarm indication: program set point above reset point.

Low alarm indication: program set point below reset point.

The deadband is determined by the difference between set and reset points. Minimum deadband is one display count. If set and reset points are programmed the same, relay will reset one count below set point.

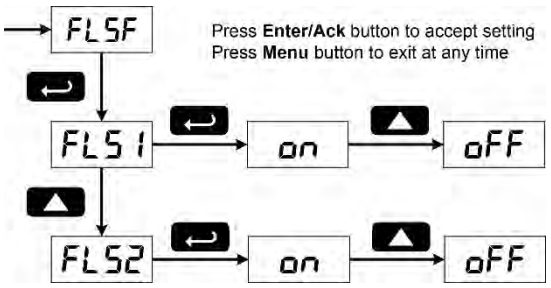
Quick Set Points

Press **Up** arrow and **Menu** at the same time to access set/reset points quickly.



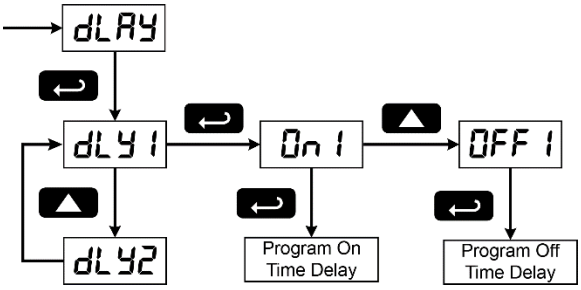
Setting Fail-Safe Operation

The fail-safe operation is set independently for each relay. Select on to enable or select oFF to disable fail-safe operation.



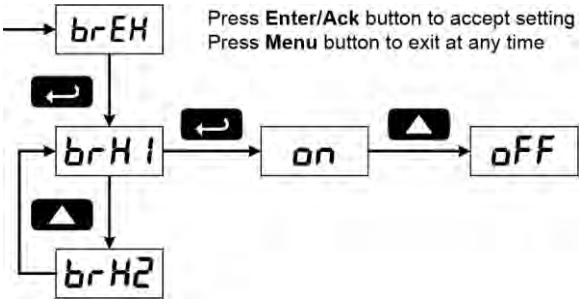
Programming Time Delay

The *On* and *Off* time delays may be programmed for each relay between 0 and 199 seconds. The relays will transfer only after the condition has been maintained for the corresponding time delay.
The *On* time delay is associated with the set point.
The *Off* time delay is associated with the reset point.



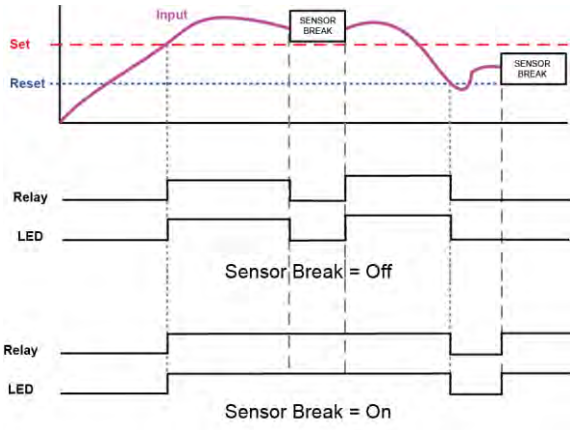
Setting Sensor Break Condition

The sensor break relay condition may be programmed for each relay as *On* (alarm) or *Off* (non-alarm). The relays will enter these states when a sensor break is detected for RTD or thermocouple inputs. These settings have no effect when current or voltage inputs are selected.



Sensor Break Operation

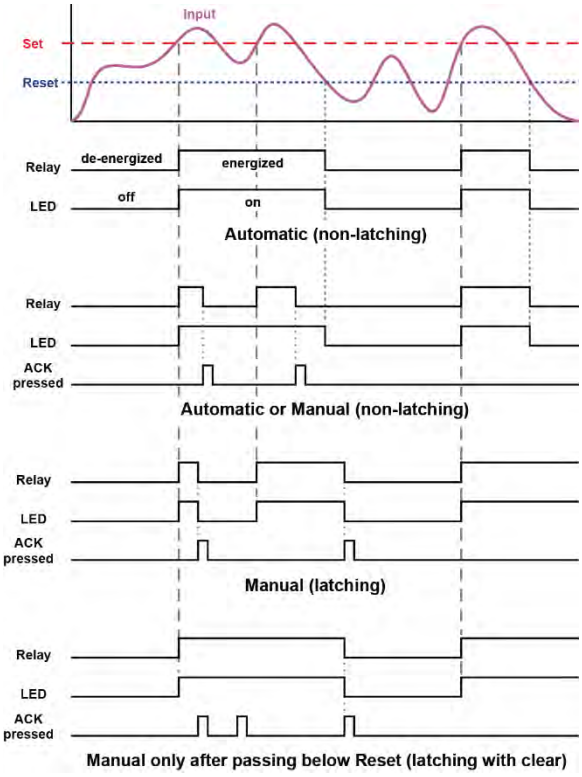
The following graphs illustrate the operation of how the meter reacts when a sensor break is detected.



Relay and Alarm Operation

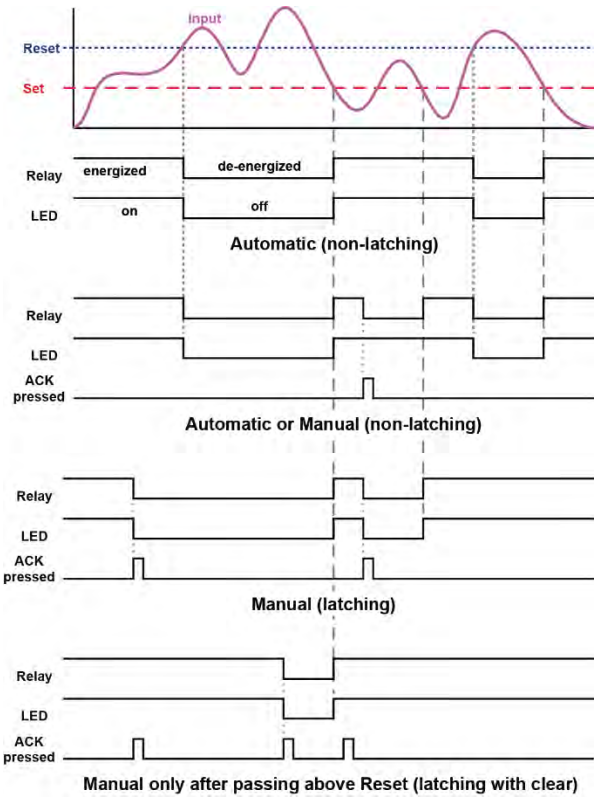
The following graphs illustrate the operation of the relays, status LEDs, and ACK button.

High Alarm Operation (Set > Reset)



For Manual reset mode, ACK can be pressed anytime to turn "off" relay. For relay to turn back "on", signal must go below set point, and then go above it.

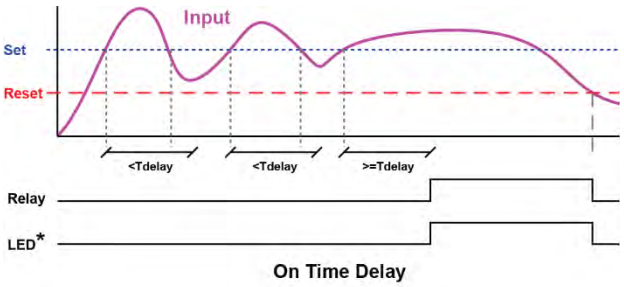
Low Alarm Operation (Set < Reset)

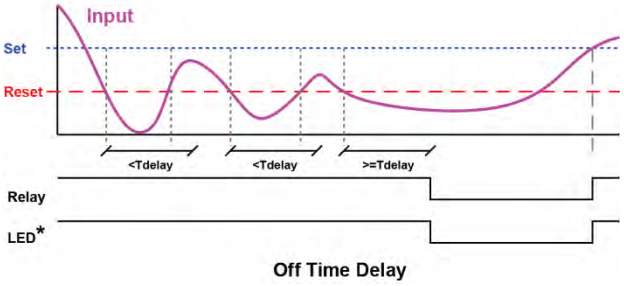


For Manual reset mode, ACK can be pressed anytime to turn "off" relay. For relay to turn back "on", signal must go above set point, and then go below it.

Time Delay Operation

The following graphs show the operation of the time delay function.

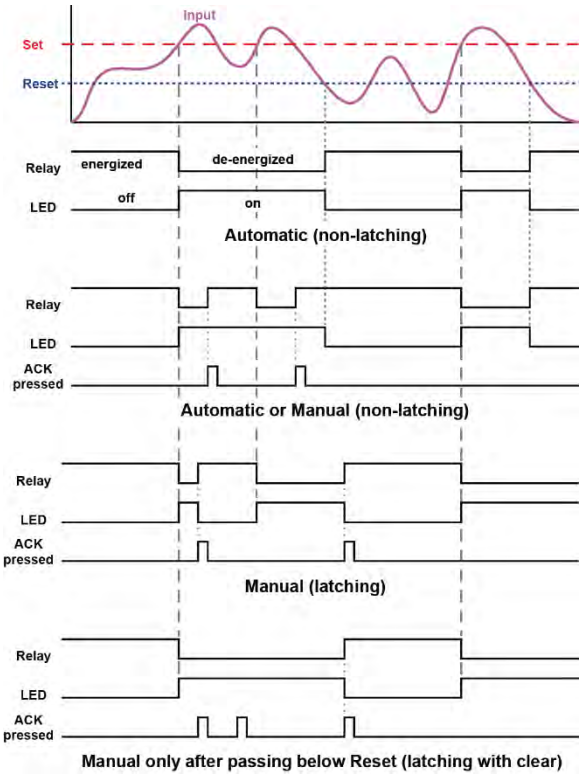




If the signal crosses the set point, the *On* time delay timer starts and the relay trips when the time delay has elapsed. If the signal drops below the set point (high alarm) before the time delay has elapsed, the *On* time delay timer resets and the relay does not change state. The same principle applies to the *Off* time delay.

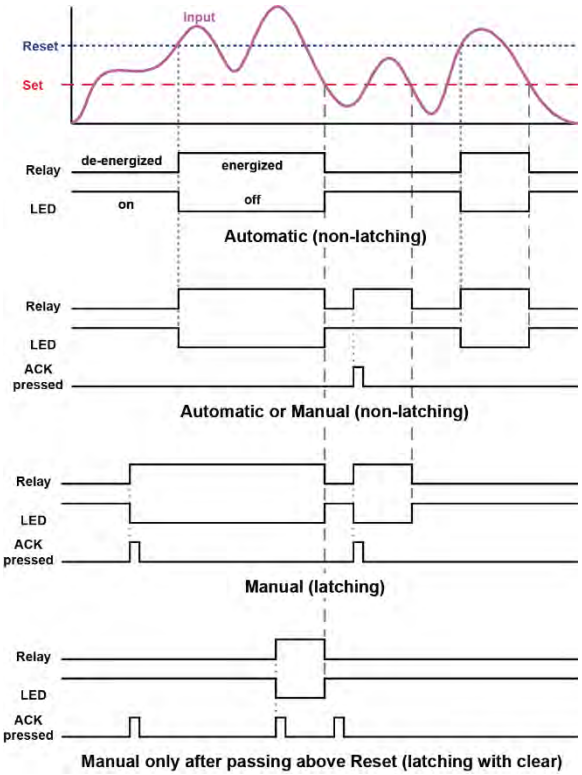
* **Note:** The LED is not affected by Time Delay when *"Automatic or Manual"* reset mode is selected. Rather the LED follows the set and reset points.

High Alarm with Fail-Safe Operation (Set > Reset)



*** Note:** Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Low Alarm with Fail-Safe Operation (Set < Reset)

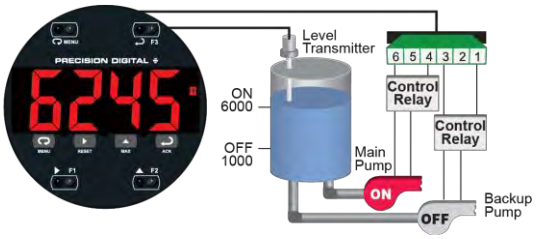


*** Note:** Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Pump Controller with Dual-Pump Alternation

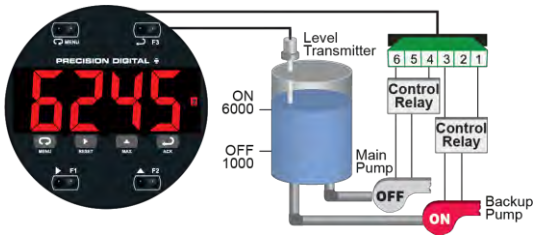
The PD8-765 can be used as a low-cost pump controller when combined with a continuous level transmitter. One of the most common pump control applications is shown below: controlling and alternating two pumps. The goal is to control the level between 1000 and 6000 gallons. The main pump turns on when the level reaches 6000 gallons and pumps down to 1000 gallons and then shuts the pump off. The next cycle, the backup pump turns on at 6000 gallons and shuts off at 1000 gallons. If at any time the active pump can't keep the level below 7000 gallons, the other pump would come on also.

1



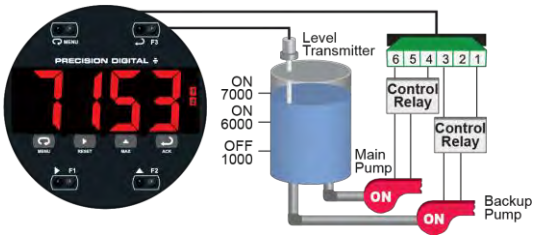
Relay #1 turns the main pump on at 6000 gallons and turns it off at 1000 gallons.

2



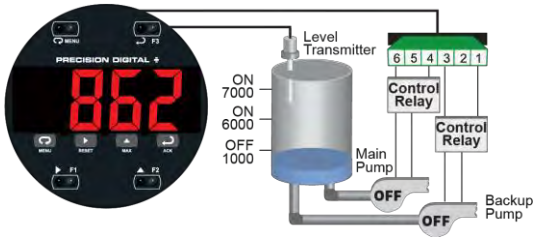
With the Pump Alternation feature activated, the next time the level reaches 6000 gallons, relay #2 starts the backup pump.

3



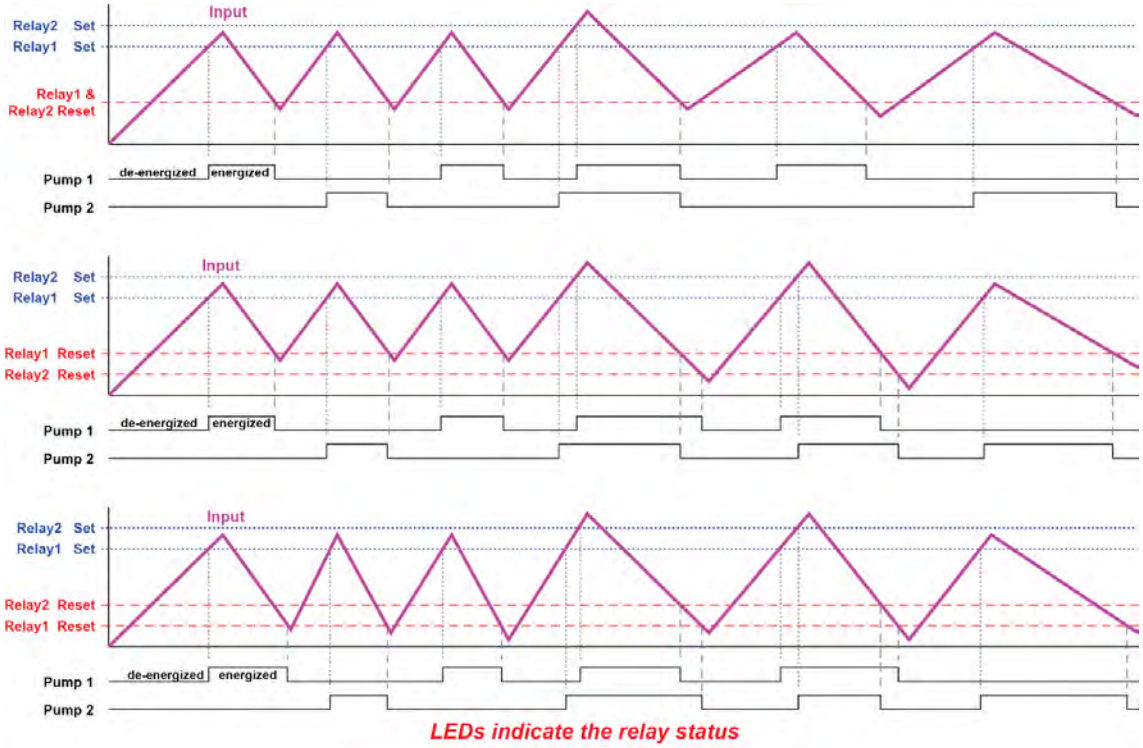
If the active pump is not able to keep up, and the level reaches 7000 gallons, the other relay will start the inactive pump as well.

4



When the level falls below 1000 gallons, both pumps will turn off.

Pump Alternation Control Operation



LEDs indicate the relay status

Scaling the 4-20 mA Analog Output (Aout)

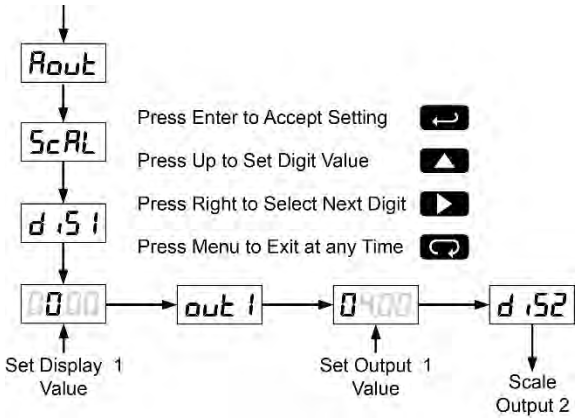
The 4-20 mA analog output can be scaled to provide a 4-20 mA signal for any display range selected.

No equipment is needed to scale the analog output; simply program the display values to the corresponding mA output signal.

The *Analog Output* menu appears in the *Setup* menu only on meters that are equipped with a 4-20 mA output. This menu is enabled or disabled at the factory via the *Advanced Features* menu. For more information on the *Advanced Features Menu*, see page *47*.

The *Analog Output* menu is used to program:

1. 4-20 mA output based on display values
2. Sensor break value in mA



For instructions on how to program numeric values see *Setting Numeric Values*, page *38*.

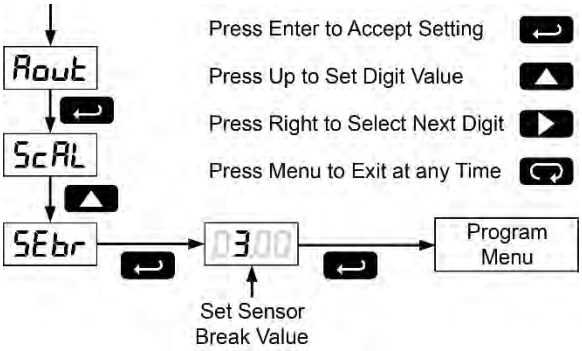
Program the Sensor Break Output Value (SEbr)

The sensor break value corresponds to the output signal generated when the meter detects a sensor break for thermocouple and RTD inputs.

For example, if there is an open thermocouple, the meter displays the message "oPEn" and the analog output goes to the programmed sensor break value (e.g. 3.00 mA).

The sensor break value can be programmed from 0.00 to 23.99.

The typical output signal range is 1.00 to 23.00 mA (e.g. If sensor break value is programmed to 0.00, the actual output will not be greater than 1.00 mA).



Analog Output when Display is Out of Range

The analog output reflects the display out of range conditions as follows:

Input Condition	Display	Analog Output
Underrange	Flashing -1999	3.00 mA
Overrange	Flashing 9999	21.00 mA
Open TC or RTD	Flashing oPEn	Sensor break value

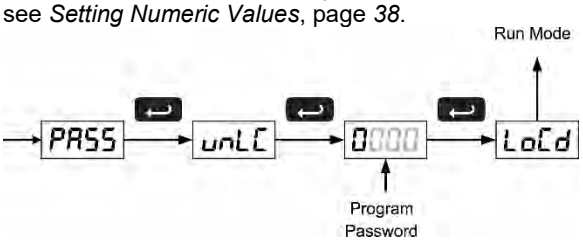
Setting Up the Password (PASS)

The *Password* menu is used to program a four-digit password to prevent unauthorized changes to the programmed parameter settings.

Locking the Meter

Enter the *Password* menu and program a four-digit password.

For instructions on how to program numeric values see *Setting Numeric Values*, page *38*.

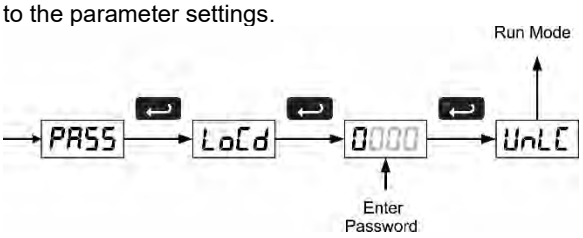


Record the password for future reference.
If appropriate, it may be recorded in the space provided.

Model:	
Serial Number:	
Password:	

Unlocking the Meter

If the meter is password protected, the correct password must be entered in order to make changes to the parameter settings.



Entering the correct four-digit number sets the password to 0000, disabling the protection. Changes to the programmed parameter settings are allowed only with the password set to 0000.
If the password entered is incorrect, the meter displays LoCd (Locked) for about two seconds, then it returns to Run Mode. To try again, press **Enter/Ack** while the *Locked* message is displayed.

Forgot the Password?

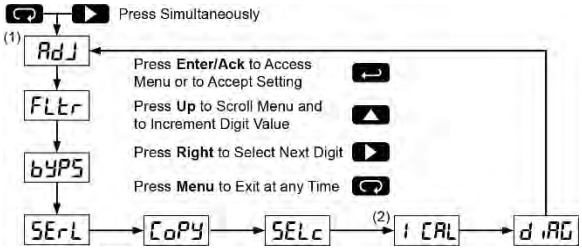
The password may be disabled by the following procedure:

1. Note display reading prior to pressing the Menu button. Ignore decimal point and sign.
2. Access the *Password* menu, add 2 to the noted reading and enter that number as the password (e.g. display reading = -1.23, password = 0125)

Advanced Features Menu

To simplify the setup process, functions not needed for most applications are located in the *Advanced Features* menu.

Press the **Right** arrow and **Menu** button simultaneously or hold the Menu button for approximately 3 seconds to access the *Advanced Features Menu* of the meter.



1. Available for temperature inputs only
2. Available for process inputs only

Advanced Features Menu & Display Messages

Display Functions and Messages

Display	Parameter	Action/Setting
AdJ	*Adjust*	Set offset adjustment for temperature, not available for process inputs
FLtr	*Filter*	Set noise filter value
byPS	*Bypass*	Set filter bypass value
SErL	*Serial*	Set serial communication parameters
Prot	*Protocol*	Enter the Protocol menu
PdC	*PDC*	Select PDC protocol
nrbS	*Modbus®*	Select Modbus® protocol
Addr	*Address*	Set meter address
bAud	*Baud rate*	Select baud rate
trdE	*Transmit delay*	Set transmit delay for serial communication
PrtY	*Parity*	Select none, even, or odd (Modbus® only)
tbyt	*Byte-to-byte*	Program byte-to-byte timeout (silent time – Modbus® only)
CoPY	*Copy*	Enter copy function
SEnd	*Send*	Send meter settings to another meter
donE	*Done*	Copy function completed
SELc	*Select*	Enter the Select menu (function, cutoff, out)
Func	*Function*	Select linear or square root function
L inr	*Linear*	Set meter for linear function
Sqrt	*Square root*	Set meter for square root extraction
cutF	*Cutoff*	Set low-flow cutoff

Display Functions and Messages

Display	Parameter	Action/Setting
out	*Output*	Set meter for either relay or analog output (factory set only; only included in certain models)
Aout	*Analog output*	Set meter for analog output option
rELY	*Relay*	Set meter for relay option
Aout	*Analog output*	Enable or disable analog output (factory set only; only included in certain models)
YES	*Yes*	Enable analog output
no	*No*	Disable analog output
Inty	*Intensity*	Select display intensity
ICAL	*Initial calibration*	Enter initial calibration for process inputs
Curr	*Current*	Calibrating current input
I Lo	*I low*	Calibrate low current input
I Hi	*I high*	Calibrate high current input
volt	*Volt*	Calibrating voltage input
ULo	*V low*	Calibrate low voltage input
UHi	*V high*	Calibrate high voltage input
diAG	*Diagnostics*	Display parameter settings
LEd	*LED*	Test display
CJC	*CJC*	Display cold junction compensation voltage
CFG	*CFG*	Display meter configuration
PtS	*Points*	Display calibration points for process inputs
rELY	*Relays*	Display relay settings
Aout	*Analog output*	Display analog output settings
GoFF	*Gain/offset*	Display gain and offset for process inputs
SErL	*Serial*	Display serial communication settings
Info	*Information*	Display software version and S/N information

Offset Adjustment (AdJ)

This parameter allows the user to select an offset adjustment to the temperature being displayed. Offset adjustment values can be either positive or negative and can be any number within ±19.9°. The offset adjustment value is programmed through the *Adjust* menu.

The offset adjustment feature can be useful to compensate for errors due to thermocouple junctions or excessive lead wire resistance in RTDs.

The offset adjustment value is automatically reset to zero whenever the type of temperature sensor is changed (*i.e.,* Thermocouple type or RTD curve).

Celsius/Fahrenheit conversion of the offset adjustment value is automatic, see note 2 below for important limitations.

Notes:

1. Offset adjustment is available only when TC or RTD input is selected.
2. If adjustment value is greater than 11°C and the temperature scale is changed to Fahrenheit, the maximum applied adjustment will be 19.9°F.

Noise Filter (FLtr)

Most applications do not require changing this parameter. It is intended to help attain a steady display with an unsteady (noisy) input signal.

The field selectable noise filter averages any minor or quick changes in the input signal and displays the reading with greater stability.

Increasing the filter value will help stabilize the display, however this will reduce the display response to changes on the input signal.

The filter level may be set anywhere from 2 to 199.

Setting filter value to zero disables filter function, and bypass setting becomes irrelevant.

Noise Filter Bypass (byPS)

The meter can be programmed to filter small input changes, but allow larger input changes to be displayed immediately, by setting the bypass value accordingly.

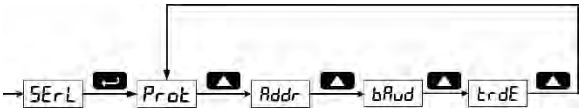
If the input signal goes beyond the bypass value, it will be displayed immediately with no averaging done on it.

The noise filter bypass value may be set anywhere from 0.2 to 99.9. It corresponds to percentage of full scale for process inputs and to degrees Fahrenheit for temperature inputs.

Increasing the bypass value may slow down the display response to changes on the input signal.

Serial Communications (SErL)

The meter is equipped with serial communications capability as a standard feature using PDC protocol and MeterView software or using the Modbus® RTU protocol. The Modbus® RTU protocol is included on all models after 5/1/2010. To communicate with a computer or other data terminal equipment, an RS-232, RS-485, or USB adapter option is required; see *Ordering Information* on page 7 for details.



When using more than one meter in an RS-485 multi-drop mode, each meter must be provided with its own unique address. The address may be programmed from 00 to 99 for PDC protocol and from 1 to 247 for Modbus® protocol. The transmit delay may be set between 0 and 199 ms (see Serial Communication Adapter manual for more details). The PD8-765 can also be connected directly to another PD8-765 through a cable assembly (PDA7420). This allows the user to copy all the settings from one meter to another, using the *Copy* function.

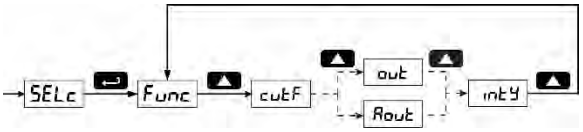
Protocol Selection Menu (Prot)

The Protocol selection menu is used to select either the PDC or the Modbus® protocol. PDC protocol should be selected to run MeterView software.

Select Menu (SELc)

The *Select* menu is used to select linear or square root function, display intensity, and low-flow cutoff. Selection for relay or analog output is a factory setting depending on the option installed.

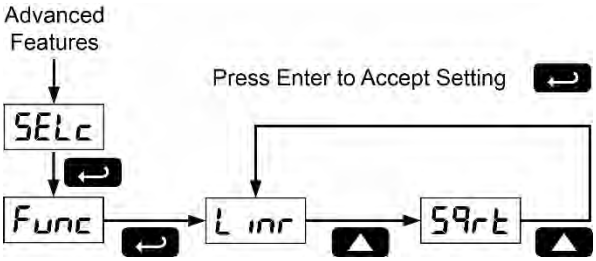
- Output options are installed and set up at the factory.
- Changing the output selection will cause erroneous operation.



Note: Depending on meter model, the Select menu will display either out or Aout. In either case, the output selection menu is for factory use only. Do not attempt to change output selection.

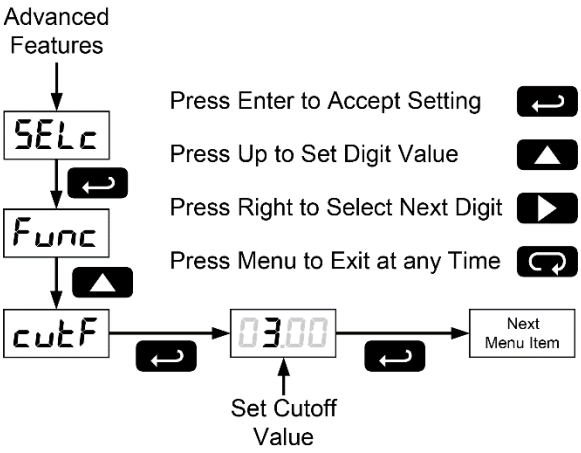
Linear or Square Root Function (L inr or Sqrt)

Meters are set up at the factory for linear function. The linear function provides a display that is linear with respect to the input signal.
The square root function is used to linearize the signal from a differential pressure transmitter and display flow rate in engineering units.



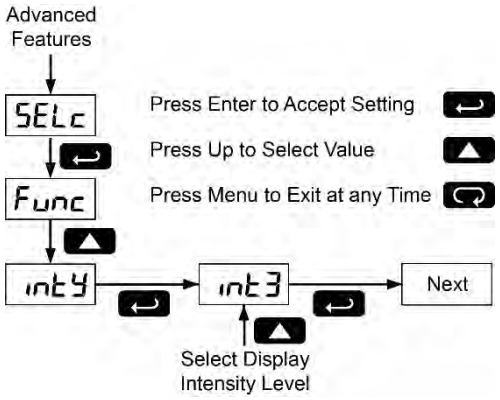
Low-Flow Cutoff (cutF)

The low-flow cutoff feature allows the meter to be programmed so that the often-unsteady output from a differential pressure transmitter, at low flow rates, always displays zero on the meter.
The cutoff value may be programmed from 0 to 9999. Below the cutoff value, the meter will display zero. Programming the cutoff value to zero disables the cutoff.



Display Intensity (intY)

The Display Intensity function allows the selection of eight levels of intensity for various lighting conditions.



Meter Copy Function (CoPY)

The *Copy* function is used to copy (or clone) all the settings from one meter to other meters requiring exactly the same setup and programming (*i.e.* type of input, scaling, decimal point, filter, bypass, etc.).

Copy Function Requirements

To successfully copy settings from one meter to another, both meters must have:

1. *Same software version*
2. *Same baud rate setting*
3. *PDC protocol selected*

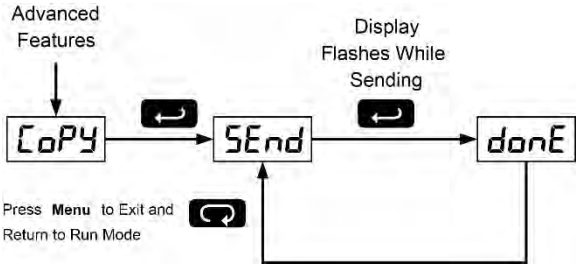
See *Determining Software Version*, page *53* for instructions.

Meter Cloning Instructions

⚠ CAUTION

- Do not connect the two meters to the same 4-20 mA loop while cloning. Internal calibration may be affected.
- Connect the two meters using cable assembly PDA7420 or equivalent (e.g. Digi-Key P/N H1663-07-ND). Cable should not exceed 7' (2.1 m).

1. Power up both meters. Leave Clone meter in Run Mode.
2. Enter the *Advanced Features Menu* of the Master meter, see *Advanced Features Menu*, page *47*.
3. Scroll to *Copy* function using **Up** arrow button then press **Enter/Ack**.
4. The meter displays the message SEnd. Press **Enter/Ack**, the display flashes while sending data. The message donE is displayed when copying is completed.



5. The Clone meter displays the memory address being programmed then the message donE when copying is completed. The meter initializes and returns to Run Mode using the same settings as the Master.
6. If meter to be cloned does not respond to the data being sent, refer to ***Copy Function Requirements*** above.

Internal Calibration (iCAL)

- There is **no need to recalibrate** the meter when first received from the factory.
- The meter is ***factory calibrated*** prior to shipment, for all input types, in milliamps, volts, and degrees respectively. The calibration equipment is certified to NIST standards.

The internal calibration allows the user to scale the meter without applying a signal. This menu is not available if the meter is set up for TC or RTD inputs.

The use of calibrated signal sources is necessary to perform the internal calibration of the meter. Check calibration of the meter at least every 12 months. Each input type must be recalibrated separately, if meter will be used with all input types.

Notes:
- If meter is in operation and it is intended to accept only one input type (e.g. 4-20 mA), recalibration of other inputs is not necessary.
- Allow the meter to warm up for at least 30 minutes before performing the internal calibration procedure.

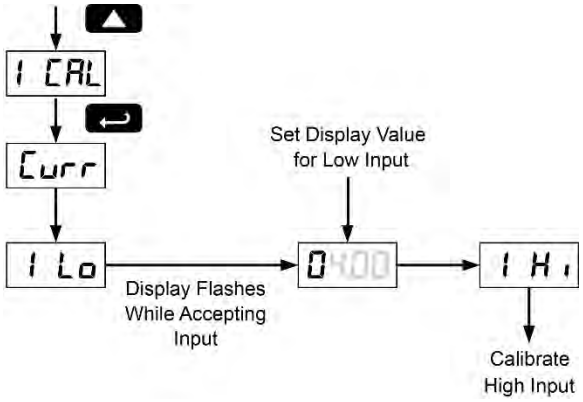
The *Internal calibration* menu is part of the *Advanced Features Menu*.

1. Press the **Up** arrow button to scroll to the *Internal calibration* menu and press **Enter/Ack**.
2. The meter displays either current (Curr) or voltage (volt), according to the meter input setup. Press **Enter/Ack** to start the calibration process.

Example for current input internal calibration:

3. The meter displays *Low* input current (I Lo). Apply the low input signal and press **Enter/Ack**. The display flashes for a moment while meter is accepting the low input.
4. After the display stops flashing, a number is displayed with the leftmost digit brighter than the rest. The bright digit is the active digit that can be changed by pressing the **Up** arrow button. Press the **Right** arrow button to move to the next digit.
5. Set the display value to correspond to the input signal being calibrated.
6. The display moves to the high input calibration (I Hi). Apply the high input signal and press **Enter/Ack**.
7. Set the display for the high input calibration in the same way as it was set for the low input calibration.

For instructions on how to program numeric values see *Setting Numeric Values,* page *38*.



The graphic above shows the calibration of the current input. The voltage input is calibrated in a similar way.

Tips:
- Low and high input signals can be any valid values within the range of the meter.
- Observe minimum input span requirements between input 1 and input 2.
- Low input must be less than high input signal.

Error Message (Err)

An error message indicates that the calibration or scaling process was not successful.
After the error message is displayed, the meter reverts to input 1, allowing the appropriate input signals to be applied.

The error message might be caused by any of the following conditions:
1. Input signal is not connected to the proper terminals, or it is connected backwards.
2. Wrong signal selection in *Setup* menu.
3. Minimum input span requirements not maintained.

Minimum Input Span

The minimum input span is the minimum difference between input 1 and input 2 signals required to complete the calibration or scaling of the meter.

Input range	Input 1 & input 2 span
4-20 mA	0.40 mA
±10 VDC	0.20 VDC

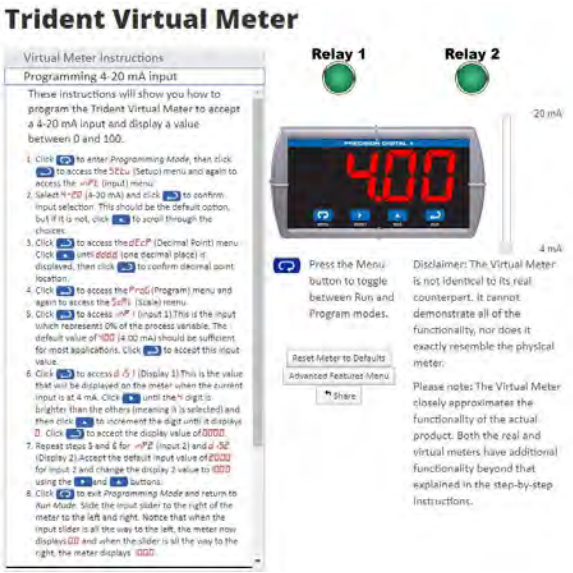
Meter Operation

For process inputs, the meter is capable of accepting positive and negative signals and displaying these signals in engineering units from -1999 to 9999 (*e.g.* a signal from -10 to +10 VDC could be displayed as -10.00 to 10.00).
The temperature inputs are displayed according to the input type and temperature units (°F or °C) selected. RTD and Type T thermocouple inputs can be displayed with either 1° or 0.1° resolution.

Buttons Operation

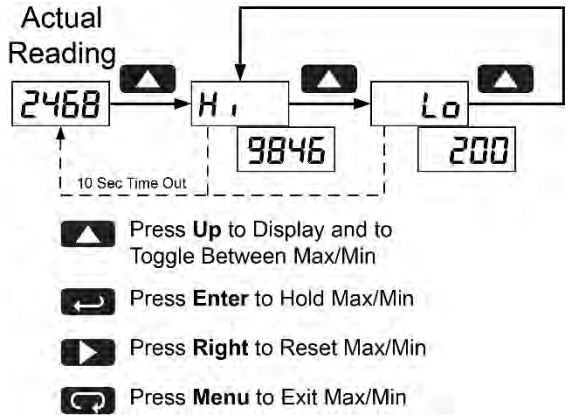
Button Symbol	Description
	Press to enter or exit Programming Mode, view settings, or exit Max/Min readings Hold to enter *Advanced Features Menu*
	Press to reset Max/Min readings
	Press to display Max/Min readings alternately
	Press to display Max/Min reading indefinitely while displaying Max/Min Press ACK to acknowledge relays

For *Interactive Virtual Meter Demo* visit predig.com/tvm



Maximum/Minimum Readings

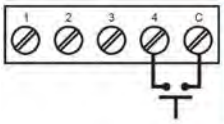
The main function of the front panel buttons during operation is to display the maximum and minimum readings reached by the process or temperature inputs.



1. Press **Up** arrow/**Max** button to display maximum reading since the last reset/power-up.
2. Press **Up** arrow/**Max** again to display the minimum reading since the last reset/power-up.
3. Press **Enter/Ack** to hold Max/Min display reading, the meter will continue to track new Max/Min readings.
4. If **Enter/Ack** is not pressed, the Max/Min display reading will time out after ten seconds and the meter will return to display the actual reading.
5. Press **Right** arrow/**Reset** button to reset Max/Min while reading is being displayed. Max/Min display readings are reset to actual reading.

Remote Operation of Meter Buttons

The PD8-765 is equipped with four external button contacts that can be used to remotely operate the PD8-765's front panel buttons. For instance, these button contacts can be used to program the meter and to remotely acknowledge/reset the relays:



Terminal	Programming	Operation
1	Menu	
2	Right Arrow	Reset Max/Min
3	Up Arrow	Display Max/Min
4	Enter	Acknowledge Relays

Troubleshooting

For an *Interactive Virtual Meter Demo* visit predig.com/tvm

Due to the many features and functions of the meter, it's possible that the setup of the meter does not agree with what an operator expects to see. If the meter is not working as expected, refer to the *Diagnostics* menu and consult the recommendations described below.

It may also be helpful to program the meter using MeterView software. A free USB adapter can be sent to you if you register your meter.

Diagnostics Menu (d iAG)

The *Diagnostics* menu is located in the *Advanced Features Menu*, to access *Diagnostics* menu see Advanced Features Menu, page *47*.
It provides an easy way to view the programmed parameter settings for troubleshooting purposes.
Press the **Enter/Ack** button to view the settings and the **Menu** button to exit at any time.
For a description of the diagnostics messages see *Advanced Features Menu & Display Messages*, page *47*.

Determining Software Version

To determine the software version of a meter:

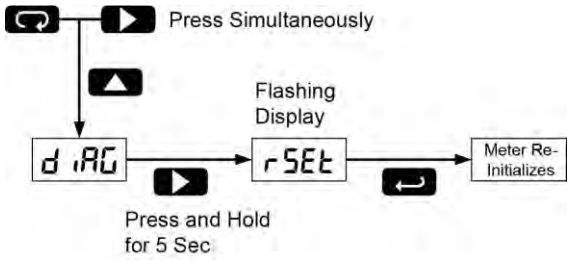
1. Go to the *Diagnostics* menu (d iAG) and press **Enter/Ack** button.
2. Press **Up** arrow/**Max** button and scroll to Information menu (InFo).
3. Press **Enter/Ack** to access the software number (SFt), version (UEr). Write down the information as it is displayed. Continue pressing **Enter/Ack** until all the information is displayed.

Reset Meter to Factory Defaults

When the parameters have been changed in a way that is difficult to determine what's happening, it might be better to start the setup process from the factory defaults.
Instructions to load factory defaults:

1. Enter the *Advanced Features Menu*. See *Advanced Features Menu*, page *47*.
2. Press **Up** arrow to go to *Diagnostics* menu
3. Press and hold **Right** arrow/Reset for five seconds, press **Enter/Ack** when display flashes rESEt.

   Note: If **Enter/Ack** is not pressed within three seconds, display returns to Diagnostics menu.
4. The meter goes through an initialization sequence (same as on power-up) and loads the factory default settings.



Factory Defaults & User Settings

The following table shows the factory setting for most of the programmable parameters on the meter. Next to the factory setting, the user may record the new setting for the particular application. MeterView software allows the saving of all meter parameters to a file for restoring meter settings, reporting, and copying settings to other meters.

Model: _____ S/N: _____
Date: _____

Parameter	Display	Default Setting	User Setting
Input type	inPt	4-20 mA	
Decimal point	dddd	2 places	
Programming	Prog		
Input 1	inP1	4.00 mA	
Display 1	d.S1	4.00	
Input 2	inP2	20.00 mA	
Display 2	d.S2	20.00	
Relay 1	rLY1		
Action 1	Act1	Automatic	
Set 1	SEt1	7.00	
Reset 1	rSt1	6.00	
Relay 2	rLY2		
Action 2	Act2	Automatic	
Set 2	SEt2	10.00	
Reset 2	rSt2	9.00	
Fail-safe	FLSF		
Fail-safe 1	FLS1	Off	
Fail-safe 2	FLS2	Off	
Time delay	dLAY		
On delay 1	On1	0 sec	
Off delay 1	OFF1	0 sec	
On delay 2	On2	0 sec	
Off delay 2	OFF2	0 sec	
Break 1	brK1	Off	
Break 2	brK2	Off	
Password	PASS	0000 (unlocked)	
Advanced Features	N/A		
Adjust	AdJ	0.0° (temp only)	
Filter	FLtr	10	
Bypass	bYPS	0.2	
Serial settings	SErL		
Protocol	Pdt	PDC protocol	
Address	Addr	00	
Baud rate	bAud	2400	
Trans delay	trdE	10 ms	
Function	Func	Linear	
Cutoff value	CutF	0.00 (disabled)	
Output option	out/Aout	Factory set only	
Display intensity	intY	Level 8	
Modbus® defaults	N/A		
Address	Addr	247	
Parity	PrtY	Even	
Byte-to-byte timeout*	tbYt	0.01 sec	

*** Note:** The byte-to-byte timeout setting might be updated automatically depending on the baud rate selected and the previous timeout setting. The minimum timeout allowed is saved to memory if a lower value is entered (e.g. If user enters 0.00 with a baud rate of 300, 0.06 is saved)

Troubleshooting Tips

This meter is a highly sophisticated instrument with an extensive list of features and capabilities. If the front panel buttons are used to program the meter, it may be a difficult task to keep everything straight. That is why we strongly recommend the use of the MeterView software for all programming activities. A free USB adapter is available for programming with MeterView software if you register your meter.

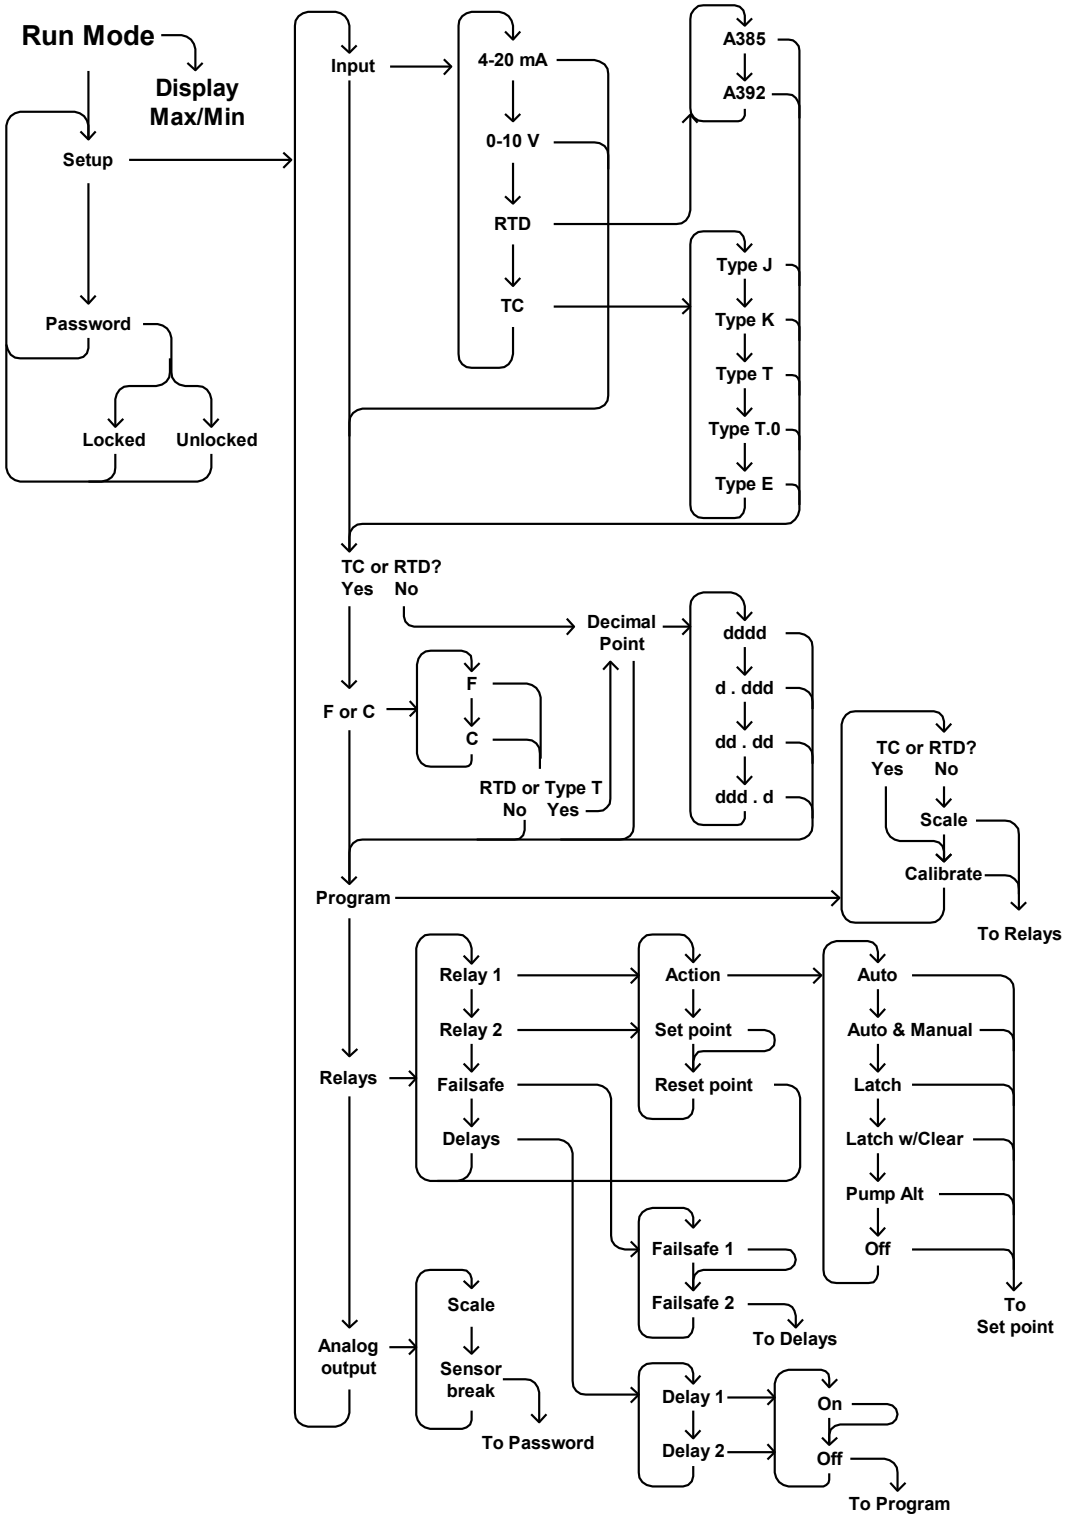
Symptom	Check/Action
No display at all	Check power at power connector
Not able to change setup or programming, LoCd is displayed	Meter is locked, enter correct four-digit password to unlock
Meter does not respond to input change	If a Low-Flow Cutoff Value has been programmed, the meter will display zero below that point, regardless of the input – which can appear like the meter is not responding to an input change. Check to make sure the problem is not being caused by an undesired low-flow cutoff value.
Meter displays error message during calibration (Err)	Check: 1. Signal connections 2. Input selected in *Setup* menu 3. Minimum input span requirements
Meter displays • oPEn • 9999 • -1999 • Displays negative number, not responding to RTD.	Check: 1. Input selected in *Setup* menu 2. TC/RTD Switch position 3. Corresponding signal at Signal connector
Display alternates between 1. Hi and a number 2. Lo and a number	Press **Menu** to exit Max/Min display readings.
Display response is too slow	Check filter and bypass values
Inaccurate temperature reading	Check: 1. Temperature units (°F or °C) 2. TC type or RTD curve selected 3. Offset adjustment 4. TC wire used 5. Calibration
If the display locks up or the meter does not respond at all	Cycle the power to restart the microprocessor.
Relay operation is reversed	Check: 1. Fail-safe in *Setup* menu 2. Wiring of relay contacts
Relay and status LED do not respond to signal	Check: 1. Relay action in *Setup* menu 2. Set and reset points
Meter not communicating with MeterView or other programs	Check: 1. Serial adapter and cable 2. Serial protocol selected 3. Meter address and baud rate 4. MeterView address and baud rate

Troubleshooting Tips

Symptom	Check/Action
SafeTouch buttons do not respond	1. If mechanical button was pushed, the SafeTouch buttons will be re-enabled automatically 60 seconds after the last button push. 2. If slide switch on connector board is in DISABLE position, switch to ENABLE. 3. Strong direct sunlight may interfere with SafeTouch button operation. It is recommended to operate the buttons by standing so as to block direct sunlight.
Serial Communications Power LED Indicator is off	Check 1. Modular cable connection 2. Power to the device
If only the TX (or DATA IN) data status LED is flashing when serial communications attempted	Check 1. Serial cable 2. Protocol selected on device 3. Instrument address & baud rate 4. Program address & baud rate
If both data status LEDs (TX and RX) are off when trying to communicate	Remove all unnecessary cables and instruments from the bus. Try getting the system to work with only one device (to ease troubleshooting) and then expand the system one device at a time.
Communications slow	Increase the baud rate
Random communication errors	1. Increase the TX delay time 2. Decrease the baud rate
Other symptoms not described above	Call Technical Support for assistance.

Note: Certain sequences of events can cause unexpected results. To solve these issues, it is best to start fresh from factory defaults and use the manual as a step by step programming guide, rather than a random approach to programming. To reset the meter to factory defaults, see *Reset Meter to Factory Defaults* on page *53*. In addition, for best results, we recommend using the free MeterView software for all programming needs.

Quick Interface Reference Guide



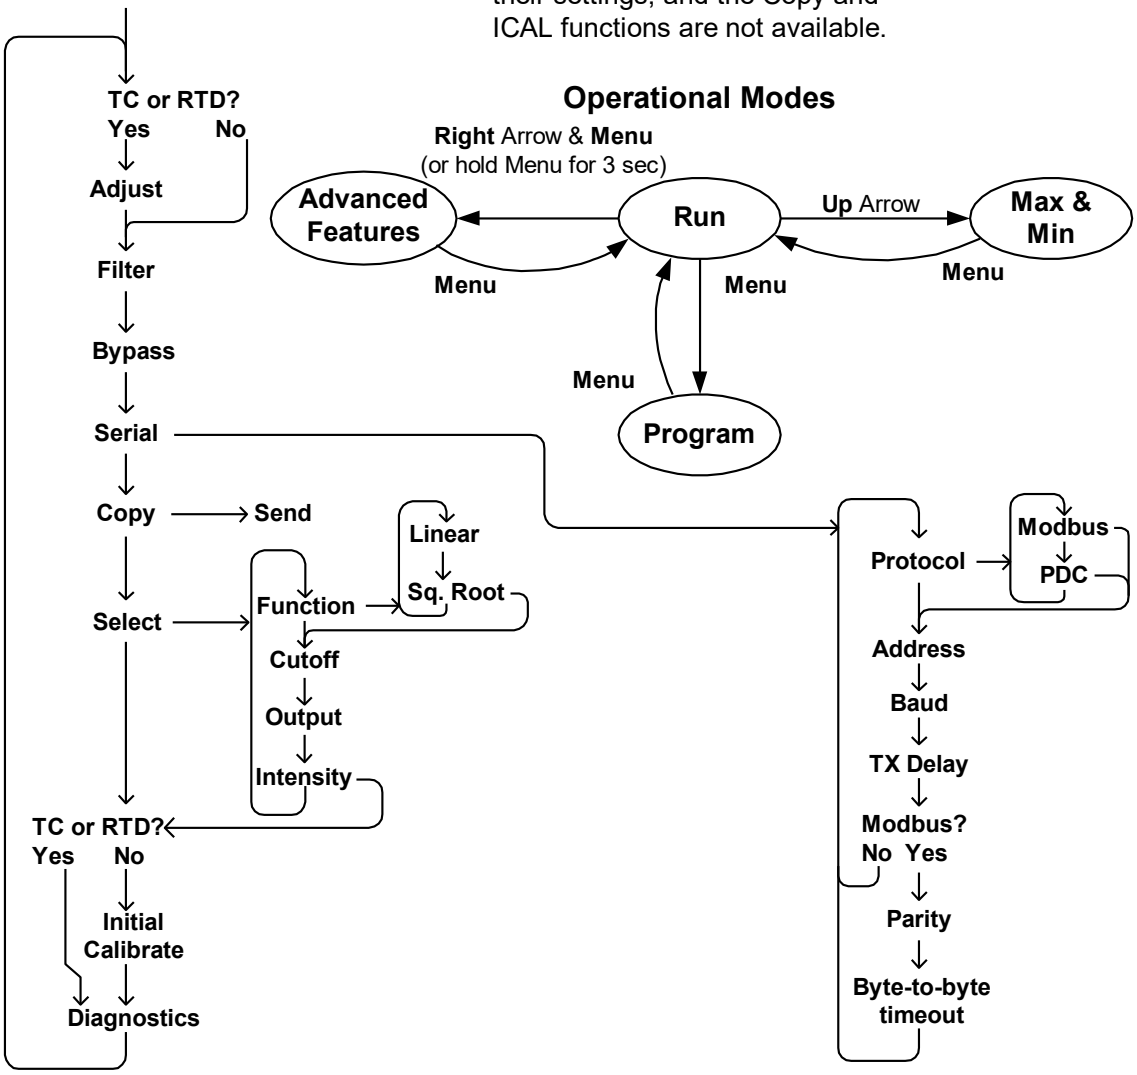
Pushbutton	Function
Menu	Go to Programming Mode or leave Programming, Advanced Features, and Max/Min Modes.
Right Arrow	Move to next digit.
Up Arrow	Move to next selection or increment digit.
Enter/Ack	Accept selection/value and move to next selection.

Right Arrow & **Menu** simultaneously enters Advanced Features

Max/Min Mode
While in Run Mode, pressing **Up** Arrow will initiate Max/Min Mode. **Up** Arrow toggles between Max & Min displays, and **Right** Arrow resets the Max/Min to the current value. Press **Menu** or wait 10 seconds to return to Run Mode. Pressing **Enter/Ack** will disable the 10 second timeout and continuously display Max or Min.

Press **Right** arrow and **Menu** to access Advanced Features Menu

When the meter is locked, Adjust, Filter and Bypass can only display their settings, and the Copy and ICAL functions are not available.



Complete Product Line of Displays and Controllers

IN ALL SHAPES, SIZES & LOCATIONS

- Big, Bright Displays For Indoor or Outdoor in Bright Sunlight
- Large Dual-Line 6-Digit Display
- 24 VDC Transmitter Power Supply

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

1

1.1 Preface

These instructions contain all the information you need for using the device.

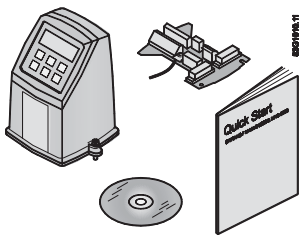
The instructions are aimed at persons mechanically installing the device, connecting it electronically, configuring the parameters and commissioning it as well as service and maintenance engineers.

Note

It is the responsibility of the customer that the instructions and directions provided in the manual are read, understood and followed by the relevant personnel before installing the device.

1.2 Items supplied

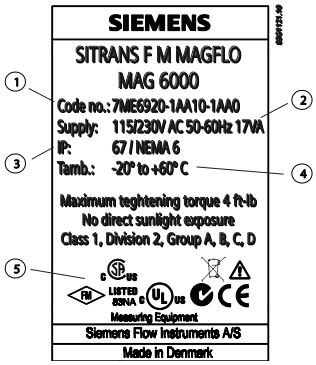
- SITRANS F M MAG 5000/6000 transmitter
- Calibration report
- SITRANS F literature CD
- Quick start guide



Inspection

1. Check for mechanical damage due to possible improper handling during shipment. All claims for damage are to be made promptly to the shipper.
2. Make sure the scope of delivery, and the information on the type plate corresponds to the ordering information

Device identification



① Code number
② Power supply
③ Enclosure rating
④ Ambient temperature
⑤ Approvals

Figure 1-1 MAG 5000/6000 nameplate

1.3 History

This document describes:

- SITRANS F MAG 5000 and MAG 6000 transmitters (standard version).
- Optional versions:
  - MAG 5000 Blind and MAG 6000 Blind
  - MAG 5000 CT and MAG 6000 CT
  - MAG 6000 SV

Documentation history

The contents of these instructions are regularly reviewed and corrections are included in subsequent editions. We welcome all suggestions for improvement.

The following table shows the most important changes in the documentation compared to each previous edition.

Edition	Remarks	FW version
01 01/2010	First edition	
02 01/2012		4.04
03 12/2013	• Customer defined unit • Velocity value with unit • Operational without SensorProm • EPD for 60 Hz mains	4.07

1.4 Further Information

Product information on the Internet

The Operating Instructions are available on the CD-ROM shipped with the device, and on the Internet on the Siemens homepage, where further information on the range of SITRANS F flowmeters may also be found:

Product information on the internet (http://www.siemens.com/flow)

Worldwide contact person

If you need more information or have particular problems not covered sufficiently by these Operating Instructions, get in touch with your contact person. You can find contact information for your local contact person on the Internet:

Local contact person (http://www.automation.siemens.com/partner)

Safety notes

2

⚠ CAUTION

Correct, reliable operation of the product requires proper transport, storage, positioning and assembly as well as careful operation and maintenance. Only qualified personnel should install or operate this instrument.

Note

Alterations to the product, including opening or improper repairs of the product, are not permitted.

If this requirement is not observed, the CE mark and the manufacturer's warranty will expire.

2.1 Laws and directives

General requirements

Installation of the equipment must comply with national regulations. For example EN 60079-14 for the European Community.

Instrument safety standards

The device has been tested at the factory, based on the safety requirements. In order to maintain this condition over the expected life of the device the requirements described in these Operating Instructions must be observed.

Environmental conditions according to IEC 61010-1 (2001)

- Indoor use
- Altitude up to 2000m
- Maximum relative humidity 80% for temperatures up to 31°C (88°F) decreasing linearly up to 50% relative humidity from 40°C (104°F)
- Main supply voltage fluctuations up to ±10% of the nominal voltage (see technical specifications)
- Overvoltage category II
- Pollution degree 2

CE-marked equipment

The CE mark symbolizes the compliance of the device with the following guidelines:

- EMC-guideline 89/336/EEC
- Low voltage guideline 73/23/EWG
- ATEX Directive 94/9/EG
- CT: (MI-001) Directive 2004/22/EC

2.2 Installation in hazardous location

⚠ WARNING

Equipment used in hazardous locations must be Ex-approved and marked accordingly.

It is required that the special conditions for safe use provided in the manual and in the Ex certificate are followed!

Ex approvals

CSA Class I, Division 2, Groups A, B, C and D. Code T5 for an ambient temperature of +60 °C.

FM Class I, Division 2, Groups A, B, C and D and Class I, Zone 2, Group IIC indoor/outdoor Type IP67 hazardous (classified) locations

Temperature specifications for Ex use

Temperature class	Ambient temperature [°C]		
	-40 to +40	-40 to +50	-40 to +60
T2	180 (process temperature)	-	-
T3	165 (process temperature)	140 (process temperature)	-
T4	100 (process temperature)	100 (process temperature)	80 (process temperature)
T5	65 (process temperature)	65 (process temperature)	65 (process temperature)
T6	50 (process temperature)	50 (process temperature)	50 (process temperature)

EX requirements

It is required that:

- Electrical connections are in accordance with Elex V (VO in explosion hazardous areas) and EN60079-14 (Installing Electrical Systems in Explosion Hazardous Areas).
- The protective cover over the power supply is properly installed. For intrinsically safe circuits the connection area can be opened.

- Appropriate cable connectors are used for the output cicuits: intrinsically safe: blue, non-intrinsically safe: black
- Sensor and transmitter are connected to the potential equalization. For intrinsically safe output circuits potential equalization must be maintained along the entire connection path.
- Sensor insulation thickness is max. 100mm (only insulated sensors).
- EN50281-1-2 is considered for installation in areas with combustible dust.
- When protective earth (PE) is connected, no potential difference between the protective earth (PE) and the potential equalization (PA) can exist, even during a fault condition.

Description

3

3.1 System components

A SITRANS F M MAG 5000/6000 flowmeter system includes:

- Transmitter (type SITRANS F M MAG 5000/6000)
- Sensor (types: SITRANS F MAG 1100/1100F/3100/3100 P/5100 W)
- Communication module (optional) (types: HART, PROFIBUS PA/DP, MODBUS RTU RS 485, Foundation Fieldbus H1, Devicenet)
- SENSORPROM memory unit

Communication solutions

The SITRANS F USM II range of add on modules, presently including HART, Foundation Fieldbus. MODBUS RTU RS 485, PROFIBUS PA / DP and Devicenet, are all applicable with the SITRANS F M MAG 6000 transmitter.

3.2 Operating principle

The transmitters are microprocessor-based with a built-in alphanumeric display in several languages. The flow measuring principle is based on Faraday's law of electromagnetic induction. Magnet coils mounted diametrically on the measuring pipe generate a pulsed electromagnetic field. The liquid flowing through this electromagnetic field induces a voltage.

The transmitters evaluate the signals from the associated electromagnetic sensors, convert the signals into appropriate standard signals such as 4 ... 20 mA, and also fulfil the task of a power supply unit providing the magnet coils with a constant current.

The transmitter consists of a number of function blocks which convert the sensor voltage into flow readings.

3.3 Applications

The pulsed DC-powered magnetic flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes, and slurries with max. 40% solids.

The main applications can be found in the following sectors:

- Water and waste water
- Chemical and pharmaceutical industries
- Food & beverage industry
- Mining and cements industries

- Pulp and paper industry
- Steel industry
- Power generation; utility and chilled water industry

3.4 Features

Power supply

2 different types of power supply are available. A 12 ... 24 V AC/DC and a 115 ... 230 V AC switch mode type.

Coil current module generates a pulsating magnetizing current that drives the coils in the sensor. The current is permanently monitored and corrected. Errors or cable faults are registered by the self-monitoring circuit.

Input circuit amplifies the flow-proportional signal from the electrodes. The input impedance is extremely high: $>10^{14}$ Ω which allows flow measurements on fluids with conductivities as low as 5 µS/cm. Measuring errors due to cable capacitance are eliminated due to active cable screening.

Digital signal processor converts the analog flow signal to a digital signal and suppresses electrode noise through a digital filter. Inaccuracies in the transmitter as a result of long-term drift and temperature drift are monitored and continuously compensated for via the self-monitoring circuit. The analog to digital conversion takes place in an ultra low noise ASIC with 23 bit signal resolution. This has eliminated the need for range switching. The dynamic range of the transmitter is therefore unsurpassed with a turn down ratio of minimum 3000:1.

CAN communication

The transmitter operates internally via an internal CAN communication bus. Signals are transferred through a signal conditioner to the display module and to/from internal/external option modules and the dialog module.

Dialog module

The display unit consists of a 3-line display and a 6-key keypad. The display shows a flow rate or a totalizer value as a primary reading.

Output module

The output module converts flow data to analog, digital and relay outputs. The outputs are galvanically isolated and can be individually set to suit a particular application.

3.5 MAG 5000/MAG 6000 versions

The transmitters are designed in various versions and offer high performance and easy installation, commissioning and maintenance.

Standard version

The standard version is an IP67 version for compact or remote installation. Its robust design ensures a long lifetime if installed outdoors.

Blind version

This version carries all the normal MAG 5000/6000 features, except those associated with the display and keypad.

Both current and digital outputs are available.

Factory setting of current output in unit is switched off when delivered.

CT version

The MAG 5000/6000 CT version is a custody transfer-approved transmitter.

It is approved according to:

- Cold water pattern approval (MAG 5000/6000 CT):
  - OIML R 49
- Cold water pattern approval (MAG 6000 CT only):
  - MI-001
- Hot water pattern approval (MAG 6000 CT only):
- Heat meter pattern approval (MAG 6000 CT only):
  - OIML R 75
- Other media than water (MAG 6000 CT only):
  - OIML R 117

* Energy metering

- PTB K7.2

SV version (MAG 6000 only)

This version is identical to the standard MAG 6000 transmitters except for the following additional functions:

- Zero point adjustment
- Adjustable excitation frequency up to 44 Hz

Installing/Mounting

4

4.1 Introduction

- SITRANS F flowmeters are suitable for indoor and outdoor installations.

⚠ WARNING
Installation in hazardous location
Special requirements apply to the location and interconnection of sensor and transmitter. See "Installation in hazardous area"

This chapter describes how to install the flowmeter in the compact version as well as in the remote version.

The transmitter is delivered ready for mounting on the sensor. The transmitter is delivered with a compression plate ready for mounting on the sensor. No further assembling is necessary.

The transmitter can be installed either compact on the sensor or remote.

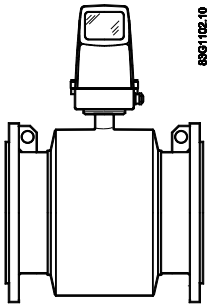


Figure 4-1 Compact installation

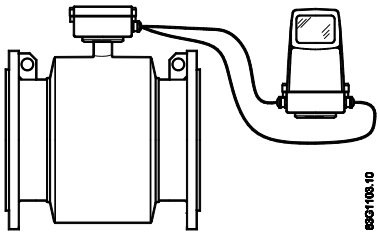

Figure 4-2 Remote installation

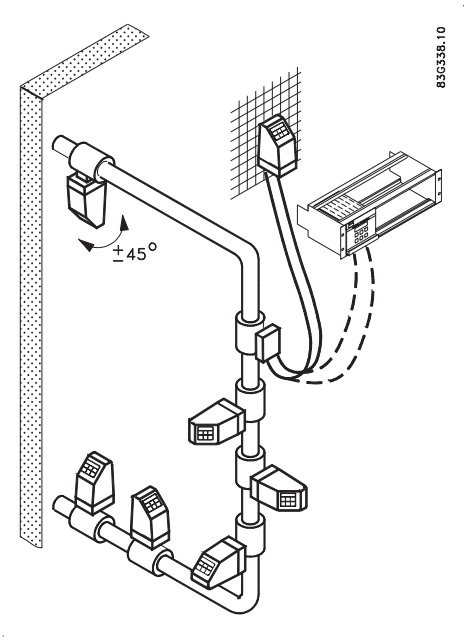
⚠ CAUTION
See Cable requirements (Page 72) before installing transmitter

4.2 Installation conditions

Reading and operating the flowmeter is possible under almost any installation conditions because the display can be oriented in relation to the sensor. To ensure optimum flow measurement, attention should be paid to the following:



Vibrations

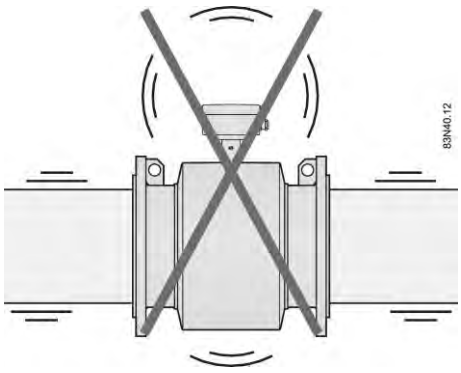


Figure 4-3 Avoid strong vibrations

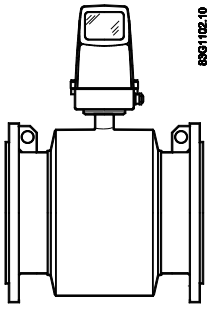
Compact installation



Medium temperature must be in accordance with the graphs showing max. ambient temperature as a function of medium temperature.

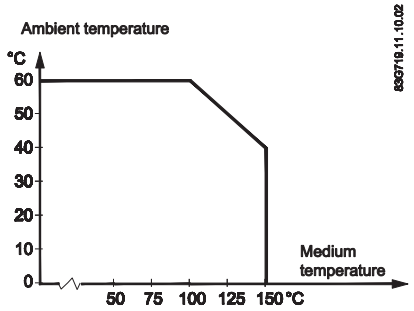


Figure 4-4 Standard, blind and SV versions

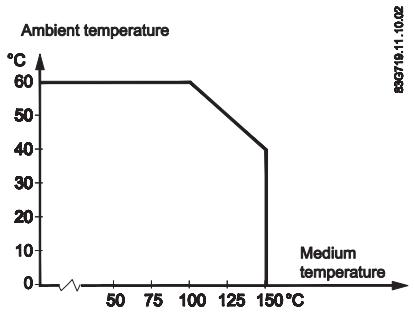

Figure 4-5 CT version

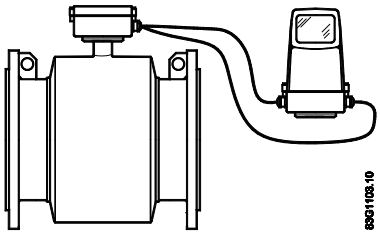
Remote installation



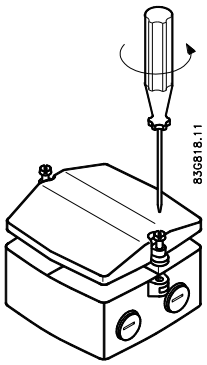
Cable length and type (as described in Cable requirements (Page 72)) must be used.

For installation conditions for sensors, see respective sensor operating instructions.

4.3 MAG 5000/6000 compact

Install MAG 5000 / MAG 6000 compact version

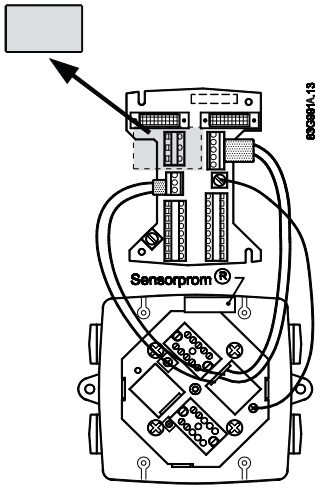
1. Remove and discard terminal box lid of sensor.



2. Ensure SENSORPROM® memory unit is installed.
3. Fit M20 or ½" NPT cable glands for supply and output cables.
4. Unplug the two black plug assemblies for coil and electrode cables in terminal box.
5. Connect earth wire from connection board to bottom of terminal box.
6. Connect 2-pin connector and 3-pin connector as shown to their corresponding terminal numbers on connection board as shown in Electrical connection (Page 36).

Note

System will not register flow if black plugs are not connected to connection board.



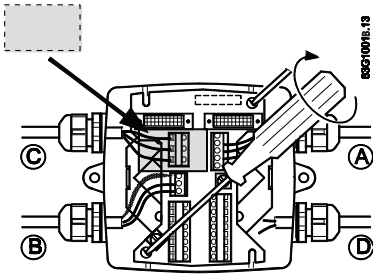
7. Fit supply and output cables through cable glands and connect to connection plate as shown in Electrical connection (Page 36).

8. Mount connection plate in terminal box.

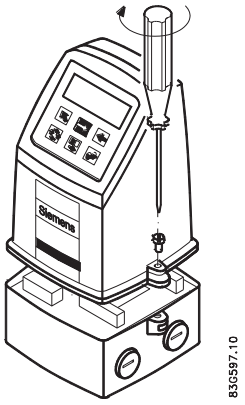
Note

Check that your connection board lines up with SENSORPROM® unit, if not, move SENSORPROM® unit to the other side of terminal box.

SENSORPROM® memory unit connections will be established automatically when connection plate is mounted in terminal box.



9. Tighten cable glands to obtain optimum sealing.
10. Mount transmitter on terminal box.



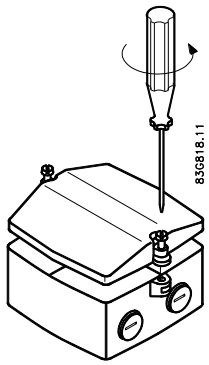
11. Transmitter is ready to be powered up.

NOTICE
Exposing transmitter to direct sunlight may increase operating temperature above its specified limit, and decrease display visibility.
A sunshield is available as accessory.

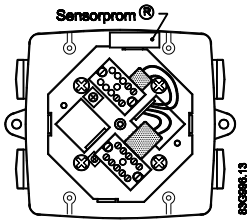
4.4 Remote installation

At sensor

1. Remove terminal box lid.

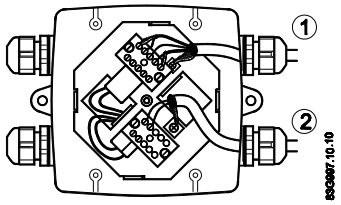


2. Remove SENSORPROM® unit from sensor terminal box and mount it in terminal box of wall mounting unit.



3. Fit M20 or ½" NPT cable glands for cables.

4. Fit and connect electrode (1) and coil (2) cables as shown in Electrical connection (Page 36).

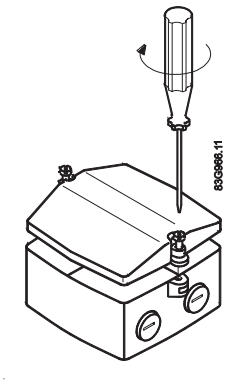


Note

Unscreened cable ends must be kept as short as possible.

Electrode cable and coil cable must be kept separate to prevent interference.

5. Tighten cable glands well to obtain optimum sealing.



⚠ WARNING

Mount terminal box lid before power up.

Wall mounting

1. Mount bracket on a wall or on a horizontal or a vertical pipe using ordinary hose clips or duct straps.

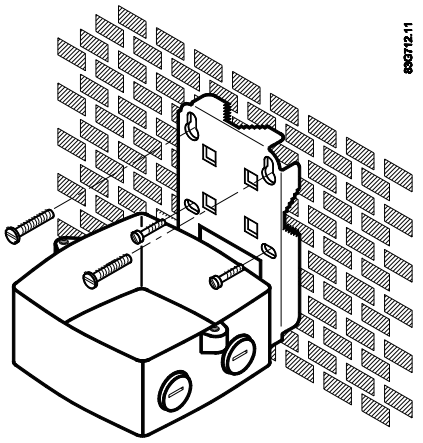


Figure 4-6 Wall mounting

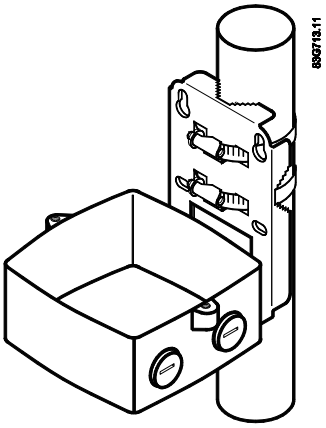

Figure 4-7 Pipe mounting - vertical

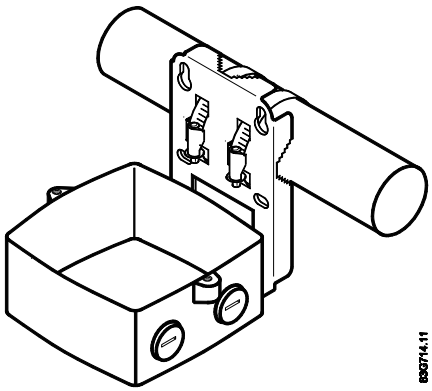

Figure 4-8 Pipe mounting - horizontal

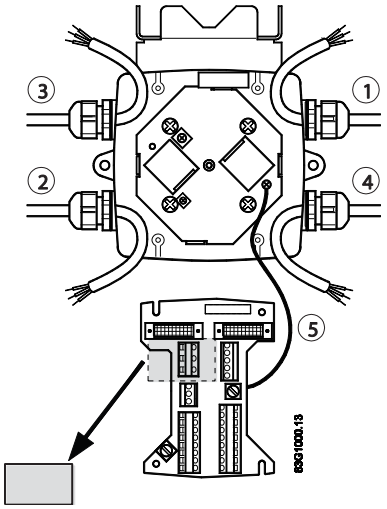
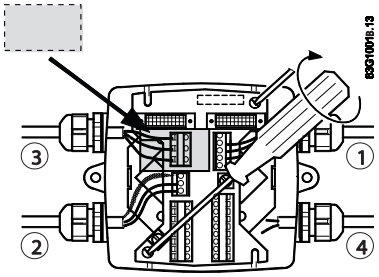
2. Ensure that correct SENSORPROM® memory unit is mounted in wall/pipe mounting unit.

3. Fit M20 or ½" NPT cable glands for cables from bottom or sides of terminal box.
4. Mount earth wire in bottom of terminal box.



① Connect electrode cable
② Connect coil cable - keep separate from electrode cable
③ Connect power supply
④ Connect output cable
⑤ Connect PE (ground) wire

5. Mount connection plate in terminal box.



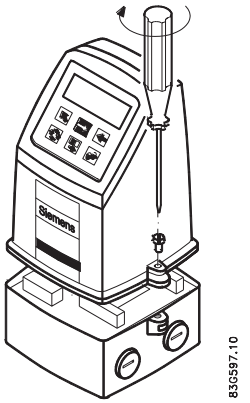
① Electrode cable
② Coil cable
③ Power supply
④ Output cable

6. Fit coil, electrode, supply and output cables through cable glands and connect to connection plate as shown in Electrical connection (Page 36).
7. Fix connection plate with the two diagonally opposite screws.

8. Tighten cable glands to obtain optimum sealing.

⚠ CAUTION
When remote mounted, power supply PE wire must be connected to PE terminal (⏚). Coil cable shield must be connected to SHIELD terminal.

9. Mount transmitter on terminal box.



10. Transmitter is ready to be powered up.

NOTICE
Exposing the transmitter to direct sunlight may increase the operating temperature above its specified limit, and decrease display visibility. A sun shield is available as accessory.

4.5 MAG 5000/6000 CT

To ensure that the settings of this custody transfer-approved MAG 5000/6000 CT transmitter are not changed, it is necessary to install a hardware key to lock the software functions and to seal the device.

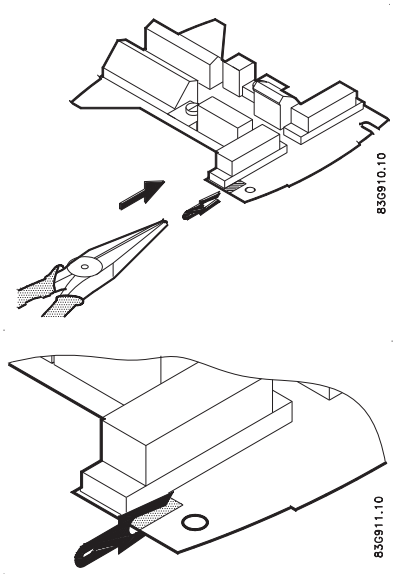
MAG 6000 CT is installed like a Standard MAG 6000 except for the final sealing.

Calibration sealing has been carried out at calibration.

4.5.1 Installing hardware key

Use hardware key on non-verified transmitter

1. Mount hardware key on transmitter connection plate during setting of primary operating parameters such as $Q_{max.}$, low-flow cut-off, units, approvals, etc. in connection with commissioning or calibration. See setup menus in appendix menu diagrams.



2. Remove hardware key after setting up and calibrating unit.

   This locks the menu structure and the selected settings.

Note

Hardware key function

Setting of primary operating parameters is blocked during normal operation.

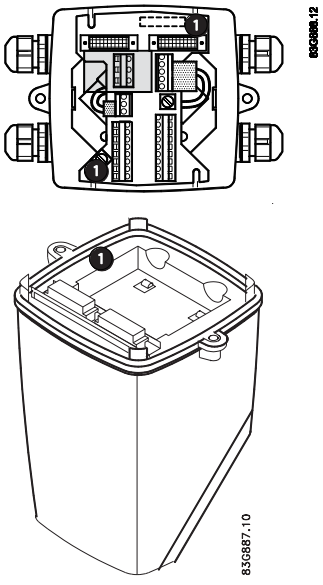
When key is mounted, access to all menu items is gained. When key is removed, primary settings are blocked in accordance with requirements in authorisation.

4.5.2 Seal device

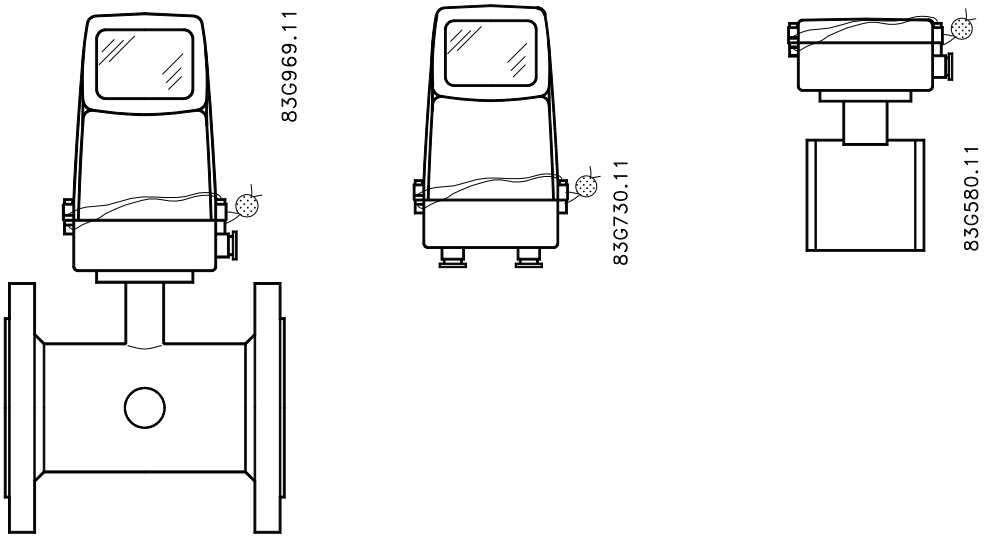
Seal transmitter

⚠ CAUTION
Seal transmitter to prevent unauthorized access.

1. Seal connection plate to prevent access to SENSORPROM® memory unit as shown below. 1 indicates sealing locations.



2. Drill through marked drilling holes in terminal box and transmitter/lid. Seal transmitter externally as shown below.



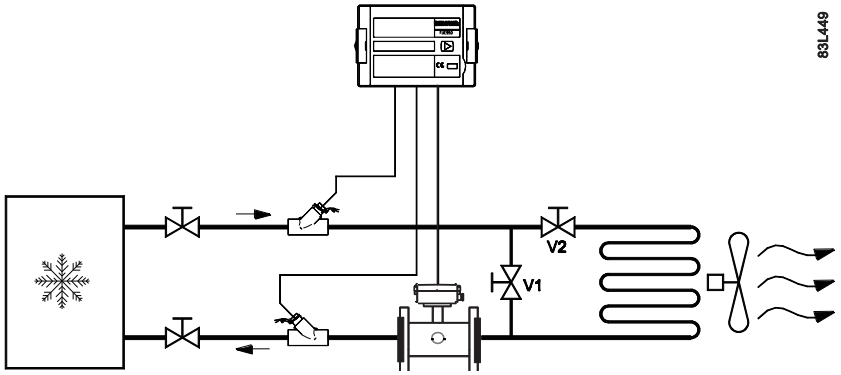
4.5.3 Installation conditions

4.5.3.1 MI-001

MAG 5000/6000 CT together with MAG 5100W (7ME652) are approved for Mi-001 under the following installation conditions.

- DN 50 to 300 mm (2" to 12")
- Horizontal installation
- Compact or remote with max. 3 m cable
- Power supply 115/230 V AC

Other restrictions may apply (see certificate).



4.5.3.2 PTB K7.2

MAG 5000/6000 CT together with MAG 5100W (7ME652) are approved for PTB K7.2 under the following installation conditions.

SITRANS F M MAG 5100 W with MAG 5000/6000CT

- DN 50 to 300 mm (2" to 12")
- Horizontal installation
- Compact or remote with max. 10 m (33 ft.) cable

Other restrictions may apply (see certificate 22.76/10.02)

**insert installation conditions as pasted

4.6 Turning transmitter/keypad

It is possible to alter the standard assembly, e.g. to turn transmitter or keypad.

Transmitter

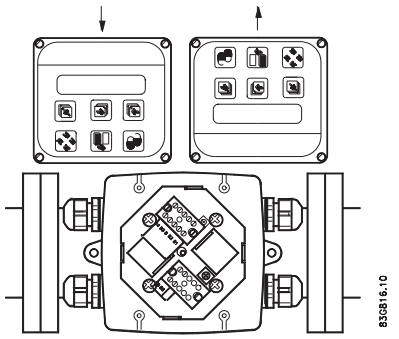


Figure 4-9 Transmitter can be mounted with its front in either direction indicated by the arrows without turning terminal box

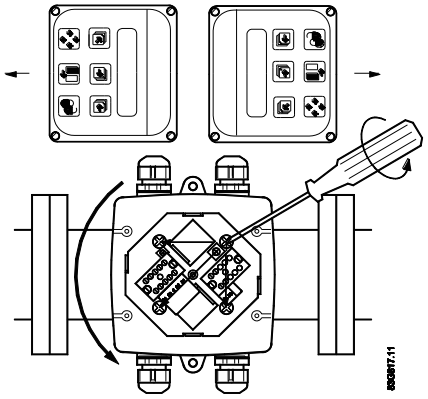

Figure 4-10 Terminal box can be rotated ±90° in order to optimize viewing angle of transmitter display/keypad

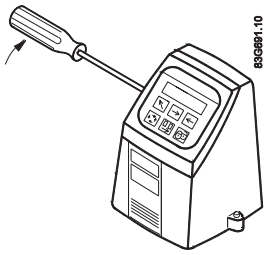
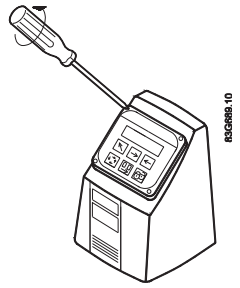
1. Unscrew the four screws in bottom of terminal box.
2. Turn terminal box to required position.
3. Retighten screws firmly.

Keypad

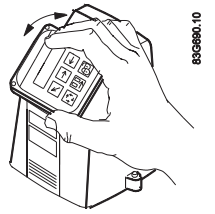
1. Remove outer frame using a screwdriver.



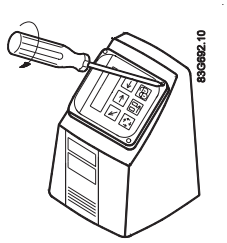
2. Loosen the four screws retaining keypad.



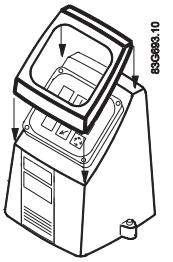
3. Withdraw keypad and turn it to required orientation.



4. Tighten the four screws until a mechanical stop is felt in order to obtain IP67 enclosure.



5. Snaplock outer frame onto keypad (click).



Connecting

5

⚠ WARNING

Mains supply from building installation Class II

A switch or circuit breaker (Max. 15 A) must be installed in close proximity to the equipment and within easy reach of the operator. It must be marked as the disconnecting device for the equipment.

⚠ WARNING

Protective conductor terminal

The required cable is min. AGW16 or 1.5 Cu.

⚠ WARNING

Wire insulation

The insulation between the connected mains supply and 24 V AC/DC supply for the flowmeter must at least be rated with double or reinforced insulation at mains voltage.

For field wiring installation: Ensure that the **National Installation Code** of the country in which the flowmeters are installed is met.

Note

National installation code

Observe country specific installation directives for field wiring.

5.1 Electrical connection

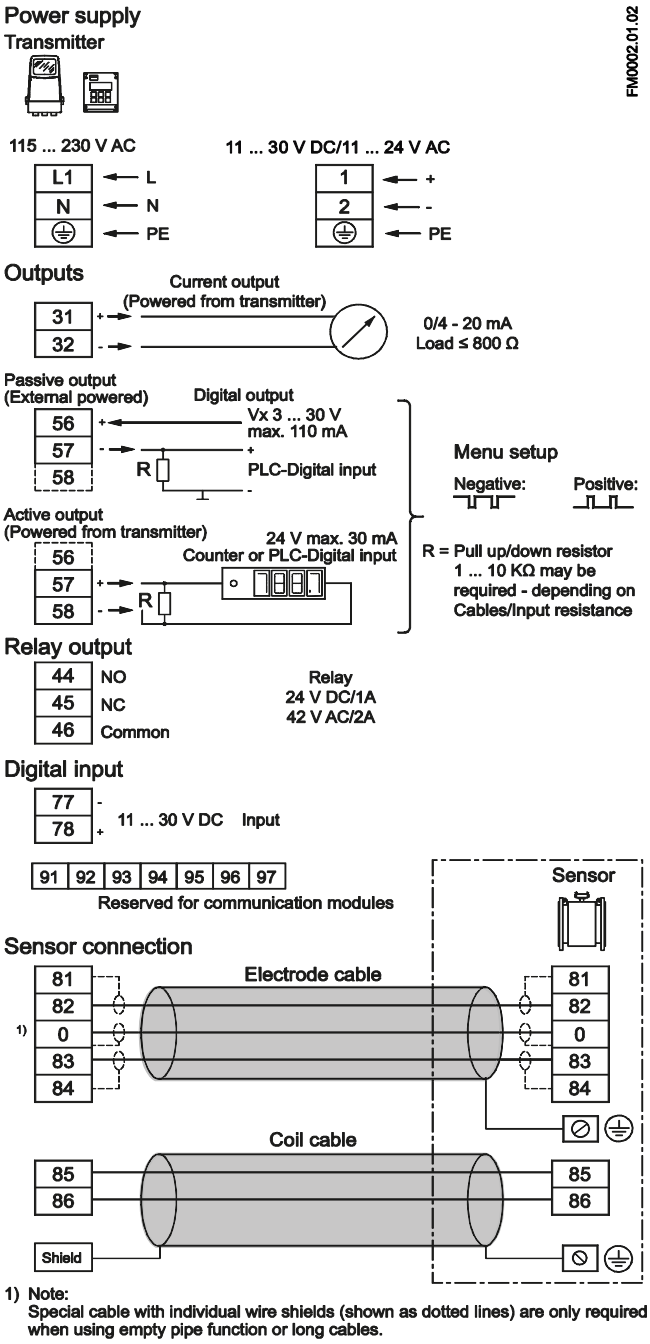


Figure 5-1 Wiring diagram

Note

Terminals 81 and 84 are only to be connected if special electrode cable with double screening is used, e.g. when empty pipe function or long cables are used.

Mains supply

Mains supply 115 ... 230 V AC from building installation Class II.

Note

For DC installations it is recommend to install an under voltage relay or protection circuit in the application where there is a risk of low power supply below the specifications for more than 10 minutes.

⚠ WARNING

Grounding

Connect mains protective earth wire to PE terminal in accordance with diagram (due to class 1 power supply).

Mechanical counter

Connect a 1000 µF capacitor (capacitor+ to terminal 56 and capacitor- to terminal 58) if a mechanical counter is connected to terminals 57 and 58 (active output).

Output cables

Use screened cables if long cables are used in noisy environments.

Digital output

If internal resistance of a load exceeds 10 kΩ, connect an external 10 kΩ load resistor in parallel to this load.

⚠ WARNING

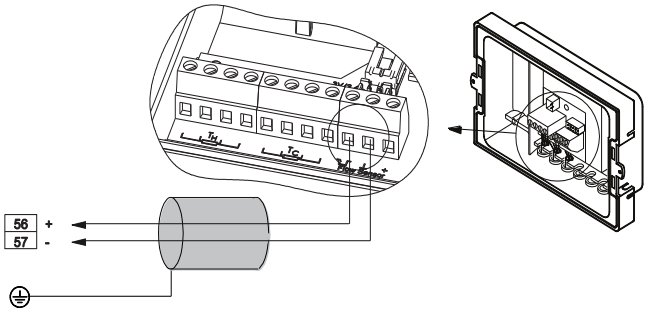
Intrinsically safe terminals

Always ensure that distance between cables/wires is **minimum 50 mm** in order to avoid that wires/terminals of intrinsically safe circuits get into contact with wires of other cables.

Fasten cables/wires in a way that they **cannot** get into contact with each other, not even in case of an error. Keep wire ends as short as possible.

5.2 Electrical connection PTB K7.2

Additional Electrical connection for PTB K7.2 approved MAG5000/6000 with MAG5100W (7ME652)



5.3 Connection of add-on modules

When the add-on module has been installed, the electrical connections are available on terminal rows 91-97.

For more information

Refer to the relevant BUS communication Quick Start or Operating Instructions available at the SITRANS F literature CD or on the internet, at : www.siemens.com/flowdocumentation (www.siemens.com/flowdocumentation).

Commissioning

6

In this chapter it is described how to commission the device via the local user interface (LUI).

The display is described in details in section Local user interface (Page 40).

Furthermore, the following functions are described in details:

- Changing password (Page 42)
- Changing basic settings (Page 43)
- Changing operator menu setup (Page 45)
- Changing language (Page 46)

Detailed diagrams concerning the specific menu are shown in appendix menu diagrams.

For factory settings, see Factory settings.

6.1 MAG 5000/6000 Blind

Note

Does not have a display. All factory settings will be uploaded from the SENSORPROM® unit after power-up.

For sensor dependent factory settings, see Appendix B.

Changing settings

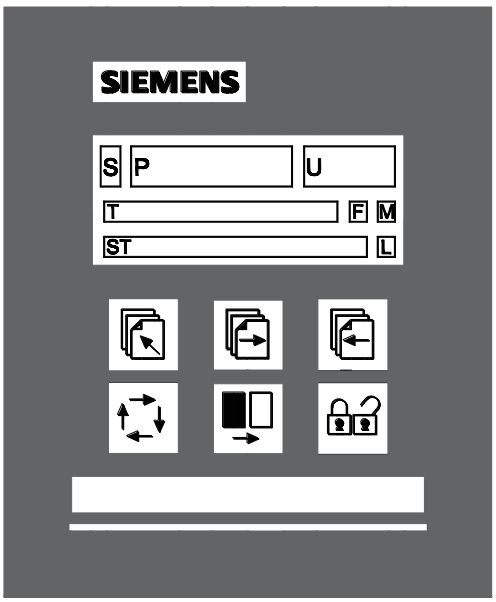
If other settings are required, a standard transmitter with display and similar power supply can be used.

1. Unscrew and remove MAG 5000/6000 Blind.
2. Mount standard MAG 5000/6000 transmitter.
3. Change required settings via display and keypad.

   All changed data will be stored in SENSORPROM® memory unit.
4. Remove standard transmitter and remount Blind transmitter.
5. Fasten screws holding transmitter.

New settings stored in SENSORPROM® memory unit will be uploaded in blind transmitter.

6.2 Local user interface



S Sign field

P Primary field for numeric value flow rate, Totalizer 1 or Totalizer 2)

U Unit field

T Title line with individual information according to operator or setup menu selected.

ST Subtitle line which will either add information to the title line or keep individual information independent of the title line.

F Alarm field. Two flashing triangles will appear in case of a fault condition.

M Mode field

L Lock field

Figure 6-1 Local User Interface

Mode field symbols

Communication mode	Language mode	Sensor characteristics
Service mode	Basic settings	Reset mode
Operator menu	Output	Operator-active
Product identity	External input	Operator-inactive

Lock field symbols

	Ready for change		Access to submenu
	Value locked		RESET MODE: Zero setting of totalizers and initialization of setting

Keypad

The keypad is used to set the flowmeter. The keys function as follows:

TOP UP KEY		This key (when held for 2 sec.) is used to switch between operator menu and setup menu. In transmitter setup menu, a short press will cause a return to previous level.
FORWARD KEY		This key is used to step forward through the menus. It is the only key normally used by the operator.
BACKWARD KEY		This key is used to step backwards through the menus.
CHANGE KEY		With this key settings or numerical values are changed.
SELECT KEY		With this key figures to be changed are selected.
LOCK/UNLOCK KEY		This key enables the operator to change settings and it gives access to submenus.

6.3 Menu structure

The menu is built up of two parts. An **operator menu** and a **setup menu**, see also overview diagrams MAG 5000/6000 and MAG 5000/6000 CT.

Operator menu

The operator menu is for daily operation. It is customized in the operator menu setup. The transmitter always starts up in operator menu No. 1. The forward and the backward keys are used to step through the operator menus.

Setup menu

The setup menu is for commissioning and service only. Access to the setup menu is gained by pressing the top up key for 2 seconds. The setup menu operates in two modes:

- View mode
- Setup mode

View mode is a read-only mode. The pre-selected settings can only be scanned.

Setup mode is a read and write mode. The pre-selected settings can be scanned and changed. Access to the setup mode is password-protected. The factory set password is 1000.

Access to a submenu in the setup menu is gained by pressing the lock key. Press the top up key briefly to return to the previous menu. Press longer (2 sec.) to exit the setup menu and return to operator menu No. 1.

6.4 Changing password

The setup menu is password-protected in order to ensure that only authorized personnel can make any changes in transmitter settings.

Change password as follows:

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach password menu.
4. Press lock/unlock key to unlock password.
5. Use select key and change key to change password.
6. Press lock/unlock key to confirm new password.
7. Press top up key two times to exit setup mode.

See change password diagram.

The factory-set password is 1000, but it can be changed to any value between 1000 and 9999.

Factory setting of password can be re-established as follows:

1. Switch off power supply.
2. While pressing top up key - switch on power supply.
3. Release top up key after 10 sec.

6.5 Changing basic settings

In the basic settings menu it is possible to set the following parameters:

Parameter	Description
Main frequency	Selection of main power supply frequency corresponding to the country in which the flowmeter is installed (e.g. 60 Hz in America).
Flow direction	Selection of correct flow direction in pipe.
Customer units	Setting of user defined volume and time units.
Q_{max}	Setting of measuring range, analog outputs and frequency output. Also individual dimension-dependent setting of value, decimal point, unit and time.
Q_{max} 2	Setting of measuring range, analog outputs and frequency output. Also individual dimension-dependent setting of value, decimal point, unit and time. This menu is only visible if chosen as external digital input.
Totalizer	Setting of unit and decimal point.
Low flow cut-off	Setting of a percentage of selected Q_{max}. This filters noise in installation reducing fluctuations in display and all outputs.
Empty pipe cut-off	When set to "On" the alarm will indicate when sensor is running empty. All readings, display and outputs, will indicate zero.
Velocity unit	Setting of velocity unit per time unit
Error level	Selecting error level at which flowmeter will detect an error.

Note

Totalizer 2 is not visible when batch is selected as digital output.

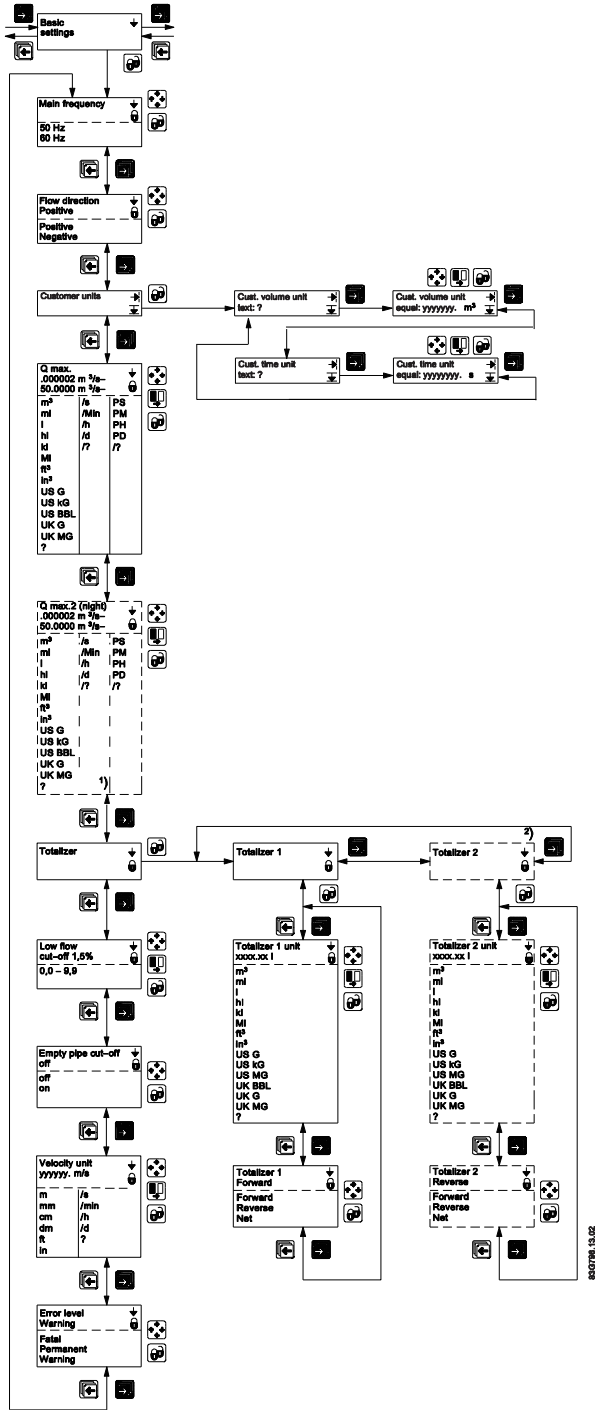
Note

Q_{max} 2 is visible only when chosen as digital input.

Change basic settings as follows:

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key to reach basic settings menu.
4. Press lock/unlock key to unlock settings.
5. Use forward key or backward key to reach relevant menu.
6. Press lock/unlock key to unlock settings.
7. Use select key and change key to change settings.
8. Press lock/unlock key to confirm new settings.

9. Repeat steps 5-8 to change other settings.
10. Press top up key ⇱ two times to exit setup mode.



Decimal point can be positioned and units set individually for flow rate in totalizer 1 and totalizer 2.

Changing decimal point position

1. Enter the respective totalizer menu.
2. Use select key to position cursor below decimal point.
3. Use change key to move decimal point to requested position.

Changing units

1. Use select key to position cursor below unit.
2. Press change key until requested unit is displayed.

6.6 Changing operator menu setup

In the operator menu the menus required for daily operation of the flowmeter are shown. It is possible to hide and change some of the menus in the operator menu. This is done in the operator menu setup menu, see operator menu setup diagram.

Customizing menus in operator menu

To customize the menus in the operator menu perform the following steps:

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach operator menu.

Changing text in line 1

1. Press lock/unlock key to unlock setting.
2. Use change key to select desired text.
3. Press lock/unlock key to confirm selected text.

Note

If "Text" is selected in line 2, this line functions as a heading for the value shown in line 3. Otherwise it shows the actual value of the reading selected.

Enabling two readings

1. Use forward key to reach requested menu.
2. Press lock/unlock key to unlock setting.
3. Use select key to move cursor to upper line.
4. Use change key to select requested reading.
5. Press lock/unlock key to confirm selection.

6. Use select key to move cursor to line 3.
7. Use change key to select desired setting.
8. Press lock/unlock key to confirm new setting.
9. Repeat steps 1-8 for each requested menu.

Showing/hiding menus in operator menu

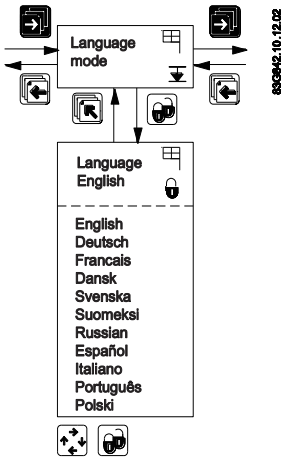
1. Use forward key to reach requested menu.
2. Press lock/unlock key to unlock setting.
3. Use select key to move cursor to √/÷ symbol.
4. Press change key to select visible (√) or hidden (÷).
5. Press lock/unlock key to confirm new setting.

6.7 Changing language

It is possible to change language in transmitter. Default language is English, but it can be changed to various other languages.

Change language as follows:

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach language menu.
4. Press lock/unlock key to unlock language.
5. Use change key to select desired language.
6. Press lock/unlock key to confirm new language.
7. Press top up key two times to exit setup mode.



Functions

7

This chapter describes the various menus of the transmitter in details. The menu diagrams are shown in appendix menu diagrams.

7.1 Output settings

Three outputs are available:

- Current output (range and time constant); terminals 31 and 32.
- Digital output (pulse, frequency, error, limit, or batch settings); terminals 56, 57, and 58.
- Relay output (error, limit, and batch settings); terminals 44, 45, and 46.

Current output

In the current output menu it is possible to select current output direction, range and time constant, see also Current output menu diagram.

If current output "4-20 mA + Alarm" is selected, then alarm level and alarm differentiation may also be defined.

"Alarm level" defines if an alarm should be above 21 mA "High" or below 3.6 mA "Low".

"Alarm diff." defines whether or not the alarm should vary according to selected error level. Error level "Fatal". "Permanent" or "Warning" is selected in "Basic settings".

If Alarm differentiation is set to "Yes", depending on the Alarm level setting, the current output will show:

Alarm level	Output / Error level		
	Fatal	Permanent	Warning
Low	1.3 mA	2 mA	3 mA
High	23 mA	22 mA	21.5 mA

If Alarm differentiation is set to "No", depending on the Alarm level setting, the current output will show:

Alarm level	Output
Low	3.5 mA
High	22.6 mA

For setting of error level, see Error level menu diagram.

If current output is not used, it must be set to "Off".

Digital output

Digital output can be used to configure various settings:

- Pulse (volume/pulse, pulse output, pulse width, pulse polarity, and time constant), see pulse menu diagram.
- Frequency (frequency output, max frequency, and time constant), see frequency menu diagram.
- Error settings (level and number), see error level menu diagram and error number menu diagram.
- Limit settings (number of setpoints, setpoint settings, and hysteresis), see direction/limit menu diagram.
- Batch settings (quantity, time and counter settings, and time constant), see batch menu diagram.

Note

Batch settings

Only MAG 6000.

Not available in MAG 5000, MAG 5000 CT and MAG 6000 CT.

Note

When relay is set to batch function, pulse/frequency is not available on digital output.

Relay outputs

Relay output can be used to configure various settings:

- Error settings (level and number), see error level menu diagram and error number menu diagram.
- Limit settings (number of setpoints, setpoint settings, and hysteresis), see direction/limit menu diagram.
- Batch settings (quantity, time and counter settings, and time constant), see batch menu diagram.
- Cleaning (cycle time), see cleaning menu diagram.

Note

Batch settings

Only MAG 6000.

Not available in MAG 5000, MAG 5000 CT and MAG 6000 CT.

Note

Cleaning

If a cleaning unit is installed together with transmitter, relay output must **always** be used to operate this unit. It cannot be used for other purposes.

7.2 External input

By applying 11 … 30 V DC to terminals 77 and 78, it is possible to perform:

- Batch control (start, stop, hold/continue)
- Reset totalizer
- Force/freeze output
- Q_{max} 2 (night)

See external input menu diagram.

Note

Batch settings

Only MAG 6000.

Not available in MAG 5000, MAG 5000 CT and MAG 6000 CT.

Note

Manual cleaning

If the digital input is used for manual cleaning, the relay output also automatically changes to "cleaning".

7.3 Sensor characteristics

The sensor characteristics menu shows:

- If a SENSORPROM® is installed or not.
- Suppress error P 40 (SENSORPROM® not installed)
- Sensor size.
- Calibration factor.
- Correction factor.
- Excitation.

See also sensor characteristics menu diagram.

7.4 Reset mode

The reset mode is used for resetting totalizers/counters or for restoring MAG 5000/6000 to its factory settings.

Resetting

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach reset mode menu.
4. Press lock/unlock key to enter reset menu.
5. Press forward key to reach totalizer/counter to be reset or default setting menu.
6. Press lock/unlock key to start resetting.

If restoring of factory settings is required:

1. Press lock/unlock key again to confirm destruction of customized settings.

See also reset menu diagram.

Zero point adjustment (MAG 6000 SV only)

Auto adjustment

Before auto zero point adjustment is carried out ensure that valves to and from flowmeter are completely closed and that flow velocity in sensor is zero.

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach reset mode menu.
4. Press lock/unlock key to enter reset menu.
5. Press forward key to reach zero adjust menu.
6. Press lock/unlock key to enter the menu.
7. Use change key to select "auto".
8. Press forward key to view actual offset (lower line in display). Value will be zero after adjustment has been performed.
9. Press lock/unlock key to start adjustment.

Manual adjustment.

1. Press top up key for 2 sec.
2. Enter password.
3. Use forward key or backward key to reach reset mode menu.
4. Press lock/unlock key to enter reset menu.
5. Press forward key to reach zero adjust menu.
6. Press lock/unlock key to enter the menu.
7. Use change key to select "manual".

8. Press forward key and then select key and change key to key in offset value.
9. Press lock/unlock key to start adjustment.

Zero point can be adjusted manually in range -1.000 ... +1.000 m^3/s. If value outside this range is keyed in, zero point adjustment will not be implemented.

See also reset mode menu diagram (MAG 6000 SV).

7.5 Service mode

All outputs of the transmitter can be forced-controlled in the service mode menu, see also service mode menu diagram.

Here it is possible to check whether e.g. the current output is functioning.

Error pending and status log lists are also accessible from this menu and the operating time (in days) can be read.

The forced control is cut off and all previous settings are reinitialized the moment the service mode is left by pressing top up key .

7.6 MAG 5000 CT and MAG 6000 CT settings

Internal totallizers

Depending on the type of approval it is possible to reset the internal totalizers. The type of approval is selected in the reset menu with the hardware key mounted. It is possible to choose between:

- Hot/cold water
- Other liquids

Resetting of totalizers by electrical input is not possible.

Hot/cold water

- Totalizer 1 is allocated to forward flow (cannot be reset)
- Totalizer 2 is allocated to reverse flow (cannot be reset)

Other liquids

Both totalizer 1 and totalizer 2 are allocated to measure the net flow, i.e. any reverse flow will make the totalizers count backwards.

- Totalizer 1 cannot be reset.
- Totalizer 2 can be reset if the flow velocity in the meter pipe is <0.25 m/s. When the totalizer is reset, the pulse output register will also be reset.

Output

- When choosing hot water, changing the output settings is not allowed and the output setting menus are not shown in display.
- When choosing cold water or other liquids, all output settings can be changed.

7.7 MAG 6000 SV

Excitation frequency

The MAG 6000 SV excitation frequency can be changed in sensor characteristics menu to one of the following frequencies:

- 1 $^{9}/_{16}$ Hz
- 3 $^{1}/_{8}$ Hz
- 6 ¼ Hz
- 12½ Hz
- 25 Hz
- 44 Hz

Note

Calibration has been made with the frequency stored in SENSORPROM® memory unit. A change in excitation frequency is not recommended and will always mean decreased measuring accuracy. In some instances, however, it may be necessary to change frequency due to pulsating flow from piston pumps or other resonance frequencies from surroundings.

It is highly recommended to carry out a External input (Page 49) after changing the excitation frequency as the offset is affected by the frequency selected. When this is done, the decrease in measuring accuracy can be kept below 1% o.r.

A too high frequency for the sensor used will cause a coil current alarm indication.

Alarm, error, and system messages

8

8.1 Diagnostics

Error system

Transmitter system is equipped with an error and status log system with 4 groups of information.

(**I**) Information - system will continue to measure as normal, relay and current outputs will not be affected.

(**W**) Warning - system will continue to measure, but an event that may cause a system malfunction and require operator attention has occurred. The cause of the error may disappear on its own.

(**P**) Permanent error - may cause malfunction in the application and operator attention is required.

(**F**) Fatal error - is essential for the operation of the flowmeter. Immediate operator attention is required.

Two menus are available in service and operator menus for registration of information and errors.

- Error pending
- Status log

Note

Registration of errors in different modes

- In setup mode (local dialog) errors are entered only to Error pending list and not to Error log list, and not registered on physical outputs (current or relay).
- In service mode errors are entered to both Error pending and Error log lists, but not registered on physical outputs (current or relay).

Note

Power-off

Both error pending and status logs are reset at power-off.

Error pending

The first 9 pending errors are stored in the error pending list. When the error is corrected, it is removed from the error pending list.

The acceptance level for "error pending" can be individually configured to a particular application.

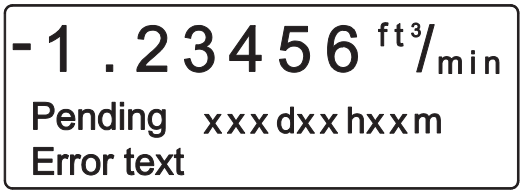
The acceptance level is set in the basic settings menu (Page 43).

Acceptance levels

The following three acceptance levels are selectable.

- Fatal error: Only fatal errors are registered as errors
- Permanent error: Permanent and fatal errors are registered as errors
- Warning (Default value): Warnings, permanent and fatal errors are registered as errors

Error information is displayed in title and subtitle lines, see display layout (Page 40). Title line will show time since occurrence of error in days, hours and minutes. Subtitle line will flash between an error text and a remedy text. Error text will indicate type of error (I, W, P or F), error number, and error text. Remedy text will inform operator of action to take to remove error.



Status log

The latest 9 errors are stored in the status log. Errors are stored in the status log for 180 days, even if they are corrected.

Alarm field

The alarm field on the display will always flash when an error is pending.

Error output

The digital and relay output can be activated individually error by error (error level). The relay output is default selected to error level. An output can also be selected to activate on a single error number.

The alarm field, error output and error pending always operate together.

Operator menu

Error pending and status log are as default enabled (√) in the operator menu.

8.2 List of error numbers

Error No.	*Error text* Remedy text	Comment	Output status	Input status
1	*I1 - Power on* OK	Device powered on	Active	Active
2	*I2 - Add-on module* Applied	A new module has been applied to the system	Active	Active
3	*I3 - Add-on module* Install	An add-on module is defect or has been removed. This can be an internal add-on module	Active	Active
4	*I4 - Param. corrected* OK	A less vital parameter in the transmitter has been replaced by its default value	Active	Active
20	*W20 - Totalizer 1* Reset manually	During initialisation the check of the saved totalizer value has failed. It is not possible to rely on the saved totalizer value anymore. The totalizer value must be reset manually in order to rely on future readings	Active	Active
20	*W20 - Totalizer 2* Reset manually	During initialisation the check of the saved totalizer value has failed. It is not possible to rely on the saved totalizer value anymore. The totalizer value must be reset manually in order to rely on future readings	Active	Active
21	*W21 - Pulse overflow* Adj. pulse settings	Actual flow is too big compared with pulse width and volume/pulse	Reduced pulse width	Active
22	*W22 - Batch timeout* Check installation	Duration of batching has exceeded a predefined maximum time	Batch output on zero	Active
23	*W23 - Batch overrun* Check installation	Batch volume has exceeded a predefined maximum overrun volume	Batch output on zero	Active
24	*W24 - Batch neg. flow* Check flow direction	Negative flow direction during batch	Active	Active
30	*W30 - Overflow* Adj. Q_{max}	Flow is above Q_{max} settings	Max. 120 %	Active
31	*W31 - Empty pipe*	Pipe is empty	Zero	Active
40	*P40 - SENSORPROM®* Insert/change	SENSORPROM® unit not installed	Active	Active
41	*P41 - Parameter range* Switch off and on	A parameter is out of range. The parameter could not be replaced by its default value. The error will disappear at the next power-on	Active	Active

Error No.	*Error text* Remedy text	Comment	Output status	Input status
42	*P42 - Current output* Check cables	Current loop is disconnected or the loop resistance is too big	Active	Active
43	*P43 - Internal error* Switch off and on	Too many errors occurred at the same time. Some errors are not detected correctly	Active	Active
44	*P44 - CT SENSORPROM®*	SENSORPROM® unit has been used as CT version	Active	Active
60	*F60 - CAN comm. error* Transmitter/AOM	CAN bus communication error. An add-on module, the display module or the transmitter is defective	Zero	Inactive
61	*F60 - SENSORPROM® error* Replace	It is not possible to rely on the data in SENSORPROM® unit anymore	Active	Active
62	*F62 - SENSORPROM® ID* Replace	The SENSORPROM® unit ID does not comply with the product ID. The SENSORPROM® unit is from another type of product SITRANS F C, SITRANS F US etc.	Zero	Inactive
63	*F63 - SENSORPROM®* Replace	It is not possible to read from the SENSORPROM® unit anymore	Active	Active
70	*F70 - Coil current* Check cables	Coil excitation has failed	Active	Active
71	*F71 - Internal error* Replace transmitter	Internal convertion error in ASIC	Active	Active

Service and maintenance

9

The device is maintenance-free, however, a periodic inspection according pertinent directives and regulations must be carried out.

An inspection can include check of:

- Ambient conditions
- Seal integrity of the process connections, cable entries, and cover screws
- Reliability of power supply, lightning protection, and grounds

Under ideal conditions the flowmeter will operate continuously with no manual adjustment or intervention required.

The SITRANS F M Verificator is an external tool developed for verifying the MAG 5000/6000 system, installation, and application. It is a highly advanced instrument, which carries out the complex verification of the entire flowmeter system according to unique SIEMENS patented principles. The verification test is automated and the instrument easy to use, so no human error or influence will affect the verification.

9.1 Transmitter check list

If unstable/wrong measurements occur, it is often due to insufficient/wrong earthing or potential equalization. If earthing connection is OK, check transmitter as described below, and sensor as described in sensor check lists (see the respective operating instructions).

The easiest way to check the transmitter in a SITRANS F M installation is to replace the transmitter with another MAG 5000/6000 with a similar power supply.

As all settings are stored in and downloaded from the SENSORPROM®, replacement is easily done and no extra settings need to be made.

Check transmitter

If no replacement transmitter is available, check transmitter according to the following check table.

Power on transmitter		
0	Display light on?	Yes ⇒ 1
		No ⇒ 2
1	Flashing error triangles?	Yes ⇒ Check error table
		No ⇒ 1.2
1.2	Output and display readings OK?	Yes ⇒ 1.2.1
		No ⇒ 1.2.2

Power on transmitter		
1.2.1	Transmitter OK	Check application Check installation/sensor/earthing connection etc.
1.2.2	Check cables/conndections Check connection board Check pins in transmitter multiplug	OK ⇒ 1.2.1
		Not OK ⇒ correct fault
2	Check cables/conndections Check connection board Check pins in transmitter multiplug	OK ⇒ 2.1
		Not OK ⇒ Correct fault
2.1	Output readings OK?	Yes ⇒ 2.1.1
		No ⇒ 2.1.2.
2.1.1	Dispaly defective	Replace display
2.1.2	Transmitter defective	Replace transmitter

Note

Sensor check list

Check list for sensors are included in the respective sensor operating instructions.

9.2 Technical support

NOTICE
Repair and service must be carried out by approved Siemens Flow Instruments personnel only.

Note

Siemens Flow Instrument defines sensors as non-repairable products.

Technical Support

If you have any technical questions about the device described in these Operating Instructions and do not find the right answers, you can contact Technical Support:

- Via the Internet using the **Support Request:**
  Support request (http://www.siemens.com/automation/support-request)
- Phone: +49 (0) 180 5050 222

Further information about our technical support is available in the Internet at
Technical support (http://support.automation.siemens.com/WW/view/en/16604318)

Service & Support on the Internet

In addition to our documentation, we offer a comprehensive knowledge base online on the Internet at:

Service and support (http://www.siemens.com/automation/service&support)

There you will find:

- The latest product information, FAQs, downloads, tips and tricks.
- Our newsletter, providing you with the latest information about your products.
- A Knowledge Manager to find the right documents for you.
- Our bulletin board, where users and specialists share their knowledge worldwide.
- You can find your local contact partner for Industry Automation and Drives Technologies in our partner database.
- Information about field service, repairs, spare parts and lots more under "Services."

Additional Support

Please contact your local Siemens representative and offices if you have additional questions about the device

Find your contact partner at:

Local contact person (http://www.automation.siemens.com/partner)

9.3 Return procedures

Enclose the delivery note, the cover note for return delivery together with the declaration of decontamination form on the outside of the package in a well-fastened clear document pouch.

Required forms

- **Delivery Note**
- **Cover Note for Return Delivery** with the following information

  Cover note
  (http://cache.automation.siemens.com/dnl/zY/zY0OTg1AAAA_16604370_TxtObj/Begleitschein_RW_AD.pdf)

  – product (ordering number)

  – number of devices or spare parts returned

  – reason for the return

- **Declaration of Decontamination**

  Decontamination declaration
  (http://pia.khe.siemens.com/efiles/feldg/files/Service/declaration_of_decontamination_en.pdf)

  With this declaration you certify *that the returned products/spare parts have been carefully cleaned and are free from any residues.*

  If the device has been operated together with toxic, caustic, flammable or water-damaging products, clean the device before return by rinsing or neutralizing. Ensure that all cavities are free from dangerous substances. Then, double-check the device to ensure the cleaning is completed.

  We will not service a device or spare part unless the declaration of decontamination confirms proper decontamination of the device or spare part. Shipments without a declaration of decontamination will be cleaned professionally at your expense before further proceeding.

You can find the forms on the Internet and on the CD delivered with the device.

9.4 Recalibration

Siemens A/S Flow Instruments offers to recalibrate the sensor. The following calibrations are offered as standard:

- Standard matched pair calibration

Note

For recalibration the SENSORPROM® memory unit must always be returned with the sensor.

Troubleshooting/FAQs

10

Symptom	Output signals	Error code	Cause	Remedy
Empty display	Minimum		1. No power supply	Power supply Check MAG 5000/6000 for bended pins on the connector
			2. MAG 5000/6000 defective	Replace MAG 5000/6000
No flow signal	Minimum		1. Current output disabled	Turn on current output
			2. Digital output disabled	Turn on digital output
			3. Reverse flow direction	Change direction
		F70	Incorrect or no coil current	Check cables/connections
		W31	Measuring pipe empty	Ensure that the measuring pipe is full
		F60	Internal error	Replace MAG 5000/6000
	Undefined	P42	1. No load on current output	Check cables/connections
			2. MAG 5000/6000 defective	Replace MAG 5000/6000
		P41	Initializing error	Switch off MAG 5000/6000, wait 5 sec. and switch on again
Indicates flow with no flow in pipe	Undefined		Measuring pipe empty	Select empty pipe cut-off
			Empty pipe cut-off is OFF	Ensure that the measuring pipe is full
			Electrode connection missing/electrode cable is insufficiently screened	Ensure that electrode cable is connected and sufficiently screened
Unstable flow signal	Unstable		1. Pulsating flow	Increase time constant
			2. Conductivity of medium too low	Use special electrode cable
			3. Electrical noise potential between medium and sensor	Ensure sufficient potential equalization
			4. Air bubbles in medium	Ensure medium does not contain air bubbles
			5. High concentration of particles or fibres	Increase time constant
Measuring error	Undefined		Incorrect installation	Check installation
		P40	No SENSORPROM® unit	Install SENSORPROM® unit
		P44	CT SENSORPROM® unit	Replace SENSORPROM® unit or reset SENSORPROM® unit with MAG CT transmitter
		F61	Defective SENSORPROM® unit	Replace SENSORPROM® unit
		F62	Wrong type of SENSORPROM® unit	Replace SENSORPROM® unit

Symptom	Output signals	Error code	Cause	Remedy
		F63	Defective SENSORPROM® unit	Replace SENSORPROM® unit
		F71	Loss of internal data	Replace MAG 5000/6000
	Maximum	W30	Flow exceeds 100% of Qmax.	Check Q_{max} (Basic Settings)
		W21	Pulse overflow Volume/pulse too small	Change volume/pulse
			Pulse width too large	Change pulse width
Measuring approx. 50%			Missing one electrode connection	Check cables
Loss of totalizer data	OK	W20	Initializing error	Reset totalizer manually
##### Signs in display	OK		Totalizer roll over	Reset totalizer or increase totalizer unit

Technical data

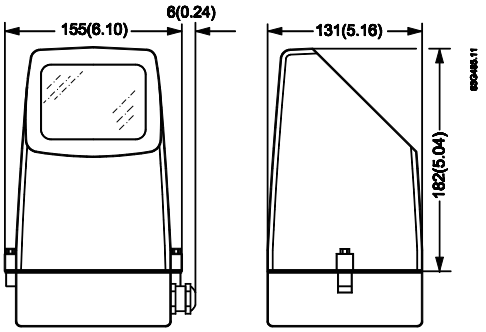
11

11.1 Technical specifications

Mode of operation and design	Measuring principle	Electromagnetic with pulsed constant field
	Empty pipe	Detection of empty pipe (special cable required in remote mounted installation)
	Excitation frequency	Depends on sensor size
	Electrode input impedance	> 1 x 10^{14} Ω
Input	**Digital input**	11 ... 30 V DC, R_i = 4.4 KΩ
	Activation time	50 ms
	Current	$I_{DC\ 11\ V}$ = 2.5 mA, $I_{DC\ 30\ V}$ = 7 mA
Output	**Current output**	
	Signal range	0 ... 20 mA or 4 ... 20 mA, Alarm
	Load	< 800 Ω
	Time constant	0.1 … 30 s, adjustable (for batch: fixed at 0.1 s)
	Digital output	
	Frequency	0 ... 10 kHz, 50% duty cycle (uni/bidirectional)
	Pulse (active)	DC 24 V, 30 mA, 1 kΩ ≤ R_i ≤10 kΩ, short-circuit protected (power supplied from flowmeter)
	Pulse (passive)	DC 3 … 30 V, max. 110 mA, 200 Ω ≤ R_i ≤10 kΩ (powered from connected equipment)
	Time constant	0.1 … 30 s, adjustable (for batch: fixed at 0.1 s)
	Relay output	
	Time constant	Changeover relay, same as current output
	Load	42 V AC/2 A, 24 V DC/1 A
Low flow cut off	0 ... 9.9% of maximum flow	
Galvanic isolation	All inputs and outputs are galvanically isolated	
Max. measuring error (incl. sensor and zero point)	MAG 5000	0.4% ± 1 mm/s (for v > 0.1 m/s)

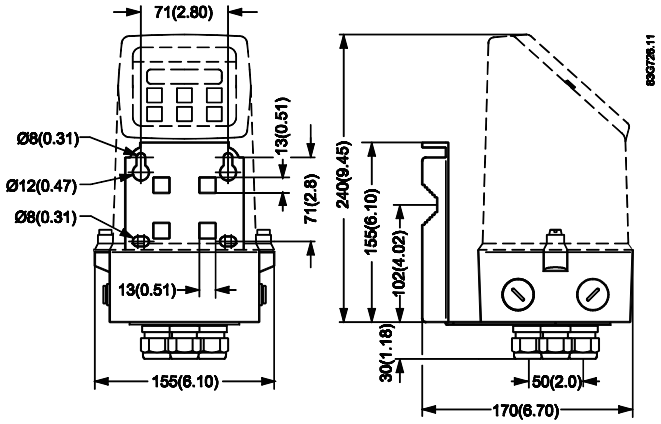
	MAG 6000	0.2% ± 1 mm/s (for v > 0.1 m/s)
Functions	Flow rate, 2 totalizers, low-flow cut-off, empty pipe cut-off, flow direction, error system, operating time, uni/bidirectional flow, limit switches, pulse output, control for cleaning and batch	
Rated operation conditions	**Ambient temperature**	
	Operation	Standard IP67, 19", blind and SV versions: -20 ... +60 °C (-4 ... +140 °F) CT version: -20 ... +50 °C (-4 ... +122 °F)
	Storage	-40 ... +70 °C (-40 ... +158 °F)
Mechanical load	18 ... 1000 Hz, 3.17 G rms, sinusoidal in all directions to IEC 68-2-36	
Degree of protection	IP67/NEMA 4X/6 to IEC 529 and DIN 40050 (1 mH_2O 30 min.)	
EMC performance	EN 61326-1 (industrial environments)	
	EN 61326-2-5	
Display and keypad	Totalizer	Two eight-digit counters for forward, net or reverse flow
	Display	Background illumination with alphanumeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign
	Time constant	Time constant as current output time constant
Design	Enclosure material	Fiber glass reinforced polyamide; optional (IP67 only): AISI 316 stainless steel
	Dimensions	See dimensional drawings
	Weight	0.75 kg (2 lb)
Power supply	115 ... 230 V AC +10% -15%, 50 ... 60 Hz, Fuse: 500 mA T 11 ... 30 V DC or 11 ... 24 V AC; Fuse 2 A T	
Power consumption	115 ... 230 V AC: 17 VA 24 V AC: 9 VA, I_N = 380 mA, I_{ST} = 8 A (30 ms) 12 V DC: 11 W, I_N = 920 mA, I_{ST} = 4 A (250 ms)	
Certificates and approvals	CE, C-UL US general purpose, C-tick, CSA/FM Class 1, div 2	
	Custody transfer approval (MAG 5000/6000 CT)	Cold water pattern approval: PTB OIML R 49, MI-001 Hot water pattern approval: DANAK OIML R 75 (MAG 6000 CT) Other media than water (milk, beer etc.) pattern approval: DANAK OIML R 117 (MAG 6000 CT) Energy metering : PTB K7.2
Communication	MAG 5000	Without communication or HART as option
	MAG 6000	Prepared for client mounted add-on modules: HART, MODBUS RTU/RS485, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA, PROFIBUS DP as add-on modules
	MAG 5000 CT / MAG 6000 CT	No communication modules approved

Transmitter IP67/NEMA 4X/6 compact polyamide



Weight: MAG 5000/6000: 0.75 kg (1.65 lbs)

Transmitter IP67/NEMA 4X/6 wall-mounted polyamide



Weight(transmitter and wall mounting bracket): 1.65 kg (3.64 lbs)

11.2 Accuracy

For accuracy reference conditions, please see below.

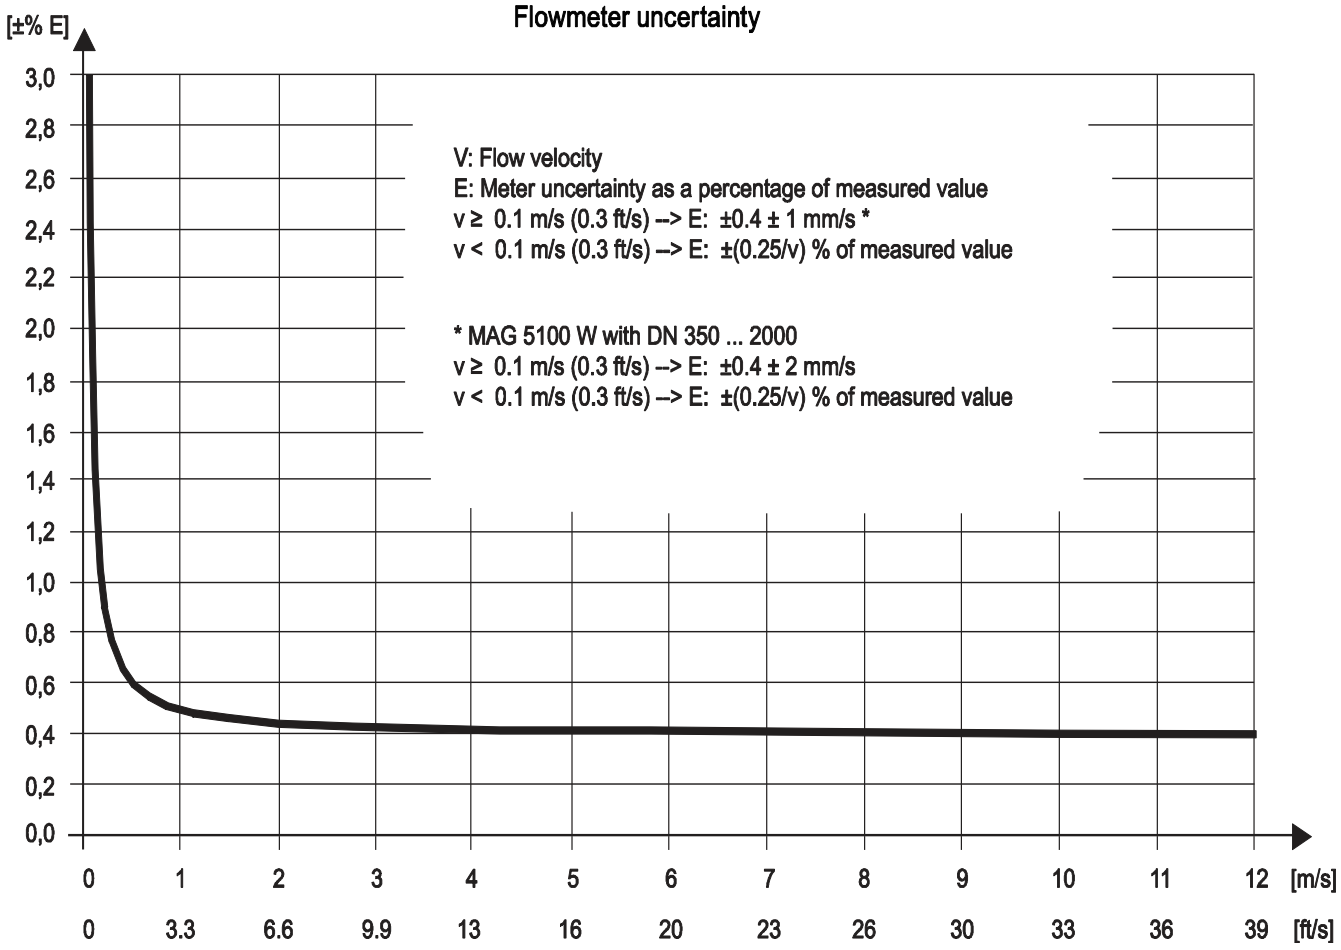


Figure 11-1 MAG 5000 with MAG 1100, MAG 1100 F, MAG 5100 W, MAG 3100 and MAG 3100 P and MAG 6000 with MAG 1100 (PFA), MAG 1100 F (PFA)

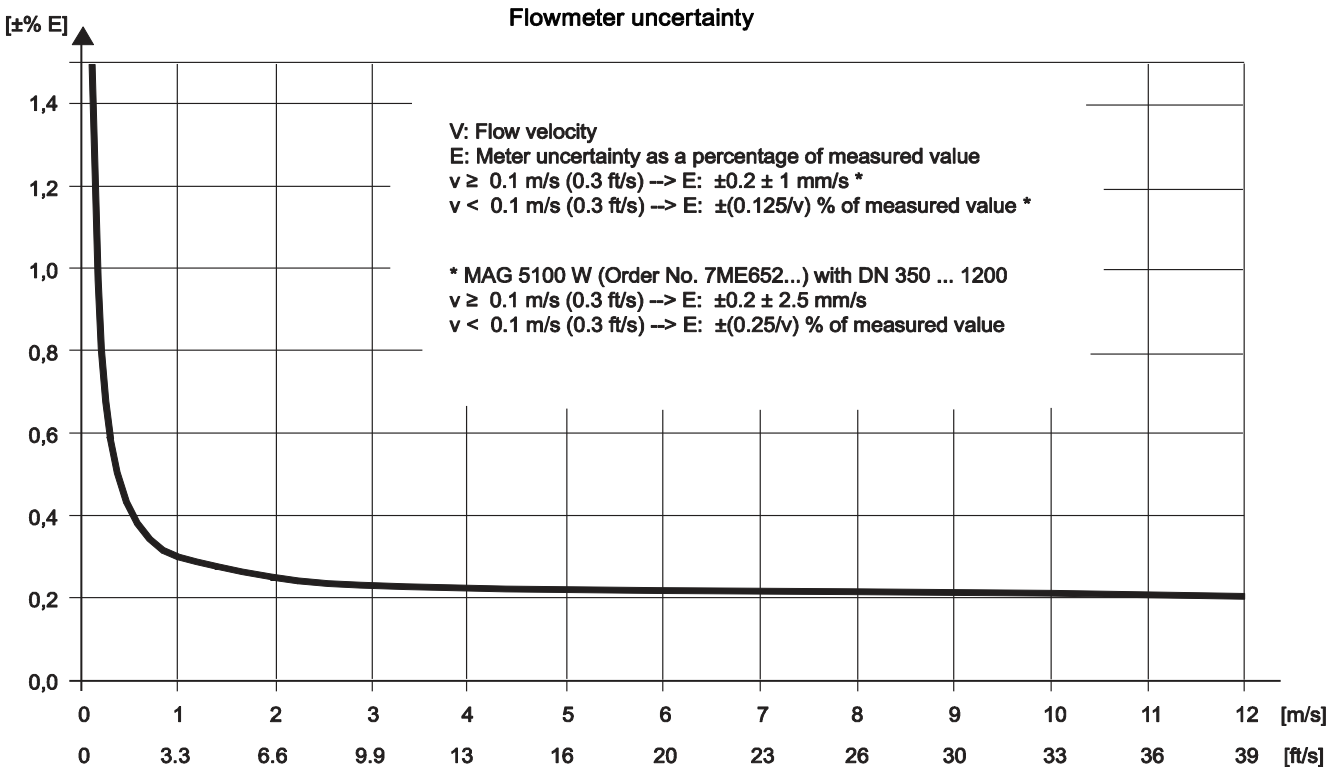

Figure 11-2 MAG 6000 with MAG 1100 (not PFA), MAG 1100 F (not PFA), MAG 5100 W, MAG 3100 and MAG 3100 P

Reference conditions

(ISO 9104 and DIN/EN 29104)

A calibration certificate is shipped with every sensor and calibration data are stored in SENSORPROM memory unit.

Medium temperature	20°C ± 5°C (68°F ± 9°C)
Ambient temperature	20°C ± 5°C (68°F ± 9°C)
Supply voltage	U_n ± 1%
Warming-up time	30 minutes
Incorporation in conductive pipe section Inlet section Outlet section	 10 x DN (DN ≤ 1200/48") 5 x DN (DN > 1200/48") 5 x DN (DN ≤ 1200/48") 3 x DN (DN > 1200/48")
Flow conditions	Developed flow profile

Reference conditions for sensor calibration

Current output	As pulse output ± (0.1% of actual flow + 0.05% FSO)
Effect of ambient temperature Display/frequency/pulse output Current output	 < ± 0.003% / °C act. < ± 0.005% / °C act.
Effect of supply voltage	< 0.005% of measuring value on 1% change
Repeatability	± 0.1% of actual flow for V ≥ 0.5 m/s (1.5 ft/s) and conductivity ≥ 10 µS/cm

Additions in the event of deviations from reference conditions

11.3 Output characteristics

Current output

Output characteristics	Bidirectional mode	Unidirectional mode
0...20 mA		4...20 mA		
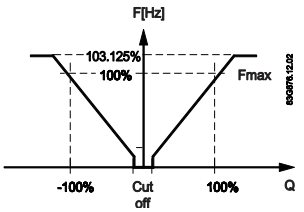
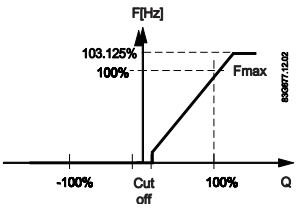
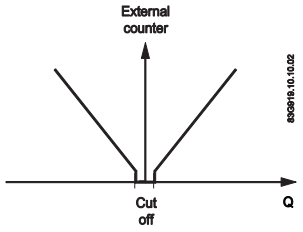
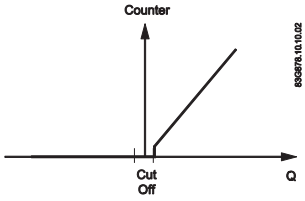
Frequency output

Bidirectional mode	Unidirectional mode
	




Pulse output

Bidirectional mode	Unidirectional mode
	


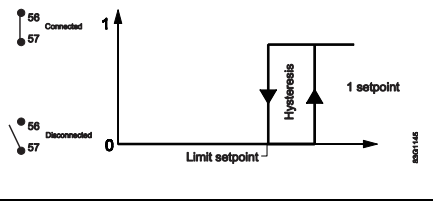


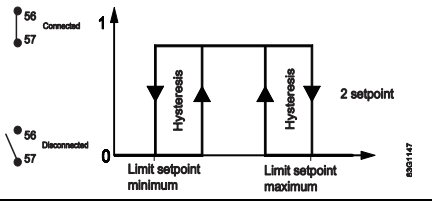
Relay output

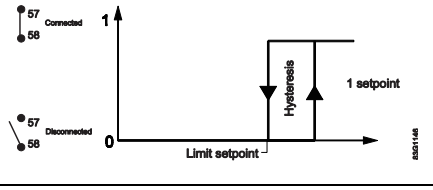
Bidirectional mode		Unidirectional mode	
Power down		Active	
Error relay output

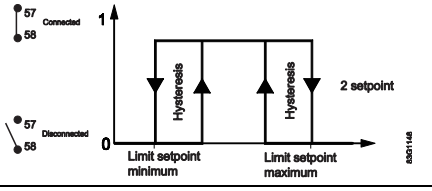
Bidirectional mode		Unidirectional mode	
No error		Error	
Limit switch (can be used as direction switch)

1 set point	2 set points
	Passive Digital output	Passive Digital output

1 set point	2 set points
		






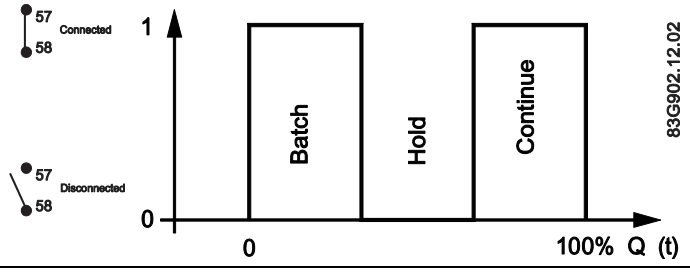


Note

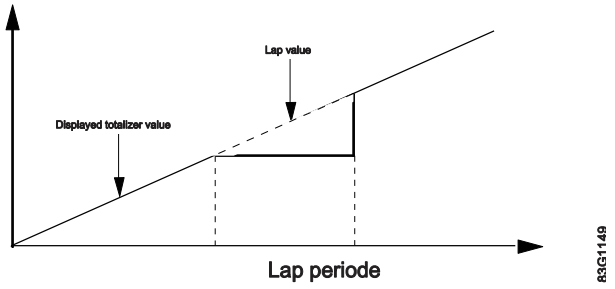
Active digital output is not avaiable with MAG 6000 I.

Batch on digital output

Unidirectional mode (forward flow only)



Totalizer lap



Batch on relay output

Unidirectional mode (forward flow only)			
Hold		Batch	
11.4 Cable data

Description

Cable for standard electrode or coil	
Electrode cable, double shielded	
Cable kit with standard coil cable and electrode cable double shielded (also available as low noise cable for MAG 1100 sensor)	

Technical data

		Standard electrode cable (electrode/coil)	Special cable (electrode)
Basic data	No. of conductors	3	3
	Sqr. area	1.5 mm^2	0.25 mm^2
	Screen	Yes	Double
	Color code	Brown, blue, black	Brown, blue, black
	Outside color	Grey	Grey
	Ext. diameter	7.8 mm	8.1 mm
	Conductor	Flexible CU	Flexible CU
	Isolation material	PVC	PVC
Ambient temperature	Flexible installation	-5 ... +70°C (23 ... 158°F)	-5 ... +70°C (23 ... 158°F)
	Non-flexible installtaion	-30 ... +70°C (-22 ... 158°F)	-30 ... +70°C (-22 ... 158°F)
Cable parameter	Capacity	161.50 pF/m	N/A
	Inductance	0.583 µH/m	N/A
	L/R	43.83 þH/Ω	N/A

11.5 Cable requirements

		Coil cable	Electrode cable
Basic data	No. of conductors	2	3
	Min. sqr. area	0.5 mm^2	0.2 mm^2
	Screen	Yes	Yes
	Max. capacitance	N/A	350 pF/m
Max. cable loop resistance	Media temperature:		
	< 100 °C	40 Ω	N/A
	> 200 °C	6 Ω	N/A
Cable glands on sensor	M20x1.5 gland - Cable ø 5 ... 13 mm (0.20 ... 0.51 inches)		
	½ NPT gland - cable ø 5 ... 9 mm (0.20 ... 0.35 inches)		

WARNING

Cable glands

For Ex zone 1 installations only certified cable glands with protection type "e" can be used for the power supply and the coil cable. The cable glands must be approved for the actual temperature and cable dimension.

Spare parts/Accessories

12.1 Ordering

In order to ensure that the ordering data you are using is not outdated, the latest ordering data is always available on the Internet:

Catalog process instrumentation (http://www.siemens.com/processinstrumentation/catalogs)

12.2 Accessories

Description	
Wall mounting unit	
Display protection lid	
Communication modules for MAG 6000	
12.3 Spare parts

Description	
Connection plate	SENSORPROM® memory unit	Display unit	
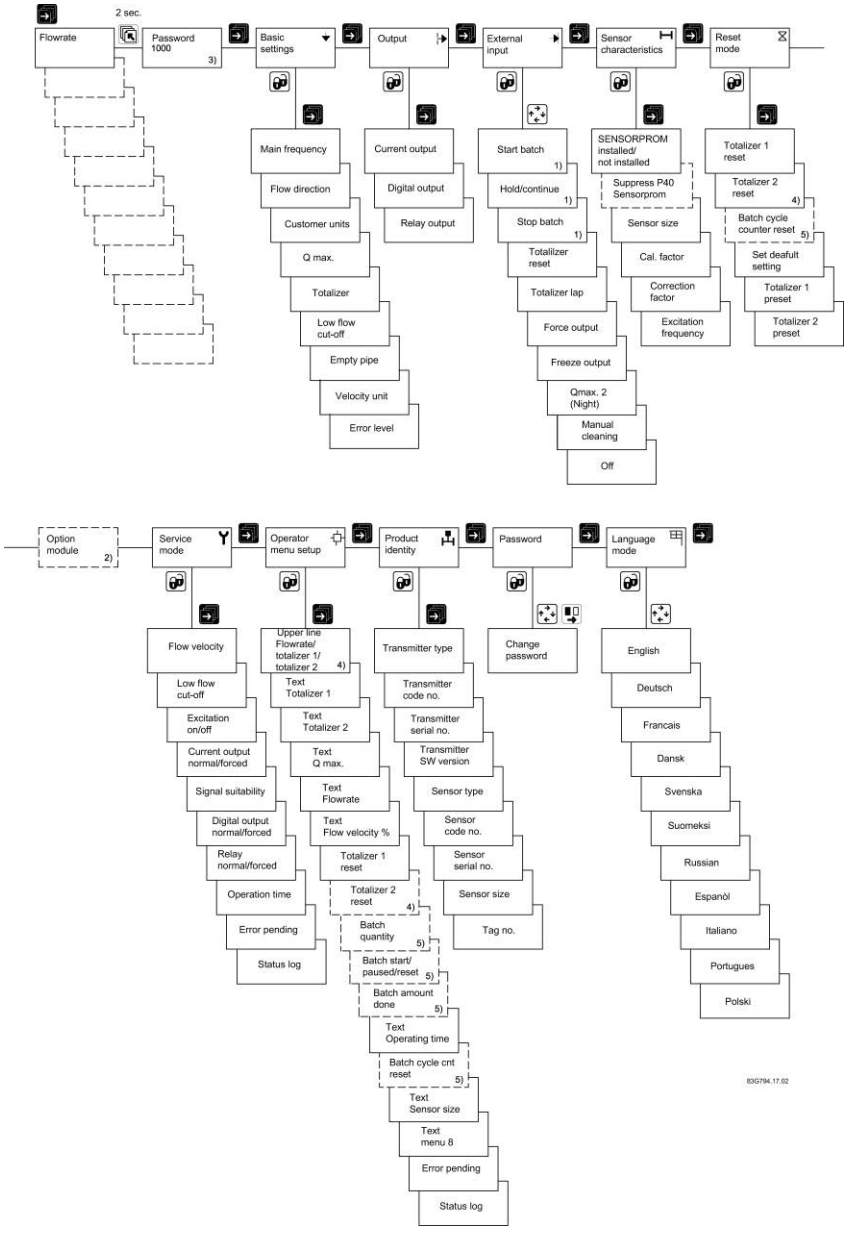
Communication modules for MAG 6000	
12.4 Sun shield

Description	
Sun shield	
Menu diagrams

A

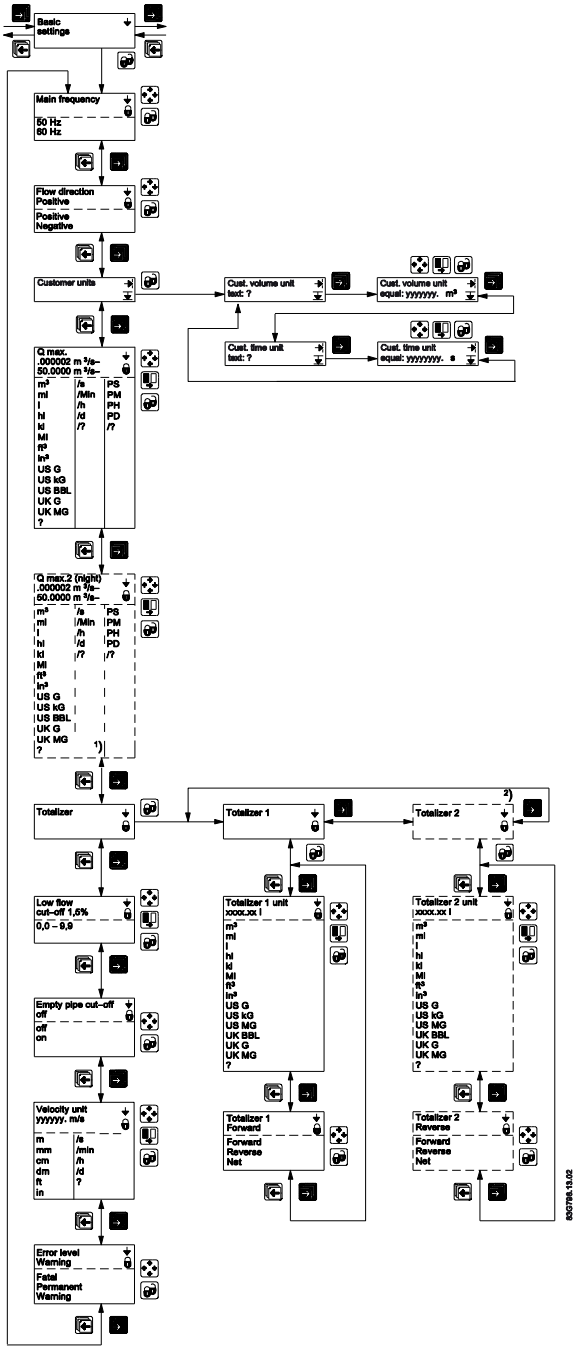
A.1 Transmitter menu overview

The menu diagrams shown on the following pages apply to MAG 5000/6000 as well as MAG 6000 I.



1) Not available in MAG 5000
2) Add-on module
3) Factory-set password: 1000
4) Not available when batch
5) Only available when batch

A.2 Basic settings

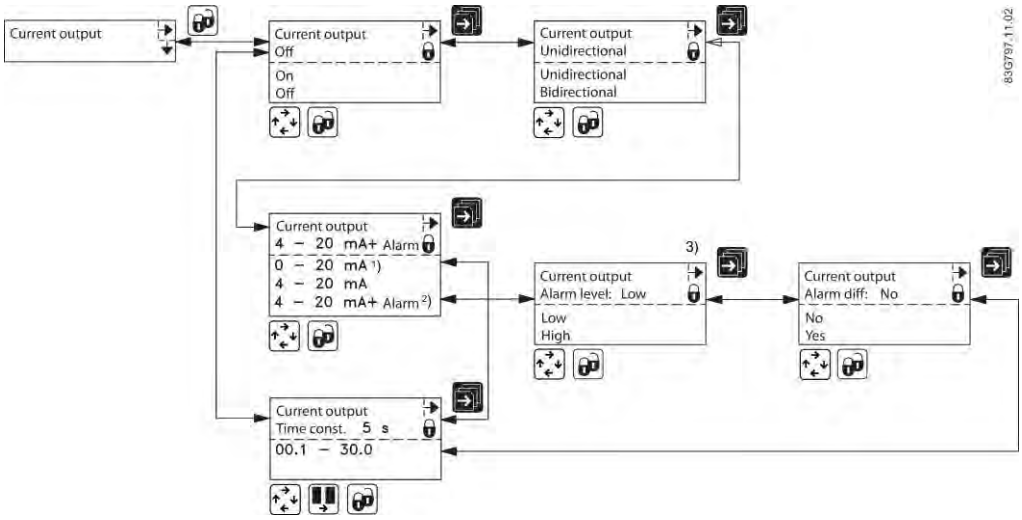


1) The question mark at unit selections stand for customer units. The unit is shown as a question mark on display if not overwritten with customer's own unit text setup using PDM or ordered specially using Y20 in ordering system.

   The flow rate unit can be "?/?" or show customer unit texts as for example "AcrFt/y" (Acre feet/year).

2) When batch is selected on digital output or relay, Totalizer 2 is not shown because it is controlled by the batch function.

A.3 Current output

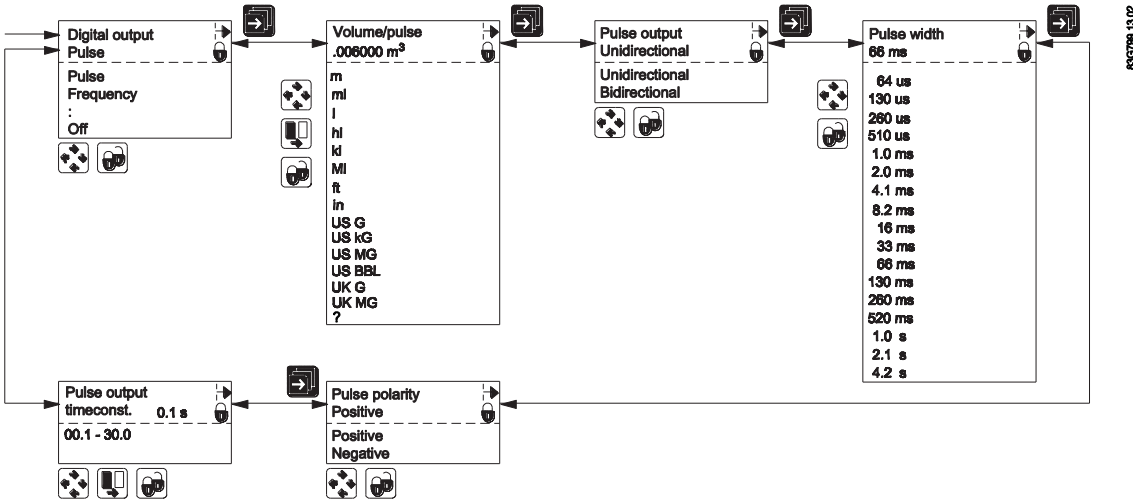


1) If HART communication is installed, it is not possible to set the output for 0-20 mA (even though the option is visible in the display). This is due to the fact that HART does not work if the output falls below 2-3 mA.

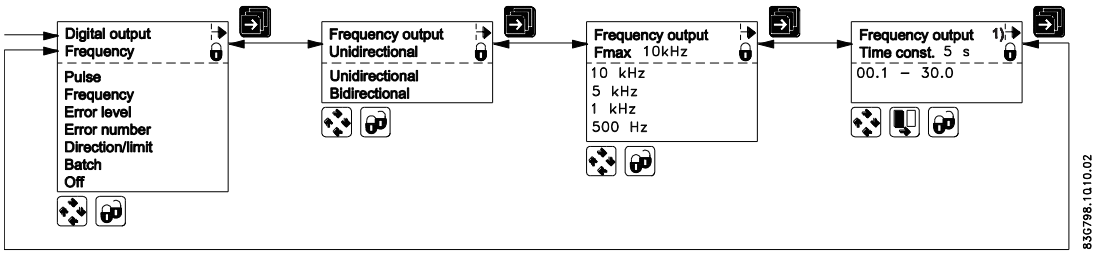
2) 4-20 mA + Alarm is the default setting for MAG 6000 I. For all other variants, the default setting is 4-20 mA.

3) The controlling of alarm levels does not recognize if the jumper is mounted for passive output. Do not combine differentiation and low alarm level together with passive output. The output will try to pull down the level to 1.3 mA at fatal errors which is not possible for passive output.

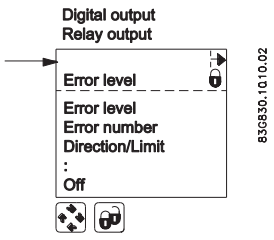
A.4 Digital output - pulse



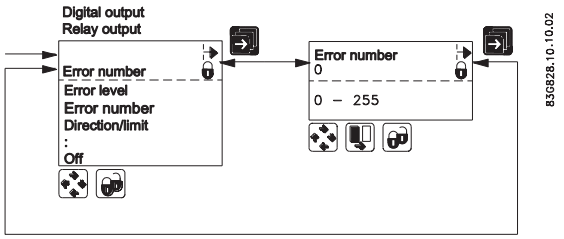
A.5 Digital output - frequency



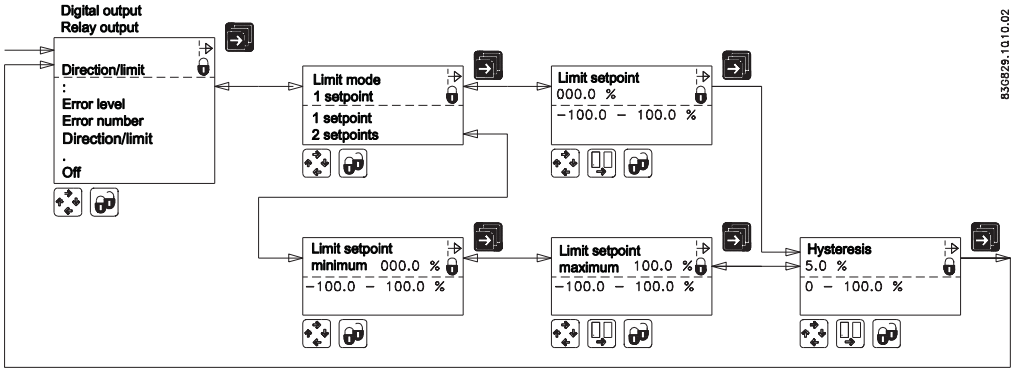
A.6 Error level



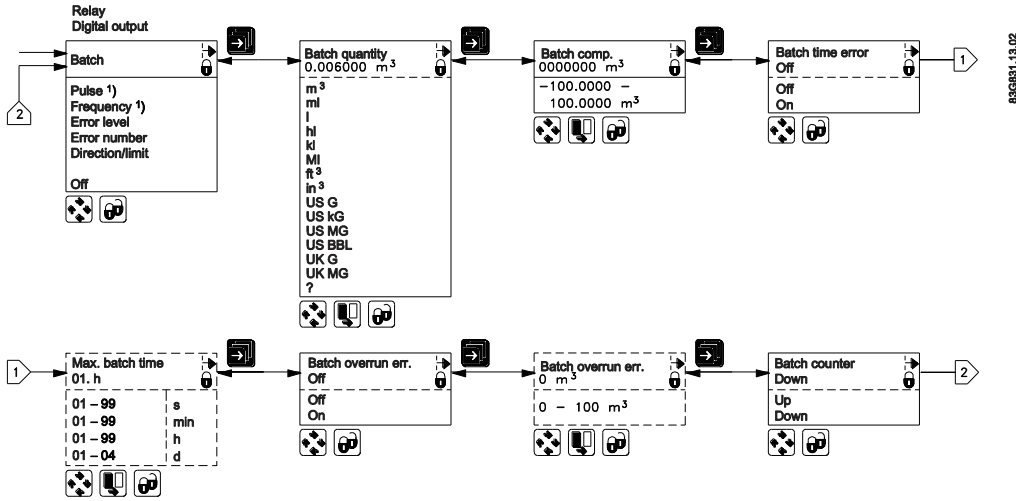
A.7 Error number



A.8 Direction/limit



A.9 Batch



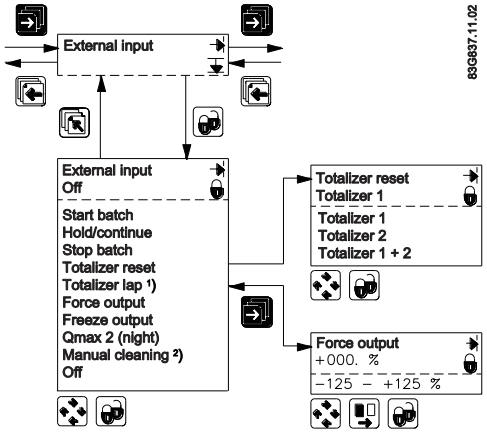
1) Visible only on Digital output.

Note

If batch function is chosen on the relay output, the digital output will be turned off if it has been set up for pulse, frequency or batch.

If digital output is set up for pulse, frequency or batch, then the relay output will be turned off if it has been set up for batch.

A.10 External input

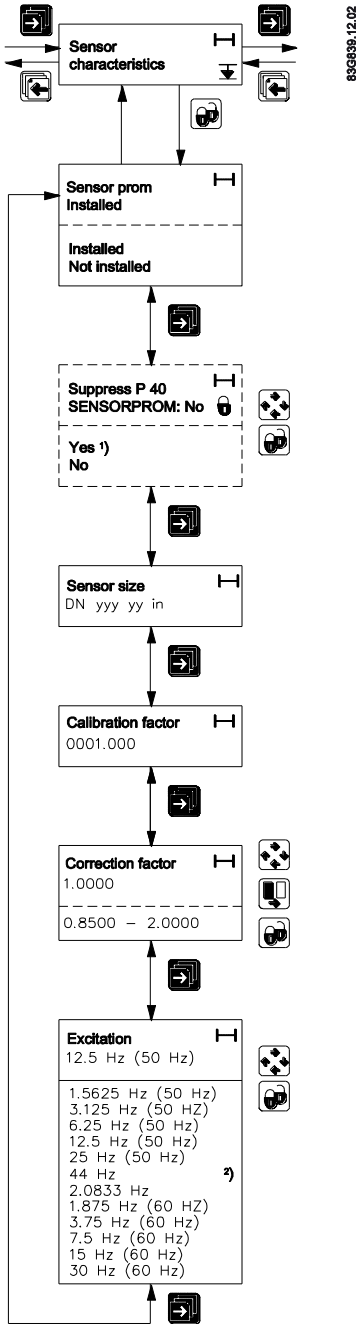


1) The value showing totalizer 1 on the display is frozen for as long as the digital output is activated. However, totalizer 1 continues counting, and when the digital input is released, the value on the display again follows totalizer 1.

2) MAG 6000 I cannot be equipped with cleaning unit. The cleaning option for relay output is however possible. When selecting function for MAG 6000 I relay output, the relay output has the same behavior as if cleaning unit was installed.

   The relay output of the transmitter determines when the relay is on by applying voltage for approximately 60 seconds. The metering is resumed after another 60 seconds when the cycle is complete. (The display is locked during this time). The time cycle can be set at 1 to 240 hours. If the cycle is set at for example three hours, the transmitter will be active every three hours.

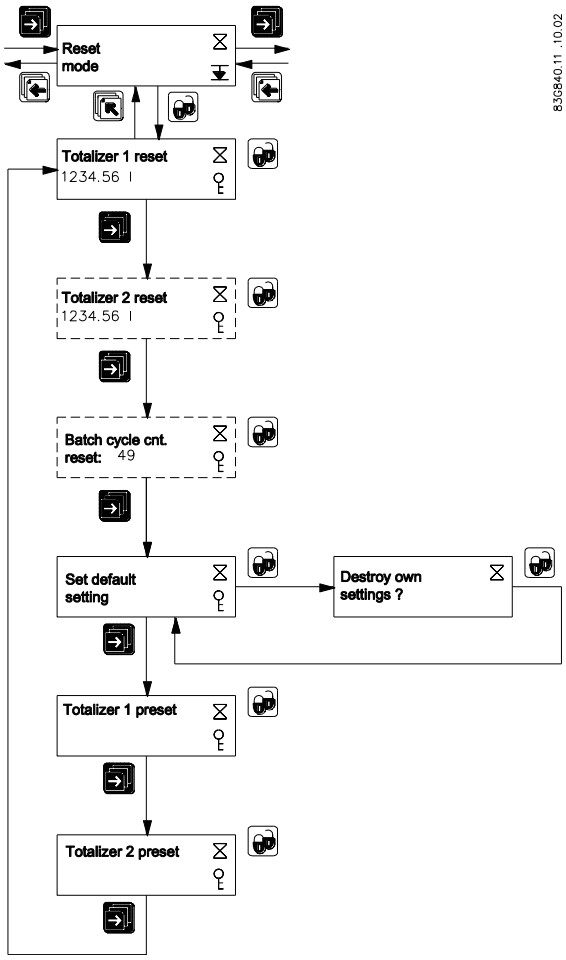
A.11 Sensor characteristics



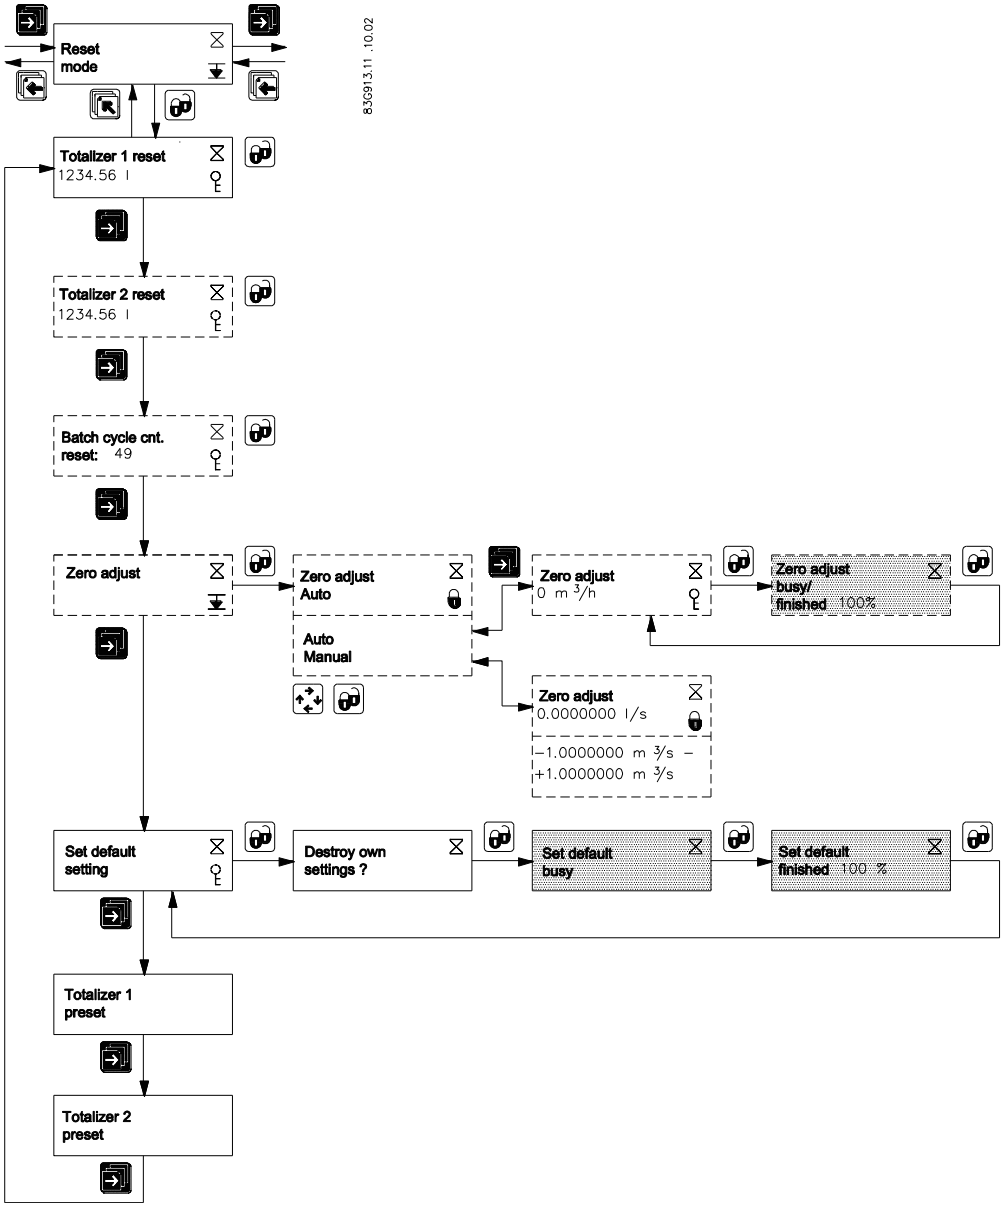
1) Error status (level or number) on an output is updated only at the time the error status changes (occurs or disappears). If P40 is suppressed after it has been detected (at power up), the output does not change state. In this case the power must be switched off/on to suppress the P40 error on the output.

2) The frequency can be set to 44 Hz in the MAG 6000 SV transmitter only.

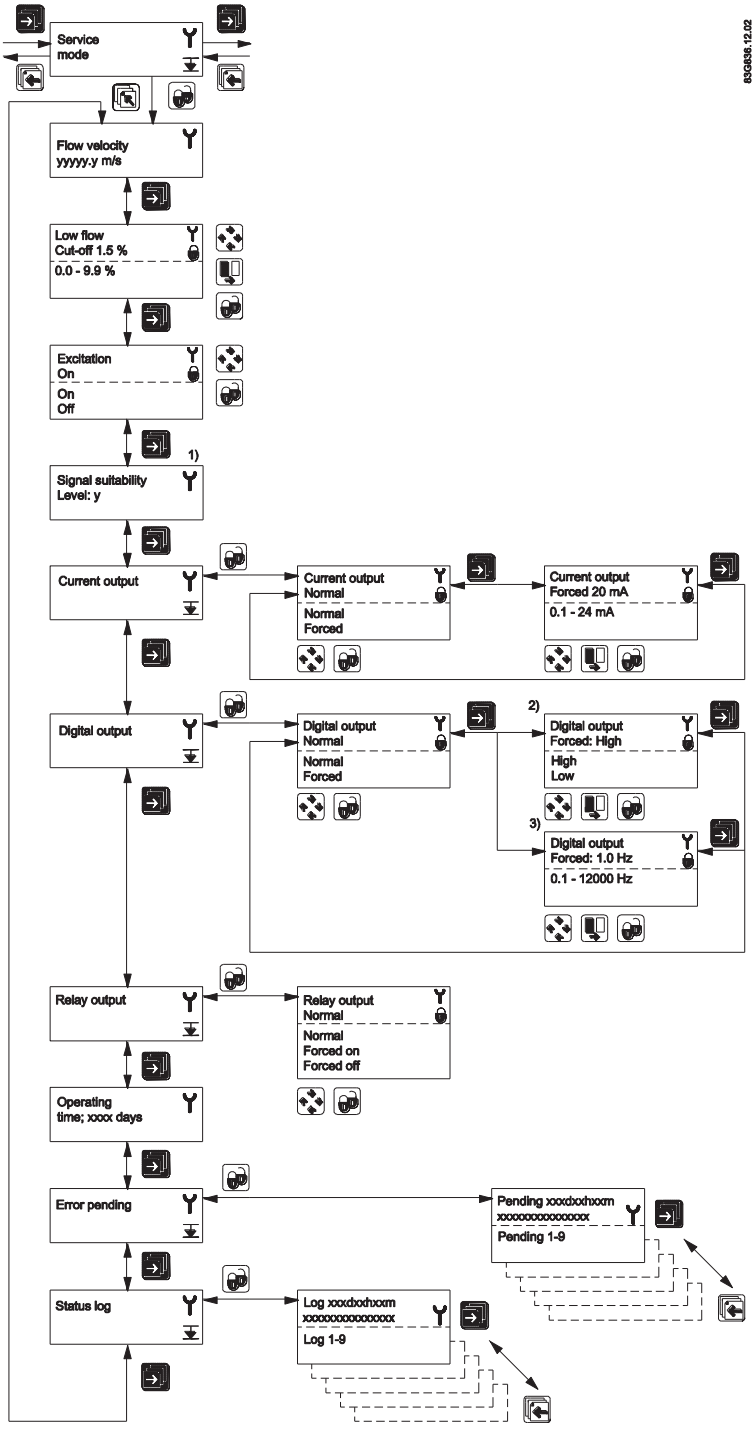
A.12 Reset mode



A.13 Reset mode - MAG 6000 SV



A.14 Service mode

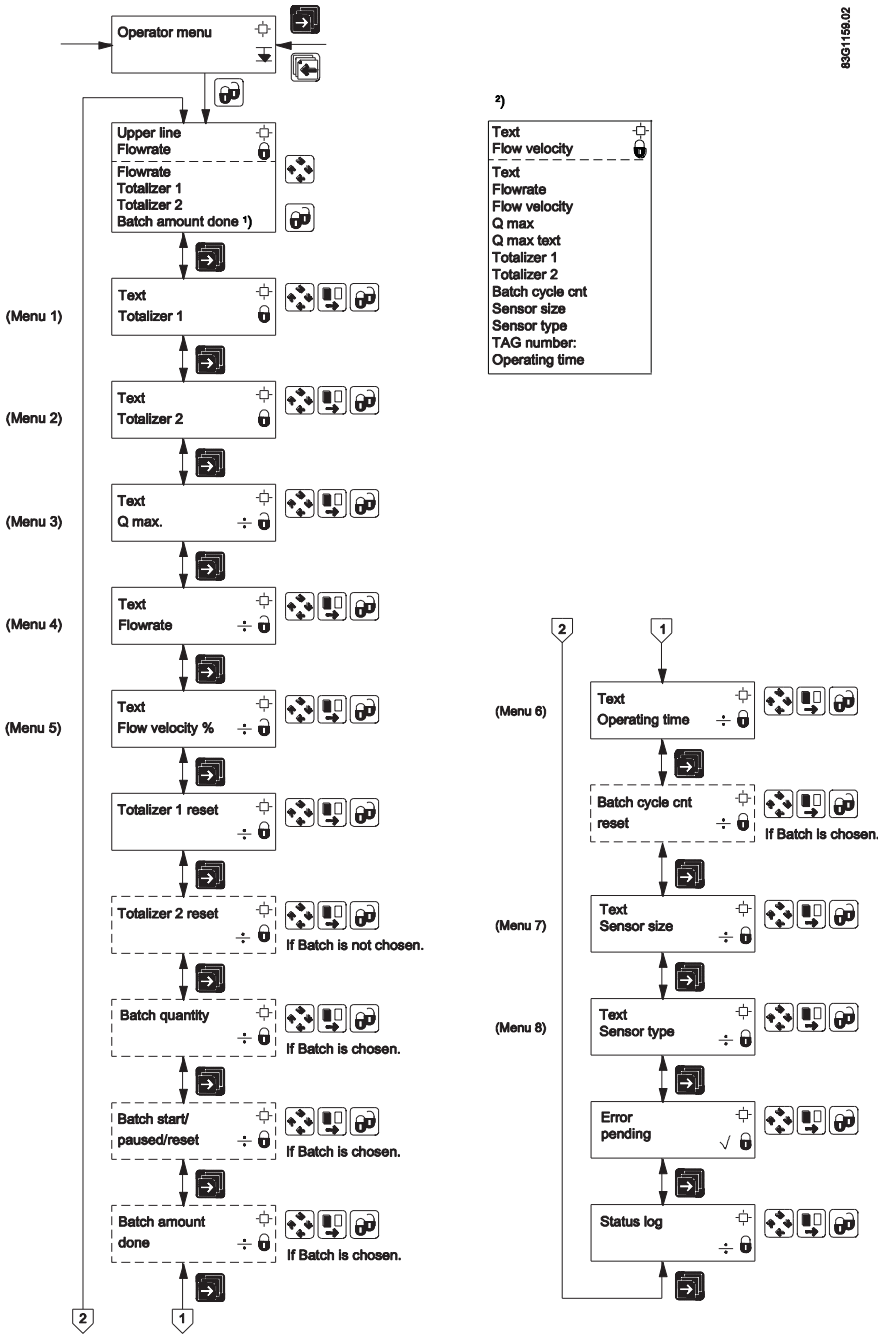


1) Signal suitability is a level from 0 to 9 of the electrode measured voltage. Level 0 is equal to the limit value that is set for empty pipe error detection, and level 9 is the best signal measured.

2) If digital output is set to pulse (standard).

3) If digital output is set to frequency.

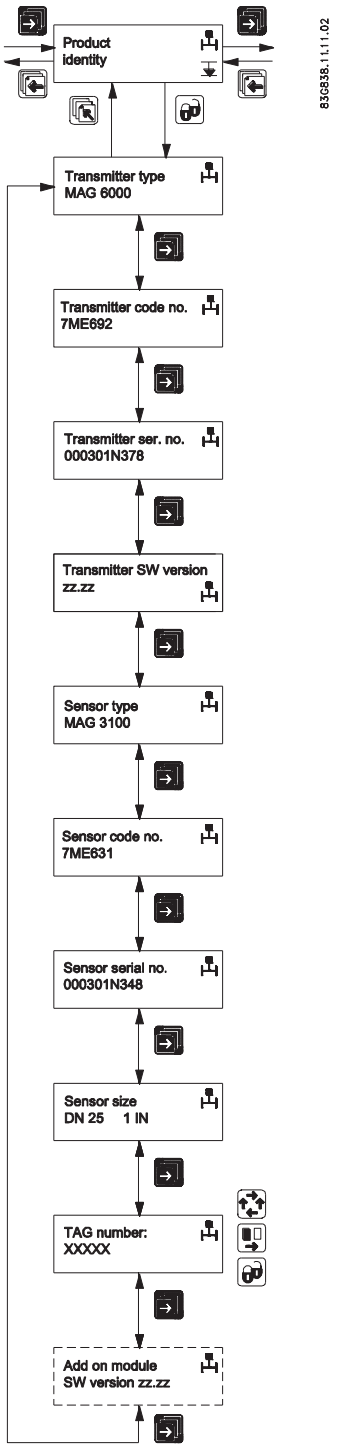
A.15 Operator menu setup



1) When selecting Batch amount for upper line, the upper line is initially blank. The amount done may not appear until the batch is started.

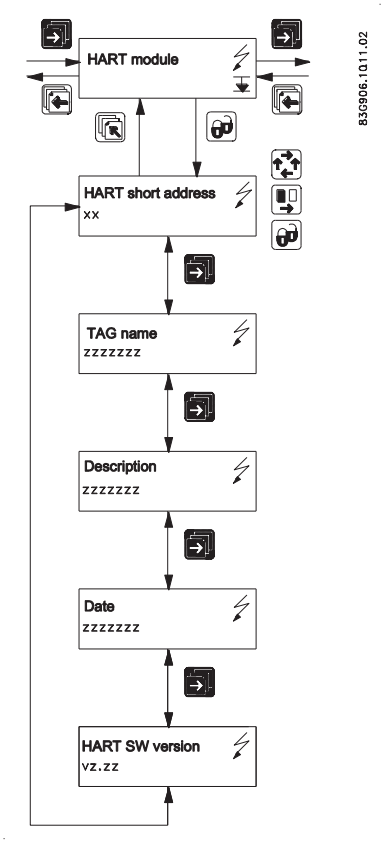
2) 'Text' means that the text for the chosen measured value is shown. For example, if textis chosen in line 2 and flow velocity is chosen in line 3, the text "Flow velocity " is shown in line2 and the measured flow velocity is shown in line 3.

A.16 Product identity



A.17 Add-on communication module

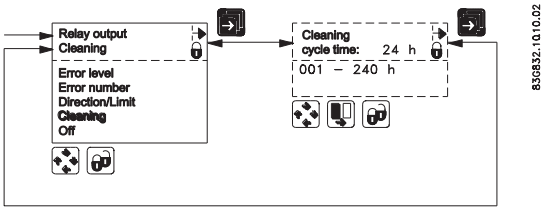
Example: HART



Note

Burst mode is not available with HART communication

A.18 Cleaning



Note

Relay outputs

If cleaning unit is installed, relay outputs must always be used to operate cleaning.

Relay outputs cannot be used for other purposes

A.19 MAG 5000/6000 CT menu overview

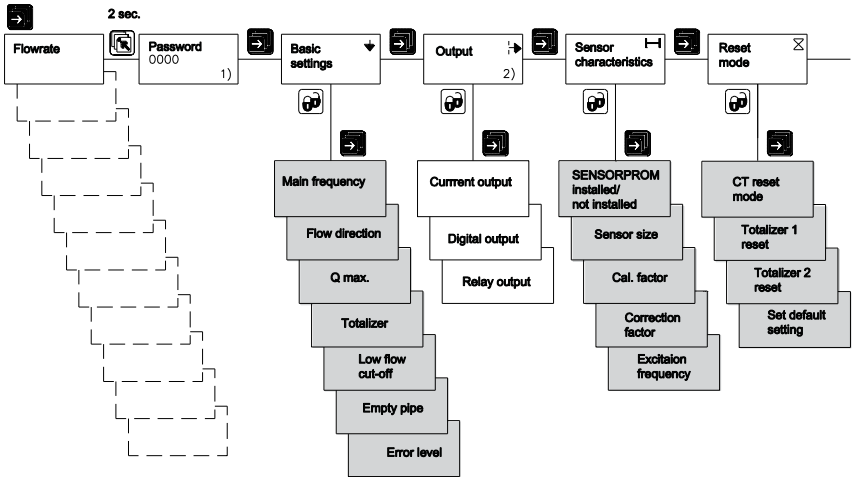


Figure A-1 Overview MAG 5000 CT and MAG 6000 CT (part 1)

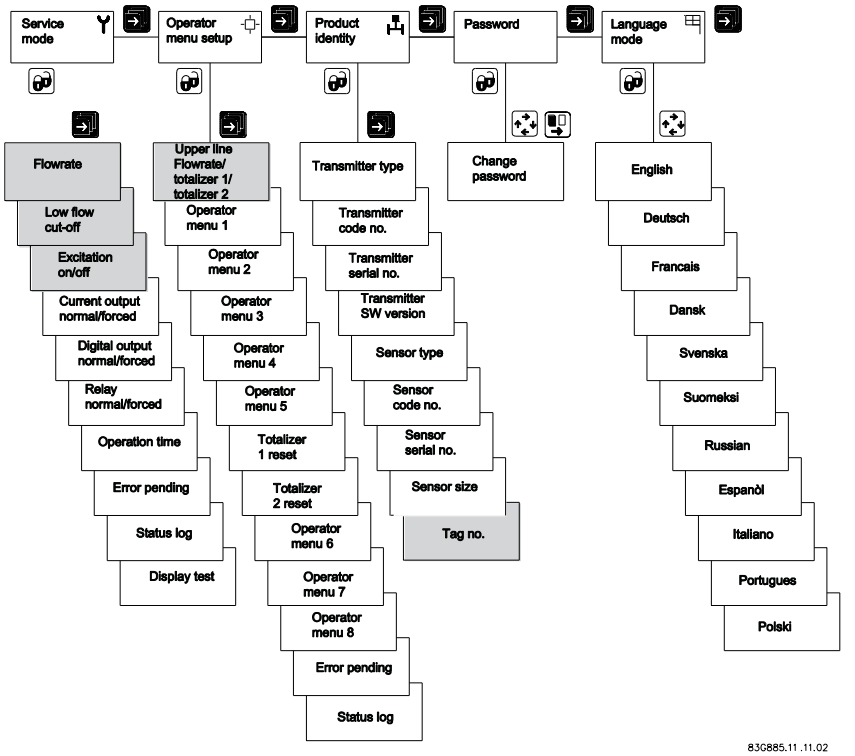


1) Factory-set password: 1000

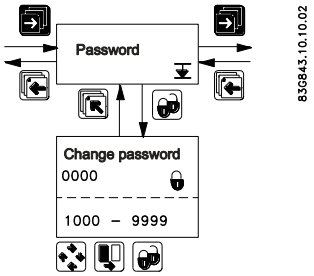
2) Not visible when CT mode is "Hot water"

Figure A-2 Overview MAG 5000 CT and MAG 6000 CT (part 2)

Note
Sealing

Menus marked with gray are locked when transmitter is sealed.

A.20 Change password



Factory settings

B

B.1 Transmitter factory settings

The factory settings shown on the following pages apply to MAG 5000/6000 as well as MAG 6000 I.

Menu item	Parameter	Factory settings	Options	More info
Password	Password	1000	1000 ... 9999	Changing password (Page 42) and Change password (Page 89)
Basic settings	Flow direction	Positive	Positive, negative	Changing basic settings (Page 43)
	Q_{max}	Sensor size dependent	Sensor size dependent	
	• *volume unit*	*Sensor size dependent*	*m^3, ml, l , hl, kl, Ml, ft^3, in^3, US G, US kG, US MG, US BBL, UK G, UK kG, UK MG, ? (customer unit)*	
	• *time unit*	*Sensor size dependent*	*Sec., min., hour, day, ? (customer unit)*	
	Totalizer 1	Forward	Forward, reverse, net	
	• *Totalizer 1 unit*	*Sensor size dependent*	*m^3, ml, l , hl, kl, Ml, ft^3, in^3, US G, US kG, US MG, US BBL, UK G, UK kG, UK MG, ? (customer unit)*	
	Totalizer 2	Reverse	Forward, reverse, net	
	• *Totalizer 2 unit*	*Sensor size dependent*	*m^3, ml, l , hl, kl, Ml, ft^3, in^3, US G, US kG, US MG, US BBL, UK G, UK kG, UK MG, ? (customer unit)*	
	Low flow cut-off	1.5%	0 ... 9.9%	
	Empty pipe	Off	On, Off	
	Velocity unit	m/s	m, mm, cm, dm, ft , in per s, min, h, d, ? (customer unit)	
	Error level	Warning	Fatal, permanent, warning	
Output	Current output	Off for MAG5000/ 6000 On for MAG6000I Namur	On/off, Unidirectional/bidirectional, 0...20 mA/4...20 mA/4...20 mA + Alarm	Output settings (Page 47)
	• *Alarm level*	*Low*	*High/Low*	
	• *Alarm diff.*	*No*	*Yes/No*	
	• *Time constant*	*5 s*	*0.1...30 s*	

Menu item	Parameter	Factory settings	Options	More info
	Digital output	Pulse	Error, direction/limit, batch, frequency, pulse, error number, off	Digital output - pulse (Page 78)
	Relay output	Error level	Error, direction/limit, cleaning, error number, off	Error level (Page 78)
	Direction/limit switch	Off	1 setpoint, 2 setpoints	Direction/limit (Page 79)
	• *Setpoints*	*0%*	*-100 ... +100%*	
	• *Hysteresis*	*5%*	*0.0 ... 100%*	
	Batch	Off		Batch (Page 79)
	• *Batch quantity*	*0*	*Sensor size dependent*

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠ DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠ WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠ CAUTION

with a safety alert symbol, indicates that minor personal injury can result if proper precautions are not taken.

CAUTION

without a safety alert symbol, indicates that property damage can result if proper precautions are not taken.

NOTICE

indicates that an unintended result or situation can occur if the corresponding information is not taken into account.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation for the specific task, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be adhered to. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of the Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

1

These instructions contain all the information you need for using the device.

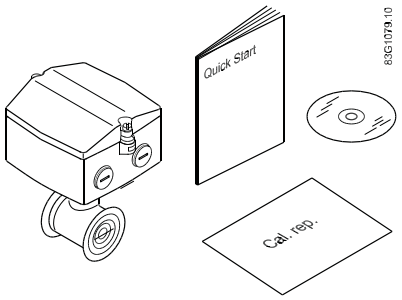
The instructions are aimed at persons mechanically installing the device, connecting it electronically, configuring the parameters and commissioning it as well as service and maintenance engineers.

Note

It is the responsibility of the customer that the instructions and directions provided in the manual are read, understood and followed by the relevant personnel before installing the device.

1.1 Items supplied

- SITRANS F M MAG 5100 W
- Calibration report
- SITRANS F M literature CD
- Quick Start guide



1.2 History

The contents of these instructions are regularly reviewed and corrections are included in subsequent editions. We welcome all suggestions for improvement.

The following table shows the most important changes in the documentation compared to each previous edition.

Edition	Remarks
11/2010	Minor updates
07/2010	First edition Replaces MAG 5100 W part of SITRANS F M Handbook (A5E02435647) and MAG 5100 W instruction (A5E00718677)

1.3 Further Information

The contents of these Operating Instructions shall not become part of or modify any prior or existing agreement, commitment or legal relationship. All obligations on the part of Siemens AG are contained in the respective sales contract which also contains the complete and solely applicable warranty conditions. Any statements contained herein do not create new warranties or modify the existing warranty.

Product information on the Internet

The Operating Instructions are available on the CD-ROM shipped with the device, and on the Internet on the Siemens homepage, where further information on the range of SITRANS F flowmeters may also be found:

Product information on the internet (http://www.siemens.com/flowdocumentation)

Worldwide contact person

If you need more information or have particular problems not covered sufficiently by the operating instructions, please get in touch with your contact person. You can find contact information for your local contact person on the Internet:

Local contact person (http://www.automation.siemens.com/partner)

Safety notes

2

⚠ CAUTION
Correct, reliable operation of the product requires proper transport, storage, positioning and assembly as well as careful operation and maintenance. Only qualified personnel should install or operate this instrument.

Note

Alterations to the product, including opening or improper repairs of the product, are not permitted.

If this requirement is not observed, the CE mark and the manufacturer's warranty will expire.

2.1 Laws and directives

General requirements

Installation of the equipment must comply with national regulations.

Instrument safety standards

The device has been tested at the factory, based on the safety requirements. In order to maintain this condition over the expected life of the device the requirements described in these Operating Instructions must be observed.

CAUTION
Material compatibility Siemens Flow Instruments can provide assistance with the selection of wetted sensor parts. However, the full responsibility for the selection rests with the customer and Siemens Flow Instruments can take no responsibility for any failure due to material incompatibility.

CE marked equipment

All meters carry either a CE mark or a CE mark followed by eg.200

- CE200: This indicates that the product conforms to:
  - PED 97/23/EC
  - LVD 2006/95/EC
  - EMC 2004/108/EC
- CE: This indicates that the product conforms to:
  - LVD 2006/95/EC
  - EMC 2004/108/EC

Compliance with PED directive

"Pressure Equipment Directive" (PED) is mandatory for all pressure equipment sold within the EU and EFTA.

Siemens Flow Instruments products confirms to PED by following the tables below.

Table 2- 1 MAG 5100 W (7ME6580 only DN15 ... 600 (½" ... 24"))

Flange mm	PN 10	PN 16	PN 40	150 lb	300 lb
15	N/A	N/A	SEP	SEP	N/A
25	N/A	N/A	SEP	SEP	N/A
40	N/A	N/A	SEP	SEP	N/A
50	N/A	SEP	N/A	SEP	N/A
65	N/A	SEP	N/A	SEP	N/A
80	N/A	SEP	N/A	SEP	N/A
100	SEP	SEP	N/A	SEP	N/A
125	N/A	SEP	N/A	PED	N/A
150	N/A	PED	N/A	PED	N/A
200	SEP	PED	N/A	PED	N/A
250	LVD	PED	N/A	PED	N/A
300	LVD	PED	N/A	PED	N/A
350	LVD	PED	N/A	PED	N/A
400	LVD	PED	N/A	PED	N/A
450	LVD	PED	N/A	PED	N/A
500	LVD	PED	N/A	PED	N/A
600	LVD	PED	N/A	PED	N/A
700	LVD	PED*	N/A	N/A	PED
750	N/A	N/A	N/A	N/A	PED

800	LVD	PED*	N/A	N/A	PED
900	LVD	PED*	N/A	N/A	PED
1000	LVD	PED*	N/A	N/A	PED
1050	N/A	N/A	N/A	N/A	PED
1100	N/A	N/A	N/A	N/A	PED
1200	LVD	PED*	N/A	N/A	PED

The key to the tables is as follows:

PED	Product covered by PED and only available as fully PED-conforming
PED*	Product covered by PED but available as either conforming or non-conforming to PED
SEP	Excluded from PED under Sound Engineering Practice
LVD	Excluded from PED under the Low Voltage Directive

2.2 Installation in hazardous area

⚠ WARNING

Equipment used in hazardous areas must be approved for use in hazardous area and marked accordingly. It is required that the special conditions for safe use provided in the manual and in the FM / CSA certificates are followed!

Hazardous area approvals

The device is approved for use in hazardous area and has the following approvals:

- MAG 5100 W DN 15 ... 1200: FM / CSA Class I, Div. 2

WARNING

Make sure the hazardous area approval is suitable for the environment in which the device will be installed.

WARNING

All approvals are based on non-flammable processes only!

WARNING

Potential equalization

In operation, the output is earthed through the conductive medium being measured and therefore potential equalisation is necessary throughout the hazardous area.

The apparatus housing shall be connected to the potential equalising conductor in the hazardous area.

WARNING

Laying of cables

Cables for use in hazardous area must satisfy the requirements for having a proof voltage < AC 500 V applied between the conductor/ground, conductor/shield and shield/ground.

Connect the devices that are operated in hazardous areas as per the stipulations applicable in the country of operation.

2.3 Certificates

Certificates are posted on the Internet and on the documentation CD-ROM shipped with the device.

Technical data (Page 37)

Certificates on the Internet (http://www.siemens.com/processinstrumentation/certificates)

Description

3

The main applications of the SITRANS F M electromagnetic flow sensors can be found in the following fields:

- Process industry
- Chemical industry
- Steel industry
- Mining
- Utility
- Power generation & distribution
- Oil & gas / HPI
- Water & waste water
- Pulp & paper

3.1 System components

The SITRANS F M USM II flowmeter system includes:

- Transmitter (types: SITRANS F M MAG 5000/6000 or MAG 6000 I)
- Sensor (types: SITRANS F M MAG 1100/1100F, MAG 3100/3100 P or MAG 5100 W)
- Communication module (optional) (types: HART, PROFIBUS PA/DP, MODBUS RTU RS 485, Foundation Fieldbus H1, Devicenet)
- SENSORPROM memory unit

Communication solutions

The SITRANS F USM II range of add on modules, presently including HART, Foundation Fieldbus. MODBUS RTU RS 485, PROFIBUS PA / DP and Devicenet, are all applicable with the SITRANS F M MAG 6000 transmitter.

The SITRANS F M MAG 5100 W sensor housing and flanges are designed in carbon steel and terminal box in fibre glass reinforced polyamide. Measuring pipe is made of stainless steel (AISI 304) and liners are available in NBR Hard Rubber, Ebonite Hard Rubber, or EPDM, which makes the sensor highly resistant to a wide range of chemicals. Electrodes are made of Hastelloy.

MAG 5100W DN15 ... 40

MAG 5100W DN50 ... 300

MAG 5100W DN350 ... 1200 (7ME6520)

MAG 5100W DN25 ... 2000 (7ME6580)

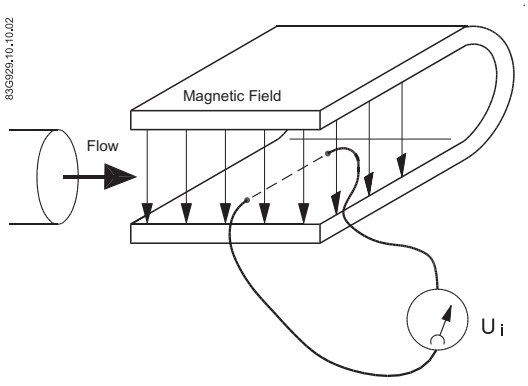
MAG 5100W compact installation with MAG 5000/6000 IP67

MAG 5100W compact installation with MAG 6000 I

The sensors carry a wide range of approvals, see Technical data (Page 37).

3.2 Theory of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction.



U_i = When an electrical conductor of length L is moved at velocity v, perpendicular to the lines of flux through a magnetic field of strength B, the voltage Ui is induced at the ends of the conductor

$U_i = L \times B \times v$

- Ui = Induced voltage
- L = Conductor length = Inner pipe diameter = k_1
- B = Magnetic field strength = k_2
- v = Velocity of conductor (media)
- $k = k_1 \times k_2$

Ui = k x v, the electrode signal is directly proportional to the fluid velocity

Operating principle

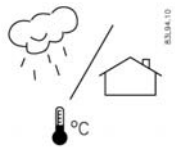
The coil current module generates a pulsating magnetizing current that drives the coils in the sensor. The current is permanently monitored and corrected. Errors or cable faults are registered by the self-monitoring circuit.

Input circuit amplifies the flow-proportional induced voltage signal from the electrodes. The input impedance is extremely high: $>10^{14}$ Ω which allows flow measurements on fluids with conductivities as low as 5 µS/cm. Measuring errors due to cable capacitance are eliminated due to active cable screening.

Digital signal processor converts the analog flow signal to a digital signal and suppresses electrode noise through a digital filter. Inaccuracies in the transmitter as a result of long-term drift and temperature drift are monitored and continuously compensated for via the self-monitoring circuit. The analog to digital conversion takes place in an ultra low noise ASIC with 23 bit signal resolution. This has eliminated the need for range switching. The dynamic range of the transmitter is therefore unsurpassed with a turn down ratio of minimum 3000:1.

Installing/Mounting

4



SITRANS F flowmeters with minimum IP67/NEMA 4X enclosure rating are suitable for in- and outdoor installations.

- Make sure that pressure and temperature specifications indicated on the device nameplate / label will not be exceeded.

WARNING

Installation in hazardous location

Special requirements apply to the location and interconnection of sensor and transmitter. See "Installation in hazardous area" (Page 9)

4.1 Installation safety precautions

WARNING

In applications with working pressures/media that can be dangerous to people, surroundings, equipment or others in case of pipe fracture, we recommend that special precautions such as special placement, shielding or installation of a security guard or a security valve are taken when the sensor is mounted.

- Ensure that stresses and loading caused by e.g. earthquakes, traffic, high winds and fire damage if appropriate are taken into account during installation.
- Ensure that the flowmeter is installed such that it does not act as a focus for pipeline stresses. External loadings are not taken into account in the flowmeter design.
- Provide adequate protection to minimise any risk of contact with hot surfaces.

WARNING

Prevent personal injuries by assuring that operation below pressure guards cannot take place, if working with vacuum or fluids boiling readily.

4.2 Determining a location

NOTICE
The sensor must always be completely filled with liquid.

- Locate the the flowmeter in u-shaped pipes if pipes are only partially filled or have free outlet

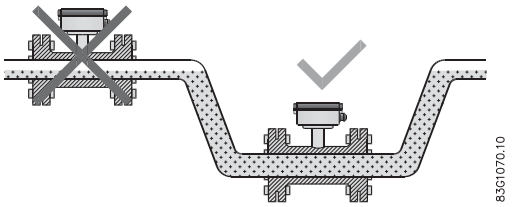


Figure 4-1 Correct installation in U-tube

- Avoid the following installations
  - Installation at the highest point in the pipe system
  - Installation in vertical pipes with free outlet

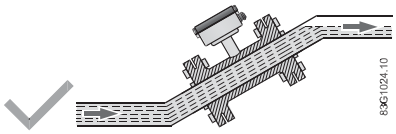

Figure 4-2 Correct installation with filled pipes

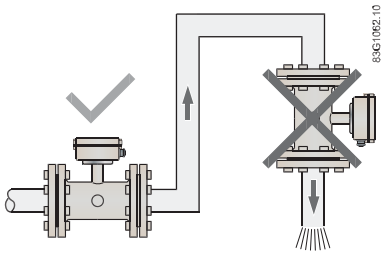

Figure 4-3 Correct installation at low point in system before outlet

Inlet and outlet conditions

To achieve accurate flow measurement it is essential to have straight lengths of inlet and outlet pipes and a certain distance to pumps and valves.

It is also important to centre the flowmeter in relation to pipe flanges and gaskets.

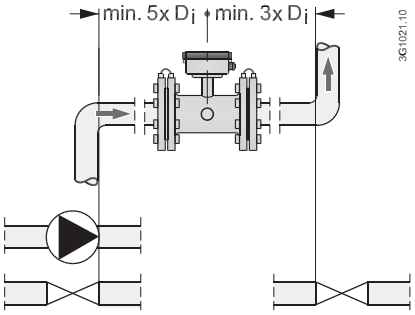

Figure 4-4 Inlet and outlet conditions

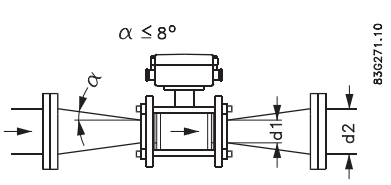
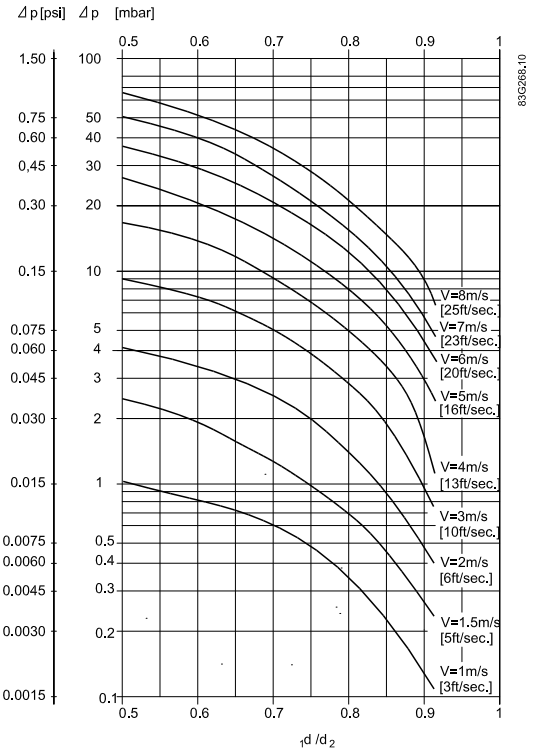
Installation in large pipes

The flowmeter can be installed between two reducers (e.g. DIN 28545). At 8° the following pressure drop curves apply. The curves are applicable to water.





Example:

A flow of 3 m/s (V) in a sensor with a diameter reduction from DN 100 to DN 80 (d_1/d_2 = 0.8) gives a pressure drop of 2.9 mbar.

4.3 Orienting the sensor

The sensor operates in all orientations, but Siemens has the following recommendations:

- Vertical installation with an upwards flow

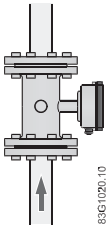


Figure 4-5 Vertical orientation, upwards flow

CAUTION
Abrasive liquids / liquids containing solid particles A vertical installation minimizes wear and deposits in the sensor

NOTICE
Gas/air bubbles in the liquid A vertical installation minimizes any negative effect of gas/air bubbles in the liquid

- Horizontal installation, terminal box upwards or downwards

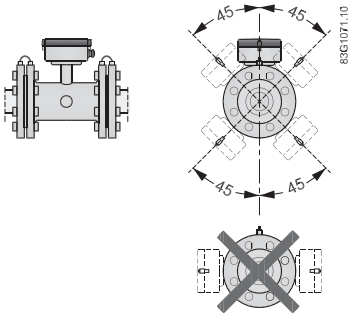

Figure 4-6 Horizontal installation, various terminal box positions

CAUTION
Do NOT mount the sensor with the terminal box sideways This will position the electrodes at the top where there is possibility for air bubbles and at the bottom where there is possibility for mud, sludge, sand etc.

NOTICE
Empty pipe detection For applications with empty pipe detection, the sensor can be tilted 45°, as shown above.

4.4 Mounting

- Install the sensor in rigid pipelines in order to support the weight of the meter.
- Center the connecting pipelines axially in order to avoid turbulent flow profiles.
- Use proper gaskets according to liner type

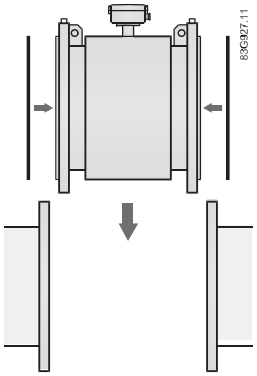

Figure 4-7 Correct installation with gaskets

Vibrations

Avoid strong vibrations.

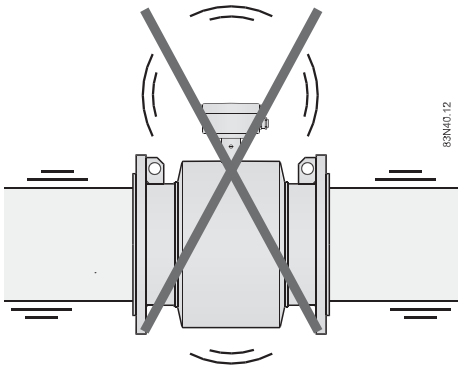

Figure 4-8 Avoid vibrations

⚠ CAUTION
In applications with strong vibrations, Siemens recommend remote mounting of the transmitter!

Torques

Fasten screws according to the torques values below

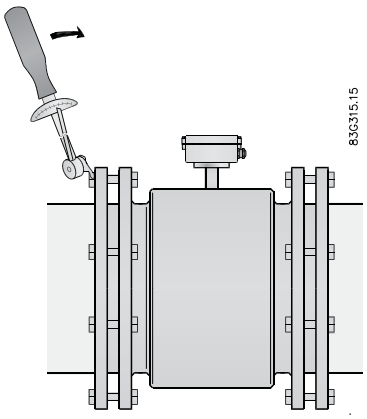

Figure 4-9 Torques values

NOTICE
Torque values are calculated on the basis of use of gaskets.

Table 4- 1 Maximum allowable torques

4.5 Potential equalization

To obtain optimum results from the measuring system, the sensor must have the same electrical potential as the liquid being measured.

This is achieved by means of built-in grounding electrodes.

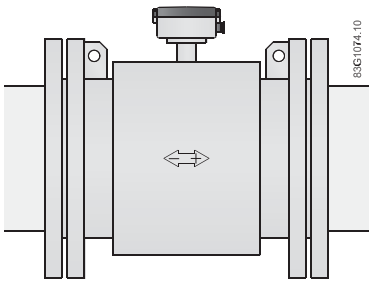

Figure 4-10 Potential equalization with earthing electrodes

Cathodic protected piping

Special attention must be paid to systems with cathodic protection

⚠ WARNING

Use in hazardous area!

Cathodic pipe protection is not allowed in hazardous areas

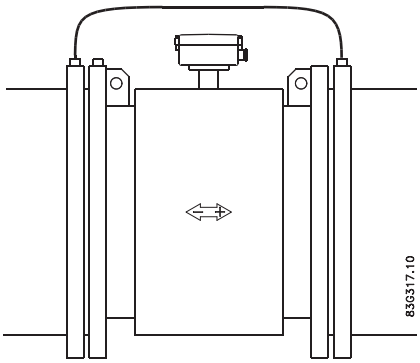

Figure 4-11 Cathodic protection

- Isolate the sensor from cathodic protected pipes using insulated bolts.
- Use bypass cable between the mating flanges

NOTICE
Remote mounted sensor versions If the above is not acceptable, remote mounted sensors can alternatively be connected as follows: • Connect coil current cable shield at sensor end via a 1.5 µF condensator • Make sure that electrode cable shield is not connected at both ends

Connecting

5

The following contains a short description of how to connect a remote mounted sensor to a transmitter type SITRANS F M MAG 5000 / 6000 or MAG 6000 I. For more information, e.g. about wiring of power supply and outputs, refer to the Operating Instructions for the respective transmitters.

Before connecting

- Check that serial numbers on sensor and SENSORPROM® unit are identical.

⚠ WARNING

The pertinent regulations must be observed for electrical installation.

- Never install the device with the mains voltage switched on!
- Danger of electric shock!
- The electrodes and magnetic current line may only be connected when the device is not connected to the power supply.
- If the housing is under voltage (power supply), the cover may be unscrewed by qualified personnel only.

⚠ WARNING

Mains supply from building installation Class II

A switch or circuit breaker (max. 15 A) must be installed in close proximity to the equipment and within easy reach of the operator. It must be marked as the disconnecting device for the equipment.

Cable specifications

- Only use cables with at least the same degree of protection as the sensor to install the sensor.
- The line length from the cable gland to the terminals must be kept as short as possible. Line loops in the terminal box must be avoided.

- To guarantee the IP 67 degree of protection, use cables with the required specifications.

⚠ WARNING
Protective conductor terminal The required cable is min. AGW16 or 1.5 Cu.

⚠ WARNING
Wire insulation The insulation between the connected mains supply and 24 V AC/DC supply for the flowmeter must at least be rated with double or reinforced insulation at mains voltage. For field wiring installation: Ensure that the **National Installation Code** of the country in which the flowmeters are installed is met.

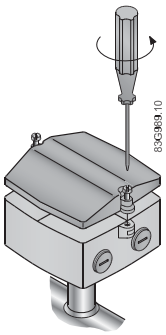
See also

Cable data (Page 40)

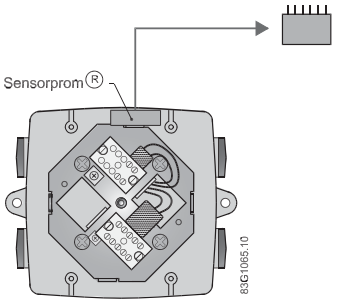
5.1 Remote installation

NOTICE
Remote installation only The following applies to remote installation of MAG 5000 / 6000 or MAG 6000 I.

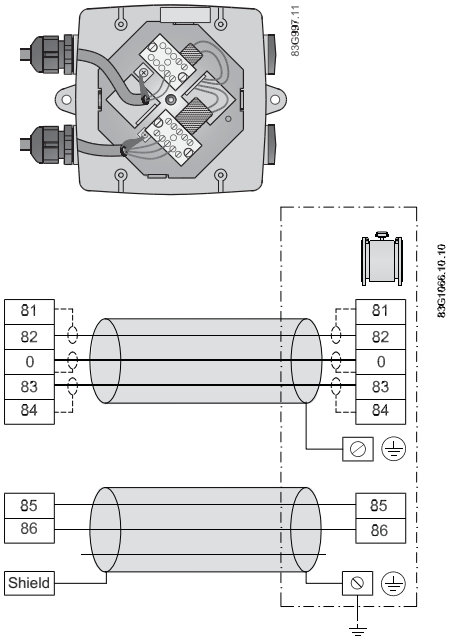
1. Unscrew and remove terminal box lid.



2. Remove SENSORPROM® unit from sensor and mount it on connection plate in transmitter, see relevant transmitter operating instructions.



3. Fit the ½" NPT or M20 cable glands for supply and output cables.
4. Fit and connect electrode and coil cables as shown below.



CAUTION

Unshielded cable ends

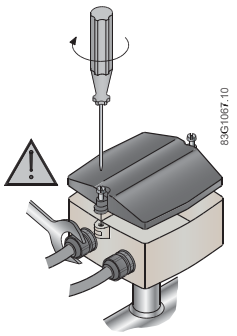
Keep unscreened cable ends as short as possible.

CAUTION

Prevent interference

Separate electrode and coil cables to prevent interference.

5. Tighten cable glands well to obtain optimum sealing.



WARNING
Mount terminal box lid before power up.

5.2 Installation check

The meter is now ready to go into normal operation - for commissioning and setting of parameters refer to the relevant transmitter manual.

Before commissioning it must be checked that:

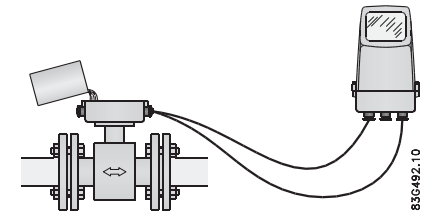
- The device has been installed and connected in accordance with the guidelines provided in chapter 4 Installing/mounting (Page 15) and 5 Connecting (Page 23)

5.3 Potting

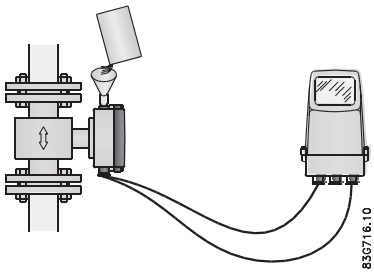
If sensor is buried or permanently submerged, terminal box must be encapsulated with silicon dielectric gel (non-toxic, transparent and self-healing gel)

CAUTION
Do **not** pot meter before electrical connections have been made.

- Mix the two components of the potting kit well and pour into terminal box.
- Let cure for approximately 24 hours at approximately 25°C (77°F). Curing time increases by 100% per -10°C (-18°F).



Horizontal orientation



Vertical orientation

NOTICE
Gel can be penetrated with test instruments or be removed in case of cable replacement.

5.4 Direct burial

Recommendations for direct burial of remote sensor:

- Check for visible damages in paint finish !
- Use protection conduit !
- Protect sensor with pea gravel at least 3000 mm around sensor. This provides some drainage and also avoids caking sensor with earth. It also helps to locate sensor in case excavation takes place.

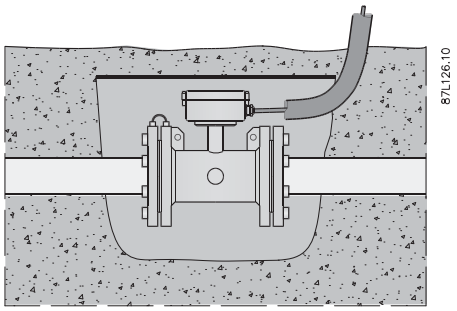


Figure 5-1 Direct burial of sensor

⚠ CAUTION

Sensor should not be subject to heavy vehicles applying excessive weight above sensor or pipeline

CAUTION

SENSORPROM® memory unit

Remove the SENSORPROM® from terminal box on sensor and relocate in remote transmitter prior to burying sensor.

All sensor data plate information and serial number should be recorded for each sensor prior to burying. This will ensure correct matching with SENSORPROM® unit.

⚠ WARNING

Electrical cable identification

Use suitable coil and electrode cables

Lay electrical cable identification tape above pea gravel before it is covered with earth.

Service and maintenance 6

6.1 Maintenance

The device is maintenance-free, however, a periodic inspection according pertinent directives and regulations must be carried out.

An inspection can include check of:

- Ambient conditions
- Seal integrity of the process connections, cable entries, and cover screws
- Reliability of power supply, lightning protection, and grounds

6.2 Recalibration

Siemens A/S Flow Instruments offers to recalibrate the sensor. The following calibrations are offered as standard:

- Standard matched pair calibration

Note

For recalibration the memory unit must always be returned with the sensor

6.3 Transportation/storage

The sensor is a fragile piece of equipment. Impact and shock can cause measuring inaccuracy. Therefore during transportation it must be placed in the transportation box delivered by Siemens Flow Instruments. If this is not possible, the alternative sensor packaging must be able to withstand the hazards from transportation.

Handling

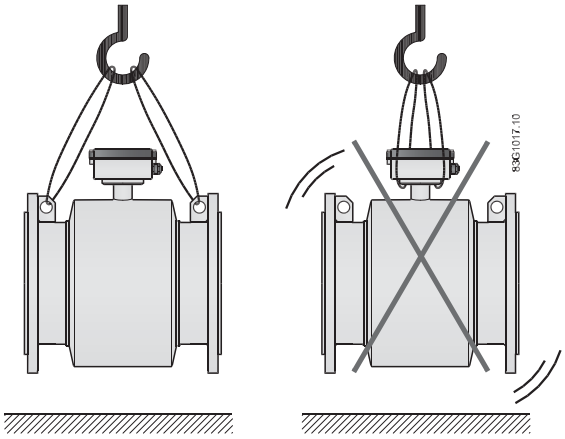

Figure 6-1 Handling of sensor

6.4 Unit repair

CAUTION
Repair and service must be carried out by Siemens authorized personnel only.

Note

Siemens Flow Instruments defines sensors as non-repairable products.

6.5 Technical support

If you have any technical questions about the device described in these Operating Instructions and do not find the right answers, you can contact Technical Support:

- Via the Internet using the **Support Request:**
  Support request (http://www.siemens.com/automation/support-request)
- Via Phone:
  - Europe: +49 (0)911 895 7222
  - America: +1 423 262 5710
  - Asia-Pacific: +86 10 6475 7575

Further information about our technical support is available in the Internet at Technical support (http://support.automation.siemens.com/WW/view/en/16604318)

Service & Support on the Internet

In addition to our documentation, we offer a comprehensive knowledge base online on the Internet at:

Service and support (http://www.siemens.com/automation/service&support)

There you will find:

- The latest product information, FAQs, downloads, tips and tricks.
- Our newsletter, providing you with the latest information about your products.
- A Knowledge Manager to find the right documents for you.
- Our bulletin board, where users and specialists share their knowledge worldwide.
- You can find your local contact partner for Industry Automation and Drives Technologies in our partner database.
- Information about field service, repairs, spare parts and lots more under "Services."

Additional Support

Please contact your local Siemens representative and offices if you have additional questions about the device

Find your contact partner at:

Local contact person (http://www.automation.siemens.com/partner)

6.6 Return procedures

Enclose the delivery note, the cover note for return delivery together with the declaration of decontamination form on the outside of the package in a well-fastened clear document pouch.

Required forms

- **Delivery Note**
- **Cover Note for Return Delivery** with the following information

  Cover note (http://support.automation.siemens.com/WW/view/en/16604370)
  - product (ordering number)
  - number of devices or spare parts returned
  - reason for the return

- **Declaration of Decontamination**

  Declaration of Decontamination (http://pia.khe.siemens.com/efiles/feldg/files/Service/declaration_of_decontamination_en.pdf)

  With this declaration you certify *that the returned products/spare parts have been carefully cleaned and are free from any residues.*

  If the device has been operated together with toxic, caustic, flammable or water-damaging products, clean the device before return by rinsing or neutralizing. Ensure that all cavities are free from dangerous substances. Then, double-check the device to ensure the cleaning is completed.

  We shall not service a device or spare part unless the declaration of decontamination confirms proper decontamination of the device or spare part. Shipments without a declaration of decontamination shall be cleaned professionally at your expense before further proceeding.

You can find the forms on the Internet and on the CD delivered with the device.

Troubleshooting/FAQs 7

7.1 Sensor check

Requirement

To check the SITRANS F M sensors the following test instruments will be required:

- Digital Meter/Multimeter
- Megger
- (Moving Coil Meter)

Sensor check

Remove the transmitter from the sensor or remote position before making the following checks.

Coil resistance check

- Measure the coil resistance between connection numbers 85 and 86 using a digital meter.
  Resistance should be around 100 ohms ±10 ohms. (See Coil resistence table)

A low reading may indicate moisture within the coil housing or shorted coil tums.

A high reading would indicate an open circuit coil.

NOTICE
In case of deviation from nominal coil values, the sensor is damaged and must be replaced

Coil insulation check

⚠ WARNING
Potential hazard!
Only carry our a coil insulation check in non-hazardous area!

- Megger between connection number 85 and the sensor body.
  The resistance should be above 20 Megohms.

A low megger reading would indicate the coil insulation is braking down. This is normally due to fluid ingress into the coil housing.

Sensors with an insulation resistance down to 1 Megohms may still work satisfactorily but this is not guaranteed.

Electrode resistance check

- Measure the electrode resistance between connections 82 and Zero with a moving coil meter.
  With a sensor full of fluid the resistance should be between 5Kohms and 50Kohms.
  If the sensor is empty the resistance will be infinite.
- Repeat the resistance measurements between connections 83 and Zero.
  The results should be the same.

If the resistance is low there may be a short on the electrodes or wiring (in the case of a remote mounted transmitter). Alternatively there may be water ingress or moisture in the terminal box.

If the resistance is high and the pipe is completely full of fluid check the following:

1. The fluid is electrically conductive.
2. Electrodes are not coated with grease or any deposit.
3. Electrode circuit is not open
4. The remote mounted transmitter has a 3 core cable with an overall shield continuously from the sensor to the transmitter, including junction boxes and terminal rails inside panels.
5. The shield is connected to the Zero or to the earth terminal (PE) on the sensor.

NOTICE
Sensors removed from line For sensors removed from line with dry bore, use megger between terminal 82 and compression plate, and 83 and compression plate to show any water ingress behind electrodes or within enclosure.

7.2 Fluctuating process values

Question

Why do the displayed process values fluctuate when the electrode cable is moved?

Answer

There are several causes to the fluctuating process values:

- Deposits on electrodes
  - Clean the electrodes.
- Defect electrode cable
  - Replace the cable
- Incorrect cable connection
  - Connect the electrode cable (82, 83, 0 and shield) according to the instructions in chapter Connecting (Page 23)

NOTICE
Vibrating environments It is recommended to use special low noise cables for sensor sizes DN 2 and 3 installed in vibrating environments.

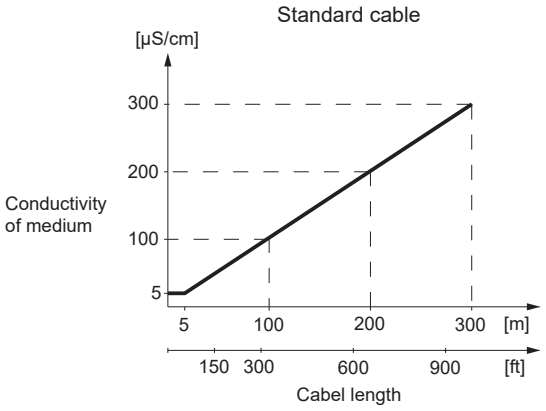
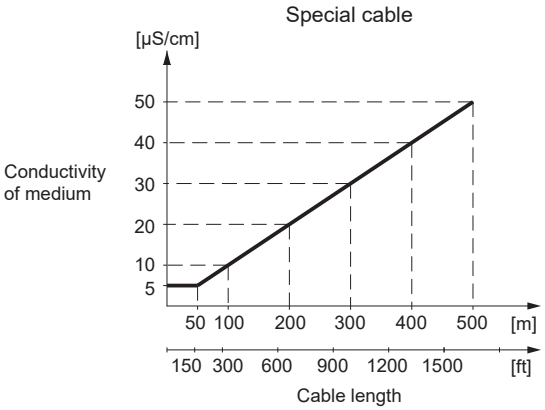
8.4 Process fluid conductivity

Compact installation

Liquids with an electrical conductivity ≥ 5 µS/cm.

Remote installation





WARNING

For detection of empty sensor the min. conductivity must always be >50 µS/cm and the max. length of the electrode cable when remote mounted is 50 meters (164 ft). Special cable must be used!

For remote MID installations the max. cable length is 3 meters (9.8 ft). For other CT application standard requirements are applicable.

8.5 Liner selection

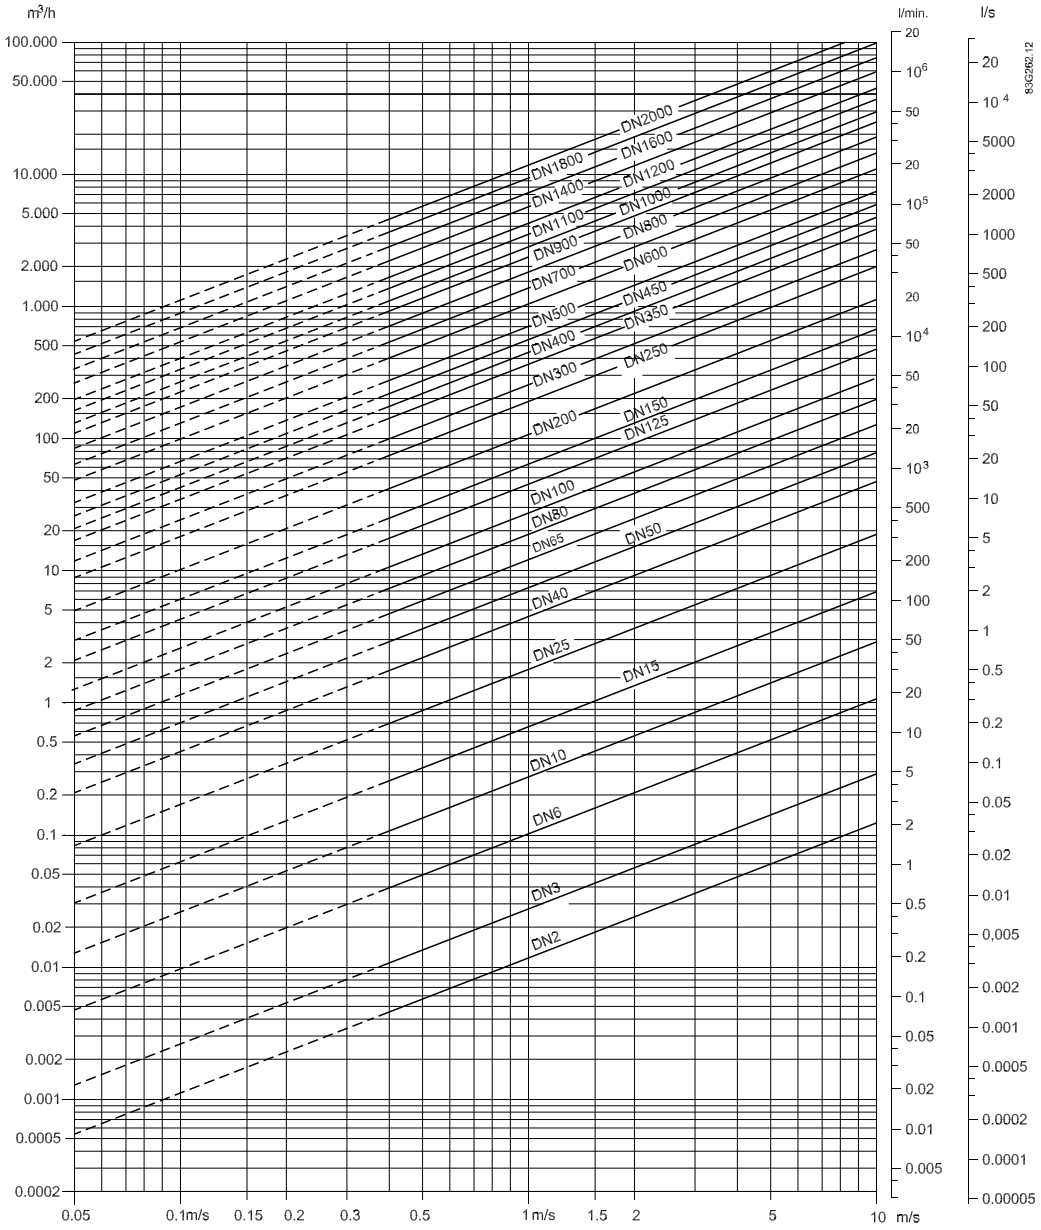
Liner	Applications
EPDM	Drinking water applications (not hydrocarbons)
Ebonite	Drinking water applications wastewater applications and certain chemicals applications
NBR	General purpose. Drinking water, sea waters

8.6 Electrode selection

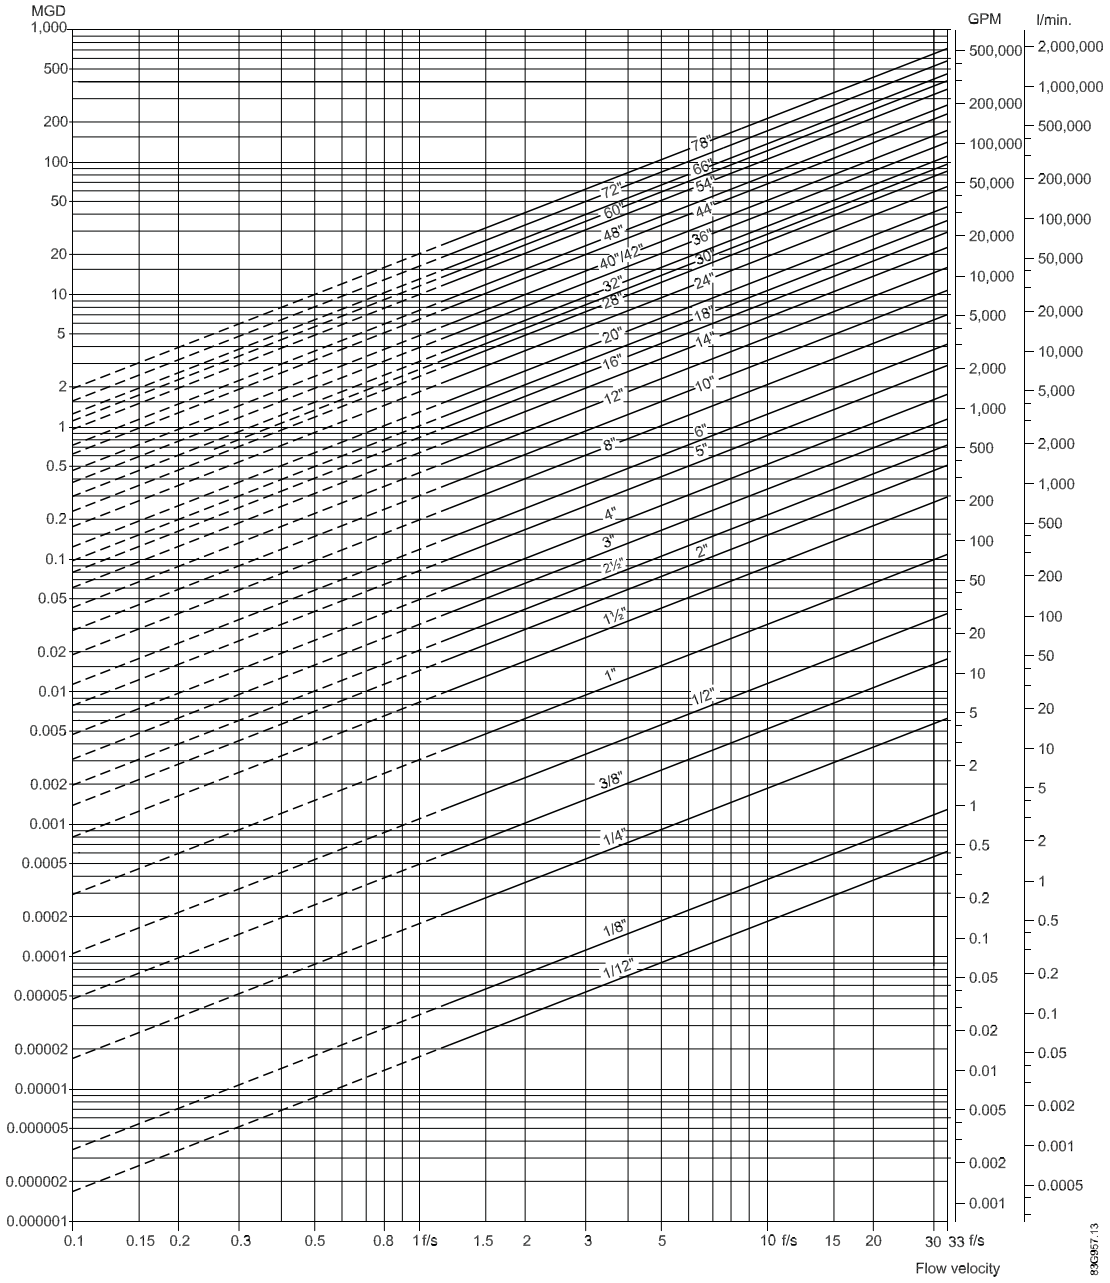
Electrodes	
Hastelloy C	The preferred choice for water and wastewater, chemicals, food and beverage, and pharmaceutical industries

8.7 Sizing tables

Sizing table (DN 2 ... DN 2000)



Sizing table (DN 1/12" ... DN 78")



The tables show the relationship between flow velocity v, flow quantity Q and sensor dimension DN.

Guidelines for selection of sensor

Min. measuring range: 0 ... 0.25 m/s (0 ... 0.8 ft/s)

Max. measuring range: 0 ... 10 m/s (0 ... ft/s)

Normally the sensor size is selected so that the nominal flow velocity v lies within the measuring range 1 ... 3 m/s (1 ... 15 ft/s).

Flow velocity calculation formula:

(metric measures)

$$V = \frac{1273.24 \times Q\ [l/s]}{DN^2\ [mm]}\ [m/s] \text{ or } V = \frac{353.68 \times Q\ [m^3/h]}{DN^2\ [mm]}\ [m/s]$$

(imperial measures)

$$V = \frac{0.408 \times Q\ [GPM]}{(\text{Pipe ID})^2\ [inch]}\ [ft/s] \text{ or } V = \frac{283.67 \times Q\ [MGD]}{(\text{Pipe ID})^2\ [inch]}\ [ft/s]$$

8.8 Dimensions and weight

Spare parts

Description	
Cable glands, 2 pcs. M20 ½" NPT	
Sealing screws for sensor/transmitter, 2 pcs.	
Terminal box, in polyamide, inclusive of lid M20 ½" NPT	

Description	
Terminal box lid, in polyamide	
Terminal box, in stainless steel, inclusive of lid M20 ½" NPT	
Potting kit for terminal box of MAG sensors for I P68/NEMA 6P (not for EX)	

A.4 Ordering

In order to ensure that the ordering data you are using is not outdated, the latest ordering data is always available on the Internet: Catalog process instrumentation (http://www.siemens.com/processinstrumentation/catalogs)

Glossary

ASIC

Application-Specific Integrated Circuit is an integrated circuit (IC) customized for a particular use, rather than intended for general-purpose use.

EMC

Electromagnetic compatibility (EMC) is the branch of electrical sciences which studies the unintentional generation, propagation and reception of electromagnetic energy with reference to the unwanted effects (Electromagnetic Interference, or EMI) that such energy may induce. The goal of EMC is the correct operation, in the same electromagnetic environment, of different equipment which use electromagnetic phenomena, and the avoidance of any interference effects.

IP

An IP (Ingress Protection) number is used to specify the environmental protection of enclosures around electronic equipment. These ratings are determined by specific tests. The IP number is composed of two numbers, the first referring to the protection against solid objects and the second against liquids. The higher the number, the better the protection. For example, in IP67 the first Number (6) means that the device is totally protected against dust, and the second (7) that it is protected against the effect of immersion between 15cm and 1m

PED

The Pressure Equipment Directive (97/23/EC) is the legislative framework on European level for equipment subject to a pressure hazard. It was adopted by the European Parliament and the European Council in May 1997 and has been obligatory throughout the European Union since May 2002.

SENSORPROM

All sensor related settings/data saved on an EPROM. SENSORPROM technology automatically configures the transmitter at start up providing calibration data, pipe size, sensor type, and output settings. The SENSORPROM automatically stores values or settings changed by users, and automatically re-programs any new transmitter without loss of accuracy.

USM

USM II is a Communication Platform. The Siemens USM II concept enables fitting of add-on bus modules without loss of functionality:

1. All modules can be fitted as true "plug & play"
2. Module and transmitter are automatically configured through the SENSORPROM

• Warranty and Warranty Restrictions

APG warrants its products to be free from defects of material and workmanship and will, without charge, replace or repair any equipment found defective upon inspection at its factory, provided the equipment has been returned, transportation prepaid, within 24 months from date of shipment from factory.

THE FOREGOING WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER WARRANTIES NOT EXPRESSLY SET FORTH HEREIN, WHETHER EXPRESSED OR IMPLIED BY OPERATION OF LAW OR OTHERWISE INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

No representation or warranty, express or implied, made by any sales representative, distributor, or other agent or representative of APG which is not specifically set forth herein shall be binding upon APG. APG shall not be liable for any incidental or consequential damages, losses or expenses directly or indirectly arising from the sale, handling, improper application or use of the goods or from any other cause relating thereto and APG's liability hereunder, in any case, is expressly limited to the repair or replacement (at APG's option) of goods.

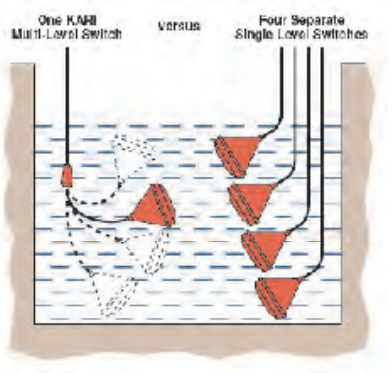
Warranty is specifically at the factory. Any on site service will be provided at the sole expense of the Purchaser at standard field service rates.

All associated equipment must be protected by properly rated electronic/ electrical protection devices. APG shall not be liable for any damage due to improper engineering or installation by the purchaser or third parties. Proper installation, operation and maintenance of the product becomes the responsibility of the user upon receipt of the product.

Returns and allowances must be authorized by APG in advance. APG will assign a Return Material Authorization (RMA) number which must appear on all related papers and the outside of the shipping carton. All returns are subject to the final review by APG. Returns are subject to restocking charges as determined by APG's "Credit Return Policy".

• Introduction

KA series controls consist of a free-floating switch enclosure to which a protected multiconductor cable is attached. Inside the float there are a number of microswitches set at different angles. A control weight is fixed at a point along the cable to keep the cable immersed in the liquid. The suspended float switch follows the movement of the liquid level. As the liquid level rises and falls, the weight on the cable causes the inclination of the float to change. This tilting action results in microswitches opening and closing, sequentially, at different elevations. The switch-operating levels are easily adjusted by moving the weight along the cable and/or altering the height of the cable fixing point.



The switch enclosure is conical in shape and the required number of microswitches are cast at predetermined angles inside it. The hermetically sealed float housing is filled with plastic foam and is weighted on one side. This rugged float and the weight are made of chemically resistant polypropylene while the standard cable is PVC coated.

There are three versions of the KA series switch. The standard S Series units are the largest, with a diameter of 6.7 inches, the C Series units have a diameter of 3.9 inches, and the smallest, M series units, are 3.0 inches in diameter.

- **Dimensions - in./mm**

S Series

C Series

M Series

• Options

Higher working temperature to 80°C (175°F): Model K
Longer cables to specified lengths
Smaller switching differentials down to 1.25 in.
Greater switching differentials to 75 in. (S series) or 60 in. (M series)
Alternative logic at switching points (normally open vs. normally closed)
Alternative cables in rubber and urethane
Alternative cables in teflon (max. 5 conductors = 4 or less switch points)
Lead weight in place of polypropylene-covered weight
Strain Relief Connector, Part #SRCG

• Chemical Compatibility — Corrosion Resistance of Materials

With a standard KA float switch, the only materials in contact with the liquid are the polypropylene covered float and weight, the heavy duty PVC coated cable, and the polypropylene wedge. Consequently, these switches are unaffected by a wide range of liquids. However, there are some liquids that are not compatible with these materials. For such applications, alternative construction materials are available as indicated in the Options section above. In assessing corrosion, key factors are the liquid's temperature and concentration, and the amount of time the float is immersed. Even if periodic replacement of KA float switches is necessary, they still may be the most economical choice. Rubber cables are preferred for applications where freezing conditions can occur, because PVC-coated cables tend to stiffen in such situations.

• Cable Weights

Single level switches (high or low alarm) are not supplied with weights. All multiple level switches are supplied with standard weights. Heavier weights may be needed if there is a danger of caking, thick crusts developing and/or the liquid is very dense and viscous. Alternative weights available are:

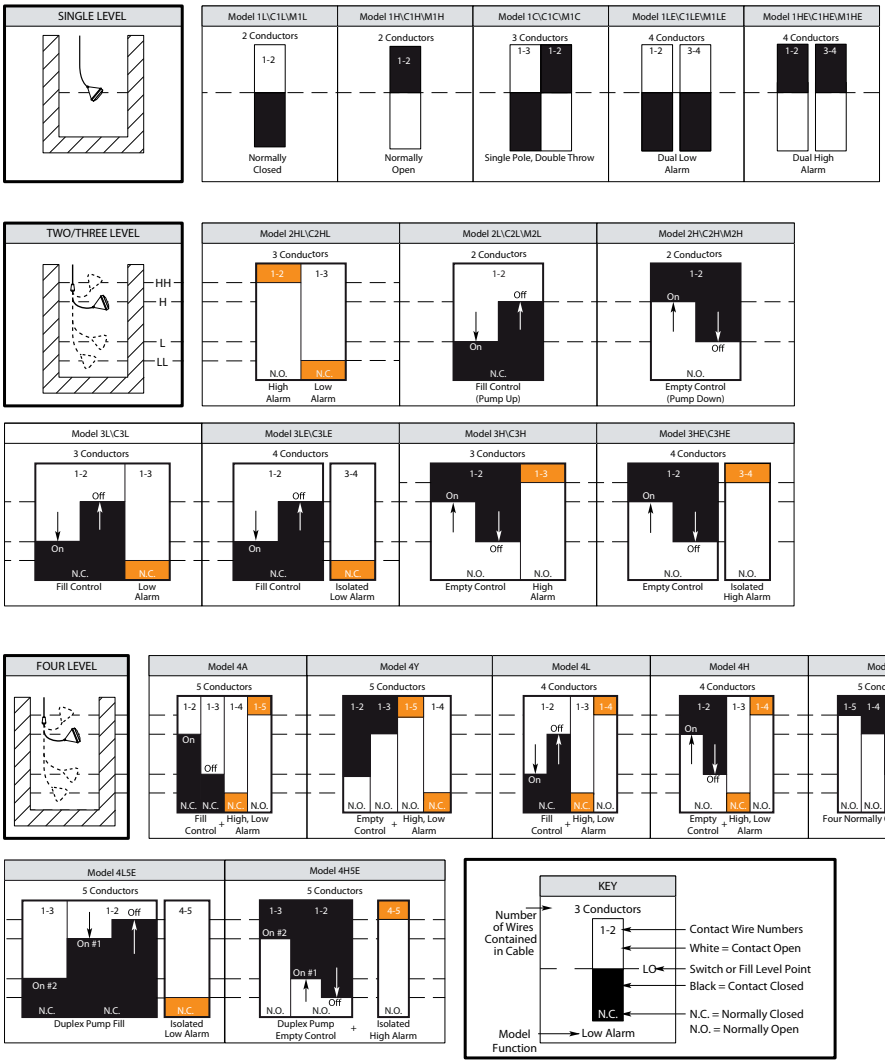
Standard: S & C series - Type A (black) 3/4 lb. M series - Type B (red) 1/2 lb.
Special: Type K (black) 1-1/2 lb. Type L (black) 2-1/2 lb.

Standard units have heavy duty cables with PVC covering. Typical diameters of the cables are:

2-Wires (1L, C1L, M1L, 2L, C2L, M2L, etc.): 0.25 in.
3-Wires (3L, C3L, 3H, C3H, etc.): 0.27 in.
4-Wires (4L, 4H, 3LE, C3LE, etc.): 0.31 in.
5-Wires (4L5E, 4H5E, etc.): 0.34 in.
(Dimensions may vary ±10%)

An integral cable, without splices, or greater length than the standard 16 feet may be needed for some situations, and this can be supplied by special order. It is not possible to modify the cable length (nor repair damaged cables) on existing units. Once the cable is outside the liquid, it can, however, be easily extended through a waterproof junction box or liquid-tight connector.

• Switch Wiring and Type Detail Table for KA Float Switches



• Selecting the Right Switch

The following procedure should be used to select the optimum switch or switch combination:

1. Determine the number of control points needed; for example, one point for alarm, two points for empty/fill, etc.
2. Select required model(s) from the Type Detail Table (previous page). If necessary, special switches may be ordered with non-standard switching logic.
3. The smaller, lower cost C series switches may be used if no more than a four conductor cable is needed.
4. The smallest, lowest cost M series switches may be used if the three following conditions are met:
    a. No solid floating materials are present.
    b. The specific gravity of the liquid is greater than 0.95.
    c. No more than a two conductor cable is needed.
5. Note that if a special material compatibility situation exists, there are a number of options available as indicated in the Options section on page 6.

The next several sections describe how the switching levels are related to each other and how they are adjusted. If it is found that the required levels cannot be accommodated by standard units, a special switch can be ordered. For use in still liquids, a two level switch with a smaller differential than the standard minimum (10 inches) may be ordered. Sometimes a combination of switches needs to be used to achieve the required switching heights or range of adjustment capabilities. For example a Model 3HE can be replaced by a model 2H plus a separate model 1H, or a model 2LH by a model 1H plus model 1L. Our Applications Engineering Department is pleased to assist users to select the best models for their particular needs.

• Understanding the Switch Action/Terminology

In order to understand the operation of KA liquid level controls, imagine them operating like pushbutton switches. A normally open (NO) switch is one that is open when there is no liquid present and closes as the liquid rises. Such a switch is symbolized as in Diagram 1. The opposite action normally closed (NC) switch operates as in Diagram 2. Note that the term "normally" means the switch state when there is *no* liquid present — it does not mean the "usual" operating state of the switch.

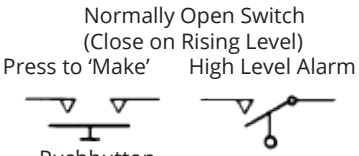


Diagram 1

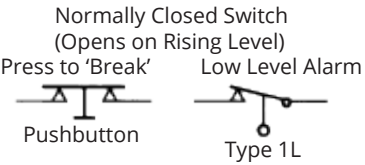

Diagram 2

• Single Versus Dual Point Control

The simplest single level KA float switches (types 1L or 1H) have no deadband (differential or hysteresis). They switch ON and OFF at one level point. Such switches work well as alarm point indicators but are unsuitable for automatic maintenance of the level of liquids in containers.

Usually, tank levels are maintained by pumps or electrically controlled solenoid valves in the supply or drain lines. Holding the level exactly at one point is difficult if there is flow in and out of the container, because it would involve the control switch going on and off constantly. This leads to excessive wear of the components. Thus, the normal practice is to have two control levels involved. At one level the pump or valve is turned ON and at the other level it is turned OFF.

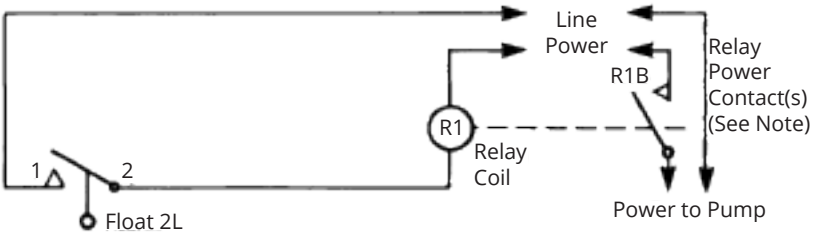
These situations can take advantage of the unique capabilities of the KA float switches. Rather than using two separate single level float switches, one float switch (type 2L or 2H) can provide ON and OFF level controls. The absolute height and separation (deadband) of these points can be easily adjusted. The ON control is a "make" in the circuit and the OFF is a "break" in the circuit. The deadband is supplied by the float switch. Other KA float switches provide additional facilities for high and low alarms as well as control of duplex pump systems.

• Single Point with Timed Relay Control

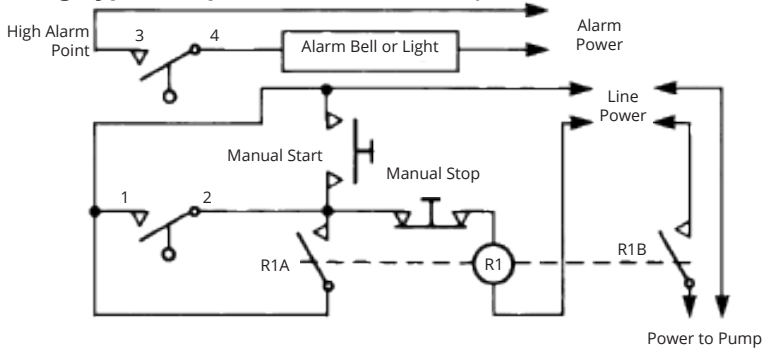
There may be some situations where it is not possible to produce any form of dual level control. In such cases an effective deadband can be produced with a single level switch by using it in conjunction with a time delay relay. When the switch operates, it turns on the relay which stays on for a predetermined period so that the pump or valve operates for that set period each time that it is turned ON.

• Emptying/Filling Pump Control Circuits

Simple Filling (Pump up) Control (Using Type 2L)

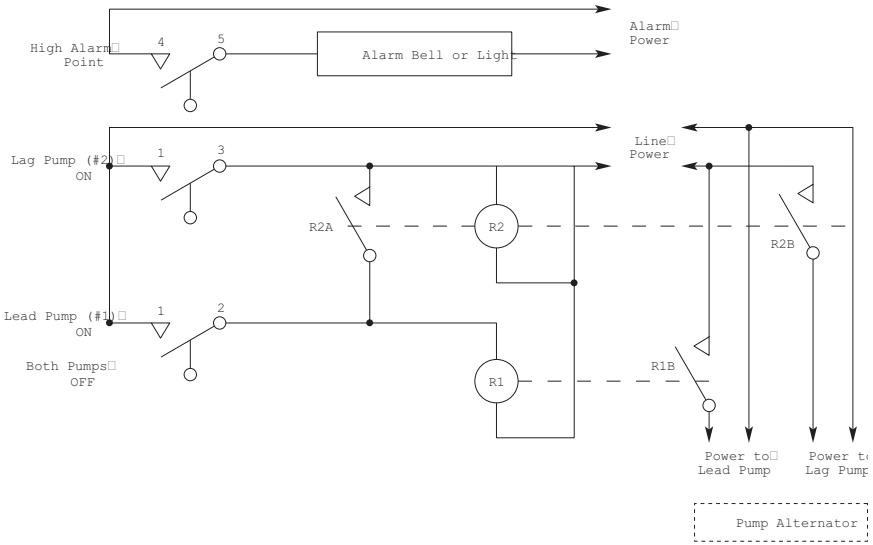


Simple Emptying (Pump down) Control with High Level Alarm (Using Type 3HE plus manual override)



Note: In the above examples, the relay contact R1A is used to electrically latch the relay ON in manual use. If the pump is manually started the float switch will not turn OFF. (The relay/contactor R1 used should be a DPST type with suitable ratings on one contact (R1B) able to carry the voltage and current required by the pump motor horsepower rating. If the pump motor requires three phase power, the relay contact R1B would have to be composed of three poles of heavy duty NO switches capable of carrying the pump motor power as well as there being an auxiliary NO switch contact R1A for latching purposes. Heavy duty relay contactors of this type are readily available at most electrical supply houses.

• Duplex Pump Control Circuit (Using Type 4H5E)



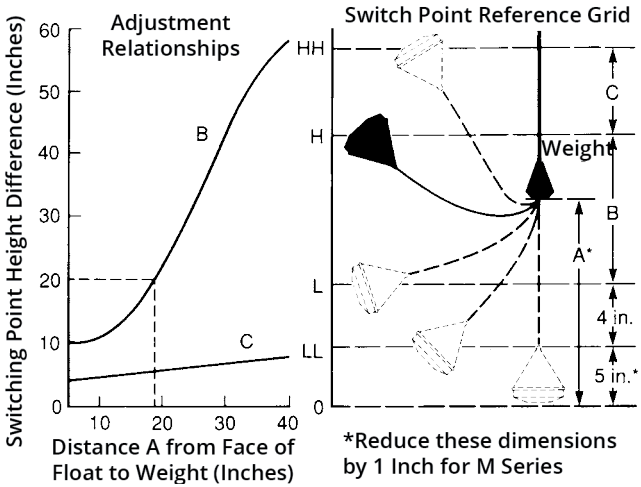
Note: Usually an alternator control is added to the lead and lag pump control circuits. This control automatically alternates the order in which the two pumps come on. In this way the wear on the pumps is evened out. If this is not done, in the course of time, the user will have one (lead) pump that is well worn and one (lag) pump that is barely used. If the pumps use three phase power, the single pole switch contacts, R1B and R2B, would need to be heavy duty three pole switch contacts.

• Operating Level Adjustment

Switch operating levels depend on the height at which the float is positioned in the tank by the cable fastening and the distance along the cable between the float and the weight. The Termination and Height Fixing section on the next page of this manual discusses the methods for securing the cable at the required height. The height of the face of the float in the free hanging position, with no liquid present, is used as a zero reference for adjusting all switch point operating levels per the graph and diagram below. Level settings may vary slightly between switches. Final adjustments should be made under actual pumping conditions. If there is surface wave motion, some variation in actual switching levels may occur.

For single level types (1L, 1H, 1C, 1LE and 1HE), the float should be hung so that the desired switching point is 5 inches above the zero reference. This represents the difference in height between levels 0 and LL. Note that these single level switches do not require a weight on the cable for their tilting operation.

For multi level types, the distance A (from 0 to weight) must be adjusted to obtain the desired switching differential. For most switches the differential height B between levels H and L is the crucial dimension. The required value for B, together with the corresponding value of A, is selected from the graph shown on the next page. Then, if the weight is wedged at that distance and the float hung in accordance with the diagram, the switch points will operate with the correct differential. The graph gives the distance C between levels H and HH for the determined value of A. It will be seen that switching levels HH and LL bear a specific relationship to A and B and cannot be independently adjusted. Thus, if it is essential to be able to adjust these levels separately, two floats will be required rather than just one.

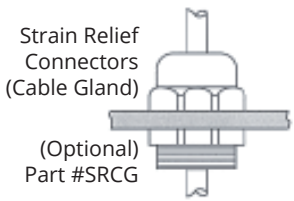


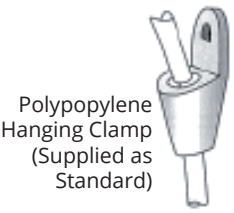
As a working example, consider a type 4H needing a pump operating differential of 20 inches (= dimension B). From the graph it can be seen that the corresponding value for A is approximately 19 inches. Now suppose that the float is to operate in a tank so that the pump "off" position (level L) is 15 inches from the bottom of the tank. This means that the float must be hung so that the zero reference height (free-hanging face of the float) is 6 inches from the bottom of the tank. The high and low alarm points HH and LL will then be, respectively, close to 41 and 11 inches from the bottom of the tank.

For type 2HL, the difference between the high and low alarm points is the difference between levels LL and HH in the graph. Note that this corresponds to distance B + C + 4 inches and the distance A for weight positioning must be selected accordingly.

• Termination and Height Fixing

There are several methods that can be used to fasten the cable so that the float is positioned at the right level in the tank. The three most commonly used are illustrated below. Very frequently, the cable will need to be led into a standard NEMA box with terminals for extension to the control panel. The liquid tight (70 psi) Strain Relief Connector (Part# SRCG) can be used to lead the cable through the wall of the box.

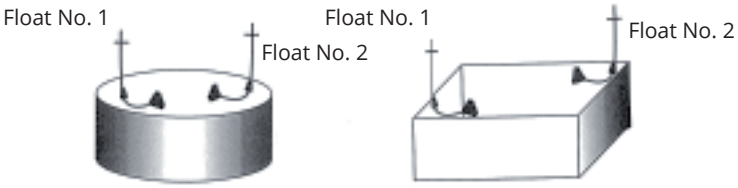




• Position in Tank/Swing Distance Allowance

KA float switches should hang freely in the tank and not be tightly tethered. If more than one float switch is to be installed in the tank, the cable fixing points should be separated to prevent the cables from tangling. The float switches do not need to be hung in the center of the tank — the cable can run down a wall or corner of the tank as illustrated below.

The float switches need a certain free surface to operate in. As a rule of thumb, the swing radius to be allowed should be the same as the distance of the weight from the bottom of the float. If necessary, baffles or stilling wells may have to be provided to prevent interference with other equipment. Contact our Applications Engineering Department for alternative suggestions if any difficulties in this regard are foreseeen or encountered.



• Control Contact Ratings

The contacts used in the KA float switches are high performance microswitches. Although they are capable of carrying quite high currents at up to 250 VAC, it is not a good practice to put pump motor currents directly through these contacts because they are immersed in the liquid. Thus, it is usually just low sensing currents for relay coil operation that are applied to the float switch contacts.

Relays with heavy duty contacts are known as contactors. Pump motor manufacturers often provide suitable contactors with control circuits on their motors. These allow the KA float switches to be connected directly. If contactors are not provided, the contact ratings needed to start and stop a pump should be approached with caution: when pump motors start and stop, they can produce a momentary surge current several times greater than the steady running current. Suppliers of the relays and contactors usually provide maximum ratings for their contacts in terms of allowable pump motor horsepower figures. If there are any concerns in this regard, consult our Applications Engineering Department for advice.

• Verifying Operation

KA float switches are highly reliable. However, if a check on the operation of a particular switch is needed, it is first necessary to ascertain where the bias weight is located in order to find the top point when the float is in the liquid. A good way to do this is to put the float switch on a flat surface so that it can roll freely to the working orientation (just like it does in the liquid). A continuity meter should then be attached to the circuit to be tested. Testing is then performed by tilting the float up and down in the vertical plan determined by the working orientation. At the appropriate angle, the switch circuit being tested should open or close.

• Valuable Tips

1. Do not be concerned if you hear a clacking sound when the float is shaken — it is only the microswitch acting. It is extremely unusual to find any leakage in these floats.
2. Do not put the full line power voltage across a contact without a load attached. Shorting out the power across the microswitch will destroy it.
3. Do not tether the floats tightly on a short cable or make them jiggle and dance in a high pressure washdown hose stream. The continuous flexing at a particular point in the cable will break the wires.

Certificate of Compliance

Certificate: 1358188 **Master Contract:** 237484

Project: 2721544 **Date Issued:** July 24, 2014

Issued to: **Automation Products Group Inc**

1290 Direct Drive Process Pressure Gauge

Tab - 2.05

FEATURES

- Accuracy complies with ±0.5% (ASME B40.1, Grade A)
- Gearless design
- Ideal for shock and vibration applications
- External dial adjustment

TYPICAL USES

- Refineries
- Offshore / Power - Power Plants

1290
4½″ dial size

SPECIFICATIONS

Accuracy:	±0.5% of span (ASME B40.100, Grade 2A)
Size:	4½″
Range:	15 to 2,000 psi
Process Connection Location:	Lower
Process Connection Size:	¼ NPT Male, ½ NPT Male
Case Style:	Solid front with pressure relief back
Movement:	Adjustable
Movement Materials:	300 SS
Window Material:	Acrylic
Dial:	Aluminum, white background, black scale
Pointer:	Aluminum
Weather Protection:	Dry Case: IP54
Mounting:	Stem or Surface
Approvals:	CRN

WETTED COMPONENTS

Bourdon Tube	Process Connection	Joints
Inconel® 750X, 304 SS capillary	316L SS	Welded

NON-WETTED COMPONENTS

Case	Ring	Back Cover
ABS Thermoplastic	302 SS	Polypropylene

KEY BENEFITS

- **Low volumetric displacement - compatible with mini diaphragm seal**
- **Selection of Measurement Units (psig and dual scale, kg/cm²/psi)**
- **Optional NIST Traceable Calibration Chart**

MIN/MAX TEMPERATURE LIMITS (1259 ONLY)

Version	Ambient	Process	Storage
Dry	-20°F to 200°F (-29°C to 93°C)	-20°F to 250°F (-29°C to 121°C)	-40°F to 250°F (-40°C to 121°C)
Glycerin Fill	20°F to 150°F (7°C to 66°C)	20°F to 200°F (7°C to 66°C)	0°F to 150°F (-18°C to 66°C)
Silicone Fill	-40°F to 150°F (-40°C to 66°C)	-40°F to 200°F (-40°C to 93°C)	-40°F to 150°F (-40°C to 66°C)

1 - SAFETY INFORMATION

SAFETY INFORMATION

To assure safe operation and maintenance procedures, read and follow these instructions.

⚠ **WARNING:** Serious injury or equipment damage can result from failure to properly install, maintain or operate these components:

- Follow all instructions in these instructions to avoid exposure to pressurized fluid.
- Use proper tools and safety equipment in installing or maintaining components.
- Assure that process pressures and temperatures are properly monitored and maintained, and that process fluid is appropriate and compatible with system.
- If Safe Quick Release (SQR) option is used with isolation ring, avoid projection hazard by always using two hands to install or remove gauge, and stand clear from the gauge and coupling.

2 - OVERVIEW

OVERVIEW

Isolation rings are designed to protect measuring devices, e.g. pressure gauges, switches, and transducers, from direct contact with the process media. Using a 360-degree flexible liner that eliminates the potential for clogging and/or fouling, while transmitting pressure hydraulically to the instrument. Offered in two styles, Type 80 (Wafer) and Type 81 (Bolt-thru), each is mounted between customer-supplied flanges of process piping; available in nominal pipe sizes from 2″ to 20″ and 1″ to 10″, respectively.

3 - PRODUCT SPECIFICATIONS

PRODUCT SPECIFICATIONS

Type/Size:

Type 80 Wafer: 2″ to 20″

Type 81 Bolt-Thru: 1″ to 10″

Liner Materials: Buna-N, Teflon®, EPDM, Natural Rubber, Viton®

Liner Process Temeperature Limits:

Buna-N	–30/225°F
Teflon®	–15/350°F
Viton®	–15/350°F
Natural Rubber	–30/225°F
EPDM	–40/300°F

End Plate: 316L SS, Carbon Steel, CPVC

Pressure Class (Type 81 Bolt-Thru only): ANSI/ASME Class 150 / 300 (Type 80 wafer applicable to both 150 and 300 class)

Body: 316L SS, Carbon Steel

Instrument Connection Size: ¼, ½ Female NPT

Fill Fluid: Glycerin, Silicone (10 CST), Silicone (5 CST), Halocarbon.

AVAILABLE PRODUCT OPTIONS

Safe Quick Release Instrument Removal Option: (SQR)

- All Welded Assembly (XDU) – Not available with Safe Quick Release (SQR) and/or Needle Valve
- Retrofit end plates (XIR)
- Wired Stainless Steel Tag (XNH)
- Calibration Chart (XC4) – Measuring instrument attached
  Consult factory for additional options

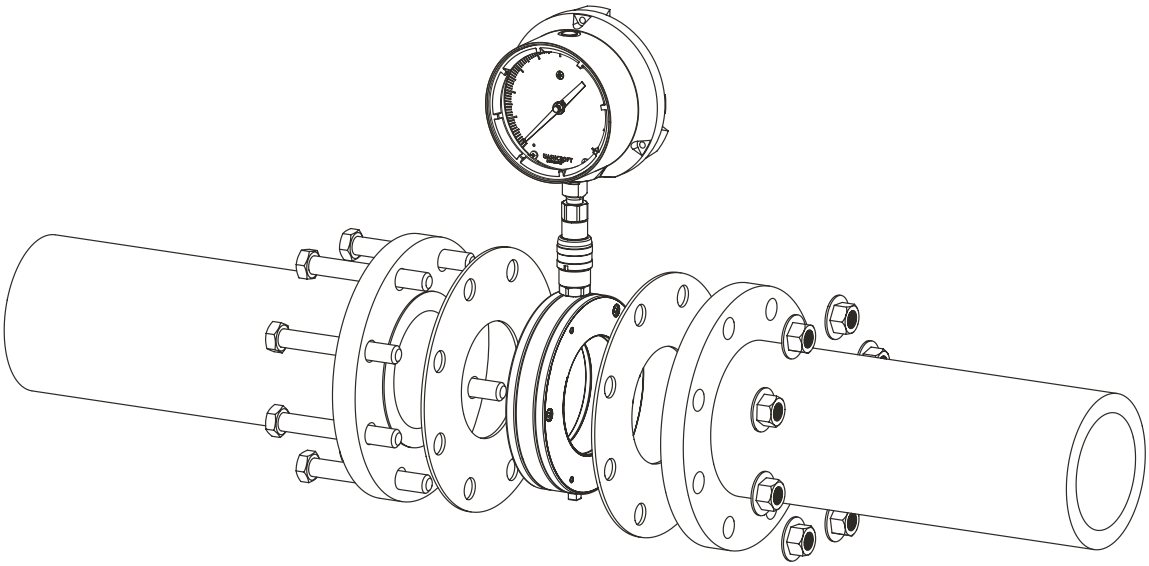
PRODUCT INSTALLATION

MATERIAL COMPATIBILITY: Wetted material selection is critical to the product's life cycle and reliability. In order to ensure proper material selection, elements to consider are:

- Process Fluid
- Process Fluid Concentration (%)
- Process Pressure and Temperature
- Assembly Fill Fluid – check compatibility

Isolation Ring Styles:

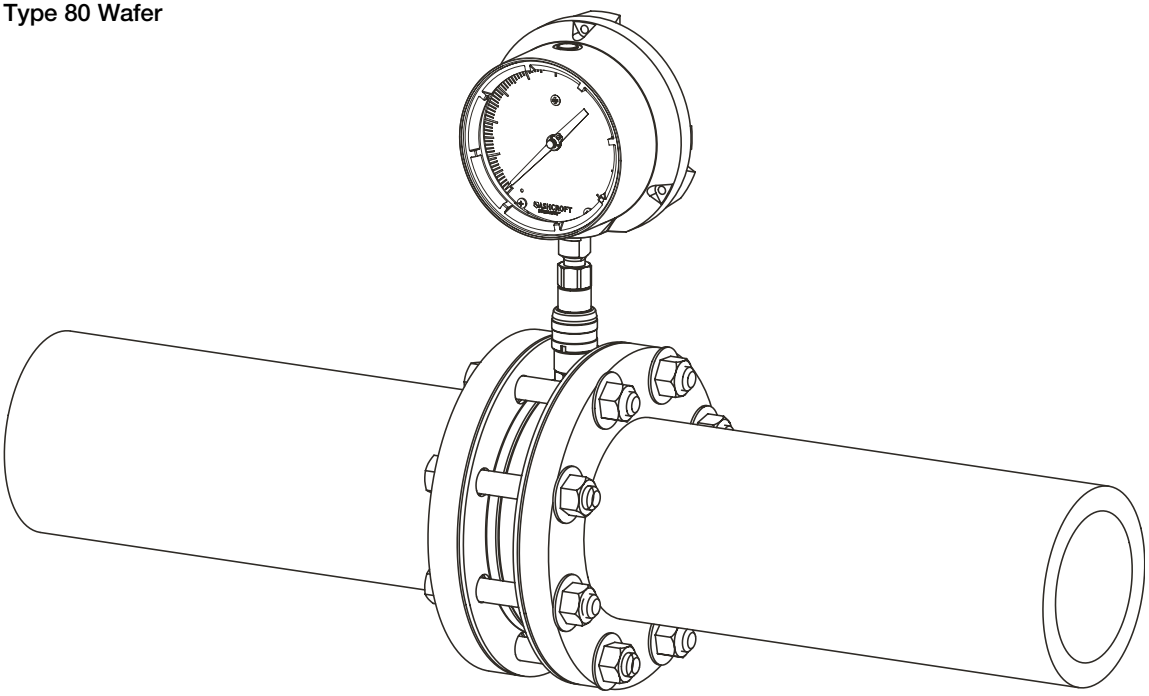
Type 80 Wafer:



(Exploded View)

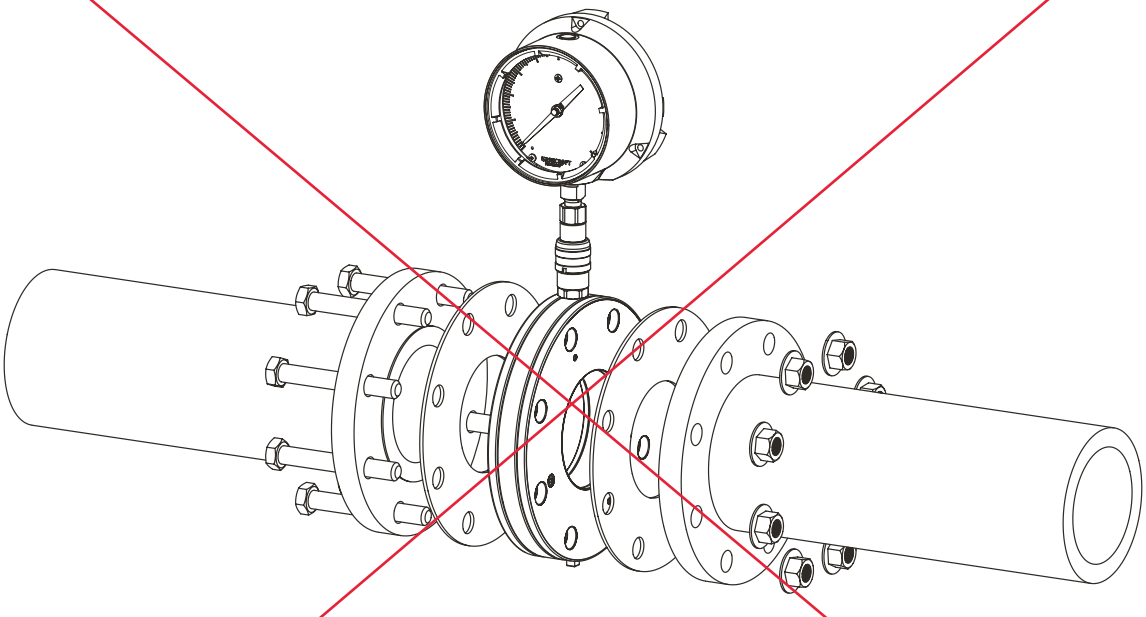
Gaskets, nuts, bolts and flanges provided by USER

Type 80 Wafer



(Installed View)

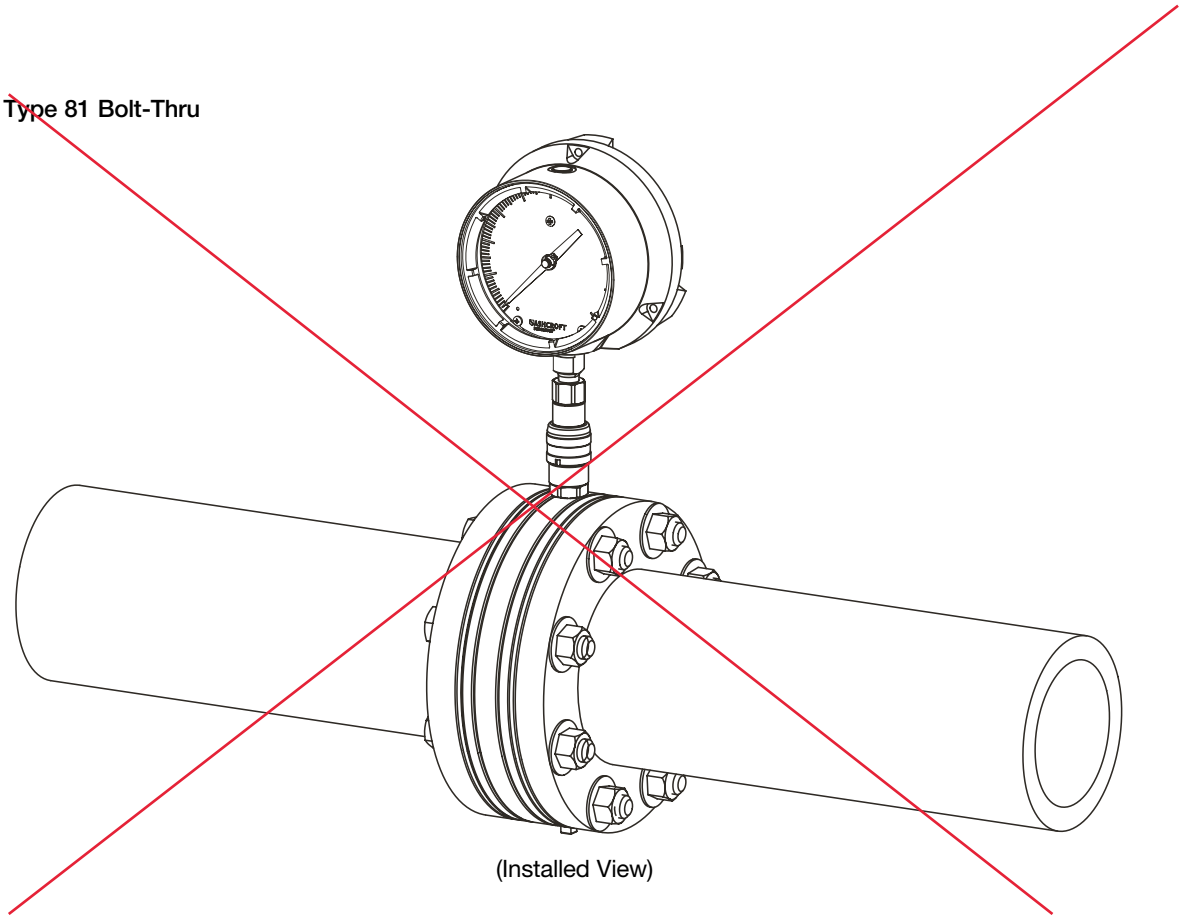
Type 81 Bolt-Thru



(Exploded View)

Gaskets, nuts, bolts and flanges provided by USER

Type 81 Bolt-Thru



(Installed View)

Prior to installation, please follow the recommended manufacturer procedure:

A. Confirm process has been shut down with process pressure relieved and piping drained.

B. Provide pipe flange gasketing, mounting bolts, lockwashers and nuts (not supplied by Ashcroft).

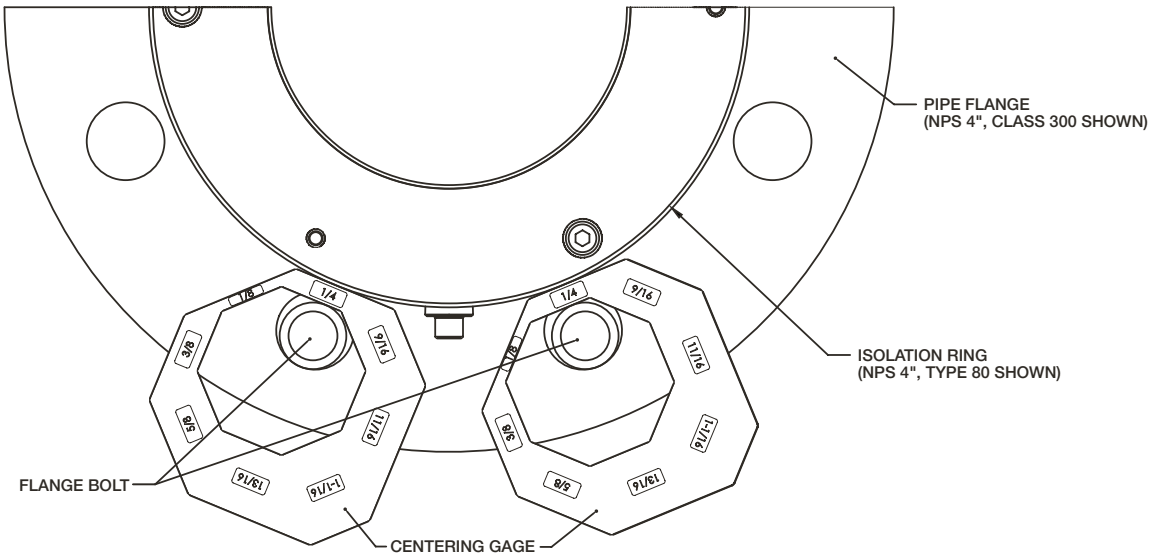
Step 1: Isolation ring and flange gaskets should be centered between process piping flanges.

For Type 80 Wafer: Assembly is installed by placing centering gages (shims) on the two bottom-most flange bolts; these are supplied by Ashcroft with each isolation ring assembly. Refer to the following table for centering gage size based on ANSI/ASME class rating. Note: Centering gauges may be removed afterwards by breaking.

ANSI/ASME CLASS	NPS	CENTERING GAGE SIZE
Class 150	All Sizes	1/8″
Class 300	2″	1/4″
	3″	3/8″
	4″	1/4″
	6″	11/16″
	8″	11/16″
	10″	9/16″
	12″	3/8″
	14″	13/16″
	16″	5/8″
	18″	1-1/16″
	20″	1-1/16″

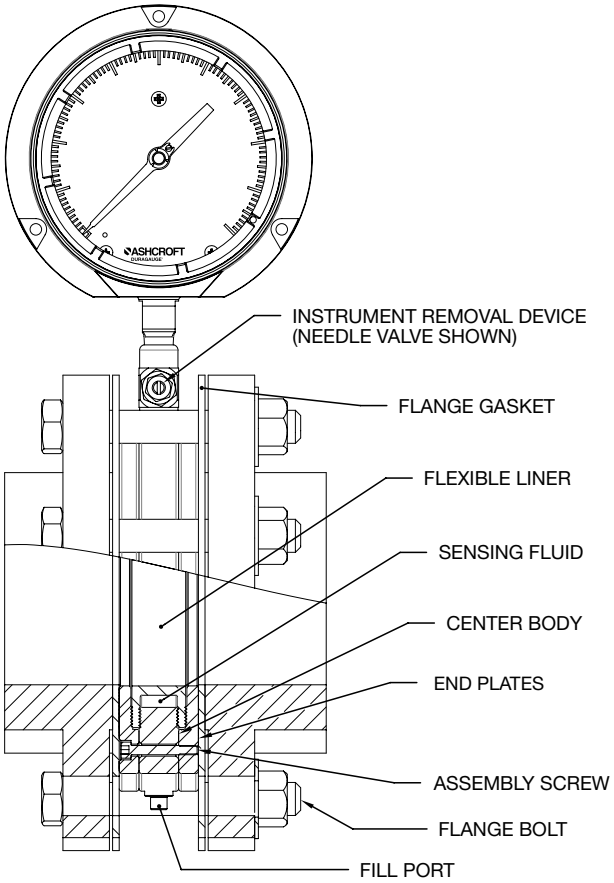
Step 2: Position Type 80 Wafer isolation ring with centering-gages or Type 81 Bolt-Thru using two bottom-most bolts through unit and process flanges. Take care to ensure that any attached instruments are directed in a vertical (upward) configuration, while measuring devices (e.g. gauge, switch, transducer) are also positioned between the two upper-most flange bolts to prevent obstruction with the process piping.

Step 3: Tighten the piping flange bolts to the locking nuts / washers on the opposite flange. Each should be tightened by cross-bolting with the proper torque based as described in ASME PCC-1 on NPS, ANSI/ASME Class rating, and gasketing used.



6- ASSEMBLY REMOVAL

ASSEMBLY REMOVAL



IMPORTANT: In the event the assembly needs to be removed from process, follow the manufacturer's recommended procedure to prevent possible injury and/or damage.

A. Confirm process has been shut down with process pressure relieved and piping drained, cleaned and dried before installation and/or removal of product assembly.

B. Ensure the assembly is supported prior to removal of bolts/flanges.

C. Loosen flange bolts securing the isolation ring assembly to the process pipe flange.

D. Upon separation of pipe flanges, remove assembly and flange gaskets from the piping.

In the event only instrument removal is required, use a wrench to unthread the instrument. Use container to catch the fill fluid when draining from the isolation ring.

7 - PRODUCT MAINTENANCE / IN-SERVICE REPLACEMENT

PRODUCT MAINTENANCE / IN-SERVICE REPLACEMENT

The following provides the user with th necessary instructions to service this product. This will allow the customer to perform routine maintenance that may involve in-service instrument replacement.

IN-SERVICE INSTRUMENT REMOVAL / REPLACEMENT (Dependent upon type of assembly connection listed below)

1) Direct Mount Instrument Removal: Measuring instrument should never be removed from the isolation ring while in service. For instrument replacement, complete removal of the isolation ring assembly from service is required.

2) Needle Valve Instrument Removal Option:

a) Shut down process and fully vent/relieve pressure to the assembly. While it is possible that pressure may be retained in the process when the instrument is removed, it is imperative that the process pressure MUST be at Zero (0 psi) when reinstalling the replacement instrument.
IMPORTANT: Residual pressure may cause potential injury/damage, and replacing an instrument with residual pressure could result in fill fluid imbalance, thereby causing accuracy errors.

b) Using a flathead screwdriver, turn the adjustment on the needle valve until fully closed (clockwise).

c) Secure the needle valve body using a ¾″ wrench, and remove the attached measuring instrument (e.g. gauge, switch, transducer) with a second wrench applied to the instrument's wrench flats.

d) Position and secure the measuring instrument so that the pressure port is facing upwards. Then utilizing an ordinary syringe, fill the internal cavity of the process connection with compatible fill fluid. Place finger on the port and tilt side-to-side to dislodge any trapped air. Continue filling until air bubbles no longer appear. Note: Improper fill can result in accuracy errors or damage to the flexible isolation ring liner. Highly viscous fill fluids may require 10 to 15 minutes until air has been completely dislodged.

e) Apply Teflon tape or sealant to instrument fitting while unit is still upside down and place aside while retaining this position.

f) Pour fill fluid into instrument until fill fluid is overflowing.

g) Using the flathead screwdriver, open the needle valve. Fill needle valve port until fluid is overflowing.

h) Once steps e, f and g have been completed, take the filled measuring instrument and quickly "flip" over to install (thread) into the top port of the needle valve. This needs to be performed to lose as little fill fluid as possible.

i) Secure both instruments utilizing the two wrenches previously used for disassembly.

3) Safe Quick Release (SQR) Option: This option provides the end-user with a flexible approach to remove/replace an existing instrument once the isolation ring has been installed. Prior to removal, it will be necessary to obtain a pre-filled instrument to allow continued operation and limit downtime. Record the product model number and pressure at which the instrument has been removed; this is important as it ensures that an exact replacement is "pre-charged" at the factory to retain accuracy. Safe Quick Release (SQR) removal procedure is as follows:

a) Ensure process pressure has been relieved to the proper intended removal pressure of the lesser of 300 psi or half-scale of any attached gauge. Recommended removal/replacement of product is 0 psi.

b) Twist the instrument so that the coupling sleeve-relief lines up with the sleeve-lock key.

c) While holding the instrument securely, pull sleeve downward to disengage coupling.

d) Place newly "pre-charged" instrument on the coupling and pressure downward to engage the coupling.

8 - STORAGE

STORAGE

Store in a cool, dry area.

KELLER

LEVELGAGE

GENERAL PURPOSE SUBMERSIBLE LEVEL TRANSMITTER

CUSTOM RANGE ANALOG LEVEL TRANSMITTER

The Levelgage by KELLER America provides standard features that far exceed those of comparably priced instruments, including standard ±1% FS Total Error Band $(TEB)_3$ or optional ±0.5% FS TEB_3 accuracy. This level transmitter is approved to NSF 61 and NSF 372_6 standards for water quality and includes KELLER America's guaranteed lightning protection, making the Levelgage an outstanding value for liquid level measurement.

The ability of the Levelgage to provide this level of sustained performance over a wide range of operating conditions makes it ideally suited to an equally wide range of applications, including drinking water, stream and reservoir level, environmental monitoring, tank level, wastewater, and for installations in areas prone to chronic damage due to transients caused by lightning.

For more information on the Levelgage, or any other KELLER product, please contact KELLER America, or view the entire KELLER catalog at kelleramerica.com

FEATURES

NSF 61 / NSF 372 approved construction for use in drinking water applications$_6$

4...20mA models include guaranteed lightning protection at no additional cost

16-bit internal digital error correction for cost-effective low Total Error Band $(TEB)_3$

316L stainless steel construction

2-year warranty covers defects in materials and workmanship

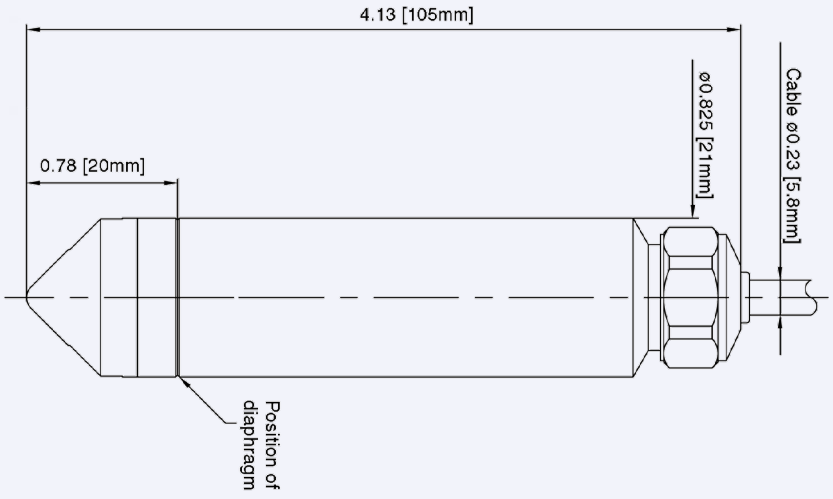
Industry standard analog outputs simplify interface to controls, data collection, and telemetry systems

Built in the U.S.A. ARRA Section 1605 Compliant

Standard 3-day lead time

CE

CLASSIFIED UL WATER QUALITY



Output	White	Black	Red

Pressure Ranges[1,2]

Relative	Infinite between 0...3 and 0...900 ft W.C
Absolute	Infinite between 0...2 and 0...11 bar

1.The Levelgage can be provided with custom calibration at no extra cost. For fluids other than water, the specific gravity must be given at the time the order is placed.

2. Intermediate ranges are realized by deranging the analog output from the next highest basic range: 1, 3, 10, and 30 bar (relative) 2, 4, and 11 bar (absolute). Level range may be specified in units of lb/in2(psi), inches WC or feet WC. KELLER America uses the International Standard conversion of 2.3067 feet WC/psi.

Accuracy[3]

Static	Standard ±0.25% FS
Total Error Band	Standard ±1% BR, Optional ±0.5% BR

3.Static accuracy includes the combined effects of non-linearity, hysteresis, and non-repeatability at room temperature (25°C). Total Error Band (TEB) includes the combined effects of non-linearity, hysteresis, and non-repeatability as well as thermal dependencies, over the compensated temperature range, expressed as a percentage of the basic range (BR).

The calculation for maximum TEB on intermediate ranges (IR) is: $TEB_{IR} = (BR/IR) \times TEB_{BR}$

Output

Current	4...20mA
Voltage	0...5, 0...10VDC[4]

4. Other voltage output options available on request.

Certifications

CE	EN50081-1, EN50082-2
NSF / ANSI[6]	61, 372

Electrical[5]

Supply (4-20mA)	11...28 VDC
Supply (0-5VDC)	8...28 VDC
Supply (0-10VDC)	13...28 VDC
Load Resistance (mA)	<(Supply-11V)/0.022A
Load Resistance (VDC)	>4k ohm

5. Nominal values may be higher depending upon cable length. Internal lightning protection increases the minimum-required supply voltage from 8VDC to 11VDC, due to internal resistance of the surge protectors. In addition, cable resistance (~70Ω / 1000ft) adds to the supply requirement. In order to insure proper system operation, calculate the minimum required supply voltage (at the source) as follows:

For two-part (internal+external) system (recommended):
MINIMUM SUPPLY VOLTAGE = 11.6 + 0.022 (CABLE LENGTH x 0.07) VDC

For internal only protector (standard with 4-20mA output):
MINIMUM SUPPLY VOLTAGE = 11 + 0.022 (CABLE LENGTH x 0.07) VDC

Environmental

Protection Rating	IP68
Operating Temp.	-10...60° C
Compensated Temp.	-10...80° C
Wetted Materials	316 L Stainless Steel
	Polyamide
Cable & Sealing	PE & EPDM for water / wastewater[6]
	Hytrel & Viton for hydrocarbons
	Tefzel & Viton or EPDM as required for chemical interaction

6. NSF 61 and NSF 372 approval applies only to PE & EPDM contruction material option, which is standard on this instrument unless otherwise specified.

Optional Accessories

1/2" NPT Conduit Fitting

Drying Tube Assembly

Bellows Assembly

Cable Hanger

Termination Enclosure

Stabilizing Weight

Process Meter

Open-faced Nose Cap

Signal Line Surge Protector

Pressure Test Adapter

1 Introduction

1.1 Content of this Document

This document contains information that you need in order to use your product throughout the applicable stages of the product life cycle. These can include the following:

- Product identification
- Delivery, transport, and storage
- Mounting and installation
- Commissioning and operation
- Maintenance and repair
- Troubleshooting
- Dismounting
- Disposal

Note

This document does not substitute the instruction manual.

Note

For full information on the product, refer to the instruction manual and further documentation on the Internet at www.pepperl-fuchs.com.

The documentation consists of the following parts:

- Present document
- Instruction manual
- Datasheet

Additionally, the following parts may belong to the documentation, if applicable:

- EU-type examination certificate
- EU declaration of conformity
- Attestation of conformity
- Certificates
- Control drawings
- Additional documents

1.2 Target Group, Personnel

Responsibility for planning, assembly, commissioning, operation, maintenance, and dismounting lies with the plant operator.

Only appropriately trained and qualified personnel may carry out mounting, installation, commissioning, operation, maintenance, and dismounting of the product. The personnel must have read and understood the instruction manual and the further documentation.

Prior to using the product make yourself familiar with it. Read the document carefully.

1.3 Symbols Used

This document contains symbols for the identification of warning messages and of informative messages.

Warning Messages

You will find warning messages, whenever dangers may arise from your actions. It is mandatory that you observe these warning messages for your personal safety and in order to avoid property damage.

Depending on the risk level, the warning messages are displayed in descending order as follows:

Danger!

This symbol indicates an imminent danger.

Non-observance will result in personal injury or death.

Warning!

This symbol indicates a possible fault or danger.

Non-observance may cause personal injury or serious property damage.

Caution!

This symbol indicates a possible fault.

Non-observance could interrupt the device and any connected systems and plants, or result in their complete failure.

Informative Symbols

Note

This symbol brings important information to your attention.

Action

This symbol indicates a paragraph with instructions. You are prompted to perform an action or a sequence of actions.

2021-03

2 Product Specifications

2.1 Function

Isolated barriers are isolators used for protection of intrinsically safe circuits in hazardous areas. In addition to the required current, voltage and power limitation, the isolated barriers have a galvanic isolation between the field circuit and the controller.

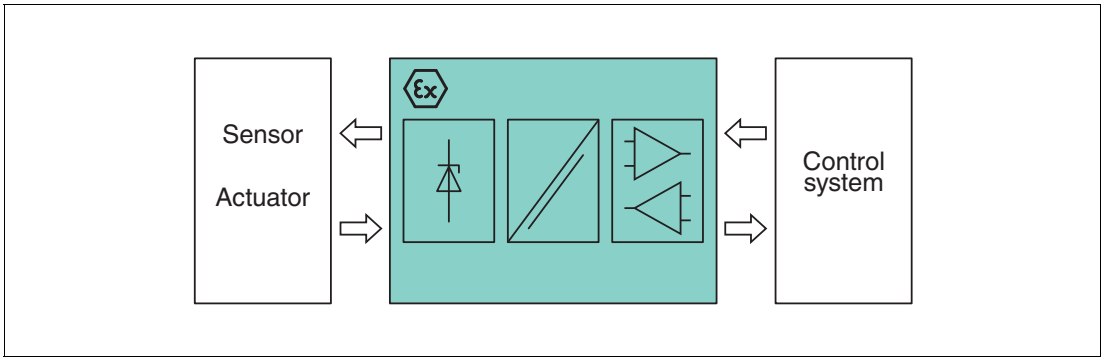

Figure 2.1 Function – isolating, amplifying and transforming signals

The K-System consists of wide range of isolated barriers suitable for mounting on 35 mm DIN mounting rail. K-System is easy to specify, integrate and expand. Our extensive line of intrinsic safe isolators for hazardous location applications contains over 150 different devices.

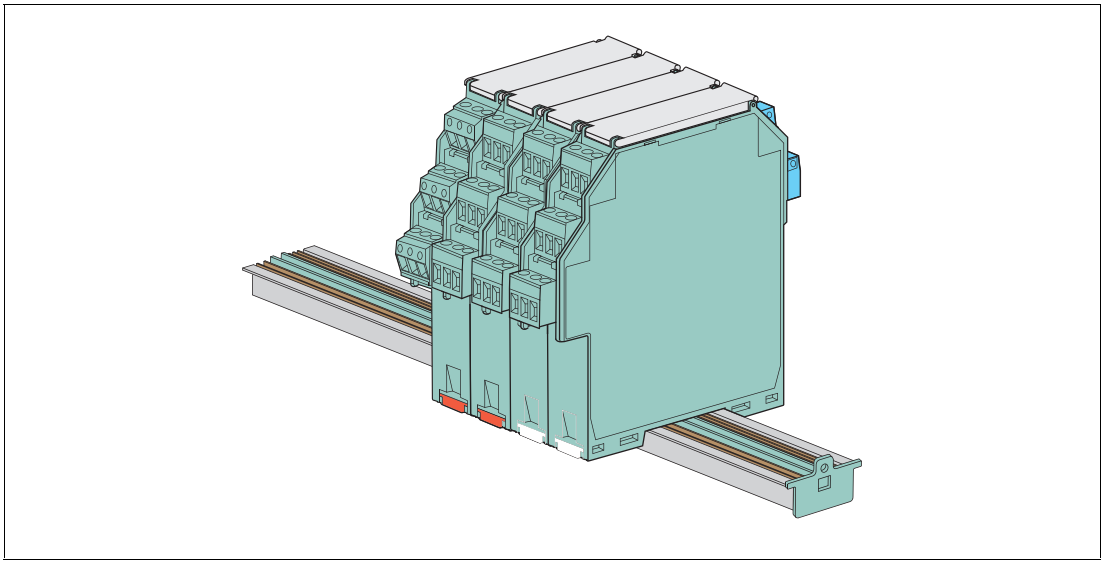

Figure 2.2 K-System on Power Rail

2.2 Housing Styles

Depending on the functionality and application, K-System devices have 3 different housing widths:

- KC devices with 12.5 mm width
- KF devices with 20 mm width
- KF devices or KH devices with 40 mm width

The 3 housing widths versions have the same system characteristics. All devices can be mounted on the 35 mm DIN mounting rail or the Power Rail. See chapter 2.9

KC Device Housing

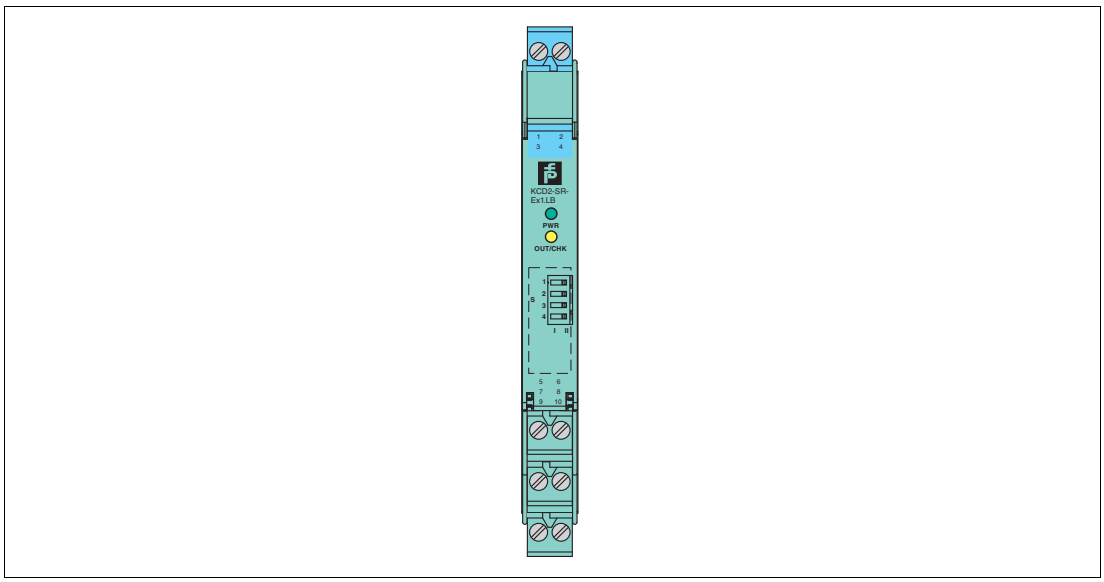

Figure 2.3 KC device housing (12.5 mm)

Used for high signal integrity

- Compact 12.5 mm housing
- High packing density with single loop integrity

KF Device Housing

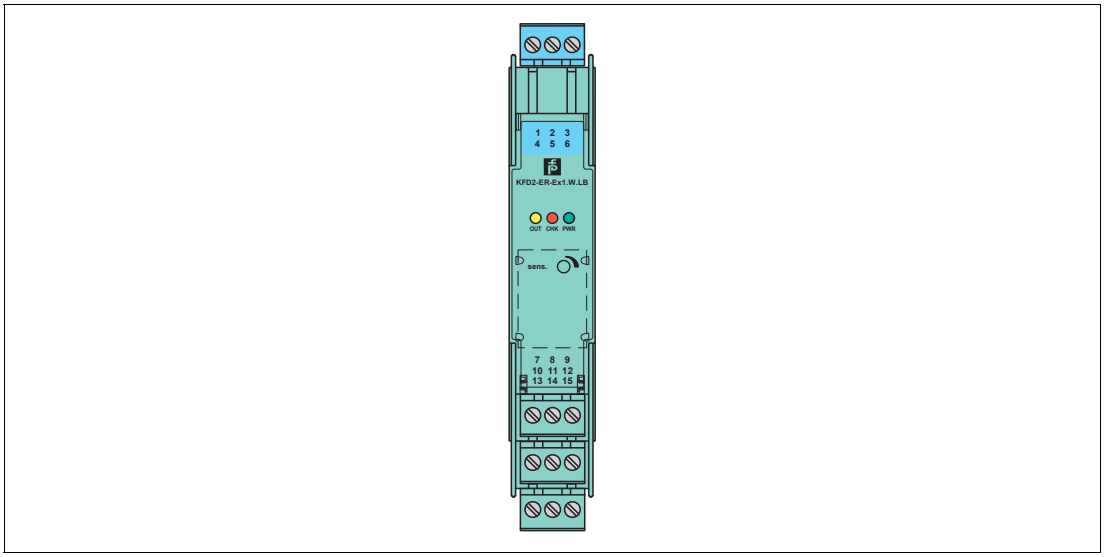

Figure 2.4 KF device housing (20 mm)

Used for high channel density

- Compact 20 mm housing
- Packing density from 5 mm per channel

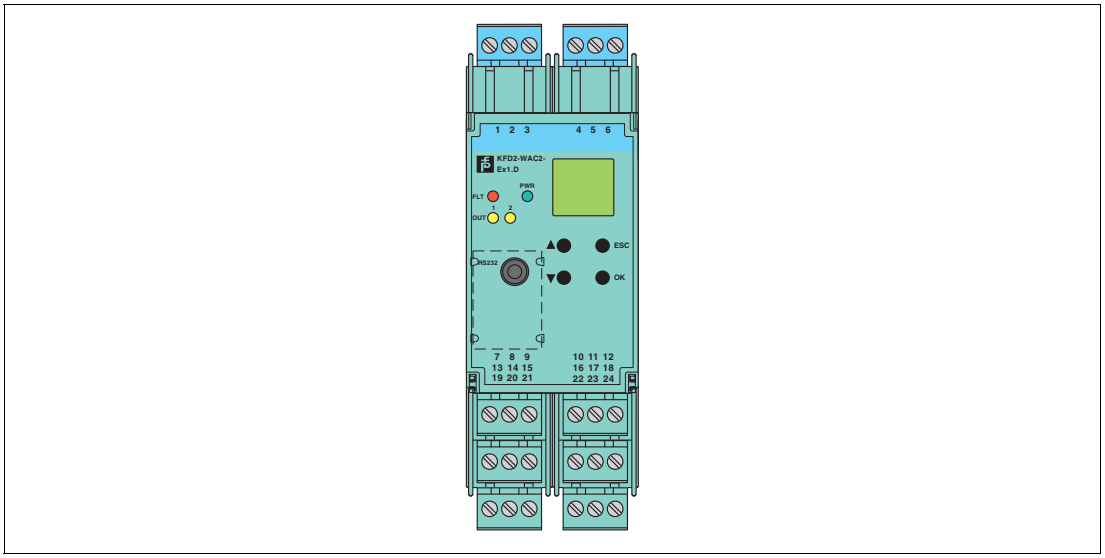

Figure 2.5 KF device housing (40 mm)

Used for applications with high functionality

- Digital devices monitor speed, direction of rotation, slip, flow rates and time.
- Analog devices monitor transmitter signals, temperature signals and load cells.
- Configured using keypad or **PACTware**^{TM} software, see also manual "Installation and Configuration Device Type Manager (DTM)"
- AC/DC wide range supply available

KH Device Housing

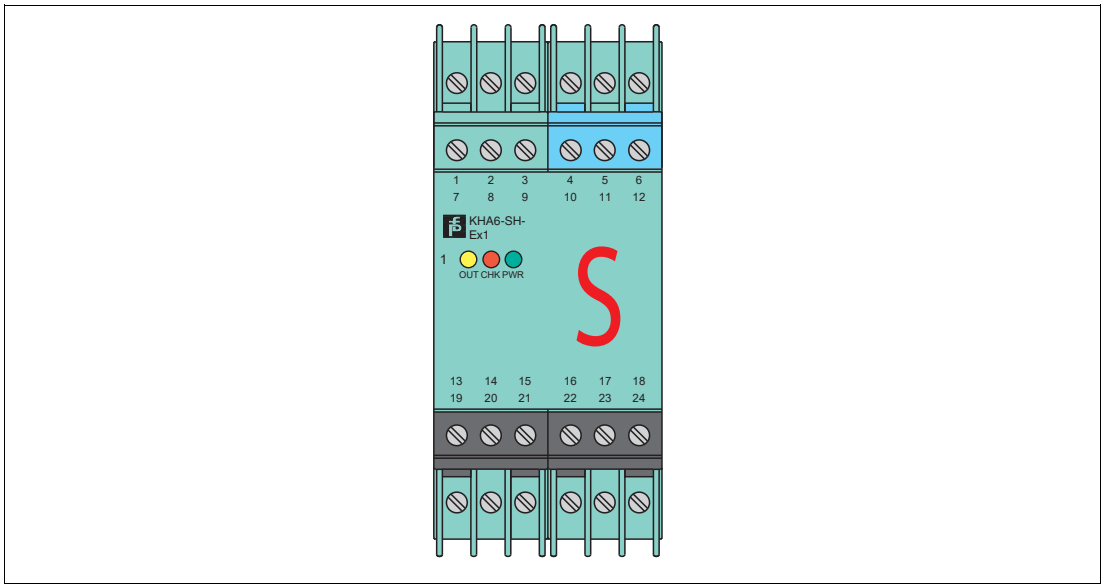

Figure 2.6 KH device housing (40 mm)

2.3 Terminals

2.3.1 Removable Terminal Blocks

The removable terminal blocks simplify connection and control cabinet assembly. The terminal blocks offer space for the connection of leads with core cross-sections of up to 2.5 mm^2 (14 AWG). The terminal blocks are coded with red coding pins so misconnection of terminal blocks are eliminated.

Observe the tightening torque of the terminal screws. The tightening torque is 0.5 Nm to 0.6 Nm.

The 20 mm and 40 mm wide KF devices are factory-equipped with screw terminals. The KC devices are available with screw terminals or spring terminals. The order designation of the versions of the KC devices with spring terminals has the extension ".SP".

As an alternative to the factory-equipped terminal blocks the devices can be used with other terminal blocks:

- Terminal blocks with screw terminals
- Terminal blocks with screw terminals and test plug socket
- Terminal blocks with spring terminals and test plug socket

These terminal blocks are available as accessories. The terminal blocks can be easily coded with KF-CP coding pins (available optionally).

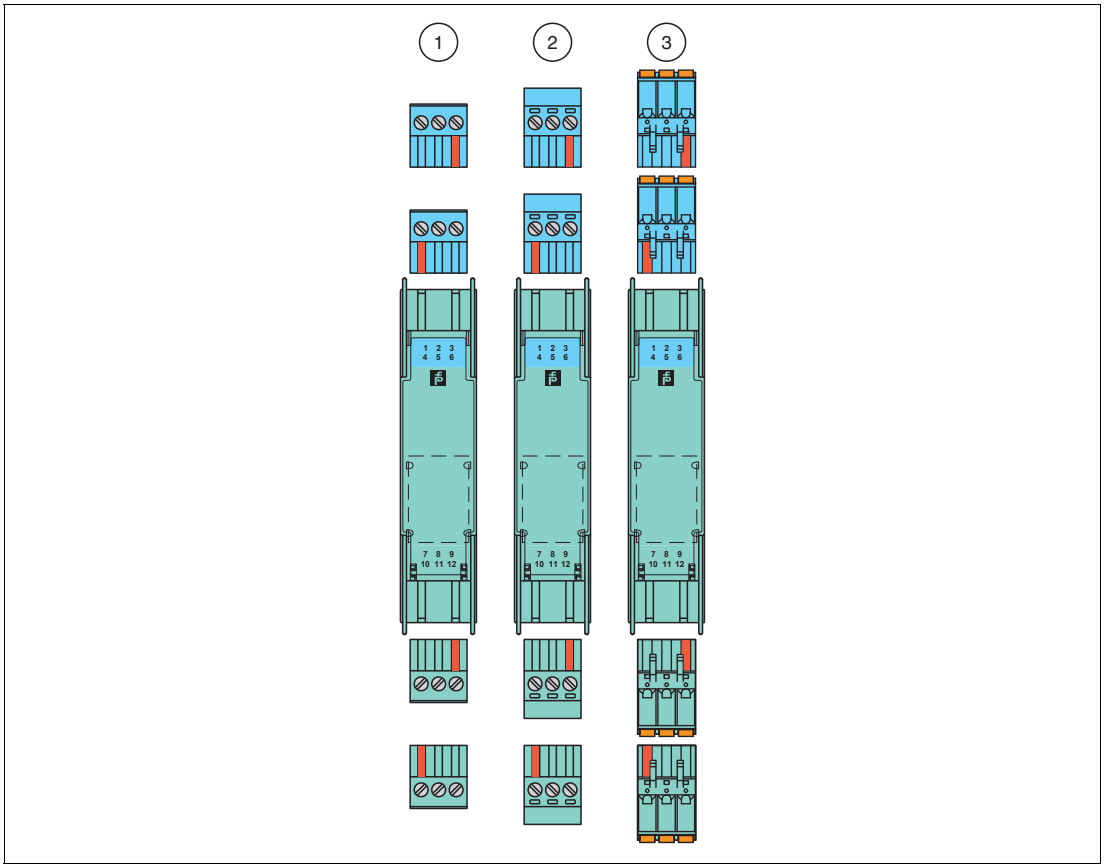

Figure 2.7 K-System removable terminal blocks

1 Terminal blocks with screw terminals
2 Terminal blocks with screw terminals and test sockets
3 Terminal blocks with spring terminals and test sockets

Protection against direct contact

The removable terminal blocks have different heights:

- Height 15 mm (1), (2), (3): These terminal blocks are used in applications that have rated voltages lower than 50 V AC. The insulation of the removable terminal blocks provides protection against direct contact. The insulation corresponds to a reinforced insulation according to EN 61010-1 for a rated insulation voltage of 50 V AC.
- Height 15.5 mm (4), (5): These terminal blocks are used in applications that have rated voltages higher than 50 V AC. The insulation of the removable terminal blocks provides protection against direct contact. The insulation corresponds to a basic insulation according to EN 61010-1 for a rated insulation voltage of 300 V AC. The higher terminals are marked (X).

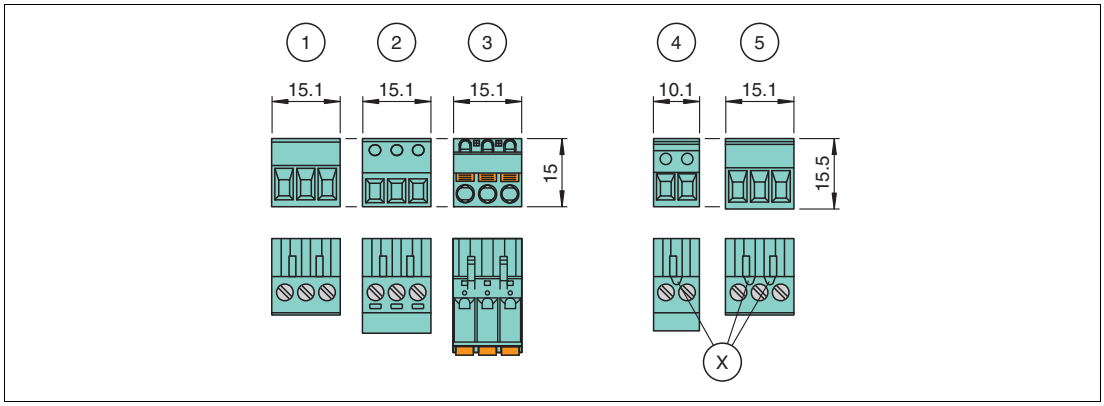

Figure 2.8 Removable terminal blocks with different heights

1 Terminal block with screw terminals, height 15 mm
2 Terminal block with screw terminals and test sockets, height 15 mm
3 Terminal block with spring terminals and test sockets, height 15 mm
4 Terminal block with screw terminals and test sockets, height 15.5 mm
5 Terminal block with screw terminals, height 15.5 mm
X Marking

Note

See corresponding datasheets for further information.

2.3.2 Terminal Designation

Note

See corresponding datasheets for precise terminal designation.

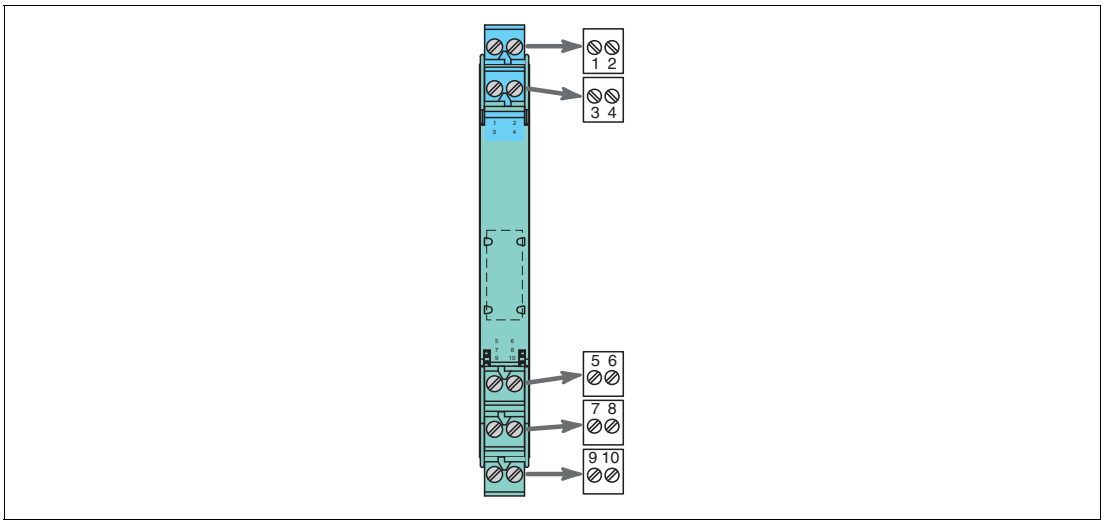

Figure 2.9 KC device housing (12.5 mm)

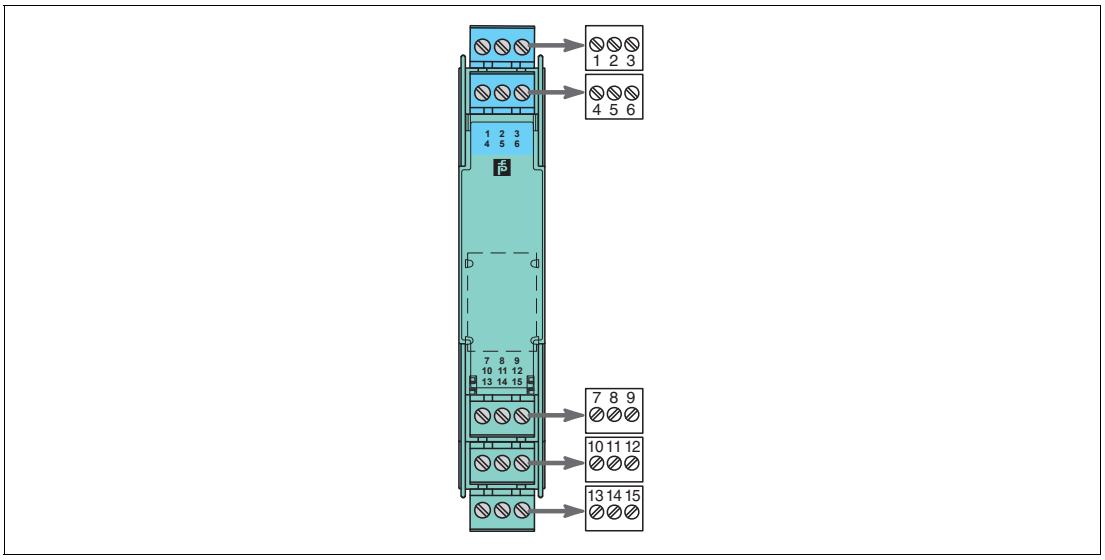

Figure 2.10 KF device housing (20 mm)

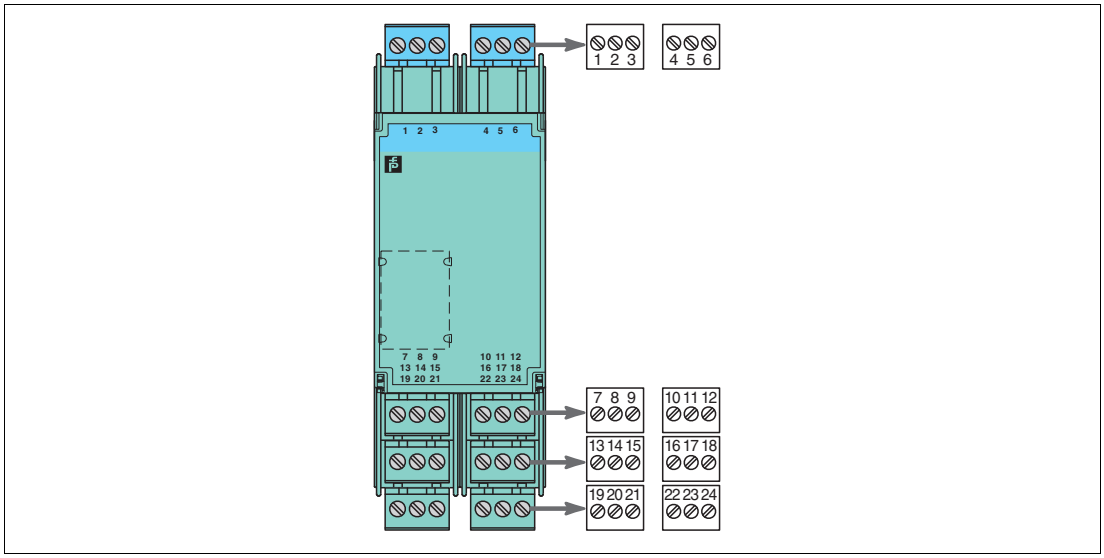

Figure 2.11 KF device housing (40 mm)

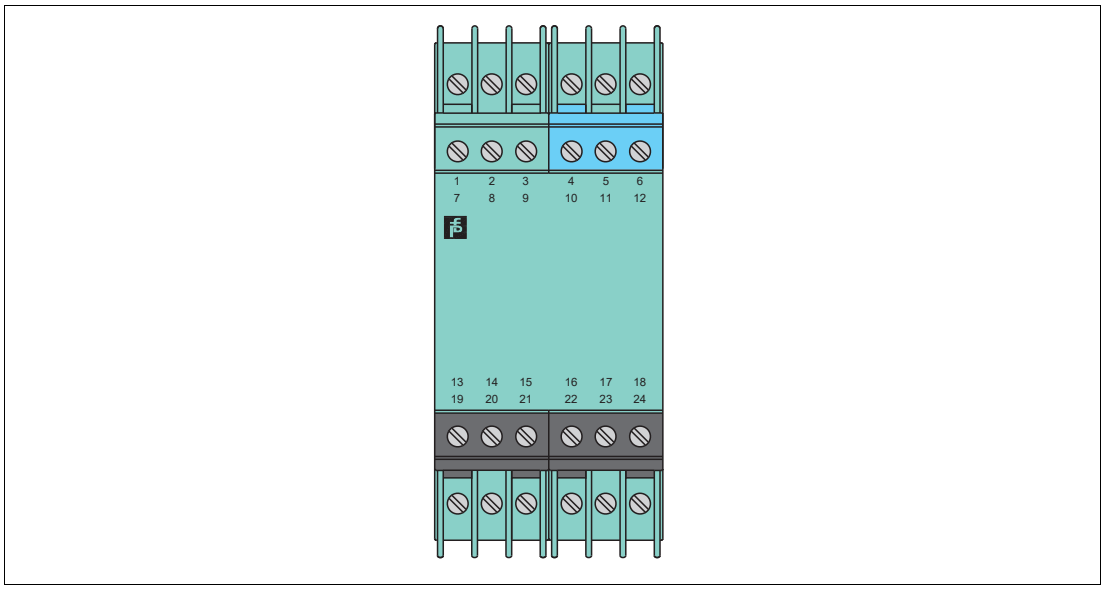

Figure 2.12 KH device housing (40 mm)

2.4 Color Identification

The color identification of the devices has the following meaning:

- Green (1) indicates devices with DC power supply.
- Black (2) indicates devices with AC power supply.
- Gray (3) indicates devices with AC/DC wide range supply.
- Blue (4) indicates devices that process signals from the hazardous area.

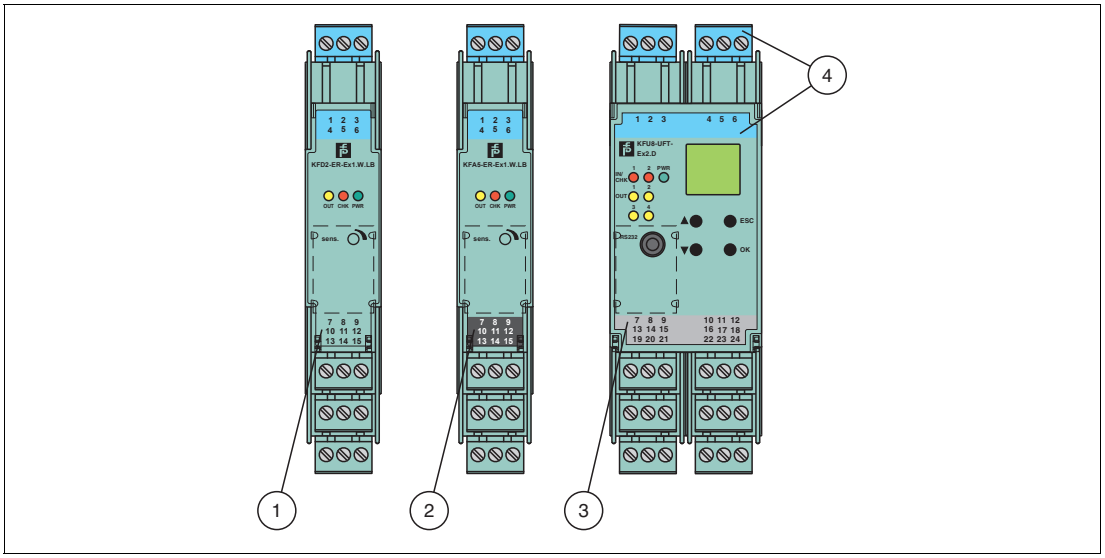

Figure 2.13 Color identification of devices

1 green
2 black
3 gray
4 blue

2.5 Status Indicators of the Isolators

LEDs are often used on isolators to indicate different statuses (e. g. for power supply, device failure, status messages, binary switching states). Standard LED colors are assigned to the status display according to NAMUR NE44.

LED	Display function	Display	Meaning
Green LED	Power supply	On	Power supply OK
		Off	No power supply or insufficient power supply – device faulty
Red LED	Device fault, device failure	On	Internal fault signal, failure signal – fault/failure display of causes detected inside the device, device needs replacing
	Line fault	Flashing	External fault signal, failure signal – fault/failure display of causes detected outside the device, inspection and elimination of fault required
	No fault	Off	No malfunction, device is operating properly
Yellow LED	Switching states of binary inputs and outputs	On	Possible causes of the output: • The relay is energized. • The NO contact (also a change-over contact) is actively closed. • The open collector is switched through. • The switching voltage generated inside the device is applied. Possible causes of the input: • A binary switching signal is present. • An analog limit value is reached.
		Off	Possible causes of the output: • The relay is de-energized. • The NO contact (also a change-over contact) is actively opened. • The open collector is not switched through. • The switching voltage generated inside the device is not applied. Possible causes of the input: • A binary switching signal is present. • An analog limit value is reached.

Table 2.1 Meaning of status indicators

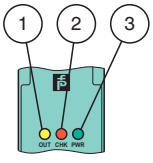

Figure 2.14 Example status indicators

1 Yellow LED "OUT"
Switching state of the output

2 Red LED "CHK"
Lead breakage and short circuit status indicator

3 Green LED "PWR"
Power supply status indicator

2021-03

2.6 Operating Elements

Many devices of the K-System can be adapted to different applications.
Depending on the device different operating elements are available for this configuration.

These operating elements are:

DIP switches

Via DIP switches you can configure the basic functions of the device.

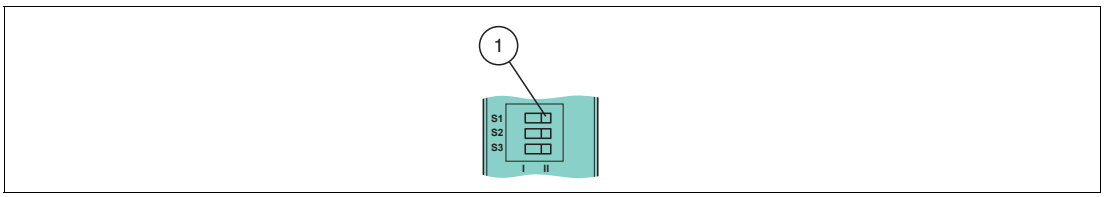

Figure 2.15

1 DIP switch

Rotary switches

Via rotary switches you can configure the basic functions of the device.

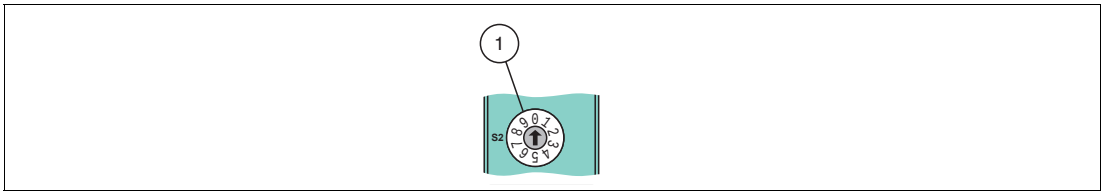

Figure 2.16

1 Rotary switch

Potentiometers

Via potentiometers you can configure the calibration of input and output characteristics.

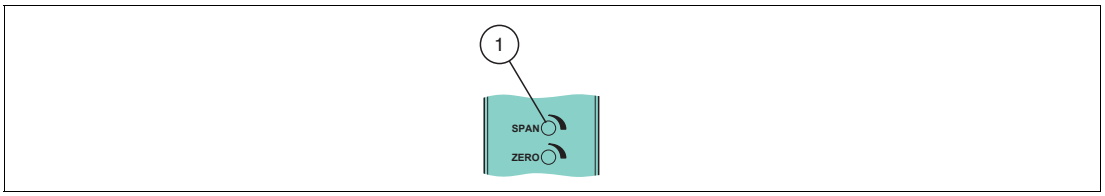

Figure 2.17

1 Potentiometer

Keypad and LC display

Via keypad you can configure the settings of the device parameters. Measured values, fault signals and configuration settings are displayed on the LC display.

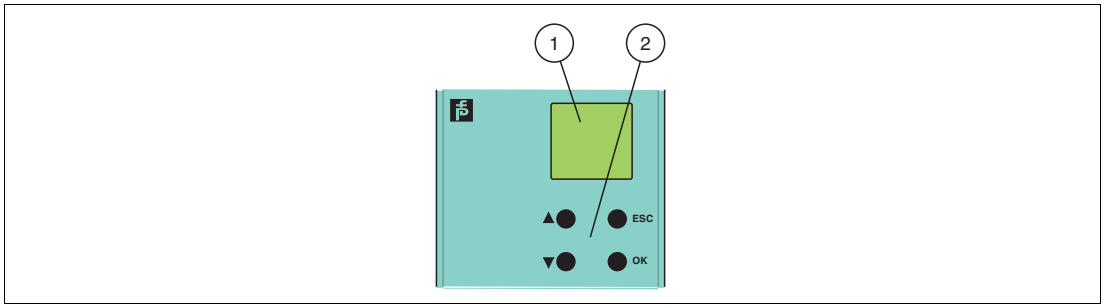

Figure 2.18

1 LC display
2 Keypad

Programming sockets for the connection of a PC with parameterization software PACTware™

Via parameterization software **PACTware™** you can configure the device easily. The configuration data can be edited and saved. The parameterization software helps users for maintenance, diagnostics and troubleshooting.

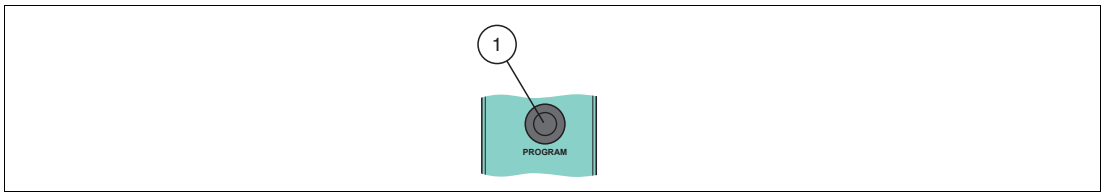

Figure 2.19

1 Programming socket

Note

See manual "HART Multiplexer System KFD*-HM*-16" for further information for communication via software.

Note

See corresponding datasheets for further information.

2.7 Label Carrier

For individual labeling, the isolated barriers are equipped ex works with a label carrier. Labels can be inserted into the label carrier.

It is also possible to attach an adhesive label to the transparent front flap.

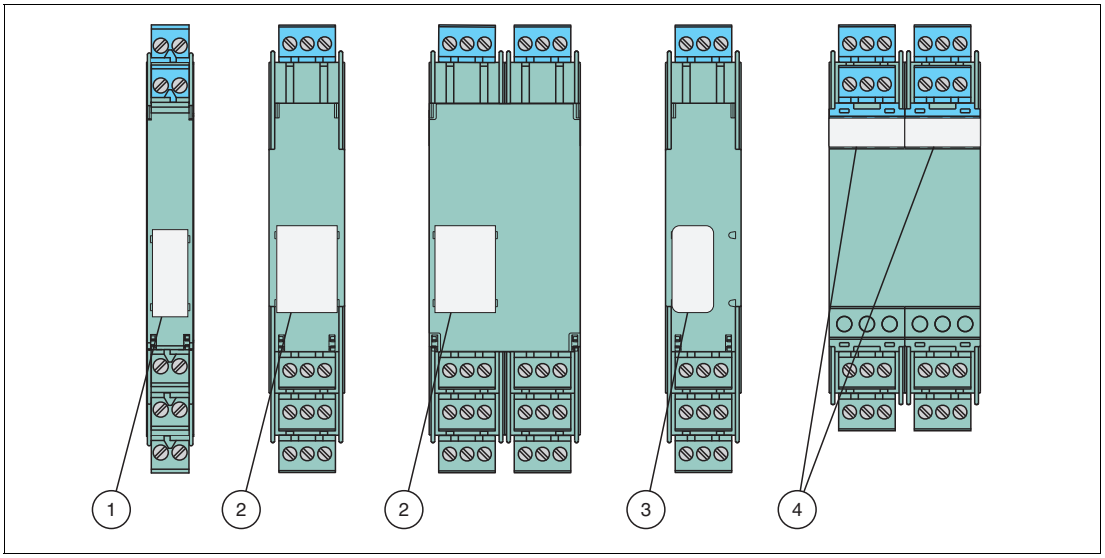

Figure 2.20 Devices with transparent front flap

1 Label carrier on KC devices with label 22 mm x 9 mm
2 Label carrier on KF devices for with 22 mm x 16.5 mm
3 Adhesive label 22 mm x 11 mm for all KC and KF devices, can only be used on devices with a transparent front flap
4 Label carrier on KF devices with label 18 mm x 8 mm, can only be used on devices without a transparent front flap

2.8 DIN Mounting Rail

The devices are mounted on a 35 mm DIN mounting rail according to EN 60715.

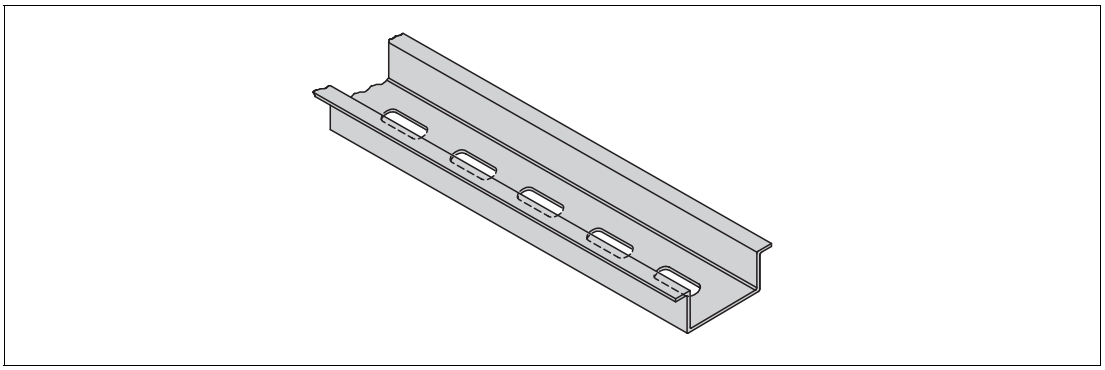

Figure 2.21 Example: DIN mounting rail UPR-MR (35 mm x 15 mm)

2.9 Power Rail

To reduce wiring and installation costs, Power Rail is the optimum solution. The Power Rail is a DIN mounting rail with plastic insert, that delivers power to the devices (24 V DC) and transfers bus signals and a collective error message.

The Power Rail is factory-equipped with cover and end caps. These parts cover empty and open segments of the Power Rail. Thus, the Power Rail is protected from contamination. Additionally the cover and end caps prevent that electrically conductive parts come in contact with the Power Rail.

Power Rail is available in two versions:

Power Rail UPR-03

The Power Rail UPR–03 has 3 conductors.

- 2 conductors for power
- 1 conductor for collective error messaging

Power Rail UPR-05 (only for KFD2-WAC2-(Ex)1.D)

The Power Rail UPR–05 has 5 conductors.

- 2 conductors for power
- 1 conductor for collective error messaging
- 2 conductors for serial data exchange

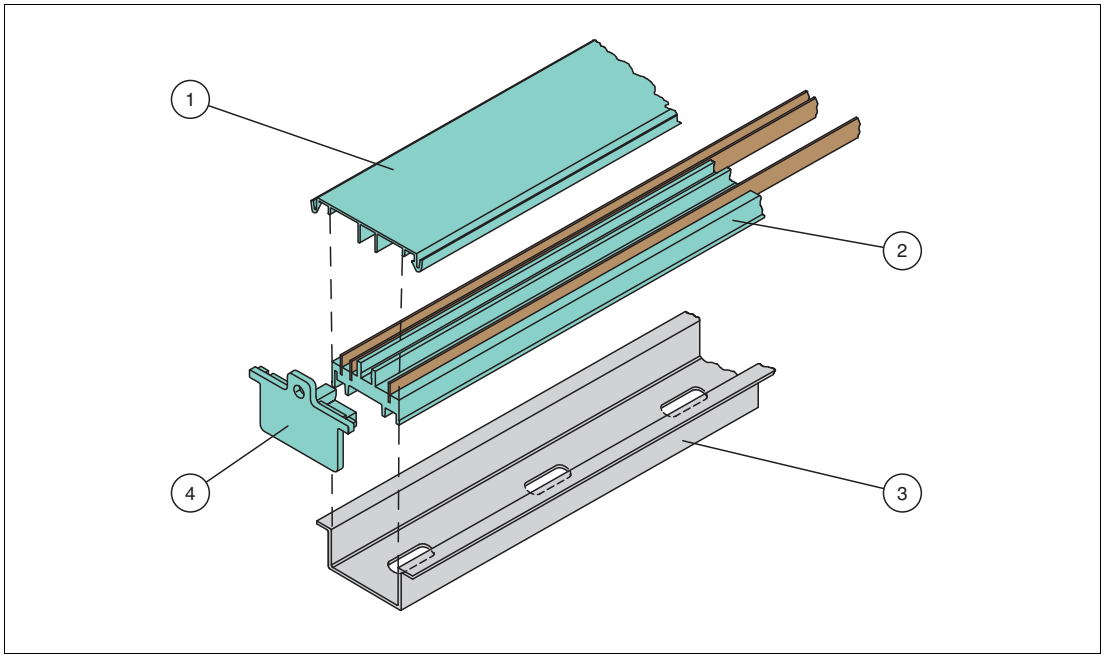

Figure 2.22 Example: Power Rail UPR-03

1 Cover UPR-COVER
2 Insert UPR-INS-03
3 DIN mounting rail UPR-MR (35 mm x 15 mm)
4 End cap UPR-E

3 Mounting and Installation

Danger!

Explosion hazard from damaged electronic components

Premature wear of electronic components in a device that was previously used in a general electrical installation can cause sparks that can ignite the surrounding potentially explosive atmosphere.

Never install devices that have already been operated in general electrical installations in electrical installations used in combination with hazardous areas!

Danger!

Explosion hazard from pollution

An excessively polluted surface of the device can become conductive and consequently ignite a surrounding potentially explosive atmosphere.

Ensure that you install the device only in environments with a pollution degree 2 or better according to IEC/EN 60664–1.

3.1 Mounting

Danger!

Danger to life from electric shock

Absent or insufficient insulation can result in electric shock.

Only connect supplies that provide protection against electric shock to power feed modules (e. g. SELV or PELV).

Caution!

Property damage from use of isolators for Power Rail supply

Using the isolators for Power Rail supply can damage the isolators and make the Power Rail fail.

Do not supply the Power Rail via isolators.

Mounting in the Non-Hazardous Area

Mounting the Isolated Barrier

Snap the device onto the DIN mounting rail in a **vertical downward** movement.
See following figure.

Mounting in Areas that Require the Equipment Protection Level Gc

Danger!

Explosion hazard from live wiring of non-intrinsically safe circuits

If you connect or disconnect energized non-intrinsically safe circuits in a potentially explosive atmosphere, sparks can ignite the surrounding atmosphere.

Only connect or disconnect energized non-intrinsically safe circuits in the absence of a potentially explosive atmosphere.

Danger!

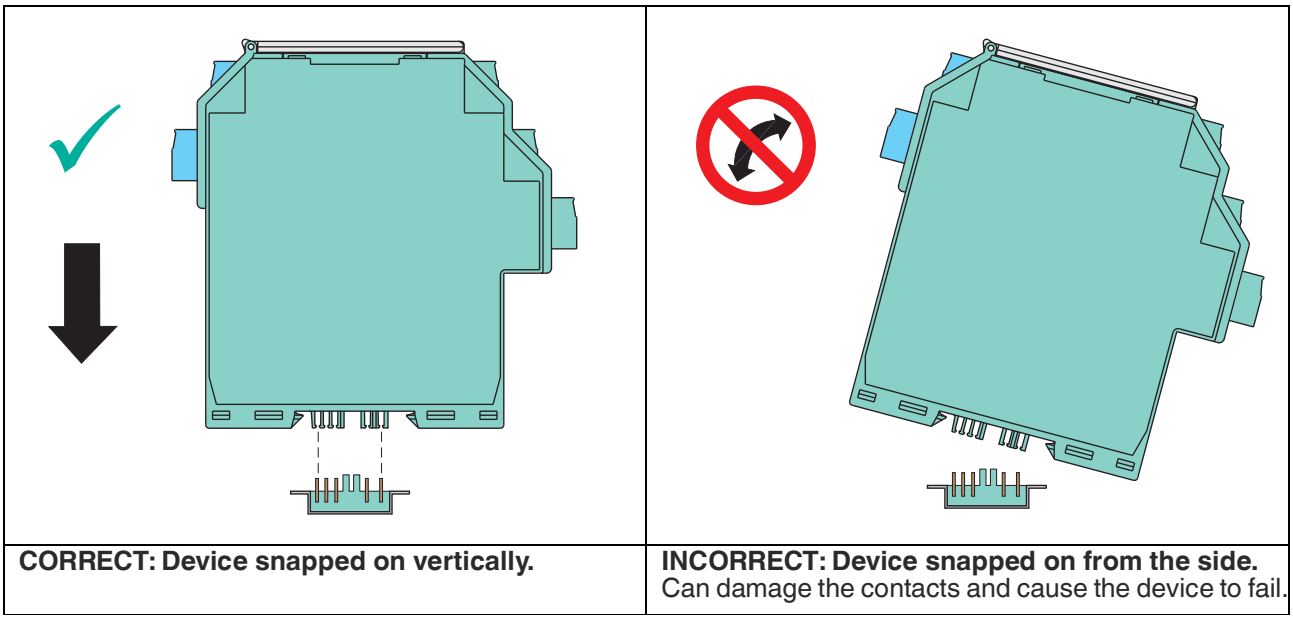
Explosion hazard from wrong mounting

The device safety can be impaired by external environmental influences and by mechanical stress. That can lead to sparking that can ignite a surrounding potentially explosive atmosphere.

Mount the device in a surrounding enclosure that complies with IEC/EN 60079–0 and that is rated with the degree of protection IP54 according to IEC/EN 60529.

Mounting the Isolated Barrier

Snap the device onto the DIN mounting rail in a **vertical downward** movement.
See following figure.



CORRECT: Device snapped on vertically.	INCORRECT: Device snapped on from the side. Can damage the contacts and cause the device to fail.

Figure 3.1

Vertical and horizontal mounting

Low heat dissipation allows vertical or horizontal mounting without separation distance. Operation is guaranteed over the full temperature range of the system in any mounting direction and without restriction.

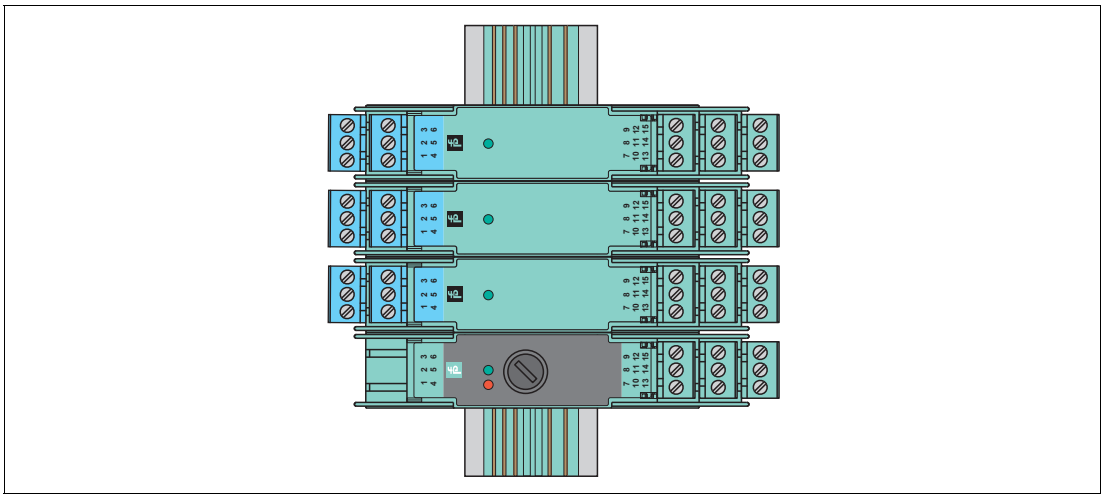


Figure 3.2 Vertical mounting without separation distance (group mounting)

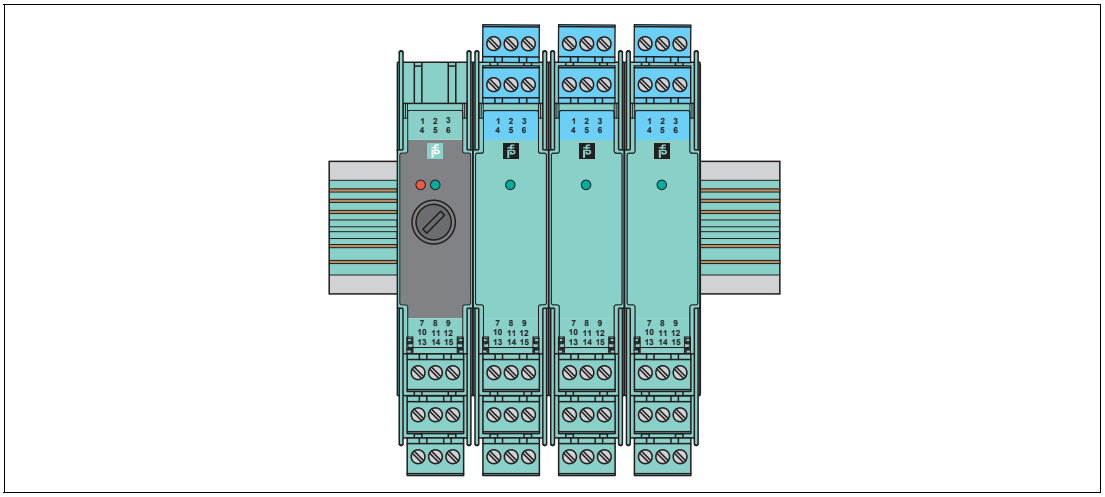

Figure 3.3 Horizontal mounting without separation distance (group mounting)

Mounting Conditions for Operating the Device at Higher Ambient Temperature

Certain devices with a maximum allowable ambient temperature of 60 °C (140 °F) can be operated at ambient temperatures up to 70 °C (158 °F) if mounted horizontally. These devices have a corresponding reference to this manual in the datasheet.

Caution!

Device failure due to overlooking heat dissipation

Overlooking heat dissipation can compromise the function and the electrical safety of the device.

- Mount the device on the DIN mounting rail in a horizontal mounting position.
- Mount the device on the DIN mounting rail according to the specified minimum separation distance.
- Do not operate devices without this reference in the datasheet at an ambient temperature up to 70 °C (158 °F).

Mounting the Isolated Barriers with Separation Distance

Mount the device on the DIN mounting rail. Observe the specified minimum separation distance.
See following figures.

- KC devices with 12.7 mm housing width, housing type A*: min. 6 mm
- KF devices with 20 mm housing width, housing type B*: min. 10 mm
- KF devices with 40 mm housing width, housing type C*: min. 15 mm

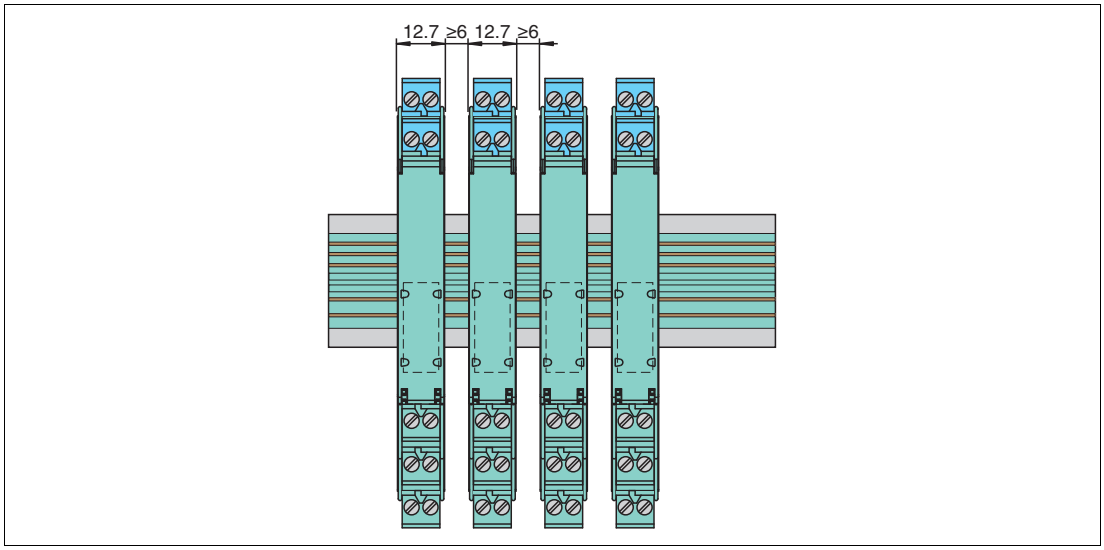

Figure 3.4 Horizontal mounting of KC devices with 12.7 mm housing width (single device mounting)

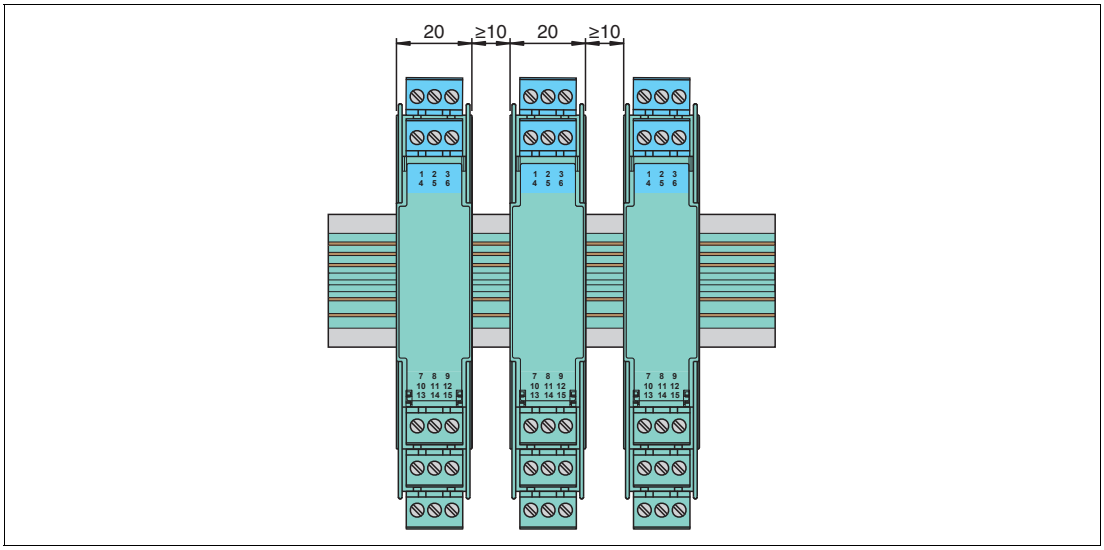

Figure 3.5 Horizontal mounting of KF devices with 20 mm housing width (single device mounting)

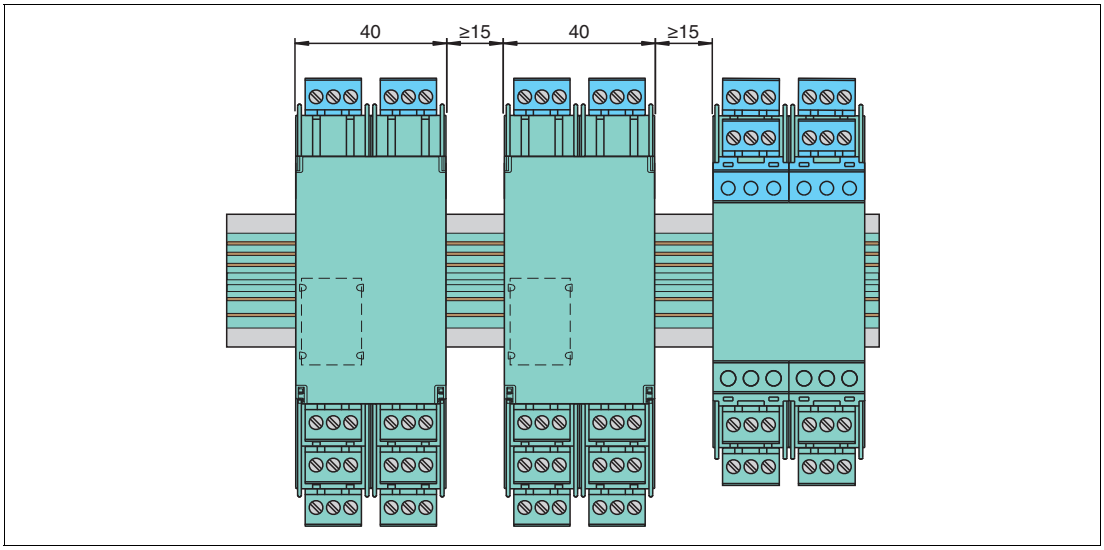

Figure 3.6 Horizontal mounting of KF devices with 40 mm housing width (single device mounting)

Mounting the Terminal Blocks

Danger!

Danger to life from electric shock

Working on live parts at voltages higher than 50 V AC or 120 V DC can result in electric shock.

1. De-energize the device.
2. Secure the circuit against reconnection.
3. Verify that the device is de-energized at all poles.
4. Provide protection from adjacent live parts, if present.

1. Switch off the voltage.
2. Connect the terminal blocks or disconnect the terminal blocks.

3.2 Connection

Danger!

Explosion hazard from live wiring of non-intrinsically safe circuits

If you connect or disconnect energized non-intrinsically safe circuits in a potentially explosive atmosphere, sparks can ignite the surrounding atmosphere.

Only connect or disconnect energized non-intrinsically safe circuits in the absence of a potentially explosive atmosphere.

Danger!

Danger to life from electric shock

Absent or insufficient insulation can result in electric shock.

- Maintain sufficient distance between the connection lines, terminals, surrounding enclosure, and the environment.
- Insulate connection lines, terminals, and the surrounding enclosure from the environment.

Danger!

Danger to life from incorrect installation

Incorrect installation of cables and connection lines can compromise the function and the electrical safety of the device.

- Observe the permissible core cross section of the conductor.
- When using stranded conductors, crimp wire end ferrules on the conductor ends.
- Use only one conductor per terminal.
- When installing the conductors the insulation must reach up to the terminal.
- Observe the tightening torque of the terminal screws.

Danger!

Explosion hazard from exposed conductors

Exposed conductors of inadequately attached cables can cause sparks that can ignite the surrounding potentially explosive atmosphere.

When installing the device ensure that the cables are adequately attached.

Caution!

Property damage from use of inappropriate tool

Using an inappropriate tool may damage the screw heads.

- Use a slot-head screwdriver with a size of 3.5 x 0.5.
- Observe the tightening torque of the terminal screws. The tightening torque is 0.5 Nm to 0.6 Nm.

Note

See corresponding datasheets for further information.

3.2.1 Field Side Connection

Danger!

Explosion hazard from wrong separation distances

If you do not observe the minimum separation distance between 2 intrinsically safe circuits, this can lead to added currents or voltages. This can result in a current/voltage flashover generating sparks. The sparks can ignite the surrounding potentially explosive atmosphere.

Ensure that you observe all separation distances between 2 adjacent intrinsically safe circuits according to IEC/EN 60079-14.

Danger!

Explosion hazard from wrong separation distances

If you do not observe the minimum separation distances between intrinsically safe circuits of associated apparatus and non-intrinsically safe circuits, this can lead to added currents or voltages. This can result in a current/voltage flashover generating sparks.
The sparks can ignite the surrounding potentially explosive atmosphere.

Ensure that you observe the compliance of the separation distances to all non–intrinsically safe circuits according to IEC/EN 60079–14.

Connecting the Field Side

Connect the field devices via the screw terminals or spring terminals.

3.2.2 Control Side Connection

Connection of Devices with Relay Output

Danger!
Danger to life from electric shock
Working on live parts at voltages higher than 50 V AC or 120 V DC can result in electric shock.

1. De-energize the device.
2. Secure the circuit against reconnection.
3. Verify that the device is de-energized at all poles.
4. Provide protection from adjacent live parts, if present.

Warning!
Risk of short circuit
Live working can cause injuries to the operator and/or damage to the device.
Disconnect the device, before you plug or unplug the plugs.

Connection of other Devices

Danger!
Danger to life from electric shock
Absent or insufficient insulation can result in electric shock.
Only connect circuits that provide protection against electric shock (e. g. SELV or PELV).

Warning!
Risk of short circuit
Live working can cause injuries to the operator and/or damage to the device.
Disconnect the device, before you plug or unplug the plugs.

Connecting the Control Side

Connect the control system via the screw terminals or spring terminals.

3.2.3 Power Supply Connection

The devices are available with different supply voltages.

- 24 V DC power supply
- 115 V AC or 230 V AC power supply for applications where direct current is not available
- AC/DC wide range supply with 24 V DC or 115/230 V AC

Note

The supported supply voltage for each device is identified on the side plate.

The devices are supplied with power in various ways.

- Power supply without Power Rail, see chapter 3.2.3.1
- Power supply with Power Rail, see chapter 3.2.3.2
  - Non-redundant supply with power feed module
  - Redundant supply with power feed module
  - Direct supply with power supply

3.2.3.1 Power Supply without Power Rail

If devices with AC or universal power supplies are used, the advantages of Power Rail are not available.

Conventional power supplies create complicated and expensive wiring systems.
After all isolated barriers are connected, there is a significant amount of wiring and more wiring must be added for extra functions such as line fault detection.

Connection of KCD and KFD Devices

Danger!

Danger to life from electric shock

Absent or insufficient insulation can result in electric shock.

Only connect supplies that provide protection against electric shock (e. g. SELV or PELV).

Connection of KFA, KFU, and KHA Devices

Danger!

Danger to life from electric shock

Working on live parts at voltages higher than 50 V AC or 120 V DC can result in electric shock.

1. De-energize the device.
2. Secure the circuit against reconnection.
3. Verify that the device is de-energized at all poles.
4. Provide protection from adjacent live parts, if present.

Connecting the Power Supply

Connect the power supply via the screw terminals or spring terminals.

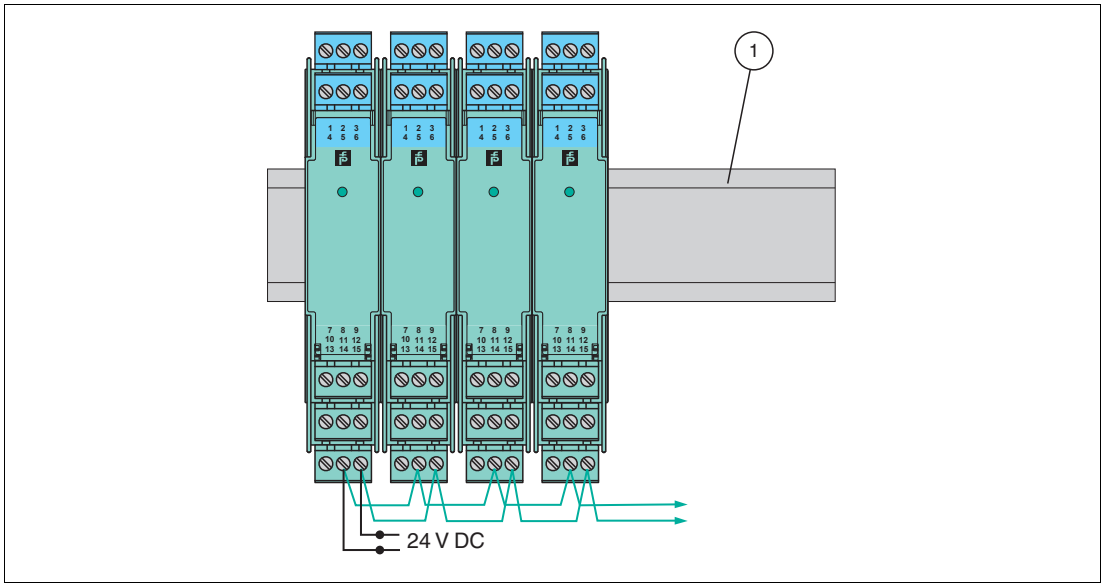

Figure 3.7 Conventional installation

1 DIN mounting rail

3.2.3.2 Power Supply with Power Rail

For devices with a 24 V DC supply voltage, use of the Power Rail reduces wiring and installation costs. The Power Rail almost completely eliminates the risk of wiring faults and facilitates expansion.

Power is supplied to the Power Rail via a power feed module which provides a voltage of 24 V DC (max. 4 A) to a maximum of 80 devices.

The power feed module features a replaceable 5 A fuse at the front. This fuse ensures that the Power Rail and connecting contacts are protected. It prevents damage caused by reverse supply voltage or by installing too many isolators. The isolators on the Power Rail feature integrated device fuses. Any faults in the isolator or in the signal leads do not affect the Power Rail supply system. The 5 A fuse permits a rated current of up to 4 A across the entire temperature range.

The power feed module also has the task of outputting a collective error message or power failure of the isolators via a separate relay output.

Alternatively, supply of the Power Rail can be provided using the power supply KFA6-STR-1.24.*. In this case, no collective error message is possible.

Supply with Power Feed Module

Danger!

Danger to life from electric shock

Absent or insufficient insulation can result in electric shock.

Only connect supplies that provide protection against electric shock to power feed modules (e. g. SELV or PELV).

Caution!

Property damage from use of isolators for Power Rail supply

Using the isolators for Power Rail supply can damage the isolators and make the Power Rail fail.

Do not supply the Power Rail via isolators.

Connecting the Power Supply

Connect the power supply via the Power Rail.

Non-Redundant Supply

The power feed module mounts on the Power Rail for easy and reliable distribution of power to all connected isolators. This method eliminates the wiring loops (daisy chain) necessary on a conventional installation without Power Rail.

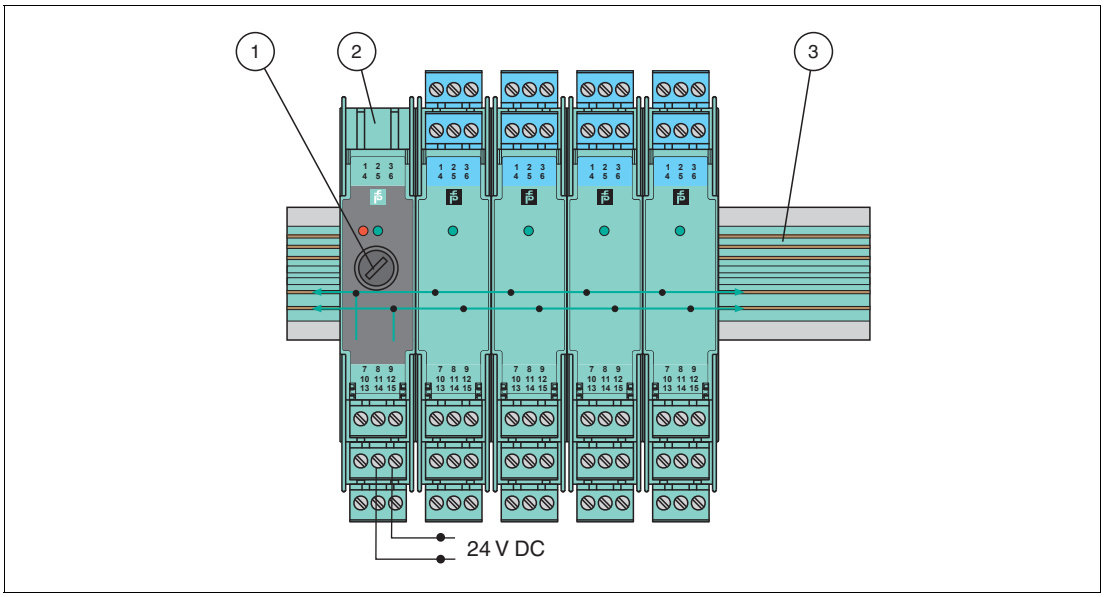

Figure 3.8 Power Rail installation

1 Replaceable fuse
2 Power feed module
3 Power Rail

Redundant Supply

Two power supplies or a redundant power supply with two power feed modules offer a high degree of availability. If a power supply or the fuse in a power feed module fails, the redundant supply continues to energize the isolators through their Power Rail connection.

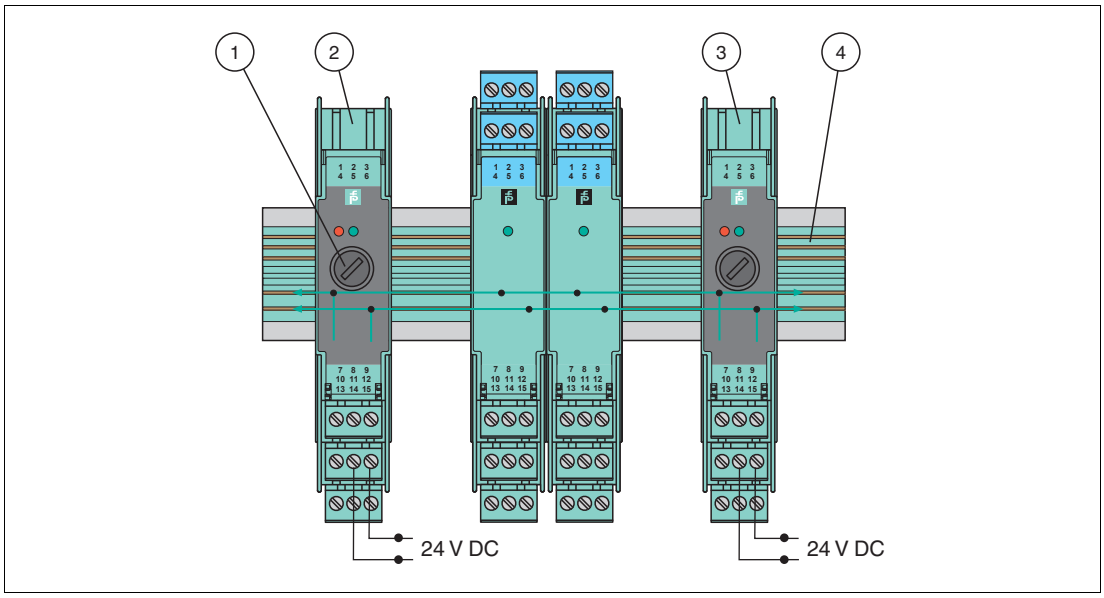

Figure 3.9 Redundant power connections

1 Replaceable fuse
2 Power feed module 1
3 Power feed module 2
4 Power Rail

Direct Supply with Power Supply

A complete power solution for a K-System installation is possible by using the following power supplies:

- KFA6-STR-1.24.4 from 115/230 V AC to 24 V DC/4 A or
- KFA6-STR-1.24.500 from 115/230 V AC to 24 V DC/500 mA

The power supplies snap on the Power Rail to easily and efficiently distribute power to the isolated barriers.

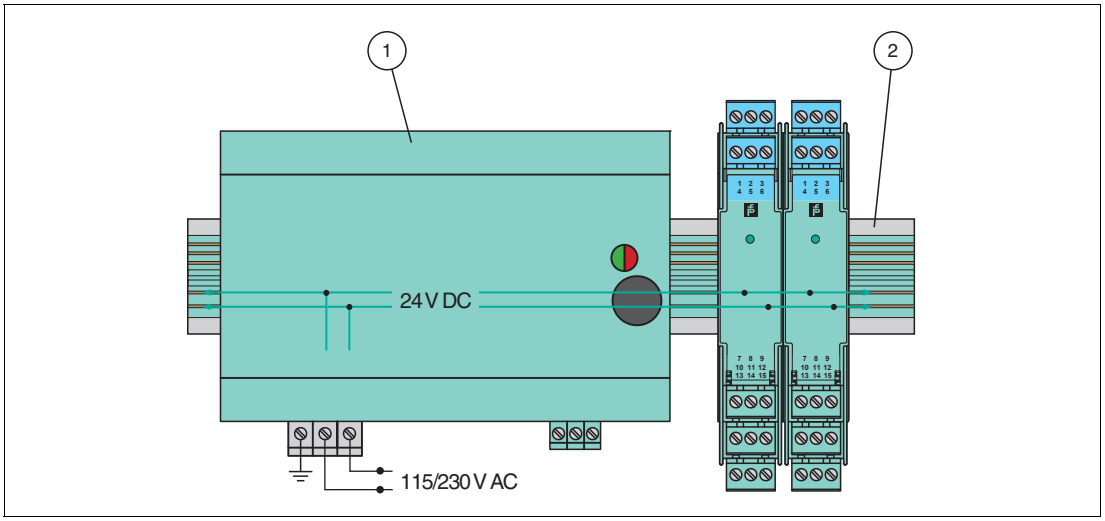

Figure 3.10 Integrated power supply (4 A)

1 Power supply
2 Power Rail

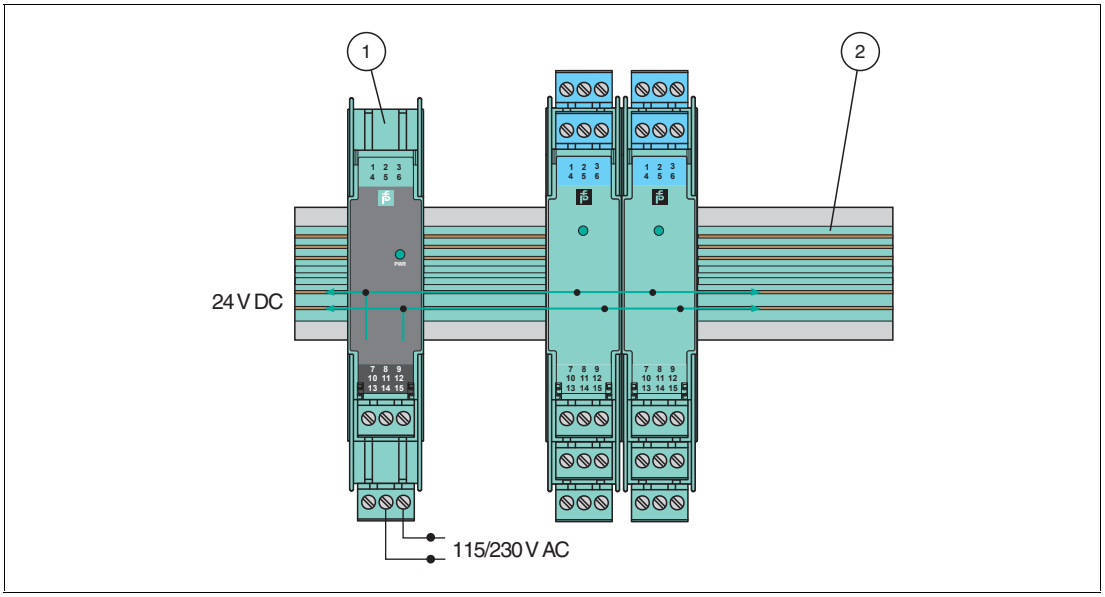

Figure 3.11 Integrated power supply (500 mA)

1 Power supply
2 Power Rail

3.2.4 Establishing the Communication via Software

Danger!

Explosion hazard from sparking when plugging or pulling the adapter

Plugging or pulling the adapter in a potentially explosive atmosphere can cause sparks that can ignite the surrounding atmosphere.

Only plug or pull the adapter in the absence of a potentially explosive atmosphere.

Caution!

Fault in the plant

Changing the device data changes the device function.

Before entering new device data, make sure the plant is not endangered by changing the device data.

Establishing the Communication via Software

Establish the HART communication via K-ADP-USB adapter and HART multiplexer on the control side, if available.

Note

See manual "HART Multiplexer System KFD*-HM*-16" for further information for communication via software.

4 Configuration

Danger!

Explosion hazard from sparking when using operating elements

Using operating elements in a potentially explosive atmosphere can cause sparks that can ignite the surrounding atmosphere.

Only use operating elements (e. g., switch, slider, button, etc.) in the absence of a potentially explosive atmosphere.

Caution!

Potential device malfunction from change of device function

Changes in the device function can lead to device malfunction. The function of the device is no longer guaranteed.

Before transferring the new device function, make sure that the changed device function does not cause a danger to the device and the plant.

Configuring the Device

Set the particular operating elements as described in section "Configuration" of the data sheet.

Note

See corresponding datasheets for further information.

5 Operation

Danger!

Explosion hazard from live wiring of non-intrinsically safe circuits

If you connect or disconnect energized non-intrinsically safe circuits in a potentially explosive atmosphere, sparks can ignite the surrounding atmosphere.

Only connect or disconnect energized non-intrinsically safe circuits in the absence of a potentially explosive atmosphere.

Danger!

Explosion hazard from sparking when using operating elements

Using operating elements in a potentially explosive atmosphere can cause sparks that can ignite the surrounding atmosphere.

Only use operating elements (e. g., switch, slider, button, etc.) in the absence of a potentially explosive atmosphere.

5.1 Fault Monitoring

Numerous faults can occur between measurement of the process variable and evaluation in the control system. This can lead to undesirable process statuses under certain circumstances. These process statuses may result in plant downtime or quality problems or even present a hazard to persons and the environment. Depending on the device version, the isolators enable monitoring of the following faults:

- Line faults
  Here, the connection cables between the isolator, the field device and the control system are monitored for lead breakages or short circuits.
- Device faults
  The isolators are designed so that internal faults are detected and reported.
  In the case of a power failure, the outputs are switched to the de-energized state.

5.2 Fault Output

Depending on the configuration of the devices, these faults are transmitted to the outputs at the control side and in separate fault indication outputs as additional information.

- Red fault indication LEDs on the isolator
- Fault indication output
- Collective error message on Power Rail

Fault Indication Output

Line and device faults are transmitted if the device has a fault indication output (FAULT). The fault indication output is active in a normal state and inactive in a fault state (closed-circuit principle). Is it impossible to reverse the detection direction of the fault indication output.

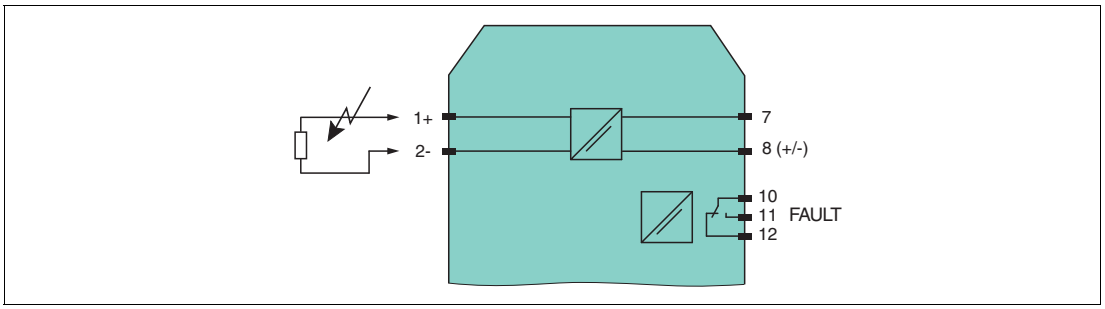

Figure 5.1

Line Fault Transparency (LFT)

Line fault transparency makes electrical conditions on the field side visible on the control side of the isolator. This enables line faults between the isolator and the field device to be detected and transmitted to the control system via the signal line.

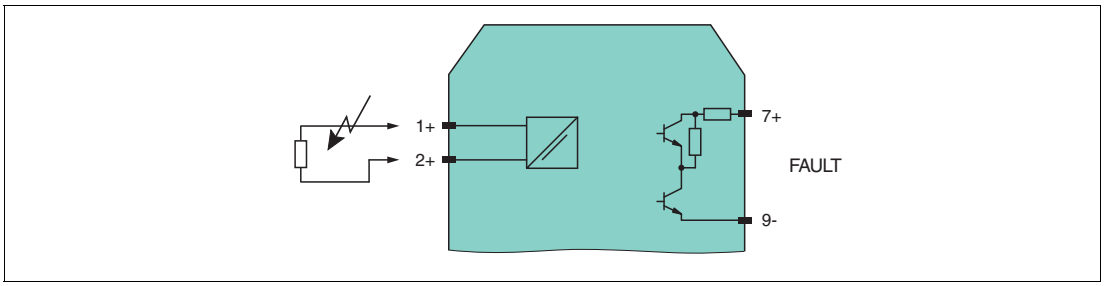

Figure 5.2 Example of line fault transparency with digital input

Collective Error Message on Power Rail

The fault can also be output via the Power Rail as a collective error message (FAULT).

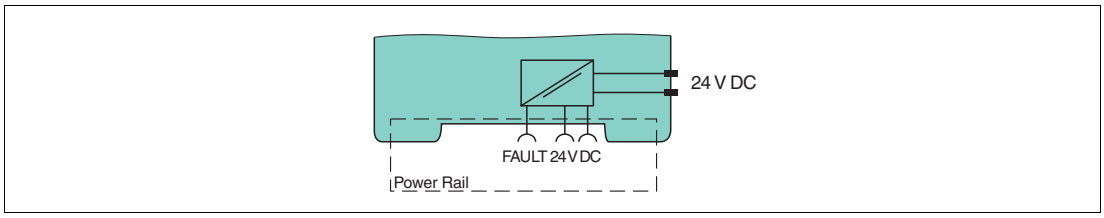

Figure 5.3

The collective error message enables line fault detection of many isolators without requiring additional wiring. In the event of a fault, a fault message signal is transmitted to the Power Rail from an isolator. The power feed module evaluates the signal and transmits the fault message signal to the controller by means of a potential-free contact.

The potential-free contact simultaneously reports the device power failure or the failure of one device minimum.

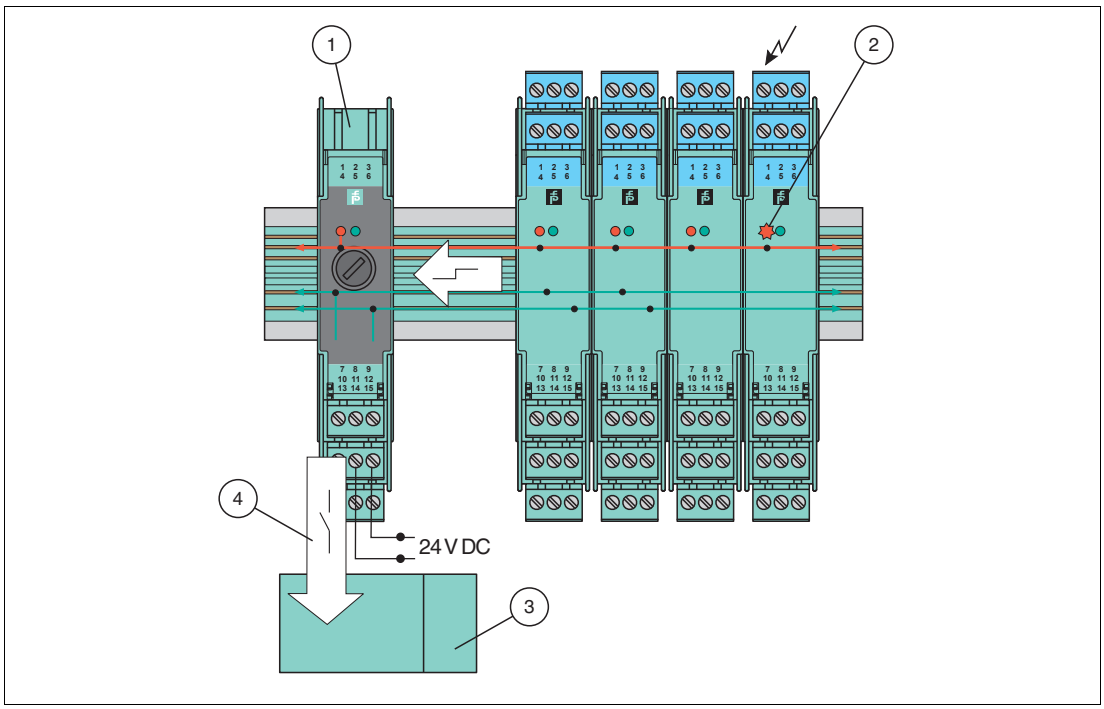

Figure 5.4 Collective error message via power feed module

1 Power feed module
2 Fault indication on one of the devices (red LED flashes)
3 Process control system
4 Fault indication output

5.3 Current and Voltage Standard Signals

The following signals have established themselves as the standard:

- the 0/4 mA to 20 mA current signal
- the 0/2 V to 10 V voltage signal
- the 0/1 V to 5 V voltage signal

Analog sensor signals and digital frequency signals are converted into one of the two standard signals for processing in a wide variety of measurement, regulatory and control tasks. This offers the measurement and control technician an easy-to-measure standard signal common to all manufacturers. Sensor signals are converted into standard signals via signal converters.

For more diagnostic options, the NAMUR organization published NAMUR recommendation NE43, dividing the value range of the signal (e. g. current signal) into several areas. Valid, defined measurement value information is transferred within the range from 3.8 mA to 20.5 mA. Failure information is available when the signal current is < 3.6 mA or > 21 mA i. e. outside of the range for measured value information. The same applies to the voltage signal.

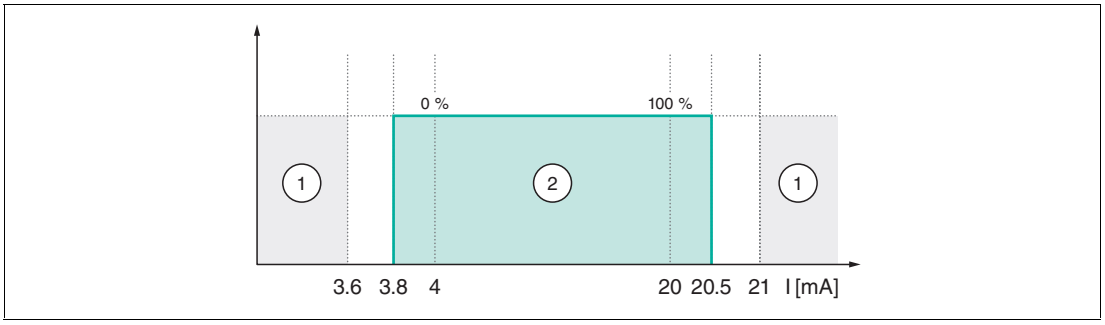

Figure 5.5 Signal ranges according to NAMUR NE43 (e. g. current signal)

1 Failure information
2 Measuring information

6 Dismounting, Maintenance, and Repair

Danger!

Explosion hazard from live wiring of non-intrinsically safe circuits

If you connect or disconnect energized non-intrinsically safe circuits in a potentially explosive atmosphere, sparks can ignite the surrounding atmosphere.

Only connect or disconnect energized non-intrinsically safe circuits in the absence of a potentially explosive atmosphere.

Danger!

Danger to life from using damaged or repaired devices.

Using a defective or repaired device can compromise its function and its electrical safety.

- Do not use a damaged or polluted device.
- The device must not be repaired, changed or manipulated.
- If there is a defect, always replace the device with an original device from Pepperl+Fuchs.

Danger!

Danger to life from electric shock

Working on live parts at voltages higher than 50 V AC or 120 V DC can result in electric shock.

1. De-energize the device.
2. Secure the circuit against reconnection.
3. Verify that the device is de-energized at all poles.
4. Provide protection from adjacent live parts, if present.

Disconnecting Circuits

1. Disconnect the power supply.
2. Disconnect the field circuit.
3. Disconnect the control circuit.
4. Disconnect the HART communication, if available.

6.1 Dismounting the Isolated Barrier

Dismounting the Isolated Barrier

Use for dismounting of the device a slotted screwdriver

1. Insert the screwdriver (4) into the groove of the red mounting slider (3).
2. Turn the screwdriver (4) in the groove until the red mounting slider (3) springs back.
3. Repeat these steps on the other side of the device.
4. Remove the isolator (2) from the DIN mounting rail (1).

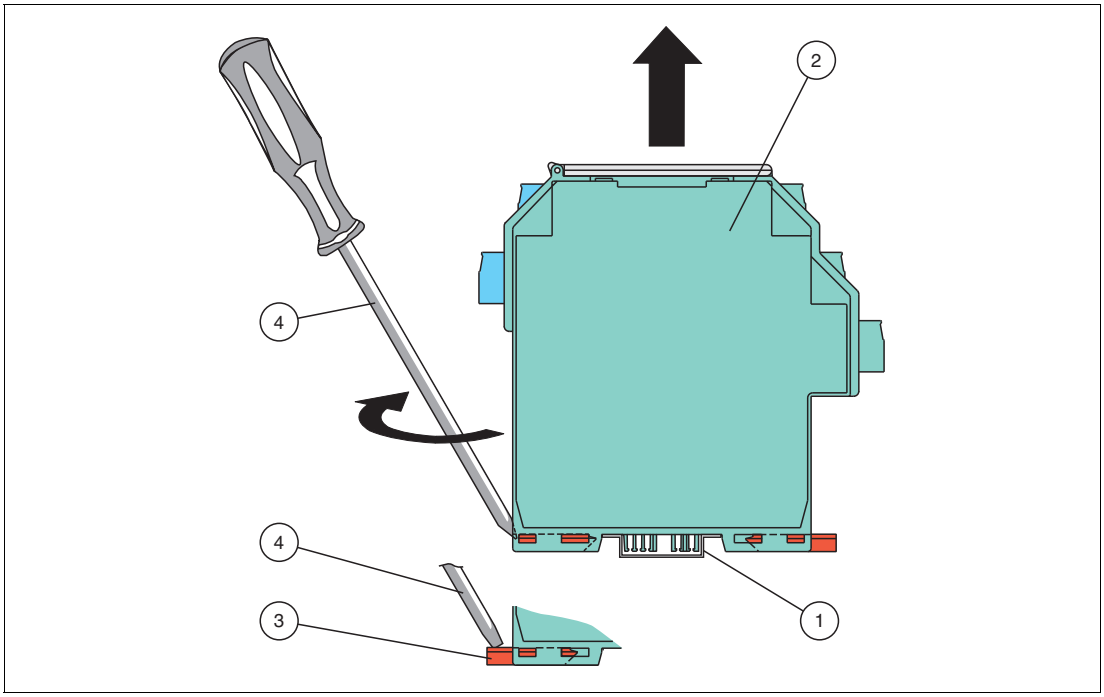

Figure 6.1 Dismounting of the isolated barrier from the DIN mounting rail

2 Isolated barrier
3 Mounting slider
4 Slotted screwdriver

7 Technical Specifications

7.1 Technical Data

Electrical Data

Non-Hazardous Area Signals or Control Circuit Signals

- 0/4 mA to 20 mA signal level according to NE 43
- 0/2 V to 10 V signal level according to NE 43
- 0/1 V to 5 V signal level according to NE 43
- Current output HART compatible
- Current input HART compatible
- Digital output: active or passive electronic output 100 mA/30 V, short-circuit protected
- Relay output 2 A, minimum load 1 mA/24 V
- Logic level 24 V according to IEC 60946
- Functional isolation or safe isolation according to IEC 61140 and NAMUR NE 23

Hazardous Area Signals or Signals in the Field Circuit

- Transmitter power supply up to 17 V DC
- Current output HART compatible
- Pt100, 2-, 3-, (4)-wire technology
- Resistor 0 Ω to 400 Ω with freely definable characteristic
- Potentiometer
- Thermocouples of all types, internal cold junction, external reference
- Current output HART compatible
- Digital input according to NAMUR EN 60947-5-6
- Digital output for standard Ex-i valves, short-circuit protected

Characteristic Safety Values

- MTBF: **M**ean **T**ime **B**etween **F**ailures

Conformity

General

- Isolators with and without explosion protection, mostly with Ex ia IIC/Class I Div. 1, international approvals
- EMV according to
  - EN 61326-1
  - EN 61326-3-2, only for devices with SIL rating, where the data sheet mentions this standard.
    If you operate the device with a DC supply voltage, you must ensure that the bridging of the 20 ms voltage interruption is realized by the power supply.
  - NAMUR NE 21
    If you operate the device with a DC supply voltage, you must ensure that the bridging of the 20 ms voltage interruption is realized by the power supply.

2021-03

- LEDs according to NAMUR NE 44
- Software according to NAMUR NE 53
- Switch-on pulse suppression
- K*D2 devices:
  - Supply voltage 20 V DC to 30 V DC via Power Rail or supply terminals
  - Collective error message via Power Rail
- K*A devices:
  - Supply voltage 115 V/230 V AC, details see datasheet
- K*U devices:
  - Supply voltage 24 V DC or 115/230 V AC, details see datasheet
- Safety devices according to VDE 0660, part 209, AK according to DIN 19250

Digital Inputs and Outputs according to NAMUR

- IEC/EN 60947-5-6: Low voltage switch gear and control gear – part 5 and 6: Control devices and switching elements – DC interface for proximity sensors and switch amplifiers (NAMUR), 1999

Ambient Conditions

Ambient Temperature

- -20 °C to 60 °C (-4 °F to 140 °F), exceptions see data sheets
- extended ambient temperature range up to 70 °C (158 °F), necessary mounting conditions see chapter 3.1

Storage Temperature

- -40 °C to 90 °C (-40 °F to 194 °F), exceptions see data sheets

Reference Conditions for Adjustment

- 20 °C (68 °F)

Relative Humidity

- max. 95 % without moisture condensation

Vibration Resistance

- according to EN 60068-2-6, 10 Hz to 150 Hz, 1 g, high crossover frequency

Shock Resistance

- according to EN 60068-2-27, 15 g, 11 ms, half-sine

Mechanical Specifications

Mounting

- Snap-on 35 mm DIN mounting rail according to EN 60715. Can be mounted horizontally or vertically, side by side.
- Panel mount: The lugs on the base of the isolator must be extended and used for mounting purposes with 3 mm screws.
- K-MS mounting base for screw attachment

Housing Material

- Polycarbonate (PC)

Dimensions

- Dimension drawings please refer to chapter Dimensions.

Protection Degree

- IP20 according to EN 60529

Connection

- KH* devices: self-opening terminals for max. core diameter of 1 x 2.5 mm^2 (14 AWG)
- KF* and KC* devices: removable connector with integrated self opening terminals for leads of up to a max. of 1 x 2.5 mm^2 (14 AWG)
- Observe the tightening torque of the terminal screws. The tightening torque is 0.5 Nm to 0.6 Nm.

Fire Protection Class

- Housing: V2 according to UL 94 standard. Unless stated otherwise all details relate to the reference conditions.

Labeling

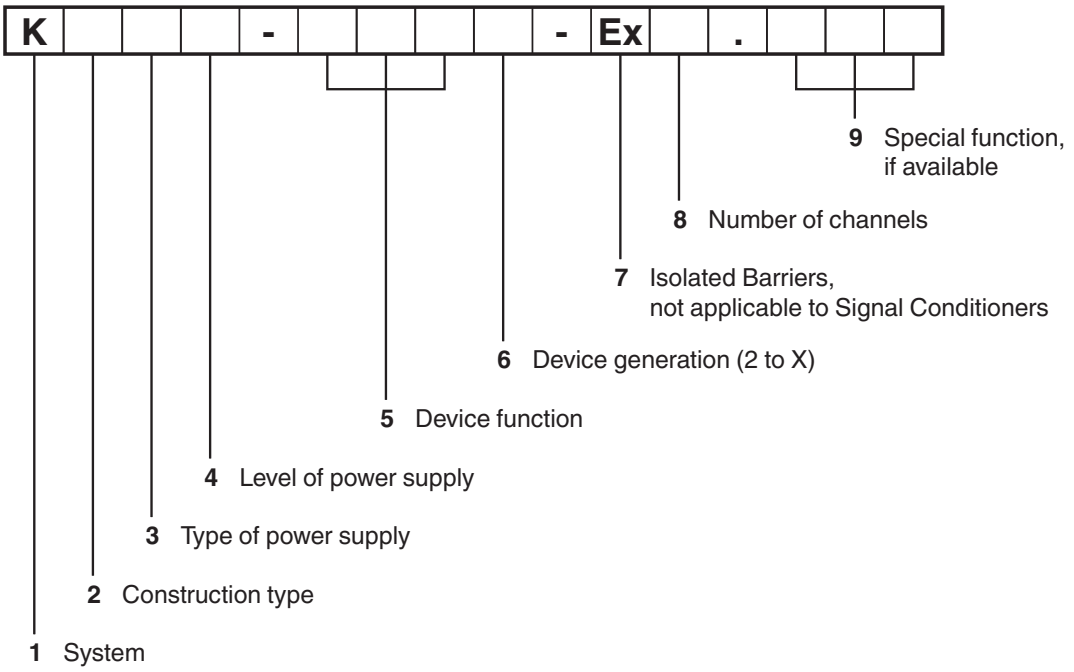
Place for labeling on the front side:

- KC devices (12.5 mm): label 22 mm x 9 mm
- KF devices (20 mm and 40 mm): label 22 mm x 16.5 mm
- All KC and KF devices: adhesive label 22 mm x 11, can only be used on devices with a transparent front flap
- KF devices: label 18 mm x 8 mm, can only be used on devices without a transparent front flap

Note

See corresponding datasheets for further information.

7.2 Model Number Description



Position 1	K	K-System
Position 2	C	Version with removable terminal blocks, 12.5 mm width
	F	Version with removable terminal blocks, 20 mm or 40 mm width
	H	Version without removable terminal blocks, 20 mm or 40 mm width
Position 3	D	DC power supply
	A	AC power supply
	U	AC/DC power supply
Position 4	0	without power supply
	2	24 V
	4	100 V
	5	115 V
	6	230 V
	8	24 V DC or 115/230 V AC
Position 5	CC	Converter for current/voltage
	CD	Active current driver
	CR	Transmitter power supply, current output
	CRG	Transmitter power supply with trip value
	CS	Passive current driver
	DU	Switch amplifier, time relay
	DWB	Overspeed/underspeed monitor, logic control unit
	EB	Power feed module
	ELD	Ground fault detection
	ER	Conductivity switch amplifier
	FF	RS 232 repeater

2021-03

Position 5	GS	Trip amplifier for current/voltage
	GU	Universal trip amplifier
	GUT	Temperature converter with trip value
	HLC	HART Loop Converter
	HMM	HART Multiplexer Master
	HMS	HART Multiplexer Slave
	LGH	Place holder isolator
	PT	Potentiometer converter
	RC	Converter for resistors
	RCI	Solenoid driver
	RO	Relay module
	RR	Thermometer resistance repeater
	RSH	Relay module in fail-safe technology
	SCD	SMART current driver
	SCS	SMART current driver/repeater
	SD	Solenoid driver, loop powered
	SH	Switch amplifier in fail-safe technology
	SL	Solenoid driver, bus powered
	SLD	Solenoid driver, bus and loop powered
	SON	Switch amplifier with NAMUR output
	SOT	Switch amplifier with passive, potential free transistor output
	SR	Switch amplifier with relay output
	SRA	Switch amplifier with relay output, 2:1 operation mode
	SRT	Switch amplifier with active transistor and relay output
	ST	Switch amplifier with active transistor output
	STC	SMART transmitter power supply with current output
	STR	Power supply
	STV	SMART transmitter power supply with voltage output
	TR	RTD converter
	TT	Converter for thermocouple/mV signal
	UFC	Universal frequency converter
	UFT	Frequency converter with direction and synchronization monitoring
	USC	Universal signal converter with trip value
	UT	Universal temperature converter
	VC	Converter for current/voltage
	VCR	Transmitter power supply, repeater for current/voltage
	VD	Solenoid driver
	VM	Solenoid driver
	VR	Voltage repeater
	WAC	Strain gauge converter

2021-03

7.3 Dimensions

7.3.1 Housing Types Isolated Barriers K-System

Housing Type A2

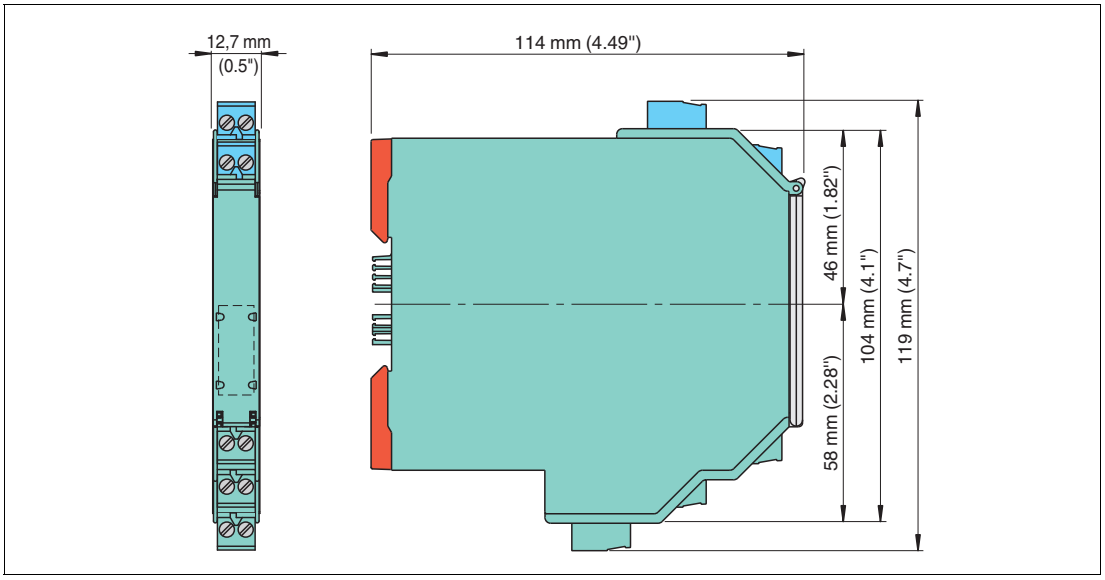


Figure 7.1

Number of terminal blocks max. 5

- Dimension drawing with screw terminals
- When using screw terminals with test sockets the device is 124 mm (4.9 in) in height.
- When using spring terminals the device is 131 mm (5.16 in) in height.

Housing Type B1

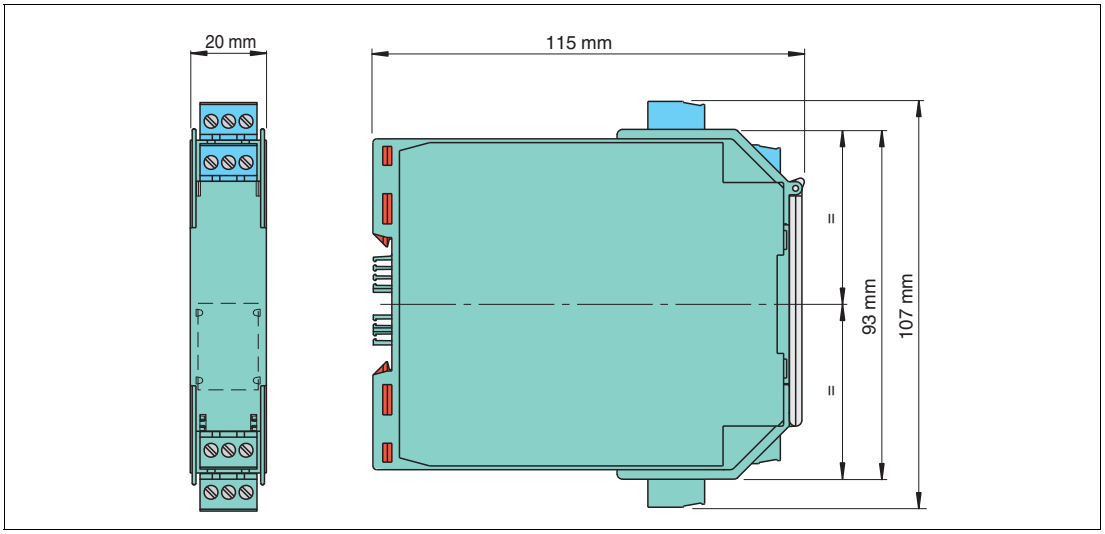

Figure 7.2

Number of terminal blocks maximum 4

- Dimension drawing with screw terminals
- When using screw terminals with test sockets the device is 115 mm (4.6 in) in height.
- When using spring terminals the device is 122 mm (4.8 in) in height.

Housing Type B2

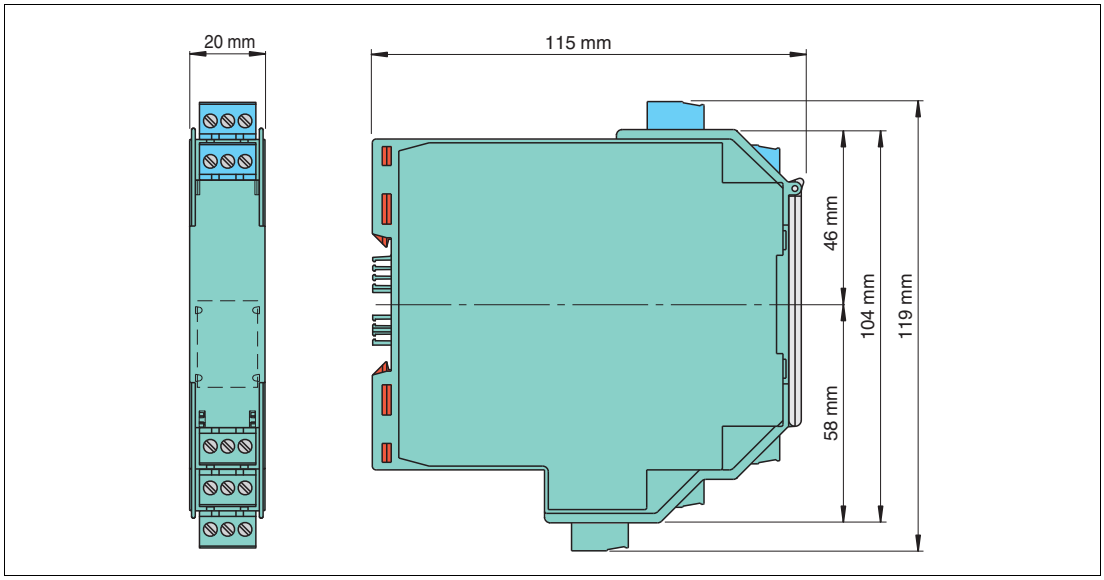

Figure 7.3

Number of terminal blocks maximum 5

- Dimension drawing with screw terminals

Data sheet

Redundancy with boost

Tab - 2.09

SLR5.100

- Input: AC 230V/115V, DC 210-375V
- Output: 24V/5A
- High overload current, no switch-off
- Quasi-Wide-Range Input
- N+1 redundancy, RDY relay contact

The Redundant Variant

IEC60950

UL508 LISTED IND. CONT. EQ. 18 WM, 60°C

UL60950 E137006 CUL/CSA-C22.2 No 950-M90

EMC and Low Volt. Directive

Input

Input voltage	AC100-120/220-240 V (switchable), 47-63 Hz (85-132 VAC / 176-264 VAC, 210-375 VDC, see also „Output: Continuous Loading“)

Quasi-Wide-Range Input: With the switch in the 230V position the power supply unit operates at low and moderate loads (until 3 A) at any input voltage between 95 and 264 V AC.
Note: At DC input, always leave the switch in the 230V position.

Input current	< 2.6 A (switch in 115V position) < 1.4 A (switch in 230V position)
• DCin at open output	typ. 5 mA (preserves battery sources)
Inrush current	typ. < 15 A at 264 V AC and cold start

To be fused with a 10A, B-type 'circuit-breaker' switch based on the usual thermomagn. overload sensing principle (used anyway to fuse the input lines). In addition, the unit contains an internal fuse (not accessible).

Harmonic current emissions	acc. to EN 61000-3-2
Transient handling	Transient resistance acc. to VDE 0160 / W2 (750 V / 1.3 ms), for *all* load conditions.
Hold-up time	> 37 ms at 196 VAC, 24 V / 5 A (see diagram overleaf)

Efficiency, Reliability etc.*

Efficiency	typ. 89 % (230 VAC, 24 V / 5 A)
Losses	typ. 14.8 W (230 VAC, 24 V / 5 A)
MTBF	480.000 h acc. to Siemensnorm SN 29500 (24 V/5 A, 230 VAC, T_{amb} = +40 °C)
Life cycle (electrolytics)	The unit exclusively uses longlife electrolytics, specified for +105°C (cf. 'The SilverLine', p.2).

Construction / Mechanics*

Housing dimensions and Weight

• W x H x D	64 mm x 124 mm x 102 mm (+ DIN rail)
• Free space for ventilation	above/below 25 mm recommended left/right 15 mm recommended
• Weight	620 g

Design advantages:
- Input and output pluggable by means of Combicon® plug connector.
- Ensure strain relief of the plug connectors when installing the unit. ⚠
- Input and output are strictly apart from each other and so cannot be mixed up (input below, output above).

Output

Rated output voltage	24 V DC

For balanced current sharing during parallel operation:
Soft characteristic (25.2 V DC ±2% at no-load, 24 V DC ±0.5% at nominal load, almost linear characteristic curve)

Output noise suppression	Radiated EMI values below EN50081-1, even when using long, unscreened output cables.
Ambient temperature range T_{amb}	Operation: -10°C...+70°C (>60°C: Derating) Storage: -25°C...+85°C

Continuous loading (at T_{amb}= -10°C...+60°C, convection cooling), see also diagram overleaf. For start at T_{amb}< 0°C and low input voltage, please contact PULS.
Output is protected against short circuit, open circuit and overload

Switch	AC/DCin		Iout
230V	176-264 V	ACin	5 A / 6 A *
	95-176 V	ACin	3 A
	210-375 V	DCin	5 A / 6 A *
	150-210 V	DCin	3 A
	100-150 V	DCin	2 A
115V	85-132 V	ACin	5 A / 6 A *

* short-term 6 A (< 1 min), at 45°C or forced cooling even continuous

Derating	typ. 3 W/K (at T_{amb}=+60°C...+70°C)
Voltage regulation	better than 2% Vout overall
Ripple / Noise	< 30 mV_{PP}, (20 MHz bandw., 50 Ω measurem.)
Overvolt. protection	typ. 29 V
Parallel operation	yes, current sharing via soft characteristic (see diagram)
Front panel indicator	Green LED

RDY relay contact

• Type	normally open contact
• closes	when output voltage > 22.1V ±4%
• opens	when output voltage < 19.8V ±4%
• Electrical isolation	500V DC to output voltage
• Contact rating	1A at 28V DC

* For further information see data sheets „The SilverLine“, „SilverLine Family Branches“ and mechanics data sheet

Order information

Order number	Description
SLR5.100	N+1 redundancy*
SL5.100	Basic version without redundancy*
SLS5.100	Safety Cover*
SLZ01	Screw mounting set, two needed per unit

Start / Overload Behaviour

Start-up delay	typ. 0.1 s
Rise time	ca. 5-20 ms, depending on load

Overload Behaviour

- Special PULS Overload Design (see right diagram) – no disconnection, no hiccup if overloaded – high overload current (up to 1.9 I_{Nom}), Vout is gradually reduced with increasing current.
- 20% power boost – 6A short-term, at 45°C or forced cooling even continuous

Advantages:

- High short-circuit current, giving large 'start-up window': unit starts reliably even with awkward loads (DC-DC converters, motors).
- No 'sticking' such as can occur with fold-back characteristics
- Secondary fuses operate reliably

Further information

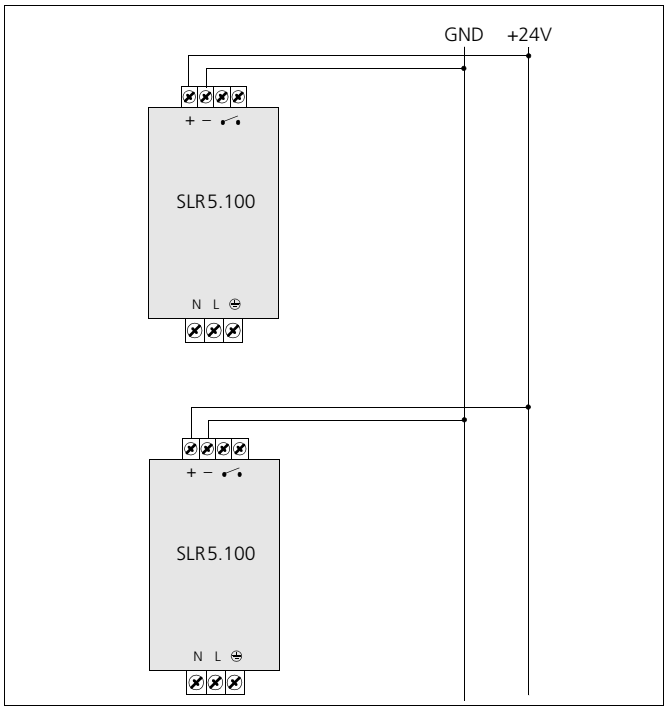
Further information, especially about

- EMC
- Connections
- Safety, Approvals
- Mechanics and Mounting

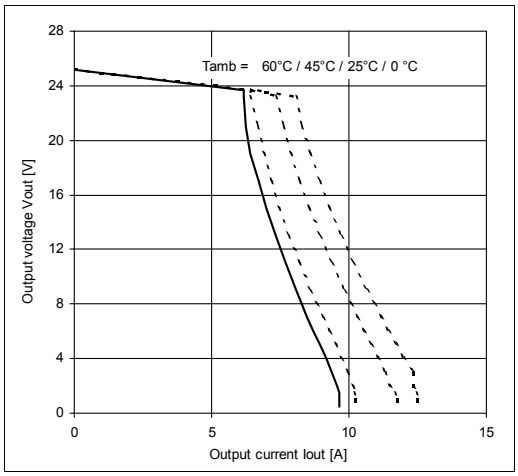
see page 2 of „The SilverLine" data sheet.

For detailed dimensions
see SilverLine mechanics data sheet SLR2.5/ 5/ 10

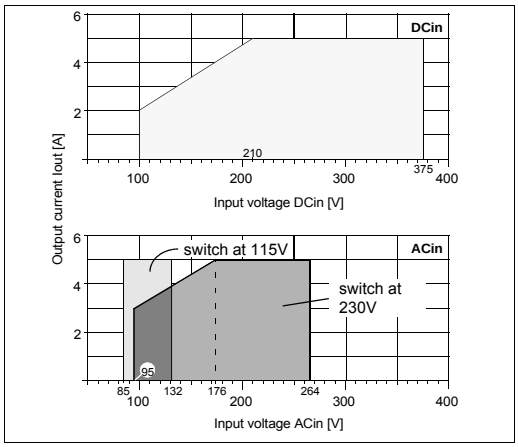
Power wiring



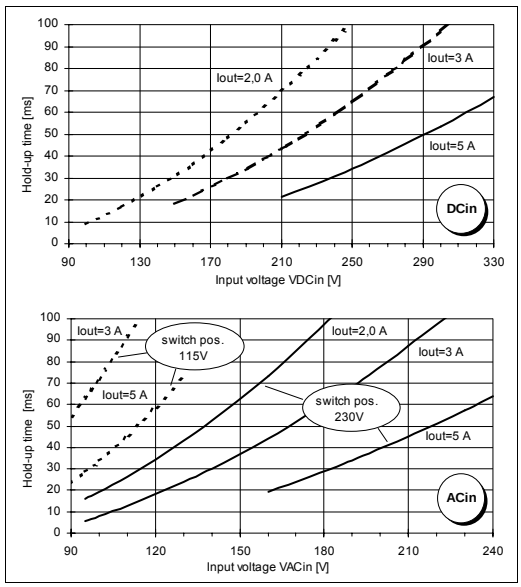
Output characteristic (min.)



Output Current over Input Voltage (min.)



Hold-up time (min.)



Unless otherwise stated, specifications are valid for AC 230V input voltage, +25°C ambient temperature, and 5 min. run-in time. They are subject to change without prior notice.

Start-up & Field Test Procedure

11306 – KSB Submersible Solids Handling Pumps
Orleans, MA

Pump Station # 1

Description	PS1.P-1	PS1.P-2	PS1.P-3
1. Complete visual inspection of pump & guide system for defects	✓	✓	✓
2. Complete installation inspection of pump and guide system,	✓	✓	✓
3. Verify proper oil levels in mechanical seal housing	✓	✓	✓
4. Inspect power cable jacket, support, and lift chain *	✓	✓	✓
5. Verify power cable properly supported and routed	✓	✓	✓
6. Complete review of pump control panel & local monitoring panel for proper installation and field wiring	✓	✓	✓
7. Review hoist installation (if applicable) and lifting method *	✓	✓	✓
8. Complete review of power circuitry for proper design, short circuit protection, and voltage.	✓	✓	✓
9. Check all field connections and terminal strip connections	✓	✓	✓
10. Bump each motor for proper rotation.	✓	✓	✓
11. Fill wetwell	✓	✓	✓
12. Operate pump under load and verify and log all appropriate electrical data including running amps, thermistor resistance, moisture sensor resistance, gauge readings, flowrate			
Pump Motor Thermistors (cool (<500 ohms))	OK	OK	OK
Pump Moisture Sensor (>25 K ohms)	OK	OK	OK
Pump Motor Voltage (460 V)	497	496	496
Pump Motor Amps (37.5 FLA)	35.6/35.6/36.1	35.8/34.7/36.2	36.1/36.6/34.9
Pump gauge pressure (86 ft TDH) (GAUGE PSI) [TDH FT]	(21) [66]	(21) [66]	(22) [68]
Pump Flow (552 GPM) (SINGLE PUMP)	761	767	773
13. Inspect pump installations for any excessive vibration or noise	✓	✓	✓

TWO(2) PUMPS ON PARALLEL (30psi) 1113 GPM TOTAL
GAUGE CORRECTION = 13 FT. FRICTION = ≈5 FT (STATION LOSSES)

NOTES:- ALL IMPELLER BOLTS WERE CHECKED FOR PROPER TORQUE
*OWNER MAY SWITCH TO LIFTING CABLES
-TEMP RVSS STARTERS WERE INSTALLED FOR S/U - VFD'S LATER
-ONLY TEMP. PROTECTION CONNECTED. PUMPSAFE RELAYS TO BE HOOKED UP WHEN VFD'S ARE INSTALLED

Pump Station # 2

Description	PS2.P-1	PS2.P-2
1. Complete visual inspection of pump & guide system for defects		
2. Complete installation inspection of pump and guide system,		
3. Verify proper oil levels in mechanical seal housing		
4. Inspect power cable jacket, support, and lift chain		
5. Verify power cable properly supported and routed		
6. Complete review of pump control panel & local monitoring panel for proper installation and field wiring		
7. Review hoist installation (if applicable) and lifting method

Pump Station # 2 S/U = 11/16/22 (LIBRARY)

Description		PS2.P-1	PS2.P-2
1.	Complete visual inspection of pump & guide system for defects	✓	✓
2.	Complete installation inspection of pump and guide system,	✓	✓
3.	Verify proper oil levels in mechanical seal housing	✓	✓
4.	Inspect power cable jacket, support, and lift chain	✓	✓
5.	Verify power cable properly supported and routed	✓	✓
6.	Complete review of pump control panel & local monitoring panel for proper installation and field wiring	✓	✓
7.	Review hoist installation (if applicable) and lifting method	✓	✓

8.	Complete review of power circuitry for proper design, short circuit protection, and voltage.	✓	✓
9.	Check all field connections and terminal strip connections	✓	✓
10.	Bump each motor for proper rotation.	✓	✓
11.	Fill wetwell	✓	✓

12. Operate pump under load and verify and log all appropriate electrical data including running amps, thermistor resistance, moisture sensor resistance, gauge readings, flowrate

Pump Motor Thermistors (cool (<500 ohms))	✓	✓
Pump Moisture Sensor (>25 K ohms)	✓	✓
Pump Motor Voltage (460 V)	493 V	491 V 494 VAC
Pump Motor Amps (37.5 FLA)	35.1 / 34 / 34.3	34.6 / 36.1 / 34.7
Pump gauge pressure (86 ft TDH) (PSI GAUGE) [FT. TDH]	(31) [89]	(31) [89]
Pump Flow (536 GPM) (FROM FLOWMETER)	520	525

GAUGE CORRECTION = 15' + 3' FRICTION = 18 FT (31 × 2.3 + 18 = 89 FT.)

13.	Inspect pump installations for any excessive vibration or noise	✓	✓

NOTES: TEMP. CONTROLS, SO ONLY THERMAL PROTECTION IS CONNECTED AT THIS TIME. WHEN VFD'S ARE INSTALLED, THEY MUST HAVE LOAD REACTORS OR FILTERS DUE TO DISTANCE TO PUMPS (> 250 FT.)

Pump Station # 3

S/U = 11/16/22 (STOP + SHOT)

Description	PS3.P-1	PS3.P-2
14. Complete visual inspection of pump & guide system for defects	✓	✓
15. Complete installation inspection of pump and guide system,	✓	✓
16. Verify proper oil levels in mechanical seal housing	✓	✓
17. Inspect power cable jacket, support, and lift chain	✓	✓
18. Verify power cable properly supported and routed	✓	✓
19. Complete review of pump control panel & local monitoring panel for proper installation and field wiring	✓	✓
20. Review hoist installation (if applicable) and lifting method	✓	✓
21. Complete review of power circuitry for proper design, short circuit protection, and voltage.	✓	✓
22. Check all field connections and terminal strip connections	✓	✓
23. Bump each motor for proper rotation.	✓	✓
24. Fill wetwell	✓	✓

25. Operate pump under load and verify and log all appropriate electrical data including running amps, thermistor resistance, moisture sensor resistance, gauge readings, flowrate

Pump Motor Thermistors (cool (<500 ohms))	✓	✓
Pump Moisture Sensor (>25 K ohms)	✓	✓
Pump Motor Voltage (460 V)	494	491 492 VAC
Pump Motor Amps (27 FLA)	20.5 / 20.7 / 22.1	19.5 / 20.1 / 19.9
Pump gauge pressure (71 ft TDH) (PSI GAUGE) [FT. TDH]	(31) [83]	(31) [83]
Pump Flow (305 GPM) (FLOWMETER)	353	335

GAUGE CORRECTION = 10' + 2' FRICTION = 12 FT (31 × 2.3 + 12 = 83 FT.)

26.	Inspect pump installations for any excessive vibration or noise	✓	✓

NOTES: TEMP CONTROLS, SO ONLY THERMAL PROTECTION CONNECTED AT PRESENT.

1.0 PRE-INSTALLATION INSTRUCTIONS

1.1 SAFETY CONSIDERATIONS

- Read this Service Manual carefully. Be thoroughly familiar with the controls and the proper use of the equipment.

- This manual should be retained with the unit because it contains the information necessary for proper maintenance.

- Keep all nuts, bolts, and screws tight to be sure the equipment is in safe working condition.

CAUTION:

- Installer should be a trained, experienced service person.

- Check the assembly and component weights to be sure that the rigging equipment can handle them safely.

- Be sure that the unit is balanced well in the transporting device.

- Always conduct a thorough check when the installation is complete.

- Never enter an enclosed blower cabinet or reach into a housing while fan is running.

- The motors in PURAFIL® equipment get very hot. This is normal and should not be regarded as a problem with the motor. However, take special care to avoid touching the hot areas.

1.2 RECEIVING INSTRUCTIONS

Systems are normally shipped assembled and with motors mounted. All units are attached securely to skids. It is recommended that units be left on their skids for protection and ease of handling while transporting. Straps, rigging, slings, or hooks attached to the skids may be used, with proper care. The units are well protected with triple wall board and are secured with metal bands. Forklifts may be used under the skids, but exercise caution to prevent damage.

Upon receiving systems from Purafil, Inc., note any shipping damage, obvious or hidden, to your carrier and on your Bill of Lading. All problems should be handled between the customer and carrier except for U.P.S. shipments, which require the customer to contact Purafil, Inc. for action.

- If the unit is to be stored before use, see Section 1.4 in this manual.
- If the unit is to be installed immediately, be sure to check Section 3.0 in this manual.
- To uncrate unit, cut metal bands and remove packaging.
- For positioning and special handling, see Section 3.1 in this manual.

1.3 INSPECTION

The condition of the unit upon its arrival is critical to its proper operation. Prior to start-up, inspect the unit carefully, according to the checklist below. Correct any inadequacies before start-up to prevent possible damage or inefficiency. Note, should there be any questions concerning the unit, refer to the numbers found on the unit identification plate, when contacting the PURAFIL® representative.

PRE-OPERATION CHECK LIST

YES	NO	CONDITION
____	____	1. Configuration and material are as specified on the sales order form
____	____	2. Measurements fit submittal requirements
____	____	3. Parts are all present
____	____	4. Latches hold securely and gaskets seal properly
____	____	5. Labels and serial numbers are present
____	____	6. Airflow direction is consistent with installation requirements (check labels attached to unit)

Note: Checking specific points is also imperative after the unit is started up. See section 3.4 in this manual for checklist.

1.4 STORAGE

The unit should be protected from the elements during storage, especially when storage time is extensive. While indoor storage is considered best, outdoor storage can be adequate when precautions are taken.

OUTDOOR STORAGE PRECAUTIONS

- Cover the equipment with a tarp. Intake and discharge openings must be well covered. (Use of black plastic as a cover may cause excessive condensation and rusting.)

- If there is the possibility of moisture collection, allow for proper drainage.

- Do not place heavy equipment on top of the unit.

- Store Purafil® media in a dry place with less than 95% relative humidity.

1.5 FOUNDATION AND CLEARANCES

FOUNDATIONS

Some units may require new or reinforced foundations, due to their weight. Always be sure to check that the existing foundation is adequate for the unit to be installed. Units to be used indoors require particular attention to strength of foundation. In some instances, a concrete base is best suited to the system. Concrete lessens the chance for vibration than if metal structures are used.

CLEARANCE

All units should be easily accessible for the required periodic maintenance. Do not block return and discharge grilles. Sufficient minimum clearances can be recommended by the local PURAFIL® representative.

2.0 BASIC DESIGN OF THE DRUM FILTER

Designed to clean odorous air, the drum filter, coupled with the final particulate filter, contains an inlet pipe, blower, a media bed housed in a LDPE drum, and diffuser. Pre-engineered in a single unit, the drum filter is designed to exhaust recycled air. The drum filter is supplied with Purafil® media. The drum filter has a quiet, low horsepower motor and low pressure drop.

The drum filter includes the following components:

1. INLET PIPING/DIFFUSER – Air enters through a 4" (100 CFM model), 8" (300, 500 CFM models), or 10" (1,000 CFM models) Fernco fitting prior to entering the drum then proceeds through the poly media pre-filter.
   - MEDIA BED – (100 CFM model) consists of 3 ft^3 (cubic feet) of Odorcarb Ultra™ and 2^3 ft (cubic feet) of Odormix™ SP. Each cubic foot of media is contained in a MediaSAK for easy handling and disposal.
   - (300 CFM model) comes complete with 7 ft^3 (cubic feet) of Odorcarb™ Ultra media (280 lbs.) and 3 ft^3 of Odormix™ SP media (120 lbs.).
   - (500 CFM model) comes complete with 13 ft^3 (cubic feet) of Odorcarb™ Ultra media (520 lbs.) and 4 ft^3 (cubic feet) of Odormix™ SP media (160 lbs.)
   - (1,000 CFM model) comes complete with 31 ft^3 (cubic feet) of Odorcarb™ Ultra media (1240 lbs.) and 8 ft^3 (cubic feet) of Odormix™ SP media (320 lbs.).
2. BLOWER – the air is then propelled further by the blower assembly which includes a mill and chemical duty motor and direct drive blower, assuring even, quiet airflow.
3. FINAL FILTER (DS-300, DS-500, and DS-1000) – any remaining contaminants, such as media dust and airborne contaminants are removed in this final stage by a polymedia filter.

FIGURE 1: BASIC DESIGN

3.0 INSTALLATION

After the entire pre-operative inspection is finished (Section 1.3), complete the following sequence for installation:

(1) Remove the unit from the skid and position it in the designated operation location.

(2) Plug in the electrical connections.

(3) Start the unit.

(4) Perform post-start inspection check. (See Section 3.4)

3.1 POSITIONING THE UNIT

The standard unit can simply be transported by lift to its pre-designed operation location (if in close proximity to the skid), according to facility safety requirements.

3.2 MEDIA BANK FILLING INSTRUCTIONS (FOR INITIAL START-UP)

Proper filling, installation, and maintenance of the chemical filtration media is critical to the unit's efficient operation. The drums are designed specifically for media manufactured by Purafil, Inc., allowing the system to perform at maximum efficiency, through proper shape and bed depth. Drum filters are pre-filled with media at the factory.

3.3 MEDIA BANK FILLING INSTRUCTIONS (FOR MEDIA REPLACEMENT)

Once media analysis (300, 500, 1,000 CFM models only) has determined that it is time for a replacement supply of media, replace the media according to the instructions below.

For 100 CFM Model:

- Media replacement is accomplished by removing the motor/blower lid assembly. Disconnect power supply.
- Remove MediaSAKs (5).
- Remove Polymedia (blue) filter.
- Install Polymedia (blue) filter.
- Install new MediaSAKs (5).
- Install motor/blower lid assembly.
- See Section 5.0 for disposal precaution.

For 300, 500, 1,000 CFM Model:

- Remove motor/blower lid assembly. Disconnect power supply.
- Remove Polymedia (blue) filter.
- Remove layer of Odormix™ SP media.
- Remove layer of Odorcarb™ Ultra media
- Remove Polymedia (blue) filter.
- Clean unit as much as possible by washing packing material with water and let dry.
- Install new Polymedia (blue) filter.
- Install new Odorcarb™ Ultra media.
- Install new Odormix™ SP media.
- Install new Polymedia (blue) filter.
- Install motor/blower lid assembly.
- Connect power supply.
- See Section 4.3 for disposal precaution.

3.4 POST-START INSPECTION/CHECK

Before initial start-up of system, contact your local PURAFIL® representative. Their name and phone number is attached to your system. Operate all DS models at the lowest airflow required to maintain a negative pressure and maximize media life.

YES	NO	CONDITION
____	____	1. Joints, seals, and gaskets do not leak.
____	____	2. Particulate filters have been installed.

4.0 MAINTENANCE

4.1 REPLACEMENT PARTS AND MATERIALS

While Purafil, Inc. products are built for durability, some parts of the PURAFIL® unit will require replacement during the normal lifetime of the equipment. Replacement items may be ordered from your local PURAFIL® representative or from Purafil, Inc.

Consumables: In order to maintain proper performance levels, particulate filters and PURAFIL® media must be replaced periodically, as they have a finite life (See Media Sampling Procedure Service Guide).

Moving Parts: Bearings, motors, etc. are all subject to gradual deterioration and/or sudden breakdown.

4.2 MEDIA REPLACEMENT

Need for Sampling

PURAFIL® engineered dry-chemical media has a finite life. Our media contains special active ingredients that react with odors and gaseous pollutants to remove them from the airstream. Once the active ingredients are spent, it is time to replace the media in your system. After start-up, your local PURAFIL® representative will work with the owner to periodically secure media samples. Purafil, Inc. will provide regular laboratory analysis of such samples to establish life cycles. Note, color change of media does not indicate level of remaining life.

Since every installation varies due to the type and quantity level of the contaminant, each operator must develop a sample schedule best suited to their system. However, until a schedule can be established, we recommend that a sample is taken from each vertical media bank and sent for analysis, so that a replacement date can be projected with a recommended sampling schedule.

Media Life Analysis (MLA) is a complimentary Purafil, Inc. service. MLA Sample Kits are available through Purafil, Inc. If analysis reveals that it is time to replace the media, order the appropriate pounds of media required per module used in the unit. See Media Sampling Service Guide for instructions on how to take a media sample from your unit.

5.0 SPECIAL PRECAUTIONS

Disposal

PURAFIL® media is a non-toxic, non-flammable substance. Filtration of contaminants through PURAFIL® media causes molecular changes to occur, and the resulting product is usually not harmful to the environment. Although special precautions are generally not required when disposing of spent media, government regulations may require specific disposal procedures if the resulting product could be harmful to the environment. Large quantities of PURAFIL® media should not be disposed of in dumpster-like equipment because the weight of the media could cause difficulties in handling the dumpster.

Independent laboratory analysis for Environmental Protection Agency toxicity characteristics may be required if the contaminants eliminated from your environment include heavy metals and pesticides.

Inhalation

A well-ventilated work area is suggested for changing the PURAFIL® media, as dusting occurs in fresh media due to handling abrasion. Workers should avoid direct inhalation of considerable PURAFIL® dust, as it induces sneezing. In closed, unventilated spaces, dust masks such as the 3-M No. 8500 are suggested.

Water

Avoid exposing the PURAFIL® media to water or precipitation, as this dissolves permanganate content. Storage of media should be in a dry place with less than 95% relative humidity. Exposure of permanganate solution to the skin causes brown staining which is temporary and not harmful. This staining can be removed by washing in a diluted solution of water and sodium bisulfite.

Eye Contact

If dust is exposed to the eyes or delicate membrane, flush thoroughly with water and seek treatment by a physician. Follow normal procedures for exposure to abrasive dust.

6.0 PURAFIL® STAIN REMOVAL PROCEDURE

The following stain removal procedure is stated here as information only, and neither Purafil, Inc., any of its subsidiaries, nor any agent or employee of Purafil, Inc. make any warranty or other representation regarding the efficacy or safety of this procedure. The stain removal could cause further damage to the garment or to the item from which one may attempt to remove the stain.

If the dust from PURAFIL® media comes in contact with organic material, there are two possible stain problems:

1. Manganese dioxide (MnO_2) which is insoluble, characterized by a medium brown color, and is found in expended PURAFIL® media, can usually be removed by normal washing.

2. New (unused) Odormix™ SP media contains sodium permanganate ($NaMnO_4$) which is a strong oxidant and will react with and discolor any organic material with which it comes in contact. These stains, which will be brownish black in color, may be removed using a solution of sodium bisulfite in water, after the garment has been removed from the person.

   CAUTION: This procedure should start with a very weak solution, gradually increasing the strength until the stain is removed. Use of too strong a solution could conceivably cause additional fabric damage.

   NOTE: Sodium bisulfite gives off sulfur dioxide (SO_2) gas; therefore, it must be used in a well-ventilated area.

   **PURAFIL® Odormix™ SP media is a 50/50 water-wastewater blend of Odorkol ™ media and Odoroxidant™ SP media.*

7.0 WARRANTY

PURAFIL® warrants hardware equipment manufactured by PURAFIL® to be free from defects in material and workmanship under normal use and service for twelve (12) months from startup date or eighteen (18) months from shipment date. PURAFIL'S obligation under this warranty shall be limited to replacing any parts thereof which shall be demonstrated to have been defective. THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS.

PURAFIL MAKES NO WARRANTIES AS TO MERCHANTABILITY OR AS TO THE FITNESS OF THE MERCHANDISE FOR ANY PARTICULAR USE AND SHALL NOT BE LIABLE FOR ANY LOSS OR DAMAGE, DIRECTLY OR INDIRECTLY, ARISING FROM THE USE OF SUCH MERCHANDISE OR FOR CONSEQUENTIAL DAMAGES. No person, firm or corporation is authorized to assume for PURAFIL® any other liability in connection with the sale of these goods. Equipment, parts and material manufactured by others and incorporated in PURAFIL® equipment are warranted by PURAFIL® ONLY TO THE EXTENT OF THE ORIGINAL MANUFACTURERS LIABILITY TO PURAFIL.

8.0 TROUBLESHOOTING

	SYMPTOM	PROBLEM	CHECKS/REMEDY

9.0 SAMPLE RECORD

Sampling Record/Schedule					

Represented By:

Important Notice

The information contained in this bulletin reflects the results of various testing and analytical procedures believed by PURAFIL, INC. (a USA corporation) to be useful indicators of the relative performance of air filtration systems and media. It is intended for use by persons having appropriate scientific and technical knowledge and experience, at their own risk. This bulletin does not in any way constitute a representation, warranty, promise, or guarantee by PURAFIL, INC. of the installed performance of PURAFIL® media.

THERN

WINCHES AND CRANES

Read this Owner's Manual thoroughly before operating the equipment. Keep it with the equipment at all times. Replacements are available from Thern, Inc., PO Box 347, Winona, MN 55987, 507-454-2996. www.thern.com

IMPORTANT: Please record product information on page 2. This information is required when calling the factory for service.

ORIGINAL TEXT

COMMANDER

Owner's Manual

For

5PT10 and 5PT20 Series Portable Davit Cranes

A12376F-1216

Two-Year Limited Warranty

Please record the following:

Date Purchased:

Crane Model No.:

Crane Serial No.:

If sold with a winch:

Winch Model No.:

Winch Serial No.:

This information is required when calling the factory for service.

Thern, Inc. warrants its products against defects in material or workmanship for two years from the date of purchase by the original using buyer, or if this date cannot be established, the date the product was sold by Thern, Inc. to the dealer. To make a claim under this warranty, contact the factory for an RGA number. The product must be returned, prepaid, directly to Thern, Inc., 5712 Industrial Park Road, Winona, Minnesota 55987. The following information must accompany the product: the RGA number, the date of purchase, the description of the claimed defect, and a complete explanation of the circumstances involved. If the product is found to be defective, it will be repaired or replaced free of charge, and Thern, Inc. will reimburse the shipping cost within the contiguous USA.

This warranty does not cover any damage due to accident, misuse, abuse, or negligence. Any alteration, repair or modification of the product outside the Thern, Inc. factory shall void this warranty. This warranty does not cover any costs for removal of our product, downtime, or any other incidental or consequential costs or damages resulting from the claimed defects. This warranty does not cover brake discs, wire rope or other wear components, as their life is subject to use conditions which vary between applications.

FACTORY AUTHORIZED REPAIR OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE EXCLUSIVE REMEDY TO THE CONSUMER. THERN, INC. SHALL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR BREACH OF ANY EXPRESS OR IMPLIED WARRANTY ON THIS PRODUCT. EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ON THIS PRODUCT IS LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or allow limitations on how long an implied warranty lasts, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Note: Thern, Inc. reserves the right to change the design or discontinue the production of any product without prior notice.

About This Manual

The Occupational Safety and Health Act of 1970 states that it is the employer's responsibility to provide a workplace free of hazard. To this end, all equipment should be installed, operated, and maintained in compliance with applicable trade, industrial, federal, state, and local regulations. It is the equipment owner's responsibility to obtain copies of these regulations and to determine the suitability of the equipment to its intended use.

This Owner's Manual, and warning labels attached to the equipment, are to serve as guidelines for hazard-free installation, operation, and maintenance. They should not be understood to prepare you for every possible situation.

The information contained in this manual is applicable only to the Thern Commander Series Model 5PT10 and 5PT20 Portable Davit Cranes. Do not use this manual as a source of information for any other equipment.

The following symbols are used for emphasis throughout this manual:

⚠WARNING

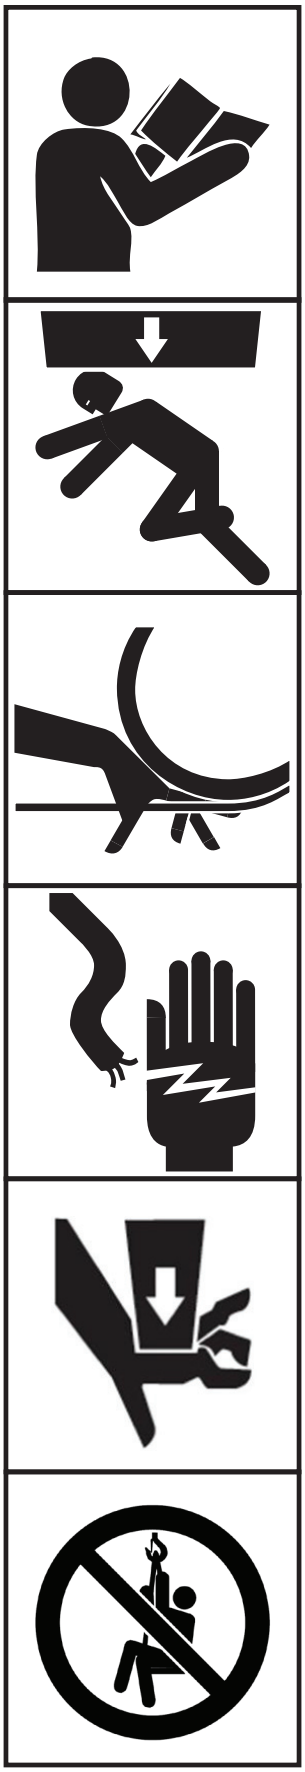
Failure to follow 'WARNING!' instructions may result in equipment damage, property damage, and/or serious personal injury.

⚠CAUTION

Failure to follow 'CAUTION!' instructions may result in equipment damage, property damage, and/or minor personal injury.

Important!

Failure to follow 'important!' instructions may result in poor performance of the equipment.



Suggestions for Safe Operation

⚠WARNING

DO the following:

Read and comply with the guidelines set forth in this Owner's Manual. Keep this manual, and all labels attached to the crane, readable and with the equipment at all times. Contact Thern, Inc. for replacements.

Check lubrication before use.

Install the wire rope securely to the winch drum.

Keep at least 4 wraps of wire rope wound on the drum at all times, to serve as anchor wraps. With less than 4 wraps on the drum the wire rope could come loose, causing the load to escape.

Keep hands away from sheaves, gears, wire rope, and other moving parts.

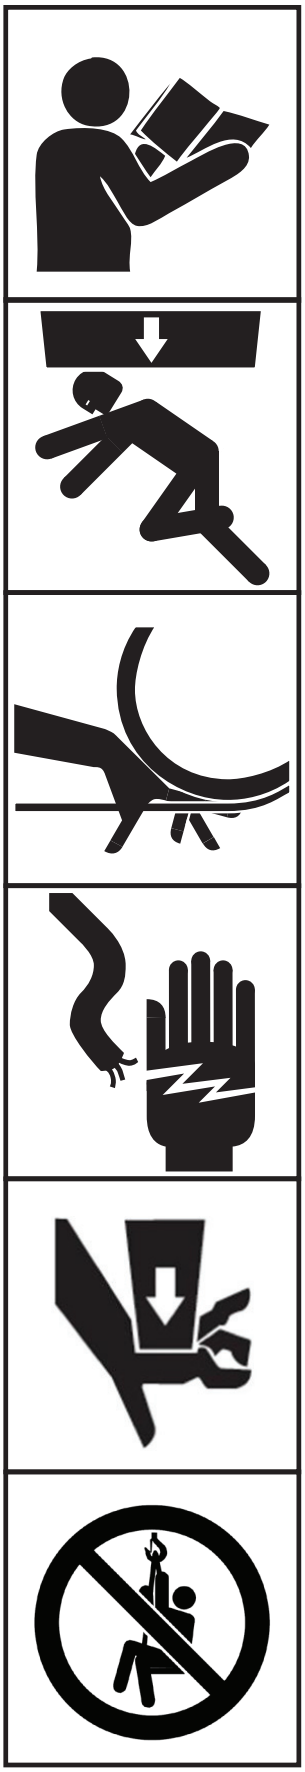
Disconnect electric power before servicing the equipment.

Keep all unnecessary personnel away from crane while in operation.

Keep out of the path of the load, and out of the path of a broken wire rope that might snap back and cause injury.

When operating the ratchet jack, avoid fully un-threading. Test the travel limits of the ratchet jack before assembly to the crane and before loading, to verify it does not fully un-thread. Contact Thern if it does fully un-thread.

Ensure that both threaded ends of the ratchet jack are threaded an equal distance out of the jack when assembled to the crane. If threaded ends are not equal, the crane boom will not be able to operate in its full range of motion, and equipment damage could occur.



Suggestions for Safe Operation (cont.)

DO NOT do the following:

Do not lift people, or things over people. Do not walk or work under a load or in the line of force of any load.

Do not exceed the load rating of the crane or any other component in the system. To do so could result in failure of the equipment.

Do not use more than one crane to move a load that exceeds the load rating of a single crane. A shift in load weight could overload the equipment.

Do not use damaged or malfunctioning equipment. To do so could result in failure of the equipment.

Do not modify the equipment in any way. To do so could cause equipment failure.

Do not wrap the wire rope around the load. This damages the wire rope and could cause the load to escape. Use a sling or other approved lifting device.

Do not operate the crane with guards removed or improperly installed.

Do not divert your attention from the operation. Stay alert to the possibility of accidents, and try to prevent them from happening.

Do not jerk or swing the load. Avoid shock loads by starting and stopping the load smoothly. Shock loads overload the equipment and may cause damage.

Do not use the crane and winch components for any use other than for their original intended function.

Do not use the crane to drag or pull loads. This will create side pulls, which could damage the equipment or cause the load to tip.

Do not leave a suspended load unattended. Place the load on the ground if it must be left unattended.

Do not adjust the winch brake with the load suspended.

Do not operate or apply loads without all pins securely in place.

Do not adjust the boom extension while the crane is loaded.

Do not force the ratchet handle past travel limits. This could sheer the travel limit pin and cause damage or injury.

1.1 Installing the Crane

Important!

- A qualified professional should inspect or design the foundation to insure that it will provide adequate support.
- Locate the crane so it will be visible during the entire operation.

⚠WARNING

Do not install the crane in an area defined as hazardous by the National Electric Code, unless installation in such an area has been thoroughly approved.

Do not install the crane near corrosive chemicals, flammable materials, explosives, or other elements that may damage the crane or injure the operator. Adequately protect the crane and the operator from such elements.

Position the crane so the operator can stand clear of the load, and out of the path of a broken wire rope that could snap back and cause injury.

Attach the crane to a rigid and level foundation that will support the crane and its load under all load conditions, including shock loading.

1.1.1 CONSULT APPLICABLE CODES AND REGULATIONS for specific rules on installing the equipment.

1.1.2 LOCATE THE CRANE in an area clear of traffic and obstacles that could interfere with operation. Make sure the crane is accessible for maintenance and operation.

1.1.3 INSTALL THE CRANE on a level surface. **An uneven surface may cause the boom to rotate in the direction the mast is leaning.**

1.1.4 FASTEN THE BASE securely to the foundation to withstand applicable overturning moments and mounting bolt reaction. See Table 1.

a FOR STANDARD PRODUCTS referred to in this manual, use 5/8-inch coarse thread fasteners, grade 5 or better. Recommended torque for Grade 5 bolts without lubrication is 150 ft-lb.

Refer to manufacturer's instructions for other fastener types with specific torque or installation instructions.

b NON-STANDARD PRODUCTS that vary from the original design may have different fastening requirements. Contact a structural engineer or Thern, Inc. for this information.

TO COMPLY WITH LOCAL CODES, CONTACT A QUALIFIED PROFESSIONAL TO OBTAIN PROPER STRUCTURE OR FOUNDATION SPECIFICATIONS FOR THE MOUNTING OF THERN PRODUCTS.

Table 1 - Crane Reactions[2]

				Pedestal Base		Wall Mount Base			
Crane Model	Mast Moment		Suggested Bolt Size	Axial Force per Bolt[1]		Axial Force per Bolt[1]		Shear Force per Bolt	
5PT10	37,790 in-lbs	4,270 N-m	5/8 inch (M16)	1,680 lbs	7,474 N-m	1,420 lbs	6,374 N	1,150 lbs	5,116 N
5PT20	95,110 in-lbs	10,747 N-m	5/8 inch (M16)	4,240 lbs	18,862 N-m	3,560 lbs	15,837 N	2,740 lbs	5,116 N

1 Force in tension.

2 This information may change without prior notice. It is the responsibility of the installer and/or end user to ensure the most current information is used.

1.2 Assembling the Crane

Important!

- Inspect the crane during assembly according to the Instructions for Periodic Inspection. This will give you a record of the condition of the crane with which to compare future inspections.
- Save all boxes and crates that the crane was shipped in, use them again if you need to repackage the crane.
- Contact the factory immediately if any parts are missing or damaged.
- Do not overtighten fasteners, this may strip threads or cause damage to other parts.

⚠CAUTION

When installing the ratchet jack, support the end of the boom so the boom does not fall and the ratchet jack does not swing up causing damage or injury.

When installing the boom extension, hold the boom extension securely so it does not slide abruptly in or out of the boom causing damage or injury.

1.2.1 STUDY PARTS DRAWINGS to understand how the crane is assembled. See pages 20-23.

1.2.2 LUBRICATE PINS and other components prior to assembly. See Section 3.2 - Lubricating the Crane.

1.2.3 INSTALL THE BASE. See Section 1.1 for additional information and crane overturning moments and mounting bolt reaction forces.

1.2.4 INSTALL THE FLANGE BEARING in the base. Bearing must be set level on the base.

1.2.5 ASSEMBLE THE CRANE in the following order.

a FASTEN THE WINCH to the mounting plate using the fasteners provided. On some models you will need to use an additional winch adapter plate and fasteners provided to fasten the winch to the crane. **Make sure the winch is positioned correctly with the winch drum facing toward the load. See Figure 3.**

b INSTALL THE MAST in the base. Move the mast side-to-side to make sure the bottom of the mast properly seats on the pin in the bottom of the base. **The crane will not be stable unless properly seated. See Figure 2.**

c FASTEN THE BOOM to the mast using the clevis pin and lynch pin provided. **Make sure the boom is positioned correctly, with the carrying handles located on the same side as the handles on the mast.**

d INSTALL THE HANDLE using the mast clevis pin and lynch pin provided.

Figure 1 – Crane Packaging

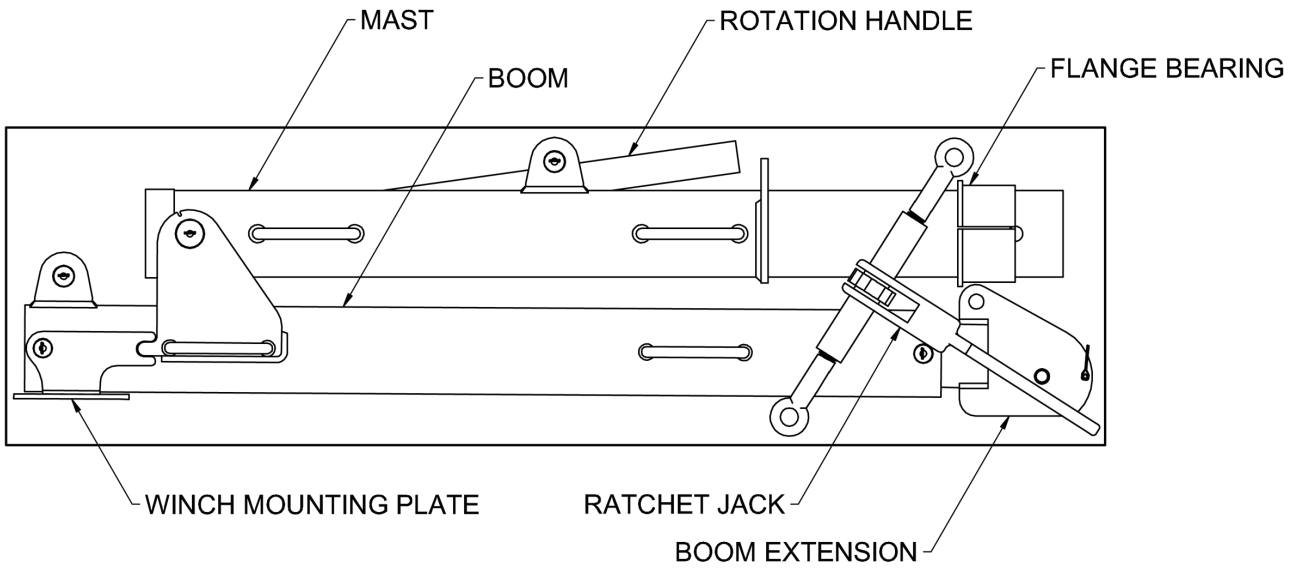


Figure 2 – Assembly Steps

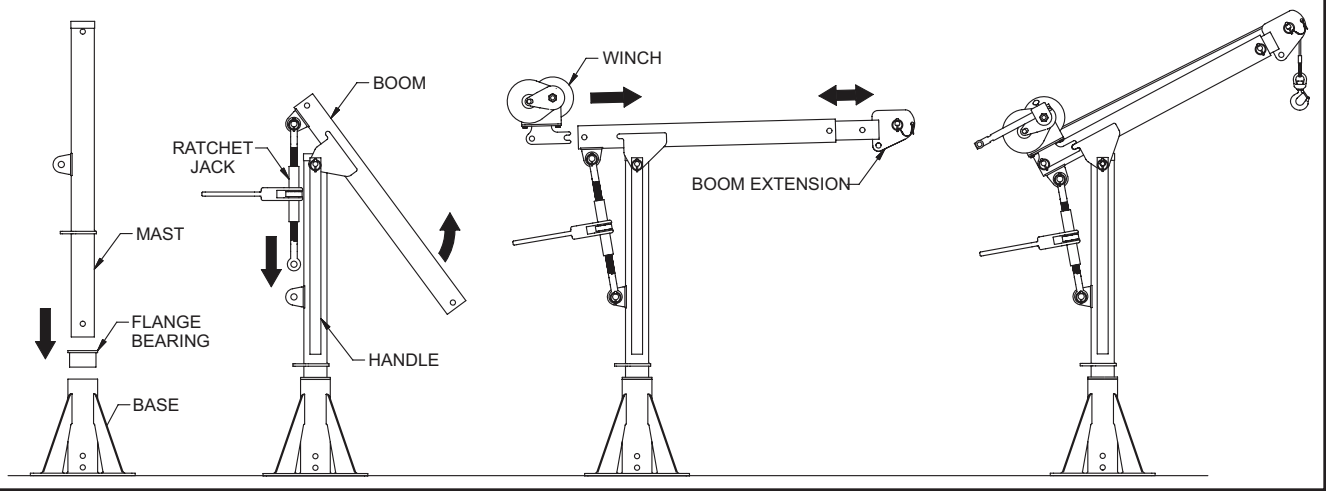

Figure 3 – Winch Mounting

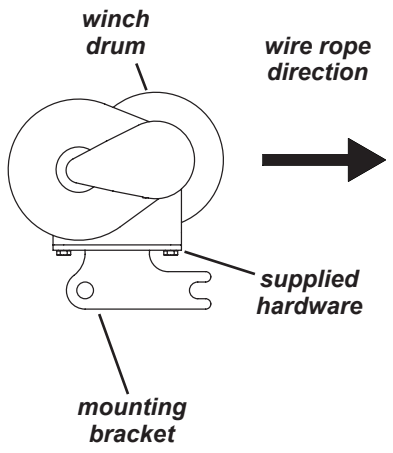

Figure 4 – Lowest Boom Angle

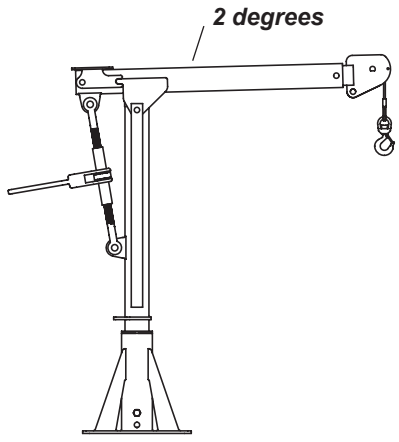


e BEFORE INSTALLING THE RATCHET JACK Ensure that both threaded ends of the ratchet jack are threaded an equal distance out of the jack when assembled to the crane. If threaded ends are not equal, the crane boom will not be able to operate in its full range of motion, and equipment damage could occur.

f INSTALL THE RATCHET JACK by fastening one end of the ratchet jack to the mounting ear on the boom with the clevis and lynch pin provided. Carefully pivot the boom up until the other end of the ratchet jack aligns with the mounting ear on the mast, and secure the ratchet jack to the mast using the clevis pin and lynch pin provided.

g ADJUST THE BOOM with the ratchet jack so the boom is slightly above the lowest boom angle. See Figure 4. **Do not lower boom below the lowest point, or the boom could fall and may result in the load escaping.**

h SLIDE THE BOOM EXTENSION into the boom, and secure in place with the clevis pin and lynch pin provided. **Make sure the boom extension is positioned correctly. See Figure 2.**

i INSTALL THE WINCH onto the boom. Slide into position and secure with provided clevis pin and lynch pin.

1.2.6 INSTALL THE WINCH HANDLE on hand winches, or connect electric current on power winches. Refer to instructions in the Winch Owner's Manual.

1.2.7 INSTALL THE WIRE ROPE. **Use wire rope assemblies in the length specified on page 24-25.**

a REMOVE ROPE KEEPER PIN at the sheave to allow rope to be installed.

b PASS THE WIRE ROPE over the sheave at the end of the boom.

c REINSTALL ROPE KEEP PIN to prevent the rope from escaping the sheave rope groove.

d ANCHOR THE WIRE ROPE to the winch drum and wind 4 wraps of wire rope onto the drum to act as anchor wraps. Refer to the instructions in the Winch Owner's Manual.

1.2.8 MAKE SURE ALL CLEVIS PINS ARE PROPERLY INSTALLED with all lynch pins in place to prevent components from shifting during use.

1.2.9 ADJUST BOOM ANGLE for the desired position using the ratchet-jack (if equipped). See Figure 2.

2.1 General Theory of Operation

Important!

- Limit nonuniform winding by keeping tension on the wire rope.
- It is your responsibility to detect and account for different factors affecting the condition and performance of the equipment.

2.1.1 THE INTENDED USE of this machinery is to lift and lower loads of its rated capacity or less. It is not for lifting people or things over people.

2.1.2 THE FORCE REQUIRED to lift the load must not exceed the load rating of the crane. Consider the total force required to lift the load, not the weight of the load.

2.1.3 THIS EQUIPMENT CAN develop forces that will exceed the load rating. It is the responsibility of the equipment user to limit the size of the load. Inspect the equipment regularly for damage according to the instructions contained in this manual.

2.1.4 PERFORMANCE RATINGS of the equipment are affected by the position of the boom, the amount of wire rope you use and whether you use a single or two part line. **Crane load ratings decrease as you extend the reach.** See the Performance Characteristics Tables on page 24-25.

a LOAD RATING represents the maximum force that can be placed on new equipment.

b LIFT varies with the position of the boom, the length of the wire rope, and the rigging configuration (single or two part line).

c REACH varies with the position of the boom.

2.1.5 DUTY RATINGS refer to the type of use the equipment is subject to. Consider the following when determining duty rating.

a ENVIRONMENT: harsh environments include hot, cold, dirty, wet, corrosive, or explosive surroundings. **Protect the equipment from harsh environments when possible.**

b MAINTENANCE: poor maintenance, meaning poor cleaning, lubrication, or inspection, leads to poor operation and possible damage of the equipment. **Minimize poor maintenance by carefully following the instructions contained in this manual.**

c LOADING: severe loading includes shock loading and lifting loads that exceed the load rating of the equipment. **Avoid shock loads, and do not exceed the load rating of the equipment.**

d FREQUENCY OF OPERATION: frequent or lengthy operations increase wear and shorten the life span of gears, bearings, sheaves, and other components. **Increase maintenance of the equipment if used in frequent operations.**

2.1.6 AIRBORNE NOISE EMISSIONS vary depending on load and the type of winch being used. Standard configurations do not typically exceed a sound pressure level of 80dB(A) at workstations.

2.1.7 VIBRATION LEVELS vary depending on load and type of winch being used. Standard configurations do not typically exceed vibration levels of 2.5 m/s^2.

CONTACT THE FACTORY FOR MORE INFORMATION.

2.2 Preparing for Operation

Important!

- When determining whether the load will exceed the load rating, consider the total force required to move the load.

⚠WARNING

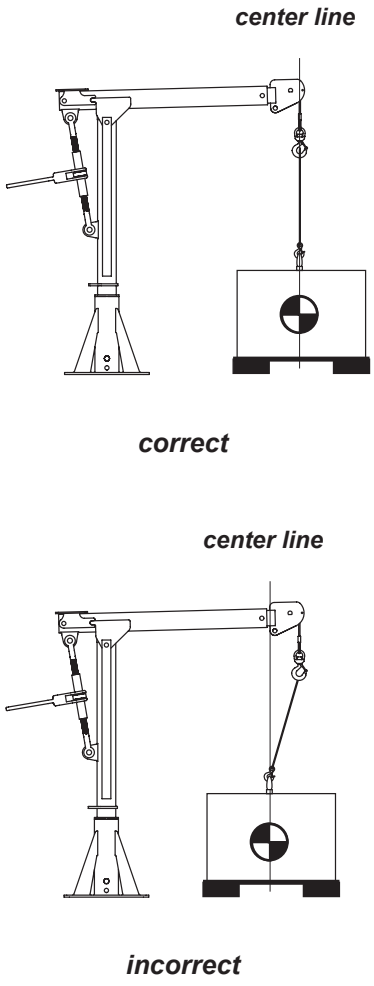
When operating the ratchet jack, avoid fully un-threading. Test the travel limits of the ratchet jack before assembly to the crane and before loading, to verify it does not fully un-thread. Contact Thern if it does fully un-thread.

Do not force the ratchet handle past travel limits. This could shear the travel limit pin and cause damage or injury.

⚠CAUTION

When adjusting boom length, set the boom angle just above the lowest angle and hold the boom extension securely so it does not slide abruptly in or out of the boom causing damage or injury.

Figure 5 – Positioning the Boom



2.2.1 CONSIDER THE OPERATION. Do not begin until you are sure you can perform the entire operation without hazard.

2.2.2 INSPECT ALL COMPONENTS of the system.

a INSPECT THE CRANE and other equipment according to the Instructions for Frequent Inspection.

b INSPECT THE WINCH according to the instructions in the Winch Owner's Manual.

c OPERATORS must be in good health, alert, thoroughly trained in operating the equipment, and properly clothed (hard hat, safety shoes and safety glasses, no loose clothing).

d THE LOAD must be clear of other objects and free to move. Make sure the load will not tip, spin, roll away, or in any way move uncontrollably.

2.2.3 KNOW YOUR LOAD and make sure you do not exceed the load rating of the crane or any other equipment in the system.

2.2.4 POSITION THE BOOM so the load hook is centered over the load. **Avoid side pulls which could damage the crane or cause the load to tip. See Figure 5.**

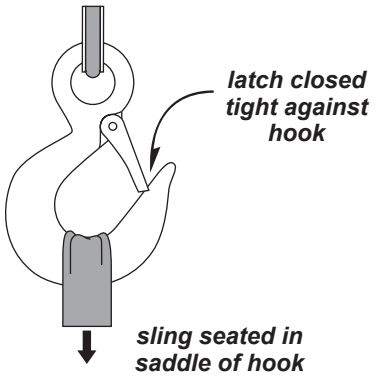
a ADJUST BOOM LENGTH by moving the boom extension in or out. **Do not make adjustments while the crane is loaded. The load rating decreases as you increase boom length. See the Performance Characteristics Tables page 24-25.**

b ADJUST BOOM ANGLE by operating the ratchet jack to raise or lower the boom. **The lift height below base level decreases as you raise the boom. See the Performance Characteristics Tables page 24-25.**

2.2.5 CONFIGURE THE CRANE for single part or two-part line operation. **Load ratings may increase with two-part line, lift height below base level will decrease with two part line. See the Performance Characteristics Tables on page 25.** Study parts drawing on page 22.

2.3 Attaching the Load

Figure 6 – Attaching Load



⚠WARNING

Do not wrap the wire rope around the load. This damages the wire rope and could cause the load to escape. Use a sling or other approved lifting device.

2.3.1 CLEAR OBJECTS from the path of the load so you can move it freely and observe it at all times during the operation.

2.3.2 MAKE SURE THE WIRE ROPE is not twisted. A twisted wire rope could cause the load to spin when it is raised off the ground.

2.3.3 ATTACH THE LOAD using a nylon sling, or other approved lifting device. Follow the recommendations of the sling manufacturer.

a SEAT THE SLING in the saddle of the hook with the hook latch completely closed. See Figure 6.

b CENTER THE LOAD on the hook so it will remain balanced and not tip or rotate to one side.

2.4 Moving the Load

Important!

- Obey a stop signal from anyone.
- Maintain tension on the wire rope to keep it tightly and evenly wound on the drum.
- If the crane and load are not visible during the entire operation, get help from another person.
- Appoint a supervisor if more than one person is involved in the operation. This will reduce confusion and increase safety.
- When lifting a load, use a tag line to keep the load from swinging or twisting, while keeping yourself away from the load.

⚠WARNING

When operating the ratchet jack, avoid fully un-threading. Test the travel limits of the ratchet jack before assembly to the crane and before loading, to verify it does not fully un-thread. Contact Thern if it does fully un-thread.

Do not force the ratchet handle past travel limits. This could shear the travel limit pin and cause damage or injury.

2.4.1 MOVE THE LOAD slowly and smoothly, only a small distance at first. Make sure the load is balanced and securely attached before continuing.

2.4.2 OPERATE THE WINCH to raise or lower the load. Refer to the instructions in the Winch Owner's Manual**.**

2.4.3 OBSERVE THE WIRE ROPE as it winds onto the drum. If it becomes loose, uneven, or overlapped, stop the operation and rewind the wire rope before continuing. **Continued operation with overlapped or uneven wire rope can damage the wire rope and shorten its life.**

2.4.4 OPERATE THE RATCHET JACK if necessary, to adjust the angle of the boom to keep the sheave centered over the load.

2.4.5 ROTATE THE BOOM to move the load side-to-side.

a ROTATE THE BOOM slowly and smoothly to avoid swinging the load or causing shock loads. **Do not jam the boom against other objects.**

b USE THE HANDLE to rotate the boom. **Do not push or pull the load or the wire rope to rotate the boom.**

3.1 Cleaning the Crane

Important!

Increase the frequency of maintenance procedures if the crane is:

- Operated for long periods.
- Used to lift heavy loads.
- Operated in wet, dirty, hot, or cold surroundings.

Clean the crane to remove dirt and help prevent rust and corrosion.

3.1.1 CLEAN THE CRANE every six months or whenever it is dirty.

a WIPE ALL EQUIPMENT to remove dirt and grease.

b LEAVE A LIGHT FILM of oil on all surfaces to protect against rust and corrosion.

c WIPE OFF excessive amounts of oil to avoid the accumulation of dirt.

3.1.2 REMOVE UNNECESSARY OBJECTS from the area surrounding the crane.

3.2 Lubricating the Crane

Important!

- Make sure lubricant has a temperature rating appropriate for the ambient temperatures of the operation.

Lubricate the crane properly to help protect it from wear and rust. Read the following instructions carefully.

3.2.1 LUBRICATE ALL PINS before installation and at least every 3 months. Use a grease brush to apply a light film of NLGI #2 grease to all pins.

3.2.2 LUBRICATE THE BASE PIN located on the bottom of the base before installation and at least every 3 months. Use a grease brush to apply a film of NLGI #2 grease to the pin.

3.2.3 LUBRICATE THE MAST BEARING located on top of the base before installation and at least every 3 months. Use a grease gun to apply NLGI #2 grease to the outside surfaces (between bearing and base).

3.2.4 LUBRICATE THE RATCHET JACK before installation and at least every 3 months. Use a grease gun to apply NLGI #2 grease to the grease fittings on the ratchet jack until excess grease can be seen. Wipe away any excess lubricant.

3.2.5 LUBRICATE THE WINCH. Refer to the Winch Owner's Manual for instructions.

3.2.6 LUBRICATE THE WIRE ROPE and other equipment by following the manufacturer's recommendations.

3.3 Disassembling the Crane

⚠CAUTION

When removing the boom extension, hold the boom extension securely so it does not slide abruptly in or out of the boom causing damage or injury.

When removing the ratchet jack, support the end of the boom so the boom does not fall and the ratchet jack does not swing up causing damage or injury.

3.3.1 STUDY PARTS DRAWINGS to understand how the crane is assembled. See pages 20-23.

3.3.2 REMOVE ANY ATTACHED LOAD from the wire rope.

3.3.3 REMOVE THE WIRE ROPE

a REMOVE THE ROPE KEEPER PIN located at the end of the boom.

b UNWIND THE ROPE from the winch drum and release the anchor.

c REPLACE THE ROPE KEEPER PIN

3.3.4 REMOVE THE WINCH HANDLE on hand winches, or disconnect electric current on power winches. Refer to instructions in the Winch Owner's Manual.

3.3.5 REMOVE THE WINCH and mounting bracket from the boom. Replace the clevis pin to prevent loss.

3.3.6 REMOVE THE BOOM EXTENSION.

a ADJUST THE BOOM ANGLE using the ratchet jack, so the boom is just slightly above horizontal.

b SECURE THE BOOM EXTENSION then remove the lynch pin and clevis pin securing the boom extension to the boom.

c CAREFULLY PULL THE BOOM EXTENSION out of the boom, then reinstall the clevis pin and lynch pin in the boom.

3.3.7 REMOVE THE RATCHET JACK.

a SECURE THE BOOM to prevent it from falling when the ratchet jack is released.

b DISCONNECT THE RATCHET JACK at the mast (bottom) by removing the lynch pin and clevis pin and slowly lower the boom until it is resting against the mast. Be careful that the ratchet jack does not swing up and cause injury.

c REMOVE THE PIN AT THE BOOM (top) to disconnect the ratchet jack from the crane. Hold onto the ratchet jack to prevent it from falling away.

d RECONNECT the clevis pins to the boom and mast with the appropriate lynch pins.

3.3.8 REMOVE THE ROTATION HANDLE from the mast.

3.3.9 DISCONNECT THE BOOM from the mast.

a SECURE THE BOOM to prevent it from falling away when the pins are removed.

b REMOVE THE LYNCH PIN AND CLEVIS PIN and carefully remove the boom.

c REPLACE the clevis pin and lynch pin in the mast.

3.3.10 REMOVE THE MAST from the base by lifting it straight out of the base.

3.3.11 REMOVE THE BEARING from the base. Install a cap over the base to prevent debris and other contaminants from getting into the base.

3.4 Inspecting the Equipment

Important!

- Start an inspection program as soon as you put the crane into use.
- Appoint a qualified person to be responsible for regularly inspecting the equipment.
- Keep written records of inspection. This allows comparison with comments from previous inspections so you can see changes in condition or performance.

Perform frequent inspections:

- Before each operation.
- Every 3 hours during operation.
- Whenever you notice signs of damage or poor operation.

Frequent Wire Rope Inspection:

- Use ASME B30.7 as a guideline for rope inspection, replacement and maintenance.
- Check the wire rope, end connections and end fittings for corrosion, kinking, bending, crushing, birdcaging or other signs of damage.
- Check the number, distribution and type of visible broken wires. See paragraph 3.4.4 b and Figure 7.
- Check the wire rope for reduction of rope diameter from loss of core support, or wear of outside wires. See Figure 9.
- Take extra care when inspecting sections of rapid deterioration such as sections in contact with saddles, sheaves, repetitive pickup points, crossover points and end connections.

⚠WARNING

Do not use damaged or malfunctioning equipment. Place an "OUT OF ORDER" sign on the crane. Do not use the crane until the sign is removed by a qualified person who has completely corrected the problem.

Inspect the crane to detect signs of damage or poor operation before they become hazardous. See Table 2 Inspection Checklist.

3.4.1 CONSULT APPLICABLE CODES AND REGULATIONS for specific rules on inspecting the crane and other equipment.

3.4.2 REFER TO THE WINCH OWNER'S MANUAL for information regarding winch inspection.

3.4.3 **Instructions for Frequent Inspection**

a VISUALLY INSPECT the entire crane and all other equipment involved in the operation.

- Check all equipment for cracks, dents, bending, rust, wear, corrosion and other damage.
- Make sure the wire rope is installed correctly and anchored securely.
- Make sure the entire crane is properly lubricated.
- Make sure all fasteners are tight and secure.
- Make sure mounting fasteners are tightened securely.
- Check the ratchet jack for signs of leakage or damage, and make sure it operates smoothly to raise and lower the boom.
- Make sure the foundation is in good condition, and capable of supporting the crane and its load under all load conditions.

b TEST CRANE PERFORMANCE by operating the crane with a load not exceeding the load rating.

- Listen for unusual noises, and look for signs of damage as you operate the crane.
- Make sure the wire rope winds evenly and tightly onto the drum. If it is loose or uneven, rewind it before continuing.
- Make sure the load moves smoothly, without hesitation or strain.
- On hand operated models, make sure the winch handle rotates freely in both directions.
- On power operated models, make sure the winch responds to the control device. It must rotate as shown on the control labels, and it must turn off when you release the control.
- Make sure the boom rotates freely when you push the handle, and remains stationary when you release it.
- Check the winch brake. Raise the load, then lower it and stop it a few feet off the ground. If the load continues to coast or creep under normal operating conditions, the brake may be worn and in need of repair or replacement. Contact the factory.

Completely correct all problems before continuing. Use the Troubleshooting Chart to help determine the cause of certain problems. See Table 3.

Table 2 – Inspection Checklist

checked boxes indicate damage or problem in need of repair

	damages	problems
general	☐ finish weathered, flaking, otherwise damaged	☐ equipment not properly lubricated
	☐ parts cracked, bent, rusted, worn, otherwise damaged	☐ unusual noises, other signs of malfunction
foundation	☐ loose, unstable, otherwise damaged	☐ not level - boom swerves
fasteners	☐ stripped threads, bent, worn, otherwise damaged	☐ loose, not tightened to the proper torque
boom assembly	☐ holes worn, distorted, or otherwise damaged	☐ does not rotate freely
winch assembly	☐ gears, bearings, and other parts worn, otherwise damaged	☐ winch jerks or hesitates under load
	☐ brake corroded, cracked, worn, otherwise damaged	☐ brake does not operate properly
sheaves	☐ holes worn, distorted, or otherwise damaged	☐ does not rotate freely
wire rope	☐ bent, crushed, otherwise damaged	☐ wire rope loosely or unevenly wound
	☐ broken wires, see Figure 7	
	replace if more than 6 wires in one lay,	number per strand =
	or 3 wires in one strand in one lay, are broken	number per lay =
	☐ diameter reduced, see Figure 9	
	replace if diameter is excessively worn	diameter =
end connections	☐ corroded, rusted, worn, otherwise damaged	☐ not securely attached
load hook	☐ twisted, bent, worn, otherwise damaged, see Figure 8	☐ hook latch fails to close when released
	replace if twist is 10 degrees or more	twist =
	replace if throat width is 15% larger than nominal	throat width =
	replace if thickness is 10% less than nominal	thickness =
labels and plates	☐ dirty, illegible, otherwise damaged	☐ loosely attached or missing

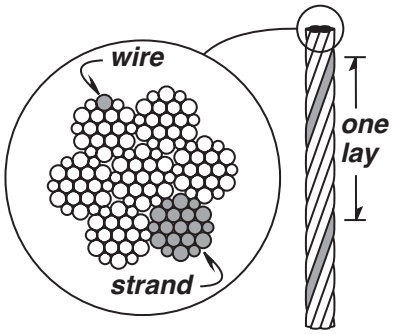
comments:

authorized signature: _____ **date** _____

Perform periodic inspections:

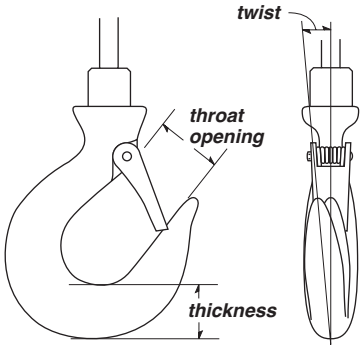
- Every 6 months.
- Whenever you return the crane to service from storage.
- Whenever you notice damage or poor operation in a frequent inspection.
- Whenever you have, or think you may have, overloaded or shock loaded the crane.

Figure 7 – Broken Wires



Wire rope assembly must be replaced if more than 6 wires are broken in one lay, or if more than 3 wires are broken in one strand in one lay.

Figure 8 – Load Hook Inspection



The wire rope assembly must be replaced if the throat opening is 15% wider than nominal, if the thickness is 10% less than nominal, or if the hook is twisted 10° or more.

3.4.4 Instructions for Periodic Inspection

a VISUALLY INSPECT the crane and all other equipment.

- Check the finish for wear, flaking, or other damage.
- Check all equipment for cracks, dents, bending, rust, wear, corrosion and other damage. If the equipment was overloaded, or if you notice cracks and other signs of overloading and damage, promptly remove equipment from use and have it repaired or replaced. **DO NOT CONTINUE TO USE DAMAGED OR OVERLOADED EQUIPMENT OR WIRE ROPE**.
- Check all fasteners for stripped threads, wear, bending, and other damage.
- Make sure the entire crane is properly lubricated.
- Check the ratchet jack for signs of leakage or damage, and make sure it operates smoothly to raise and lower the boom.
- Remove the ratched jack from the crane assembly. Test the travel limits of the ratchet jack. Make sure it does not fully un-thread.
- Make sure all labels and plates are readable, firmly attached, free of damage and clean. Replacements are available from the factory.

b INSPECT THE WIRE ROPE according to the wire rope manufacturer's recommendations, or follow accepted industry standards for wire rope inspection.

- Always wear protective clothing when handling wire rope.
- Check the entire length of wire rope for bent wires, crushed areas, broken or cut wires, corrosion, and other damage. Carefully inspect areas that pass over sheaves or through roller guides.
- Note the location and concentration of broken wires. Replace wire rope if more than 6 wires are broken in one lay, or more than 3 wires are broken in one strand in one lay. See Figure 7.
- Make sure the load hook or other device is securely attached to the wire rope, and the wire rope where it is attached is not frayed, corroded, broken, or otherwise damaged.
- Measure the throat opening, thickness, and twist of the hook. Replace the hook if it shows signs of damage. See Figure 8.
- Make sure hook latch opens without binding and closes when released.
- Check the anchor holes in the drum and the surrounding area for signs of wear or distortion.

c PLACE enough weight to keep the wire rope straight and tightly drawn.

- Measure the diameter of the wire rope, especially in areas where wear is noticeable. Replace the wire rope if the diameter measures below the minimum diameter at any point. See Figure 9.

d REMOVE THE WINCH and inspect it by following the instructions in the Winch Owner's Manual.

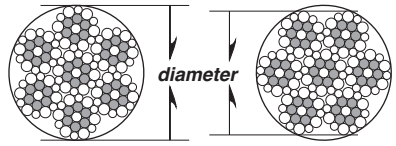
e DISASSEMBLE THE CRANE. Inspect each component for damage.

f REMOVE THE CRANE BASE from the foundation.

- Check fasteners for stripped threads, wear, bending, and other damage.
- Check the foundation for cracks, corrosion, and other damage.

g FASTEN THE CRANE BASE securely to the foundation.

Figure 9 – Rope Diameter



The wire rope assembly must be replaced if the diameter measures less than the minimum diameter at any point.

wire rope size	minimum diameter
3/16 in	11/64 in (.1719 in)
1/4 in	15/64 in (.2344 in)
5/16 in	19/64 in (.2969 in)

h REASSEMBLE THE CRANE.

i TEST CRANE PERFORMANCE by operating the crane with a load equal to the load rating.

- Listen for unusual noises, and look for signs of damage as you operate the crane.
- Make sure the wire rope winds evenly and tightly onto the drum. If it is loose or uneven, rewind it before continuing.
- Make sure the load moves smoothly, without hesitation or strain.
- On hand operated models, make sure the winch handle rotates freely in both directions.
- On power operated models, make sure the winch responds to the control device. It must rotate as shown on the control labels, and it must turn off when you release the control.
- Make sure the boom rotates freely when you push the handle, and remains stationary when you release it.
- Check the brake. Raise the load, then lower it and stop it a few feet off the ground. If the load continues to coast or creep under normal operating conditions, the brake may be worn and in need of repair or replacement. Contact the factory.

Completely correct all problems before continuing. Use the Troubleshooting Chart to help determine the cause of certain problems. See Table 3.

Table 3 – Troubleshooting Chart

problem	cause	correction
overheating	• operated too long without rest	allow to cool
	• load too heavy	lighten load
	• poor lubrication	inspect and lubricate as necessary
	• bearing seized up	inspect and replace as necessary
boom bounces up and down	• load too heavy	lighten load
	• mounting bolts loose	tighten mounting bolts to proper torque
	• sheave worn or damaged	inspect and replace as necessary
	• foundation loose or unlevel	inspect and repair as necessary
	• winch gears worn or damaged	inspect and repair as necessary
boom does not rotate	• rotation points contaminated or worn	inspect and repair as necessary
	• flange bearing broken or locked	inspect and replace as necessary
boom rotates on its own	• foundation loose or unlevel	inspect and repair as necessary
	• mast bent, distorted, or leaning	inspect and repair as necessary
unusual noises		
high pitched squeak	• poor lubrication	lubricate entire crane properly
grinding noise	• contaminated lubricant at rotation points	clean and lubricate rotation points
rattling noise	• loose bolts, set screws or other fasteners	tighten all bolts and other fasteners
resistance felt in ratchet jack - boom not able to raise or lower to the published angle limits	• threaded ends of ratchet jack do not protrude equally from the jack	Adjust the threaded rod ends by removing the jack and turning the ends until an equal amount of threads are showing
ratchet jack fully un-threads	• travel limit pin damaged	contact Thern

Refer to the Winch Owner's Manual for possible problems with the winch and brake.

3.5 Repairing the Crane

Important!

- It is your responsibility to determine when to replace parts. When considering whether to continue using a part or to replace it, remember that replacing it is the best way to avoid further equipment damage.
- Appoint a qualified person to be responsible for all repairs to the equipment.

3.5.1 GET FACTORY AUTHORIZATION for all repairs. Unauthorized repairs will void the warranty, and may lead to damage or failure of the crane.

3.5.2 REPLACE DAMAGED OR POORLY OPERATING PARTS with Thern repair parts.

3.5.3 REFINISH AREAS where the paint is worn or flaking. A good finish helps to protect against corrosion and weather damage.

a REMOVE THE FINISH from damaged areas, down to the bare metal.

b CLEAN THE AREA thoroughly.

c REPAINT with a high quality primer and finishing coat.

3.5.4 TO ORDER REPAIR PARTS, contact your local dealer. Include the following information when ordering:

- model number
- serial number (or code number)
- part number
- date purchased, and from whom
- description of what happened, or what is wrong
- your name and return address

Table 4 – Crane Weight Chart

	Model 5PT10		Model 5PT20

4.1 Transporting the Crane

Important!

- Keep a record of what you ship, and when you send it.

4.1.1 PARTIALLY DISASSEMBLE THE CRANE into components that can be transported.

4.1.2 PACK THE CRANE for transport, using the original packaging materials, if appropriate.

4.1.3 PACK THE WINCH for transport, using the original packaging materials, if appropriate. Please see the winch owner's manual for instructions.

4.1.4 REASSEMBLE THE CRANE at its new location following the instructions under Section 1.2 - Assembling the Crane.

4.1.5 INSPECT THE CRANE according to the Instructions for Frequent Inspection before installing it for operation. See Section 3.4.3 - Instructions for Frequent Inspection.

4.2 Storing the Crane

4.2.1 PARTIALLY DISASSEMBLE THE CRANE and store all parts in a cool clean place away from corrosive chemicals and moisture.

4.2.2 SEAL THE CRANE in plastic with a desiccant to help protect it from rust, corrosion, and other damage.

4.2.3 SEAL THE WINCH in plastic with a desiccant to help protect it from rust, corrosion, and other damage. Please see the winch owner's manual for instructions.

4.2.4 REASSEMBLE THE CRANE at its new location according to Section 1.2 - Assembling the Crane.

4.2.5 INSPECT THE CRANE according to Section 3.4.4 - Instructions for Periodic Inspection before installing it for operation.

TCN

Tubular Centrifugal Inline Fans

INSTALLATION, OPERATION AND MAINTENANCE MANUAL

This publication contains the installation, operation and maintenance instructions for standard units of the *TCN: Inline Blowers.*

- TCN-B
- TCNHE-B
- TCNH-D
- TCNH-B
- TCNHS-B
- TCNU-B
- TCNE-B
- TCNHU-B
- TCNS-B
- TCN-D

Carefully read this publication and any supplemental documents prior to any installation or maintenance procedure.

Loren Cook catalog, *TCN,* provides additional information describing the equipment, fan performance, available accessories and specification data.

For additional safety information, refer to AMCA Publication 410-96, *Safety Practices for Users and Installers of Industrial and Commercial Fans*.

All of the publications listed above can be obtained from:

- lorencook.com
- *info@lorencook.com*
- 417-869-6474 ext. 166

For information and instructions on special equipment, contact Loren Cook Company at 417-869-6474.

Receiving and Inspection

Carefully inspect the fan and accessories for any damage and shortage immediately upon receipt of the fan.

- Turn the wheel by hand to ensure it turns freely and does not bind.
- Inspect dampers for free operation of all moving parts.
- Record on the *Delivery Receipt* any visible sign of damage.

Handling

Lift the fan by foot brackets.

NOTICE! Never lift by the shaft, motor or housing.

TCN-B

⚠WARNING

Rotating Parts & Electrical Shock Hazard:

Fans should be installed and serviced by qualified personnel only.

Disconnect electric power before working on unit (prior to removal of guards or entry into access doors).

Follow proper lockout/tagout procedures to ensure the unit cannot be energized while being installed or serviced.

A disconnect switch should be placed near the fan in order that the power can be swiftly cut off, in case of an emergency and in order that maintenance personnel are provided complete control of the power source.

Grounding is required. All field-installed wiring must be completed by qualified personnel. All field installed wiring must comply with National Electric Code (NFPA 70) and all applicable local codes. Ensure the power supply (voltage, frequency and current carrying capacity of wires) is in accordance with the motor nameplate.

Fans and blowers create pressure at the discharge and vacuum at the inlet. This may cause objects to get pulled into the unit and objects to be propelled rapidly from the discharge. The discharge should always be directed in a safe direction and inlets should not be left unguarded. Any object pulled into the inlet will become a projectile capable of causing serious injury or death.

When air is allowed to move through a non-powered fan, the impeller can rotate, which is referred to as windmilling. Windmilling will cause hazardous conditions due to unexpected rotation of components. Impellers should be blocked in position or air passages blocked to prevent draft when working on fans.

Friction and power loss inside rotating components will cause them to be a potential burn hazard. All components should be approached with caution and/or allowed to cool before contacting them for maintenance.

Under certain lighting conditions, rotating components may appear stationary. Components should be verified to be stationary in a safe manner, before they come into contact with personnel, tools or clothing.

Failure to follow these instructions could result in death or serious injury.

The attachment of roof mounted fans to the roof curb as well as the attachment of roof curbs to the building structure must exceed the structural requirements based on the environmental loading derived from the applicable building code for the site. The local code official may require variations from the recognized code based on local data. The licensed engineer of record will be responsible for prescribing the correct attachment based on construction materials, code requirements and environmental effects specific to the installation.

Storage

If the fan is stored for any length of time prior to installation, completely fill the bearings with grease or moisture-inhibiting oil (refer to *Lubrication*, page 6).Store the fan in its original crate and protect it from dust, debris and weather.

Outdoor Storage

To maintain good working condition of a TCN when it is stored outdoors or on a construction site, follow the additional steps below.

- Cover the inlet, outlet and belt tunnel opening to prevent the accumulation of dirt and moisture in the housing
- Periodically rotate the wheel and operate dampers (if supplied) to keep a coating of grease on all internal bearing parts
- Periodically inspect the unit to prevent damaging conditions

Installation

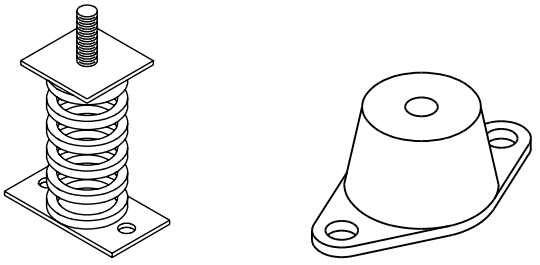
To prevent damage to the fan during shipping, motors 5 HP and larger and extremely heavy motors (cast iron or severe duty) are shipped loose and must be field mounted by bolting the motor on the motor mounting plate in the existing mounting slots.

NOTICE! Extreme vibration is a serious problem that may cause structural and mechanical failure. To help vibration and noise from being transferred to the building, isolators are recommended.

Isolation Installation

Floor Mounted Spring Isolators

1. Mount fan and motor on isolation base (if supplied).
2. Elevate fan (or isolation base) to operating height and insert blocks to hold in position.
3. Position isolators under the fan and vertically align by inserting leveling bolt through mounting holes in the fan or the base. The isolator must be installed on a level surface.
4. Adjust the isolators by turning the leveling nut counterclockwise several turns at a time alternately on each isolator until the fan weight is transferred onto the isolators and the fan raises uniformly off the blocks. Then remove the blocks.
5. Turn lock nut onto leveling bolt and secure firmly in place against the top of the mounting flange or frame.
6. Secure isolators to mounting surface.



Spring Isolator Rubber-in-Shear Isolator

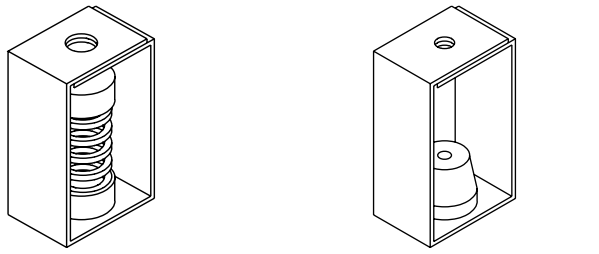
Figure 1 - Floor Mount Isolators

Floor Mounted Rubber-In-Shear (RIS) Isolators

1. Mount fan and motor on an isolation base (if supplied).
2. Elevate fan to provide room to insert isolators between the fan and foundation and block in position.
3. Position isolators under fan and secure bolts.
4. Remove blocks and allow fan to rest on floor. Isolators must be installed on a level surface (leveling should not be required).
5. Secure isolators to mounting surface.

Ceiling Mounted Spring and Rubber-in-Shear (RIS) Isolators

1. Elevate fan to operating height and brace.
2. Attach threaded rod to overhead support structure directly above each mounting hole. Rod should extend to within a few feet of fan.
3. Attach isolator to end of threaded rod using a nut on each side of isolator bracket.
4. Insert another section of threaded rod through the fan mounting hole and isolator.
5. Attach two nuts to threaded rod in isolator.
6. Place adjusting nut and locking nut on threaded rod near fan mounting bracket.
7. Alternately rotate adjusting nut at each mounting location until the fan weight is uniformly transferred to the isolators. Remove bracing.



Ceiling Mounted Spring Isolator Rubber-in-Shear Ceiling Isolator

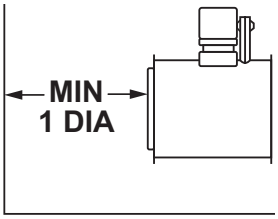
Figure 2 - Ceiling Mount Isolators

Duct Installation

Efficient fan performance relies on the proper installation of inlet and discharge ducts. Be sure your fan conforms to the following guidelines.

Non-Ducted Inlet Clearance

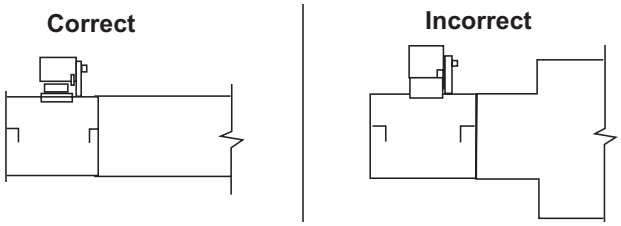
If your fan has an open inlet (no duct work), the fan must be placed one fan wheel diameter away from walls and bulkheads.



Non-ducted Inlet Clearance

Free Discharge

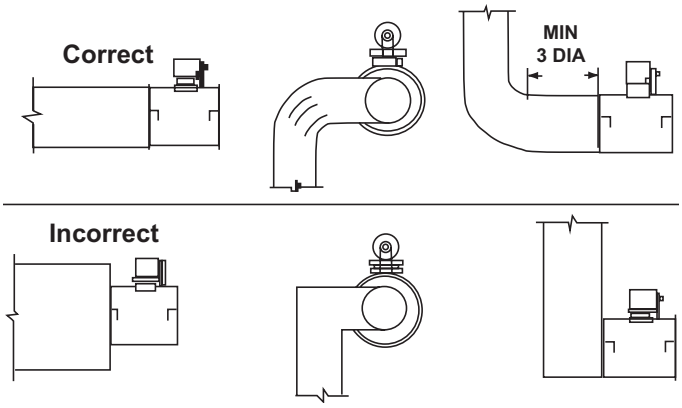
Avoid a free discharge into the plenum. This will result in lost efficiency because it doesn't allow for a static regain.



Free Discharge

Inlet Duct Turns

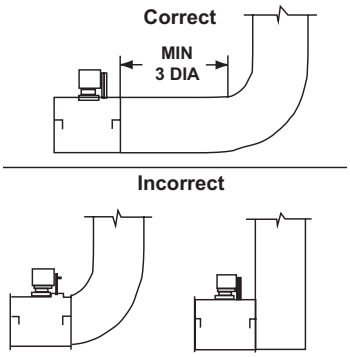
For ducted inlets, allow at least three fan wheel diameters between duct turns or elbows and the fan inlet.



Inlet Duct Turns

Discharge Duct Turns

When possible, allow three duct diameters between duct turns or elbows and the fan outlet.



Discharge Duct Turns

Wheel-to-Inlet Clearance

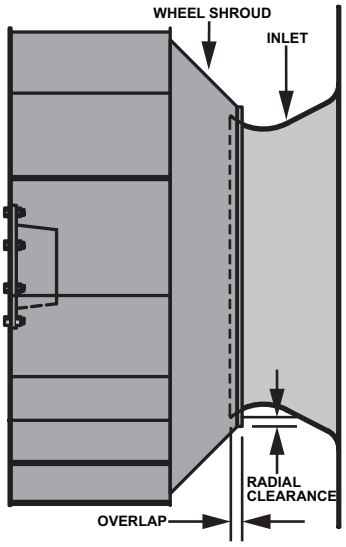
The correct wheel-to-inlet clearance is critical to proper fan performance. This clearance should be verified before initial start-up since rough handling during shipment could cause a shift in fan components. Refer to wheel/inlet drawing below for correct overlap.

Adjust the overlap by loosening the wheel hub and moving the wheel along the shaft to obtain the correct value.

A uniform radial gap (space between the edge of the cone and the edge of the inlet) is obtained by loosening the inlet cone bolts and repositioning the inlet cone.

Wheel/Inlet Overlap

Size	Overlap
60 - 165	3/16”
180 - 245	1/4”
270 - 300	5/16”
330 - 365	3/8”
402	7/16”
445 - 490	1/2”



Belt and Pulley Installation

Belt tension is determined by the sound the belts make when the fan is first started. The belts will produce a loud squeal, which dissipates after the fan is operating at full capacity. If belt tension is too tight or too loose, lost efficiency and damage can occur.

Do not change the pulley pitch diameter to change tension. This will result in a different fan speed.

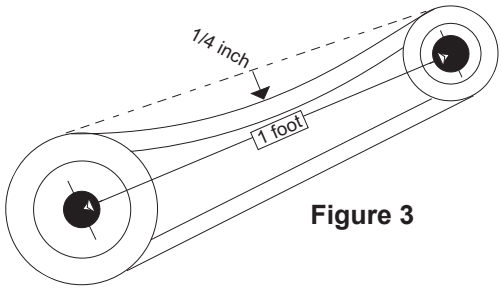


Figure 3

1. Loosen motor plate adjustment bolts and move motor plate in order that the belts can easily slip into grooves on pulleys. Never pry, roll or force the belts over the rim of the pulley.
2. Adjust the motor plate until proper tension is reached. For proper tension, a deflection of approximately 1/4” per foot of center distance should be obtained by firmly pressing the belt. Refer to *Figure 3*.
3. Lock the motor plate adjustment nuts in place.
4. Ensure pulleys are properly aligned. Refer to *Figure 4*.

Pulley Alignment

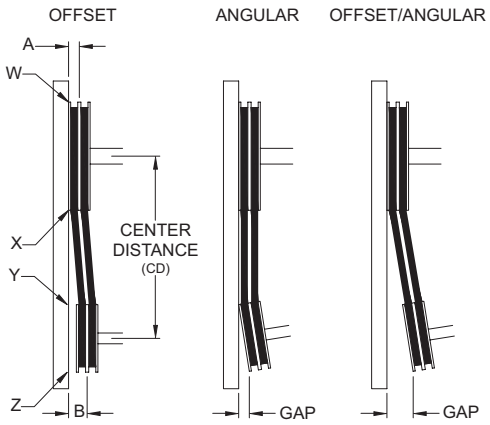
Pulley alignment is adjusted by loosening the motor pulley setscrew and by moving the motor pulley on the motor shaft.

Figure 4 indicates where to measure the allowable gap for the drive alignment tolerance.

Tolerance

Center Distance	Max. Gap
Up through 12”	1/16”
12” up through 48”	1/8”
Over 48”	1/4”

Figure 4



All contact points (indicated by WXYZ) are to have a gap less than the tolerance shown in the table. When the pulleys are not the same width, the allowable gap must be adjusted by half of the difference in width (as shown in A & B of *Figure 4*). *Figure 5* illustrates using a carpenter’s square to adjust the position of the motor pulley until the belt is parallel to the longer leg of the square.

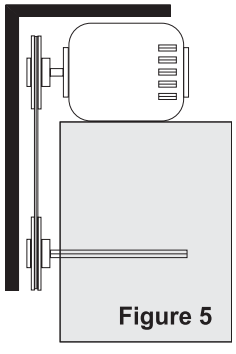


Figure 5

Wiring Installation

Leave enough slack in the wiring to allow for motor movement when adjusting belt tension. Some fractional motors have to be removed in order to make the connection with the terminal box at the end of the motor. To remove motor, remove bolts securing motor base to power assembly. Do not remove motor mounting bolts.

Use of Variable Frequency Drives

Motors

Motors that are to be operated using a Variable Frequency Drive (VFD) must be VFD compatible. Motors that are not supplied by Loren Cook Company should have the recommendation of the motor manufacturer for use with a VFD.

Grounding

The fan frame, motor and VFD must be connected to a common earth ground to prevent transient voltages from damaging rotating elements.

Wiring

Line reactors may be required to reduce over-voltage spikes in the motors. The motor manufacturer should be consulted for recommended line impedance and usage of line reactors or filters if the lead length between the VFD and the motor exceeds 10 ft (3m).

Fan

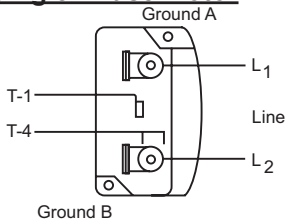
It is the responsibility of the installing body to perform coast-down tests and identify any resonant frequencies after the equipment is fully installed. These resonant frequencies are to be removed from the operating range of the fan by using the “skip frequency” function in the VFD programming. Failure to remove resonant frequencies from the operating range will decrease the operating life of the fan and void the warranty.

Wiring Diagrams

Vari-Flow

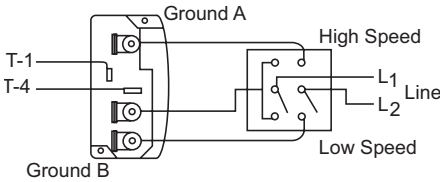
For EC or VF see EC Motor Wiring supplement. For VF2 see PM wiring supplement.

Single Speed, Single Phase Motor



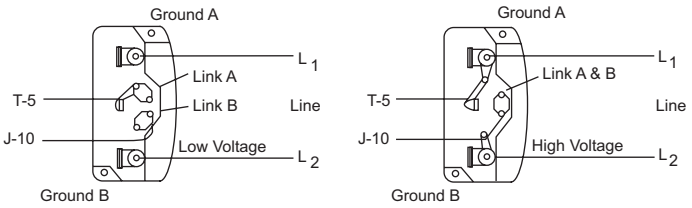
When ground is required, attach to ground A or B with No. 6 thread forming screw. To reverse, interchange T-1 and T-4.

2 Speed, 2 Winding, Single Phase Motor



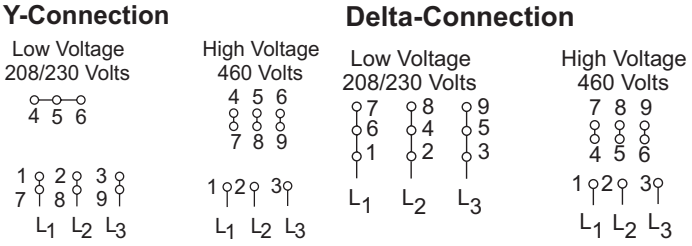
When ground is required, attach to ground A or B with No. 6 thread forming screw. To reverse, interchange T-1 and T-4 leads.

Single Speed, Single Phase, Dual Voltage



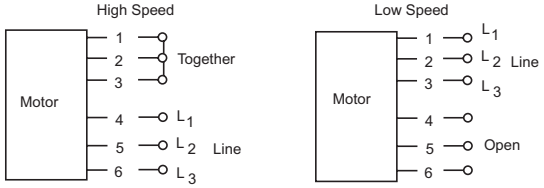
When ground is required, attach to ground A or B with No. 6 thread forming screw. To reverse, interchange T-5 and J-10 leads.

3-Phase, 9 Lead Motor



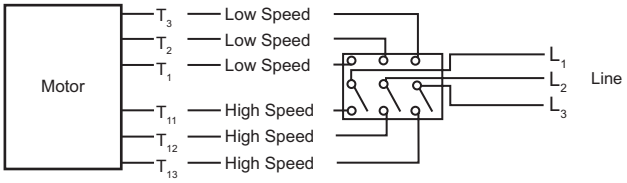
To reverse, interchange any two line leads.

2 Speed, 1 Winding, 3-Phase Motor



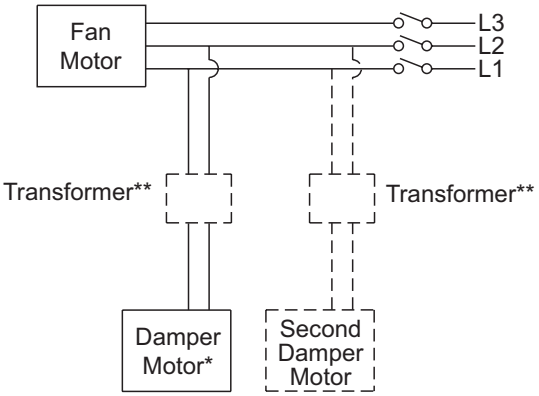
To reverse, interchange any two line leads. Motors require magnetic control.

2 Speed, 2 Winding, 3-Phase



To reverse: High Speed: interchange leads T_{11} and T_{12}. Low Speed: interchange leads T_1 and T_2. Both Speeds: interchange any two line leads.

Typical Fan Motor/Damper Motor Schematic

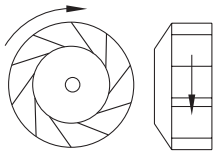


For 3-Phase, damper motor voltage should be the same between L_1 and L_2. For single phase application, disregard L_3.
*Damper motors may be available in 115, 230 and 460 volt models. The damper motor nameplate voltage should be verified prior to connection.
**A transformer may be provided in some installations to correct the damper motor voltage to the specified voltage.

NOTICE! Follow the wiring diagram in the disconnect switch and the wiring diagram provided with the motor. Correctly label the circuit on the main power box and always identify a closed switch to promote safety (i.e., red tape over a closed switch).

Wheel Rotation

Test the fan to ensure the rotation of the wheel is the same as indicated by the arrow marked *Rotation*.



Tubular Centrifugal Inline

115 and 230 Single Phase Motors

Fan wheel rotation is set correctly at the factory. Changing the rotation of this type of motor should only be attempted by a qualified electrician.

208, 230 and 460 3-Phase Motors

These motors are electrically reversible by switching two of the supply leads. For this reason, the rotation of the fan cannot be restricted to one direction at the factory. See *Wiring Diagrams*, page 4, for specific information on reversing wheel direction.

NOTICE! Do not allow the fan to run in the wrong direction. This will overheat the motor and cause serious damage. For 3-phase motors, if the fan is running in the wrong direction, check the control switch. It is possible to interchange two leads at this location so that the fan is operating in the correct direction.

Final Installation Steps

1. Inspect fasteners and setscrews, particularly fan mounting and bearing fasteners then tighten according to the *Recommended Torque* chart.
2. Inspect for correct voltage with a voltmeter.
3. Ensure all accessories are installed.

Operation

Pre-Start Checks

1. Lock out all the primary and secondary power sources.
2. Ensure fasteners and setscrews, particularly those used for mounting the fan, are tightened.
3. Inspect belt tension and pulley alignment.
4. Inspect motor wiring.
5. Ensure belt touches only the pulleys.
6. Ensure fan and ductwork are clean and free of debris.
7. Inspect wheel-to-inlet clearance. The correct wheel-to-inlet clearance is critical to proper fan performance.
8. Close and secure all access doors.
9. Restore power to fan.

Start-Up

Turn on the fan. In variable speed units, set the fan to its lowest speed and inspect for the following:

- Direction of rotation
- Excessive vibration
- Unusual noise
- Bearing noise
- Improper belt alignment or tension (listen for squealing)
- Improper motor amperage or voltage

NOTICE! If a problem is discovered, immediately shut off the fan. Lock out all electrical power and check for the cause of the trouble. Refer to Troubleshooting.

Inspection

Inspection of the fan should be conducted at the first **30 minute**, **8 hour** and **24 hour** intervals of satisfactory operation. During the inspections, stop the fan and inspect as per the *Conditions Chart*.

30 Minute Interval

Inspect bolts, setscrews and motor mounting bolts. Adjust and tighten as necessary.

8 Hour Interval

Inspect belt alignment and tension. Adjust and tighten as necessary.

24 Hour Interval

Inspect belt tension. Adjust and tighten as necessary.

Recommended Torque for Setscrews/Bolts (IN-LB)

Setscrews				Hold Down Bolts	
Size	Key Hex Across Flats	Recommended Torque		Size	Recommended Torque
		Min.	Max.		
#8	5/64”	15	21	3/8”-16	324
#10	3/32”	27	33	1/2”-13	780
1/4	1/8”	70	80	5/8”-11	1440
5/16	5/32”	140	160	3/4”-10	2400
3/8	3/16”	250	290	7/8”-9	1920
7/16	7/32”	355	405	1”-8	2700
1/2	1/4”	560	640	1-1/8”-7	4200
5/8	5/16”	1120	1280	1-1/4”-7	6000
3/4	3/8”	1680	1920	-	-
7/8	1/2”	4200	4800	-	-
1	9/16”	5600	6400	-	-

Maintenance

Establish a schedule for inspecting all parts of the fan. The frequency of inspection depends on the operating conditions and location of the fan.

Inspect fans exhausting corrosive or contaminated air within the first month of operation. Fans exhausting contaminated air (airborne abrasives) should be inspected every three months.

Regular inspections are recommended for fans exhausting non-contaminated air.

It is recommended the following inspections be conducted twice per year:

- Inspect bolts and setscrews for tightness. Tighten as necessary
- Inspect belt wear and alignment. Replace worn belts with new belts and adjust alignment as needed. Refer to *Belt and Pulley Installation*, page 3
- Bearings should be inspected as recommended in the *Lubrication Conditions Chart*
- Inspect variable inlet vanes for freedom of operation and excessive wear. The vane position should agree with the position of the control arm. As the variable inlet vanes close, the entering air should spin in the same direction as the wheel
- Inspect springs and rubber isolators for deterioration and replace as needed
- Inspect for cleanliness. Clean exterior surfaces only. Removing dust and grease on motor housing assures proper motor cooling. Removing dirt from the wheel and housing prevents imbalance and damage

Lubrication

Fan Bearings

TCN bearings are lubricated through a grease fitting on the exterior of the fan housing and should be lubricated by the schedule, *Lubrication Conditions Chart*.

For best results, lubricate the bearing while the fan is in operation. Pump grease in slowly until a slight bead forms around the bearing seals. Excessive grease can burst seals thus reducing bearing life.

In the event the bearing cannot be seen, use no more than three injections with a hand-operated grease gun.

Before lubricating, the grease nipple and immediate vicinity should be thoroughly cleaned without the use of high pressure equipment. The grease should be supplied slowly as the bearing rotates until fresh grease slips past the seal. Excessive pressure should be avoided to prevent seal damage.

Exceptions to the greasing interval chart:

- **Periodic Applications (any break of one week or more):** it is recommended that full lubrication be performed prior to each break in operation
- **Higher Temperature:** it is recommended to halve the intervals for every 30°F increase in operating temperature above 120°F not to exceed 230°F for standard bearings; high temperature bearings (optional) can operate up to 400°F
- **Vertical Shaft:** it is recommended that the intervals should be halved

Loren Cook Company uses petroleum lubricant in a lithium base. Other types of grease should not be used unless the bearings and lines have been flushed clean. If another type of grease is used, it should be a lithium-based grease conforming to NLGI grade 2 consistency. A NLGI grade 2 grease is a light viscosity, low-torque, rust-inhibiting lubricant that is water resistant. Its temperature range is from -30°F to +200°F and capable of intermittent highs of +250°F.

Lubrication Conditions Chart

Fan Class	Fan Status	Shaft Size	Maximum Interval (operation hrs)
TCN Inline Blowers	Normal Conditions (clean, dry & smooth)	> 1-1/2”	10000
		< 1-1/2”	2000
	Extreme Conditions (dirty/wet/rough)	> 1-1/2”	2000
		< 1-1/2”	400

Motor Bearings

Motors are provided with prelubricated bearings. Any lubrication instructions shown on the motor nameplate supersede instructions below.

Motor bearings without provisions for relubrication will operate up to 10 years under normal conditions with no maintenance. In severe applications, high temperatures or excessive contaminates, it is advisable to have the maintenance department disassemble and lubricate the bearings after 3 years of operation to prevent interruption of service.

For motors with provisions for relubrication, follow intervals of the following table.

Relubrication Intervals

Service Conditions	NEMA Frame Size					
	Up to and Including 184T		213T-365T		404T and Larger	
	1800 RPM and Less	Over 1800 RPM	1800 RPM and Less	Over 1800 RPM	1800 RPM and Less	Over 1800 RPM
Standard	3 yrs.	6 months	2 yrs.	6 months	1 yr.	3 months
Severe	1 yr.	3 months	1 yr.	3 months	6 months	1 month

Motors are provided with a polyurea mineral oil NGLI #2 grease. All additions to the motor bearings are to be with a compatible grease such as Exxon Mobil Polyrex EM and Chevron SRI.

The above intervals should be reduced to half for vertical shaft installations.

Motor Services

Should the motor prove defective within a one-year period, contact your local Loren Cook representative or your nearest authorized electric motor service representative.

Changing Shaft Speed

All belt driven fans with motors up to and including 5HP are equipped with variable pitch pulleys. To change the fan speed, perform the following:

1. Loosen setscrew on driver (motor) pulley and remove key, if equipped.
2. Turn the pulley rim to open or close the groove facing. If the pulley has multiple grooves, all must be adjusted to the same width.
3. After adjustment, inspect for proper belt tension.

Speed Reduction

Open the pulley in order that the belt rides deeper in the groove (smaller pitch diameter).

Speed Increase

Close the pulley in order that the belt rides higher in the groove (larger pitch diameter). Ensure that the RPM limits of the fan and the horsepower limits of the motor are maintained.

Pulley and Belt Replacement

1. Loosen and remove belts by lowering motor mounting plate with the four adjusting nuts.
2. Remove pulleys from their respective shafts.
3. Clean the motor and fan shafts.
4. Clean bores of pulleys & coat the bores with heavy oil.
5. Remove grease, rust or burrs from the pulleys and shafts.
6. Remove burrs from shaft by sanding.
7. Place fan pulley on the fan shaft and the motor pulley on the motor shaft. Damage to the pulleys can occur when excessive force is used in placing the pulleys on their respective shafts.
8. Tighten in place.
9. Install belts on pulleys and align as described in *Belt and Pulley Installation*.

Maximum RPM

Size	Non-Reinforced	Reinforced	TCNH-B
60	3899	-	4231
70	3942	-	4231
80	3600	-	4231

Bearing Replacement

The fan bearings are pillow block ball bearings.

1. Loosen and remove belts by lowering motor mounting plate with the four adjusting nuts.
2. Remove the bearing cover by removing the four bolts around the perimeter of the bearing cover. ***NOTICE! Do not remove fan sheave yet.***
3. Remove inlet cone by removing attaching bolts/nuts around perimeter of the inlet plate.
4. Remove wheel by loosening setscrews and sliding off shaft.
5. Record the location of the fan sheave from end of shaft, and remove the sheave.
6. Record the distance from the bearing to the end of the shaft.
7. Loosen setscrews on bearings and remove shaft.
8. Remove bearings and rub ring and replace with new bearings.
9. Slide shaft through bearings until shaft protrudes the same amount as original shaft. Tighten setscrews.
10. Replace rub ring.
11. Replace fan sheave in original location.
12. Replace wheel but do not tighten yet.
13. Replace inlet cone. Wheel may need to be moved to allow proper alignment. Care should be taken to insure that inlet cone is centered inside wheel before and after tightening attaching bolts.
14. Slide wheel on shaft to achieve proper wheel/inlet overlap. *Refer to Wheel-to-Inlet Clearance*, page 3.
15. Replace and tighten belts.
16. Test run the fan.
17. Re-tighten setscrews on bearings, sheave and wheel. Recheck belt tension and adjust as needed.
18. Replace bearing cover.
19. Trim balance as necessary (0.0785 in/sec max.).

Wheel Replacement for TCN & TCNH

TCN

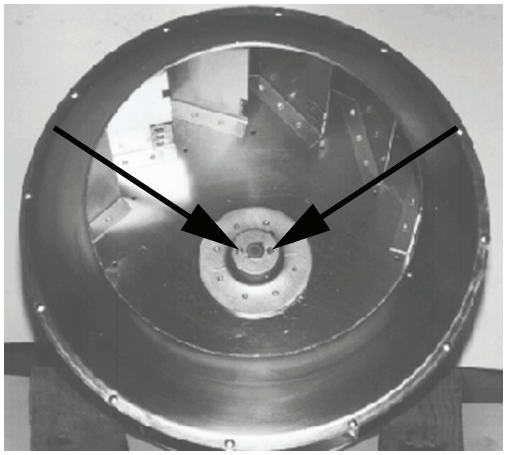
1. Remove inlet cone by removing bolts around perimeter of the inlet plate.
2. Remove wheel by loosening setscrews and sliding off shaft if wheel will slide easily; if not, follow these steps to pull wheel:
   a. Drill two 1/4” diameter holes, 180° apart centered between the shaft and the outside diameter of the hub, 3/8” to 1/2” deep.
   b. Tap 1/4” holes with a 5/16” tap. Do not drill or tap greater than recommended.
   c. Screw puller arms (recommend Lisle No. 45000 Steering Wheel Puller) to full depth of threads into tapped holes. Align center of puller with center of shaft. (See next page for details)
   d. Ensure all setscrews in the hub (normally two) are fully removed.
   e. Slowly remove wheel from shaft.
3. Remove any burrs by filing or sanding shaft surface.
4. Replace wheel but do not tighten set screws.
5. Replace inlet cone. Care should be taken to insure inlet cone is centered inside wheel before and after tightening inlet attachment bolts.
6. Adjust wheel on shaft for proper alignment with inlet (see *Wheel-to-Inlet Clearance*, page 3).
7. Once wheel and inlet are properly aligned, tighten wheel setscrews.
8. Test run fan.
9. Re-tighten wheel setscrews to proper torque values listed on page 5.
10. Trim balance as necessary (0.0785 in/sec max.).

TCNH

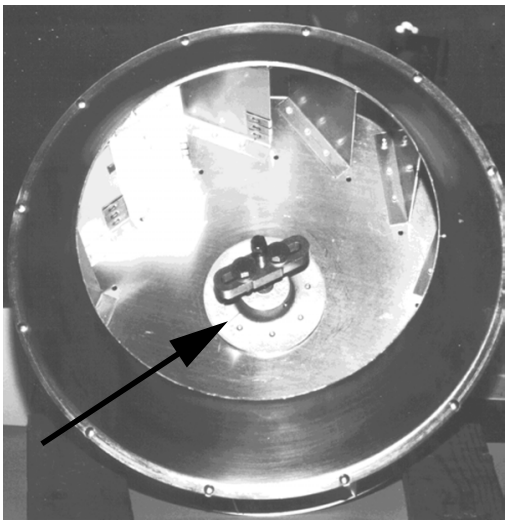
1. Remove inlet cone by removing bolts around perimeter of the inlet plate.
2. Remove wheel by loosening setscrews and sliding off shaft if wheel will slide easily; if not, follow these steps to pull wheel:
   a. The TCNH wheel has a pre-machined shoulder in the hub for the use of most two and three jaw mechanical pullers.
   b. Align center of puller with center of shaft.
   c. Ensure all setscrews in the hub (normally two) are fully removed.
   d. Slowly remove wheel from shaft.
3. Remove any burrs by filing or sanding shaft surface.
4. Replace wheel but do not tighten set screws.
5. Replace inlet cone. Care should be taken to insure inlet cone is centered inside wheel before and after tightening inlet attachment bolts.
6. Adjust wheel on shaft for proper alignment with inlet (see *Wheel-to-Inlet Clearance*, page 3).
7. Once wheel and inlet are properly aligned, tighten wheel setscrews.
8. Test run fan.
9. Re-tighten wheel setscrews to proper torque values listed on page 5.
10. Trim balance as necessary (0.0785 in/sec max.).

Recommended Puller

Lisle No. 45000 Steering Wheel Puller. This puller is available at most automotive parts retail outlets.



Drilled Hole Location



Wheel Puller

Troubleshooting

Problem and Potential Cause
Low Capacity or Pressure: • Incorrect direction of rotation. Make sure the fan rotates in same direction as the arrows on the motor or belt drive assembly • Poor fan inlet conditions. There should be a straight clear duct at the inlet • Improper wheel alignment
Excessive Vibration and Noise: • Damaged or unbalanced wheel • Belts or fasteners too loose; belts worn or oily; belts misaligned • Speed too high • Incorrect direction of rotation. Make sure the fan rotates in same direction as the arrows on the motor or belt drive assembly • Bearings need lubrication or replacement • Bearing setscrews loose • Fan surge • Debris in impeller • See page 4 for issues regarding VFD use
Overheated Motor: • Motor improperly wired • Incorrect direction of rotation. Make sure the fan rotates in same direction as the arrows on the motor or belt drive assembly • Cooling air diverted or blocked • Improper inlet clearance • Incorrect fan RPMs • Incorrect voltage
Overheated Motor: • Improper bearing lubrication • Excessive belt tension

Limited Warranty

Loren Cook Company warrants that your Loren Cook fan was manufactured free of defects in materials and workmanship, to the extent stated herein. For a period of one (1) year after date of shipment, we will replace any parts found to be defective without charge, except for shipping costs which will be paid by you. This warranty is granted only to the original purchaser placing the fan in service. This warranty is void if the fan or any part thereof has been altered or modified from its original design or has been abused, misused, damaged or is in worn condition or if the fan has been used other than for the uses described in the company manual. This warranty does not cover defects resulting from normal wear and tear. To make a warranty claim, notify Loren Cook Company, General Offices, 2015 East Dale Street, Springfield, Missouri 65803-4637, explaining in writing, in detail, your complaint and referring to the specific model and serial numbers of your fan. Upon receipt by Loren Cook Company of your written complaint, you will be notified, within thirty (30) days of our receipt of your complaint, in writing, as to the manner in which your claim will be handled. If you are entitled to warranty relief, a warranty adjustment will be completed within sixty (60) business days of the receipt of your written complaint by Loren Cook Company. This warranty gives only the original purchaser placing the fan in service specifically the right. You may have other legal rights which vary from state to state. For fans provided with motors, the motor manufacturer warrants motors for a designated period stated in the manufacturer's warranty. Warranty periods vary from manufacturer to manufacturer. Should motors furnished by Loren Cook Company prove defective during the designated period, they should be returned to the nearest authorized motor service station. Loren Cook Company will not be responsible for any removal or installation costs.

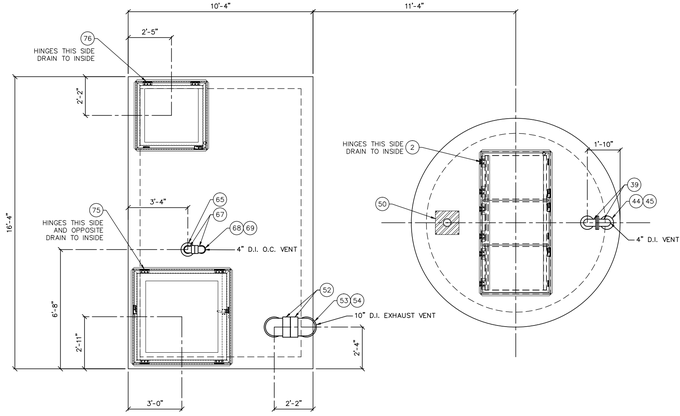
ROOF SLABS REMOVED FOR CLARITY



VALVE VAULT **WETWELL**

TOP VIEW @ GRADE

GENERAL NOTES:

1. SEE STRUCTURAL CALCULATIONS FOR PRODUCTION SPECIFICATIONS.

2. STRUCTURE SHALL BE WET CAST USING A SELF COMPACTING CONCRETE MIX.

3. REINFORCING STEEL WELDED WIRE FABRIC SHALL CONFORM TO THE LATEST ASTM SPECIFICATION A185.

4. REINFORCING STEEL DEFORMED BARS SHALL CONFORM TO THE LATEST ASTM SPECIFICATION A706, GRADE 60.

5. ALL CONCRETE JOINTS SHALL BE SEALED WITH 1" BUTYL RUBBER.

6. EXTERIOR OF WETWELL AND VALVE VAULT SHALL BE COATED WITH BAY OIL, "AQUA-SAFE".

7. INTERIOR OF STRUCTURE SHALL BE COATED WITH CPP SPRAY LINER.

8. INTERIOR OF VALVE VAULT SHALL BE NATURAL CONCRETE FINISH.

9. MANHOLE STEPS ARE NOT REQUIRED IN WETWELL.

10. ALL HARDWARE SHALL BE 316 SERIES STAINLESS STEEL .

11. CONTRACTOR SHALL VERIFY ALL PENETRATION SIZES AND LOCATIONS.

SUBJECT:	Pump Station 01 - GEN.01-1	SPECIFICATION:	11398

(1)-No Exception Taken (2)-Make Corrections Noted (3)-Amend and Resubmit (4)-Rejected-See Remarks (5)-For Information Only (6)-Not Required for Review

Engineer's review is for general conformance with the design concept and Contract Documents. Markings or comments shall not be construed as relieving the Contractor from compliance with the Project Drawings and Specifications nor departure there from. The Contractor remains responsible for details and accuracy, for confirming and correlating all quantities and dimensions, for selecting fabrication processes, for techniques of assembly, and for performing his work in a safe manner.

ITEM NUMBER	REFERENCE	CODE	COMMENT
1.	11398 1.04.B.1	1	~~Submit a copy of specification section 11398 with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.~~ Response: Confirmed, attached is a copy of spec section 11398 with addendums indicating specification requirements. AECOM Response: No exceptions taken.
2.	11398 1.04.B.10	1	~~Submit engine generator loading calculation per the requirements of 11398, Attachment A. It is noted that generator load calculation is missing from the submittal. Loads shall be grouped per steps in Attachment A.~~ Response: Confirmed, generator load calculation included in the revised submittal. AECOM Response: No exceptions taken.
3.	11398 2.07.F.4(a)	1	~~Provide 65 kA rated circuit breaker in accordance with Specification requirements. It is noted that the submittal references a 480VAC, 35 kA rated circuit breaker in multiple locations, see attached.~~ Response: Confirmed, a 65kA rated breaker is being provided, this is being accomplished thru an engineering special request. The breaker Square D, PowerPact J frame, model # is JJP36250CU33X. AECOM Response: No exceptions taken.
4.	11398 2.06.C.3 & 2.07, F.1(b) 01 E-002	1	~~Please clarify requirement for "100 Amp main 3-phase panelboard" at generator enclosure. It should be noted that this is a non-walk-in type enclosure. Circuits for generator heaters and support systems shall be provided as 208/120VAC rated from panelboard MPC.01-1 in accordance with Specification Section 11398, Paragraph 2.06.C.3 and Paragraph 2.07, F.1(b) and per Contract electrical drawings.~~ ~~- 208VAC, 20A – Generator jacket water heater (1.5 kW)~~ ~~- 120VAC, 20A – Generator space heater~~ ~~- 120VAC, 20A – Generator battery charger~~ ~~- 120VAC, 20A – Generator alternator heater~~

ITEM NUMBER	REFERENCE	CODE	COMMENT
			~~A single 208VAC, 3-phase power feed could be provided. However, 100A feed requirement for 125 kVA generator ancillary power appears excessive for a non-walk-in enclosure. Please advise if values on Fidelity drawing "sheet 4 of 7" are realistic or could be reduced.~~ Response: A non-walk-in customer enclosure is being provided to meet the specified sound requirements (65 dBA@ 23') per spec section 11398 2.04. The enclosure manufacture assumed a load center/panelboard was required as part of the enclosure package . The load panel/panelboard will be removed from the enclosure package, the generator accessories will be electrically fed from panelboard MPC.01-1 per the specification and drawing. AECOM Response: No exceptions taken.
5.	11398 2.07.A.1	1	~~Confirm fuel storage tank is a double-walled and UL listed and labeled for primary containment aboveground tank for flammable and combustible liquids.~~ Response: Confirmed, a double-wall UL 142 rated sub-base fuel tank is being provided per spec section 11398 207 A 1-6. AECOM Response: No exceptions taken.
6.	Transfer Switch	1	~~Transfer switch to be submitted under submittal # 16900. Provide ASCO 7000 series or equal.~~ Response: Confirmed, Transfer Switch Submittal date included in the revised submittal. AECOM Response: No exceptions taken.

Chapman Construction Group, Inc
17 Jan Sebastian Drive, Unit 4&5
Sandwich, MA 02563

Reference: Orleans Area Collection Pump Station #1 Submittal Questions.

Dear Ms. Chapman

Listed below are my answers to the comments made by the engineer.

Question 1- Submit a copy of specification section 11398 with addenda and all referenced specification sections with addenda, with each paragraph check- marked to indicate specification compliance.

Answer 1- Confirmed, attached is a copy of spec section 11398 with addendums indicating specification requirements.

Question 2- Submit engine generator loading calculation per the requirements of 11398, Attachment A. It is noted that generator load calculation is missing from the submittal. Loads shall be grouped per steps in Attachment A

Answer 2- Confirmed, generator load calculation included in the revised submittal.

Question 3- Submit cutsheets/model number for generator engine starting batteries. It is noted that information is submitted only for the battery charger.

Answer 3- Confirmed, spec sheet for generator starting batteries included in the revised submittal.

Question 4- Confirm starting batteries are industrial grade, high-output, long-life, lead acid type designed for diesel engine cranking service in accordance with 11398.

Answer 4- Confirmed, batteries are industrial grade, high output, long life and are the optimal batteries recommend by the generator manufacture (Kohler Power).

Question 5- Provide a 65 kA rated generator main circuit breaker in accordance with Specification requirements. It is noted that the submittal references a “JG” type, 480VAC, 35 kA rated circuit breaker in multiple locations throughout the submittal, see attached

Answer 5- Confirmed, a 65kA rated breaker is being provided, this is being accomplished thru an engineering special request. The breaker Square D, PowerPact J frame, model # is JJP36250CU33X

Question 6- Provide generator main circuit breaker with an adjustable trip, rating plug, long-time, short-time and instantaneous protective relaying and ground fault (LSIG) protection in accordance with Section 11398. It is noted that the submitted circuit breaker trip unit only has adjustable long-time and
instantaneous functions

Answer 6- Confirmed, the breaker has long time, short time, and instantaneous trip (LSI).

Question 7- Provide full model number/catalog number and catalog cutsheet for generator main circuit breaker. Submitted tables for the circuit breaker don't appear to be Square D/Schneider Electric catalog cutsheets and the model number provided as "JG" is incomplete

Answer 7- The catalog for the upsized breaker is Square D, PowerPact, J-Frame, model number JJP36250CU33X with TX termination accessories.

Question 8- Please clarify requirement for "100 Amp main 3-phase panelboard" at generator enclosure. It should be noted that this is a non-walk-in type enclosure. Circuits for generator heaters and support systems shall be provided as 208/120VAC rated from panelboard MPC.01-1 in accordance with Specification Section 11398, Paragraph 2.06.C.3 and Paragraph 2.07, F.1(b) and per Contract electrical drawings.

208VAC, 20A - Generator jacket water heater (1.5 kW)
120VAC, 20A – Generator space heater
120VAC, 20A – Generator battery charger
120VAC, 20A – Generator alternator heater

The 208VAC, 100A rated feed requirement for a 125 kVA generator set ancillary power appears high for this size unit with a non-walk-in enclosure. Please advise if values on Fidelity drawing "sheet 4 of 7" are realistic or could be reduced.

Answer 8 A non-walk-in customer enclosure is being provided to meet the specified sound requirements (65 dBA@ 23') per spec section 11398 2.04. The enclosure manufacture assumed a load center/panelboard was required as part of the enclosure package . The load panel/panelboard will be removed from the enclosure package, the generator accessories will be electrically fed from panelboard MPC.01-1 per the specification and drawing.

Question 9- Confirm fuel storage tank is double-walled and UL listed and labeled as: Primary containment aboveground tank for flammable and combustible liquids.

Answer 9- Confirmed, a double-wall UL 142 rated sub-base fuel tank is being provided per spec section 11398 207 A 1-6.

Question 10- Submit transfer switch for review under submittal # 16900. Provide ASCO 7000 series or equal. Provide service entrance rated transfer switch in accordance with Specification Section 16900

Answer 10- Confirmed, Transfer Switch Submittal date included in the revised submittal.

If you have any further questions, please do not hesitate to call me.

Sincerely,

David Duchesneau

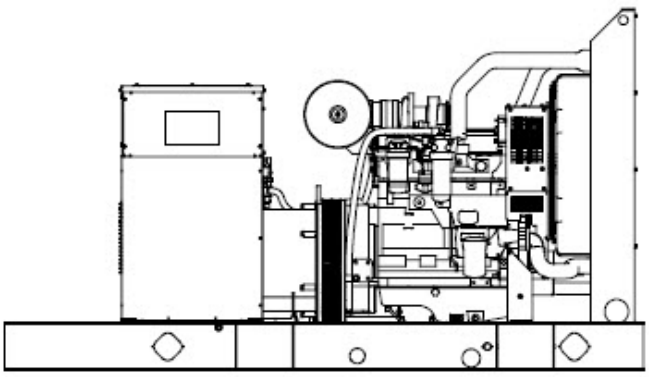
KOHLER®

Spec Sheets

KOHLER®

125REOZJG
Diesel



Standard Features

- Kohler Co. provides one-source responsibility for the generating system and accessories.
- The generator set and its components are prototype-tested, factory-built, and production-tested.
- The 60 Hz generator set offers a UL 2200 listing.
- The generator set accepts rated load in one step.
- The 60 Hz generator set meets NFPA 110, Level 1, when equipped with the necessary accessories and installed per NFPA standards.
- A one-year limited warranty covers all systems and components. Two-, five-, and ten-year extended warranties are also available.
- Tier 3 EPA-certified for Stationary Emergency Applications
- Alternator Protection
- Battery Rack and Cables
- Customer Connection (standard with Decision-Maker® 6000 controller only)
- Local Emergency Stop Switch
- Oil Drain Extension

Alternator Features

- Operation and Installation Literature
- The unique Fast-Response X excitation system delivers excellent voltage response and short circuit capability using a rare-earth, permanent magnet (PM)-excited alternator.

Other Features

- Kohler designed controllers for one-source system integration and remote communication.
- The low coolant level shutdown prevents overheating (standard on radiator models only).
- Integral vibration isolation eliminates the need for under-unit vibration spring isolators.
- Mount up to three circuit breakers to allow circuit protection of selected priority loads.

Generator Set Ratings

				Standby130C Ratings		
Alternator	Voltage	Ph	Hz	Peak kVA	kW/kVA	Amps
4R13X	277/480	3	60	540	128 / 160	192

RATINGS: All three-phase units are rated at 0.8 power factor. All single-phase units are rated at 1.0 power factor.
Standby Ratings: The standby rating is applicable to varying loads for the duration of a power outage. There is no overload capability for this rating.
Prime Power Ratings: At varying load, the number of generator set operating hours is unlimited.
A 10%overload capacity is available for one hour in twelve. Ratings are in accordance with ISO-8528-1 and ISO-3046-1. For limited running time and continuous ratings, consult the factory.
Obtain technical information bulletin (TIB-101) for ratings guidelines, complete ratings definitions, and site condition derates.
The generator set manufacturer reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever.

Model: 125REOZJG, continued

Alternator Specifications

Specifications	Alternator
Alternator manufacturer	Kohler
Type	4-Pole, Rotating-Field
Exciter type	Brushless, Rare-Earth Permanent-Magnet
Leads, quantity	4RX: 12, Reconnectable 4TX: 4, 120-240
Voltage regulator	Solid State, Volts/Hz
Insulation	NEMA MG1
Insulation: Material	Class H
Insulation: Temperature Rise	130°C, Standby
Bearing: quantity, type	1, Sealed
Coupling	Flexible disc
Amortisseur windings	Full
Voltage regulation, no-load to full-load RMS	Controller Dependent
One-Step Load Acceptance	100% of rating
Unbalanced load capability	100% of Rated Standby Current

- NEMA MG1, IEEE, and ANSI standards compliance for temperature rise and motor starting.
- Sustained short-circuit current of up to 300% of the rated current for up to 10 seconds.
- Sustained short-circuit current enabling down stream circuit breakers to trip without collapsing the alternator field.
- Self-ventilated and dripproof construction.
- Vacuum-impregnated windings with fungus-resistant epoxy varnish for dependability and long life.
- Superior voltage waveform from a two-thirds pitch stator and skewed rotor.

Engine

Engine Specification

Engine Manufacturer	John Deere
Engine Model	4045HF285K
Engine: type	4-Cycle, Turbocharged, Charge Air-Cooled
Cylinder arrangement	4 Inline
Displacement, L (cu. in.)	4.5 (276)
Bore and stroke, mm (in.)	106 x 127 (4.19 x 5.00)
Compression ratio	19:01
Piston speed, m/min. (ft./min.)	457 (1500)
Main bearings: quantity, type	5, Replaceable Insert
Rated rpm	1800
Max. power at rated rpm, kWm (BHP)	147 (197)
Cylinder head material	Cast Iron
Crankshaft material	Forged Steel
Valve (exhaust) material Intake	Chromium-Silicon Steel
Valve (exhaust) material Exhaust	Stainless Steel
Governor: type, make/model	JDEC Electronic L16 Denso HP3
Frequency regulation, no-load to-full load	Isochronous
Frequency regulation, steady state	±0.25%
Frequency	Fixed
Air cleaner type, all models	Dry

Model: 125REOZJG, continued

Exhaust

Exhaust System

Exhaust Manifold Type	Dry
Exhaust flow at rated kW, m3/min. (cfm)	27.0 (953)
Exhaust temperature at rated kW, dry exhaust, °C (°F)	580 (1076)
Maximum allowable back pressure, kPa (in. Hg)	7.5 (2.2)
Exh. outlet size at eng. hookup, mm (in.)	98 (3.86)

Engine Electrical

Engine Electrical System

Battery charging alternator	12 Volt
Battery charging alternator: Ground (negative/positive)	Negative
Battery charging alternator: Volts (DC)	12
Battery charging alternator: Ampere rating	65
Starter motor rated voltage (DC)	12
Battery, recommended cold cranking amps (CCA): Qty., CCA rating each	One, 800
Battery voltage (DC)	12

Fuel

Fuel System

Fuel type	Diesel
Fuel supply line, min. ID, mm (in.)	11.0 (0.44)
Fuel return line, min. ID, mm (in.)	6.0 (0.25)
Max. lift, fuel pump: type, m (ft.)	Mechanical, 1.8 (6.0)
Max. fuel flow, Lph (gph)	90.0 (23.8)
Max. return line restriction, kPa (in. Hg)	20 (5.9)
Fuel prime pump	Manual
Fuel Filter Secondary	2 Microns@ 98% Efficiency
Fuel Filter Primary	30 Microns
Fuel Filter Water Separator	Yes
Recommended fuel	Low Sulfur #2 Diesel

Lubrication

Lubrication System

Type	Full Pressure
Oil pan capacity, L (qt.)	27.0 (28.5)
Oil pan capacity with filter, L (qt.)	27.9 (29.5)
Oil filter: quantity, type	1, Cartridge
Oil cooler	Water-Cooled

Model: 125REOZJG, continued

Cooling

Radiator System

Ambient temperature, °C (°F)	50 (122)
Engine jacket water capacity, L (gal.)	8.5 (2.25)
Radiator system capacity, including engine, L (gal.)	19.2 (5.1)
Engine jacket water flow, Lpm (gpm)	180 (48)
Heat rejected to cooling water at rated kW, dry exhaust, kW (Btu/min.)	72 (4098)
Heat rejected to air charge cooler at rated kW, dry exhaust, kW (Btu/min.)	26.5 (1508)
Water pump type	Centrifugal
Fan diameter, including blades, mm (in.)	660 (26)
Fan, kWm (HP)	7.7 (10.3)
Max. restriction of cooling air, intake and discharge side of radiator, kPA (in. H20)	.125 (0.5)

* Enclosure with internal silencer reduces ambient temperature capability by 5°C (9°F).

Operation Requirements

Air Requirements

Radiator-cooled cooling air, m3/min. (scfm) *	226.5 (8000)
Combustion air, m3/min. (cfm)	9.65 (341)
Heat rejected to ambient air: Engine, kW (Btu/min.)	30.4 (1730)
Heat rejected to ambient air: Alternator, kW (Btu/min.)	13.5 (770)

*Air density = 1.20 kg/m3 (0.075 lbm/ft3)

Fuel Consumption

Diesel, Lph (gph), at % load	Rating
Standby Fuel Consumption at 100% load	37.4 Lph (9.9 gph)
Standby Fuel Consumption at 75% load	29.0 Lph (7.6 gph)
Standby Fuel Consumption at 50% load	21.1 Lph (5.6 gph)
Standby Fuel Consumption at 25% load	11.4 Lph (3.0 gph)
Prime Fuel Consumption at 100% load	34.8 Lph (9.2 gph)
Prime Fuel Consumption at 75% load	26.9 Lph (7.1 gph)
Prime Fuel Consumption at 50% load	19.5 Lph (5.1 gph)
Prime Fuel Consumption at 25% load	10.6 Lph (2.8 gph)

Dimensions and Weights

Dim Weight Spec	Dim Weight Value
Fuel	Diesel
Engine Manufacturer	Diesel
Overall Size, L x W x H, mm (in.):	2700 x 1120 x 1527 (106.3 x 44.1 x 60.1)
Weight (radiator model), wet, kg (lb.):	1270 (2800)

APM402

Kohler® APM402 Controller

General Description and Function

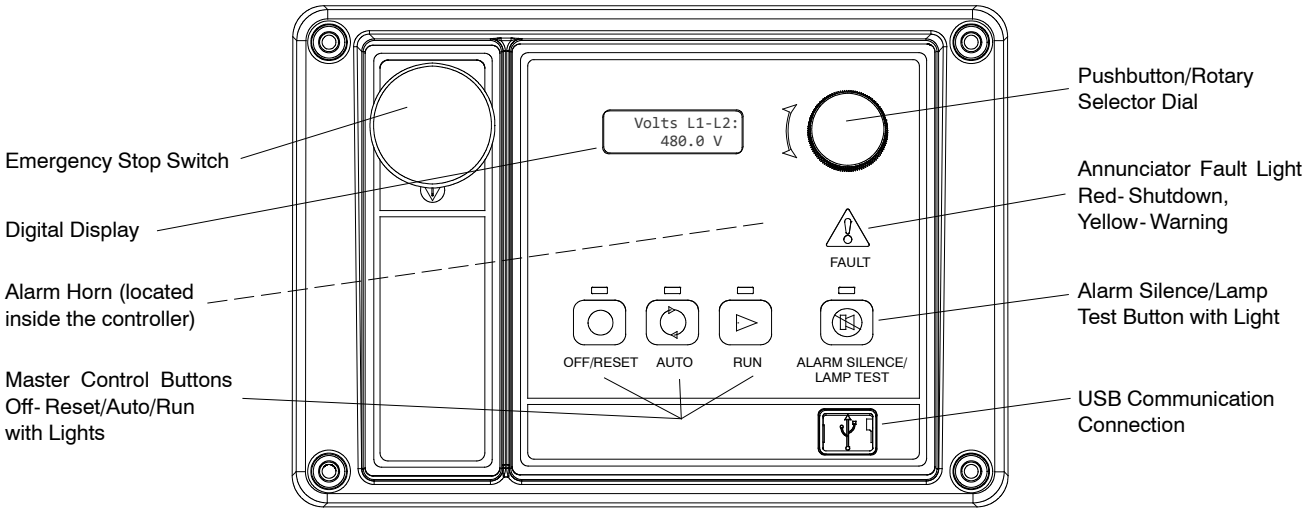
The APM402 generator set controller provides advanced control, system monitoring, and system diagnostics for optimum performance.

The APM402 controller meets NFPA 110, Level 1 when equipped with the necessary accessories and installed per NFPA standards.

The APM402 controller uses a patented hybrid voltage regulator and unique software logic to manage alternator thermal overload protection features normally requiring additional hardware. Additional features include:

- A digital display and pushbutton/rotary selector dial provide easy local access to data.
- Measurements selectable in metric or English units.
- The controller can communicate directly with a personal computer via a network or serial configuration using SiteTech™ or Monitor III software.
- The controller supports Modbus® protocol. Use with serial bus or Ethernet networks. (Ethernet requires an external Modbus®/Ethernet converter module.)
- Scrolling display shows critical data at a glance.
- Digital display of power metering (kW and kVA).
- Integrated hybrid voltage regulator providing ±0.5% regulation.
- Built-in alternator thermal overload protection.

Modbus® is a registered trademark of Schneider Electric.



User Interface Controls and Components

- Emergency stop switch
- Backlit LCD digital display with two lines of 12 characters *(see User Interface Displays for menus)*
- Alarm horn indicates generator set shutdown and warning faults
- Environmentally sealed membrane keypad with three master control buttons with lights
  - Off/Reset (red)
  - Auto (green)
  - Run (yellow)
- Pushbutton/rotary selector dial for menu navigation
  - Rotate dial to access main menus
  - Push dial and rotate to access sub menus
  - Press dial for 3 seconds to return to top of main menu
- Annunciator fault light
  - System shutdown (red)
  - System warning (yellow)
- Alarm silence/lamp test button
  - Alarm silence
  - Lamp test
- USB and RS-485 connections
  - Allows software upgrades
  - Provides access for diagnostics
  - PC communication using SiteTech™ or Monitor III software
- Dedicated user inputs
  - Remote emergency stop switch
  - Remote 2-wire start for transfer switch
  - Auxiliary shutdown
- Integrated hybrid voltage regulator
- Auto-resettable circuit protection mounted on circuit board.
- One relay output standard. Optional five relay output available.
- One analog and three digital inputs standard. Optional two inputs available.

NFPA 110 Requirements

In order to meet NFPA 110, Level 1 requirements, the generator set controller monitors the engine/generator functions/faults shown below.

- Engine functions:
  - Overcrank
  - Low coolant temperature warning
  - High coolant temperature warning
  - High coolant temperature shutdown
  - Low oil pressure shutdown
  - Low oil pressure warning
  - High engine speed
  - Low fuel (level or pressure) *
  - Low coolant level
  - EPS supplying load
  - High battery voltage
  - Low battery voltage
- General functions:
  - Master switch not in auto
  - Battery charger fault *
  - Lamp test
  - Contacts for local and remote common alarm
  - Audible alarm silence button
  - Remote emergency stop *

* Function requires optional input sensors or kits and is engine dependent, see Controller Displays as Provided by the Engine ECM.

User Interface Displays

The listing below has ● denoting main menus and ○ denoting sub-menus.

- Overview
  - Software version
  - Active shutdowns and warnings (if any are present)
  - Engine run time, total hours
  - Average voltage line-to-line
  - Frequency
  - Average current
  - Coolant temperature
  - Fuel level or pressure *
  - Oil pressure
  - Battery voltage
- Engine Metering
  - Engine speed
  - Oil pressure
  - Coolant temperature
  - Battery voltage
- Generator Metering
  - Total power, VA
  - Total power, W
  - Rated power, %
  - Voltage, L- L and L- N for all phases
  - Current, L1, L2, L3
  - Frequency
- GenSet Information
  - Generator set model number
  - Generator set serial number
  - Controller serial number
- GenSet Run Time
  - Engine run time, total hours
  - Engine loaded, hours
  - Number of engine starts
  - Total energy, kWh
- GenSet System
  - System voltage
  - System frequency, 50 or 60 Hz
  - System phase, single or three (wye or delta)
  - Power rating, kW
  - Amp rating
  - Power type, standby or prime
  - Measurement units, metric or English (user selectable)
  - Alarm silence, always or auto only (NFPA 110)
  - Manual speed adjust *
- GenSet Calibration
  - Voltage, L- L and L- N for all phases
  - Current, L1, L2, L3
  - Reset calibration
- Voltage Regulation
  - Adjust voltage, ±10%
- Digital Inputs
  - Input settings and status
- Digital Outputs
  - Output settings and status
- Analog Inputs
  - Input settings and status
- Event Log
  - Event history (stores up to 1000 system events)
- Selector Switch (requires initial activation by SiteTech™)

Controller Features

- **AC Output Voltage Regulator Adjustment**. The voltage adjustment provides a maximum of ±10% of the system voltage.
- **Alarm Silence.** The controller can be set up to silence the alarm horn only when in the AUTO mode for NFPA-110 application or Always for user convenience.
- **Alternator Protection**. The controller provides generator set overload and short circuit protection matched to each alternator for the particular voltage/phase configuration.
- **Automatic Restart**. The controller automatic restart feature initiates the start routine and recrank after a failed start attempt.
- **Common Failure Relay.** This relay is integrated on the controller circuit board. Contacts are rated 2 amps at 32 VDC or 0.5 amp at 120 VAC.
- **Communication.** Controller communication is available.
- **Cyclic Cranking.** The controller has programmable cyclic cranking.
- **ECM Diagnostics.** The controller displays engine ECM fault code descriptions to help in engine troubleshooting.
- **Engine Start Aid**. The starting aid feature provides control for an optional engine starting aid.
- **Event Logging**. The controller keeps a record (up to 1000 entries) for warning and shutdown faults. This fault information becomes a stored record of system events and can be reset.
- **Historical Data Logging**. Total number of generator set successful starts is recorded and displayed.
- **Integrated Hybrid Voltage Regulator**. The voltage regulator provides ±0.5% no-load to full-load regulation with three-phase sensing.
- **Lamp Test**. Press the alarm silence/lamp test button to verify functionality of the indicator lights.
- **LCD Display.** Adjustable contrast for improving visibility.
- **Measurement Units.** The controller provides selection of English or metric displays.
- **Power Metering**. Controller digital display provides kW and kVA.
- **Programming Access (USB)**. Provides software upgrades and diagnostics.
- **Remote Reset**. The remote reset function resets faults and allows restarting of the generator set without going to the master control switch off/reset position.
- **Remote Monitoring Panel.** The controller is compatible with the Kohler® Remote Serial Annunciator.
- **Run Time Hourmeter**. The generator set run time is displayed.
- **Time Delay Engine Cooldown (TDEC)**. The TDEC provides a time delay before the generator set shuts down.
- **Time Delay Engine Start (TDES)**. The TDES provides a time delay before the generator set starts.
- **Voltage Selection Menu.** This menu provides the capability of quickly switching controller voltage calibrations. Requires initial activation using SiteTech™ software. **NOTE:** Generator set output leads require voltage reconnection.

Controller Functions

The following chart shows which functions cause a warning or shutdown. All functions are available as relay outputs.

Warning causes the fault light to show yellow and sounds the alarm horn signaling an impending problem.

Shutdown causes the fault light to show red, sounds the alarm horn, and stops the generator set.

* Electronic governor and ECM are optional on KDI M and TM engines.

† Controller uses local analog input to obtain this information.

NOTE: REOZMD/ROZMC (Mitsubishi engines) have an ECM but do not send signals to the generator set controller.

NOTE: See the generator set specification sheet for engine model identification.

Controller Specifications

- Power source with circuit protection: 12- or 24-volt DC
- Power drain: 200 milliamps at 12 VDC or 100 milliamps at 24 VDC
- Humidity range: 5% to 95% noncondensing
- Operating temperature range: -40°C to +70°C (-40°F to +158°F)
- Storage temperature range: -40°C to +85°C (-40°F to +185°F)
- Standards:
  - CE Directive
  - NFPA 99
  - NFPA 110, Level 1
  - CSA 282-09
  - UL 508
  - ASTM B117 (salt spray test)
- Panel dimensions—W x H, 229 x 160 mm (9.0 x 6.3 in.)

Communication and PC Software Available Options

Refer to G6-76 Monitor III Software and the communication literature for additional communication and PC software information including Modbus® communication.

❑ **Monitor III Software for Monitoring and Control (Windows®-based user interface)**

❑ **Converter, Modbus®/Ethernet.** Supports a power system using controllers accessed via the Ethernet. Converter is supplied with an IP address by the site administrator. Refer to G6-79 for converter details.

❑ **Converter, RS-232/RS-485.** Supports a power system using controllers accessed via a serial (RS-232) connection.

Availability is subject to change without notice. Kohler Co. reserves the right to change the design or specifications without notice and without any obligation or liability whatsoever. Contact your local Kohler® generator set distributor for availability.

APM402 Available Options

❑ **Float/Equalize Battery Charger** available with 6 or 10 amp output for 12 or 24V DC voltage output. The 10 amp model provides NFPA 110 charging and alarming capability.

❑ **Manual Speed Adjust** available for applications using closed transition ATS. Adjustment range for 60 Hz: 1751-1849 rpm (58.2-61.8 Hz) and for 50 Hz: 1451-1549 rpm (48.2-51.8 Hz).

❑ **Prime Power Switch** prevents battery drain during generator set non-operation periods and when the generator set battery cannot be maintained by an AC battery charger.

❑ **Remote Emergency Stop Switch** available as a wall mounted panel to remotely shut down the generator set.

❑ **Remote Monitoring Panel.** The Kohler® Remote Serial Annunciator (RSA) enables the operator to monitor the status of the generator set from a remote location, which may be required for NFPA 99 and NFPA 110 installations, and up to four Automatic transfer switches.

❑ **Run Relay** provides a relay indicating that the generator set is running.

❑ **Shunt Trip Wiring** provides relay outputs to trip a shunt trip circuit breaker and to signal the common fault shutdowns. Contacts rated at 10 amps at 28 VDC or 120 VAC.

❑ **Two Input/Five Output Module** provides a generator set mounted panel with two inputs and five relay outputs.

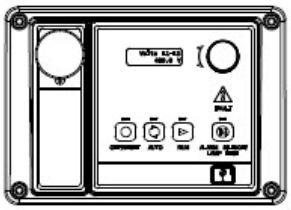
Integral Voltage Regulator with Kohler® APM402/ Decision-Maker® 3000 and Menu-Driven Selections (15-1000 kW Generator Set Models)



APM402 and Decision-Maker® 3000 Controller with Integral Voltage Regulator

The voltage regulator is integral to the controller and uses patented hybrid voltae regulator design providing ±0.5% no-load to full-load regulation using root-mean-square (RMS) voltage sensing. The voltage regulator features three-phase sensing and is available for 12- or 24-volt engine electrical systems.

Voltage Regulators

The following information provides general features, specifications, and functions of available voltage regulators.

This information generally applies to a single generator set and multiple generator sets with paralleling applications. Refer to the respective generator set specification sheet and see your authorized distributor for information regarding specific voltage regulator applications and availability.

Integral Voltage Regulators with APM402/Decision-Maker® 3000 Controllers

Calibration	Digital Display	Range Settings	Default Selection
Voltage Adjustment	Volt Adj	±10% of System Voltage	System Voltage
Underfrequency Unload or Frequency Setpoint	Frequency Setpoint	42 to 62 Hz	2.5 Hz Below Nominal Frequency
Underfrequency Unload Scope	Slope	0-10% of System Voltage (Volts per Cycle)	5% of System Voltage

KOHLER®

Specification/Feature	Integral with APM402/Decision-Maker® 3000
Generator Set Availability	15-1000 kW
Type	Patented Hybrid Design
Status and Shutdown Indicators	LEDs and Text LCD Display
Operating Temperature	-40°C to 70°C (-40°F to 158°F)
Storage Temperature	-40°C to 85°C (-40°F to 185°F)
Humidity	5-95% Non-Condensing
Circuit Protection	Solid-State, Redundant Software and Fuses
Sensing, Nominal	100-240 Volts (L-L), 50-60 Hz
Sensing Mode	RMS, Single- or 3-Phase
Input Requirements	8-36 VDC
Continuous Output	5 VDC @ 100mA max. 5.0 ADC with GM88453 Activator Board
Maximum Output	5 VDC @ 100mA max. 7.8 ADC with GM88453 Activator Board
Transition Frequency	42.0-62.0Hz
Exciter Field Resistance	4-30 Ohms with GM88453 Activator Board
No-Load to Full-Load Voltage Regulation	±0.5%
Thermal Drift	<0.5% (-40°C to 70°C) [-40°F to 158°F] Range
Response Time	Less than 5µS

Integral Voltage Regulator with APM402/Decision-Maker® 3000 Controller

- The APM402/Decision-Maker® 3000 digital display and pushbutton/rotary dial provide access to data. A two-line LCD display provides complete and concise information. A two-line vacuum fluorescent display provides complete and concise information.
- The Decision-Maker® 3000 graphical display and pushbutton/rotary dial provide access to data. A five-line, 35-characters per line LCD display provides complete and concise information include gain, ramp rate, reactive droop, VAR control (P, I, D gains) and PF control (P, I, D gains).
- The controllers provide ISO 8528-5, Class G3, compliance for transient response on some 20-300 kW generator set models. Both controllers support Modbus®.
- These controllers can control Fast Response™ II, Fast Response™ X, and wound field alternators using the GM88453 activator board.

Voltage Regulator Menu

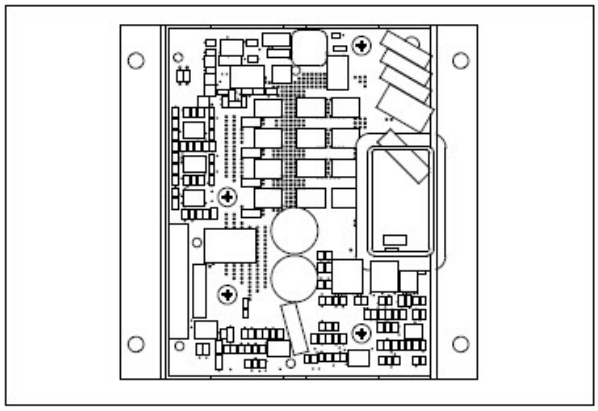
- Voltage adjustment, ±10% of system voltage
- V/Hz cut-in, 42-62 Hz
- Underfrequency unload slope, 0-10% of system voltage

Generator Set Calibration Menu (APM402/DEC 3000)

- L1-L2 volts
- L2-L3 volts (3-phase)
- L3-L1 volts (3-phase)
- L1-N volts
- L2-N volts
- L3-N volts (3-phase)

KOHLER®

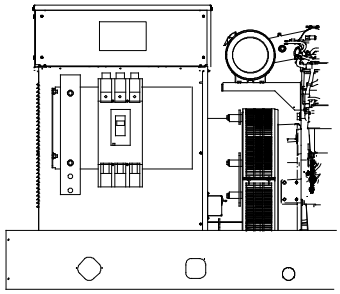
Activator Board GM88453



- Interfaces between the controller and alternator assembly using rotor field leads, auxiliary power windings, and optic board leads.
- Allows the Decision-Maker® controllers the ability to control a wound-field alternator using the same control signal as Fast Response™ alternator.
- Permits the generator set controller to control the current to the exciter field of a wound-field excited alternator.
- Contains two isolated relay driver outputs (RDO) rated at 250 mA. Provides RDO outputs indicating a field over-excitation condition and that the alternator is supplying voltage to the activator.

Modbus® is a registered trademark of Schneider Electric.

Line Circuit Breakers 15- 300 kW



Single Circuit Breaker Kit with Neutral Bus Bar
15- 300 kW Model Shown

Standard Features

- The line circuit breaker interrupts the generator set output during a short circuit and protects the wiring when an overload occurs. Use the circuit breaker to manually disconnect the generator set from the load during generator set service.
- Circuit breaker kits are mounted to the generator set and are provided with load-side lugs and neutral bus bar.
- Kohler Co. offers a wide selection of molded-case line circuit breaker kits including single, dual, and multiple configurations for each generator set.
- Four types of line circuit breakers are available: (see page 2 for definitions and pages 3 and 4 for application details)
  - Magnetic trip
  - Thermal magnetic trip
  - Electronic trip
  - Electronic with ground fault (LSIG) trip
- In addition, line circuit breakers are offered with 80% and 100% ratings.
- Single line circuit breaker kits allow circuit protection of the entire electrical system load.
- Dual line circuit breaker kits allow circuit protection of selected priority loads from the remaining electrical system load.
- Multiple line circuit breaker kits with field connection barrier allow circuit protection for special application on selected 80- 300 kW models.
- Line circuit breakers comply with the following codes and standards unless otherwise stated.
  - UL 489 Molded Case Circuit Breakers
  - UL 1077 Supplementary Protectors
  - UL 2200 Stationary Engine Generator Assemblies

Line Circuit Breaker Types

Magnetic Trip

The magnetic trip features an electromagnet in series with the load contacts and a moveable armature to activate the trip mechanism. When a sudden and excessive current such as a short circuit occurs, the electromagnet attracts the armature resulting in an instantaneous trip.

Thermal Magnetic Trip

Thermal magnetic trip contains a thermal portion with a bimetallic strip that reacts to the heat produced from the load current. Excessive current causes it to bend sufficiently to trip the mechanism. The trip delay is dependent on the duration and excess of the overload current. Elements are factory- calibrated. A combination of both thermal and magnetic features allows a delayed trip on an overload and an instantaneous trip on a short circuit condition.

Electronic Trip

These line circuit breakers use electronic controls and miniature current transformers to monitor electrical currents and trip when preset limits are exceeded.

LI breakers are a combination of adjustable trip functions including long-time ampere rating, long-time delay, and instantaneous pickup. LSI breakers have all of the LI breaker features plus short-time pickup, short-time delay, and defeatable instantaneous pickup. LSIG breakers have all of the LSI breaker features plus ground-fault pickup and delay.

Electronic with Ground Fault Trip

The ground fault trip feature is referred to as LSIG in this document. Models with LSIG compare current flow in phase and neutral lines, and trip when current unbalance exists.

Ground fault trip units are an integral part of the circuit breaker and are not available as field-installable kits. The ground fault pickup switch sets the current level at which the circuit breaker will trip after the ground fault delay. Ground fault pickup values are based on circuit breaker sensor plug only and not on the rating plug multiplier. Changing the rating plug multiplier has no effect on the ground fault pickup values.

80% Rated Circuit Breaker

Most molded-case circuit breakers are 80% rated devices. An 80% rated circuit breaker can only be applied at 80% of its rating for continuous loads as defined by NFPA 70. Circuit conductors used with 80% rated circuit breakers are required to be rated for 100% of the circuit breaker's rating.

The 80% rated circuit breakers are typically at a lower cost than the 100% rated circuit breaker but load growth is limited.

100% Rated Circuit Breaker

Applications where all UL and NEC restrictions are met can use 100% rated circuit breakers where 100% rated circuits can carry 100% of the circuit breaker and conductor current rating.

The 100% rated circuit breakers are typically at a higher cost than the 80% rated circuit breaker but have load growth possibilities.

When applying 100% rated circuit breakers, comply with the various restrictions including UL Standard 489 and NEC Section 210. If any of the 100% rated circuit breaker restrictions are not met, the circuit breaker becomes an 80% rated circuit breaker.

Line Circuit Breaker Options

❑ Alarm Switch

The alarm switch indicates that the circuit breaker is in a tripped position caused by an overload, short circuit, ground fault, the operation of the shunt trip, an undervoltage trip, or the push-to-trip pushbutton. The alarm resets when the circuit breaker is reset.

❑ Auxiliary Contacts

These switches send a signal indicating whether the main circuit breaker contacts are in the open or closed position.

❑ Breaker Separators (350- 2500 kW)

Provides adequate clearance between breaker circuits.

❑ Bus Bars

Bus bar kits offer a convenient way to connect load leads to the generator set when a circuit breaker is not present.
15- 300 kW. Bus bar kits are available on alternators with leads for connection to the generator set when circuit breakers are not ordered.
350- 2500 kW. A bus bar kit is provided when no circuit breaker is ordered. Bus bars are also available in combination with circuit breakers or other bus bars on the opposite side of the junction box. On medium voltage (3.3 kV and above) units, a bus bar kit is standard (not applicable to KD models).

❑ Field Connection Barrier

Provides installer wiring isolation from factory connections.

❑ Ground Fault Annunciation

A relay contact for customer connection indicates a ground fault condition and is part of a ground fault alarm.

❑ Lockout Device (padlock attachment)

This field-installable handle padlock attachment is available for manually operated circuit breakers. The attachment can accommodate three padlocks and will lock the circuit breaker in the OFF position only.

❑ Lugs

Various lug sizes are available to accommodate multiple cable sizes for connection to the neutral or bus bar.

❑ Overcurrent Trip Switch

The overcurrent trip switch indicates that the circuit breaker has tripped due to overload, ground fault, or short circuit and returns to the deenergized state when the circuit breaker is reset.

❑ Shunt Trip, 12 VDC or 24 VDC

A shunt trip option provides a solenoid within the circuit breaker case that, when momentarily energized from a remote source, activates the trip mechanism. This feature allows the circuit breaker to be tripped by customer-selected faults such as alternator overload or overspeed. The circuit breaker must be reset locally after being tripped. Tripping has priority over manual or motor operator closing.

❑ Shunt Trip Wiring

Connects the shunt trip to the generator set controller. (standard on KD models with the APM802 controller)

❑ Undervoltage Trip, 12 VDC or 24 VDC

The undervoltage trips the circuit breaker when the control voltage drops below the preset threshold of 35%- 70% of the rated voltage.

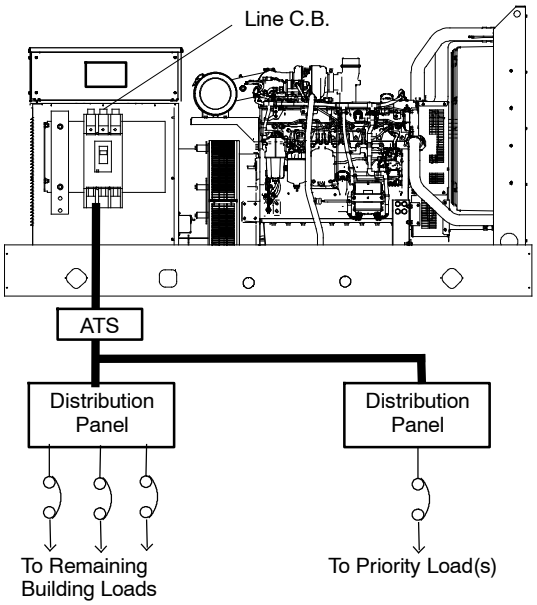
15- 300 kW Line Circuit Breaker Applications

Single Circuit Breaker Installations

A generator set with a single circuit breaker installed typically feeds a single transfer switch and then a distribution panel. This allows protection of the entire system.



Single line circuit breaker configuration where circuit breaker can trip causing all power to building loads including priority load to be disrupted.

MICROLOGIC® 5.0/6.0 A/P/H TRIP UNIT CHARACTERISTIC TRIP CURVE NO. 613-4

Long-time Pickup and Delay
Short-time Pickup and I^2t OFF Delay

The time-current curve information is to be used for application and coordination purposes only.

Curves apply from -30°C to +60°C ambient temperature.

Notes:

1. There is a thermal-imaging effect that can act to shorten the long-time delay. The thermal-imaging effect comes into play if a current above the long-time delay pickup value exists for a time and then is cleared by the tripping of a downstream device or the circuit breaker itself. A subsequent overload will cause the circuit breaker to trip in a shorter time than normal. The amount of time delay reduction is inverse to the amount of time that has elapsed since the previous overload. Approximately 20 minutes is required between overloads to completely reset thermal-imaging.
2. The end of the curve is determined by the interrupting rating of the circuit breaker.
3. With zone-selective interlocking on, short-time delay utilized and no restraining signal, the maximum unrestrained short-time delay time band applies regardless of the setting.
4. Total clearing times shown include the response times of the trip unit, the circuit breaker opening, and the extinction of the current.
5. For a withstand circuit breaker, instantaneous can be turned OFF. See 613-7 for instantaneous trip curve. See 613-10 for instantaneous override values.
6. Overload indicator illuminates at 100%.

PMA-60	Optional

Note: For optional conformal coating please consult factory.

Description

The PGR-4300 Generator Ground-Fault Relay provides a simple method for detecting a ground-fault condition on generators without the need for current transformers (CTs). This greatly simplifies the installation. In addition, it is compatible with both three- and four-pole transfer switches. This relay also monitors the neutral-to-ground path for continuity. The PGR-4300 is ideal for any generator or application where there is not sufficient space to install CTs.

Features & Benefits

FEATURES	BENEFITS
No CTs required	Saves space and simplifies installation
Adjustable pickup (100-1200 A)	Adjustable trip setting provides a wide range of protection and allows system coordination
Adjustable time delay (0-1.0 s)	Adjustable trip delay allows quick protection and system coordination
Output contacts	Form C ground-fault output contacts for alarming or tripping purposes
Analog output (0-1 mA)	Provides means for connecting to an optional meter (PGA-0500) or control system
N-G continuity alarm	Monitors neutral-to-ground integrity and alarms if ground path becomes open circuit
Passive filtering	Eliminates nuisance tripping

Accessories

PGA-0500 Analog % Current Meter
Optional panel-mounted analog meter displays ground-fault current as a percentage of the set-point.

Specifications

TEST METHODS AND CONDITIONS

The emission data listed is measured from a laboratory test engine according to the test procedures of 40 CFR 89 or 40 CFR 1039, as applicable. The test engine is intended to represent nominal production hardware, and there is no guarantee that every production engine will have identical test results. The family parent data represents multiple ratings and this data may have been collected at a different engine speed and load. Emission results may vary due to engine manufacturing tolerances, engine operating conditions, fuels used, alternate test methods, or other conditions.

Data and specifications subject to change without notice.

Non-after Treatment Devices: Electronic Control, Smoke Puff Limiter, Non-standard Non-After Treatment Device Installed, Engine Design Modification

Pursuant to Section 111 and Section 213 of the Clean Air Act (42 U.S.C. sections 7411 and 7547) and 40 CFR Part 60, and subject to the terms and conditions prescribed in those provisions, this certificate of conformity is hereby issued with respect to the test engines which have been found to conform to applicable requirements and which represent the following engines, by engine family, more fully described in the documentation required by 40 CFR Part 60 and produced in the stated model year.

This certificate of conformity covers only those new compression-ignition engines which conform in all material respects to the design specifications that applied to those engines described in the documentation required by 40 CFR Part 60 and which are produced during the model year stated on this certificate of the said manufacturer, as defined in 40 CFR Part 60.

It is a term of this certificate that the manufacturer shall consent to all inspections described in 40 CFR 1068 and authorized in a warrant or court order. Failure to comply with the requirements of such a warrant or court order may lead to revocation or suspension of this certificate for reasons specified in 40 CFR Part 60. It is also a term of this certificate that this certificate may be revoked or suspended or rendered void *ab initio* for other reasons specified in 40 CFR Part 60.

This certificate does not cover engines sold, offered for sale, or introduced, or delivered for introduction, into commerce in the U.S. prior to the effective date of the certificate.

The actual engine power may lie outside the limits of the Emissions Power Category shown above. See the certificate application for details.

SEISMIC INSTALLATION REQUIREMENTS:

The following are requirements for seismic installation:

1. The design of post-installed anchors in concrete used for the component anchorage is pre-qualified for seismic applications in accordance with ACI 355.2 and documented in a report by a reputable testing agency. (ex. The Evaluation Service Report issued by the International code Council)
2. Anchors must be installed to an embedment depth as recommended in the pre-qualification test report as defined in Note 1.
3. Anchors must be installed in minimum 4000 psi compressive strength normal weight concrete. Concrete aggregate must comply with ASTM C33. Installation in structural lightweight concrete is not permitted unless otherwise approved by the structural engineer of record.
4. Anchors must be installed to the torque specification as recommended by the anchor manufacturer to obtain maximum loading
5. Anchors must be installed in the locations specified the Kohler ADV dimension print.
6. Anchor bolt design loads or specific anchors are specified on seismic Kohler ADV.
7. Anchor plates from Kohler must be installed at each anchor location between anchor head and equipment to tension load distribution.
8. Concrete floor slab and concrete housekeeping pads must be designed and rebar reinforced for seismic applications in accordance with ACI 318.
9. All housekeeping pad thickness must be designed in accordance with pre-qualification test report as defined in Note 1 or a minimum of 1.5x the anchor embedment depth, whichever is largest
10. All housekeeping pads must be doweled or cast into the building structural floor slab and designed for seismic application per ACI 318 and as approved by the structural engineer of record
11. Wall mounted equipment must be installed to a rebar reinforced structural concrete wall that is seismically designed and approved by the engineer of record to resist the added seismic loads from the components being anchored to the wall.
12. Floor mounted equipment (with or without housekeeping pad) must be installed to a rebar reinforced structural concrete floor that is seismically designed and approved by the engineer of record to resist the added seismic loads from components being anchored to the floor.
13. When installing to a floor or wall, rebar interference must be considered.
14. Attaching seismic certified equipment to any floor or wall other than those constructed of structural concrete and designed to accept the seismic loads form said equipment is not permitted by this specification and beyond the scope of this certification.
16. Attaching seismic certified equipment to any concrete block walls or cinder block walls is not permitted by this specification and beyond the scope of this certification.
17. For installations upon rooftop, steel dunnage shall be coordinated with the Structural Engineer of Record.
18. Installation upon only rooftop curb shall be coordinated with the curb manufacturer and the Structural Engineer of Record. Any curb or concrete pad that supports the RTU unit is beyond the scope of this certification.
19. Anchor locations, size, type and load requirements are specified on the installation drawing. Mounting requirements details such as brand, type, embedment depth, edge spacing, anchor spacing, concrete strength, wall bracing, and special inspection must be outlined and approved by the project Structural Engineer of Record to withstand the seismic anchor loads as defined on the seismic installation drawing. The installing contractor is responsible for the proper installation of all anchors and mounting hardware, observing the mounting requirement details outlined by the Engineer of Record. Contact Kohler if a detail Seismic Installation Calculation Package is required.
20. Electrical wiring, piping, duct and other connections to the equipment is the responsibility of the installing contractor. It is necessary that these remain in tact, functional and do not inhibit the functionality of the generator set after a seismic event. Adequate slack shall be allowed cable and piping to allow for motions of set during a seismic event.

*21. Concrete pad dimensions are minimum values to satisfy only the anchor bolt requirements. The pad must be designed by the project structural engineer of record.

*22 Anchor bolt and concrete recommendations are for the maximum seismic design levels shown. If the specific application has a lower level, thinner concrete or alternate anchors may be acceptable. Consult Kohler.

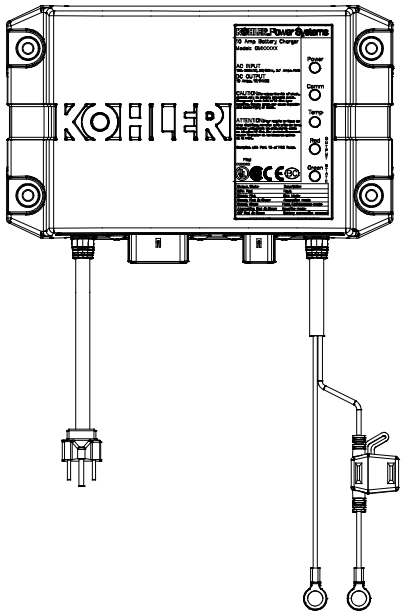
Generator Accessories

KOHLER

Industrial Generator Set Accessories

12/24 Volt, 10 Amp
Automatic Multi-Stage Battery Charger



The battery charger is a fully-automatic, high efficiency battery charger that charges batteries rapidly and safely. The battery charger is designed for an industrial environment.

The battery charger is designed for operation with an engine cranking battery.

The battery charger is universal voltage input capable, comes with a standard 120 V/60 Hz AC plug, and charges 12 VDC or 24 VDC battery systems.

Five LED lights indicate power, communication status, temperature compensation status, charge curve, and charger status.

With the optional battery temperature sensor connected, the battery charger can adjust output voltages for optimal charging.

Standard Features

- 12 or 24 VDC output
  - Automatic voltage detection
- Automatic multi-stage charging modes
  - Recovery charge
  - Bulk charge
  - Absorption charge
  - Float charge
  - Equalize charge
- Charges the following type batteries:
  - Flooded lead acid (FLA)
  - AGM
  - Gel cell
  - High performance AGM
  - Nickel-cadmium (NiCad)
- 5 LED status indicators
- Durable potted assembly for waterproofing and vibration resistance
- Reverse-polarity protection
- Short-circuit protection
- Electronically limited output current
- Optional temperature compensation (FLA only)
- User adjustable parameters to support optimal manufacturer recommended charge curve.
- Code compliance:
  - UL 1236 Listed
  - NFPA 110, Level 1 compatible (when used with Kohler controller and connected to engine harness)
  - CSA - C22.2 No. 107.2-01
  - FCC - Title 47, Part 15 Class A
  - CE
  - IBC 2015
  - OSHPD

OVERVIEW:
THE AUTOMATIC MULTI-LEVEL FLOAT/ EQUALIZE CHARGER SPECIFIED BELOW IS INTENDED TO CHARGE ENGINE STARTING BATTERIES EITHER INDEPENDENT OR IN CONJUNCTION WITH AN ENGINE DRIVEN CHARGING SYSTEM.

BATTERY TYPES TO BE CHARGED:
- LEAD ACID
  - AGM
  - GEL CELL
  - HIGH PERFORMANCE AGM
  - FLOODED
- NICKEL CADMIUM (NiCd)

INPUT AC:
- INPUT VOLTAGE: 90-265V SINGLE PHASE
- INPUT FREQUENCY: 47-63 Hz

INPUT LEAD:
APPROXIMATELY 1.8M (72") (REF) TYPE SJTOW -40°C TO 105°C UL RATED WIRE AND INSULATION. TERMINATED IN PRE-MOLDED UL RATED 3 PRONG NEMA 5-15 MALE AC PLUG.

DC OUTPUT:
- 10A @ 12V
- 10A @ 24V
- VOLTAGE REGULATION: +/-1% (VOLTAGE AT EACH STAGE IS TOPOLOGY DEPENDENT)

OUTPUT LEAD:
APPROX. 1.8M (72") (REF) TYPE SJTOOW -40°C TO 105°C UL RATED WIRE WITH RED AND BLACK WIRE INSULATION. TERMINATED IN 9.5 mm (REF) RING STYLE TERMINALS.

FUSES:
THE FUSE MUST BE LOCATED APPROXIMATELY 6" FROM RING TERMINAL ON RED OUTPUT LEAD. 20A ATC

ENVIRONMENTAL:
- STORAGE TEMPERATURE RANGE: -40 TO +85°C (-40 TO +185°F)
- OPERATING TEMPERATURE RANGE: -20 TO +70°C (-4 TO +158°F)
- HUMIDITY: 5 TO 95% (NON-CONDENSING)
- SALT SPRAY TESTING - ASTM B117

CORROSIN RESISTANT FROM GASSING OF BATTERIES

REVERSE POLARITY PROTECTION:
THE CHARGER SHALL SUSTAIN NO DAMAGE WHEN INCORRECTLY CONNECTED TO THE BATTERY IN REVERSE ORIENTATION.

MOUNTING:
4 NON-THREADED THROUGH HOLES FOR M6 FASTENERS TO PASS THOUGH

ENCLOSURE:
SHALL PROTECT THE CHARGER COMPONENTS FROM RAIN, SNOW, DUST AND DRIPPING WATER AND UNINTENTIONAL INPACTS. ALL INTERNAL COMPONENTS PROTECTED FROM WATER DROPLETS.

INDICATORS:
- POWER: INDICATES THE ACCEPTABILITY OF AC INPUT TO THE CHARGER
- COMMUNICATION: INDICATES THE STATE OF THE COMMUNICATION SYSTEM
- TEMPERATURE COMPENSATION: INDICATES THE STATE OF THE TEMPERATUARE COMPENSATION SUBSYSTEM WHEN INSTALLED
- VOLTAGE OUTPUT: INDICATES THE STATE OF THE BATTERY AND CERTAIN FAULT CONDITIONS.

DOCUMENTATION:
THERE SHALL BE AN INSTALLATION / OPERATIONAL MANUAL SUPPLIED WITH EACH CHARGER. PER KOHLER SUPPLIED ARTWORK.

CERTIFICATIONS (US AND CANADA):
- UL1236
- CSA - C22.2 NO 107.2-01
- FCC- TITLE 47, PART 15 CLASS A
- CE
- EN 61000-6-2
- CEC AND DOE
- NFPA-110 LEVEL1 (WHEN SUPPORTED WITH APPLICABLE KOHLER CONTROLLER)
- IBC

PRODUCT LABELING:
THE LABEL ATTACHED TO THE CHARGER SHALL HAVE THE FOLLOWING INFORMATION:
- UL LISTING
- KOHLER PART NUMBER
- DESCRIPTION OF ALL INDICATOR
- OUTPUT CURRENT AND VOLTAGE
- INPUT VOLTAGE AND FREQUENCY

PACKAGING LABEL:
THE PACKAGING LABEL SHALL CONTAIN THE FOLLOWING INFORMATION:
- KOHLER P/N
- DESCRIPTION - BATTERY CHARGER
- MFG. MODEL NO.
- MFG. PART NUMBER
- DATE CODE

TITLE
DWG, ASSY BATTERY CHARGER

SCALE 0.40 | CAD NO. | SHEET 1 of 1
DWG NO. GM94447 | D

- Kohler Co. selects batteries to meet the engine manufacturer's specifications and to comply with NFPA requirements for engine-cranking cycles.
- Heavy-duty starting batteries are the most cost-effective means of engine cranking and provide excellent reliability in generator set applications.
- Tough polypropylene cases protect against life-shortening vibration and impact damage.
- Batteries are rated according to SAE standard J-537.
- All batteries are 12 volts. Kits that contain two or four 12-volt batteries are available for 24-volt systems and/or systems with redundant starters.
- Wet- and dry-charged batteries have lead-calcium or lead-antimony plates and use sulfuric acid electrolyte. Removable cell covers allow checking of electrolyte specific gravity.
- Absorbent glass mat (AGM) batteries are sealed and maintenance-free.
- Batteries are for applications below and above 0°C (32°F).

* Charge type:
Dry-charged batteries do not contain electrolyte. Supply and add electrolyte per instructions enclosed with each kit.
Wet-charged batteries contain electrolyte and have removable covers.
AGM batteries are sealed and do not require added electrolyte.

NOTE: Battery kit numbers on the Price List may appear with PA- and (loose kit) and/or without PA- (installed kit) for some generator set models. Battery kit numbers with -KP are loose kits. Kit numbers with -KA are factory-installed.

NOTE: 10-20REOD/REODB and 10-20REOZD/REOZDB models: Service kit GM40633 may be required when the original battery is replaced. See Service Bulletin SB-658.

Description

The engine block heater kit heats the engine coolant in cold ambient, warming the cylinders, oil, and charge air circuit which all help to give a faster starting time. The engine block heater uses thermosiphon action to circulate warm coolant into the engine and supplies constant heating to the engine. The engine block heater kit helps to extend element life and gives a significant reduction in electrical consumption.

The engine block heater kit is recommended for ambient temperatures below 10°C (50°F).

The engine block heater kits are available in 120 V, 240 V, and 277 V versions.

KOHLER®

Warranty

Stationary Standby and Prime Power Industrial Generator Set One-Year or Two Thousand (2000)-Hour Limited Warranty

Your Kohler product has been manufactured and inspected with care by experienced craftsmen. If you are the original end user, Kohler Co. warrants, for the period indicated below, each product to be free from defects in materials and workmanship. In the event of a defect in materials or workmanship, Kohler Co. will repair, replace, or make appropriate adjustment at Kohler Co.'s option if the product, upon Kohler Co.'s inspection, is found to be properly installed, maintained, and operated in accordance with Kohler Co.'s instruction manuals. A Kohler distributor, dealer, or authorized service representative must perform startup.

Kohler Product	**Warranty Coverage**
Stationary Standby Generator Set & Accessories	One (1) year from registered startup or two thousand (2000) hours (whichever occurs first). In any event, the warranty period will expire not later than thirty (30) months from the date of shipment from Kohler Co.'s factory.
Stationary Prime Power Generator Set & Accessories	One (1) year from registered startup or two thousand (2000) hours (whichever occurs first). In any event, the warranty period will expire not later than thirty (30) months from the date of shipment from Kohler Co.'s factory.

The following will **not** be covered by the warranty:

1. Normal wear, routine tuneups, tuneup parts, adjustments, and periodic service.
2. Damage, including but not limited to damage caused by accidents, improper installation or handling, faulty repairs not performed by an authorized Kohler service representative, improper storage, or acts of God.
3. Damage caused by operation at speeds, or with fuel, loads, conditions, modifications or installation contrary to published specifications.
4. Damage caused by negligent maintenance such as:
   a. Failure to provide the specified type and sufficient quantity of lubricating oil.
   b. Failure to keep the air intake and cooling fin areas clean.
   c. Failure to service the air cleaner.
   d. Failure to provide sufficient coolant and/or cooling air.
   e. Failure to perform scheduled maintenance as prescribed in supplied manuals.
   f. Failure to regularly exercise the generator set under load (stationary applications only).
5. Original installation charges and startup costs.
6. Starting batteries and the following related expenses:
   a. Labor charges related to battery service.
   b. Travel expenses related to battery service.
7. Additional expenses for repairs performed after normal business hours, i.e. overtime or holiday labor rates.
8. Rental of equipment during the performance of warranty repairs.
9. Removal and replacement of non-Kohler-supplied options and equipment.
10. Non-Kohler replacement parts. Replacement of a failed Kohler part with a non-Kohler part voids the warranty on that part.
11. Radiators replaced rather than repaired.
12. Fuel injection pumps not repaired by an authorized Kohler service representative.
13. Non-Kohler-authorized repair shop labor without prior approval from Kohler Co. Warranty Department.
14. Engine fluids such as fuel, oil, or coolant/antifreeze.
15. Shop supplies such as adhesives, cleaning solvents, and rags.
16. Expenses incurred investigating performance complaints unless the problem is caused by defective Kohler materials or workmanship.
17. Maintenance items such as fuses, lamps, filters, spark plugs, loose or leaking clamps, and adjustments.
18. Travel time and mileage exceeding 300 miles round trip.

To obtain warranty service, call 1-800-544-2444 for your nearest authorized Kohler service representative or write Kohler Co., Service Department, MS072, Kohler, WI 53044 USA.

KOHLER CO. SHALL NOT BE LIABLE FOR SPECIAL, INCIDENTAL, AND/OR CONSEQUENTIAL DAMAGES OF ANY KIND including, but not limited to, incidental and/or consequential labor costs, installation charges, telephone charges, or transportation charges in connection with the replacement or repair of defective parts.

This is our exclusive written warranty. We make no other express warranty nor is anyone authorized to make any on our behalf.

ANY IMPLIED OR STATUTORY WARRANTY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS EXPRESSLY LIMITED TO THE DURATION OF THIS WARRANTY. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental and/or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Certification

VMC GROUP
THE POWER OF TOGETHER™

KOHLER®

CERTIFICATE OF COMPLIANCE

SEISMIC DESIGN OF NONSTRUCTURAL COMPONENTS AND SYSTEMS

Certification No.

VMA-45451-01C (Revision 6)

Expiration Date: 10/31/2022

Certification Parameters:

The nonstructural products (mechanical and/or electrical components) listed on this certificate are CERTIFIED[1] FOR SEISMIC APPLICATIONS in accordance with the following building code[2] releases.

IBC 2009, 2012, 2015, 2018

The following model designations, options, and accessories are included in this certification. Reference report number VMA-45451-01 as issued by The VMC Group for a complete list of certified models, included accessories/options, and certified installation methods.

Kohler; Diesel Gensets
REOZJx; 20kW - 500kW

The above referenced equipment is **APPROVED** for seismic application when properly installed[3], used as intended, and contains a Seismic Certification Label referencing this Certificate of Compliance[4]. As limited by the tabulated values, below grade, grade, and roof-level installations, installations in essential facilities, for life safety applications, and/or of equipment containing hazardous contents are permitted and included in this certification with an Equipment Importance Factor assigned as I_p=1.5. The equipment is qualified by successful seismic shake table testing at the nationally recognized University of California Berkeley Pacific Earthquake Engineering Research Center, Curtis-Wright Flow Control Company Qualtech NP (Formerly Trentec), and Clark Dynamic Test Laboratory under the witness of the ISO Accredited Product Certification Agency, The VMC Group.

This certification includes the open generator set and the enclosed generator set when installed with or without the sub-base tank. This certification also includes the sub-base tank as a stand-alone accessory. The generator set and included options shall be a catalogue design and factory supplied. The generator set and applicable options shall be installed and attached to the building structure per the manufacturer supplied seismic installation instructions. For a list of certified configurations and options please directly contact the manufacturer. This certification excludes all non-factory supplied accessories, including but not limited to mufflers, isolation/restraint devices, remote control panels, remote radiators, pumps and other electrical/mechanical components.

CERTIFICATE OF COMPLIANCE

SEISMIC DESIGN OF NONSTRUCTURAL COMPONENTS AND SYSTEMS

Notes & Comments:

1. All equipment listed herein successfully passed the seismic acceptance criteria for shake testing non-structural components and systems as set forth in the ICC AC-156. The Test Response Spectrum (TRS) enveloped the Required Response Spectrum (RRS) for all units tested. The units cited in this certification were representative sample(s) of a contingent of models and all remained captive and structurally sound after the seismic shake simulation. The units also remained functionally operational after the simulation testing as functional testing was completed by the equipment manufacturer before and after the seismic simulations. Although a seismic qualified unit inherently contains some wind resisting capacity, that capacity is undetermined and is excluded from this certification. Snow/Ice loads have been neglected and thus limit the unit to be installed both indoors (covered by an independent protective structure) and out of doors (exposed to accumulating snow/ice) for ground snow loads no greater than 30 psf for all applications.

2. The following building codes are addressed under this certification:
   IBC 2018 referencing ASCE7-16 and ICC-ES AC-156
   IBC 2015 referencing ASCE7-10 and ICC-ES AC-156
   IBC 2012 referencing ASCE7-10 and ICC-ES AC-156
   IBC 2009 referencing ASCE7-05 and ICC-ES AC-156

3. Refer to the manufacturer supplied installation drawings for anchor requirements and mounting considerations for seismic applications. Required anchor locations, size, style, and load capacities (tension and shear) may be specified on the installation drawings or specified by a 3rd party. Mounting requirement details such as anchor brand, type, embedment depth, edge spacing, anchor-to-anchor spacing, concrete strength, special inspection, wall design, and attachment to non-building structures must be outlined and approved by the Engineer of Record for the project or building. Structural walls, structural floors, and housekeeping pads must also be seismically designed and approved by the project or building Structural Engineer of Record to withstand the seismic anchor loads as defined on the installation drawings. The installing contractor is responsible for observing the installation detailed in the seismic installation drawings and the proper installation of all anchors and mounting hardware.

4. For this certificate and certification to remain valid, this certificate must correspond to the "Seismic Certification Label" found affixed to the unit by the factory. The label ensures the manufacturer built the unit in conformance to the IBC seismic design criteria set forth by the Certified Seismic Qualification Agency, The VMC Group, and meets the seismic design levels claimed by this certificate.

5. Mechanical, Electrical, and Plumbing connections to the equipment must be flexibly attached as to not transfer load through the connection. The structural integrity of any conduit, cable trays, piping, ductwork and/or flexible connections is the responsibility of others. This certification does not guarantee the equipment will remain compliant to NEMA, IP, UL, or CSA standards after a seismic event.

6. This certificate applies to units manufactured at:
   Kohler, N7650 Lakeshore Road, Sheboygan, WI 53083

7. This certification follows The VMC Group's ISO-17065 Scheme.

John P. Giuliano, PE
President, The VMC Group

IAS ACCREDITED Product Certification Agency

IBC® CERTIFIED VMC GROUP

Certificate of Registration

nqa global assurance

This is to certify that the Quality Management System of:

Kohler Power Systems

N7650 Lakeshore Road
Sheboygan WI 53083
United States of America

Central function listed above. See appendix for additional locations

applicable to:

Design, manufacture, and distributor support for electrical generators, alternators, fuel tanks, automatic transfer switches and switchgear

has been assessed and approved by
National Quality Assurance, U.S.A., against the provisions of:

ISO 9001:2015

Certificate Number:	16852
EAC Code:	19, 17
Certified Since:	February 28, 1995
Valid Until:	November 6, 2021
Reissued:	November 7, 2018
Cycle Issued:	November 7, 2018

For and on behalf of NQA, USA

ANAB ACCREDITED ISO/IEC 17021 MANAGEMENT SYSTEMS CERTIFICATION BODY

G15-152 11/18

This approval is subject to the company maintaining its system to the required standard, which will be monitored by NQA, USA, 289 Great Road, Suite 105, Acton, MA 01720, an accredited organization under the ANSI-ASQ National Accreditation Board.

Certificate of Registration

Appendix to Certificate Number: 16852

Includes Facilities Located at:

Kohler Power Systems Certificate Number 16852 N7650 Lakeshore Road Sheboygan WI 53083 United States of America	Design, manufacture, and distributor support for electrical generators, automatic transfer switches and switchgear
Kohler Power Systems Certificate Number 16852 300 N Dekora Woods Blvd. Saukville WI 53080 United States of America	Manufacturer of fuel tanks, skids, fabricated components and generators
Muth Warehouse Certificate Number 16852 2821 Muth Court Sheboygan WI 53083 United States of America	The distribution of generator sets
KWIP Warehouse Certificate Number 16852 4327 County EE Sheboygan WI 53081 United States of America	Receiving, sequencing and warehousing of generator components

Certified Since: February 28, 1995

Valid Until: November 6, 2021

Reissued: November 7, 2018

Cycle Issued: November 7, 2018

This approval is subject to the company maintaining its system to the required standard, which will be monitored by NQA, USA, 289 Great Road, Suite 105, Acton, MA 01720, an accredited organization under the ANSI-ASQ National Accreditation Board.

Kohler Standby/Prime Generator Set Test Program

Testing is an integral part of quality assurance. In keeping with our uncompromising commitment to quality, safety, and reliability, every Kohler Standby/Prime power generator set undergoes an extensive series of prototype and production testing.

Prototype Testing

Prototype testing includes the potentially destructive tests necessary to verify design, proper function of protective devices and safety features, and reliability expectations. Kohler's prototype testing includes the following:

- Alternator temperature rise test per NEMA MG1-32.6. Standby and prime ratings of the alternator are established during this test.
- Maximum power test to assure that the prime mover and alternator have sufficient capacity to operate within specifications.
- Alternator overload test per NEMA MG1-32.8.
- Steady-state load test to ensure voltage regulation meets or exceeds ANSI C84.1, NEMA MG1-32.17 requirements and to verify compliance with steady-state speed control specifications.
- Transient test to verify speed controls meets or exceeds specifications.
- Transient load tests per NEMA MG1-32.18, and ISO 8528 to verify specifications of transient voltage regulation, voltage dip, voltage overshoot, recovery voltage, and recovery time.
- Motor starting tests per NEMA MG1-32.18.5 to evaluate capabilities of generator, exciter, and regulator system.
- Three-phase symmetrical short-circuit test per NEMA MG1-32.13 to demonstrate short circuit performance, mechanical integrity, ability to sustain short-circuit current.
- Harmonic analysis, voltage waveform deviation per NEMA MG1-32.10 to confirm that the generator set is producing clean voltage within acceptable limits.
- Generator set cooling and air flow tests to verify maximum operating ambient temperature.
- Reliability tests to demonstrate product durability, followed by root cause analysis of discovered failures and defects. Corrective action is taken to improve the design, workmanship, or components.
- Acoustical noise intensity and sound attenuation effects tests.

Production Testing

In production, Kohler Standby/Prime generator sets are built to the stringent standards established by the prototype program. Every Kohler generator set is fully tested prior to leaving the factory. Production testing includes the following:

- Stator and exciter winding high-potential test on all generators. Surge transient tests on stators for generators 180 kW or larger. Continuity and balance tests on all rotors.
- One-step, full-load pickup tests to verify that the performance of each generator set, regulator, and governor meets published specifications.
- Regulation and stability of voltage and frequency are tested and verified at no load, 1/4 load, 1/2 load, 3/4 load, and full-rated load.
- Voltage, amperage, frequency and power output ratings verified by full-load test.
- The proper operation of controller logic circuitry, prealarm warnings, and shutdown functions is tested and verified.
- Any defect or variation from specification discovered during testing is corrected and retested prior to approval for shipment to the customer.

Torsional analysis data, to verify torsional effects are not detrimental and that the generator set will provide dependable service as specified, is available upon request.

Kohler offers other testing at the customer's request at an additional charge. These optional tests include power factor testing, customized load testing for specific application, witness testing, and a broad range of MIL-STD-705c testing. A certified test report is also available at an additional charge.

KOHLER®

Transfer Switch Spec Sheets

Model KEP-DMTA-0400S-NK

KOHLER®

ISO 9001 KOHLER POWER SYSTEMS NATIONALLY REGISTERED

Transfer Switch Standard Features

- Service entrance automatic transfer switches incorporate an isolating mechanism and overcurrent protection on the utility supply, eliminating the need to have a separate, upstream utility source circuit breaker/ disconnect switch
- UL 1008 listed, file #58962
- IBC seismic certification available
- Fully enclosed silver alloy contacts provide high withstand rating
- 3-cycle short circuit current withstand-tested in accordance with UL 1008
- Completely separate utility and generator set power switching units provide redundancy (no common parts) and are easy to service
- Utility disconnect power switching units have overcurrent protection; generator disconnect is available with or without overcurrent protection
  - Molded case circuit breakers (MCCB) include thermal magnetic or electronic trip overcurrent protection (80% rated)
  - Molded case switches (MCSW) do not include overcurrent protection (100% rated) (available on generator disconnect only)
  - Insulated case circuit breakers (ICCB) include elecronic trip overcurrent protection (100% rated)
  - Insulated case switches (ISCW) do not include overcurrent protection (100% rated) (available on generator disconnect only)
- Inherent stored-energy design prevents damage if manually switched while in service
- Heavy duty brushless gear motor and operating mechanism provide mechanical interlocking and extreme long life with minimal maintenance
- Safe manual operation permits easy operation even under adverse conditions
- All mechanical and control devices are visible and readily accessible
- Padlockable service disconnect control switch
- Status indicators
- Two-position control circuit isolation switch disconnects utility power to the transfer switch controller
- Load shed (Forced transfer from Emergency to OFF). (Customer-supplied signal {contact closure} is required for the forced transfer to OFF function.)
- NEMA 1, 3R, 4X and 12 enclosures are availalble

KOHLER®

Service Disconnect Switch

- Service disconnect to OFF position
- Two-position switch with padlockable cover disconnects the normal source and emergency sources
- Controller display show Service Disconnected and the NOT IN AUTO LED flashes
- Lamp illuminates to indicate that the switch is in the DISCONNECT position

Decision-Maker® MPAC 1500 Controller

- LCD display, 4 lines x 20 characters, backlit
- Complete programming and viewing capability at the door using the keypad and LCD display
- LED indicators: Source available, transfer switch position, service required (fault), and "not in auto"
- Modbus communication is standard
- Programmable voltage and frequency pickup and dropout settings
- Programmable time delays
- Programmable generator exerciser
- Time-based load control
- Current-based load control (current-sensing kit required)
- Two programmable inputs and two programmable outputs (one programmable input and one programmable output are used for factory connections on these models are are not available for customer connection)
- Up to four I/O extension modules available
- RS-485 communication standard
- Ethernet communication standard
- Threee-source system
- Prime power

For more information about Decision-Maker® MPAC 1500 features and functions, see specification sheet G11-128.

Codes and Standards

The ATS meets or exceeds the requirements of the following specifications:

- EN6100-4-4 Fast Transient Immunity Severity Level 4
- EN61000-4-5 Surge Immunity Class 4 (voltage sensing and programmable inputs only)
- EIC Specifications for EMI/EMC Immunity:
  - CISPR 11, Radiated Emissions
  - IEC 1000–4–2, Electrostatic Discharge
  - IEC 1000–4–3, Radiated Electromagnetic Fields
  - IEC 1000–4–4, Electrical Fast Transients (Bursts)
  - IEC 1000–4–5, Surge Voltage
  - IEC 1000–4–6, Conducted RF Disturbances
  - IEC 1000–4–8, Magnetic Fields
  - IEC 1000–4–11, Voltage Dips and Interruptions
- IEC 60947-6-1, Low Voltage Switchgear and Control Gear; Multifunction Equipment; Automatic Transfer Switching Equipment
- IEEE Standard 446, IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications
- IEEE 472 (ANSI C37.90A) Ring Wave Test
- NEMA Standard ICS 10-2005, Electromechanical AC Transfer Switch Equipment
- NFPA 70, National Electric Code
- NFPA 99, Essential Electrical Systems for Health Care Facilities
- NFPA 110, Emergency and Standby Power Systems
- Underwriters Laboratories UL 1008, Standard for Automatic Transfer Switches for Use in Emergency Standby Systems file #58962

Application Data

Environmental Specifications	
Operating Temperature	-15°C to 50°C (5°F to 122°F)
Storage Temperature	-20°C to 70°C (-4°F to 158°F)
Humidity	95% noncondensing

Decision-Maker® MPAC 1500 Controller Standard Features

- Microprocessor-based controller
- Environmentally sealed user interface
- LCD display, 4 lines x 20 characters, backlit
- Dynamic function keypad with tactile feedback pushbuttons allows complete programming and viewing capability at the door
- LED indicators: Source available, transfer switch position, service required (fault), and not in auto
- Broadrange voltage sensing (208–600 VAC) on all phases
- Phase-to-phase sensing and monitoring with 0.5% accuracy on both sources
- Frequency sensing with 0.5% accuracy on both sources
- Anti-single phasing protection
- Phase rotation sensing for three-phase systems
- Real-time clock with automatic adjust for daylight saving time and leap year
- Run time clock and operation counter
- Time-stamped event log
- Fail-safe transfer for loaded test and exercise functions
- DIP switches: password disable and maintenance
- Isolated RS-485 ports for Modbus connections (9.6, 19.2, and 57.6 kbps)
- Standard Ethernet communications with RJ45 connector for 10/100 ethernet connection
- Modbus® RTU and Modbus® TCP/IP protocols (Modbus® register map available)
- USB port. Connect a personal computer and use Kohler® SiteTech™ software to view events and adjust settings *
- Available in automatic and non-automatic versions; see supervised transfer control switch on page 5

Programmable Features

- Programming and monitoring methods:
  - Monitoring and password-protected programming at the door using the keypad and display
  - Program using a PC with Kohler SiteTech software *
- Over/undervoltage and over/underfrequency for all phases of the normal and emergency sources
- Adjustable time delays
- Load/no load/auto-load test and load/no-load exercise functions
- Programmable inputs and outputs
- Load bank control for exercise or test
- Time-based and current-based† load control, nine individual time delays for selected loads
- In-phase monitor (3-phase only)
- Password protection, three security levels

* SiteTech software is available to Kohler-authorized distributors and dealers.
† Requires current sensing kit.

Modbus is a registered trademark of Schneider Electric.

Decision-Maker® MPAC 1500 Controller Features

User Interface LED Indicators

- Contactor position: source N and source E
- Source available: source N and source E
- Service required (fault indication)
- Not in automatic mode

LCD Display

- System status
- Line-to-line voltage
- Line-to-neutral voltage
- Active time delays
- Source frequency
- Preferred source selection
- System settings
- Common alarms
- Load current, each phase (current sensing kit required)
- Inputs and outputs
- Faults
- Time/date
- Address
- Event history
- Maintenance records
- Exerciser schedule
- Exerciser mode
- Time remaining on active exercise

Dynamic Function Tactile Keypad Operations

- Scroll up/down/forward/back
- Increase/decrease/save settings
- End time delay
- Start/end test or exercise
- Reset fault
- Lamp test

DIP Switches

- Maintenance mode
- Password disable

Event History

- View time and date-stamped events on the display or on a personal computer equipped with Kohler® SiteTech™ software. *****
- Download complete event history files using Kohler SiteTech software and a PC connected to the USB port. *****

Main Logic Board Inputs and Outputs

- Two (2) programmable inputs
- Two (2) programmable outputs

Communications

- Ethernet communications with RJ-45 connector for 10/100 ethernet connection
- Isolated RS-485 ports for Modbus communications
- Modbus® RTU and Modbus® TCP/IP protocols (Modbus® register map available)
- USB Port. Use SiteTech software to upload or download files and adjust transfer switch settings *****
  - Application software
  - Event history files
  - Language files
  - Parameter settings
  - Usage reports
  - Feature configuration

Programmable Features

- System voltage, 208–600 VAC †
- System frequency, 50/60 Hz †
- Single/three-phase operation †
- Standard/programmed/closed-transition operation †
- Bypass/isolation enable/disable †
- Service entrance enable/disable †
- Preferred source selection allows the normal or emergency source to be used when both sources are available (alarm module required)
- Phase rotation: ABC/BAC/none selection with error detection
- Voltage and frequency pickup and dropout settings
- Voltage unbalance, enable/disable
- In-phase monitor: enable/disable and phase angle
- Transfer commit/no commit
- Source/source mode: utility/gen, gen/gen, utility/utility, or utility/gen/gen for 3-source systems
- Passwords, system and test
- Three-source system setup allows the use of one utility source and two generator sets
- Time, date, automatic daylight saving time enable/disable
- Time delays (see table)
- Exerciser: calendar mode, loaded/unloaded up to 21 events
- Test: loaded/unloaded/auto load (1–60 minutes)
- Remote test: loaded/unloaded
- Automatic override on generator failure (loaded test and exercise)
- Peak shave delay enable/disable
- Current monitoring (current sensing kit required)
- Load control pre/post-transfer delays, 9 individual time delays for selected loads
- Current-based load control settings: high/low current levels and load add/remove priority for 9 separate loads (current sensing kit required)
- Prime power sequence alternates between two generator sets with adjustable generator set runtimes
- Resettable historical data

***** SiteTech software is available to Kohler-authorized distributors and dealers.

† System parameters are factory-set per order.

Modbus is a registered trademark of Schneider Electric.

Decision-Maker® MPAC 1500 Controller Features, Continued

Programmable Inputs

- Bypass contactor disable (for bypass/isolation switches)
- Forced transfer to OFF (programmed-transition models only; requires load shed accessory)
- Inhibit transfer
- Low battery voltage (external battery supply module required)
- Peak shave/area protection input
- Remote common fault
- Remote test
- Remote end time delay
- Remotely monitored inputs, four (4) available
- Service disconnect (for service entrance models)
- Three-source system disable

Programmable Outputs

- Alarm silenced
- Audible alarm
- Chicago alarm control
- Common alarm events
- Contactor position
- Exercise active
- Fail to open, source 1/source 2 (service entrance models)
- Fail to close, source 1/source 2 (service entrance models)
- Failure to acquire preferred source
- Failure to acquire standby source
- Failure to transfer
- Generator engine start, source N and E
- I/O module faults
- In-phase monitor synch
- Load bank control
- Load control active (pre/post transfer delay, up to 9 outputs)
- Loss of phase fault, source N and E
- Low battery fault (external battery supply module required)
- Maintenance mode
- Non-emergency transfer
- Not in automatic mode
- Over/underfrequency faults, source N and E (generator)
- Over/undervoltage faults, source N and E
- Peak shave/area protection active
- Phase rotation error, source N and E
- Preferred source supplying load
- Software-controlled relay outputs (four maximum)
- Source available, preferred and standby
- Standby source supplying load
- Test active
- Three-source system disable
- Transfer switch auxiliary contact fault
- Transfer switch auxiliary contact open
- Voltage unbalance, source N and E

Voltage and Frequency Sensing

Parameter	Default	Adjustment Range
Undervoltage dropout	90% of pickup	75%–98%
Undervoltage pickup	90% of nominal	85%–100%
Overvoltage dropout *	115% of nominal*	106%–135%
Overvoltage pickup	95% of dropout	95%–100%
Unbalance enable	Disable	Enable/Disable
Unbalance dropout	20%	5%–20%
Unbalance pickup	10%	3%–18%
Voltage dropout time	0.5 sec.	0.1–9.9 sec.
Underfrequency dropout	99% of pickup	95%–99%
Underfrequency pickup	90% of nominal	80%–95%
Overfrequency dropout	101% of pickup	101%–115%
Overfrequency pickup	110% of nominal	105%–120%
Frequency dropout time	3 sec.	0.1–15 sec.

* 690 volts, maximum. Default = 110% for 600 volt applications.

Adjustable Time Delays

Time Delay	Default	Adjustment Range
Engine start, Source S2	3 sec.	0–6 sec. †
Engine start, Source S1 (gen/gen)	3 sec.	
Engine cooldown, Source S2	5 min.	0–60 min.
Engine cooldown, S1 (gen/gen)	5 min.	
Fail to acquire standby source	1 min.	
Fail to acquire preferred source	1 min.	
Transfer, preferred to standby	3 sec.	
Transfer, standby to preferred	15 min.	
Transfer, off to standby	1 sec.	1 sec. – 60 min.
Transfer, off to preferred	1 sec.	
Fail to synchronize	60 sec.	10 sec – 15 min.
Auto load test termination after transfer	1 sec.	1 sec.–60 min.
Prime power run duration	6 min.	6 min. – 100 days (6 min. increments)
Load Control Time Delays:		
Pretransfer to preferred	0 sec.	0–60 min.
Post-transfer to preferred	0 sec.	
Pretransfer to standby	0 sec.	
Post-transfer to standby	0 sec.	
Load add Source1/Source2	0 sec.	
Load remove Source1/Source2	0 sec.	

Note: Time delays are adjustable in 1 second increments, except as noted.

† Engine start time delay can be extended to 60 minutes with an External Battery Supply Module Kit.

Accessory Modules

The mounting kit holds up to five optional modules.

Module Current Draw Specifications, mA	
Alarm Module	75
Standard I/O Module	75
High Power I/O Module	100
Maximum Total Current *	300

* If an External Battery Module is installed, there is no current restriction.

❑ Standard Input/Output Module

Inputs	
Available Inputs	2
Input Definition	Contact closure
Current	5 mA Max
Connection Type	Terminal Strip
Wire Size	#14-24 AWG
Max Distance	700 feet
Outputs	
Outputs Available	6
Contact Type	Form C (SPDT)
Contact Voltage Rating	2 A @ 30 VDC 500 mA @ 125 VAC
Connection Type	Terminal Strip
Wire Size	#14-24 AWG

❑ High-Power Input/Output Module

Inputs	
Available Inputs	2
Input Definition	Contact closure
Current	5 mA Max
Connection Type	Terminal Strip
Wire Size	#14-24 AWG
Max Distance	700 feet
Outputs	
Outputs Available	3
Contact Type	Form C (SPDT)
Contact Voltage Rating	12 A @ 24 VDC 12 A @ 250 VAC 10 A @ 277 VAC 2 A @ 480 VAC
Connection Type	Terminal Strip
Wire Size	#14-24 AWG
Environmental Specifications	
Temperature	-40°C to 85°C (-40°F to 185°F)
Humidity	35% to 85% noncondensing

❑ Alarm Module

- 90 dB Audible alarm
- Any alarm function can be programmed to trigger the audible alarm
- Chicago alarm function
- Preferred source selection
- Supervised transfer control (supervised transfer control switch required)
- Connection for external alarm

External Alarm Connection Specifications	
Wire Size	#12-22 AWG Cu
Contact Voltage Rating	500 mA @ 120 VAC
	250 mA @ 240 VAC

❑ External Battery Supply Module

- Energizes the ATS controls using an external battery when no source power is available
- Allows extended engine start time delays
- Allows the use of any combination of accessory modules (no current draw restriction, maximum of five modules total)
- Connects to one or two batteries, 12 VDC or 24 VDC system
- Current draw, 140 mA @ 12 VDC, 86 mA @ 24 VDC
- Provides low external battery voltage indication to the transfer switch controller
- Reverse-polarity protected

Other Controller Accessories

Accessories are available either factory-installed or as loose kits, unless otherwise noted.

❑ Controller Disconnect Switch

- Disconnects power to controller without disconnecting load
- Mounts inside the enclosure

❑ Current Sensing Kit

- Monitor current on all phases with 1% accuracy

❑ Digital Meter

- Measure and display voltage, current, frequency, and power for both sources
- Programmable visual alarms for high voltage, low voltage, and high current
- Three digital outputs
- Serial port for optional network connections
- Password-protected programming menus
- Joystick operation
- Factory-installed
- Joystick operation
- Available factory-installed
- For more information, see TT-1506, Digital Power Meters.

❑ Line-to-Neutral Voltage Monitoring

- Monitors all line-to-neutral voltages

❑ Load Shed Kit

- Forced transfer from Emergency to OFF for programmed-transition models
- Customer-supplied signal (contact closure) is required for the forced transfer to OFF function
- Factory-installed only

❑ Padlockable User Interface Cover

- Provides additional protection against unauthorized access
- Standard on NEMA 3R enclosures

❑ RSA III Remote Serial Annunciator

- Monitors the generator set
- Monitors Normal and Emergency source status and connection
- Monitors ATS common alarm
- Allows remote testing of the ATS
- For more information about RSA III features and functions, see specification sheet G6-139.

❑ Supervised Transfer Control Switch

- Standard on models with non-automatic controls
- Optional for models with automatic controls
- Auto, manual, and transfer positions
- Automatic and non-automatic modes
- Alarm module required

Supervised Transfer Control Switch Operation for Automatic and Non-Automatic Transfer Switches		
Switch Position	**Automatic Switches**	**Non-Automatic Switches**
AUTO	• Automatically transfers to the standby source, when available, if the preferred source is lost. • Transfers back to the preferred source when it becomes available.	
MANUAL	• Automatically transfers to an available source if the connected source is lost. • Test, peak shave, and loaded exercise commands will transfer to the standby source. • Does not automatically transfer back to preferred when both sources are available.	• Does not automatically transfer to an available source when the connected source is lost. • Test, peak shave, and loaded exercise commands are ignored. • Does not automatically transfer back to preferred when both sources are available. • Transfers only when the switch is manually moved to the TRANSFER position as described below.
TRANSFER (momentary switch position)	• Does not initiate an engine start sequence. Generator set engine must be signalled to start by an event such as a loss of utility, loaded test, loaded exercise, etc. • Allows transfer to the other source, if available. An event such as a loss of utility, loaded exercise, or loaded test must first initiate the transfer sequence. • Time delays will operate. Wait for time delays to expire, or press the End Time Delay button. • Operates pre- and post-transfer load control time delays if both sources are available. • MANUAL TRANSFER is displayed when the ATS is ready to transfer.

Environmental Specifications	
Operating Temperature	-20°C to 70°C (-4°F to 158°F)
Storage Temperature	-40°C to 85°C (-40°F to 185°F)
Humidity	5% to 95% noncondensing

Main Board I/O Specifications	
Output contact type	Isolated form C (SPDT)
Output contact rating	1 amp @ 30 VDC, 500 mA @120 VAC
I/O terminals wire size	#12-24 AWG

Dimensional Drawings

** FOR ATS INSTALLATION ONLY **

GENERAL SEISMIC INSTALLATION NOTES:

1. ANCHORS MUST BE DESIGNED IN ACCORDANCE WITH ACI 355.2-04. SUGGESTED MANUFACTURERS INCLUDE SIMPSON, RAMSET AND HILTI.
2. ANCHORS MUST BE INSTALLED TO A MINIMUM EMBEDMENT OF 8X THE ANCHOR DIAMETER.
3. ANCHORS MUST BE INSTALLED IN MINIMUM 4000 PSI COMPRESSIVE STRENGTH NORMAL WEIGHT CONCRETE. CONCRETE AGGREGATE MUST COMPLY WITH ASTM C33. INSTALLATION IN STRUCTURAL LIGHTWEIGHT CONCRETE IS NOT PERMITTED UNLESS OTHERWISE APPROVED BY THE STRUCTURAL ENGINEER OF RECORD.
4. ANCHORS MUST BE INSTALLED TO THE REQUIRED TORQUE SPECIFIED BY THE ANCHOR MANUFACTURER TO OBTAIN MAXIMUM LOADING.
5. ANCHORS MUST BE INSTALLED TO THE ANCHOR SPACING REQUIRED TO OBTAIN MAXIMUM LOAD AND EDGE DISTANCE REQUIRED TO OBTAIN MAXIMUM LOAD UNLESS OTHERWISE APPROVED BY THE STRUCTURAL ENGINEER OF RECORD.
6. ANCHORS USED FOR SEISMIC INSTALLATION MUST BE DESIGNED AND RATED TO RESIST SEISMIC LOADING IN ACCORDANCE WITH ACI 355.2-04 AND DOCUMENTED IN A REPORT BY A REPUTABLE TESTING AGENCY. (EX. THE EVALUATION SERVICE REPORT ISSUED BY THE INTERNATIONAL CODE COUNCIL)
7. WIDE WASHERS MUST BE INSTALLED AT EACH ANCHOR LOCATION BETWEEN THE ANCHOR HEAD AND EQUIPMENT FOR TENSION LOAD DISTRIBUTION.
8. EQUIPMENT INSTALLED ON A HOUSEKEEPING PAD REQUIRES THE HOUSEKEEPING PAD THICKNESS TO BE AT LEAST 1.5X THE ANCHOR EMBEDMENT DEPTH.
9. ALL HOUSEKEEPING PADS MUST BE SEISMICALLY DESIGNED AND DOWELLED OR CAST INTO THE BUILDING STRUCTURE AS APPROVED BY THE STRUCTURAL ENGINEER OF RECORD.
10. REBAR REINFORCING IN THE HOUSEKEEPING PAD IS REQUIRED FOR ALL INSTALLATIONS.
11. CONCRETE AND REBAR REINFORCING MUST BE DESIGNED IN ACCORDANCE ACI 318-05.
12. WALL MOUNTED EQUIPMENT MUST BE INSTALLED TO A REBAR REINFORCED STRUCTURAL CONCRETE WALL THAT IS SEISMICALLY DESIGNED AND APPROVED BY THE ENGINEER OF RECORD TO RESIST THE ADDED SEISMIC LOADS FROM COMPONENTS BEING ANCHORED TO THE WALL.
13. FLOOR MOUNTED EQUIPMENT (WITH OR WITHOUT A HOUSEKEEPING PAD) MUST BE INSTALLED TO A REBAR REINFORCED STRUCTURAL CONCRETE FLOOR THAT IS SEISMICALLY DESIGNED AND APPROVED BY THE ENGINEER OF RECORD TO RESIST THE ADDED SEISMIC LOADS FROM COMPONENTS BEING ANCHORED TO THE FLOOR.
14. WHEN INSTALLING TO A FLOOR OR WALL, REBAR INTERFERENCE MUST BE CONSIDERED.
15. EQUIPMENT ATTACHED TO ANY STRUCTURAL FLOOR OR WALL OTHER THAN THOSE CONSTRUCTED OF STRUCTURAL CONCRETE AND DESIGNED TO ACCEPT THE SEISMIC LOADS FROM THE MOUNTED EQUIPMENT ARE BEYOND THE SCOPE OF THIS SPECIFICATION.
16. INSTALLATION TO LIGHT WEIGHT CONCRETE OVER STEEL DECKING IS BEYOND THE SCOPE OF THIS SPECIFICATION.
17. INSTALLATION TO CONCRETE BLOCK OR CINDER BLOCK WALLS IS BEYOND THE SCOPE OF THIS SPECIFICATION.

IBC 2000, IBC 2003, IBC 2006, IBC 2009, IBC 2012
CERTIFIED SEISMIC DESIGN LEVELS

$S_{DS} \leq 2.0$	$S_{DS} \leq 2.0$
$z/h \leq 0.0$	$z/h \leq 1.0$
(EQUIPMENT AT GRADE)	(EQUIPMENT ON ROOF)

SOIL CLASSES A, B, C, D, SEISMIC RISK CATEGORY I, II, III, IV, AND SEISMIC DESIGN CATEGORIES A, B, C, D, E, AND F ARE ALL COVERED UNDER THIS CERTIFICATION, LIMITED BY THE S_{DS} VALUE STATED ABOVE.

THE FOLLOWING BUILDING CODES ARE ADDRESSED UNDER THIS CERTIFICATION:
- IBC 2012 - REFERENCING ASCE7-10 AND ICC AC-156
- IBC 2009 - REFERENCING ASCE7-05 AND ICC AC-156
- IBC 2006 - REFERENCING ASCE7-05 AND ICC AC-156
- IBC 2003 - REFERENCING ASCE7-02 AND ICC AC-156
- IBC 2000 - REFERENCING ASCE7-98 AND ICC AC-156

NOTE:
SEE CERTIFICATE OF COMPLIANCE (GI8-211) FOR COMPLETE CERTIFICATION INFORMATION AND ATS MODELS COVERED.

Breaker Data

For use in alternating current the Tmax T2, T4, T5, T6 and T7 circuit breakers can be equipped with trip units constructed using electronic technology. This allows protection functions to be obtained which provide high reliability, tripping precision and insensitivity to temperature and to the electromagnetic components.
The power supply needed for correct operation is supplied directly by the current sensors of the trip unit, and tripping is always guaranteed, even under single-phase load conditions.

Characteristics of the Tmax electronic trip units

Operating temperature	-13 °F…+158 °F (-25 °C…+70 °C)
Relative humidity	98%
Self-supply	0.2 x In (single phase)
Auxiliary power supply (where applicable)	24 V DC
Operating frequency	45…66 Hz
Electromagnetic compatibility (LF and HF)	IEC 60947-2 Annex F

For Tmax T2, T4, T5 and T6 the protection trip unit consists of:
– 3 or 4 current sensors (current transformers)
– external current sensors (e.g. for the external neutral), when available
– a trip unit
– a trip coil (for T2 housed in the right slot, for T4, T5 and T6 integrated in the electronic trip unit).
For Tmax T7 the protection trip unit consists of:
– 3 or 4 current sensors (Rogowski coils and current transformers)
– external current sensors (e.g. for the external neutral)
– interchangeable rating plug
– a trip unit
– a trip coil housed in the body of the circuit breaker.

Rating plugs

Circuit breaker	CS Rated current I_u	In [A]				
		400	600	800	1000	1200
T7	1000	■	■	■	■	
	1200	■	■	■	■	■

The current sensors supply the electronic trip unit with the energy needed for correct operation of the trip unit and the signal needed to detect the current.
The current sensors are available with rated primary current as shown in the table.

Current sensors

PR231/P, PR232/P, PR331/P, PR332/P	T7							■	■	■	■	■

When a protection function trips, the circuit breaker opens by means of the trip coil, which changes the contact AUX-SA (supplied on request, see chapter “Accessories” at page 3/21 and following) to tripping. Mechanical signalling reset takes place with resetting of the circuit breaker.

Basic protection functions

(L) Protection against overload
This protection function trips when there is an overload with inverse long-time delay trip according to an inverse time curve ($I^2t=k$). The protection cannot be excluded.

(S) Protection against short-circuit with time delay
This protection function trips when there is a short-circuit, with long inverse time-delay trip ($I^2t=k$ ON) or a constant trip time ($I^2t=k$ OFF). The protection can be excluded.

(I) Instantaneous protection against short-circuit
This protection function trips instantaneously in case of a short-circuit. The protection can be excluded.

(G) Protection against ground fault
The protection against ground fault trips when the vectorial sum of the currents passing through the current sensors exceeds the set threshold value, with long inverse time-delay trip ($I^2t=k$ ON) or a constant trip time ($I^2t=k$ OFF). The protection can be excluded.

2

Advanced protection functions

The PR332/P trip unit makes it possible to carry out highly developed protection against the most varied types of fault. It adds the following advanced protection functions to the basic protection functions.

(U) Protection against unbalanced phase
The protection function against unbalanced phase U can be used in those cases where a particularly precise control is needed regarding missing and/or unbalance of the phase currents. The trip time is instantaneous. The protection can be excluded.

(OT) Protection against overtemperature
The protection against overtemperature trips instantaneously when the temperature inside the trip unit exceeds 85 °C, in order to prevent any temporary or continual malfunction of the microprocessor. The protection cannot be excluded.

(ZS) Zone selectivity
ZS zone selectivity is an advanced method for carrying out coordination of the protections in order to reduce the trip times of the protection closest to the fault in relation to the time foreseen by time selectivity. Zone selectivity can be applied to the protection functions S and G, with constant time-delay trip. The protection can be excluded.

(UV, OV, RV) Protections against voltage
The three protections trip with a constant time-delay in the case of undervoltage, overvoltage and residual voltage respectively. The latter allows to detect interruptions of the neutral (or of the ground conductor in systems with grounded neutral). The protections can be excluded.

(RP) Protection against reversal of power
The protection against reversal power causes tripping of the breaker, with constant time-delay trip, when the flow of power reverses sign and exceeds, as an absolute value, the set threshold. It is particularly suitable for protection of large machines such as generators. The protection can be excluded.

(UF, OF) Protections of frequency
The two protections detect the variation in network frequency above or below the adjustable thresholds, opening the circuit breaker, with constant time-delay trip. The protection can be excluded.

PR221DS − Tmax T2, T4, T5 and T6

The PR221DS trip unit, available for T2,T4, T5 and T6, provides protection functions against overload L and short-circuit S/I (version PR221DS-LS/I): with this version you can choose whether to have inverse time-delay S or instantaneous I protection against short-circuit by moving the dedicated dip-switch. Alternatively, the version with only the protection function against instantaneous short-circuit I is available (version PR221DS-I, also see page 2/33 and following).
There is a single adjustment for the phases and the neutral. The neutral is adjustable from 50 - 100% of the phases for Tmax T2 In = 160 A (T2 In<160 A, N = 100%), whereas for T4, T5 and T6 it is possible to select the protection threshold OFF, 50% or 100% directly from the front of the trip unit by means of the specific dip switch.
The trip coil is always supplied with the PR221DS trip unit for Tmax T2 and is housed in the right-hand slot of the circuit breaker. Dedicated auxiliary contacts are available for T2 with electronic trip units (see page 3/21).
For Tmax T4, T5 and T6, the opening solenoid is housed internally and therefore, by not using the right-hand slot of the circuit breaker, all the auxiliary contacts available can be used.

PR221DS-LS/I

Protection S
Against short-circuit with delayed trip

Protection L
Against overload

Dip-switch for neutral setting (only for T4, T5 and T6)

Socket for TT1 test unit

Protection I
Against short-circuit with instantaneous trip

PR221DS - Protection functions and settings

Protection functions		Trip threshold	Trip curves[1]
L **CANNOT BE EXCLUDED**	Against overload with long inverse time delay trip and trip characteristic according to an inverse time curve (I^2t=constant)	I_1 = 0.40 - 0.44 - 0.48 - 0.52 - 0.56 - 0.60 - 0.64 - 0.68 - 0.72 - 0.76 - 0.80 - 0.84 - 0.88 - 0.92 - 0.96 - 1 x In Release between 1.1...1.3 x I_1 (IEC 60947-2 and UL 489)	at 6 x I_1, t_1 = 3s at 6 x I_1, t_1 = 6s **only for T2** at 6 x I_1, t_1 = 12s **only for T4, T5** Tolerance: ± 10% up to 6 x In, ± 20% above 6 x In
S **CAN BE EXCLUDED**	Against short-circuit with inverse short time delay trip and trip characteristic with inverse time (I^2t=constant) (selectable as an alternative to protection function I)	I_2 = 1 - 1.5 - 2 - 2.5 - 3 - 3.5 - 4.5 - 5.5 - 6.5 - 7 - 7.5 - 8 - 8.5 - 9 - 10 x In[2] Tolerance: ± 10% (T4-T5), ± 10% up to 2 x In (T2), ± 20% above 2 x In (T2)	a 8 x In, t_2 = 0,1s a 8 x In, t_2 = 0,25s Tolerance: ± 10% up to 6 x In (T4-T5), ± 20% above 6 x In (T4-T5), ± 20% (T2)
I **CAN BE EXCLUDED**	Against short-circuit with instantaneous trip (selectable as an alternative to protection function S)	I_3 = 1 - 1,5 - 2 - 2,5 - 3 - 3,5 - 4,5 - 5,5 - 6,5 - 7 - 7,5 - 8 - 8,5 - 9 - 10 x In[3] Tolerance: ± 10% (T4-T5), ± 20% (T2)	instantaneous

[1] These tolerances hold in the following conditions:
– self-powered relay at full power and/or auxiliary supply;
– two or three-phase power supply.

In conditions other than those considered, the following tollerances hold:

	Trip time
S	± 20%
I	≤ 40ms

[2] For T5 In = 600 A ⇒ I_2 max = 9.5 x In
[3] For T5 In = 600 A ⇒ I_3 max = 9.5 x In

PR222DS/P − Tmax T4, T5 and T6

The PR222DS/P trip unit, available for T4, T5 and T6, has protection functions against overload L, delayed S and instantaneous I short-circuit (version PR222DS/P-LSI). Alternatively, in addition to the functions L, S, I, it also has protection against ground fault G (version PR222DS/P-LSIG).
Setting of the PR222DS trip unit can be carried out either by means of dip switches on the front of the circuit breaker or electronically, using the PR010/T programming and control unit (see page 3/48) or the BT030 wireless communication unit (see page 3/45).
There is a single setting for the phases and neutral for which one can decide whether to set the threshold of the protection functions to OFF, to 50% or to 100% of the phases by means of two dedicated dip switches.
Furthermore, on the front of the PR222DS/P (or PR222DS/PD-A) trip units, signalling of pre-alarm and alarm of protection L is available. The pre-alarm threshold value, signalled by the red LED fixed, is equal to 0.9 x I1. It is also possible to remotely transmit the alarm of protection L by simply connecting connector X3 to the dedicated contact.

PR222DS/PD-A − Tmax T4, T5 and T6

Apart from the protection functions available for the PR222DS/P trip unit (for the settings see page 2/18), the PR222DS/PD-A trip unit, available for T4, T5 and T6 also has the communication unit integrated with Modbus® RTU protocol.
The Modbus® RTU protocol has been known and used worldwide for many years and is now a market standard thanks to its simplicity of installation, configuration and to its integration in the various different supervision, control and automation systems, as well as good level performances.
The PR222DS/PD-A trip units allow the Tmax T4, T5 and T6 circuit breakers to be integrated in a communication network based on the Modbus® RTU protocol. Modbus® RTU provides a Master-Slave system architecture where a Master (PLC, PC…) cyclically interrogates several Slaves (field devices). The devices use the EIA RS485 standard as the physical means for data transmission at a maximum transmission speed of 19.2 kbps.
Again for this trip unit, the power supply needed for correct operation of the protection functions is supplied directly by the current transformers of the trip unit and tripping is always guaranteed, even under conditions of single-phase load down. Nevertheless, communication is only possible with an auxiliary power supply of 24 V DC.

PR222DS/PD-A − Electrical characteristics

Auxiliary power supply (galvanically insulated)	24 V DC ± 20%
Maximum ripple	± 5%
Inrush current @ 24 V	1 A for 30 ms
Rated current @ 24 V	100 mA
Rated power @ 24 V	2.5 W

The PR222DS/PD-A trip unit, with integrated communication and control functions, allows a wide range of information to be acquired and transmitted remotely, opening and closing commands to be carried out by means of the electronic version motor operator, the configuration and programming parameters of the unit to be stored, such as the current thresholds of the protection functions and the protection curves.
All the information can be consulted both locally, directly on the front of the circuit breaker with the front display unit FDU, or on the HMI030 switchgear multi-meter and remotely by means of supervision and control systems.
Moreover, by connecting of the BT030 external module to the test connector of the PR222DS/PD-A trip unit, wireless communication to a PDA or Notebook is possible through a Bluetooth port.
The PR222DS/PD-A trip units can be associated with the AUX-E auxiliary contacts to know the state of the circuit breaker (open/closed), and with MOE-E motor operator (the AUX-E are obligatory when MOE-E is to be used) to remotely control circuit- breaker opening and closing as well.
If the circuit breaker fitted with the PR222DS/PD-A trip unit is inserted in a supervision system, during the test phases with the PR010/T unit, communication is automatically abandoned and starts again on completion of this operation.

For use in alternating current the Tmax T2, T4, T5, T6 and T7 circuit breakers can be equipped with trip units constructed using electronic technology. This allows protection functions to be obtained which provide high reliability, tripping precision and insensitivity to temperature and to the electromagnetic components.
The power supply needed for correct operation is supplied directly by the current sensors of the trip unit, and tripping is always guaranteed, even under single-phase load conditions.

Characteristics of the Tmax electronic trip units

Operating temperature	-13 °F…+158 °F (-25 °C…+70 °C)
Relative humidity	98%
Self-supply	0.2 x In (single phase)
Auxiliary power supply (where applicable)	24 V DC
Operating frequency	45…66 Hz
Electromagnetic compatibility (LF and HF)	IEC 60947-2 Annex F

For Tmax T2, T4, T5 and T6 the protection trip unit consists of:
– 3 or 4 current sensors (current transformers)
– external current sensors (e.g. for the external neutral), when available
– a trip unit
– a trip coil (for T2 housed in the right slot, for T4, T5 and T6 integrated in the electronic trip unit).
For Tmax T7 the protection trip unit consists of:
– 3 or 4 current sensors (Rogowski coils and current transformers)
– external current sensors (e.g. for the external neutral)
– interchangeable rating plug
– a trip unit
– a trip coil housed in the body of the circuit breaker.

Rating plugs

Circuit breaker	CS Rated current I_u	In [A]				
		400	600	800	1000	1200
T7	1000	■	■	■	■	
	1200	■	■	■	■	■

The current sensors supply the electronic trip unit with the energy needed for correct operation of the trip unit and the signal needed to detect the current.
The current sensors are available with rated primary current as shown in the table.

When a protection function trips, the circuit breaker opens by means of the trip coil, which changes the contact AUX-SA (supplied on request, see chapter “Accessories” at page 3/21 and following) to tripping. Mechanical signalling reset takes place with resetting of the circuit breaker.

Basic protection functions

(L) Protection against overload
This protection function trips when there is an overload with inverse long-time delay trip according to an inverse time curve ($I^2t=k$). The protection cannot be excluded.

(S) Protection against short-circuit with time delay
This protection function trips when there is a short-circuit, with long inverse time-delay trip ($I^2t=k$ ON) or a constant trip time ($I^2t=k$ OFF). The protection can be excluded.

(I) Instantaneous protection against short-circuit
This protection function trips instantaneously in case of a short-circuit. The protection can be excluded.

(G) Protection against ground fault
The protection against ground fault trips when the vectorial sum of the currents passing through the current sensors exceeds the set threshold value, with long inverse time-delay trip ($I^2t=k$ ON) or a constant trip time ($I^2t=k$ OFF). The protection can be excluded.

2

Advanced protection functions

The PR332/P trip unit makes it possible to carry out highly developed protection against the most varied types of fault. It adds the following advanced protection functions to the basic protection functions.

(U) Protection against unbalanced phase
The protection function against unbalanced phase U can be used in those cases where a particularly precise control is needed regarding missing and/or unbalance of the phase currents. The trip time is instantaneous. The protection can be excluded.

(OT) Protection against overtemperature
The protection against overtemperature trips instantaneously when the temperature inside the trip unit exceeds 85 °C, in order to prevent any temporary or continual malfunction of the microprocessor. The protection cannot be excluded.

(ZS) Zone selectivity
ZS zone selectivity is an advanced method for carrying out coordination of the protections in order to reduce the trip times of the protection closest to the fault in relation to the time foreseen by time selectivity. Zone selectivity can be applied to the protection functions S and G, with constant time-delay trip. The protection can be excluded.

(UV, OV, RV) Protections against voltage
The three protections trip with a constant time-delay in the case of undervoltage, overvoltage and residual voltage respectively. The latter allows to detect interruptions of the neutral (or of the ground conductor in systems with grounded neutral). The protections can be excluded.

(RP) Protection against reversal of power
The protection against reversal power causes tripping of the breaker, with constant time-delay trip, when the flow of power reverses sign and exceeds, as an absolute value, the set threshold. It is particularly suitable for protection of large machines such as generators. The protection can be excluded.

(UF, OF) Protections of frequency
The two protections detect the variation in network frequency above or below the adjustable thresholds, opening the circuit breaker, with constant time-delay trip. The protection can be excluded.

PR221DS − Tmax T2, T4, T5 and T6

The PR221DS trip unit, available for T2,T4, T5 and T6, provides protection functions against overload L and short-circuit S/I (version PR221DS-LS/I): with this version you can choose whether to have inverse time-delay S or instantaneous I protection against short-circuit by moving the dedicated dip-switch. Alternatively, the version with only the protection function against instantaneous short-circuit I is available (version PR221DS-I, also see page 2/33 and following).
There is a single adjustment for the phases and the neutral. The neutral is adjustable from 50 - 100% of the phases for Tmax T2 In = 160 A (T2 In<160 A, N = 100%), whereas for T4, T5 and T6 it is possible to select the protection threshold OFF, 50% or 100% directly from the front of the trip unit by means of the specific dip switch.
The trip coil is always supplied with the PR221DS trip unit for Tmax T2 and is housed in the right-hand slot of the circuit breaker. Dedicated auxiliary contacts are available for T2 with electronic trip units (see page 3/21).
For Tmax T4, T5 and T6, the opening solenoid is housed internally and therefore, by not using the right-hand slot of the circuit breaker, all the auxiliary contacts available can be used.

PR221DS - Protection functions and settings

Protection functions		Trip threshold	Trip curves[1]
L **CANNOT BE EXCLUDED**	Against overload with long inverse time delay trip and trip characteristic according to an inverse time curve (I^2t=constant)	I_1 = 0.40 - 0.44 - 0.48 - 0.52 - 0.56 - 0.60 - 0.64 - 0.68 - 0.72 - 0.76 - 0.80 - 0.84 - 0.88 - 0.92 - 0.96 - 1 x In Release between 1.1...1.3 x I_1 (IEC 60947-2 and UL 489)	at 6 x I_1, t_1 = 3s at 6 x I_1, t_1 = 6s **only for T2** at 6 x I_1, t_1 = 12s **only for T4, T5** Tolerance: ± 10% up to 6 x In, ± 20% above 6 x In
S **CAN BE EXCLUDED**	Against short-circuit with inverse short time delay trip and trip characteristic with inverse time (I^2t=constant) (selectable as an alternative to protection function I)	I_2 = 1 - 1.5 - 2 - 2.5 - 3 - 3.5 - 4.5 - 5.5 - 6.5 - 7 - 7.5 - 8 - 8.5 - 9 - 10 x In[2] Tolerance: ± 10% (T4-T5), ± 10% up to 2 x In (T2), ± 20% above 2 x In (T2)	a 8 x In, t_2 = 0,1s a 8 x In, t_2 = 0,25s Tolerance: ± 10% up to 6 x In (T4-T5), ± 20% above 6 x In (T4-T5), ± 20% (T2)
I **CAN BE EXCLUDED**	Against short-circuit with instantaneous trip (selectable as an alternative to protection function S)	I_3 = 1 - 1,5 - 2 - 2,5 - 3 - 3,5 - 4,5 - 5,5 - 6,5 - 7 - 7,5 - 8 - 8,5 - 9 - 10 x In[3] Tolerance: ± 10% (T4-T5), ± 20% (T2)	instantaneous

[1] These tolerances hold in the following conditions:
– self-powered relay at full power and/or auxiliary supply;
– two or three-phase power supply.

In conditions other than those considered, the following tollerances hold:

	Trip time
S	± 20%
I	≤ 40ms

[2] For T5 In = 600 A ⇒ I_2 max = 9.5 x In
[3] For T5 In = 600 A ⇒ I_3 max = 9.5 x In

PR222DS/P − Tmax T4, T5 and T6

The PR222DS/P trip unit, available for T4, T5 and T6, has protection functions against overload L, delayed S and instantaneous I short-circuit (version PR222DS/P-LSI). Alternatively, in addition to the functions L, S, I, it also has protection against ground fault G (version PR222DS/P-LSIG).
Setting of the PR222DS trip unit can be carried out either by means of dip switches on the front of the circuit breaker or electronically, using the PR010/T programming and control unit (see page 3/48) or the BT030 wireless communication unit (see page 3/45).
There is a single setting for the phases and neutral for which one can decide whether to set the threshold of the protection functions to OFF, to 50% or to 100% of the phases by means of two dedicated dip switches.
Furthermore, on the front of the PR222DS/P (or PR222DS/PD-A) trip units, signalling of pre-alarm and alarm of protection L is available. The pre-alarm threshold value, signalled by the red LED fixed, is equal to 0.9 x I1. It is also possible to remotely transmit the alarm of protection L by simply connecting connector X3 to the dedicated contact.

PR222DS/PD-A − Tmax T4, T5 and T6

Apart from the protection functions available for the PR222DS/P trip unit (for the settings see page 2/18), the PR222DS/PD-A trip unit, available for T4, T5 and T6 also has the communication unit integrated with Modbus® RTU protocol.
The Modbus® RTU protocol has been known and used worldwide for many years and is now a market standard thanks to its simplicity of installation, configuration and to its integration in the various different supervision, control and automation systems, as well as good level performances.
The PR222DS/PD-A trip units allow the Tmax T4, T5 and T6 circuit breakers to be integrated in a communication network based on the Modbus® RTU protocol. Modbus® RTU provides a Master-Slave system architecture where a Master (PLC, PC…) cyclically interrogates several Slaves (field devices). The devices use the EIA RS485 standard as the physical means for data transmission at a maximum transmission speed of 19.2 kbps.
Again for this trip unit, the power supply needed for correct operation of the protection functions is supplied directly by the current transformers of the trip unit and tripping is always guaranteed, even under conditions of single-phase load down. Nevertheless, communication is only possible with an auxiliary power supply of 24 V DC.

PR222DS/PD-A − Electrical characteristics

Auxiliary power supply (galvanically insulated)	24 V DC ± 20%
Maximum ripple	± 5%
Inrush current @ 24 V	1 A for 30 ms
Rated current @ 24 V	100 mA
Rated power @ 24 V	2.5 W

The PR222DS/PD-A trip unit, with integrated communication and control functions, allows a wide range of information to be acquired and transmitted remotely, opening and closing commands to be carried out by means of the electronic version motor operator, the configuration and programming parameters of the unit to be stored, such as the current thresholds of the protection functions and the protection curves.
All the information can be consulted both locally, directly on the front of the circuit breaker with the front display unit FDU, or on the HMI030 switchgear multi-meter and remotely by means of supervision and control systems.
Moreover, by connecting of the BT030 external module to the test connector of the PR222DS/PD-A trip unit, wireless communication to a PDA or Notebook is possible through a Bluetooth port.
The PR222DS/PD-A trip units can be associated with the AUX-E auxiliary contacts to know the state of the circuit breaker (open/closed), and with MOE-E motor operator (the AUX-E are obligatory when MOE-E is to be used) to remotely control circuit- breaker opening and closing as well.
If the circuit breaker fitted with the PR222DS/PD-A trip unit is inserted in a supervision system, during the test phases with the PR010/T unit, communication is automatically abandoned and starts again on completion of this operation.

Transfer Switch One-Year Limited Warranty

Your Kohler product has been manufactured and inspected with care by experienced craftsmen. If you are the original end user, Kohler Co. warrants, for the period indicated below, each product to be free from defects in materials and workmanship. In the event of a defect in materials or workmanship, Kohler Co. will repair, replace, or make appropriate adjustment at Kohler Co.'s option if the product, upon Kohler Co.'s inspection, is found to be properly installed, maintained, and operated in accordance with Kohler Co.'s instruction manuals. A Kohler distributor, dealer, or authorized service representative must perform startup.

Kohler Product	**Warranty Coverage**
Transfer switch and factory-supplied transfer switch accessories	One (1) year from the registered startup date. In any event, the warranty period will expire not later than thirty (30) months from the date of shipment from Kohler Co.'s factory.
Transfer switch main contacts	Ten (10) years from the registered startup date. In any event, the warranty period will expire not later than eleven (11) years and six (6) months from the date of shipment from Kohler Co.'s factory.

The following will **not** be covered by the warranty:

1. Normal wear, periodic service, and routine adjustments.
2. Damage, including but not limited to damage caused by accidents, improper installation or handling, faulty repairs not performed by an authorized Kohler service representative, improper storage, or acts of God.
3. Damage caused by:
   a. Operation above or below rated capacity, voltage, or frequency.
   b. Modifications.
   c. Installation contrary to published specifications and codes.
4. Damage caused by negligent maintenance such as:
   a. Failure to provide a clean, dry environment.
   b. Failure to perform recommended exercising.
   c. Failure to perform scheduled maintenance as prescribed in supplied manuals.
   d. Use of parts and/or procedures other than factory-supplied or -approved replacement parts and/or procedures.
5. Non-Kohler replacement parts. Replacement of a failed Kohler part with a non-Kohler part voids the warranty on that part.
6. Original installation charges and startup costs.
7. Additional expenses for repair after normal business hours, i.e. overtime or holiday labor rates.
8. Rental of equipment during performance of warranty repairs.
9. Removal and replacement of non-Kohler-supplied options and equipment.
10. Non-Kohler-authorized repair shop labor without prior approval from Kohler Co. Warranty Department.
11. Expenses incurred investigating performance complaints unless the problem is caused by defective Kohler materials or workmanship.
12. Maintenance items such as fuses, lamps, and adjustments.
13. Labor and travel charges after the first year of the transfer switch main contacts warranty period.
14. Travel time and mileage exceeding 300 miles round trip.

To obtain warranty service, call 1-800-544-2444 for your nearest authorized Kohler service representative or write Kohler Co., Kohler Power Systems Service Department, MS072, Kohler, WI 53044 USA.

KOHLER CO. SHALL NOT BE LIABLE FOR SPECIAL, INCIDENTAL, AND/OR CONSEQUENTIAL DAMAGES OF ANY KIND including, but not limited to, incidental and/or consequential labor costs, installation charges, telephone charges, or transportation charges in connection with the replacement or repair of defective parts.

This is our exclusive written warranty. We make no other express warranty nor is anyone authorized to make any on our behalf.

ANY IMPLIED OR STATUTORY WARRANTY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS EXPRESSLY LIMITED TO THE DURATION OF THIS WARRANTY. Some states do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of incidental and/or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

KOHLER®

CERTIFICATE OF COMPLIANCE
SEISMIC DESIGN OF NONSTRUCTURAL COMPONENTS AND SYSTEMS

Certification No.

VMA-46550-01C (Revision 9)

Expiration Date: 10/31/2022

Certification Parameters:

The nonstructural products (mechanical and/or electrical components) listed on this certificate are CERTIFIED[1] FOR SEISMIC APPLICATIONS in accordance with the following building code[2] releases.

IBC 2018, 2015, 2012, 2009

The following model designations, options, and accessories are included in this certification. Reference report number VMA-46550-01 as issued by The VMC Group for a complete list of certified models, included accessories/options, and certified installation methods.

Kohler; Automatic Transfer Switches

KCx, KBx, KGx, KEP ICCB, KSx, KEP MCCB; 30 - 4000 Amps

The above referenced equipment is **APPROVED** for seismic application when properly installed[3], used as intended, and contains a Seismic Certification Label referencing this Certificate of Compliance[4]. As limited by the tabulated values, below grade, grade, and roof-level installations, installations in essential facilities, for life safety applications, and/or of equipment containing hazardous contents are permitted and included in this certification with an Equipment Importance Factor assigned as I_p=1.5. The equipment is qualified by successful seismic shake table testing at the nationally recognized University of California Berkeley Pacific Earthquake Engineering Research Center, National Technical Solutions Longmont (formerly Sun APT), and National Technical Solutions Huntsville (formerly Wyle Labs) under the witness of the ISO Accredited Product Certification Agency, the VMC Group.

Certified Seismic Design Levels[8]			
Certified **IBC**	**Importance $I_p \leq 1.5$** Soil Classes A-E Risk Categories I-IV Design Categories A-F	z/h ≤ 1.0	z/h = 0.0
		$S_{DS} \leq 2.000$ g	$S_{DS} \leq 2.000$ g

The qualified seismic design level stated is the lowest for all series this certificate covers. For more information, see the certified product tables on page 2.

CERTIFICATE OF COMPLIANCE

SEISMIC DESIGN OF NONSTRUCTURAL COMPONENTS AND SYSTEMS

Certified Product Table:

Model	Amp Range	NEMA 1	NEMA 3R	NEMA 4	NEMA 4X	NEMA 12	Certified S_{DS} Level	Configuration
KCS	30 - 1200	X	X	X	X	X	2.00g at Roof 2.50g at Grade	Non-Bypass (Standard Configuration)
	1600 - 4000			N/A	N/A	N/A		
KCP / KCC	150 - 1200			X	X	X		
	1600 - 4000			N/A	N/A	N/A		
KCS / KCP / KCC	1600 - 2000							Non-Bypass (Front Connected)
KBS / KBP / KBC	150 - 4000						2.00g at Roof and Grade	Bypass
KGS / KGP	150 - 3000		N/A					
KEP ICCB	800 - 4000		X					Service Entrance (Insulated Case Circuit Breaker)
KSS	40 - 1000			X	X	X		Standard Transistion
KSP	100 - 600							Programmed Transistion
KEP MCCB	100 - 1200			N/A	N/A			Service Entrance (Molded Case Circuit Breaker)
	100 - 600	N/A	N/A		X	N/A		

An "X" denotes that the given NEMA enclosure is available as a certified option, whereas the "N/A" denotes the given NEMA enclosure is not available as a certified option.

Group	Type	S_{DS} (z/h=0)	S_{DS} (z/h=1)	A_{Flex-H}	A_{Rig-H}	A_{Flex-V}	A_{Rig-V}	F_p/W_p
Seismic	AC156	2.00	2.00	3.20	2.40	1.33	0.53	1.50

This certification includes the product and factory supplied accessories and options. The product and included accessories and options shall be a catalogue design and factory supplied. The product shall be installed and attached to the building structure per the manufacturer supplied seismic installation instructions. For a list of certified configurations and options please directly contact the manufacturer. This certification excludes all non-factory supplied accessories, including but not limited to enclosures, isolation/restraint devices, remote control panels, mounting brackets, and other electrical/mechanical components.

IBC CERTIFIED VMC GROUP

VMA-46550-01C (Revision 9)

THE POWER OF TOGETHER™

KOHLER®

CERTIFICATE OF COMPLIANCE

SEISMIC DESIGN OF NONSTRUCTURAL COMPONENTS AND SYSTEMS

Notes & Comments:

1. All equipment listed herein successfully passed the seismic acceptance criteria for shake testing non-structural components and systems as set forth in the ICC AC-156. The Test Response Spectrum (TRS) enveloped the Required Response Spectrum (RRS) for all units tested. The units cited in this certification were representative sample(s) of a contingent of models and all remained captive and structurally sound after the seismic shake simulation. The units also remained functionally operational after the simulation testing as functional testing was completed by the equipment manufacturer before and after the seismic simulations. Although a seismic qualified unit inherently contains some wind resisting capacity, that capacity is undetermined and is excluded from this certification. Snow/Ice loads have been neglected and thus limit the unit to be installed both indoors (covered by an independent protective structure) and out of doors (exposed to accumulating snow/ice) for ground snow loads no greater than 30 psf for all applications.

2. The following building codes are addressed under this certification:
   IBC 2018 referencing ASCE7-16 and ICC-ES AC-156
   IBC 2015 referencing ASCE7-10 and ICC-ES AC-156
   IBC 2012 referencing ASCE7-10 and ICC-ES AC-156
   IBC 2009 referencing ASCE7-05 and ICC-ES AC-156

3. Refer to the manufacturer supplied installation drawings for anchor requirements and mounting considerations for seismic applications. Required anchor locations, size, style, and load capacities (tension and shear) may be specified on the installation drawings or specified by a 3rd party. Mounting requirement details such as anchor brand, type, embedment depth, edge spacing, anchor-to-anchor spacing, concrete strength, special inspection, wall design, and attachment to non-building structures must be outlined and approved by the Engineer of Record for the project or building. Structural walls, structural floors, and housekeeping pads must also be seismically designed and approved by the project or building Structural Engineer of Record to withstand the seismic anchor loads as defined on the installation drawings. The installing contractor is responsible for ensuring the proper installation of all anchors and mounting hardware.

4. For this certificate and certification to remain valid, this certificate must correspond to the "Seismic Certification Label" found affixed to the unit by the factory. The label ensures the manufacturer built the unit in conformance to the IBC seismic design criteria set forth by the Certified Seismic Qualification Agency, the VMC Group, and meets the seismic design levels claimed by this certificate.

5. Mechanical, Electrical, and Plumbing connections to the equipment must be flexibly attached as to not transfer load through the connection. The structural integrity of any conduit, cable trays, piping, ductwork and/or flexible connections is the responsibility of others. This certification does not guarantee the equipment will remain compliant to NEMA, IP, UL, or CSA standards after a seismic event.

6. This certificate applies to units manufactured at:
   300 Twin Oaks Rd, Kohler, WI 53044

7. This certification follows the VMC Group's ISO-17065 Scheme.

8. The qualified seismic design level stated is the lowest for all series this certificate covers. For more information, see the certified product tables on page 2.

IBC CERTIFIED VMC GROUP

Kohler Automatic Transfer Switch Test Program
Non-Bypass Models

Testing is an integral part of quality assurance. In keeping with our uncompromising commitment to quality, safety, and reliability, every Kohler Automatic Transfer Switch (ATS) undergoes an extensive series of performance and production testing.

Performance Testing

All Kohler ATSs are UL1008 listed, which includes the following performance tests:

- General – Normal Operation
- Overvoltage
- Undervoltage
- Overload
- Temperature Rise
- Endurance
- Dielectric Voltage – Withstand
- Short Circuit Withstand
- Short Circuit Close- On
- Dielectric Voltage – Withstand (repeated)
- Strength of insulating base and support

EMC/EMI Immunity Verification

Controls and printed circuit board assemblies are evaluated to IEC and IEEE tests, including:

- EN61000- 4- 4 Fast Transient Immunity Severity Level 4
- EN61000- 4- 5 Surge Immunity Class 4 (voltage sensing and programmable inputs only)
- IEC Specifications for EMI/EMC Immunity:
  - CISPR 11, Radiated Emissions
  - IEC 1000- 4- 2, Electrostatic Discharge
  - IEC 1000- 4- 3, Radiated Electromagnetic Fields
  - IEC 1000- 4- 4, Electrical Fast Transients (Bursts)
  - IEC 1000- 4- 5, Surge Voltage
  - IEC 1000- 4- 6, Conducted RF Disturbances
  - IEC 1000- 4- 8, Magnetic Fields
  - IEC 1000- 4- 11, Voltage Dips and Interruptions
- IEEE 472 (ANSI C37.90A) Ring Wave Test

Production Testing

Every Kohler ATS is fully tested prior to leaving the factory. Visual inspections are also performed by the mechanism manufacturer as well as Kohler personnel during assembly and final test. Production testing includes the following:

- Electrical operation testing on all ATSs
- Verification of controller communication
- Verification of controller settings
- Voltage calibration
- Automatic transfer switch operation when Normal source is lost
  - Verify engine start signal
  - Verify transfer to Emergency position when Emergency source is available
- Automatic Transfer switch operation when Normal source returns
  - Verify transfer to Normal position
  - Verify engine start signal is removed

CSA Certification

CSA Certification is also available upon request. CSA certification includes the following additional test:

- Dielectric test at 1000V plus twice the maximum rated voltage

Options Testing

The operation of all installed options is verified. Tested options include:

- Input/Output Modules
- Supervised Transfer Control Switch
- Preferred Source Switch
- Load Shed, Normal and Emergency
- Line-to- Neutral Monitoring
- Digital Meter setup and operation

Kohler offers other testing at the customer's request at an additional charge. These optional tests include customized load testing for specific application, witness testing, and contact resistance testing. A certified test report is also available at an additional charge.

3.03 - CONTRACT CLOSEOUT 13

PART 1 – GENERAL

1.01 - SCOPE Confirmed

A. Furnish, place in operation, and test standby diesel engine driven generator set, EPA Compliant, complete with enclosure, instrumentation and controls, and required supporting systems as specified herein.

B. The unit shall be provided in an outdoor, weather proof, non-walk-in, sound attenuated enclosure with an integral sub-base fuel storage tank with a capacity for 24 hours of standby operation.

C. The unit shall have a minimum power rating as indicated on Contract drawings, standby at 80 percent lagging power factor with three-phase, 60-Hertz, 480 volt, four-wire, alternating current generator.

D. The unit shall be arranged for automatic starting and stopping-, and load transfer upon failure of the normal source of power through the pump station electrical enclosure automatic transfer switch specified in SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT.

E. The engine generator set shall exhibit less than 20 percent voltage dip and less than 5 percent frequency dip during starting of the loads identified in Attachment A, Attachment B and Attachment C to this Section.

F. The engine-generator package shall be complete in all respects and shall include all equipment and controls necessary for a fully operational standby power supply system.

G. The generator unit shall comply with the Commonwealth of Massachusetts, local and federal codes and regulations for standby diesel generators.

H. Attention is directed to the DOCUMENT 00700, GENERAL CONDITIONS and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

1.02 - MEASUREMENT AND PAYMENT

A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

1.03 - DEFINITIONS

A. Definitions shall be as specified in DOCUMENT 00700, GENERAL CONDITIONS.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. “Work” shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.
7. Exposed" shall mean not concealed as defined above.
8. “Furnished by others” shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

Confirmed **1.04 - SUBMITTALS**

A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of the DOCUMENT 00700, GENERAL CONDITIONS and SECTION 01300, SUBMITTALS.

B. Submittals required under this section include, but are not limited to the following:

1. A copy of this specification section with addenda and all referenced specification sections with addenda, with each paragraph check-marked to indicate specification compliance.

2. Outline equipment drawings and elevation drawings with shipping splits with estimated weights defined.

3. Bill of Materials including manufacturer name, model number, and quantities.

4. Equipment catalog cuts clearly annotated to show which products and options are being supplied.

5. Wiring diagrams showing internal and external wiring. Wiring diagrams shall clearly indicate all required field wiring and terminations.

6. Enclosure layout drawings showing locations of internal and external mounted devices including light fixtures, receptacles, panelboards, heaters, batteries and battery chargers and fire alarm system components.

7. Submit catalog cut sheets for devices including light fixtures, receptacles, panelboards, batteries, battery chargers, and fire alarm system components.

8. Engine-generator skid base drawings.

9. Performance specifications of all items of equipment.

10. Engine generator loading calculation, per the requirements of Attachment A, Attachment B and Attachment C to this section.

11. Provide certificate of conformance to UL Standard 2200, Stationary Engine Generator Assemblies.

12. Attenuation curve for the silencing equipment as offered to accomplish the required silencing for this installation.

13. EPA Tier compliance certificate.

14. Data to be provided by engine generator system supplier:

    a. Submit generator loading calculations and data for engine, generator, and accessories: (for rated kW capacity).

        (1) Engine Data

            (a) Manufacturer

            (b) Model

            (c) Number and arrangement of cylinders

            (d) RPM

            (e) Bore X stroke

            (f) Maximum power at rated RPM

            (g) BMEP at rated kW (including any parasitic loads and generator efficiency)

            (h) Piston speed, feet per minute

            (i) Make and model of governor

            (j) Make and model of overspeed shutdown device

Confirmed

(2) Generator Data

(a) Manufacturer

(b) Model

(c) Rated kVA

(d) Rated kW

(e) Voltage

(f) Temperature rise above 40 degrees C ambient. Stator by thermometer and field by resistance in degrees C.

(g) Class of insulation

(h) Generator efficiency including excitation losses at 80 percent PF

1) Full load

2) Three quarters load

3) Half load

(i) Generator sub-transient reactance in ohms

(3) Guaranteed maximum fuel consumption rate at generator terminals @ 138,000 BTU/gallon of ultra-low sulfur diesel fuel:

(a) Full load, gal/hr

(b) Three-quarters load, gal/hr

(c) Half load, gal/hr

(4) Generator unit and accessories

(a) Weight of unit

(5) Exhaust gas emissions data, maximum values at full load, 3/4 load, 1/2 load, and 1/4 load:

Temperature in degrees F

(6) Flow in ACFM (mass and volume)

(7) Combustion air volume in CFM

(8) Cold cranking amperes rating of engine starting batteries (CCA).

1. Provide manufacturer's printed installation instructions including anchoring details to meet earthquake requirements as specified and indicated.
2. Information on the proposed jacket water treatment and procedures for flushing of the cooling systems.
3. Engine-generator skid base drawings, indicating size and location of anchor bolts, and conduit locations.
4. Operations and Maintenance Manuals.
5. As-built drawings and material summary shall be shipped with the equipment.
6. Control panel layout drawings, dimensions, and component bill of materials. Outline drawings showing conduit entry areas and anchoring information. Description of control including operation of interface equipment.
7. Electrical, instrumentation, control and wiring diagrams in sufficient detail to allow installation of instrumentation and controls and electrical components.
8. Time versus current characteristic curves for generator main circuit breaker.

Confirmed

1.05 - PRODUCT HANDLING

A. Products shall be shipped, stored and handled in a manner consistent with the written recommendations of the manufacturer and as to not to degrade quality, serviceability or appearance. All products delivered to the project site shall be accompanied by test reports certifying that the pipe conforms to the ASTM specifications listed herein. Any unit found to be defective either before or after installation shall be removed from the project site and replaced with a sound unit.

B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

1.06 - DESIGN CRITERIA

A. The materials and equipment specified are intended to be standard materials and equipment of demonstrated successful performance, as manufactured by reputable concerns. Equipment shall be designed and constructed in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the equipment.

B. The design conditions and other pertinent requirements for the equipment are listed on the Contract Drawings.

1.07 - QUALITY ASSURANCE

A. The engine-generator set shall be factory designed, certified prototype tested, and as specified. The manufacturer shall be regularly engaged in the production of this type of equipment and shall maintain a permanent service organization and supply of spare parts, of the types utilized for the equipment specified herein.

1.08 - REFERENCES

A. American Gear Manufacturers Association (AGMA)

O. National Fire Protection Association (NFPA)

P. Where reference is made to one of the above standards, the version in effect at the time of bid opening shall apply.

1.09 - SEISMIC REQUIREMENTS:

A. Generator unit shall conform to the seismic requirements as indicated and as specified in SECTION 01900, SEISMIC AND WIND REQUIREMENTS.

1.10 - UNIT PERFORMANCE

Confirmed

A. The units shall be utilized to provide standby power service in the event the normal source is not available.

B. The voltage regulation shall be within plus or minus one percent from zero load to full-rated load. Upon application or removal of full-rated load in one step, the transient voltage dip and recovery to steady state operation shall be within five seconds.

C. Stable or steady state operation is defined as operation with the frequency variation not exceeding plus or minus 0.25 percent (0.15 Hertz) and voltage variation plus or minus one percent of their mean value for constant load from zero load to full rated load. A rheostat shall provide plus or minus five percent voltage adjustment from rated voltage.

PART 2 - PRODUCTS

2.01 - MANUFACTURERS

A. The Owner has standardized on standby diesel engine driven generator sets as manufactured by Kohler.

B. This is a proprietary specification. No other manufacturers are acceptable.

2.02 - GENERAL

A. Engine-generator set shall be a factory-assembled unit that is a standard production unit with existing torsional analysis data. Mixing and matching engine and generator by a third-party supplier is not acceptable.

B. The engine and generator shall be directly connected with a flexible coupling, shall be free from injurious torsional or other vibration and shall be mounted on a heavy steel sub-base.

C. The engine and generator shall be directly connected and shall operate at the same rotative speed. The use of gearing or other speed adjustment between the engine and the generator, such that the engine and generator operate at different rotative speeds will not be allowed.

D. The engine-generator set shall allow easy access to the various parts for maintenance purposes.

E. The engine-generator set shall be pre-piped and pre-wired.

F. The complete engine-generator unit shall be free from harmful torsional or other vibration throughout the entire operating range of speed and load. The engine manufacturer shall provide an analysis of the complete engine-generator unit, which shall show where any critical speed will be encountered, together with the order, the frequency and magnitude of any critical speed.

2.03 - ENGINE

In line type

A. The diesel engine shall be of ~~V-type~~ construction, four-stroke cycle, turbo-charged, full compression ignition, diesel, with mechanical fuel injection. The unit shall operate at a speed of not more than 1800 rpm.

B. The rating of the engine shall not exceed the manufacturer's published standby rating. The gross engine horsepower required to produce the standby rating shall not exceed the manufacturer's published continuous duty rating by more than 150 percent. Continuous duty rating shall be as defined in BS649 or DIN6270 but in no case shall it exceed the manufacturer's published continuous duty rating. The gross engine horsepower required for the generator set standby rating described above shall include all parasitic demands such as generator inefficiencies, fuel pumps, water pumps, and all accessories necessary to the unit's proper operation while operating at rated loads.

C. The engine shall be capable of satisfactory operation on ultra-low sulfur diesel fuel.

2.04 - ENGINE GENERATOR ENCLOSURE

A. Provide complete factory pre-wired, weatherproof, sound attenuated, non walk-in enclosure.

B. Building capable of withstanding wind equal to 125 mph.

C. Roof load equal to 50 psf.

D. The sound attenuation shall be provided with noise reduction level of 65 dBA at 23ft from the enclosure.

E. The inlet and exhaust air handling system shall provide the necessary level of sound attenuation.

Confirmed

F. Provide enclosure with high efficiency, LED type, industrial, enclosed with acrylic lens, fiberglass housing and UL listed light fixtures. Provide light switches at each door.

G. The enclosure shall be provided with electrical space heater(s), designed to hold a minimum space temperature of 50 degrees F, with outside temperature of -1 degree F. Building shall be pre-painted aluminum stressed-skin construction, door and door frame, lifting rings, mounting frame, insulation, electrical package, louvers, muffler mounting bracket, and other appurtenances to provide complete unit.

H. Electrical Package

1. All equipment and devices shall be U.L. listed.
2. Provide enclosure electrical package complete and factory pre-wired. The enclosure package shall include lighting, receptacles, heating and ventilation equipment.
3. Provide ground studs for earth grounding.

I. Louvers and Dampers

1. Provide acoustical louvers and dampers for engine generator inlet, exhaust and ventilation air.
2. Fixed louvers, all aluminum construction, riveted into aluminized steel frame to form rigid, water resistant assembly.
3. Dampers shall be powered closed, spring open, fail safe type.
4. Properly size louvers and dampers to allow sufficient engine combustion air, radiator cooling air, and ventilation air with maximum 0.5 in. water restriction.

J. Enclosure shall be pre-painted steel construction, with removable panels to allow for maintenance with muffler mounting bracket, and other appurtenances to provide a complete unit.

1. Muffler and Mounting Bracket
   a. Critical grade silencer with bracket.
   b. Provide exhaust pipe with birdscreen and rain cap.
   c. All interior engine exhaust piping to be insulated.
2. Fuel Piping
   a. Provided integral with base fuel tank.

2.05 - EQUIPMENT

A. Governor

1. Provide isochronous solid state governor, capable of maintaining isochronous regulation from no load to full rated load within 0.25 percent of rated frequency.
2. The governor controller shall be mounted within the generator control panel. The governor shall have the capability for manual adjustment of speed setting and speed droop. Speed droop shall be adjustable from 0 to 5 percent from no load to full load. The controller shall eliminate all electromagnetic interference.
3. Provide a separate overspeed shutdown device which shall, in case of predetermined overspeed of the operation of various protective devices as later specified, instantly stop the engine without the fuel injection system losing its prime.

2.06 - GENERATOR AND EXCITATION SYSTEM

A. The generator shall be drip-proof, guarded, and be able to connect to the specified engine output and shall be 3-phase, 60-Hertz, 4-wire, 480-volt operation, "WYE" connected. The generator shall be mechanically and torsionally matched to the engine driver and shall be provided to withstand inherent pulsating torques of the engine. Full load efficiency of the combined generator, exciter and regulator shall be not less than 95 percent.

Confirmed

B. The generator shall conform to the applicable parts of the following standards, unless otherwise specified:

1. NEMA MG1, Motors and Generators
2. IEEE 43, Recommended Practice for Insulation Testing of Large AC Rotating Machinery
3. CSA C22.2-100 Designation ABL3
4. Testing shall be in accordance with IEEE-115 and NEMA MG-1 standards

C. The generator windings, insulation and excitation system shall be braced to withstand any possible short-circuit stresses.

D. The temperature rise of the generator windings, when operated at rated prime power load and under continuous duty conditions with cooling air inlet temperature of 40 degrees C, shall not exceed 130 degrees C when measured by the resistance method.

E. The stator frame shall be fabricated bar and plate steel construction.

1. All insulation materials used in the stator shall have a temperature rating of Class H per IEEE Standard 1. The coils shall be of a formed coil construction using a magnet wire meeting NEMA MW36-C specifications.
2. The complete stator shall be wound with a 2/3 stator winding pitch and processed in a vacuum pressure impregnation chamber. Encapsulation of the stator shall be accomplished with a two-part epoxy system.

F. The rotor shall be of the fully laminated, salient pole type. Cooling fans shall be an integral part of the rotor assembly. The rotor shall be dynamically balanced for all speeds up to 125 percent of rated speed per NEMA specification.

1. Insulation materials used on the rotor shall have a temperature rating of Class H. The poles shall be of a layer wound construction using a magnet wire meeting NEMA MW35-C or MW36-C specifications.
2. The complete winding and rotor pole assembly shall be in a vacuum pressure impregnation chamber. Encapsulation of the assembly shall be accomplished with a thixotropic, single component epoxy resin.

G. The exciter shall be a high frequency, direct connected, rotating brushless type, three phase, full wave rectified, and shall be matched with the generator rotor and control system. Both the armature and field windings shall be a vacuum pressure impregnated with epoxy resin.

H. The pilot exciter shall be permanent magnet generator type. The stator winding shall be vacuum pressure impregnated with epoxy resin. The permanent magnet generator shall have the ability to provide a nominal 300 percent of the 130 degrees C rise rated three-phase short circuit for ten seconds at the alternator terminals.

I. The digital voltage regulator shall be hermetically sealed, silicon controlled rectifier type and shall employ a zener reference and three phase sensing. The voltage regulator shall provide automatic protection of the entire unit on 3 phase short-circuits. The voltage regulator shall include automatic over-excitation and under-frequency protection. Input isolation transformers and filters shall be provided. Exciter shall be fast response type with a rotating rectifier and surge suppresser, 3-phase, full-wave bridge.

J. The voltage regulator and associated equipment shall be mounted in the generator terminal box. Manual voltage adjustment potentiometer shall be mounted in the Generator Control Panel.

K. Generator stator leads shall be connected to tinned copper bus bars in an oversize terminal box. The box shall allow bottom entry of cables and conduits shown on the contract drawings.

2.07 - SYSTEMS

A. Fuel Storage System:

1. Provide base fuel storage tank, integral to the mounting of the engine generator unit.
2. The fuel tank shall be UL listed as “primary containment aboveground tank for flammable and combustible liquids”.
3. Provide necessary supply and return lines; drainage and supply valve control.

Confirmed

4. Tapped openings in tank shall be bushed to desired size with double-tapped cast-iron tank bushing.

5. Tank vent shall be standard weight, black steel pipe with screwed malleable-iron fittings.

6. Provide double-walled tank, with level indication and auxiliary pre-wired leak detection alarm contacts.

B. Engine Fuel System:

1. Diesel fuel system shall consist of an engine-driven fuel supply pump, fuel filters, and a base tank and lift pump set.

C. Electric (Battery) Starting System:

1. Starting shall be accomplished by a 24-volt, engine mounted, solenoid shift electric starter, capable of withstanding four consecutive continuous cranking periods of 15 seconds duration each separated by 15 seconds rest periods before shutting down completely and sounding the overcrank alarm.

2. The starting batteries shall be low maintenance, premium industrial grade, high-output, long-life, lead acid type especially designed for diesel engine cranking service, and of a capacity as recommended by the battery manufacturer for cranking the engine being furnished. The engine starting batteries shall be sized to also supply power to the generator control panel.

3. Furnish an engine starting battery charger for charging the starting batteries for the engine. The battery charger shall be U.L. listed, fully automatic, filtered, equalize and float-type, appropriate for wall or rack mounting. Supply voltage shall be 120 volts, AC, single phase, 60 Hz obtained from the generator electrical package. The DC output shall be not less than 20 amperes, regulated to within one percent with plus or minus ten percent fluctuations of the input voltage, and shall be current limited at 120 percent of rated output. Accessories shall include DC ammeter and voltmeter (panel type; 2 percent accuracy), adjustable float and equalize controls toggle switch, AC and DC circuit breakers, AC power failure alarm relay, low DC voltage alarm relay and DC ground fault relay. Fault relays shall operate individual alarm indicators on the face of the charger panel and shall also operate a common alarm relay for remote transmission of alarm. Charger shall have a continuous power rating sufficient to power all generator control devices in both the standby mode and the running mode.

D. Lubrication System:

1. The engine shall be provided with a full pressure lubricating oil system arranged to lubricate and cool the pistons and distribute oil to all moving parts of the engine including the turbocharger bearings. The system shall include a full flow oil filter of the replaceable element type, an appropriately sized shell and tube type oil cooler, and an automatic temperature regulator.

2. Furnish a low oil level float switch to alarm to the generator control panel.

E. Engine Cooling System Radiator:

1. General: Provide a unit mounted radiator complete with integral jacket water circulating pump, thermostatic central of cooling system, fan and drive motor sized to maintain full load operation continuously as specified herein for engine-generator set.

2. Provide radiator to operate engine at full rated generator load at 104 F ambient temperature.

3. Provide jacket water treatment for the prevention of both scale formation and corrosion in the engine water jackets and cooling system components which are in contact with the engine jacket water. This treatment shall be added to the cooling system prior to running the field acceptance test

F. Miscellaneous Equipment and Requirements

1. Heaters

a. Automatic thermostatically controlled heater(s), shall be provided to maintain not less than 90º F temperature for the engine jacket water system.

b. Heater(s) shall be rated 208/120VAC. Deviation - The factory heater voltage for this size unit is 120V

c. Heater shall be automatically deactivated when the engine-generator unit is in operation.

Confirmed

2. Emergency Stop Pushbuttons

   a. Furnish an emergency stop pushbutton on the engine control panel.

   b. The emergency stop buttons shall be maintained type, red colored, push to stop, mushroom type with a hinged plastic Lexan cover, labeled as "Emergency Stop," "Push."

   c. The pushbutton shall be wired to the engine-generator instrument/control panel and shall immediately stop the engine.

3. Control Power Fuses

   a. Fuses shall be mounted in locations where they are accessible. Pullout type fuses shall be provided.

4. Main Circuit Breaker

   a. Provide generator with a molded case circuit breaker to protect generator against overload and short circuit conditions. Circuit breaker shall be rated for 65 kA short circuit symmetrical and shall conform to the provisions of NEMA Standard AB1 and UL Standard 489.

   b. Provide circuit breaker with adjustable trip unit, rating plug, long-time, short-time and instantaneous protective relaying and ground fault protection.

5. Terminal Blocks

   a. Terminal blocks shall be one-piece, 20 AMP rated, with barriers appropriate for ring tongue terminals and provided with binding head screws. The terminal block rating shall be 600 V.

6. Solid State Circuitry

   a. Heavy-duty solid state controls, relays, timers or monitors shall meet the following specifications:

Accuracy:	+ 2% of set point
Temp Range:	- 40 C to +65 C (-40 F to 150 F)
Protection:	Transient overvoltage with-stand of 1500 volts peak, 1 m sec. time constant
Ratings:	Current ratings to exceed application of devices. Devices shall be UL listed.

2.08 - SYSTEM OPERATING SEQUENCE

A. The engine generator unit shall be operated in the following manner:

   1. The engine generator unit shall be arranged for automatic or manual starting and stopping.

   2. The engine generator shall be brought up to rated voltage and frequency and closed onto facility main Switchboard through open transition automatic throw-over system.

B. Normal – system utility powered:

   1. During normal system operation, the normal (utility) shall power the electrical distribution system with loads as indicated.

Confirmed

C. Loss of utility power - standby operation:

1. Upon loss of utility power, automatic transfer switch shall sense loss of power and after an adjustable time delay the automatic transfer system shall initiate generator start.
2. When the generator is up to speed and capable of accepting load, pump station loads will transfer to generator power.
3. Upon return of utility power, the automatic transfer switch shall initiate transfer back to the utility after an adjustable time delay.
4. After an adjustable cool-down period, the engine-generator shall shutdown.

2.09 - ENGINE CONTROL PANEL

A. The engine starting control logic shall be microprocessor based and shall automatically start, protect and monitor the engine-generator set. Electro-Mechanical controls are unacceptable.

B. The following gauges shall be mounted within an engine mounted control panel. Gauges shall be digital:

1. Jacket water temperature cooler temperature into heat exchanger
2. Lube oil temperature
3. Lube oil pressure
4. Lube oil filter differential pressure.

C. An engine coolant level switch shall be furnished. Level switch shall shut down generator on low level.

D. The engine starting control logic shall be capable of controlling the following engine devices.

1. Starting motor magnetic switch.
2. Electrically operated fuel control.
3. Normally open protective switches that close for abnormal conditions of pressure, temperature, speed and liquid level.

E. The panel shall have the following controls:

1. Emergency stop
2. Lamp test
3. Cycle crank
4. Voltage control
5. Cool-down timer
6. Phase selector switch
7. Programmable relays 4 (std)
8. Stop/Auto/Test.

F. The panel shall be provided with the following indicating lights:

1. Low oil pressure
2. High coolant temperature
3. Over speed
4. Over crank
5. Emergency stop
6. Fault shutdown

Confirmed

7. 3 spare lights, programmable input.
8. Not in Auto

G. Protection shall include:

1. Over and under voltage
2. Over and under frequency
3. Low coolant level
4. Oil temperature.

G. Provide contacts to alarm the following functions:

1. Low oil pressure
2. Sub-base oil tank rupture
3. Low fuel
4. Fuel tank leak
5. Battery malfunction
6. Low battery voltage
7. Common fault alarm
8. Not in automatic
9. In exerciser mode
10. E-stop activated
11. Generator run status
12. Low coolant level

H. Provide analog (4-20mA) output from fuel tank control panel for fuel level.

I. Engine Start/Stop Operation: The automatic engine control logic shall initiate operation of the engine upon receipt of a signal from a contact at the facility main Switchboard automatic transfer system. The contact(s) shall close for engine run and open for engine stop.

J. If the engine fails to start after 4 adjustable cranking attempts (factory set at 10 seconds on, 10 seconds off, adjustable from 5 to 30 seconds) or if any protective device should operate while the engine is running, the engine shall be disconnected from service and immediately stopped. The engine control logic shall lock the failed set out of service and requires a manual reset. The engine control logic shall include a provision for conversion to single cycle cranking, adjustable from 35 to 210 seconds.

K. Three-position engine control switch:

1. **Stop/Reset:** In this position, the engine shall not be capable of starting and/or running. If the engine was shutdown due to the operation of a protective device, the shutdown malfunction shall be reset when the switch is moved to this position. If the engine is running when the switch is moved to this position, it shall be immediately shutdown.
2. **Automatic:** In this position, the engine control shall be in readiness for fully automatic operation upon receipt of a start signal.
3. **Test:** When placed in this position, the engine shall start and run as if a start signal were received except it shall not be connected to the bus unless a start signal is received. When returned to the automatic position, the engine will shut down.

Confirmed

2.09 - SHOP PAINTING

A. The engine-generator set shall be shop primed and finished coated in accordance with the manufacturer's standard practice prior to shipment. A supply of touch-up paint shall be supplied by the manufacturer.

2.10 - SHOP TESTING

A. The complete engine-generator set shall be shop tested to simulate a complete and integrated system prior to shipment.

B. The procedure for the shop test of the diesel engine shall cover the engine manufacturer’s standard practice.

2.11 - SPARE PARTS

A. Provide a recommended list of spare parts.

PART 3 – EXECUTION

3.01 - INSTALLATION AND START UP

A. The generator unit shall be mounted on a concrete pad.

3.02 - FIELD TEST

A. Upon completion of the installation and as soon as conditions permit, the diesel engine driven generator, including the engine, generator, electrical circuit controls, transfer controls other devices shall be tested to assure that the system functions as specified.

3.03 - CONTRACT CLOSEOUT

A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF TEXT

See Attachments

This Page Intentionally Left Blank.

ATTACHMENT A
Pump Station No. 1

Loads to be powered up by the engine-generator for engine generator load calculation.
The Generator shall be capable of picking up the loads in order shown.

Equipment List

Equipment	Total Quantity	Quantity Operating	HP/AMPS/kVA/kW
Step 1			
Mini Power Center MPC.01-1	1	1	7.5kVA
Odor Control Fan PS1.OC-1*	1	1	1HP
Step 2			
PS1.P-1**	1	1	40HP
Step 3			
PS1.P-2**	1	1	40HP
Step 4			
PS1.P-3**	1	1	40HP

* Motor is powered by full voltage motor starter.

** Motor is powered with 6-pulse variable frequency drive with 5% input line reactor.

ATTACHMENT B
Pump Station No. 2

Loads to be powered up by the engine-generator for engine generator load calculation.
The Generator shall be capable of picking up the loads in order shown.

Equipment List

Equipment	Total Quantity	Quantity Operating	HP/AMPS/kVA/kW
Pump Station No. 2			
Step 1			
Mini Power Center MPC.02-1	1	1	7.5kVA
Odor Control Fan PS2.OC-1*	1	1	1HP
Step 2			
PS2.P-1**	1	1	40HP
Step 3			
PS2.P-2**	1	1	40HP

* Motor is powered by full voltage motor starter.

** Motor is powered with 6-pulse variable frequency drive with 5% input line reactor.

ATTACHMENT C
Pump Station No. 3

Loads to be powered up by the engine-generator for engine generator load calculation.
The Generator shall be capable of picking up the loads in order shown.

Equipment List

Equipment	Total Quantity	Quantity Operating	HP/AMPS/kVA/kW
Step 1			
Mini Power Center MPC.03-1	1	1	7.5kVA
Odor Control Fan PS3.OC-1*	1	1	1HP
Step 2			
PS3.P-1**	1	1	30HP
Step 3			
PS3.P-2**	1	1	30HP

* Motor is powered by full voltage motor starter.

** Motor is powered with 6-pulse variable frequency drive with 5% input line reactor.

10. SECTION 02629, POLYVINYL CHLORIDE LOW-PRESSURE SEWER PIPE

    A. Page 02629-3, ARTICLE 2.01 – MATERIALS, delete Paragraph D. in its entirety and replace with the following new paragraph:

        D. The Contractor has the option of substituting SDR 11 HDPE I.P.S. butt-fused pipe for the SDR 21 PVC gasketed pipe used for pressure main and services at no additional cost to the Owner. All couplings, fittings, adapters, valves, reducers, tees, and wyes shall be compatible with the type of pipe used. HDPE pipe shall be pressure rated for 200 psi and shall conform to ASTM D1248, ASTM D3350, ASTM D2239, and NSF-14. Compression fitting shall be brass and manufactured by Ford, or equal.

    B. Page 02629-3, ARTICLE 2.01 – MATERIALS, add the following new Paragraph K.:

        K. Pipe and fittings using glued connections is not acceptable.

11. SECTION 11398, DIESEL ENGINE-GENERATOR SET AND APPURTENANCES

    A. Page 11398-2, ARTICLE 1.01 – SCOPE, delete Paragraph B. in its entirety and replace with the following new paragraph:

Confirmed

        B. The unit shall be provided in an outdoor, weather proof, non-walk-in, sound attenuated enclosure with an integral sub-base fuel storage tank with a capacity for 24 hours of standby operation running at full load.

12. SECTION 13300, INSTRUMENTATION AND CONTROL SYSTEM – GENERAL

    A. Page 13330-5, ARTICLE 1.08 – WARRANTY, delete the article in its entirety and replace with the following new article:

    1.08 - WARRANTY

        A. Guarantees and warranties shall be furnished in accordance with DOCUMENT 00700, GENERAL CONDITIONS.

        B. Equipment Manufacturer

            1. The Equipment Manufacturer shall provide a warranty that all of the equipment is new and of recent manufacture, all materials and workmanship are of good quality, free from faults or defects in accordance with the requirements of these specifications. In addition, the Equipment Manufacturer shall warrant that the system will function in accordance with the manufacturer's published technical description guides and as specified herein. The Warranty, obtained by the Equipment Manufacturer, shall be secured by a Performance Bond issued jointly to the Equipment Manufacturer and the Owner. The Equipment Manufacturer agrees to furnish a Warranty in the sum of the 100 percent of the equipment price and duly executed by the said Equipment Manufacturer as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the Owner, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Equipment Manufacturer. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

            2. The Warranty shall be for a period of two (2) years from Substantial Completion of the construction contract.

            3. The Equipment Manufacturer shall be responsible for execution of warranties during the warranty period should the need arise.

C. Contactor

1. The Contractor shall provide a warranty that the installation of materials and hardware are in compliance with applicable provisions of the National Electric Code, UL, NEMA, the rules and regulations of the Federal Communications Commission, and state and/or local codes or ordinances that may apply. The Warranty, obtained by the Contractor, shall be secured by a Performance Bond issued jointly to the Contractor and the Owner. The Contractor agrees to furnish a Warranty in the sum of the full amount of the equipment price and duly executed by the said Contactor as Principal and by a surety company qualified to do business under the laws of the Commonwealth of Massachusetts and satisfactory to the Owner, as Surety, for the faithful performance of the work proposed. The premiums for such Bonds shall be paid by the Equipment Manufacturer. Bonds must be issued by surety companies listed on the latest IRS Circular 570.

2. The Warranty shall be for a period of one (1) year from Substantial Completion of the construction contract.

3. The Contractor shall be responsible for execution of warranties during the warranty period should the need arise.

D. It is the Contractor's and Equipment Manufacturer's responsibility to resolve any and all warranty claims.

E. The Warranties shall be provided as part of the shop drawing submittal. Submittals which do not include the required Warranty Bonds will be summarily rejected and returned to the Contractor without further review and consideration.

B. At the end of the section include SECTION 13330 ATTACHMENT A - INSTRUMENTS PRODUCT SHEETS, as attached.

13. SECTION 16900, ELECTRICAL CONTROLS AND MISCELLANEOUS ELECTRICAL EQUIPMENT

A. Page 16900-5, ARTICLE 2.07 – WALL-MOUNTED COMBINATION STARTERS, delete Paragraph A in its entirety and replace with the following new Paragraph:

A. Unless otherwise indicated, provide each combination starter with motor circuit protector and full-voltage magnetic starter. Provide starters in enclosures rated in accordance with the Area Classification Schedule on Contract drawings.

B. Page 16900-6, add the following new ARTICLE 2.13- AUTOMATIC TRANSFER SWITCH:

Confirmed

2.13 – AUTOMATIC TRANSFER SWITCH

A. Provide UL listed, 480VAC, 3-phase, 3-wire, automatic transfer switches (ATS) to automatically transfer between normal utility power source and standby generator power source.

B. Provide open-transition, electrically operated automatic transfer switch of the current, voltage, and short circuit ratings indicated on the Contract drawings capable of switching all classes of load and fully rated.

C. Provide service entrance rated ATS.

D. Provide ASCO 7000 Series or approved equal.

E. Provide ATS with dry-type contacts to PLC for remote indication of transfer switch position and status:

1. Utility Power Position

2. Standby Generator Power Position

3. General Fault Alarm
